Tragedy struck the Williams family on February 22, 1901 when the patriarch, David Williams, passed away at the age of fifty-five. Later in 1901, the Williams household included widowed mother, Melissa Williams, along with her children: Charles (age twenty-seven, a soldier); Frank (age twenty-four, a sailor); Arthur (age twenty-one, a painter); Elmer (age nineteen, a sailor); Mabel (age sixteen); George (age thirteen); and Gordon (age ten). Two of Frederick Williams' brothers also served in the war.

Frederick's younger brother, **Arthur David Williams**, enlisted in the Canadian Over-Seas Expeditionary Force on September 20, 1915. The thirty-five-year-old stood five feet five inches tall, had brown eyes and dark brown hair, and recorded his trade or calling as contractor, and his next-of-kin as his wife Mrs. Letitia (nee Corcoran) Williams, who was residing at 360 Maria Street (later 167 North Brock Street), Sarnia. Arthur also recorded that he had four years militia experience with the 27th Regiment and had served 13 months with the U.S.A. Force in the Spanish American War.

Arthur Williams became a member of the 34th Battalion with the rank of Lieutenant. The following month, on October 23, 1915, he embarked overseas bound for the United Kingdom. He continued his training in England, at Bramshott and Shorncliffe, and in mid-March 1916 was transferred to the 17th Reserve Battalion and then the Royal Canadian Regiment (RCR). In early June 1916, he was seconded from the RCRs to become a member of the 7th

Brigade, Machine Gun Company and then proceeded to France.

Three months later, in mid-September 1916, Lt. Arthur Williams was hospitalized at #14 General Hospital in Boulogne and then #2 Western General Hospital in Manchester. He had been diagnosed with severe myalgia, later sciatica "due to exposure in trenches" while in the Ypres Salient. He was returned to England and remained in hospital for fifty days. Arthur was returned to Canada on leave in November 1916 aboard the *S.S. Grampian*. The Medical Board in Canada recommended extending his leave to June 6, 1917 due to his ill health. The Board later determined that he had an attack of acute articular rheumatism, and now had a valvular disease of the heart, a permanent condition. On December 19, 1917, Lt. Arthur David Williams was discharged, struck off strength and assessed as being "medically unfit for overseas service". On May 26, 1941, Arthur Williams passed away at the age of sixty-one in Sarnia. His cause of death was recorded as, "Cerebral haemorrhage, arterio-sclerosis, etc. Death was due to service." Arthur Williams is buried in Lakeview Cemetery, Sarnia.

Fredericks' older brother, **Charles Herbert Williams**, enlisted in the Canadian Over-Seas Expeditionary Force on October 8, 1915 in Sarnia, Ontario. The forty-three-year-old stood five feet six inches tall, had blue eyes and brown hair, and recorded his trade or calling as acid stiller, and his next-of-kin as his wife Zillah (nee Worsley) Williams. They had resided at 273 Cameron Street and later 481 George Street, then at 215 Water Street and then 360 Nelson Street, Sarnia. (Note: For some reason, the recruiter recorded Charles' age as thirty-five.)

Charles also recorded that he had six years military experience with the U.S.A. Force in the Spanish American War. Charles became a member of the 70th Battalion and six months later, on April 26, 1916, he embarked overseas bound for the United Kingdom. During training in England, he advanced in rank from Private to Sergeant. Four months after arriving in England, in late August 1916, Charles Williams reverted to the rank of Private on his own request in order to proceed across the Channel.

Private Charles Williams arrived in France as a member of the 18th Battalion Canadian Infantry on August 27, 1916. During his time in France, Charles escaped being wounded or gassed and survived the war. After being discharged on demobilization on May 24, 1919, he returned to Sarnia, raised his family, and worked as a labourer at Imperial Oil. On June 12, 1943, Charles Williams passed away four days before his seventy-first birthday and is buried in Lakeview Cemetery, Sarnia.

Sometime during 1892, **Frederick James Williams** and his future wife, Eva Scott, moved to Michigan. Eva Scott was born November 18, 1875 in Sarnia, along with her twin sister Alice. The two girls were the daughters of George, a Grand Trunk Railway switchman, and Christina Scott (nee Ferguson). On May 1, 1893, nineteen year-old Frederick Williams married eighteen year-old Eva Scott in Detroit, Michigan. Frederick and Eva Williams were blessed with three children together, all born in Michigan: Pearl (born January 1893); Vera (born August 1894); and George (born March 1897). In 1900, Frederick and Eva, along with their three children, were residing on Miller Street in Detroit, and Frederick was employed as a bartender at the time.

Ten years later, in 1910, Frederick and Eva Williams were residing on Lysander Street in Detroit with their two children: daughter Pearl G. (age seventeen) and their son George E. (age thirteen). Also residing with them were Frederick's twenty-one year old brother, George; brother-in-law, Herbert B. Shannon, 25; and sisters-in-law Cassie B. Shannon, 27, and Margaret F. Scott, 24. Frederick Williams was employed as a manager of a café at the time.

On July 10, 1917, at age forty-two, Frederick Williams enlisted in the Canadian Over-Seas Expeditionary Force in Windsor, Ontario. He stood five feet three and a half inches tall, had brown eyes and black hair, and recorded his present address as 432 Pingree Avenue, Detroit. He also recorded his trade or calling as an assembler, and his next-of-kin as his wife, Mrs. Eva Williams, who was residing at 432 Pingree Avenue, Detroit, Michigan. Frederick became a member of 21st Regiment, Overseas Company and was soon transferred to the 1st Depot Battalion, Western Ontario Regiment, CEF. Sometime after her husband enlisted, Eva Williams returned to Sarnia, where she resided at 189 College Avenue.

Five months after enlisting, on December 21, 1917, Private Frederick Williams embarked overseas from Halifax bound for the United Kingdom aboard the *SS Grampian*. He arrived in Glasgow, Scotland on December 31, 1917. Later, in Bramshott, England, he was transferred to the 4th Canadian Reserve Battalion. Just over three months after arriving overseas, on April 7, 1918, Frederick was posted to the Canadian Infantry, 18th Battalion, Western Ontario Regiment. He arrived in France with the 18th Battalion the next day and two days later, he arrived at the Canadian Corps Reinforcement Camp. About one month later, on May 7, 1918, Private Frederick Williams joined the 18th Battalion in the field at the front lines.

Private Frederick Williams soon found himself taking part in the final great campaign of the war. The **Hundred Days Campaign** (August 8 – November 11, 1918 in France and Belgium) was the “beginning of the end” of the Great War. Canadians were called on again and again over the three-month period to lead the offensives against the toughest German defences. The series of victories repeatedly drove the Germans back, culminating in Germany’s unconditional surrender on November 11, but it came at a cost of almost 46,000 Canadians killed, wounded and missing.

The first offensive in Canada’s Hundred Days Campaign was the **Battle of Amiens** in France (August 8-14, 1918), a truly all-arms battle, one in which all four Canadian divisions would be involved. Over the course of one week, in a battle that British Field Marshal Douglas Haig called “*the finest operation of the war*”, the Canadians would advance nearly 14 km – but it came at a cost of 11,822 Canadian casualties.

It was in the Battle of Amiens with the 18th Battalion that Frederick Williams suffered wounds that proved fatal. Three months after arriving at the front lines, on August 9, 1918, he was wounded in action, hit multiple times by enemy gunfire. Frederick was admitted to No. 16 General Hospital in Le Treport with a gunshot wound to the abdomen and right leg. He was also recorded as, “dangerously ill, may be visited”. Four days later, on August 13, he was recorded as, “previously dangerously ill, now seriously ill”.

One month after being wounded at Amiens, on September 14, Frederick was recorded as, “still seriously ill”. Five weeks after he was wounded in action, Eva received a telegram at her home at 189 College Avenue which informed her that her husband, PTE. FRED JAMES WILLIAMS, INFANTRY, IS SERIOUSLY ILL AT SIXTEENTH GENERAL HOSPITAL, LE TREPORT. On September 23 and still at No. 16 General Hospital, Frederick was recorded as, “GSW abdomen and right leg, removed from seriously ill list”. One week later, on September 30, he was again recorded as, “dangerously ill, may be visited”. Several days later, on October 3, 1918, Private Fred Williams passed away at No. 16 General Hospital, Le Trepot, the result of the wounds he had received in action at Amiens. His Commonwealth War Graves Register records him as; *Date of Casualty: 3-10-18. Died of Wounds – No. 16 Gen. Hosp. Le Treport.*

In mid-October of 1918, Eva received a telegram officially informing her that her husband, PRIVATE FRED JAMES WILLIAMS, INFANTRY, WAS OFFICIALLY REPORTED AS HAVING DIED OF WOUNDS AT THE 16TH GENERAL HOSPITAL, WOUNDS IN HIS RIGHT LEG. Approximately one month after Frederick’s death, the Great War would end.

Frederick Williams was survived by his widow Eva, and their three children: Pearl, Vera and George. He was also survived by his mother, Melissa, and his eight siblings George; Charles (18th Battalion) in France; Frank in Sarnia; Elmer in New York; Gordon in London; Lieut. Arthur D. Williams, who saw service in the Spanish-American War and WWI; and his two sisters, one in Detroit and one in the northwest.

A little over a year after the Great War ended, on February 5, 1920, Frederick’s wife Eva Williams passed away at the age of forty-four. Frederick’s post-war medals, decorations, scrolls and Memorial Cross were all delivered to his mother, Mrs. David (Melissa Ann) Williams in Sarnia. Frederick Williams, 43, is buried in Mont Huon Military Cemetery, Le Treport, Seine-Maritime, France, Grave VIII.G.10B.

WILSON, C.B. - No information found in searched records links this name to Sarnia.

Possibly Charles B. Wilson. No confirmed information from a number of sources.

WILSON, John Alexander (#402865 and A/2865)

On May 19, 1916, Private John Wilson was killed in action while fighting in Belgium. His death was simply recorded as, *Killed in action, May 19, 1916*. John, 23, was awarded the 1914-15 Star, the British War Medal, and the Victory Medal and is buried in Chester Farm Cemetery, Belgium. On his headstone are inscribed the words, WHILE ETERNAL AGES RUN REST IN THY SAVIOUR’S LOVE. John Wilson’s name is also inscribed on the Oil Spring’s Memorial in the Town of Oil Springs.

John Alexander Wilson was born in Oil Springs, Ontario, on January 27, 1894, the eldest son of John Wilson Sr. (an oil operator/engineer in Lambton) and Dinah Jane (nee Smyth) Wilson. John Wilson Sr. was born on November 30, 1856 in Lanarkshire, Scotland, and had immigrated to Canada in 1885. In 1891, thirty-five-year-old John Wilson Sr. was residing in Oil Springs with his brother Alexander Wilson (a general merchant) and his wife

Annie Alice Wilson, along with their two year-old daughter Della May Wilson, and Alexander's brother-in-law Albert Henry Martin and sister-in-law Della Martin.

The following year, on November 30, 1892, thirty-six-year-old oil producer John Wilson Sr. married twenty-three-year-old Dinah Jane Smyth (born May 1, 1870 in Wyoming, Ontario) in Oil Springs. John Sr. and Dinah Wilson were blessed with six children together: John Alexander Jr.; Mina Smyth (born November 11, 1895); William Allan Wilson (born May 13, 1898); Geneva Evelyn (born 1902); Arthur Craven (born 1908); and Charles Kenneth Stanley Wilson (born 1912). In 1901, the Wilson family residing in Oil Springs included parents John Sr. (an engineer) and Dinah Wilson along with their children: John Alexander Jr. (age seven), Mina (age five) and William (age two).

John Jr.'s younger brother, **William Allan Wilson**, also served in the war. Seventeen and a half year-old William enlisted in the Canadian Over-Seas Expeditionary Force in Oil Springs on January 12, 1916 and became a member of the 149th Battalion (William enlisted one year after his older brother John Jr.). William Wilson embarked overseas from Halifax bound for the United Kingdom on March 28, 1917. After arriving in Liverpool, he was taken on strength into the 25th Reserve Battalion, and was later transferred to the 4th Reserve Battalion at Bramshott.

Approximately seven months after arriving in England, on November 24, 1917, Private William Wilson arrived at the Canadian Corps Reinforcement Camp (CCRC) in France. William became a member of the 18th Battalion, Canadian Infantry and arrived in the field on December 6, 1917. Almost six months later, on May 28, 1918, William was admitted to No. 1 Australian General Hospital after being wounded in action--a gunshot wound in the right thigh. After two and a half months of recovery, in August 1918, William Wilson rejoined his battalion in the field.

William Wilson took part in the final campaign of the war. The Hundred Days Campaign (August 8 – November 11, 1918 in France and Belgium) was the “beginning of the end” of the Great War. Canadians were called on again and again over the three-month period to lead the offensives against the toughest German defences. The series of victories repeatedly drove the Germans back and culminated in Germany's unconditional surrender on November 11; however, victory came at a cost of almost 46,000 Canadians killed, wounded and missing. William Wilson survived this campaign and the war and was discharged on demobilization in London, Ontario in May 1919.

On January 27, 1915, on his twenty-first birthday, **John Alexander Wilson Jr.** enlisted in the Canadian Over-Seas Expeditionary Force in Sarnia. He stood six feet tall, had brown eyes and auburn hair, was single, and recorded his trade or calling as labourer, and his next-of-kin as his father, John Wilson in Oil Springs, Ontario. He also recorded that he had prior militia experience in the 27th Regiment. Private John Wilson became a member of the Canadian Infantry, 1st Battalion, CEF.

Private John Alexander Wilson

Private John Wilson embarked overseas bound for the United Kingdom with the 2nd Canadian Contingent in the spring of 1915. On July 5, 1915, John was attached to the 11th Reserve Battalion in Shorncliffe. One month later,

on August 3, 1915, he arrived in France as a member of the 1st Battalion, Canadian Infantry. After six months at the Front, on February 21, 1916, John was granted nine days leave in England. Afterwards, he rejoined the 1st Battalion on March 1, 1916.

Two and a half months later, on May 19, 1916, Private John Wilson was killed in action while fighting in Belgium. His death was simply recorded as, *Killed in action, May 19, 1916*. John's Commonwealth War Graves Register records him as *Date of Casualty: 19-5-16. Killed in Action. Buried: Chester Farm Military Cemetery, 1 mile E. of Voormezele, 1 3/4 miles S. of Ypres*. John was posthumously awarded the 1914-15 Star, the British War Medal, and the Victory Medal. John Wilson, 23, is buried in Chester Farm Cemetery, Belgium, Grave II.A.3. On his headstone are inscribed the words, WHILE ETERNAL AGES RUN REST IN THY SAVIOUR'S LOVE. John Wilson's name is also inscribed on the Oil Spring's Memorial in the Town of Oil Springs.

WRIGHT, Thomas William (#845567)

The death of Thomas William Wright, a British Home Child who arrived in Ontario in 1894, illustrates the indiscriminate cruelty of war. In his late thirties when he enlisted, the married father of six children arrived in France in July 1917. More than a year passed and Thomas survived the three major battles of what became known as "The Hundred Days Campaign." He was assigned the rank of Lance Corporal in late October 1918 but in early November was hospitalized because of influenza and broncho-pneumonia. He never recovered and died at a casualty clearing station two days before the Armistice was signed.

Thomas William Wright was born on the Isle of Guernsey, England, on April 15, 1881, the son of John Albert Wright, a shoemaker, and Julia Elizabeth (nee Le Noury), also from Guernsey. John and Julia Wright had eight children together: Flora (born November 1876, died in July 1904); Albert Ernest (born April 1878); Maud Mabel (born October 1879); Thomas William; Walter Edward (born July 16, 1882); Harriet (born November 1883, died in 1884); Julia (born 1885); and John Albert (born in September of 1886, three months after the death of his father). In June 1886, when Thomas was only five years old, his father, John, passed away from heart disease.

After the death of the patriarch, the family broke apart. Maud and Julia Wright went to an orphanage on Guernsey; the two oldest, Florence and Albert Wright, resided with relatives; and John Wright went with his mother Julia. Thomas and his brother Walter Wright ended up in the Leopold House, in London, England. Both Thomas and Walter, thirteen and twelve respectively, were sent to Canada by Annie MacPherson Homes as **British Home Children**. They arrived in the summer of 1894, where they were placed on nearby farms in Forest, Ontario.

Between 1869 and 1948, over 100,000 children, most between six and fifteen years of age, were sent to Canada from the British Isles during the "British Child Emigration Movement". Circumstances in Britain had resulted in their families experiencing hard times. Churches and philanthropic organizations sent these impoverished, abandoned and orphaned children to Canada in the belief that they would have a better chance for a healthy, moral life in rural Canada. Canadian families welcomed them; however, far too many were used as a source of cheap farm labour and domestic help.

Following is a portion of a December 1895 article from *Ups and Downs*, a monthly Toronto publication under the auspices of Dr. Barnardo's Homes:

Two of our little men of whom we have the highest expectations are Thomas and Walter Wright... who came out to Canada in the summer of 1894, are aged 15 and 13 respectively. They have good homes close to each other in Bosanquet township. Each is striving hard to do his duty. It may almost be said that Thomas has already engaged in stock raising on his own account, his employer last Christmas rewarding him for his good conduct with a ewe, which in the spring gave birth to a lamb... One of the greatest sources of happiness to the young brothers is that they are able to see each other frequently. As they grow older we fervently trust that the strong bond of love which at present unites them may lose nothing of its strength, and that under God's guidance they may side by side build up a future of happiness and prosperity.

In 1901, Thomas Wright was recorded as a domestic residing with the Lusby family in Bosanquet Township, Lambton East. The head of the house was sixty-nine-year-old Joseph Lusby, a farm labourer, along with his ninety-six-year-old mother Martha Lusby. Also residing in the house was fifty-one-year-old Julia Simmons (born in England, had immigrated to Canada in 1894), who was also recorded as a domestic.

Thomas remained at his placement for at least three years, earning a medal for Good Conduct and Length of

Service from Dr. Barnardo's Homes in recognition for his hard work. The medal is inscribed with the words: *Who so shall receive one such little child in my name receiveth me*. In August 1903, the *Ups and Downs* publication wrote; *Our friend Thomas Wright, we look upon as not only one of those who has done the highest credit to the Homes, but who is himself a staunch ally of the work. We frequently hear from Thomas in connection with applications from farmers and others in the neighbourhood of Forest, where he is now a salesman in one of the principal stores and a highly respected citizen.*

In February 1905, Thomas Wright, now residing in Forest, married English-born Harriet Selena Wisby. Harriet was the daughter of David Samuel and Harriet (nee Knights) Wisby, who were married in July 1877 in Cambridgeshire, England. David and Harriet Wisby had three children: Margaret (born April 6, 1878 in Cambridgeshire, England); Harriet Selena (born November 4, 1879 in Harston, South Cambridgeshire, England); and William John (born and died in early 1881) Wisby. In early 1881, one year-old Harriet lost her mother Harriet (Sr.), who passed away at the age of thirty-three (likely a result of birth complications).

Later that year, the young Harriet Wisby was residing in Harston, Cambridge, England, along with her two year-old sister Margaret, their thirty year-old widowed father David (a flour and pollard dealer, and farmer of eighteen acres) and his sixty-eight-year-old widowed mother Lydia Wisby. Ten years later, in 1891, eleven year-old Harriet was still residing in Cambridge County, England, along with her twelve year-old sister Margaret, their forty year-old widowed father David Wisby (a farm merchant), and his seventy-nine-year-old widowed mother Lydia Wisby.

On January 20, 1900, sisters Harriet and Margaret lost their father David Wisby, who passed away on that date at the age of forty-nine in Chesterton, Cambridgeshire, England. One year later, twenty-one-year-old Harriet was residing in Croydon, England where she was employed as a domestic servant in the home of George and Ellen Watts and their five children. In 1905, twenty-five-year-old Harriet Wisby immigrated to Canada. Departing from Liverpool, England aboard the *SS Pretorian*, she arrived at the port of Halifax on February 5, 1905. Harriet recorded her occupation as domestic-to be married and her intended destination as Forest, Ontario.

Only five days after arriving in Canada, on February 10, 1905, twenty-five-year-old Harriet Wisby married twenty-four-year-old Thomas Wright (a clerk residing in Forest) at the Methodist Parsonage in Toronto, York County, Ontario. Thomas and Harriet Wright resided in Forest, and had three children together: Herbert Wisby (born February 26, 1906); Ellis John (born December 16, 1909); and Florence Ada Wright (born October 15, 1911). In early 1911, the Wright family in Forest included parents Thomas (a salesman) and Harriet "Hattie" Wright, along with their two children at the time; Herbert (age five) and Ellis John Wright (age one). One year later, tragedy struck the Wright family and Thomas in particular. On February 28, 1912, Thomas' wife Harriet, age thirty-two, passed away a result of tuberculosis. And only a few days after Harriet's death, their infant daughter, Florence Ada Wright, also passed away the result of meningitis.

In 1901, Harriet's sister, Margaret Wisby, then twenty-two years old, was residing in Meldreth, Cambridgeshire, England, where she worked as a servant-cook in the home of Mackenzie and Adelaide Butlin, along with their two children and two other servants: nineteen year-old Susan Hopwood (housemaid) and twenty-one-year-old Rosina Hopwood (nurse). Five years later and one year after her sister, Margaret Wisby immigrated to Canada. Departing from Liverpool, England aboard the *SS Tunisian*, twenty-eight-year-old Margaret arrived at the port of Montreal on June 8, 1906. She recorded her occupation as cook, and her intended destination as Forest, Ontario.

Four years after her arrival, on June 2, 1910, thirty-two-year-old Margaret Wisby married thirty-five-year-old Charles Umferille Kershaw (a farmer, originally from England) in Forest, Ontario. Charles and Margaret (nee Wisby) Kershaw had one child together: Mary Umfreville Kershaw, born August 17, 1911. Tragically, two weeks after the birth of their daughter, on August 30, 1911, thirty-five-year-old father Charles Kershaw, a gardener, passed away in Forest, the result of arterio-sclerosis and nephritis.

Thomas William Wright (father of two) and Margaret Wisby (mother of one) were now both widowers. On March 5, 1914 in Forest, Ontario, thirty-two-year-old Thomas Wright married thirty-five-year-old Margaret (nee Wisby) Kershaw, the older sister of his first wife Harriet Wisby. When Thomas married Margaret (nee Kershaw), he recorded his residence as Port Huron, Michigan. Thomas and Margaret Wright had three children together: Clifford Wisby (born September 1914); and twins Edith Selena and James LeNoury Wright (born August 19, 1916). Thomas and Margaret Wright's son James LeNoury Wright later served in World War II and tragically lost his life while serving. Flying Officer-Pilot James LeNoury Wright's story is included in this Project on page 1057. *Thomas

William Wright and James LeNoury Wright are the only father and son combination from Sarnia to both lose their lives while serving Canada in two different World Wars.

The Wisby sisters - Margaret (L) and Harriet (R)

Two of Thomas Wrights' brothers also served in the Great War. Older brother **Albert Ernest Wright** (born 1878) enlisted in the British Army at the age of fourteen and went on to serve the entire war. Younger brother **Walter Edward Wright** (born July 16, 1882 in Guernsey, Channel Islands) enlisted in the Canadian Expeditionary Force on January 27, 1916 in Sarnia, becoming a member of the 149th Battalion. Thirty-three-year-old Walter Wright was a married fireman residing at 514 Christina Street, Sarnia at the time. He recorded his next-of-kin as his wife, Mrs. Myrtle Wright on Christina Street, and that he had prior military experience serving 1 ½ years in the U.S. Army.

Walter Wright had married Myrtle Adella Mann, the daughter of Levi and Sarah Mann of Sarnia, on December 31, 1907 in Sarnia. Walter did not have the opportunity to serve overseas. Approximately nine months after he enlisted, on October 10, 1916, though his conduct and character were recorded as "Good", Walter was discharged at Camp Borden, declared medically unfit. Walter returned to Sarnia and worked as a fireman. Later residing at 178 Cotterbury St., Walter and Myrtle Wright had four children together, all born in Sarnia: Harold Chester (born November 1908); Stewart Malcolm (born June 1913); Doris Victoria (born May 1915); and Lloyd George (born March 1921).

Prior to enlisting, **Thomas William Wright** operated a grocery store on Christina Street in Sarnia (it later became Glaab's barber shop). Thomas was a member of Sarnia Lodge No. 126, I.O.O.F., and a member of the Sarnia Citizens Band and the Forest Band. When he enlisted, Thomas was residing at 128 Penrose Street in Sarnia with his wife Margaret and their four children at the time: Herbert Wisby and Ellis John Wright (from Thomas' first marriage); Mary Umfreville Kershaw (from Margaret's first marriage) and Clifford Wisby Wright.

Thirty-four-year-old Thomas Wright enlisted in the Canadian Over-Seas Expeditionary Force (CEF) on February 18, 1916 in Sarnia (three weeks after his younger brother Walter had enlisted). He stood five feet two and a half inches tall, had blue eyes and brown hair, recorded his trade or calling as grocer, and his next-of-kin as his wife Margaret Wright at 128 Penrose Street. Thomas became a member of 149th Battalion, CEF. The Wright family later resided at 240 Bright Street, Sarnia. Six months after he enlisted, in August 1916, Thomas and Margaret's twins, Edith and James, were born.

Seven months after enlisting, in September 1916, Thomas spent nine days in hospital at Camp Borden, recovering from a scabies infestation. In January 1917, Thomas Wright completed a form that was required to be filled out by all men joining units for overseas service. On the form, Thomas recorded he and his wife Margaret's address as 128 Penrose Street and the names of his six children: Herbert Wisby (age 11), Ellis John (age 7), Mary Umfreville Kershaw Wright (age 5), Clifford Wisby (age 2), and twins James LeNoury and Edith Salina (age 4 months). Thomas also recorded that his mother, who was still alive, was Julia Peters, of Canada House, 68 Mt. Durand Guernsey Channel Is., England.

Almost fourteen months after enlisting, on April 2, 1917, Private Thomas Wright was transferred to the 216th Battalion. He embarked overseas from Halifax bound for the United Kingdom aboard the *SS Scandinavian* on

April 18, 1917. He arrived in Liverpool on April 29, 1917, and the next day, was transferred to the 3rd Canadian Reserve Labour Battalion at West Sandling. Just over two months later, in early July 1917 and still at West Sandling, Thomas was transferred to the Central Ontario Regimental Depot, and a week later to the 1st Labour Battalion. On July 19, 1917, Private Thomas Wright arrived in France, as a member of the 3rd Canadian Labour Battalion. The 3rd Canadian Labour Battalion was later designated as the 11th Battalion, Canadian Railway Troops (CRT). Seven months after arriving in France, on February 18, 1918, Thomas Wright, in his role as a Sapper, was awarded a Good Conduct Badge in the field.

Lance Corporal Thomas William Wright

Approximately one year after arriving in France, Thomas found himself taking part in the final campaign of the war. The **Hundred Days Campaign** (August 8 – November 11, 1918 in France and Belgium) was the “beginning of the end” of the Great War. Canadians were called on again and again over the three-month period to lead the offensives against the toughest German defences. The series of victories repeatedly drove the Germans back, culminating in Germany’s unconditional surrender on November 11; however, victory came at a cost of almost 46,000 Canadians killed, wounded and missing.

There were three major offensives in Canada’s Hundred Days Campaign in France. The first offensive in the Campaign was the Battle of Amiens (August 8-14, 1918), a truly all-arms battle, one that all four Canadian divisions would be involved in. Over the course of one week, in a battle that British Field Marshal Douglas Haig called “*the finest operation of the war*”, the Canadians would advance nearly 14 km. The second offensive in the Campaign was the Battle of Arras and Breaking the DQ Line (August 26-September 3, 1918), where Canadians were part of a spearhead force tasked with crashing one of the most heavily fortified positions, the Hindenburg Line. General Sir Julian Byng called the Canadian victory at Arras and the DQ Line “*the turning point of the campaign*”.

The third offensive in the Campaign was the Battle of Canal-du-Nord and Cambrai (September 27-October 11, 1918). Against seemingly impossible odds and a desperate fully prepared enemy, the Canadians fought for two weeks in a series of brutal engagements--successfully channelling through a narrow gap in the canal, punching through a series of fortified villages and deep interlocking trenches, and capturing Bourslon Wood and the city of Cambrai. General Arthur Currie would call it “*some of the bitterest fighting we have experienced*”.

On October 22, 1918, Thomas Wright was appointed the rank of Acting Lance Corporal, 11th Battalion, Canadian Railway Troops. Twelve days after being appointed Acting Lance Corporal, on November 3, 1918, Thomas was admitted to No. 56 Casualty Clearing Station (CCS) where his condition was recorded as “dangerously ill, influenza”. Six days later, on November 9, 1918, Thomas Wright passed away at No. 56 CCS, the result of broncho-pneumonia. (Note: his rank was originally recorded as Sapper, but was later changed to Acting Lance Corporal). Acting Lance Corporal Thomas Wright’s Commonwealth War Graves Register records him as; *Date of Casualty: 9-11-18. Died (Influenza & Broncho-pneumonia) No. 56 Casualty Clearing Station. Buried: Grevillers British Cemetery, 1 mile W. of Bapaume, France*. Two days after Thomas’ death, the Armistice was signed, ending the Great War.

In early November 1918, after Thomas had been overseas for a little over two years, Margaret received a telegram at their home on Penrose Street, informing her that her husband, Private Thomas Wright, was dangerously ill with influenza. Almost two weeks after the Great War ended, Margaret received the sad official news that her husband, 845567 PTE. THOMAS WILLIAM WRIGHT HAS DIED OF BRONCHO PNEUMONIA AT A CASUALTY CLEARING STATION ON NOVEMBER 9TH.

Thomas Wright

In late November 1918, the secretary of Sarnia Lodge No. 126, I.O.O.F. received a letter that had been written by Thomas Wright prior to his death. Thomas was proud to be a member of the order and had been anxiously waiting his return home, so he could attend the meetings of his beloved order. Following is that letter:

Somewhere in France, Oct. 6, 1918.

Wm. Batten, Sec'y I.O.O.F. Sarnia

Dear Sir,

A few lines to let you know I have not forgotten Sarnia Lodge No. 126, I.O.O.F. I am very proud of being an Odd Fellow and, moreover, I must thank the lodge for the kindness tendered to my wife and family during my absence. I am very sorry to hear the sad news of the death of the late James Galbraith. He was always ready with a helping hand to help any brother in need no matter who he was. So Sarnia loses a good brother. I am very sorry not to have written a few lines before but I trust we shall meet again. The boys out here in France have learned some good lessons and you can count on having a good number of our boys once we are permitted to return home. I am looking forward to being able to meet again in 126 lodge room. How good it would be to be there. Yet we must wait a while longer. We are very cheerful and the news at present one can hardly wait to see the paper. May it continue and then victory. Germany is certainly in a very bad position. The sooner he gives in the better for him and us all. I am writing this few lines on a German field letter card, having picked it up on the battlefield along with the enclosed iron cross ribbon and needle found in one of the German trenches. I can't tell you where, but some day I hope to. Kindest regards to all the boys of 126 lodge.

Yours, in F.L. & T. Thos. Wright

Thomas William Wright, 37, is buried in Grevillers British Cemetery, Pas de Calais, France, Grave XVII.E.8. Thomas left behind his wife, Margaret, and their five children: Herbert, Ellis, Mary, Clifford, Edith and James. Thomas' first wife, Harriet, who passed away in Forest in 1912, and his second wife Margaret, who was Harriet's sister and who passed away in Sarnia in 1964, are both buried in Beechwood Cemetery in Forest. An empty spot still lies between them, for their husband Thomas William Wright. That spot will always be there, as Thomas Wright is buried in France with his fallen brothers in arms.

WYSEMAN, Andrew (#811870)

Three Wyseman brothers enlisted, but Andrew was the only one to die in the Great War. To this day, no one really knows what happened to Andrew Wyseman in the weeks following the Battle of Vimy Ridge. A fellow soldier mentioned later that when Andrew and he "went over the top" they were surrounded by Germans. They managed to drive the enemy back but in the fighting, all contact with Andrew was lost. He was never seen again. Andrew

Wyseman, 37, is memorialized on the Vimy Memorial, Pas de Calais, France.

Andrew Wyseman was born in Falkirk, Stirlingshire, Scotland, on August 7, 1879, the eldest child of Robert and Agnes (nee Gibb) Wyseman. Robert Wyseman (born December 30, 1856 in Stirlingshire, Scotland) and Agnes Gibb (born June 13, 1860 in Polmont, Stirlingshire, Scotland) were married on June 13, 1879 in Polmont, Stirlingshire, Scotland. Robert and Agnes were blessed with six children: Andrew; Richard Gibb (born September 28, 1885); Robert Gibb (born February 24, 1888); William (born December 10, 1891); James Hunter (born 1898); and Mary (born 1900).

In 1891, Robert and Agnes Wyseman were residing on Thornhill Road in Falkirk, Stirlingshire, with their children: Andrew (age eleven), Richard (age five), Robert (age three) and William (age three months). Robert supported his family by working as a moulder. Ten years later, in 1901, the Wyseman family was still residing on Thornhill Road, Falkirk, and Robert was still working as an iron-moulder; however, they had more mouths to feed for the family had swelled to Robert, Agnes and their six children: Andrew (age twenty-one, employed as an iron-moulder like his father); Richard; Robert; William; James and Mary.

The Wyseman family immigrated to Canada in 1907. The patriarch Robert left first on April 20, 1907, departing from Glasgow, Scotland aboard the *Corinthian*. He arrived in Montreal, Quebec on May 6, 1907, recording his occupation was moulder and his intended destination was London, Ontario. One month later, in late May 1907, forty-seven-year-old Agnes, along with their children Robert, William, James and Mary departed Glasgow, Scotland aboard the *Corinthian*. They arrived in Montreal, Quebec on June 4, 1907 and also recorded their intended destination as London, Ontario.

Not long after, the Wyseman family was residing at 130 South Brock Street in Sarnia. Robert supported his family working as a moulder in Sarnia. On December 10, 1910, tragedy struck the family when Andrew's younger brother, Richard Wyseman, who was employed as a moulder in Sarnia, passed away in Sarnia at the age of twenty-five, due to infantile paralysis. Three and a half years later, on June 16, 1914, Andrew's youngest brother, James (of 130 S. Brock Street, Sarnia, a cashier), married Anna Elizabeth Scott, a stenographer who was living at 133 Essex Street.

Two of Andrew Wyseman's younger brothers also served in the Great War. Brother **William Wyseman**, age twenty-three, was the first Wyseman brother to enlist in the Canadian Expeditionary Force, on February 10, 1915 in Sarnia. On his Attestation Paper, William recorded the spelling of his surname as "Wiseman". William stood five feet seven and three-quarter inches tall, had dark blue eyes and fair hair, was single, and recorded his occupation as machinist, and his next-of-kin as his father Robert Wiseman of 130 Brock Street, Sarnia.

Private William Wiseman became a member of No. 3 Stationary Hospital, Canadian Army Medical Corps (CAMC). He arrived in England in mid-April 1915. Once there, William spent a lot of time in hospitals as a patient, since he was persistently burdened with illnesses, including gastritis, para-typhoid and a recurring influenza. Fourteen months after arriving overseas, on June 3, 1916, William arrived in France. He served in France with the 7th Canadian General Hospital, the 3rd Canadian Stationary Hospital and the 2nd Canadian Field Ambulance. William Wiseman survived the war and was discharged on demobilization in London, Ontario in May 1919.

Robert Gibb Wyseman, 27, was the second brother to enlist in the Canadian Expeditionary Force. Robert enlisted on April 19, 1915 in Hamilton, Ontario, and became a member of the 36th Battalion, CEF. He was working as a moulder at the time and was married (he had married Marion Kath Lawson three and a half years earlier, on October 5, 1911). Robert stood five feet five and three-quarter inches tall, had blue eyes and light brown hair, recorded his occupation as a clerk, and his next-of-kin as his wife Marion Wyseman at their home address of 25 West Street in Brantford, Ontario (she later resided at 171 Kathleen Avenue, Sarnia).

On June 19, 1915, Private Robert Gibb Wyseman embarked overseas bound for the United Kingdom aboard the *SS Corsican* and arrived in England on June 28, 1915. Robert served only in England, as a Sergeant with the Canadian Ordnance Corps (COC) and Canadian Army Pay Corps (CAPC). Robert was not allowed to embark to France/Belgium because of a congenital defect with his vision. Sergeant Robert Wyseman survived the war and was discharged in London, Ontario on June 4, 1919.

At some point, **Andrew Wyseman** moved out west and was residing in Alberta. On February 1, 1916, at the age of thirty-six, Andrew enlisted in the Canadian Over-Seas Expeditionary Force (CEF) in Edmonton, Alberta, where he became a member of the 138th Battalion, CEF. Andrew stood five feet eight inches tall, had blue eyes and

light brown hair, was single, was residing at 70 May Street, Edmonton, and was employed as a mail carrier at the time. He recorded his next-of-kin as his father Robert Wyseman, who was living at 130 Brock Street, Sarnia. Andrew also recorded that he had seven months of prior militia experience with the 101st Active Militia.

One month after enlisting, on April 8, 1916 in Edmonton, Andrew completed an "Application for Entry for a Homestead". The application was made for a section of agricultural land that he planned to reside on and cultivate for his own. Approximately six and a half months after enlisting, on August 21, 1916, Private Andrew Wyseman embarked overseas from Halifax bound for the United Kingdom aboard the *SS Olympic*. He arrived in Liverpool, England on August 30, 1916.

Two months later, on October 26, 1916, Andrew was transferred to the 137th Battalion at Camp Witley. Two and a half months after that, on January 10, 1917, he was transferred to the 21st Reserve Battalion, Alberta Regiment at Seaford. Just over one month later, on February 16, 1917, he was transferred again, to the 31st Battalion. The next day, Private Andrew Wyseman arrived in Havre, France. From the Canadian Base Reinforcement Depot, Andrew and the 31st Battalion arrived at the front five days later, on February 22, 1917. In the spring of 1917, his battalion and the rest of the Canadian Corps made their way to an area in northern France dominated by a long hill known as Vimy Ridge.

The Battle of Vimy Ridge (April 9-12, 1917) was the first time (and last time in the war) that all four divisions of the Canadian Corps, with soldiers from every region in the country, would surge forward simultaneously. The first day of the battle, April 9, 1917, was the single bloodiest day of the entire war for the Canadian Corps and the bloodiest in all of Canadian military history. The four-day victory at Vimy Ridge was a seminal battle, a turning point in the war for the Canadian Corps and significant victory for Canada, later referred to as "the birth of a nation". Of the 97,000 Canadians who fought at Vimy Ridge, approximately 7,004 were wounded and 3,598 were killed in four days of battle.

Three weeks later, on May 3, 1917, Private Andrew Wyseman of the 31st Battalion, was killed in action during fighting in the vicinity of Vimy Ridge. Though the pivotal Battle of Vimy Ridge had occurred just weeks earlier, the fighting in the area continued in the following weeks. On May 3, 1917, after an attack against the enemy, Andrew was not seen again. He was originally reported missing. As the days passed, no further information was furnished from the casualty branch. Months later, Private Andrew Wyseman was recorded as, *Previously reported missing, now for official purposes presumed to have died on or since May 3rd, 1917.*

In June 1917, Agnes on Brock Street in Sarnia received the following letter from one of her son's comrades, conveying that he was missing:

Dear Mrs. Wyseman,

I am sorry to inform you that Andy is missing. I don't know if you have been informed through the War Office or not, but before we went into the line, Andy gave me his address, and I gave him mine, and we promised each other if anything should happen, we would write home after several days. There is a great possibility of him being taken a prisoner, for the day we went over the top, Andy and myself were together and we were surrounded by Germans, but we drove them back and in the excitement, I lost Andy. He is reported missing and I have been waiting this last week thinking I might hear news of him. As I have not heard anything, I thought I would let you know. My address is Pte. Maurice Kew, No. 811605, 31st Canadian Battalion E.F., France. My home address is Kidmore, Reading Berks, England. I joined up with Andy, being in the 138th Band with him, and have been with him right along. Therefore I miss him very much, and I am awfully sorry this has happened. We must hope for the best. If you should hear of him as a prisoner or otherwise, you might let me know and I will certainly do the same, therefore, wishing you the best of luck will close. I am yours very truly.

Maurice Kew

Eight months later, in late January 1918, the Deputy Adjutant-General, G.H.Q., 3rd Echelon, Canadian Division, completed a "Missing Man (Acceptance of Death for Official Purposes)" form. In reference to Private Andrew Wyseman of the 31st Battalion, the following was recorded: *Reference has been made to the Unit, the Record Office and the Base, on the printed missing list, but no evidence of material value has been received which would indicate that he is not dead. In accordance with the decision of the Army Council, this soldier is to be regarded for official purposes as having died on or since 3-5-17.* It also recorded that no Will, either in his Pay Book or as a separate document was ever received. Andrew Wyseman's Commonwealth War Graves Register records him as; *Date of Casualty: 3-5-17. Previously Reported Missing now for Official purposes presumed to have DIED on or since 3-5-17.*

Andrew Wyseman, 37, has no known grave. He is memorialized on the Vimy Memorial, Pas de Calais, France. On the Sarnia cenotaph, his name is inscribed as A. Wiseman. Andrew's parents Robert and Agnes resided at 130 Brock Street in Sarnia for the rest of their lives. Robert Wyseman passed away at the age of seventy-four on February 6, 1932. Agnes Wyseman passed away at the age of seventy-five on February 8, 1935. Both Robert and Agnes Wyseman are buried at Lakeview Cemetery, Sarnia.

A Canadian's Message

(from a postcard mailed home by a WWI soldier)

*Although to-day we're parted,
And your hand I cannot take;
I send this loving message,
With a thought for old times sake.*

*All the time we're divided,
You are ever in my mind;
And the lonely days now passing,
Shall our hearts more closer bind.*

*So when you get this greeting
You will know what thoughts are mine;
And that my love I send you
For the sake of Auld Lang Syne.*

n.d. (1915)

Perhaps

*Perhaps some day the sun will shine again,
And I shall see that still the skies are blue,
And feel once more I do not live in vain,
Although bereft of You.*

*Perhaps the golden meadows at my feet
Will make the sunny hours of spring seem gay,
And I shall find the white May-blossoms sweet,
Though You have passed away.*

*Perhaps the summer woods will shimmer bright,
And crimson roses once again be fair,
And autumn harvest fields a rich delight,
Although You are not there.*

*Perhaps some day I shall not shrink in pain
To see the passing of the dying year,
And listen to Christmas songs again,
Although You cannot hear.*

*But though kind Time may many joys renew,
There is one greatest joy I shall not know
Again, because my heart for loss of You
Was broken, long ago.*

WORLD WAR II (1939-1945)

Following is a description of important historical events, people and key battles and campaigns of the Second World War. As in the Great War, Sarnia-Lambton's sons participated in every major battle and campaign fought by Canadian troops. Many made the supreme sacrifice.

- **THE “GOOD WAR”:** The Second World War has been referred to as the last “good war,” “the just war,” and “the necessary war.” It was a war of democracy against Nazism and fascism, good against evil. It was fought against a repulsive tyranny and villainous ideology that included the remorseless and bestial cruelty on the Eastern Front and in the Pacific; the killing of hundreds of thousands of civilians through ruthless and relentless bombing campaigns; and the unspeakable horror of the Holocaust that would claim some six million Jews.^{4H} The Second World War was not just one war but a series of campaigns and battles around the world. The war pitted the **Axis Powers** of Germany, Italy, Japan, and a number of less influential nations against the **Allied Powers** of Britain (and its dominions and colonies – Canada, Australia, New Zealand, Newfoundland, South Africa, and India) – along with France, the Soviet Union (summer of 1941), the United States (December 1941), and other nations.

- **VIMY UNVEILED:** In the summer of 1936, there was the most remarkable peacetime outpouring of national fervor that Canada had yet seen. **The Canadian National Vimy Memorial** was unveiled by King Edward VIII on a warm, sunny July 26, 1936 afternoon before a crowd of more than 100,000 spectators, including more than 6,200 Canadian veterans and their families who, at the height of the Depression, paid their way across the Atlantic to stand on Vimy Ridge. The journey – the largest ever peacetime movement of people from Canada to Europe – required five ocean liners for them all, and was properly called a **pilgrimage**. The Canadian Radio Broadcasting Commission (forerunner of the CBC) broadcast the unveiling ceremony live to Canada over the national radio network, while the British shortwave broadcast was heard worldwide.^{7Z, 8H}

The Vimy Memorial stands as a tribute to all who served Canada in battle in World War I. More information about the Memorial is on page 146. It is inscribed with the names of 11,285 Canadian soldiers who were killed in France whose final resting place is unknown, including 28 young men from Sarnia.

On that same day, Sarnians observed Vimy Day with a dual celebration in Sarnia and Port Huron. Parades and ceremonies were held in both cities, and included delegation members of the Sarnia Canadian Legion, the Lambton Regiment, the Imperial Pipe Band, the Ladies Auxiliary and a number of Great War veterans from Sarnia, Petrolia, Forest and Wallaceburg. Along with the Canadian veterans, American, British, Belgian and even several German veterans also attended the events.

Just three years after the Vimy Memorial was unveiled, World War II would begin and Canadians would have to go to war again. Nine months later, Canadians were shocked to read the headlines and see the photographs of a victorious Adolf Hitler and his Nazi entourage at the Vimy Memorial.

- **THE LEAD UP TO WAR:** Approximately twenty years after the end of World War I, the storm clouds of war were brewing again. The war began, arguably, in the **Far East**, when in November 1936, Japanese backed forces attempted to take control of the Republic of China province of Suiyuan. Though the campaign was unsuccessful, it enflamed tensions between the two nations. The Empire of Japan and the Republic of China went to war in July 1937. Also in November 1936, Imperial Japan and Nazi Germany signed the Anti-Comintern Pact that declared the hostility of the two countries to international communism (an alliance aimed against the Soviet Union). One year later in November 1937, Italy would join the pact, and in April 1939, Spain would join the pact.

In July 1936, a vicious civil war began in **Spain**, fought between the Republicans (democrats, anarchists, socialists and communists supported by the Soviet Union and Mexico) and the Nationalists (the army, church and monarchists supported by Nazi Germany and Fascist Italy). During the three years of war, thousands of volunteers from around the world, desperate to prevent a wave of fascism across Europe, flocked to Spain to fight with the Spanish Republicans. This included nearly 1,600 Canadians, armed volunteers in the anti-fascist cause, many of them recent immigrants and the unemployed leaving behind the poverty-stricken conditions of the Great Depression in Canada. In 1937, there was even a Canadian battalion established, the **Mackenzie-Papineau Battalion**. This, even though at the time in the country, the Foreign Enlistment Act of 1937 expressly forbade Canadians from joining or recruiting others to enlist. The Spanish civil war would last almost three years and resulted in millions of Spaniards being displaced, and hundreds of thousands being killed the result of systematic killings, mob violence, torture and other brutalities. Approximately one third of the Canadians that fought in Spain were killed in the war.^{9V, 9X}

In October 1935, **Italy** who under its' dictator Benito Mussolini, invaded Abyssinia (now Ethiopia). Italian armed forces won a major victory there in April 1936, and had captured the capital of Abyssinia, Addis Ababa, by May 1936. Created to maintain peace by solving international disputes, the League of Nations response to this aggression was slow, and when it did occur, was half-hearted and ineffective. The League's credibility was undermined, and Fascist Italy would ally with Nazi Germany for the first time, the two countries forming a Rome-Berlin Axis alliance in October 1936.

In **Germany**, Adolf Hitler of the National Socialist German Workers Party ("Nazi Party" for short) had been appointed Chancellor in late January 1933. He moved quickly to dismantle Germany's democracy by suspending individual freedoms of press, speech and assembly; murdering or arresting leaders of opposition parties; giving himself dictatorial powers; and creating the Gestapo and SS secret police. Also in 1933, Nazi racist extremism practices began to be instituted, including: public book burnings; spreading of hate-mongering propaganda blaming the "inferior" Jews for Germany's problems; and in 1935, the **Nuremberg laws** were passed that progressively stripped German Jews of their property, employment and basic rights; that led to forced sterilization of deemed genetic "inferiors"; and imprisonment of "undesirables" and "enemies of the state" in concentration camps. In December 1936, Hitler mandated that all males ages 10-18 would have to join the Hitler Youth.

The final shattering of Jewish existence in Germany came on the night of November 9, 1938 – "**Kristallnacht**" (also known as the "Night of Broken Glass" – for the shattered glass from the store windows that littered the streets). Beginning on this night, a wave of violence broke out against Jewish people and property throughout Germany and Nazi controlled areas. Synagogues were burned; rioters ransacked and looted Jewish businesses; Jewish hospitals, homes, schools and cemeteries were vandalized; and at least ninety Jews were killed and approximately thirty thousand Jewish males were arrested and sent to concentration camps.

Throughout the 1930's, Hitler prepared Germany for war, rebuilding the military, persecuting his enemies and regaining territory and seizing their resources. In March 1936, German forces invaded the Rhineland, on the border of France. In March 1938, Germany annexed Austria. In October 1938, German troops occupied Sudetenland (the German-speaking areas of Czechoslovakia), which the Allies agreed to in signing the Munich Agreement. In March 1939, the German Army invaded and occupied Czechoslovakia. Time and again, the League of Nations failed to act on these aggressions, a direct contravention of the Treaty of Versailles.

As Germany's growing militarization worried the world, **Canadian Prime Minister William Lyon Mackenzie King** journeyed overseas to meet with German Chancellor Adolf Hitler in late June 1937 to assess the situation himself. King was in Berlin for four days, in which he met and talked with Hitler, Hermann Goring, Konstantin von Neurath, and a host of minor Nazi officials. Hitler emphasized to King that *"you need have no fear of war at the instance of Germany... We know what a terrible thing war is, and not one of us want to see another war"* (this was at a time when Germany was actively preparing for war). King returned to Canada with a great fondness for the "eminently wise" Hitler, convinced he didn't pose a threat to the world. Overawed by his German visit, King wrote in his journal that Hitler *"is really one who truly loves his fellowmen, and his country, and would make any sacrifice for their good,"* and *"I believe that the world will yet come to see a very great man-mystic in Hitler."* King also wrote of Hitler, *"His face is much more prepossessing than his pictures would give the impression of. It is not that of a fiery over-strained nature, but of a calm, passive man, deeply and thoughtfully in earnest... his eyes impressed me most of all. There was a liquid quality about them which indicates keen perception and profound sympathy... One could see particularly how humble folk would come to have a profound love for the man."* King was not the only world leader who was charmed and impressed by Hitler. Soviet leader Joseph Stalin and U.K. Prime Minister Neville Chamberlain would both at some point accept the word of Hitler that the German dictator had no dreams of conquest.^{2N, 3F, 9V}

In mid-August 1939, Hitler signed a **Nonaggression Pact** with the communist Joseph Stalin, the Soviet Union's dictator, in which the two countries agreed to take no military action against each other for the next ten years. For Germany, this would allow them to invade Poland unopposed, and they would no longer risk having to mount a military campaign on two fronts. It was Adolf Hitler's desire for revenge against the World War I victors, his obsession to eradicate Jews and other "undesirables," and his vision to create a German Aryan society that would rule the world (his Thousand Year Reich) that made it a world war.

In **Canada**, despite all these world events, the general isolationism of Canadians made the prospect of war seem remote. The unprecedented slaughter of the Great War had convinced politicians and the public that war was unthinkable.

Yet in March 1939, veteran organizations across **Canada** were asking ex-soldier personnel to voluntarily register in the Federal Veteran's Survey in order to get full data on war veterans in case the country needed them. The Sarnia branch of the Royal Canadian Legion asked all local veterans to enroll at the Soldier's Service Club. Registering in the survey did not constitute enlistment: the men and women were just indicating their experience and willingness to serve Canada in some capacity should the need arise. In a portion of the manifesto issued by the Veteran's Organizations, they stated, *"Today, world conditions are confused and disturbing. Our own will for peace does not, unfortunately, guarantee peace to us. The events of tomorrow are wholly unpredictable. We would be unfaithful to ourselves, to the memory of our comrades, and to our country if we remained indifferent in the face of that uncertainty."*

• **THE KING AND QUEEN IN CANADA:** In mid-May 1939, less than four months before the start of World War II, King George VI and Queen Elizabeth (later the Queen Mother) embarked on a month long, cross-country tour by train of Canada and part of the United States. Their two princess daughters; thirteen-year old Elizabeth, who would later succeed her father becoming Queen Elizabeth II, and eight-year old daughter Margaret Rose remained in England during the tour. The Royal Tour marked the first time a reigning monarch visited Canada. Canada's Prime Minister William Lyon MacKenzie King travelled with the royal visitors for their entire tour. The royal couple visited every Canadian province and Newfoundland (with a sidetrip to Washington and New York), and the month-long tour was an enormous success, attracting huge enthusiastic crowds everywhere they went. Early in the tour, on May 21, 1939, King George VI officially unveiled the **National War Memorial** in Confederation Square, Ottawa (also known as *The Response*), a symbol of the sacrifices made by Canada's sons and daughters in the Great War.

On a warm morning on June 7, 1939 the Royal train with King George VI, Queen Elizabeth and Prime Minister MacKenzie King, as part of their 36 stops in Ontario, stopped in London, Ontario. With the planned exodus of local citizens to see the Royal couple in London, Sarnia's Mayor Norman Perry had decreed June 7th to be a civic holiday in Sarnia, and many offices and businesses closed for the day. While in London, the Royal procession passed more than 200,000 people through the downtown streets of London, including an estimated 60,000 school children cheering and waving flags. Thousands of Sarnia and Lambton County residents, including 3,600 school children, travelled to the city by automobile, bus and special trains to witness the historic occasion. Sarnia was officially recognized in that Mayor Norman Perry and his wife were presented to the Royal Majesties at a reception, along with other prominent citizens. Also taking part in the event were local militia, members of the Royal Canadian Legion, city constables, three Sarnia bands and members of the 26th Lambton Battery. In Europe, it was apparent that war was looming. Less than three months after the Royal visit in London, war was declared.

• **SARNIA PREPARES FOR WAR:** With the situation in Europe growing more tense, Sarnia was already preparing for the possibility of war. In late August of 1939, Mayor Norman Perry, local authorities and industry representatives had plans to place armed guards on the St. Clair Tunnel, the Canadian approach of the Blue Water bridge, the Sarnia Waterworks, the hydro sub-station, Imperial Oil Refinery, Mueller Limited, Dominion Salt Company, Holmes Foundry, the wireless station at Point Edward, the Lambton Garrison armory, the grain elevator and other industrial plants. Unarmed guards were already at these locations, on 24-hour duty, on lookout for saboteurs and spies. One week after the start of the war, many of these guards were then armed. Immigration officers were increasing their screening of persons entering the country from the United States. The militia was prepared for mobilization, including the reorganized **Lambton Regiment** made up of three Sarnia military units: the **26th Field Battery, Royal Canadian Artillery; the 11th Field Company, Royal Canadian Engineers; and the 1st Field Park Company, Royal Canadian Engineers**. In Watford, there was the 48th Howitzer Battery, Royal Canadian Artillery. In the event of war, efforts would be made to immediately bring all of these units to war strength.

By May of 1940, the Sarnia Legion was recruiting volunteers from their registry to form a Sarnia platoon of the **Veterans' Home Guard**, a uniformed and armed unit of men responsible for combating any "Fifth Column" or other subversive elements in Sarnia, Forest, Watford, Thedford, Petrolia, Moore Township and Point Edward. By June 1940, close to 100 men had volunteered for the Home Guard platoon, and another 300 men had signed up for active duty in the Veterans' Auxiliary Home Defence Force.

The first Sarnians to go to war went two days before the outbreak of war. On August 29, 1939, five artillerymen from the 26th Field Battery, R.C.A. (Non-Permanent Active Militia) enlisted for active service to man coastal batteries in Eastern Canada. Bombardiers B. Baker and W. Torpe and Gunners J. Bennett, H. Tinkham and L. Abbott were the first men to leave Sarnia for service in World War II.^N

• **THE WAR BEGINS:** The Second World War began on September 1, 1939, when German forces swept into Poland in a “blitzkrieg” (meaning lightning war) attack. German armoured (Panzer) divisions destroyed Polish defences, with Hitler urging his generals to “kill without mercy men, women and children of the Polish race or language.” At 11:00 a.m. on Sunday, September 3, 1939, Britain, Australia, New Zealand and France declared war on Germany, though it was too late for Poland.

The next day, the September 4, 1939 *Sarnia Canadian Observer* front page headlines read;
REPORT MAJORITY OF PASSENGERS, CREW OF TORPEDOED BRITISH LINER RESCUED.
MONTREAL-BOUND SHIP CARRYING 1,347 PERSONS, MOSTLY CANADIANS, REPORTED SUNK BY NAZI SUBMARINE

London, Sept. 4 – A rescue fleet guarded by guns of British destroyers, was officially reported today to have saved all but the few persons killed by the explosion which sank the Montreal-bound Donaldson liner Athenia, which British officials said was torpedoed by a German submarine in the North Atlantic... Presumably the Athenia was torpedoed around midnight, Greenwich time (8 p.m. Sunday E.D.T.) while running without lights in a smooth sea.

• **THE ATTACK ON THE ATHENIA:** After Britain declared war, Germany’s first target was this passenger ship bound for Canada. The 13,400-ton British passenger liner *SS Athenia* left Glasgow on September 1, 1939, picked up more people off Belfast that evening, and then went on to Liverpool to receive its final passengers. The international crisis in August—failed alliance talks between Britain, France and the Soviet Union followed by the Nazi-Soviet non-aggression pact of August 23—had resulted in a crush of people attempting to get home before hostilities broke out. On September 2 at 4:00 p.m., the unarmed *Athenia* with 1,418 aboard (1,102 passengers and 316 crew) headed through the North Channel around Ireland and into the Atlantic Ocean, unescorted bound for Montreal. The passengers included about 500 Jewish refugees, 469 Canadians, 311 Americans and 72 British. Normal shipboard routines—church services and seating assignments in the dining rooms—carried on, although some wartime precautions were taken: portholes were covered and lifeboats were readied for use.

On September 3, two days out of port and northwest of Ireland, at approximately 7:30 p.m. that evening as the evening meal was being served, German U-boat *U-30*, which had been tracking the *Athenia* for about three hours, surfaced and without warning, fired two torpedoes directly at the defenceless *Athenia*, and later a third. The first of the torpedoes struck the *Athenia* squarely and exploded, ripping open the bulkhead between the engine room and the boiler room (the second torpedo misfired).

The U-boat commander, having sighted the *Athenia* running without lights and sailing in a zig-zag anti-submarine pattern, had apparently mistaken the vessel for an armed merchant cruiser or troop ship. Germany was committed by treaty not to sink civilian passenger ships, and having realized his mistake, the commander neither rendered assistance nor reported the incident, but simply silently steamed away. The U-boat commander swore his crew to secrecy and ordered them to never speak of the attack. He also altered the ship’s official log to erase any connection with the attack. It was only in 1946 that the truth about the attack was finally revealed during the Nuremberg trials.

On that fateful night, all 26 lifeboats were launched, although there were some difficulties in getting many of the women and children into them. Fortunately, distress signals were received by ships reasonably close by. In the chaos, some families were separated while getting into the lifeboats. Adding to the confusion, survivors were taken to different ports: Glasgow, Scotland; Galway, Ireland or Halifax. Though the *Athenia* remained afloat after being torpedoed, she would eventually sink beneath the waves, stern first, approximately 14 hours later.

A total of 117 were killed (19 crew and 98 passengers) in the unprovoked attack. A number were killed in the initial torpedo explosion and others in the difficult circumstances in the lifeboats. Among the victims was Hannah Baird of Montreal, a stewardess on the ship and Canada’s first fatality of the Second World War.

Another young Canadian girl was among the casualties: ten-year old Margaret Janet Hayworth, of Hamilton, Ontario suffered head injuries from the flying debris and would die several days later at sea aboard a rescue vessel in her mother Georgina’s arms. Waiting at the pier for his wife Georgina to disembark from the rescue ship was her husband John Hayworth. Georgina met him, and sobbed, “*Dear God, John, she’s gone.*” A photograph in many of the newspapers of the hastily made coffin of young Margaret Hayworth being carried from the rescue ship stirred the nation and brought home the cruelty of war. A few weeks after the sinking, flags across Canada flew at half-mast in Margaret Hayworth’s honour. A public funeral was held for her in Hamilton where over one thousand mourners attended. The British and Canadian governments used the sinking of the *Athenia* as a propaganda tool to rally support

for war.^{2E, 5B, 7Q}

The sinking of the *SS Athenia* had a local connection. Following is a story from the September 4, 1939 *Sarnia Canadian Observer*;

Petrolia Mother and Daughter Had Booked On S.S. Athenia

A Petrolia husband and father was anxiously awaiting this morning, word of the safety of his wife and eight-year-old daughter who had booked passage to Canada on the S.S. Athenia, which sailed from Glasgow on Friday. Mrs. Mary (Blair) Clark and daughter Catherine were due to sail on the ill-fated liner after concluding a holiday in Britain and Dawson Clark, the husband and father this morning waited in great anxiety for word at the Petrolia telegraph office. Mr. Clark is a bricklayer at the Petrolia refinery.

Also anxious for news was Mary Clark's sister, Mrs. Peter Barclay of Sarnia. Mary Blair Clark and her daughter Catherine were sailing home from a trip to her Scottish homeland, travelling third-class right next to the engine room. On September 6th, three days after the attack, husband Dawson Clark and his two children in Petrolia, received a cablegram informing him that his wife and daughter were rescued and were now safe in Scotland. Following is Mary Clark's account of her harrowing experience on that fateful day:

My little girl had been seasick. I was in the cabin with her and had just told her to be good, as I was going to the ship's church that night. This was at approximately 7:30 o'clock, ship's time. I was dressing for church when the awful noise of the explosion came. You can imagine my feelings as the lights went out and I groped in the darkness for my daughter. Then, to my horror, I felt water around my legs.

Praying to God I clasped Catherine and ran from the cabin. I placed her on my back, pulled her arms around my neck and her legs around my body. Before I had gone more than a few yards along the corridor, the water was up to my waist and before I could reach where the stairway was supposed to be it was up to my neck. I had to swim with Catherine on my back to where the stairs were to find they had been torn away by the explosion. It was impossible to walk. How I managed to get onto the upper deck, I shall never know. Perhaps if it had been only for my own life I was frightened, I would have been overcome, but I was battling for my daughter's life. Wreckage was under our feet and over our heads.

On deck we found that lifeboats were already being filled and lowered away. The only trouble was with foreign passengers, who pushed their way into the lifeboats even ahead of the women and children. Only after one of the sailors grabbed a hatchet and threatened violence were the foreigners held back. The rule of the sea is children first, then women, male passengers and last of all, members of the crew and the officers. Children were being taken out of their mother's arms and placed in lifeboats. The lifeboat I was in was the last to leave. There were 80 of us cramped into a boat which normally would hold 50 persons. The only reason I can give for our escape was that we were quartered on the starboard side while the torpedo hit the port side. Many on the port side were either killed by the concussion or drowned as the water rushed in.

We were torpedoed at 7:30 o'clock, Sunday evening, September 3, and drifted on the ocean in our lifeboat from 8 o'clock that night until 9 or 10 o'clock Monday morning when two British destroyers, Electra and Escourt reached us.... Drifting all night in the open lifeboat under ordinary conditions would have been terrible enough, but to be burdened with the fear that we might again be fired upon added to our distress. Indeed we did hear one more torpedo, but whether it was directed at the lifeboats we could not tell. Later in the evening it started to rain to add to our discomfort.

After being picked up by the Electra, we were taken to Greenock and later to Glasgow... One pathetic incident which stands out clearly in my mind is that of a mother who was looking for her 10-months-old daughter. When the two destroyers met at Glasgow, she was anxiously scanning the passengers on the other boat and when she saw two 16-year-old girls holding up her daughter, she cried, "Thank God, my baby!"

When Mary Clarke climbed the railings of the remnants of the stairs in the dark and flooding ship during her escape, her legs were heavily lacerated as a result of rubbing against the twisted debris in the ship's hallways. When she and her daughter got on board the last lifeboat, they spotted an abandoned five-year old girl who was crying out for her mother. Mary Clarke helped to guide the young girl by the hand into the lifeboat, comforting the five-year old and her own daughter Catherine. They would spend all night in a crowded lifeboat during a dark and rainy night, and were rescued the next morning and brought back to Scotland. Aside from the damage to her legs, Mary Clarke also developed a bronchial infection as a result of her trials at sea. The five-year old girl who had been separated from her

mother, and who would be re-united with her again, was Jacqueline Hayworth, the younger sister of ten-year old Margaret Hayworth, daughter of Georgina Hayworth.

Another Sarnia connection in the sinking of the *Athenia*: a few weeks after the sinking, (Sarnia) Collegiate Institute and Technical received a letter from Thomas Nelson and Sons publishers, informing the school that a shipment of text books destined for the Collegiate had gone down with the ship.

- **CANADA ENTERS THE WAR:** Although Britain declared war on Germany on September 3, Canada was not automatically committed by that declaration as it was in 1914 – though there was little doubt that Canada would quickly follow. On Sunday, September 10, 1939, King George VI announced that, by a decision of Canadian Prime Minister William Lyon Mackenzie King and the Canadian Parliament, Canada was at war with Germany.

On Monday, September 11, 1939, the *Sarnia Canadian Observer* front page headlines included;

POLISH ARMY STILL HOLDING WARSAW DEFENCE LINES

BRITAIN INTENSIFIES HER NAVAL & ECONOMIC WARFARE AGAINST GERMANY

CANADA'S PARLIAMENT TURNS TO BUDGET AFTER APPROVING WAR ENTRY

Proclamation Declaring State of War Exists Between the Dominion and Germany Little More Than Thirteen Hours After Commons and Senate Almost Unanimously Approved Government Decision-Provision of Sinews of War Next Step.

Ottawa, Sept 11 - Canada, exercising her rights and responsibilities as an independent nation, has cast her lot with the British and French against German aggression and has become a self-declared belligerent for the first time in the dominion's history... In a rapid sequence of events beginning at three p.m. EDT, Saturday (Sept 9), and ending at 1:10 p.m. Sunday (Sept 10), both the senate and house of commons approved the government's decision and a proclamation was issued declaring a state of war existed as from Sept. 10 between Canada and Germany. This was the first time Canada declared war herself...

For one local Sarnia family, there was both joy and sadness when the war began. John Koziol, the proprietor of New Service Shoe Repair on Christina Street, had arrived from his native Poland in 1928, leaving behind his family. On August 29, 1939, John's wife Nellie and their two sons, Fred, aged 18 and John aged 12, arrived in Sarnia from Poland. Three days later, Germany invaded Poland. The newly arrived Koziol's, who did not speak English, were glad to be reunited as a family in the safe haven of Sarnia, Canada, but were concerned about the family they had left behind. John's hometown in Poland, where his brothers and sisters were residing, had been bombed by the Nazi's.

Canada was unprepared and woefully under-equipped for war. The Permanent Force army of 4,200 men, augmented by 51,000 partly trained reservists, possessed virtually no modern equipment. The navy had only four minesweepers and six destroyers, the smallest class of ocean-going warships. The navy's complement at the outset was 1,850 ratings, 131 officers and approximately 1,500 reservists. The RCAF had only 195 aircraft, most of which were obsolete. Air force personnel numbered roughly 4,000 members. If ever a nation was unready for war, Canada was it.

Though war was declared on September 10th, in September alone, over 58,000 Canadian men and women volunteered to serve, including about 4,000 Great War veterans.^{D, E, 7P} As in the Great War, the vast majority of Canada's men and women in uniform were not professional soldiers, but ordinary civilians who left their schools, farms, factories, careers and families to serve their King and country. And as in the Great War, the Germans would come to both admire and fear Canadian soldiers for their resilience, tenacity, and courage.^{3Y}

- **SARNIA RECRUITS:** The qualifications posted in Sarnia for enlistment were: the individual had to be a British subject, between the ages of 18 and 45, of good character, and reported physically fit by a medical board. In uniform, a man received regular meals and shelter, clothing, \$1.30 a day for Privates and \$35 a month for his wife, plus another \$12 per child (to a maximum of two). Other enticements were free medical and dental service, including free spectacles and false teeth if they needed them.^{4H, 9V}

Following is a portion of a report from the September 11, 1939 *Sarnia Observer*, one day after Canada declared war on Germany:

*War Declaration Speeds Up Recruiting
Applicants Rush To Join The Colors*

Canada's declaration of war upon Germany today had the result of swamping the local recruiting depot with

applicants for enlistment. Following a lull on Friday and Saturday, when Canada's position did not appear clear to the man in the street, the events of the weekend completely changed the situation at recruiting headquarters today. Interview officers of all three units were kept busy and the medical board was working at top speed. Swelling the ranks of local men anxious to join up were a large number of the 48th Howitzer Battery of Watford which is not under mobilization orders. There were also many from Chatham and Kent County arriving by bus, car or by hitch-hiking on trucks to sign up...

If American citizens are accepted as they may be shortly, there will be no dearth of applicants from Michigan anxious to join Canadian units. Recruiting officers said today there has been a steady stream of inquiries from Americans anxious to join. None of them, however, wants to serve in a unit which will not be sent overseas. "We want to fight Hitler and we want to get to it as soon as we can," most of them are reported as saying. The air force is mentioned in most inquiries. "We expect that the battery will be at its full strength of 168 men by the end of this week," Major W.E. Harris, O.C., of the 26th Field Battery, Royal Canadian Artillery said.

In early September 1939, the military staffs at the armory on Christina Street and the recruiting station on Front Street were working at top speed enlisting men for service in the Canadian Active Service Force. Recruits were coming in from Inwood, Alvinston, Petrolia, Port Lambton, Wyoming, Forest, Camlachie, Walpole Island, Brigden and other surrounding communities such as Wallaceburg and a good many from Windsor. Military recruiters reported that the men who were enlisting were anxious for active service overseas, and did not care for any "home guard" assignments. In one case, a young Irish orphan enlisted in Sarnia who had lost both his mother and father in the Great War when he was just a baby. He was jobless and his only relative was an aunt in Ireland, for whom he had no address. At his enlistment, he made his will out to his former orphans home.

Among those turned down locally early in the enlistment process were a large number American men from Michigan; several Czecho-Slovakian men who had been in Canada for years but were never naturalized as a Canadian; a sturdy, young Polish-Canadian lad who had been accepted, but then rejected after his father came in and disclosed his true age of fifteen-years old; two husky-looking Native men who were described by the proud recruiting officer as "splendid types of manhood", but were rejected when physical examiners discovered that both volunteers were nearly blind; and several fathers and sons applied together, but in most cases, only the sons were accepted.

Following is a portion of a report in the *Canadian (Sarnia) Observer*, September 1939, describing the scene at the recruiting depot on North Front Street:

... Crowds of young men have been standing in front of the recruiting office ever since it opened. They chat with sergeants and privates stationed in front to answer questions. They then often retire to stand on the curbstone for hours in indecision. Unobtrusively then they slip into the depot and in practically no time, are in the army. Inside the recruiting office door are the recruiting officers for the various companies. The volunteer talks to them and states what branch of the army he would like to join and describes his qualifications. If he seems to fit the requirements here, he is sent upstairs to the medical board where he has to pass three separate doctors who examine him for different things.

If he passes the medical examination, and he has to be good to do so, he is passed along a long line of desks behind which are clerks who take down and record a great deal of information about the recruit. Then he is sworn in and told to go on parade the following morning at the armories where he is issued a uniform. He is signed up for the duration of the war....

Recruits in Sarnia took part in physical training, military drills, marching and weapons training at the armory and collegiate campus. In mid-September 1939, one of the issues military officials had to deal with was the shortage of clothing and shoes. Major McIntyre of the 11th Field Company stated, *"It would be a good time for some kind angel to organize a drive for funds so that we could buy enough boots to carry on with for the present. We have two cobblers in the unit who can repair any old shoes and they need not be high shoes either. We can take oxfords, just as long as we can get the men into sturdy enough footwear for drill purposes."* Men were being excused from marching exercises, because of the condition of their shoes. Within days, local citizens, downtown merchants and the Red Cross Society contributed more than enough shoes for the troops.

By the end of September 1939, all three units of the Lambton Garrison—the 26th Field Battery, Royal Canadian Artillery; the 11th Field Company, Royal Canadian Engineers; and the 1st Field Park Company, Royal Canadian Engineers, had their ranks filled to full strength. In late September, the recruits moved to a camp encompassing all of Bright's Grove and Lake Cabin Cottages for a six-week intensive training period, where Major Harris stated, *"We are going to make these men into soldiers."*

Recruiting did not stop with the three Lambton Garrison units. Sarnians were also recruited into the Royal Canadian Regiment, the 48th Highlanders, the Essex Scottish, the First Hussars, the Royal Canadian Ordnance Corps, the Royal Canadian Army Service Corps, the Royal Canadian Army Medical Corps, the Perth Regiment, the Elgin Regiment and the Kent Regiment to name a few.

In late September 1939, all German nationals in Lambton County over 16 years of age were obliged to report for registration at the R.C.M.P. office on Queen Street or the office detachment in Port Lambton. The chiefs of police in Petrolia, Forest and Watford were authorized to receive registrations there. German nationals, and those born in territories which were under sovereignty or control of the German Reich on September 3, 1939, were required to report weekly to their place of registration for the duration of the war, and they were issued permit cards, which they were required to carry with them, subject to arrest. In June of 1940, the order to register at the nearest R.C.M.P. headquarters had been expanded to include, "all aliens of German or Italian origin and all persons of German and Italian origin naturalized since September 1, 1929." Also in June 1940, the Royal Canadian Mounted Police ordered that all persons living in Canada who were not naturalized Canadians or of British birth, must surrender all their firearms or be prosecuted under the Defence of Canada Regulations.

In October 1939, the Sarnia city council pledged to hold soldiers' jobs for all city employees who enlisted in the Canadian forces. A number of local industries endorsed the plan and agreed to do likewise, including Imperial Oil Limited, Canadian National Railways, Doherty Manufacturing Company, and the John Goodison Thresher Company. The policy stated that permanent employees enlisting for military service would be assured of re-employment upon demobilization from His Majesty's service. John Goodison stated, *"It is one of the least things that is within our power, and we shall be only too pleased to extend such a little service to those who would be serving us and their country in these troubled times."*

Also in October 1939, for one Sarnia man, his time in the service was short. Louis Farkas was born in Karcag, Hungary and had served with a machine gun company in the Hungarian army. At age twenty-seven, he was boarding at 215 Water Street, Sarnia, when he enlisted in the army, a member of the 11th Field Company, Royal Canadian Engineers, with the rank of Sapper. After he entered the Canadian army, he discovered that his brothers, living in Czecho-Slovakia, had been conscripted into the German forces. While his mother was still living in Karcag, Hungary, his brothers were living in Czecho-Slovakia, when it was seized by the Germans. His brothers were then conscripted into Hitler's army. Louis Farkas applied for discharge because he did not want to run the risk of looking along a rifle barrel at his brothers in the trenches opposite.

On May 12th 1940, the grim realities of war were brought home to the people of Sarnia when the three local units of the Canadian Active Service said farewell. More than 5,000 citizens cheered the members of the 26th Field Battery of the Royal Canadian Artillery, the 11th Field Company and the 1st Field Park Company of the Royal Canadian Engineers as they marched from the city hall square along Christina Street toward the Athletic Park. Marching along with the well-precisioned, smartly dressed soldiers were four bands, two hundred veterans of the last war, and bringing up the rear of the parade were the blue-uniformed cadets from the Sarnia Collegiate Institute and Technical School. At the Athletic Park, there were speeches, hymns, prayers, the playing of the National Anthem and a final march-past the grandstand. On their return to city hall square, the men of the 26th Field Battery were dismissed for a brief hour and a half to be with their families and friends, before leaving from the Canadian National Depot at the Tunnel Station. There was a surging crowd of close to 2,000 at the train station, with many tearful farewells prior to the departure of the 26th Field Battery.

The Engineers had marched off from City Hall Park to the armory parade grounds for dismissal. They had a few extra days before they had to return to barracks in London, where they would move out soon after. Two weeks later, the rousing send-off for the three units mobilized in Sarnia was repeated in Guelph and London. The 26th Field Battery departed Guelph for Petawawa Camp, while the 11th Field Company and the 1st Field Park Company of the Royal Canadian Engineers departed London for Petawawa. Hundreds of citizens from Sarnia made the trip to both cities, joining thousands of others, as the troops marched through the city centers to the train stations. Along with the cheering crowds were many touching scenes as the men bade goodbye to their wives, mothers, sweethearts and friends.

• **CANADA'S SOLDIERS:** One of the myths about the Second World War was that most Canadians enlisted to escape unemployment; in fact, eight out of ten who enlisted in the first three years of the war left jobs or occupations to sign up. The remainder included students, those who just finished school and those not yet ready to seek full

employment.^{2B}

Proud Canadians: Unlike in the Great War, when about half of Canadian soldiers were British-born, in this war, the proportion was far smaller: the vast majority of Canadian service personnel now were Canadian-born. With their own uniforms, units, and symbols, Canadians took pride in their distinctive status. The flip side was often a yearning for home. They wrote of missing Canadian food, leisure activities, community and family. The first of the Canadian servicemen arrived in England in December 1939. The 20,000 1st Canadian Infantry Division included both professional and volunteer soldiers. The average rifleman was twenty-three years old (and thousands were teenagers), stood about five foot seven, and weighed less than 140 pounds, and more than half had left school before grade seven. As a result of the Depression years, many of these young Canadians were forced to abandon formal education in order to put food on the family table.^{4H} At Aldershot camp, the Canadians prepared for war, with much of the training based on what had been learned in the Great War; an emphasis on marching, bayonet work, and digging trenches, and rarely rifle firing due to small arms ammunition shortages.^{4H}

World War II has been referred to as a “**young man’s war**”. Approximately 700,000 Canadians under the age of 21 served in uniform during the Second World War. In World War I, the average Canadian soldier age was 26, whereas in World War II, the average age of a rifleman was 23.^{D, 4H, 8M}

Sarnia’s fallen soldiers numbers reflect the claim that the Second World War was a “young man’s war”. Of the 185 World War II Sarnia fallen soldiers included in this Project, 70 of them enlisted as teenagers (age 19 or under). This equals 37.8% of Sarnia’s WWII fallen enlisted as teenagers. Of the World War II fallen soldiers included in this Project, 113 of them enlisted at age 21 or under, representing over 61%. The median enlistment age of Sarnia’s WWII fallen was 21 years old.

Of the 185 World War II Sarnia fallen soldiers included in this Project, 59 of them were between the ages of 17 and 21 when they were killed, representing almost one third of Sarnia’s WW II fallen. Of the World War II fallen soldiers included in this Project, 129 of them, or almost seventy percent of Sarnia’s fallen soldiers were age 25 or under when they were killed. The median age of Sarnia’s WW II fallen soldiers is 23 years old (vs. the median age of Sarnia’s World War I fallen soldiers is 26 years-old).

Old Enough to Fight II: In the First World War, an estimated 15,000 to 20,000 underage Canadian youths (under the age of 18, later changed to 19), some as young as ten, volunteered to serve. By the Great War’s end, an estimated 2,300 underage soldiers were killed in action.^{2J} This includes two of Sarnia’s WWI fallen; Robert Batey who was killed at age fifteen, and Norman Brearley who was killed at age seventeen.

At the outbreak of the Second World War, teenage boys again flocked to the recruiting centres to enlist. Requirements for volunteers were that they had to be between eighteen and forty-five years of age. Boys under eighteen were legitimately welcomed in with the rank of “boy soldier” or “boy sailor”. The minimum age for overseas service was nineteen, and recruits had to have a minimum height of five-feet-four, be in good health and be British subjects “of good character.” Sometimes boys as young as 13 would lie about their age, or use falsified written consent letters from a parent, or went with the blessing of a parent in an attempt to enlist in the military.

The creation of a National Registration Certificate during the Second World War, which all Canadians sixteen years of age and older were legally required to carry at all times, made it more difficult for underage youth to join. At recruiting centres though, birth and baptismal certificates were not required—those in line were simply asked to state their age. Underage applicants were rejected in larger numbers at the recruiting centers than in WWI. Despite this, many of underage volunteers who looked old enough were often accepted, while many of those who were rejected by one service would simply apply to another, and many underage men and women ended up serving in the Merchant Navy.

In World War II, an estimated 30,000 underage soldiers from across the country fought for Canada. The exact number is unknown because the majority got in by fudging their birthdate by as much as two to three years. Some went beyond that and passed themselves off as an older brother. For those who joined before they were legally allowed to enlist or proceed overseas, they were usually no longer underage by the time the Second World War was over. For example, sixteen and seventeen year-old boys who joined in 1939 or 1940 and survived the war, were twenty-one to twenty-three years old by the time the war ended in 1945.^{D, 8M}

The youngest Canadian soldier killed in the Second World War was fourteen-year old Claude Brooks, a reservist, who was killed along with two others in an armoured vehicle accident in Prince Edward Island in

September 1944. Two of the youngest Canadian soldiers killed while overseas during the Second World War were Gerard Dore and Edward “Teddy” James Wright, both of whom lied about their age when they enlisted. Private Gerard Dore was from Quebec, and enrolled when he was fifteen years old. He became a member of the Les Fusiliers Mont-Royal, R.C.I.C., arrived in France on D-Day + 2, and two weeks later, was killed in action on July 23, 1944 during the Battle of Normandy, at age sixteen. Flight Sergeant Teddy Wright was from Winnipeg, and also enrolled when he was fifteen years old. He became an Air Gunner with Bomber Command, RCAF No. 428 (Ghost) Squadron, and while on a cross-country training flight in England in late April 1945, the Lancaster bomber that he was in broke up in the air, spiralled into the ground, resulting in the death of all seven aboard, including sixteen year-old Teddy Wright. He had served in 428 Squadron for eight days.

Possibly the youngest airman in Bomber Command killed in action during the war was Winnipeg-born Leonard Jonasson. He joined the RCAF when he was sixteen years old. After air gunnery training in Canada, he arrived in Britain five days before his seventeenth birthday. He would soon be posted to 76 Squadron RAF, taking part in the Battle of the Ruhr. Less than three weeks after he joined 76 Squadron, on only his third trip over occupied Europe, mid-upper gunner Sergeant Len Jonasson was killed. On April 16, 1943, aboard a twin-engine Halifax bomber returning from a raid in occupied Czechoslovakia, the bomber was shot down by a German night fighter over France. All seven on board were killed including Len Jonasson, who was killed three months to the day after his seventeenth birthday.^{8M}

Like their predecessors a generation before, the underage young men who enlisted in the Second World War had many of the same reasons for joining as those in the First World War. Reasons included: an opportunity for adventure; there was a ruthless enemy to defeat; for excitement and to see the world; patriotism; to follow the example of a family member who fought in the Great War; their friends were signing up; a chance to “be somebody”; to wear a uniform and impress the girls; and the desire to avenge the death of a brother, father or close friend killed overseas. For some it was the appeal of regular pay after the poverty of the Depression.^{D, 8M}

In World War II, a number of Sarnia’s young men who enlisted for service were underage. They either lied about their age and/or required a parent’s permission to enlist. Some of these boys made the supreme sacrifice. Of Sarnia’s fallen WWII soldiers, the youngest enlistees include sixteen year-old’s John Dowding and Ross Stevens, and seventeen year-old’s James Banks, Paul Brown, Robert Dionne, Robert Lochhead, John McKernan, Stephen Powell, Geoffrey Stone and Stanley Teskey. Among Sarnia’s WWII fallen is one seventeen year-old (John Dowding), three eighteen year-olds (Gilbert McFadyen, Stephen Powell, Ross Stevens) and thirteen nineteen year-olds.

What they wore at the front: Even in England, the lack of preparation for war was apparent. George Orwell described it in *England Your England: After 1934 it was known that Germany was rearming. After 1936 everyone with eyes in his head knew that war was coming. After Munich it was merely a question of how soon the war would begin. In September 1939 war broke out. Eight months later it was discovered that, so far as equipment went, the British army was barely beyond the standard of 1918. We saw our soldiers fighting their way desperately to the coast, with one aeroplane against three, with rifles against tanks, with bayonets against tommy-guns.*^{11D}

In Canada, just as in 1914, there were too few uniforms for the first units readying to go overseas. Boots were in short supply and some units had only Great War uniforms on hand. But beginning in late 1939, soldiers began to wear a Canadian-produced higher quality version of the British-designed **battle dress** uniform. Soon all soldiers had it. The blouse, made of khaki wool serge, was a waist-length garment with two breast pockets and a collar buttoned at the neck. The matching loose-fitting wool trousers had belt loops, buttons for braces and pockets to hold maps and a field dressing. Although the battle dress was of good quality, it was hot in the summer and not warm enough in cold weather. In action, the uniforms absorbed dirt and mud and became sodden in wet weather.

From 1943 on, men in the field wore a beret, khaki for most, black for armoured units and maroon for airborne. In action, soldiers wore a heavy steel Mark II or III helmet with a chinstrap and camouflage net. Soldiers in training, those in armoured units and those working with vehicles and machinery wore khaki or denim overalls. Summer dress ordinarily consisted of a khaki shirt and shorts. In winter in the field, they might be covered with a greatcoat or parka, occasionally even with leather jerkins, sheepskin jackets or white ski pants and jacket.

Every soldier had the 1937 Pattern Web Equipment—an interconnected harness system of belts and braces worn across the shoulders and fastened at the waist—for carrying their “kit”. Waterproofed and dyed to a khaki colour, and maintained with regular applications of “blanco” cleaning compound, the web equipment was

uncomfortable and awkward when fully loaded. Components included: a variety of pouches for ammunition; a respirator case; utility pouches for extra ammunition; a bayonet hanger for their bayonet; an entrenching tool carrier (for spade or pick); and a small pack for necessities that included aluminum mess tins, a water bottle, spare socks, rations, a shaving kit and toothbrush, shoe polish, a sewing kit, a folding knife/spoon/fork, a pay book, mail from home, cigarettes, and a ground sheet. The soldiers' large pack, designed to be carried on the back, was usually left behind with the unit transport, and held sleeping gear, blankets, the greatcoat and other equipment considered unnecessary in action. Officers had a binoculars case, a compass case and a pistol holster.

In battle, soldiers adapted their equipment to what worked best. Each carried a heavy load of some 20 kilograms. A Private carried a Lee-Enfield No. 4 Mk I .303 rifle and one or two bandoliers holding 50 rounds each. He usually carried one or two 30-round magazines for his platoon's three or four Bren light machine guns, at least two No. 36 or No. 69 hand grenades, and likely 2-pound bombs for the 2-inch mortar or 3-pound projectiles for the company PIAT (projector, infantry, anti-tank) weapon (weighing 14.5 kg). Bren gunners had to lug the gun, weighing some 10 kilograms, and wireless operators carried the bulky radio with its telltale aerial sticking up high. Another weapon used by infantrymen was the Vickers .303 machine gun (15 kg without water) that was normally fired from a tripod (weighing 23 kg). Most non-commissioned officers had Sten machine guns (weighing 3 kg), and officers had a Sten and a revolver. In Italy, Tommy guns were used.^{2E, 3F, 4A}

What they ate at the front: The army fed the troops well, but there was no pretense of fine dining. For many who grew up in the Depression, army grub suited them just fine. If rations could not be brought forward in the field by company cooks, soldiers lived on the Composite Ration Pack, a crate with enough food for 14 men for 24 hours. Put together in Britain, 'compo' rations included hardtack biscuits, waxy margarine, tins of meat and vegetables, cheese, tea, jam and hard candies. One of the most sought-after cans was that of a sweet molasses-soaked pudding. There was also matches, seven cigarettes for each man, canned heat, and six sheets of toilet paper per soldier.

On the other hand, a good company cook could feed his soldiers well. Cooks scrounged for food, supplementing issued rations. The Company Quartermaster-Sergeant (CQMS) had the food carried forward in 'dixies' (large iron cooking pots) that kept the contents hot. The men ordinarily received a diet heavy on bread, potatoes, beans and meat that aimed to provide at least 3,000 calories a day. Individual soldiers also foraged, liberating what food they could from civilian homes and farms. Parcels from home were prized, especially those with chocolates, biscuits, and Canadian cigarettes (which also functioned as hard currency in the Netherlands and in occupied Germany).

For water—the civilian water supply often had been destroyed and there was the rational fear of poisoned reservoirs. In the field, rivers and streams too often were full of dead humans and animals. Using purification tablets, a two-step, 30-minute process, made the water foul-tasting. The only truly potable supply of water came from the Army Service Corps' tanker trucks, although it invariably tasted of chlorine.^{2E, 4A}

• **THE BATTLE OF THE ATLANTIC**, September 3, 1939 – May 8, 1945: It was the longest continuous battle of the Second World War and one in which Canada played a central role. It began on the opening day of the war, and ended almost six years later with Germany's surrender. It was the struggle between the Allied and German forces for control of the Atlantic Ocean.

As country after country fell in Europe before the Nazi onslaught, Britain's very survival depended on what it could receive by sea. Germany was determined to starve the British people into submission by destroying their sea communications and seaports, and cutting them off from overseas supplies. The Allies needed to keep the vital flow of men, machinery, arms, fuel and basic resources going between North America and Europe.

The Canadian ports of Sydney and Halifax, Nova Scotia, along with St. John's, Newfoundland (known affectionately as "Newfy John" or the "Hole in the Rock") were the crucial bases from which the merchant ships under Royal Canadian Navy (RCN) protection, left for the frightful trip across the inhospitable and dangerous North Atlantic. The war was also brought to Canada's doorstep as German U-boats looked for, and successfully torpedoed ships off the Canadian port cities, and even in the St. Lawrence River. The Battle of the Atlantic was the only campaign actually fought in Canadian territory, as aircraft and warships left from Canadian bases to fight the enemy within sight of the Canadian coast.

Canada's Merchant Navy, along with the Royal Canadian Navy (RCN) and the Royal Canadian Air Force

(RCAF) played a vital role in the Battle of the Atlantic. The Royal Canadian Navy's fleet included destroyers, cruisers, corvettes, frigates, minesweepers and landing craft along with the Canadian Merchant Navy cargo vessels. All of these different types of vessels were turned out from Canada's shipyards in astonishing numbers during the war, approximately 344 warships alone produced between 1939 and 1945. The Canadian Navy made major contributions in the Atlantic (as far north as Greenland and Iceland, and as far south as the Azores), as well as in the Caribbean, the Mediterranean, the Indian Ocean, the Pacific, the Arctic (eg. Murmansk Run to northern Russia), and in European waters.^{D, 4H, 5B}

The Royal Canadian Navy: The Royal Canadian Navy consisted of three organizations that were frequently lumped together with little distinction under the title of Royal Canadian Navy: the professional force, the Royal Canadian Navy (RCN), were sailors that had made naval warfare their profession and had been trained at the naval college and on Royal Navy ships; the Royal Canadian Naval Reserve (RCNR), drew upon the merchant navy and the pool of men who made their living as fishers; and the Royal Canadian Naval Volunteer Reserve (RCNVR), the ordinary sailors from across the country who would form the bulk of the navy, eventually making up 84 percent of the force.

The three categories of sailor were distinguished by the distinctive stripes on the cuffs of their uniforms: the RCN had broad straight stripes; the RCNR had criss-crossed stripes; and the RCNVR had wavy stripes, which led them to calling themselves the "Wavy Navy."^{4H}

At the beginning of the Second World War, the Royal Canadian Navy (RCN) had only seven ocean-going destroyers, five small minesweepers, two training vessels and 3,500 personnel. By the end of the war, the Royal Canadian Navy had 434 commissioned vessels and 110,000 men and women in uniform (all volunteers). The Royal Canadian Navy had become the third largest navy in the world.

Like the other branches of Canada's military, the men who volunteered to serve in the Navy "for the duration of the war", were mostly untrained for war. They were young men from the Maritimes and British Columbia, from Quebec and the prairies, from the villages, towns and cities of Ontario like Sarnia. Many of them had never seen the sea until they came to it in the dark and perilous days of war. They boarded ships and sailed out to face and fight whatever odds might be against them.

Royal Canadian Navy sacrifices: The Canadian sacrifices in the triumph of the Battle of the Atlantic were high: 24 RCN vessels were sunk, and approximately 2,000 Royal Canadian Navy members and 752 RCAF members lost their lives during the Atlantic campaign.^{D, E, T, 2N, 4H, 4I, 5B, 6Z, 9G} At least twenty young men from Sarnia gave their lives while in service with the Navy. Fifteen of those were killed during the Battle of the Atlantic, including William Anderson, William Andrew, Joseph Bell, Paul Brown, Roy Grainger, Wallace Horley, Rowland Jamieson, Alfred Kettle, Hector Le Gare, William Lucas, Ralph Martindale, Michael Paithowski, Stephen Powell, Robert Rigby and Arnold Schildknecht.

During World War II, the Royal Canadian Navy was **reluctant to disclose information** to the public after an attack. The family of any sailor lost at sea usually received a telegram within days. Most of them were a few lines stating the name of the sailor, his service number and whether he was missing or dead. Specific details on where and how a ship was sunk – even if they were known to naval authorities – were not released until the navy deemed it safe. The military feared that any information about the location of attack, the identification of ship, the number of men killed, etc., would be helpful to the enemy. As the old saying went: "Loose lips sink ships." So in the interest of national security, family members of lost seaman were given very little information about the loss of their loved one.

The Royal Canadian Navy's "Fourth Arm of Service" was the **Canadian Merchant Navy**, the fleet of transport ships that carried desperately needed equipment, fuel, foodstuffs, clothing, steel, lumber, tanks, trucks, guns, munitions and personnel to Europe and around the world. In late August 1939, two weeks before the war began, Canada conscripted all merchant ships so the Royal Canadian Navy took control of all shipping. When the war began, Canada had only thirty-eight ocean-going merchant ships, including 10 tankers of Imperial Oil Limited, and about 1,500 sailors. By war's end, Canadian shipyards had manufactured 403 merchant ships (10,000 and 4,700 ton cargo ships), and added captured vessels to the registry. Also, in the desperate wartime situation, even Canadian Great Lakes fleet vessels were transferred from inland waterways to ocean convoy duties.

One of the major challenges facing the Merchant Navy was finding enough sailors to crew the ships. Virtually all seamen with sailing experience had already been recruited by the RCN, while most of the able-bodied men without sea experience were in the army and air force. The Merchant Navy turned to shipping companies that

operated on inland or coastal waterways, but also accepted men rejected by the navy or other services for being under- or overage or not meeting medical standards. Canadian mariners served in the Canadian merchant fleet and in all manner of vessels from other nations, and by the end of the war, an estimated 12,000 Canadian and Newfoundland men and women served in the merchant navy.^{D, T, 2E, 3F, 4H, 8M}

The Canadian Government fortified many merchant ships with armour, and equipped them with anti-aircraft guns on the stern, mounted machine guns, and other equipment for defence against surfaced U-boats and aircraft. Later they were given naval gunners or navy/army-trained merchant crews to man the weapons (these merchant ships were referred to as DEMS – Defensively Equipped Merchant Ships). Early in the war, many merchant ships were lost because escorting aircraft reached the limits of their flight capacity and had to turn back before the ships reached their destinations. The navy helped solve the problem by creating DEMS ships, building improvised flight decks on some merchant ships (referred to as “baby flattops”), and even creating Merchant Aircraft Carriers (MACs)—tankers or grain carriers equipped with a deck and three or four aircraft. Two RN commissioned merchant vessels were converted to World War II Canadian aircraft carriers, and were manned by largely Canadian crews—the *HMS Nabob* and the *HMS Puncher*. Severe damage from a German torpedo would prematurely end *Nabob's* career, but *Puncher* served until the end of the war.^{D, T, 2E, 2I, 4H, 6Z}

Outward-bound merchant ships sat deep in the water due to their hulls being crammed with food, fuel, munitions, and supplies, nor could they manoeuvre quickly. When the empty ships returned west, bad weather was particularly worrisome, as the boats were light, rode high and were unstable. The merchant mariners knew that their ships were prime targets for enemy action. The ships had to manoeuvre in crowded ranks, without lights, wireless or navigational aids. They knew the risks included the constant threat of fierce attacks by German submarines or air attack, the risk of collision, underwater mines, many of the ships were old and unsuitable for open ocean travel, and the hazardous weather, fog, gales, and ice conditions in the North Atlantic. Crossings were often an uncomfortable, nerve-racking experience, especially for those on board a ship loaded with munitions or fuel.

Though the merchant navy and its supplies were one of the essential keys to victory, the mariners rarely received the same respect as the sailors of the RCN. Many believed that they were overpaid; in fact, they earned only slightly more than ordinary seamen in the RCN – with the war bonus, a Merchant able seaman received \$119.12 per month, compared to \$90 for an RCN sailor on board a corvette. Officers on the other hand were better paid in the RCN and their income was tax-free. Even for decades after the war, Canadian merchant seamen were denied veteran status and most forms of government compensation, including pensions. It was not until 1992 that merchant mariners were granted official status as veterans, eligible to receive pensions, allowances and benefits accorded to veterans of the three armed services. In 2003, Canadian Parliament declared September 3 to be **Merchant Navy Veterans’ Day** annually.^{D, 4H}

Canadian Merchant Navy sacrifices: From 1940 to 1945, over 25,000 merchant ships left Canadian ports to Britain, carrying approximately 180 million tons of cargo, and thousands of other voyages occurred elsewhere. The majority of merchant vessels that were sunk during the war were torpedoed by U-boats. Vessels were also lost due to collisions and mines, Axis aircraft attacks and German surface ships. The costs of the Battle of the Atlantic were high: approximately 72 Canadian merchant ships were lost, and more than 1,600 Canadian and Newfoundland Merchant Navy men, women and boys gave their lives. Canada's merchant navy suffered proportionately higher casualty rates than the Army, Navy or Air Force. Their names are commemorated in the *Merchant Navy Book of Remembrance* along with the other Books of Remembrance located in the Peace Tower on Parliament Hill, Ottawa. One out of every seven Merchant Navy sailors who served was killed or wounded.^{D, T, 2E, 3F, 4I, 5B, 8M}

In Veterans Memorial Park in Point Edward, there is a large black stone monument honouring the Merchant Navy sacrifices in World War I, World War II and the Korean War. The Point Edward Canadian Merchant Navy Memorial reads, “In memory of the Canadian Merchant Seaman and the Canadian vessels lost by enemy action and those who served in the cause of freedom.” The Point Edward memorial has eleven names inscribed on it. At least two young men from Sarnia lost their lives while serving with the Merchant Navy during World War II; Arnold Schildknecht and Ross Stevens—their stories are included in this Project.

Along the waterfront in Centennial Park is **Sarnia’s Naval and Merchant Navy Memorial**, a large anchor dedicated to the Naval and Merchant Marines of the Second World War. Sarnia resident Laird Nixon discovered the anchor in the early 1970’s in the Lampel and Zierler junkyard on south Christina Street. He paid \$200, and had the over one ton anchor moved to the front lawn of his family home on Lakeshore Road. It is believed that the anchor

came from a “saltie,” one of the ocean-going vessels that occasionally haul cargo on the Great Lakes. In 1997, Laird and Doris Nixon donated the artifact to the City of Sarnia. The City moved it with a front-end loader, painted it grey and chose to display it at Centennial Park overlooking Sarnia Bay. As the Nixon family were water enthusiasts, and because Laird had a brother who served in the navy, the Nixon family dedicated the anchor with a plaque. The plaque on the anchor reads; “DEDICATED IN MEMORY OF THE MEN AND WOMEN WHO SERVED THEIR COUNTRY IN THE NAVY AND MERCHANT NAVY. DONATED BY LAIRD AND DORIS NIXON AND FAMILY SARNIA 1997”^{2m}

Convoys: The sinking of the British passenger liner *SS Athenia* on September 3, 1939 prompted the Royal Navy to order that merchant ships would be grouped in “convoys”. To protect merchant ships from being picked off by U-boats one at a time, the Royal Canadian Air Force (RCAF) supplied air escorts (Eastern Air Command – primarily flying Lockheed Hudsons, Liberators and the Consolidated Canso flying boats) and the Royal Canadian Navy (RCN) organized merchant ships into convoys that were accompanied by armed naval escorts. The RAF Coastal Command and RCAF Eastern Air Command were also able to provide air cover for the convoys. However, even when bad weather and thick cloud cover didn’t curtail air cover missions, the planes could stay in the air only for so long.

Enormous tracts of ocean remained where U-boats could hide. In the early years of the war, much of the mid-Atlantic could not be reached by supporting aircraft, and became known as **the Black Pit** or the Air Gap. To avoid the worst of this area, the convoys were soon routed further north, where the weather was harsher, icebergs loomed, and the storms wilder, but the break in air coverage was less pronounced.^{D, 4H}

The **Newfoundland Escort Force** (NEF), created in May 1941, consisting of Royal Canadian Navy destroyers and corvettes, assumed the responsibility for protecting convoys in the western zone, from St. John’s, Newfoundland to Iceland. There, they would hand over the convoy to Royal Naval escorts, which would accompany it into British home waters. The NEF ships would then proceed north to Hvalfjörður, resupply, replenish, and refuel, and then sail south to pick up westbound convoys returning to North America.

By early 1942, with the Royal Canadian Navy taking on an expanded role in escorting North Atlantic convoys, the NEF was re-organized as the **Mid-Ocean Escort Force** (MOEF). The revised convoy scheme had the MOEF escort the convoys on a shorter track away from Iceland, and across the entire ocean to meet UK-based escorts near Northern Ireland. The MOEF’s new eastern terminus was Londonderry, Northern Ireland, and from there, they would return to sea to meet a westbound convoy. Entering Londonderry, or “Derry”, as it became known, after a storm-tossed crossing of the dangerous North Atlantic brought great warmth and joy to the weary sailors. As the little rust-streaked corvettes entered the mouth of the River Foyle, the deep green of the Irish countryside engulfed them, each kilometer upriver offering respite from the brutal war at sea. A Canadian sailor said, “*To arrive at Derry after a hard east-bound crossing was a little like approaching the pearly gates.*”^{6Z}

The Risks: Both prey and hunters often huddled together, ships in convoys with armed escorts for protection, marauding U-boats in wolf-packs. Seamen whose vessels were hit hard had only a 50 per cent chance of survival. Death by explosion or fire or scalding steam, or by drowning in the malevolent, cold grey waters as a ship was sucked under—all were horrific enough. Harshest of all, floundering men from fatally hit vessels frequently had to be left behind, as the ships were ordered to steam ahead rather than break convoy ranks, and becoming sitting ducks for the enemy. Drowning sailors had to be abandoned to the frigid Atlantic waters so that the greater number would survive. Many sailors died from exposure or dehydration.

While the convoy could not stop, generally a rescue boat would be dropped out of line and, after the warships chased off the U-boats, would begin to search for survivors. A seventeen year-old Canadian merchant navy man who had been on a rescue ship described how he was shaken by the state of the survivors, many of whom, “*were injured, some quite horribly. After picking up the living, or near living, we then picked up body parts which might be identified so that next-of-kin could be informed.*”^{D, 2E, 4H, 8M}

In response to provide better protection for the merchant ships, two of the easy-to-build and effective **anti-submarine warships** manufactured in Canada (for the RN and RCN) were Bangor-class minesweepers and corvettes. By late summer 1940, sixty-four corvettes and twenty-four minesweepers were under construction in Great Lakes, St. Lawrence River and British Columbia shipyards. With such an aggressive building program, there was a desperate need for new crews but little time to train them—they would learn the hard way: on the ships, at sea, and against the U-boats in battle.^{2I, 4H}

Convoy in Bedford Basin, Halifax

RCN Corvette – Backbone of the Canadian Navy

The Corvettes: Corvettes were considered the backbone of the Canadian navy by many. They had a relatively simple design, based on that of a whaling vessel. Wrote one Rear Admiral, *“They were thrown into the battle because it was thought that catching whales and killing U-boats had something in common”*.

Windflower and *Mayflower* were the first corvettes commissioned in Canada, and because the navy was short of suitable weapons, both were fitted with dummy guns made of wood for their maiden voyages to England. Corvettes could be manufactured at a modest cost, had the ability to out-maneuvre a submarine as well as long endurance, and bobbed on the sea like a cork. Corvettes were roughly 60 metres long and had a top speed of 16 knots (slower than a U-boat at the surface); were made to be sailed close to land and never intended for the wide-open Atlantic Ocean crossings; were surprisingly tough and nimble with a tight turning circle; were equipped with a 4-inch gun that fired 31-pound shells; and carried depth charges filled with high explosives to blow submarines out of the water. An ever-present danger when an escort vessel went down was that its depth charges would explode as they sank below the surface, resulting in higher death tolls.

Corvette crew size varied from between sixty and a hundred men, so they were intolerably crowded with less than ideal living conditions. Corvettes, who some joked would “roll even on wet grass”, were known as “wet ships”, as the seas broke over them, salty water seeped through seams, hatches and ventilators. American officers marveled at the Canadian corvettes awash in the towering North Atlantic swells and joked that their crews should get submarine pay.^{D, 4H, 5B, 6F}

Life on board a corvette in the harsh North Atlantic was mentally and physically exhausting. Howling winds and massive frigid waves—the “*Green Ones*”, in sailor’s slang—battered the ships, sweeping over them from bow to stern, tearing away lifeboats from their moorings, and knocking about 420-pound depth charges like marbles. In heavy seas, the corvettes climbed the crests of waves, only to plunge into the troughs before battling up to the crest again. The violent rolling, pitching and pounding shuddered the whole of the ship, making for a rough and wet ride for the crew, seasickness was common. RCNVR Bill Fittell, serving aboard a destroyer, recalled, *“If seasick pills failed, one antidote was to do ‘funnel watch’ on the breezy upper deck, which meant we’d sit with our backs to the warm funnels or smokestacks and try to still our stomachs. It helped us avoid, as some wags quipped, ‘travelling the Atlantic by rail,’ that is, grabbing on to the railing of the ship and upchucking.”*

The corvette was crowded, and included a mess deck that was the space for living, sleeping, eating, and relaxing off duty. Canvas hammocks hung from every conceivable spot of the deckhead, and men slept at all times because of the four-hour watch schedule. Good weather or bad, sailors were instructed to wear their deflated rubber life jacket, nicknamed a “Mae West”, around their waists. Many found them bulky and kept them in their lockers, observing that if a man fell into the Atlantic in winter, it did not matter if he was wearing a life vest or not, because the cold water would kill him in minutes. Inside, clothes and duffle bags were constantly wet; foul-smelling water sloshed on the floor; cockroaches were ever-present; fresh water was sparse; and there were always shortages of fresh food.

Food staples included oatmeal porridge, real then powdered eggs and toast, “red lead and bacon” (tomatoes with fatty bacon), bangers and mash, powdered milk, Coca-Cola, tea, the beloved “kye” (a viscous hot drink made from a block of coarse chocolate, scoops of sugar, and canned milk) and “grog” (a 2.5-ounce tot of rum mixed with

water or Coca-Cola served daily at 11 a.m. to all crew members over the age of twenty-one). For the few who were of age that chose not to partake in the rum, they were given an extra seven cents a day.

The winter months brought the added danger of a ship icing up, as the heaving water sprayed the vessel and froze to anything made of metal, thickening to block ice, and adding enormous weight that could keel the boat over. All crew members, as part of their “turn to” (meaning to get to work), had the duty of using hammers, axes, crowbars and even fists to chip away the ice as waves pummelled them again and again.

Despite the hardship, the weather, the rough crossings, and the terror of being hunted, morale and comradeship was kept up through activities such as singing songs, limericks or parodies of songs; poker games that ran day and night; telling of stories, tall tales and jokes; playing pranks on crew members; and receiving letters from loved ones at home.^{4H, 8M, 9G, 9K, x} At least four young men from Sarnia lost their lives while serving aboard a corvette during World War II; William Anderson, Wallace Horley, Alfred Kettle and Michael Paithowski.

Destroyers: In September 1940, the neutral Americans completed a deal with Britain that saw the Americans acquire naval access to British bases in exchange for its provision of fifty Great War-era destroyers. Though the American destroyers were outdated and ill-suited for crossing the Atlantic, they were better than nothing and were almost immediately pressed into service. Canada initially received six of these destroyers, all of which took their names from rivers near the Canada-United States border (*Annapolis, Columbia, Niagara, St. Francis, St. Croix and St. Clair*). Known as “four-stackers” (because of their four funnels), the destroyers were built for speed, but lacked stability, so were tossed about in the rough Atlantic seas.^{x, 4H, 5B} At least seven young men from Sarnia lost their lives while serving aboard RCN destroyers during World War II; Joseph Bell, Paul Brown, Roy Grainger, Hector Le Gare, John Love, Stephen Powell and Robert Rigby.

One of the six “over-age” U.S. destroyers to be used as a war vessel was renamed the *HMCS St. Clair* (formerly the *USS Williams*). The honour was greatly appreciated by the residents of Sarnia and other communities along the shores of the St. Clair River. The suggestion to the government that the name *St. Clair* be considered, when naming additional naval craft, had been submitted by Homer Lockhart, secretary-treasurer of the Sarnia Chamber of Commerce. Adding to local interest was the fact that a Sarnia resident was named chief quartermaster of the destroyer. Lloyd Jennings of 173 Parker Street had given up his position as first mate on a Great Lakes freighter to join the R.C.N.V.R. He underwent a period of training in the Canadian navy at an eastern port before being assigned to the *St. Clair*. Lloyd had a wife and daughter residing in Sarnia; his brother Charles was a local fireman; and his other brother Harry was in England as a member of the 11th Field Company, Royal Canadian Engineers.

Town Class Destroyer *HMCS St. Clair* I65

Convoy organization: The first transatlantic convoy – HX1 - sailed out of Halifax for the United Kingdom on September 16, 1939, closely guarded by the Canadian destroyers *St. Laurent* and *Saguenay* and British cruisers. The convoy was escorted out to sea for about 400 miles and then the escort departed. The convoy picked up its inbound escort of British ships south of Iceland.

In organizing the convoys, ships would arrive from all over, and then wait in the safety of the maritime ports, behind submarine nets and long-range coastal guns, for their proper pairing with the corvettes, frigates, and destroyers, and a sufficient number of other merchant ships that steamed at similar speed. The final convoy could be as few as two dozen ships or a multinational grouping of more than 100 vessels, plus escorts, though a typical convoy was made up of 40 ships.

When ordered to sail, the ships steamed out of the harbour, taking several hours to find their place in the convoy. The merchant ships were tightly packed in rows and columns, with only about 600 metres separating the vessels in front and back, and about 1,000 metres separated the columns. The convoy commander would be at the head of the formation, generally in a destroyer, while corvettes took positions on the flanks, and if there were enough, also at the rear. The most vulnerable and valuable ships – those with ammunition or oil – were placed in the centre of the convoy.

The ships would change course every fifteen or twenty minutes, travelling in a zig-zag pattern to elude the U-boats. Maintaining formation was difficult, made more so in the dark, in rough waters, and with the use of haphazard communication, so collisions were a frequent occurrence. With so many steamships pressed into service, it was necessary to separate them into slow and fast convoys. Fast or regular convoys could make the voyage across the Atlantic in ten to twelve days, but the slower convoys could take fourteen to sixteen, and even longer if streaming into winter storms.^{D, 2E, 2I, 4H, 5B, 8M}

Canada's first troop convoy sailed in late 1939. Half of Canada's First Division of soldiers began their journey overseas from Halifax harbour on December 10, 1939. Approximately 7,500 men, including their new commander Major-General Andrew McNaughton, would travel aboard five large luxury liners in convoy TC1 on their way to Scotland. The other half would follow in a second convoy one week later.

For most of the recruits, their equipment was shoddy, worn out and obsolete. The Lee-Enfield rifles had seen service in the last war; the old Lewis light machine-gun had yet to be replaced by the more efficient Bren; and some wore First War uniforms or their trousers. There was no crowd on hand to see them off as the convoy left under a blanket of wartime secrecy. The big liners steamed out of the harbour at half-hour intervals into the calm Atlantic, and were encircled by their escorts: four Canadian destroyers—*Ottawa*, *Restigouche*, *Fraser* and *St. Laurent* (two-thirds of the country's fleet of six) and later four British warships—the battleship *Resolution*, aircraft carrier *Furious*, battle cruiser *Repulse*, and cruiser *Emerald*. After a week's long voyage, as the ships were in sight of Scotland, and the Canadian destroyer escort had long since returned to Halifax, a welcoming fleet of twelve British warships greeted them, including the *Hood* and *Warspite*.^{9V}

German U-boats: British Prime Minister Winston Churchill would say that "*The only thing that ever really frightened me during the war was the U-boat peril.*" The first Canadian warship to be torpedoed in the war was the *HMCS Saguenay* in December 1940, with a cost of twenty-one lives, including two Sarnians, Paul Brown and Hector Le Gare.

The German submarines, U-boats, were sleek killing machines that prowled the Atlantic looking to sink Allied ships. The term U-boat is from the German word for submarines, *Unterseebooten* (undersea boats). Often hunting in "**wolfpacks**"—concentrations that hunted and killed together, the U-boats would shadow the convoy and attack from the rear, or penetrate to the centre of the convoy under cover of darkness before attacking, aiming to catch a vessel broadside. Though they could fire their torpedoes underwater, German command pushed the U-boats to fire their torpedoes while running low on the surface of the water. After striking, experienced U-boat captains would submerge and slip away, then emerging from the wake of the convoy before surfacing and steaming ahead to catch the convoy for another run several hours later. Other U-boats would not shoot and run, but prowl within the spread out convoy, stalking and picking off their victims.

While the U-boats had all the advantages in battle, RCN crews would defend by firing their deck guns, dropping (or throwing) depth charges or ramming the U-boat, but only after finding the enemy. Through much of the critical years of the war, the Canadians fought nearly blind because of obsolete equipment and technology, as they lacked the most advanced radar and navigation equipment as that of the British. On the whole, the submarines had things their way in the winter of 1940-41. Working in patrol lines across the usual convoy routes and directed by excellent intelligence, the U-boats hunted in packs, swarming the convoys, attacking on the surface at night, like motor-torpedo boats. German submariners called the winter of 1940-41 the "Happy Time".^{D, 4H, 5B, 6Z}

Increased demands on the RCN: By early 1942, the demands being made on the RCN ships and crews were pushing them to the limit. Many of the crews were inexperienced and their ships had equipment that was at least a generation behind that of the Royal Navy. RCN vessels had SW1C radar that could almost never detect a surfaced U-boat; and they lacked the latest in gyrocompasses, asdic equipment, and shipborne anti-aircraft and anti-submarine weapons. After the attack on Pearl Harbour, more American warships were ordered to the Pacific leaving the Canadian Navy to pick up the slack in the Atlantic. The RCN were ordered to protect the convoys along a more

southward Atlantic route from Newfoundland to Londonderry, Ireland, right through the German U-boat concentrations. German U-boats were being manufactured at a high rate; the size of the wolf packs increased; they had improved technology that could detect long-wave radio emissions from Canadian warships making it easier to attack while avoiding being killed; and they shifted the additional U-boats from the Mediterranean to North American waters.

To protect American ships, the RCN added the **Triangle Run**, with corvettes and minesweepers escorting vessels from Boston, and later New York, to Halifax and St. John's. As U-boats pushed southward into the Caribbean, the RCN added the **Halifax to Trinidad Run**, escorting tankers carrying crude oil. U-boats slipped into Canadian waters including the St. Lawrence River, which further diluted navy escort strength. Adding to the demands, the RCN sent sixteen corvettes to assist in the protection of troops for *Operation Torch*, the amphibious invasion of North Africa. The RCN escort system reorganization meant shorter layovers in ports for repair and maintenance of battered ships, and quicker turnaround times for overworked and exhausted crews.^{D, 4H, 6Z}

The Battle of the St. Lawrence was an extension of the larger Battle of the Atlantic. It began on May 12, 1942 when after entering the Gulf of St. Lawrence, German U-boat *U-553* sank the steamers *Nicoya* and *Leto* south of Anticosti Island, shocking Canadians. Between May 1942 and late 1944, German U-boats repeatedly penetrated the waters of the St. Lawrence River and the Gulf of St. Lawrence, sinking 23 ships in the Gulf of St. Lawrence waters, destroying valuable cargo and costing hundreds of lives. It was the first and only time since the War of 1812 that naval battles were waged in Canada's inland waters.

Anti-submarine operations were made more difficult in these shallower waters. The mixing of the cold fresh water from the St. Lawrence with the warmer salt water of the Gulf, combined with the tricky tides and currents, layered the water into different zones of temperature and salinity that bent asdic beams. Submarine captains quickly learned to take advantage of these water conditions to hide both before and after attacks. Several U-boats made their way into the Gulf for other reasons; in one case to drop off a German spy near the town of New Carlisle, Quebec (the spy was quickly discovered and arrested); and on two occasions, in attempts to rescue German prisoners of war, first POW's near Fredericton, New Brunswick, the other, POW's from a camp in Bowmanville, Ontario.^{D, 2N, 3F, 6Z}

Following are three stories of German submarine attacks that took place in Canadian waters:

In late August 1942, two submarines, *U-517* and *U-165*, slipped into Canadian waters, and torpedoed four ships over the course of a week. On the night of September 6-7, 1942, a convoy of eight merchant vessels and five escorts was attacked by the two submarines shortly after it left Ile du Bic, Quebec bound for Sydney, Nova Scotia. Two vessels were sunk by *U-165*, including the armed yacht *HMCS Raccoon*, which was on escort duty. All 37 naval crew on board the *Raccoon* were killed, including twenty-year old Ordinary Seaman Ralph Martindale of Sarnia. The next day, submarine *U-517*, struck the convoy, sinking three more freighters and killing ten. A week later, the two submarines sank four more ships and damaged another before making for the Atlantic.

In the early morning hours of October 14, 1942, *U-69* was in the Cabot Strait when it spotted the passenger ferry *SS Caribou* on a night crossing from Sydney to Port aux Basques, Newfoundland. The moonless night was clear and cold with a brisk breeze. On board the darkened ferry were 237 passengers, most of whom were asleep, and crew. When the *U-69* torpedo struck the *Caribou* at approximately 2:20 a.m., the ferry's lone escort, *HMCS Grandmere*, following navy protocol, gave chase after the submarine for 90 minutes. The decision to delay the search for survivors was a heart-wrenching one for the *Grandmere's* captain. "*Oh my God. I felt the full complement of things you feel at a time like that. Things you had to live with. You are torn. Demoralized. Terribly alone,*" he later said. "*I should have gone on looking for the submarine, but I couldn't. Not with women and children out there somewhere. I couldn't do it any more than I could have dropped depth charges among them.*" In less than five minutes, the *Caribou* was sucked under. On that night, 136 passengers and crew of the *Caribou* perished in the cold waters, including at least five mothers and ten children.

On the evening of November 24, 1944, *U-1228* spotted the Canadian warship *HMCS Shawinigan* sitting off Port aux Basques, waiting to escort the ferry *Burgeo*, from Port aux Basques to Sydney the next morning. The U-boat fired a torpedo that caused catastrophic damage. *HMCS Shawinigan* sunk within four minutes, and was unable to send a distress signal. All 91 naval crew of the *Shawinigan* were killed, including two young Sarnians: Leading Coder William Anderson and Petty Officer-Stoker Michael Paithowski. The sinking of the *Shawinigan* was the last major encounter of the Battle of the St. Lawrence.

The Boarding of U-94: In late August 1942, Canadian corvettes *HMCS Oakville*, *HMCS Snowberry* and *HMCS Halifax*, were part of an escort group with convoy TAW-15. That convoy, nine escorts and twenty-nine heavily laden oil tankers, had departed Curacao in the Caribbean on August 25 on its way to the east coast of the U.S.. Wallowing toward a North Atlantic rendezvous at an agonizing eight knots, with the three Canadian corvettes were the Dutch *Jan Van Brakel*, three small U.S. patrol vessels and the powerful U.S. destroyer *Lea*.

The Battle of the Caribbean, not as well-known as the Battle of the Atlantic, was almost as crucial in strategic importance and in the bitterness with which it was fought. By the summer of 1942 the Allies' only important source of oil, the lifeblood of war, was the Caribbean area—Trinidad, Curacao, Aruba and Maracaibo. Submarines swarmed the southern sea lanes; in the first eight months of 1942 they had sunk four hundred ships between Trinidad and Halifax.

Around noon on August 27, 1942, lookouts on German U-boat *U-94* spotted TAW-15 in the warm waters of the Windward Passage between Cuba and Haiti, and shadowed it for the rest of the day. Not long after midnight, after *U-94* had penetrated the escort screen and was preparing to fire torpedoes, it was spotted by a USN Catalina flying bomber that dropped four 650-pound depth charges that exploded around her. The well-placed bombs blew off both of the U-boat's bow hydroplanes, making the sub impossible to control underwater.

Aboard the *HMCS Oakville* (K178), action-station bells rang out as the ship headed for the area, dropping five depth charges as they passed over the spot. The damaged U-boat emerged out of the water barely 100 yards from the *Oakville*. On board the *Oakville*, Harold Lawrence recalled, *"A black snout reared out of the water; the conning tower burst through a swell; she surfaced completely. From her decks water cascaded foaming white in the moonlight."* The Captain of the *Oakville* ordered her crew to ram the sub. The corvette, with a comparatively fragile single-plated hull, just scrapped down the side of *U-94*. As the range opened, she fired her guns striking the sub's deck guns and the men scrambling to fire them. The *Oakville* manoeuvred frantically and attempted to ram the sub a second time, and again was only able to deliver a glancing blow.

The *Oakville* slipped by so close that her guns could not depress enough to fire. In the lull, German sailors poured on deck once more. On the *Oakville* deck were six stokers who had already loaded the depth charge throwers. With German sailors on the bridge of a U-boat just a few feet away, the stokers reached for what was handy, and threw empty Coke bottles at the conning tower of *U-94*, and screamed taunts. Harold Lawrence recalled, *"I have never seen more astonished faces than those of the German submariners when they came under a barrage of empty pop bottles at twenty-foot range..."*¹⁰⁷

Before the enemy could recover from this attack, the submarine and corvette were apart. The *Oakville* dropped more depth charges and at least one exploded directly under the U-boat. With *U-94* now nearly stationary, the *Oakville* swung around and charged the submarine a third time. The *Oakville* was finally able to ram it squarely aft of the conning tower, the bow reared up and rolled over the submarine. On the *Oakville*, a 12-man boarding party prepared for that duty as the ship pulled alongside the crippled sub. *"Away boarding party!"* the captain cried. *"Never mind lowering the boat,"* he bellowed from the bridge above. *"I'll put you alongside."*¹⁰⁷

In the chaos that ensued, two of the boarding party, twenty-two year-old **Lieutenant Harold "Hal" Lawrence** and twenty-three year-old **Petty Officer Arthur Powell**, leapt from the *Oakville*'s gunwale onto the deck of the submarine eight feet below. The rest of the boarding party remained stranded on the *Oakville* as the corvette lost power and drifted away. Harold Lawrence recalled, *"We slid alongside and I jumped eight feet to the deck of the submarine. The belt of my tropical shorts broke from the severe thump of my landing. My pants slid down to my ankles. I stumbled, kicked them off, and clad only in a pistol, two grenades, a gas mask, a length of chain, a flashlight and a life belt, I lurched up the deck."*

Each armed with a .45 revolver, Lawrence and Powell moved along the slippery, rolling sub deck towards the conning tower, knocking one already-dead German over the side. A half-mile away, the aftergun of the *Oakville* opened up, luckily starting at the other end of *U-94*'s hull and methodically working its fire to where Lawrence and Powell were. With bullets ricocheting off the hull, the two Canadians jumped over the side into the water. With the next big wave, they swam back on board and moved forward. Reaching the forward gun, a tangled mess of steel, a German slid from behind it whom they knocked over the side. Around the conning tower, they encountered two German crewmen, who they directed aft and then just jumped overboard. As they reached the top of the conning tower ladder two German crewmen were already out and a third was half out. The two Germans lunged forward, Lawrence shot one and Powell shot the next one, the third man hobbled down.

While Powell stood over the hatch with his pistol to keep the rest of the crew below, Lawrence went aft to another open hatch and found it's compartment fully flooded. The prisoners below were shouting. *"Better let them out if we're to salvage this bucket,"* Powell said. Lawrence put the pistol on the deck, shone the flashlight on his face and spoke with what he hoped was a reassuring voice, *"Come on up. It's all right. See – no gun."* The German sailors emerged one by one from the tower, and soon Lawrence and Powell were milling around in a mob of enemy sailors. Powell ordered the submariners to the stern of the boat.

While Powell watched the POW's, Lawrence dropped down into the tower looking for anything of interest. Wading through chest-deep water in the pitch-black, he was unable to find any signal equipment or code-books, or shut any of the valves in the control room. Finally Powell yelled down through the open hatch, *"Come up sir, she's sinking!"* Once up top, they ordered the POW's over the side into the sea, and Lawrence and Powell followed. Lawrence recalled, *"Off to the north the dark bulk of the convoy receded. Two 'whumps' of torpedoes striking home told me that other submarines were attacking... Oakville was a black silhouette a mile away. We hadn't abandoned U-94 a moment too soon. She lifted her bow, lifted it more, and slid under."*

There in the bloodied water, an area where sharks and barracuda were known to be active, they waited for rescue. Approximately half an hour later, a whaler from the US destroyer *Lea* picked up Lawrence, Powell and twenty-six prisoners. On the deck of the *Lea*, Lawrence and Powell were grabbed and hustled aft along with the prisoners. After an obscenity-laced tirade, Lawrence was able to convince the USN officers that they were indeed the captors.

About one hour later, at one o'clock in the morning, both Lawrence and Powell were back on board the *Oakville*, where they were reminded that they were still at action stations. That afternoon, the *Oakville* arrived in Guantanamo, Cuba. Art Powell was with some of the crew to see the prisoners sent ashore. In Art Powell's words, *"The U-boat Captain looked at me and saluted. I returned the salute."* The *Oakville* had no casualties, or only one: Harold Lawrence said, *"I had been wounded--when I wiggled down U-94's hatch I cut my elbow on a broken Coke bottle."*¹⁰⁷

Sub-Lieutenant Harold Lawrence (L) and Stoker Petty Officer Arthur J. Powell (R)

Nineteen Germans were killed in the incident and the twenty-six POW's were detained at Guantanamo in Cuba. The event inspired the making of a propaganda poster depicting the action. Petty Officer Arthur Joseph Powell was awarded the Distinguished Service Medal and Lieutenant Harold Ernest Thomas Lawrence was awarded the Distinguished Service Cross. The citation reads, "Lieutenant Lawrence was in charge of a boarding party of two which attempted to prevent the scuttling of a U-boat. With complete disregard for his own safety, the Officer, accompanied by a Petty Officer, boarded the U-boat and, having subdued the enemy crew, he took action in an endeavor to prevent the scuttling of the U-boat, notwithstanding the fact that it was sinking. His spirited and determined conduct was worthy of the highest traditions of the Royal Canadian Navy."

Harold Lawrence was born in Kent, England in August 1920, and moved at a young age with his family to Halifax, Nova Scotia. He joined the Royal Canadian Naval Volunteer Reserve in 1939. After the war he earned a Master's degree from the University of Ottawa before retiring from the Navy in 1965. He taught at the University of Ottawa and the University of Victoria and wrote three books concerning World War II: *A Bloody War*, in 1979; *Tales*

of the *North Atlantic*, in 1985; and *Victory at Sea*, in 1989. Harold Lawrence passed away at the age of 73 in Victoria, British Columbia in April 1994.

Arthur Powell was born in Sudbury, Ontario on July 8, 1917, the son of a railroader. Arthur spent much of his youth in Timmins, and would work in the mines there and on freighters, before joining the Navy in April 1940. After the war, Art Powell returned to Point Edward where his parents and siblings had moved in 1941. In the early 1950's, Art moved to Sarnia where he resided for the next decade until his work took him to London, Ontario. As a civil engineer, Art surveyed waterways throughout the Great Lakes. He never entirely left Sarnia, however. He returned here to train Sea Cadets and marched with Sarnians on Remembrance Day. Arthur Powell passed away at the age of 80 in London in January 1997.^{2E, 3m, 10T}

The **Murmansk Run** was one of the lesser-known places that Canadian sailors served. This dangerous convoy route, referred to as “down North” by those who sailed her, saw Royal Canadian Navy and Canadian Merchant Navy seamen sail into the Arctic Ocean to deliver war materials to the Soviet Union. Beginning in the late summer of 1941, Canadian merchant sailors served on Allied ships making the runs, departing North American ports such as Halifax and sailing to the northern Soviet Union, usually via Iceland or Great Britain. The Germans threw the full weight of their air force and navy against the convoys as they neared the coast of occupied Norway. Attacks by more than a dozen enemy submarines and hundreds of planes simultaneously were common. Harsh weather and the Arctic ice pack took a toll as well. Many of the runs took place in the winter to take advantage of the almost constant darkness in the northern seas. The temperatures were frigid, the winds strong, the waves sometimes 25 metres high and it was nearly instant death for anyone who went into the icy waters.

Beginning in October 1943, Royal Canadian Navy destroyers and frigates also became involved in the Murmansk Run as convoy escorts. They participated in about 75 percent of the subsequent convoys until the end of the war a year and a half later. Remarkably, no Royal Canadian Navy ships were lost.^{b, 9G}

Enigma and the Codebreakers: To generate secret codes in the Second World War, Germany used a machine called Enigma (Greek for riddle). Each branch of the German military developed its own Enigma version, with constant tweaks to make messages even harder to decipher. The heart of the typewriter-like encoder/decoder was a set of five to eight interchangeable rotors, aligned in a row of three or four. The rotors moved to new positions with each keystroke, ensuring a different letter was substituted for each letter typed. Additional security came from changing the starting position of the rotors with each message and changing the order of the rotors every day.

Throughout the war, the German military relied on Enigma's coded messages to convey battle plans; deliver orders for deployment of troops, tanks, submarines and aircraft; record ships' cargo; and report fuel and equipment shortages. The Germans thought Enigma's codes were unbreakable. They were wrong.

Britain set up a sophisticated system for capturing and decrypting enemy messages at **Bletchley Park** in Buckinghamshire, England—the home of the Codebreakers. Among the 10,000 employees at Bletchley Park, seventy-five percent of the staff were women. Thousands of wireless operators around the world, including in Canada, trolled radio frequencies ceaselessly, recorded and sent coded enemy messages to Bletchley Park to be deciphered and analyzed.

In early 1941, with the use of a captured German “Enigma” machine and code books from a U-boat, codebreakers at Bletchley Park were able to decipher the German Enigma naval codes used between German U-boat land headquarters and the U-boats at sea. This incredible achievement allowed the British to read German messages, albeit after a delay. This information was known as ULTRA, for “ultra secret”, and it was limited severely in its distribution, as the British were fearful of alerting the Germans to the breakthrough.

In February 1942, the German Navy shifted to a more complex four-rotor Enigma code system, known to the Germans as “Triton”, and to the British as “Shark”. Allied losses in the Atlantic again increased alarmingly until early 1943, when British codebreakers were able to crack this cipher code. An incalculable number of ships were saved as convoys were steered away from danger zones and the massacre that awaited them, but because it was used sparingly, some units and lives had to be sacrificed. Intelligence from ULTRA has been credited with shortening the war by at least two years—and sparking the computer age.^{2E, 4H, 5B, 6Z, 9M}

The Tide Turns: Along with British Intelligence's breaking of the top secret German code, the tide finally began to turn in favour of the Allies in the Battle of the Atlantic in April and May 1943. There were now more escort ships, including second generation River Class destroyers and frigates, with better-trained and more experienced

crews. Additional defences for the convoys included: escort ships fitted with improved equipment including new radar, asdic, anti-submarine weapons such as Hedgehog, homing torpedoes, and gyrocompasses to replace their old magnetic compasses; aircraft carriers and small flight decks on merchant ships, equipped with a few aircraft that flew off as needed; and the addition of four-engine VLR Liberator bombers that provided long-range aerial surveillance that closed the Black Pit; and improved sharing of intelligence with the Royal Navy and the US Navy.

Still, the Battle of the Atlantic continued for two more years, and Allied losses continued. The Germans continued to produce new and improved U-boats that were sleeker and faster, had additional anti-aircraft guns, new radar detection equipment, and the snorkel device, which allowed the U-boat to use its diesel engines while travelling just under the surface, thus attaining higher speeds and giving it the ability to recirculate stale air, recharge batteries, and stay under water for much longer periods than previously.

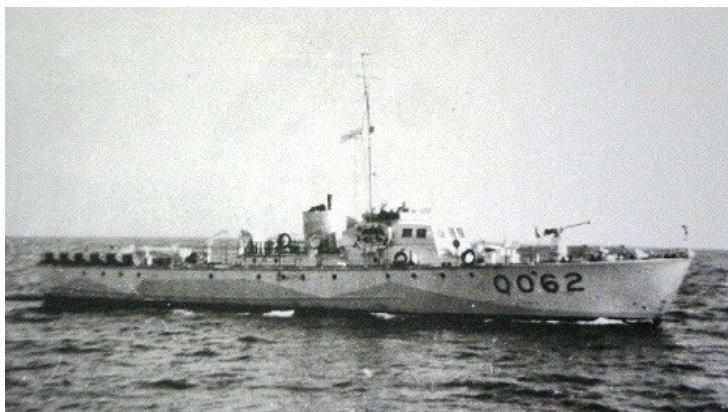

For much of the war, the Canadian warships were involved in almost half of the convoy protection in the North Atlantic – and then, from mid-1944 onward, they assumed even greater responsibility for the protection of all convoys across the Atlantic. Between September 1942 and May 1945, 99.4 percent of merchant ships reached their destinations intact. For the RCN and its Allies, improved tactics and equipment, increased escort ships, and overwhelming air cover would result in the fact that – four of every five U-boat crew members who left European ports on war patrol never returned.^{D, 4H, 4I, 6Z}

Canada's Commander Leonard Murray: By the spring of 1943, nearly half of all the escorts operating between New York and the U.K. were Canadian. Canada's operational role was so critical that, in April 1943, a separate theatre of war, the **Canadian Northwest Atlantic Command** was established to control Canadian and Newfoundland waters. Nova Scotia born Rear-Admiral Leonard W. Murray was appointed its Commander-in-Chief, making him the only Canadian to command an Allied theatre of war.

A graduate of the first class of the Royal Naval College of Canada in Halifax in 1912, and a veteran of the Great War, he would hold highly important commands throughout World War II including being put in charge of the Newfoundland Escort Force when it was formed in May 1941. In 1943, as Commander-in-Chief of the Canadian Northwest Atlantic, commanding all Canadian and Allied air and naval forces involved in convoy protection in that area, Admiral Murray would become the most important operational commander in RCN history.^{3F, 5B, 6Z} More information on Commander Leonard Murray is on page 529.

Sarnia's Mac-Craft Corporation Limited was a boat building plant that was formerly situated in Wallaceburg. In March 1940, it acquired property in Sarnia that had been a distillery ten or twelve years earlier. By February 1941, the new Mac-Craft plant in Sarnia was in operation. On November 27th 1941, the first war vessel built in this city was launched in Sarnia. Work on the wooden vessel had begun in the early summer of 1940. The small warship, a **Fairmile Motor Launch (ML)**, named *HMC ML Q062*, was launched at the Sarnia Mac-Craft Corporation.

Canadian shipyards, including Sarnia's Mac-Craft Corporation, would build approximately eighty Fairmile motor launches for the Royal Canadian Navy. The motor launches were 112 foot wooden vessels based on the design by the Fairmile Marine Company in England, thus they became known as Fairmiles. The Canadian B Type design vessels were intended as **submarine chasers**—to protect coastal convoys, port approaches and coastal waters against submarines.

Fairmile Motor Launch *Q062*

On November 27, 1941, Mrs. J.T. Barnes, the wife of Sarnia's mayor, christened the *Fairmile Q062* as it slid down the marine railway, by smashing a bottle of champagne on the bow. One week earlier, a large number of invited Sarnians had gathered at the plant to witness the launching. Arrangements had been made for a special ceremony, and the ship was prepared to slide into the water, but at the last minute, because of an unforeseen delay in dredging a channel from the boat works to the harbour, the event had to be postponed. Workmen then had to remove a water main from the boat works to the water's edge, and pull out rows of spiling from the former site of the Cleveland-Sarnia Saw Mills property.

A week later, following the brief christening ceremony, the vessel slid smoothly down the railway until the stern touched water. Suddenly the boat stopped and became stuck in the track. After 15 minutes of pulling on cables and ropes, the vessel glided free into the St. Clair River. There was only a small crowd present at the launching, which came as a surprise to most Sarnians, as there were rumours circulating that the ship would be kept in the plant until the next spring. The launching of the *Fairmile* brought back memories for local citizens of the last large ship to be constructed and launched in Sarnia. It had been over fifty years prior, that the *SS Monarch*, which had been built at Dyble shipyards in Sarnia, was launched in September of 1890. The passenger ship *Monarch* would meet its fate in 1906, wrecked after striking a rock near Isle Royal in Lake Superior.

A few days later, the last weekend of November 1941, the *Fairmile Q062* was officially given her first trial, a run on the St. Clair River with forty-seven persons aboard. The little ship backed away from its dock at the Sarnia elevator slip and turned around gracefully heading down the river to the Imperial Oil Limited dock where she took on a cargo of fuel. Then she went through her two-hour test run down the river, where at times, the ship appeared to be racing automobiles on highway 40. Officials of the Royal Canadian Navy and Department of National Defence gave its performance high praise.

The patrol boat, officially described as a submarine chaser, was a credit to the boat builders and contractors of Sarnia who built the sleek, speedy vessel based on designs sent from England. With sandbags sitting in her depth-charge cradles, the deck was finished in the dull gray of the navy, and the interior fittings were of highly varnished reddish wood. A description of the gadgets and fittings within the small, comfortable pilot house was not allowed to be disclosed at that time. The details of the powerful Hall-Scott twin marine motors, such as the size, the revolutions per minute and the speed of the craft, were also a navy secret. The men's and officer's quarters were neatly finished with galleys, ward rooms, soft leather covered mattresses, and neat little natural-finished mess tables suitable for two persons.

One week after the launch of *Q062*, a second *Fairmile* subchaser, *HMC Q063* was launched by Mac-Craft Corporation in Sarnia, one month ahead of schedule. At the time, it was believed to be a new record for quick construction in Canada. Both ships were completed within six months. The two Sarnia ships along with a sister ship from Midland would winter in Sarnia until the spring of 1942.

Both *Q062*, in April 1942 and *Q063*, in January 1943, would be loaned to the free French Navy during the war. Both would serve off the south coast of Newfoundland until the end of the war. The Commanding Officers of *Q062* were Lt. William Lyle Moore, RCNVR (April 18, 1942-April 30, 1942), and then Lt. Howard David Pepper, RCNVR (May 1, 1942-January 16, 1943); and the Commanding Officer of *Q063* was Sub/Lt. Norman MacDougall Simpson, RCNVR (April 1, 1942-January 15, 1943). Mac-Craft Limited of Sarnia completed five more *Fairmile* subchasers between October 1942 and September 1943, numbers *Q101* to *Q105*. One more *Fairmile* was completed in November 1943, the *Q115*. At the end of the war, the *Q062* would be re-acquired by the Royal Canadian Navy and renamed the *HMCS Wolf*, while the *Q063* would be sold.

After being decommissioned, *Fairmile Q105* would be loaned to McGill University for research in the St. Lawrence River. After that, it was sold to a tour company in Quebec, christened the *Duc d'Orleans*, where it took tourists around the Ile d'Orleans (an island near Quebec City). In the late 1970's, it would be purchased by a couple of Sarnia businessmen with the goal to use it as a passenger cruise ship in the community. It was refurbished and the new *Duc d'Orleans*, would serve as a charter boat based in Sarnia for St. Clair river cruises from 1978 until 2005. The Sombra Museum is now the home of a number of artifacts from the *Q105*, including the original blueprints, compass, parts of the hull and the ships' original propellers. The Commanding Officer of *Q105* was Lt. J.D. Addison, RCNVR (September 5, 1943-August 29, 1944), then Lt. William Peter Tennent McGhee, RCNVR (August 30, 1944-September 16, 1945).^{x, 2A}

Fairmile Motor Launch *Q105* (later the *Duc d'Orleans*)

Naming Ships: Each Canadian warship had its own personality. The naming of ships was important, and unlike the United States and Britain, Canada avoided naming ships after military, national, or political figures (exceptions were destroyers *Champlain* and *Vancouver*). Destroyers were named according to their class: River-class destroyers for Canadian rivers (eg. *Saguenay*, *Micmac*, *Athabaskan*); Town-class for Canadian cities (eg. *Ottawa*, *Annapolis*, *Hamilton*); and Tribal-class destroyers for First Nations (eg. *Haida*, *Iroquois*, *Huron*). Other Canadian vessels were also linked to cities, which reinforced the notion that this was a citizen navy. Cities adopted their namesake ships, and patriotic groups sent the sailors presents and care packages. Strong links developed between the fighting ships and the communities that supported them.^{4H, 5B}

For the men on the sailing vessels, they always used the female pronoun “she” when affectionately referring to their ship. This was a maritime tradition historically embedded in nautical language for centuries. During the war, men from across the country came together as one within the ship. In her they would live and in her they would fight. She would be their home, for some the last home on earth they would ever know. A member of the Royal Canadian Navy Volunteer Reserve who rose to the level of commander during the course of the war, wrote of sailors and ships and the tremendous loss felt by the men for their vessels: “*Those who have never beheld the dread moment of the death of a ship can hardly imagine the enormous drama of such an occasion, doubled of course for those who served in her... I never witnessed such a spectacle without deep emotion... Few non-seagoing men will ever understand the strange bond of love for a ship on the part of men who served in her or even a ship in which they have not served.*”^{4I, 9G}

The *HMCS Sarnia* (J309): In July 1942, Lieutenant Commander C.H. Mott, the commanding officer of a minesweeper, wrote a letter to Sarnia Mayor John T. Barnes expressing his desire to visit with the mayor and some of the city’s leaders. The minesweeper that he was the commander of was the *H.M.C.S. Sarnia*, named in honour of this city. It was one of more than 300 ships that were named for Canadian communities during the Second World War.

The *H.M.C.S. Sarnia* (J309), was a 165-foot, steel-hulled **Bangor-class minesweeper**, launched in January of 1942, and later commissioned for service at the Toronto Shipbuilding Yards on August 13, 1942. Present for the ceremony were Sarnia Mayor John T. Barnes, Mrs. Barnes and a small group of Sarnia civic officials. Also present were representatives from a number of Sarnia organizations who had provided comforts and gifts for the crew of the *HMCS Sarnia* not supplied by official naval sources. In a telegram to the Mayor Barnes from the Minister of National Defence for Naval Affairs, he stated, “The interest that the people of Sarnia have shown in the ship and crew is greatly appreciated.”

Upon the mayor’s return to Sarnia, city council made plans to donate a crest of the city (to be hung in the commanders cabin) and a large washing machine (for the crew), as the city’s gift to *HMCS Sarnia*. The *HMCS Sarnia* was never able to visit the port of its namesake. Not long after being commissioned, the *HMCS Sarnia* would escort a Quebec-Sydney convoy arriving in Halifax in mid-September 1942, subsequently being assigned to the Newfoundland Escort Force. In February 1944, the commanding officer, Lieutenant Commander R.C. Chenoweth and crew forwarded two photographs of the *HMCS Sarnia* along with expressions of thanks from the officers and ratings to the city for the interest shown in their welfare. The commander also suggested that certain electrical equipment which would benefit the whole ship’s company might be of more value than personal comforts, owing to

the fact that the personnel changed frequently. It was suggested that additional loudspeaker equipment together with record playing attachments be purchased for the ship, along with hot plates and electric irons for use in the various messes. City Clerk Miss M.D. Stewart, chairman of the *HMCS Sarnia* committee said that her committee would endeavor to secure the required articles.

In mid-September 1944, Sub. Lieut. Douglas Whalen and three members of the *HMCS Sarnia* arrived in the city for a visit. They were met at the train station by a welcoming committee and taken to city hall and then to a hotel. During their two-day stay, they were given a tour of the city and entertained by local dignitaries. Their sight-seeing tour included Canatara Park, the harbour at Point Edward and the Polymer Corporation plant. Entertainment included a dinner in the Sarnia Golf Club; a civic dance at *H.M.C.S. Repulse*, headquarters of the local Sea Cadet Corps, that included Ollie Case's orchestra; a semi-formal reception at city hall; and a supper-party put on by the women staff of city hall at the home of Mr. and Mrs. Basil Williamson, 366 Cameron Street. During their visit, the *HMCS Sarnia* was in port undergoing a major refit, after participating in minesweeping and short convoys out of Halifax. It would eventually be assigned to the Halifax Local Defence Force until June 1945.

The record of Commanding Officers of *HMCS Sarnia* were: Lt. Charles Atkins Mott, RCNR (August 13, 1942-February 10, 1943); Lt. David Ireland McGill, RCNVR (February 11, 1943-July 17, 1943); Lt. Richard Cassels Chenoweth, RCNVR (July 18, 1943-March 12, 1944); Lt. Herbert Allan Plow, RCNVR (March 13, 1944-June 24, 1944); Lt. Roland Douglas Hurst, RCNVR (June 25, 1944-October 9, 1944); Lt. Robert Percy Joel Douty, RCNVR (October 10, 1944-September 21, 1945) and Lt. D.M. Mossop, RCNVR (September 22, 1945-October 28, 1945).^{X, 2A}

Bangor Class Minesweeper *HMCS Sarnia J309*

Crew of *HMCS Sarnia*

Late in March 1945, *HMCS Sarnia* was taken off the Triangle Run (see page 431) and joined the Local Halifax Defence Force. The assignment was to patrol outside the gates of Halifax Harbour, four days out, three days in. In mid-April 1945, the *HMCS Sarnia* would be involved in a **life saving rescue**. On the evening of April 15, 1945, with the war drawing to a close, the RCN Bangor Class minesweeper *HMCS Esquimalt* set out from Halifax on a routine anti-submarine patrol around the harbour approaches. The *HMCS Sarnia* was also patrolling the area, in another sector. The two minesweepers were scheduled to rendezvous at "C" buoy at 8:00 a.m. on April 16 to perform a radar sweep for a convoy leaving Halifax at 8:00 p.m. that evening. Lurking in those same cold northwest Atlantic waters was German submarine *U-190*. In the early morning hours of April 16th at 6:35 a.m., *U-190* idling in the Halifax harbour fired a single acoustic torpedo that struck the starboard hull of the *Esquimalt*. The *Esquimalt* had radioed her last report to Halifax Command only minutes earlier. With the explosion, the ship lurched out of the water and sank in four minutes, too fast to send out a distress signal.

Twenty-eight men went down with the ship, the remaining forty-three scrambled from the bone-chilling water into four Carley floats (life rafts). There was not enough room for all, so some clung desperately to the sides in the frigid waters. The *Sarnia* had been waiting at a rendezvous point for the *Esquimalt*, and when it failed to appear, the commander of the *Sarnia* feared the worst, as a German sub had been spotted in the area just weeks prior. The attempt to initiate a search was delayed twice as *Sarnia* detected the presence of U-boats and responded with depth charges. It was nearly four hours after the *Esquimalt* went down that search action was finally initiated. The survivors were left in the freezing waters for almost six hours.

When the *HMCS Sarnia* arrived, men were clinging to the Carley floats, some barely alive, others already dead having succumbed to hypothermia, floated nearby. The *Sarnia* performed its rescue duty admirably, with engines at full stop and defenceless, hauling the survivors and dead aboard up scramble nets, while the threat of being attacked loomed. The *Sarnia* picked up 27 survivors and 13 corpses. The *Sarnia* then ran a zigzag course back to the safety of Halifax harbour. In total, twenty-eight men went down with the *Esquimalt*; the remaining forty-three had scrambled to Carley floats, but sixteen of those sailors died of exposure before the *HMCS Sarnia* arrived. Only twenty-seven of the *Esquimalt*'s crew of seventy-one survived the sinking. With the war in Europe ending a mere three weeks later, the *HMCS Esquimalt* was the last Royal Canadian Navy vessel to be lost during the Second World War.

In October 1945, two months after the war had ended, Sarnia city council received the following letter from Lieutenant D.F. Mossop, O.C., the Commanding Officer of the *H.M.C.S. Sarnia* with news of the fate of the ship;

Perhaps it would be easier for me to look into the future and let you know just what we expect to happen to the ship. As you no doubt have read in the dailies, many in fact most ships of the Canadian fleet have been declared surplus by the authorities and are to be turned over to the War Assets Corporation for disposal. That I am afraid is the fate of H.M.C.S. "SARNIA" in the very near future. We expect within the next month to have the ship turned over to the War Assets and fully out of commission.

It seems a hard fate for a ship which has accumulated an envious record among not only the Canadian Navy but all Allied Navies for a series of brilliant feats which frustrated the enemy on a number of occasions and brought succor and life on one occasion to some of our own lads. However, 'c'est la guerre' and at least it is comforting to realize the "SARNIA" is retiring from service after completing her job in a manner which brought credit to her officers and men and I trust honor to the city whose name she carries and the good people of the city who were so thoughtful during the ship's wartime commission.

When the ship is finally through, in approximately a month, I personally expect to be proceeding home for discharge, at which time I hope to be able to spend a day or so in Sarnia and personally relate some of the tales of the "SARNIA'S" feats to you and express our profoundest thanks for all your citizens have done for the crew in the days when every comfort meant so very, very much during the monotonous patrols.

Lieutenant Mossop would visit the city in early November 1945, the guest of honour at a banquet by Mayor Hipple and city council at the Sarnia Golf Club. The dinner was also attended by Bell Telephone employees, Delta Phi Sigma Sorority and the Public School Teachers' Association, groups that had been active in supplying the crew of the *H.M.C.S. Sarnia* with comforts during the war. Lieut. Mossop presented to Mayor Hipple as a gift to the city, the name-plate removed from the deck of the vessel, along with the ship's ensign, the one she had been flying at the time of the *Esquimalt* rescue. In speaking about some of the ship's history, Mossop said that the minesweeper *Sarnia* had cleared more mines from waters of the eastern seaboard than any other ship, Canadian or American. In describing the *Sarnia*'s role in rescuing the *Esquimalt* survivors, he said the lives of several of the men had been saved by artificial respiration applied by the minesweeper's crew. Others had been supported in the water by crewmen of the *Sarnia* who had jumped over the side to their rescue. In thanking the people of Sarnia for past gifts, Lieut. Mossop said, "I was only on the ship for a few months but she upheld Sarnia traditions to the highest."

The *H.M.C.S. Sarnia* was decommissioned October 28, 1945 in Sydney, Nova Scotia. Years later, in March 1958, she was transferred to the Turkish Navy to serve as a patrol boat, the *Buyukdere*, until 1972. Beginning in 1995, fifty years after *Sarnia*'s dramatic rescue of the *Esquimalt* survivors, there were a number of *H.M.C.S. Sarnia* reunions held to honour her impressive war record. Aside from former crew members of the *Sarnia*, also attending some of the reunions were a number of survivors of the *Esquimalt* sinking and the Engineering Officer of the German submarine *U-190*.^{N, X, u}

In 2010, on the 100th Anniversary of the Canadian Navy, the City of Sarnia was presented with a plaque honouring the *HMCS Sarnia*. The plaque, which includes a photograph of the ship, hangs in Sarnia City Hall today. The plaque includes the following words;

His Majesty's Canadian Ship
Sarnia

Presented to the City of Sarnia, Ontario by the
Chief of the Maritime Staff on the occasion of the Canadian Naval Centennial 1910-2010

There has been only one vessel named *Sarnia* in the Canadian Navy – *HMCS Sarnia* (J309/190)

continued over...

The *Sarnia* was a Bangor Class minesweeper. The Bangor Class ships were built in order to replace the old Basset Class minesweepers, as they were larger, faster, had greater endurance, and burned oil as opposed to coal. As enemy mines were laid only once in 1943 in Canadian waters, the Bangors were used primarily as escorts to coastal shipping or as local escorts to ocean convoys. Sixteen of them, however, assisted in sweeping the approaches to Normandy before D-Day and stayed to help clear German and Allied minefields in the English Channel for some months afterward.

Commissioned at Toronto, Ontario, on 13 August 1942 *Sarnia* arrived at Halifax, Nova Scotia, on 22 September, having escorted a Quebec-Sydney convoy en route. She was assigned to Newfoundland Escort Force and in September 1944 underwent a major refit at Lunenburg, Nova Scotia, after which she went to Bermuda for a workup. On her return to Canada, she was assigned to Halifax Force and, later, to Halifax Local Defence Force until June 1945.

On 15 April 1945 she rescued survivors of the minesweeper HMCS *Esquimalt*, torpedoed outside Halifax. She then performed miscellaneous duties until being paid off on 28 October 1945 at Sydney, Nova Scotia, and laid up at Shelburne, Nova Scotia. In 1946, she was placed in strategic reserve at Sorel, Quebec, and in 1951 reacquired by the Royal Canadian Navy and extensively refitted. She did not re-commission, however, and on 29 March 1958 was transferred to the Turkish Navy. She served until 1972 as *Buyukdere*.

Builder: Davie Shipbuilding and Repairing Co. Ltd., Lauzon, Quebec.

Laid Down: 18 September 1941

Launched: 21 January 1942

Date Commissioned: 13 August 1942

Date Paid Off: 28 October 1945

Displacement: 672 tons

Dimensions: 54.9 m X 8.7 m X 2.5 m

Speed: 16 knots

Crew: 83

Armament: one 3-inch (76-mm) gun, two 20-mm guns (2 X 1) and depth charges.

Canadian Battle Honours: Gulf of St. Lawrence 1942, Atlantic 1942-1943

Note: The bell from the *HMCS Sarnia* has been maintained in trust by the Royal Canadian Sea Cadet Corps Repulse in Sarnia.

HMCS Petrolia: Another Lambton County community had the honour of having a Canadian Navy ship named in her honour. The *H.M.C.S. Petrolia* (K 498) was named in honour of the "Hard Oil Town" in April 1944. The *H.M.C.S. Petrolia* was one of a dozen Castle-Class corvettes assigned to the Royal Canadian Navy. The ship was built in Belfast, Northern Ireland, launched as the *HMS Sherborne Castle* in February 1944 and transferred to the RCN and commissioned on June 29, 1944. Hundreds of local residents of Petrolia packed Victoria Hall on the evening of April 26, 1944 for the official adoption ceremony of this latest ship of the Royal Canadian Navy. A model of the corvette was christened on the Hall stage flanked on each side by naval men and Sarnia Sea Cadets. The *H.M.C.S. Petrolia* was used for Atlantic convoy service for the duration of the war.^{N, P, and X}

• **THE THREAT OF SABOTAGE IN SARNIA:** The paranoia of sabotage locally was a legitimate concern. During World War I, in December 1917, a group of German conspirators in the United States were convicted in Detroit federal court on charges of having conspired to dynamite the St. Clair River tunnel, among other charges. The scheme involved sending a load of dynamite with a time fuse attached into the tunnel on a small platform attached to roller skates, which would ride the rails from the Port Huron side. Fortunately, the conspirators were arrested before they had the opportunity to carry out their plan.

During World War II, in June of 1940, an attempt of sabotage was made on a freight train as it travelled through the tunnel from Port Huron to Sarnia. Holes had been drilled through the floor beneath one of the freight cars containing four valuable airplane motors, and strips of blankets saturated with flammable linseed oil had been shoved into the car under the motors, and ignited. As the freight train arrived in Sarnia, officials noticed that one of the crates on a car was afire. The flames were extinguished by railway employees and the Sarnia Fire Department. Only four hours earlier, a special train of eight cars loaded with extremely explosive demolition bombs had passed through the tunnel.

• **NATIONAL RESOURCES MOBILIZATION ACT:** On June 21, 1940 after the fall of France, Canadian Prime Minister William Lyon MacKenzie King introduced the National Resources Mobilization Act (NRMA), which gave the federal government sweeping powers to take whatever measures it deemed necessary to mobilize men and women, factories, farms, and other resources for the purposes of fighting the war. One of the measures proposed by the NRMA was a national registration of eligible men between the ages of 21 and 45 for conscription for home defence duties only. The bill was introduced in response from English Canada for total mobilization of manpower.

In August of 1942, the Bill was amended to allow conscription for overseas service (though initially, it was never implemented). Prime Minister King declared his August 1942 change in policy as “not necessarily conscription, but conscription if necessary.” As the war dragged on, the NRMA conscripts at home were known as “**zombies**” – the living dead, with a lack of soul – due to their status as neither civilians nor general-service soldiers. Increasingly, there was pressure on the “zombies” to volunteer for overseas service.

The Minister of National Defence J.L. Ralston, a World War I veteran, visited the Italian front in October 1944. He interviewed soldiers about the crashing of the Gothic Line (Aug-Sept 1944) and the chronic shortages of supplies and reinforcements. He was badly shaken, as every infantry battalion he visited was under-strength. Then he flew to Northwest Europe to interview soldiers about the Normandy campaign (Jun-Aug 1944). He learned that the situation was dire – that Canadians were dying for want of comrades in the line. He was told how ill-trained reinforcements were put in the line and often wounded or killed before the end of the first day at the front.

The problem was not an overall shortage of reinforcements in the army as a whole, just too few spare trained infantrymen available. One reason for this was that the Canadian Army had too many in other types of military occupations – when new recruits entered the army, most were taken up by the artillery, the engineers, the pay corps, the military police, and so on. Only a relatively small number were sent to become infantrymen. A second important reason was that the army had utilized British combat-loss projections based on the fighting in the North Africa desert to forecast how many casualties (“wastage”) it would need to replace once the fighting in Italy and northwest Europe began. Those figures were far too low for the intense ground combat in Italy and Normandy, which produced far more infantry casualties than the fighting in the desert.^{6Z}

J.L. Ralston returned to Ottawa and informed Prime Minister Mackenzie King that now was the time for **conscription**. Not long after, King fired Ralston, however media pressure was relentless. The National Resources Mobilization Act was amended on November 22, 1944 allowing the government to send conscripts overseas. In early 1945, 12 908 conscripts were sent overseas. Only 2 463 of these conscripted men reached units on the front lines, and out of these, 313 were wounded and 69 lost their lives.^{2I, 3F, 4I, 6F, 6Z, 7P}

Five of Sarnia’s World War II fallen had enrolled under the National Resources Mobilization Act. One of them, Harold Green, lost his life in British Columbia in May 1944. The four others lost their lives in action overseas; Joseph Aubin (embarked November 1944), Norman Ellis (embarked May 1944), John Esselment (embarked August 1944) and John Lychowich (embarked March 1944).

• **CANADIAN INTERNMENT CAMPS:** From the outset of the Second World War, the Canadian government had procedures for establishing internment camps across the country to house military prisoners of war, merchant seamen, potential insurgents, refugees, and other civilian detainees deemed “enemy aliens.” The men responsible for guarding the internment camps were pulled from the ranks of the Veterans Guard of Canada (VGC), the renamed Veteran’s Home Guard. By taking over guard duties, the VGC helped free up younger Canadians for overseas service.

The front page headline of the June 10, 1940 *Sarnia Canadian Observer* read, “Italy Declares War on the Allies – Premier Mussolini Announces that Fascist Nation will fight at side of Germany”. When Italy declared war against the Allies in June 1940, residents of Italian descent suspected of being sympathetic to the Fascist cause, were subject to internment. In December 1941, when Japan entered the war, many Japanese in Canada (over 21,000 were residing in British Columbia) were interned and their assets seized and sold, without receiving any compensation. Many of the Jews fleeing persecution and violence of war, seeking refuge in Canada, were from enemy countries so they also faced internment. In accordance with the Geneva Convention, internment camps for civilians and refugees were separate from camps for prisoners of war. With the exception of the Japanese, the majority of refugees and civilians were released before the end of 1943 and no Italian or Japanese military personnel were ever imprisoned in Canada.^{F, 2E, 2N, 6Z}

An internment camp close to Sarnia was the former Eatonville Roadhouse, in Morpeth, Ontario (about 23 miles east of Chatham). Operating as a hotel in the 1930's, in 1942, the federal government used the building as an internment camp for Canadians of Japanese descent from British Columbia. The men were paid to work at Rondeau Provincial Park clearing timber and brush. The camp was closed in 1943.

- **CANADIAN PRISONER OF WAR CAMPS:** The first German prisoners of war arrived in Canada in the early fall of 1939 and prisoners of war continued to arrive from overseas throughout the war. In May of 1945, approximately 35,000 prisoners of war were held in Canada in 26 POW camps, the majority German. Many of the camps were located in remote areas of Northern Ontario, Quebec and the Rocky Mountains. Conditions and amenities varied among the camps but there was no doubt that they were far superior than those camps in Europe and the Far East where Canadian soldiers were being held captive. In Canadian POW camps, prisoners enjoyed games, sports, and entertainment, and in many of the camps, prisoners freely mingled with the guards and local townspeople. In 1943, the government authorized prisoner employment, where by 1945, over 11,000 POW's were working, primarily on farms and in logging camps, and were paid for their work.

The nearest POW camp to Sarnia was Camp No. 10, in Chatham and Fingal, Ontario. It was a tented camp housing enemy merchant seamen and enemy officers. It was in use periodically from May 1944 to November 1946. Many of the POWs there were employed in farming projects in southwestern Ontario. Other camps in this part of Ontario were located in Ingersoll, Kitchener, Toronto, Bowmanville, Gravenhurst and Algonquin Park. When the war ended, approximately 6,000 German POW's asked to remain in Canada. By December 1946, all prisoners were repatriated back to Germany, though many would return and settle in Canada.^{F, 2E, 2N}

- **THE PHONEY WAR:** Following the collapse of Poland in September 1939, a strange lull set in on the western front. This period of apparent "inactivity" from October 1939 to April 1940 became known as the "Phoney War" (also referred to as the "Twilight War" by Churchill and as "Sitzkrieg" by the Germans). During this stretch, although the great powers of Europe had declared war on one another, there were no major bombing or land battles between Germany and the Western Allies. Both sides utilized the lull.

Britain built up her defences, prepared her air forces, and dispatched an expeditionary force to the Continent. Winston Churchill joined British Prime Minister Neville Chamberlain's cabinet and became First Lord of the Admiralty. A few days later, Britain implemented merchant ship convoys. Over a million and a half women and children were evacuated from major British cities, being billeted in villages and farms. French troops took up positions on the Maginot Line—the fortified defence line on their eastern border. The Germans, too, manned their great Rhineland fortifications, known as the West Wall or the Siegfried Line—and they engaged in intense preparation for attack.

In Canada recruiting was stepped up to bolster the armed forces. On August 24, the Liberal government had ordered the precautionary mobilization of some 100,000 Canadian militia. Their mission was to provide port defence on both coasts and to guard "vulnerable points" inland. On September 3, the government invoked the War Measures Act, placed the regular forces on active service and authorized the call-up of reserves. The prime minister made the government's first priority clear – it was to be the defence of Canada.

The Phony War came to a sudden end when, in April 1940, German troops without warning seized Denmark and launched an invasion of Norway.^{D, 7Q}

- **THE GERMAN BLITZKRIEG:** In April 1940, Germany launched their quick surprise "**blitzkrieg**" strikes, with troops, tanks and air support moving rapidly west invading Denmark and then Norway. Beginning on May 10, the German blitzkreig continued through Luxembourg, then the Netherlands and then Belgium on their way to France. On the same day, British Prime Minister Neville Chamberlain resigned. Three days later, Winston Churchill became the new Prime Minister of Britain. For years prior, he had warned Britains about the threat posed to the world by Hitler's Germany. In his first speech he declared, "*I have nothing to offer but blood, toil, tears, and sweat.*"

Entering France on May 12, the German forces infiltrated through the Ardennes Forest, outflanking France's Maginot Line, splitting the Allied forces, and caused the virtual collapse of the French armies. By late May, the British Expeditionary Force (BEF), including some Canadians, accompanied by a number of French, Belgian and Polish troops, had been pushed back to the English Channel port of Dunkirk by the advancing German army.

- **MIRACLE OF DUNKIRK:** Trapped, with their backs up against the French coast, outflanked and cut off from their supplies, almost 340,000 Allied troops had to evacuate or face certain capture or death. Churchill activated a

plan to evacuate the soldiers in a daring rescue mission by the Royal Navy, *Operation Dynamo*, though with hundreds of thousands of soldiers trapped, they only expected to have time to lift off up to 45,000 troops.

Beginning on May 26, 1940, British supply ships, ferries, destroyers, minesweepers and passenger vessels began the process of evacuating troops who were surrounded by German forces including Panzer divisions and artillery, and while being attacked from above by Luftwaffe Stuka dive-bombers (when weather allowed). It was then that the “Miracle of Dunkirk” occurred – between May 26 and June 4, when the trapped soldiers would be taken off the beaches of Dunkirk across the English Channel to safety. RAF Spitfire and Hurricane aircraft provided important air cover for the operation, while the ships braved mines, bombs and torpedoes. Over 200 British naval ships, including four Royal Canadian Naval destroyers, and an armada of as many as 800 civilian craft, every kind of boat that could float, including private yachts, motor launches, lifeboats, paddle steamers, fishing boats and barges, “the Little Ships of Dunkirk”, made the heroic rescue.

Of the over 860 ships deployed, 243 would be lost during the operation. Many of the troops boarded rescue ships from the harbour’s protective mole (1.3 km long breakwater), while others were ferried directly from the beaches by the smaller craft to larger ships waiting offshore. Approximately 340,000 British, French and Allied troops would be safely evacuated from France.^{D, 3G, 6Z} The British Army were so rushed in their evacuation that most of their equipment was abandoned. Approximately 11,000 British were killed during the operation, and at least 40,000 were captured and imprisoned. Forty thousand French troops who had been holding the perimeter, were captured when Dunkirk eventually fell. During his June 4 speech to Parliament on the success of the *Operation Dynamo*, Winston Churchill cautioned, “*We must be very careful not to assign to this deliverance the attributes of a victory. Wars are not won by evacuations.*” By mid-June 1940, Paris had fallen and France was in German hands. Only the English Channel now separated Britain from a seemingly unstoppable German military.

One of the heroes at Dunkirk, who remains largely unknown in Canada is **James Campbell Clouston**. James Clouston grew up in Pointe-Claire, Montreal, Quebec. He was the older of two boys born to a Canadian naval officer and his British wife. He was an avid hockey player who attended Selwyn House School and Lower Canada College before enrolling in engineering at McGill University. At the age of 17, he enlisted to join Britain’s Royal Navy in 1917 as an officer cadet, hoping to serve in World War I. He spent the next 23 years with the navy, rising through the ranks as a gunnery officer and instructor, to the rank of commander. In 1935, he married Gwyneth Lilian Vanderpump, and in 1937, he took command of his own ship, the destroyer *HMS Isis*. Following the outbreak of war, the ship saw action in anti-submarine patrol and convoy defence.

In May 1940, Clouston was among eight officers chosen to oversee the evacuation at Dunkirk. He arrived on May 27, 1940 to find hundreds of thousands of hungry, exhausted troops and only 50 men an hour being evacuated. Clouston was given the responsibility of the eastern mole, a narrow wooden walkway mounted on a concrete breakwater that extended one-kilometre out into the English Channel. It was not designed to be used by ships, but was the only part of the port that had not been heavily bombed by the Luftwaffe and it would prove pivotal to the evacuation. Through organizational brilliance and force of will, pier-master Clouston was able to increase the rate to 2,000 an hour, shuttling the men along the 10-foot wide pier. He regulated the flow of men along the mole into waiting ships for five days and nights with barely a break, while Stuka dive-bombers terrorized the sky above them.

On June 1, Commander Clouston returned to Dover for a planning meeting. He could have stayed in England, but chose to return because close to 100,000 French troops remained, and Clouston spoke French because of his Montreal upbringing. On the afternoon of June 2, Clouston and a party of 30 men left Dover on two RAF rescue motorboats for the final night of the evacuation. Off the coast of France, the two boats were strafed and bombed by eight Stuka aircraft. Clouston’s boat was sunk, leaving the crew clinging to the wreckage. As senior officer, Clouston refused to leave his men and ordered the other boat to continue to Dunkirk. Clinging with them on the upturned hull of the boat, he attempted to keep spirits up by telling white lies about the nearness of the rescue. But no rescue came and one by one, he and his men eventually succumbed to exhaustion and hypothermia. Only two men survived. After the perilous Dunkirk evacuation, Captain William G. Tennant (the senior naval officer ashore at Dunkirk and a future admiral), would cite the “magnificent work” of the pier party, and “of those, no one is more deserving of praise than Commander Clouston.”^{8R}

In Sarnia, local citizens were kept abreast of the situation in France through the end of May and into June by reading the *Sarnia Canadian Observer*. On May 30, 1940, the front page headline read, “*ALLIED TROOPS SLOWLY WITHDRAWING FROM POCKET DESPITE TERRIFIC NAZI ONSLAUGHT,*” with the subheading, “*Air*

Forces Protect Retiring Armies While Navy Keeps Port Open As Embarkation Point.” The Canadian Press story began with, *“Balking the German drive to turn the Flanders pocket into a sieve, Allied troops slowly retreated northwestward today under the protection of their air forces toward Dunkerque, where British and French warships were helping keep the battered port open as an embarkation point. London dispatches indicated the withdrawal of troops through Dunkerque is in full swing. Several divisions were reliably reported to have reached a port in Southeastern England...*

On May 31, the front page headline read, *“ALLIED WARSHIPS RUSH EVACUATION OF WEARY, WAR TORN UNITS FROM FRANCE,”* with the subheading, *“French Continue Fight At Southern End Of The Corridor.”* A second front page story headline read, *“Soldiers Speedily Removed.”* Following is a portion of that Canadian Press story; *“Every hour, in craft of all shapes and sizes, tens of thousands of men of the British Expeditionary Force with their French comrades are being landed safely at ports on the south coast of England in one of the quickest movements in British military history... Grimy and exhausted Tommies said that when they arrived at the coast, fishermen-many of them old salts of 70-volunteered to a man to take their tiny unarmed boats across the Channel... As more blood-stained and tattered troops landed, private motorboat owners hurried to ‘help out.’ Officially nothing was done about them. Unofficially they went. At one period of the day seven ships docked at a south coast port in less than two hours. The men clambered into trains and were whipped away to bases in various parts of England within half an hour of landing... Many of the evacuation craft had been bombed and machine-gunned for hours. But backwards and forwards they ferry... And as the undaunted khaki-clad boys come ashore, housewives gladly handed over food from their cupboards when official supplies ran short. On one platform stood a bride-to-be carving up her wedding cake to hand to the hungry troops.*

On June 1, the front page headline read, *“FRENCH MAKE GAINS ALONG THE SOMME; BATTLE CONTINUES IN DUNKERQUE REGION.”* On June 3, Sarnians learned that the city of Paris has been bombed by German aircraft, along with further details on the evacuation with headlines that included, *“New Assaults Fail To Halt Withdrawal Of Allied Troops”* and *“Evacuation Dwindles To A Trickle.”* The June 4 front page headline read, *“PRIME MINISTER SAYS BRITAIN WILL NEVER GIVE UP STRUGGLE AGAINST NAZI TYRANNY,”* with the subheading, *“Churchill Reveals 335,000 Men Taken Out Of Dunkerque.”*

The report included a portion of **Churchill’s June 4th “we shall fight” speech** in the House of Commons, one described as the finest of his career: *“We shall go on to the end, we shall fight in France, we shall fight on the seas and oceans, we shall fight with growing confidence and growing strength in the air, we shall defend our Island, whatever the cost may be. We shall fight on the beaches, we shall fight on the landing grounds, we shall fight in the fields and in the streets, we shall fight in the hills. We shall never surrender, and even if, which I do not for a moment believe, this Island or a large part of it were subjugated and starving, then our Empire beyond the seas, armed and guarded by the British Fleet, would carry on the struggle until, in God’s good time, the New World, with all its power and might, steps forth to the rescue and the liberation of the old.”*

• **McNAUGHTON’S TRAVELLING CIRCUS:** By early June 1940, German forces had overrun western Europe in less than three months. Only the English Channel now separated Britain from the unstoppable German military. Yet after Dunkirk, it was the 1st Canadian Division, the only whole and reasonably well-equipped infantry division in England, and a handful of other formations, including the soon-to-arrive 2nd Infantry Division that prepared to defend southern England behind anti-tank ditches, machine-gun nests, and barbed wire obstacles against the expected coming invasion.

Throughout the month of July, the 1st Canadian Division conducted a series of marches and countermarches across the length of southern England with the goal to mislead German aerial reconnaissance as to exact strength of the Allied forces available to defend England. The exhausted troops of the 1st Canadian Division referred to themselves as “McNaughton’s Travelling Circus,” after their commander Major-General Andrew McNaughton.^{4H}

• **THE BATTLE OF BRITAIN,** July 10 – October 31, 1940: In the summer of 1940, after advancing through Poland, Denmark, Norway, Belgium, Netherlands and France, German forces prepared to launch a full-scale invasion of Great Britain called *Operation Sea Lion*, originally scheduled to take place in mid-September 1940. Prior to the cross-Channel land attack, the German plan was to first destroy the Royal Navy by gaining command of the air, which meant destroying Britain’s Royal Air Force (RAF). The battle began in mid-July 1940 with the German Air Force, the Luftwaffe, attacking convoys in the English Channel, along with some ports and coastal defences. In mid-August, there was more intense fighting as the Luftwaffe bombers and fighters attacked radar positions, airfields,

command stations, individual industrial targets and engaged British fighters. In late August into early September, the Luftwaffe launched a massive campaign to destroy the RAF on the ground and in the air. The English sky was painted with whispery white contrails that disguised the brutality of the combat overhead. The countryside was littered with the wreckage of fire-blackened aircraft and the bodies of young men.

In September 1940, the Germans switched strategies and began their **Blitz** campaign—the Luftwaffe moved to bombing industrial, military and transportation targets around large urban centres in British cities in massive bomber raids day and night. The Luftwaffe's bomber force was unleashed on a massive scale on September 7, 1940—the beginning of the systematic bombing of the eight-million strong capital of the British Empire, London. The bombers destructive loads included large incendiaries filled with oil, high explosives and delayed action high explosives (to hinder fire fighting efforts).

It was left to the Royal Air Force—approximately 2,900 fighter pilots—to defend Britain, against a German Luftwaffe that vastly outnumbered them in aircraft by at least two to one.^{D, 4H} RAF fighter pilots included British, along with Canadian, New Zealand, Australian, Polish and French airmen among others, flying mostly Hawker Hurricane and Spitfire fighter aircraft. The Luftwaffe's main fighters were the Messerschmitt Bf109 and Bf110's, which protected the medium-distance bombers and fighter-bombers.

A key to Britain's defence was a complex system of detection (Dowding System radar stations) linked to a central command that allowed the RAF to efficiently intercept incoming aircraft. A climatic turning point in the battle occurred on September 15, 1940, which became known as “**Battle of Britain Day**”, the juncture at which the aerial contest for control of the skies was won by the RAF. On that day, the Luftwaffe launched its largest and most concentrated attack of 123 bombers and 650 fighters against London. RAF fighter command successfully repulsed the attack scattering the bombers and causing heavy German losses, which led to Hitler's decision two days later to suspend *Operation Sea Lion* until further notice. Though enemy raids continued, by the end of October, Germany had given up its hope of establishing air superiority and invading England.

It is estimated that approximately 1,000 British planes were shot down during the battle, while over 1,800 German planes were destroyed. Five hundred and forty-four RAF pilots and aircrew died during the events spanning these three-and-a-half months. The Battle of Britain marked the first time that Hitler's advance had been stopped. It was also the first battle in history to be fought exclusively in the air. It was during this time that Prime Minister Churchill made his famous speech about the RAF crews fighting the Battle of Britain, “*The gratitude of every home in our island, in our Empire and indeed throughout the world, except in the abodes of the guilty, goes out to the British airmen who, undaunted by odds, unwearied in their constant challenge and mortal danger, are turning the tide of the world by their prowess and their devotion. Never in the field of human conflict was so much owed by so many to so few...*”

Canadians at the Battle of Britain: It is estimated that between 88 and 112 Canadian fighter pilots would participate in the Battle of Britain (based on the RAF Roll of Honour and the Battle of Britain London Monument, while 105 Canadians qualified for the coveted Battle of Britain clasp). The vast majority of them flew with RAF fighter squadrons—including the RAF No. 242 (Canadian) Squadron*, with the Royal Navy Fleet Air Arm, and with the only Canadian unit, RCAF No. 1 Fighter Squadron (later re-numbered as No. 401 Squadron). Hundreds of other Canadians served as ground crew and support personnel who, although aren't given the same level of recognition, made vital contributions to the victory. Three members of RCAF No. 1 Squadron received the Distinguished Flying Cross for their efforts during the Battle of Britain and two Canadian groundcrew were recognized for their contribution to the Battle. Twenty-three Canadian fighter pilots lost their lives during the Battle of Britain.^{D, 2N, 2S, 3G, 4H, 6H, 6Z, 8Q}

*With so many Canadians in the RAF Fighter Command, an independent Canadian fighter formation was reformed in October 1939—the **RAF No. 242 “All-Canadian” Squadron**. In June 1940, its commander was British ace Douglas Bader, who in 1931, had lost both his legs in a flying accident and had been fitted with artificial limbs. When war came, he'd badgered his way back into the RAF, proved he could fly as well as any pilot, and was determined to make RAF 242 “Canadian” Squadron the best in the RAF. The squadron was involved early in operations over France, before taking part in the Battle of Britain, and then fought support in battles in North Africa, Sicily and Italy. Over time, the grind of combat killed or wounded so many Canadian flyers, most of whom were replaced by Brits, that No. 242 lost its distinctly Canadian character.^{2N, 4H, 10B}

• **THE BLITZ** (September 1940-May 1941): After the Luftwaffe's failure in the Battle of Britain, and with

Germany's invasion plans wrecked, Germany changed their strategy to a mass air offensive against Britain. The daylight attack against London on September 7, 1940, had marked the opening phase of the German bomber offensive. Known as the "Blitz", daylight attacks gave way to night raids as the Luftwaffe bombers, night after night, pounded British industrial targets, ports and civilian centers such as London, Liverpool, Plymouth, Sheffield, Southampton, Cardiff, Glasgow, Birmingham, Bristol and Coventry. From September 7, 1940, London was bombed for fifty-seven nights in a row, with 'disturbance attacks' during the day. The infamous bombing of Coventry on November 14, 1940, by five hundred German bombers obliterated the city and killed five thousand people.

Throughout the Blitz campaign, the Luftwaffe dropped high explosive bombs; some of the especially dangerous delayed action variety; parachute mines; flares; oil bombs and lethal incendiary bombs. This carpet bombing of factories and civilians continued for nearly nine months, until May 1941 (when Hitler decided to invade the Soviet Union). Approximately 44,000 British civilians would be killed (including over 5,600 children), 139,000 were wounded and 1.4 million had been made homeless during this sustained aerial bombing campaign.^{3G, 4H, 6Z, 8Q, 9N}

One of the casualties of the German Blitz was Sarnia's Lieutenant John David Wright. He was in a London restaurant that was struck by a bomb during a raid. He lost his life while shielding a nurse, saving her life. His story is included in this Project.

A Canadian's Blitz Experience: A Canadian serviceman described his impressions of England while there during the Blitz in a letter home to his parents. Following are portions of that letter;

Dear Family,

... The first experience that must be faced by the newcomers is, of course, the black-out. It is almost impossible to describe the agony of picking one's way around the streets with a flashlight whose aperture is about the size of a dime... The second thing that they must be taught is the bombing... The order of appearance would be something like this. First, Wailing Willie... the local air raid siren, screaming away, tearing the blackness of the night with its shrieking. Second, the sound of engines "upstairs". The Jerry planes have a sound all their own and there's no mistaking them. Third, the searchlights stabbing round like the Northern Lights... Fourth, the ack-acks – anti-aircraft guns, little ones with a bark like a terrier, big ones with a throaty growl; flashes on the ground from the guns; fire-flies in the sky from bursting shells. Sometimes, a patter on the roof like hail – shrapnel and shell splinters coming down. Fifth, the bombs; big ones, little ones, incendiaries, flares, screams, whines, bangs, crumps, bumps, swish, whoosh... Windows rattling, flashes from the explosions, a blast of air down the street... Sirens of the A.F.S (Auxiliary Fire Service) wagons... whistles of the policemen standing on point duty... Sixth, the silence. Cats creeping around seem to be stamping their feet. Cigarettes are lit behind carefully-cupped hands. Seventh, Wailing Willie blowing the All Clear. Police toot their whistles again, Traffic starts to flow, diverted here and there. People ooze towards the nearest pub, for an Englishman must have his beer. They talk football, cricket, Winston Churchill's latest speech... It's just another night in the front line for them...^{7A}

• **BRITISH GUEST CHILDREN:** The British government had begun slowly planning for war with Nazi Germany soon after Adolf Hitler was appointed chancellor in 1933. The fears of an invasion and occupation by the German army were widespread and raised concerns about the safety of British children. By 1935, a plan had been developed to evacuate youngsters from large cities to the countryside. After Britain declared war on Germany in September 1939, the danger of invasion seemed imminent. In the first few days of that September, almost three million children were evacuated from large cities to rural areas as authorities predicted massive civilian casualties from the bombing of British cities.

After the initial lull in military action—known as the "Phoney War"—ended in April 1940, overseas evacuation began in earnest. By then, the triumphant German war machine was sweeping through western Europe, toppling one government after another. In that summer of rising hysteria, a new wave of internal evacuations from London and eastern England got underway. And some parents sought safety for their children farther afield, and in the summer of 1940, a stream of children sailed for North America.

Initially, the evacuations were done privately. Parents arranged for their children to stay with relatives or friends in Canada and the United States. In some cases, entire schools were transferred to a host facility. Universities and churches as well as British companies with branch offices in Canada also set up evacuation programs. However, since many of these youngsters came from well-off families, there were complaints in the British Parliament and press that the affluent were looking out for their own while children from poor families were being overlooked. The British government initially resisted sponsoring overseas evacuations, one of the strongest opponents being Prime

Minister Winston Churchill who regarded it as defeatist and a waste of invaluable shipping.

In response to a flood of offers from the Empire, an embarrassed British government announced plans in June 1940 to evacuate children to Australia, New Zealand, South Africa and Canada. The scheme would be operated by the **Children's Overseas Reception Board** (CORB), which would pay the children's transportation costs. To be eligible for overseas evacuation by CORB, children had to come from areas likely to be attacked, be in good health, and have a satisfactory school record. When CORB opened its doors in June 1940, it was inundated with applications, with more than 250,000 children registered before the application period closed after only two weeks.

The response by volunteer families in host countries was overwhelming, and there was no shortage of homes for children. The Canadian government, learning from the abuse and hardship suffered by relocated children of the British Home Children migration scheme that started in 1869 (see page 90), insisted that no child would be sent to a family on relief or to one where children had to work for their keep. After debarking at a Canadian port, the children were received by immigration officials, who then arranged for their transportation under supervision to provincial clearing centres, where provincial authorities took charge. Through the Children's Aid or other Child Welfare organizations, the children were placed in carefully selected homes.

The first ships carrying CORB children left Britain in June 1940, and continued over the course of the summer. The government insisted that ships travel as part of a convoy. Tragedy struck on September 17, 1940, when the *SS City of Benares*, carrying 90 CORB children, was sunk by the German submarine *U-48* in the North Atlantic Ocean after naval escorts had left the convoy, believing it was in safe waters. In total, 265 lives were lost. Only 13 of the children were rescued, after being found huddled in lifeboats and suffering from hypothermia. In the wake of this attack, the British government suspended and then terminated the CORB evacuation plan. The agency sent no children to Canada and the other dominions in 1941. Death at home among family was deemed preferable to death at sea. Moreover, by the spring of 1941, the demand for overseas evacuation of children had ended as the threat of a German invasion of Britain was fading. Obtaining warships for convoy duty was also proving difficult.

About 7,500 British children, known officially as "British Guest Children", were evacuated to Canada between 1939 and 1941. Of these, 1,532 arrived under the British government scheme. Most of the British Guest Children adjusted well in Canada where, even in wartime, life was comparatively luxurious and where there were no air raids or blackouts and food was abundant. Most of the children did not return to their families until the end of the war. Many Guest Children eventually returned to Canada as immigrants.^{2E, 11B}

British Guest Children in Sarnia: By June 1940, at least fifty families in Sarnia and surrounding district had registered, offering to open their homes for the voluntary care of refugee children expected to arrive from Britain. The local Children's Aid Society embarked on the task of finding temporary homes for children torn from their own homes by the scourge of war, and ensuring that the children would be properly cared for. Sarnia families offered to provide these children homes, food, clothing, medical attention and other care free of charge. Despite the Ontario Department of Public Welfare stipulating that not more than two children could be placed in any one home, except in special instances, some Sarnia families offered to take care of as many as six children.

In early July 1940, the first group of children from Great Britain arrived in Ontario. It was expected that 2,000 would be in the first group. The first British Guest Children to arrive in Sarnia in early July were two brothers and their sister, the children of Major and Mrs. Alfred Tozer of Potters' Bar, north of London, England. They were Olivia Mary, aged 15, Edward Timothy, aged 12 and John Robert, aged 11. They were to stay with Mr. and Mrs. Charles Weir of 133 James Street, who upon the children's arrival were residing at their summer home at Lake Huron beach. Mr. Charles Weir of Sarnia was a veteran of the Great War, and had billeted at the Tozer home while he was serving as a lieutenant with a mobile anti-aircraft unit. Major Alfred Tozer was in France with the British army at the time Charles Weir was boarding there. The two did not meet until after the armistice, but then became great friends. On June 22, 1940, Charles Weir cabled the Tozers and offered to take care of the children during the war. Major Tozer, who was once more in the army, and among those who escaped Dunkerque (Dunkirk), was only too glad to place his children in Canada. One week later, the children sailed to Canada. Within five minutes of arriving at the lake in Sarnia, the three Tozer children were playing on the beach and in swimming, along with the two Weir children, Catherine and Jane.

In early September 1940, six more "British Child Guests" arrived in Sarnia. Five of the children were from Glasgow, Scotland: sisters Isobel (age 8), Jessie (age 10), and Marjorie McIntosh (age 12); and brothers Gordon (age 12) and David Hope (age 14). Eric Yare (age 14) of Kent, England was the other child. The children had first arrived

in Toronto where they were under the care of the Children's Aid Society there. When the six young children arrived in Sarnia at the Tunnel station, about 200 Sarnians were present to greet them. Following is a portion of the *Sarnia Observer* report on their arrival:

The children showed signs of fatigue when they first came off the train to be surrounded by young and old eager to get a glimpse of them. One little Scottish lassie flashed a ready smile at the bystanders. And it proved to be an infectious smile, for all three of the comely girls were soon, when free of the crowd and excitement, smiling readily. Someone had provided them with some Canadian pears and they were enjoying them contentedly... All the children nodded when asked if they were going to go to school here, and some of them even seemed to be looking forward to it.

Isobel McIntosh would reside with Mr. and Mrs. Norman Perry of 340 Davis Street; her sisters Jessie and Marjory would stay with Mr. and Mrs. Duncan Ferguson of 430 George Street; Gordon and David Hope would stay with Alex Rose of 359 Cromwell Street, later Mr. and Mrs. C.F. Schnarr of 265 South Brock Street; and Eric Yare would stay with Mr. and Mrs. John Cowan at their lakeshore residence, later 262 North Vidal Street.

By December 1940, four more British Child Guests were residing in Sarnia: Roger Butler (age 12) was with Major and Mrs. Gordon McIntyre at 354 London Road; Isabel Miller (age 10) was with Mr. and Mrs. Laurie at 153 North College Avenue; Barbara Scott (age 6) was with Mr. and Mrs. S.B. Scott, and Joan John (age 14) was with Dr. and Mrs. R.K. Stratford in Corunna.

In late May 1942, over three thousand Sarnians came out to welcome two **British "Blitz" Boy Scouts** who were on a coast-to-coast tour of Canada. Hugh Bright, aged 17 and Roy Davis, aged 18, told of their experiences during air raids in England. Their visit to Sarnia began with a luncheon at the Windsor Hotel, attended by local Boy Scouts, Girl Guides, Brownies and their leaders, representatives from local service clubs and civic officials including Mayor J.T. Barnes. It was followed by a parade beginning at City Hall that moved along Christina Street to Victoria Park. At the park, thousands of local citizens gathered to listen to the boys' experiences. Following are the words of seventeen year-old Hugh Bright of Scotland:

Canada is fine and dandy. The first thing that struck us when we arrived in Canada was the number of lights. We stayed up at night just looking at them. I remember my first meal I had. I couldn't believe it. The steak I had would have been a week's ration in Britain. The scenery in this country is marvelous.

The first thing you hear in an air raid is the siren. We have become so used to it that we are out of bed, dressed, and to our post by the time the siren ends. It blows for one minute. 'Jerry' first drops incendiary bombs to start fires and mark his target. All the men between 18 and 60 years of age are in the fire guard. Their job is to put out the incendiaries. After the incendiaries fall, the heavy bombs come, after which 'Jerry' drops more incendiaries to set on fire what he had destroyed. We, as Boy Scouts, are organized to put out incendiaries, dig out people who are trapped in buildings, and be as useful as we can whenever asked to do a job.

Eighteen year-old Roy Davis of Southampton, told the large Sarnia crowd of the food the British were getting at the time:

We only get two eggs a month in England now and everyone looks forward to the meal with eggs in it. There is no white bread, it is all brown. The government says brown is best for us. We have two ounces of butter each week to spread on the bread. When the butter is gone, we have two ounces of cheese to put on the bread.

In the bombing raids, it isn't the soldiers who suffer, but rather it is the civilians. In one raid 40,000 incendiary bombs dropped on the residential and business section of Southampton in one half hour. It certainly kept us busy putting them out.

The two "Blitz" Boy Scouts had been chosen for the Canada tour from Boy Scouts across Britain who had given noteworthy service during air raids. Roy Davis did outstanding work during all the air raids at Southampton. Hugh Bright had rendered exceptional and courageous service as a stretcher-bearer throughout heavy air raids on the Clyde, Glasgow.

In July 1943, Sarnia "British Child Guest" Eric Yare, after being the guest of Mr. and Mrs. John Cowan for three years, returned home to England to join the Royal Air Force. He was eager to contribute his effort to help destroy the Luftwaffe that had driven him from his homeland. He expressed that he had many pleasant memories of Canada and Sarnia, and that the people and scenes made a vivid impression on him. Although England would always be home to him, he hoped to return to Sarnia to visit his many friends here. He said that he was struck by many things on his arrival in Sarnia. He remembered clearly that separately-built wooden houses with verandahs were quite

a novelty to him. His chief objection to Canada had been the smallness and dinginess of its railway stations and the difficulty of access to them. He did like the size and speed of the passenger and freight trains.

On entering school in Sarnia, Eric was somewhat surprised by its co-educational character and by the presence of female teachers. He was impressed also by the freer teacher-student relationship and the relative rarity of corporal punishment. He was also somewhat shocked at first by the informal attire of his classmates. He said that he found Canadians friendly, almost embarrassingly so at first. He took part in many sports while in Sarnia, chiefly boxing, but also enjoyed swimming and diving in Lake Huron, which was much more preferable than the North Sea. Cricket was the sport dearest to him, which he successfully attempted to teach to his Sarnia friends, who had proved quite enthusiastic about the sport. For Eric, it seemed that the Canadians' chief topic of conversation was the weather, finding ample justification for this in its' extreme unpredictability. "In England" Eric said, "there is no need to talk of the weather. You can be sure that it will rain."

In March 1944, another Sarnia "British Child Guest" would return home. After spending more than three years in Sarnia, David Hope, now aged 17 returned to Glasgow, Scotland where he planned to join the R.C.A.F. His younger brother Gordon would remain in Sarnia. David had attended Sarnia Collegiate Institute and was a member of the 7th Sarnia Boy Scouts. He was looking forward to seeing his parents again, Mr. and Mrs. J.N. Hope, and an older brother who was in the British Army. David hoped to return to Canada after the war.

In July of 1944, four more "British Child Guests" would return home to England after spending four years in Sarnia: Olivia Mary (Bindle) Tozer (who had completed one year at McGill University to her credit); and her younger brothers Edward Timothy and John Robert (who attended Sarnia Collegiate Institute); and Roger Butler (who completed his final year at Sarnia Collegiate). When asked their opinion of Sarnia and Canada comments included: Olivia regretted leaving her friends in Canada but would be glad to see her mother and English friends again; and she felt individuals grew up faster in Canada since they were allowed more liberties, such as girls going to dances at the age of 15 or 16 versus England's private schools where girls would only get to social functions at age 19. Olivia and Roger both felt schools in Canada had less discipline; and Roger said when he first arrived in Sarnia he was impressed with wooden houses, since in England, they were either brick or stone. The children had been spending their summers at the lakeshore and said they enjoyed this, especially swimming in Lake Huron; Roger came to like watermelon and corn-on-the-cob which they had never seen before; and John Robert became an ardent baseball and hockey fan.

• **SARNIA PREPARES FOR ATTACK:** On a mid-February night in 1941, thousands of local and district residents turned out in downtown Sarnia for a mock "blackout and bombing raid" event and parade. It was organized by the committee in charge of the War Savings Certificates campaign, as a way to demonstrate what might happen should the community be attacked, as the English people were enduring with nightly German bombing raids. The *Sarnia Observer* reported that, "It was an event the like of which had never been seen in Sarnia and the parade was considered the best since the Armistice celebration in 1918."

Sarnia's downtown was jammed with people when the air raid warning sounded, and within seconds, the fire department raced down Front, Wellington and Christina streets with sirens wailing and bells ringing. At the same time, fireworks, to represent bursting bombs and shells, exploded along the waterfront, and flares were fired from rooftops. The parade included numerous floats, the Lambton Garrison Band, local military units, the Sarnia Volunteer Guards, the Sarnia Township Guard, the Pressey Boys' Band, the Petrolia White Rose Band, the Imperial Pipe Band, the Salvation Army Band, the Hydro employees wash-board band, several hundred Boy Scouts and the St. John Ambulance Brigade.

In late December 1941, Sarnia Mayor John Barnes, as chairman of the local Civilian Defence Committee, offered advice to Sarnia citizens, stating that it was urgent that they become acquainted with measures to be taken in the event of an air raid attack. Instructions included: if at home or work during an emergency, stay there, seek cover at once; keep streets clear for movement of emergency vehicles; do not use the telephone; keep on hand a supply of water; be prepared for incendiary bombs by keeping on buckets of sand; and keep on hand a moderate supply of first aid equipment.

On the first day of summer, June 21, 1942, Sarnia, along with Point Edward and Port Huron, held their first test "black-out". The united 15-minute drill was a test of the Civilian Defence and Air Raid Precautions (A.R.P.) Committees emergency preparedness in the event of enemy air attack. Warning sirens across the area sounded to start the drill, then within seconds, street lights, homes, cars, downtown businesses and industry lights like those at

Imperial Oil Limited were extinguished. The only lights visible for miles were those of passing lake freighters, navigation signals on the bridge and ironically, a spotlight that illuminated the war memorial in Victoria Park which had been mistakenly left on. A few minutes later, fire engines, ambulances and utility vehicles were dispatched and raced through the downtown streets of Sarnia and Port Huron in response to simulated emergencies. Afterwards, Mayor John T. Barnes congratulated the citizens of the city for the manner in which they cooperated and stated, "It was a good test and will probably make the people of Sarnia conscious of what they may have to go through if Sarnia is ever raided." A number of these "black-out" drills would be held in Sarnia during the course of the war, organized by the Civilian Defence Committee.

• **CORPS OF CANADIAN CIVILIAN FIREFIGHTERS:** Not all who put their lives on the line to serve Canada during the war did so in a military uniform. A little known organization that did this was the Corps of (Civilian) Canadian Firefighters. During a visit to the United Kingdom in 1941, Prime Minister McKenzie King was asked by Winston Churchill to provide a contingent of firefighters to assist British firefighters in combating the fires caused by persistent air raids. By March 1942, recruitment began for the Corps of Canadian Firefighters. A total of 422 Canadian men volunteered for the Corps, leaving behind their homes and families to answer the call of duty overseas.

Arriving overseas beginning in May 1942, only half of Corps volunteers were professional firefighters; the other half had no experience. After completing a four-week familiarization course, they were posted to fire stations in Southampton, Portsmouth, Plymouth and Bristol. During their time in England, the Corps of Canadian Firefighters responded to all fires both domestic and those caused by the German air raids. They worked often in perilous conditions to effect rescues and battle fires usually started by bombing. There were a total of 11 Canadian casualties, including three deaths, in the Corps of Canadian Firefighters overseas between May 1942 and May 1945.^{D, E and 3A}

At least five men from Sarnia-Lambton were part of the Corps, including Sarnians Charles F. Jennings (214 Napier Street), William Boulton (214 Cotterbury Street), Clarence Taylor (Murphy Sideroad), H. Smith (Watford) and A.O. McFarlane (Forest). Charles Jennings and William Boulton were members of the Sarnia Fire Department.

• **THE NORTH AFRICAN CAMPAIGN,** June 1940 – May 1943: In June 1940, Italy declared war on the United Kingdom and France. In September 1940, Italian leader Benito Mussolini moved to enlarge his Italian empire in Northern Africa, which already included Libya and Ethiopia, by invading Egypt (then part of the British Empire). In December 1940, British and Commonwealth forces counterattacked and captured some 130,000 Italians. Hitler's response to this loss was to send in the newly formed German "Afrika Korps" to western Libya in February 1941. Led by General Erwin Rommel (the 'Desert Fox'), the German forces pushed eastward into Egypt, sending the British forces into retreat.

Over the next couple of years, Allied and Axis forces pushed back and forth across Libya and Egypt that included key battles at Benghazi, Tobruk and El Alamein. A turning point came in the Second Battle of El Alamein in late 1942, when Lieutenant-General Bernard Montgomery's British Eighth Army broke out and drove Axis forces all the way from Egypt to Tunisia. In November 1942, thousands of British and American forces invaded French North Africa (Morocco and Algeria) in **Operation Torch**. Joining the attack and overwhelming the Vichy French defenders, they eventually helped force the surrender of all remaining Axis troops in Tunisia in mid-May of 1943 and ending the campaign for North Africa. North Africa was a large-scale conflict and it had forced Hitler to divert considerable resources, severely weakening German efforts elsewhere, especially relieving pressure on the Soviet Eastern Front. Ultimately, the North Africa Campaign was a serious defeat for the Axis powers.

Though Canada did not send any Canadian Army units to fight in North Africa, there were approximately 350 Canadian army officers and non-commissioned officers dispatched there, fighting as part of British units that had suffered serious casualties. There they gained valuable experience before returning to Canadian units, while twenty-five became casualties, eight of them fatal. Canadian airmen, members of the RAF or the Royal Canadian Air Force, including Squadron No. 417, flew fighters above the armies from Egypt to Tunisia. Canadian airmen also performed meteorological flying, anti-submarine assignments and bomber duties. Royal Canadian Navy sailors manned landing craft supporting the Algerian and Moroccan landings, as did sixteen Royal Canadian Navy corvettes. The corvettes sank three submarines in the North African theatre, but HMCS *Louisburg* and *Weyburn* were lost.^{2E, 2I, 4A, 7B}

Sometime in 1943, the *Sarnia Observer* included a story on Flight-Lieutenant Harry B. Turnbull of Sarnia, who had returned to the city on leave. Before joining the Royal Canadian Air Force, he was employed by Imperial Oil in Sarnia. Turnbull had arrived overseas in the fall of 1941, was transferred to the RAF and posted to the Middle East in Cairo. He was attached to a bomber squadron, flew in a Wellington, and was assigned to night operations

against Bengazi, Tobruk and Crete. Following is a portion of that story;

Veteran Of Forty-Three Bomber Attacks Over The Axis In Africa Back Home

To have been through some of the thickest fighting in Egypt and Lybia, to have seen the British pushed back when Rommel had his eyes on Cairo, and to have been part of the regained offensive when the British forces in the Middle East began their drive and kept on and on with unrelenting determination and vigor is the experience of Flt.-Lieutenant Harry B. Turnbull of Sarnia, who returned to the city yesterday for a well-earned leave.

It was with considerable reluctance that Flt.-Lieut. Turnbull was persuaded to talk at all of his experiences. "There is nothing much to tell," was his first explanation, "and if there was, it would have to be authorized; otherwise I might easily get into trouble."

... The bombers take off light and proceed to an advanced base where they are "bombed up", then continue to their objective. Crete is so heavily fortified by the enemy that it was their job to get there, release the bombs on the target and get away quickly out of range of anti-aircraft fire... In the bombing attacks against Bengazi and Tobruk they encountered comparatively little opposition from enemy aircraft. "But there was one 'sticky do'," he ventured. "Our objective was Tobruk. We went in at about 8,000 feet and got caught in flak and searchlight. We did a dive to get out of that, dropped the bombs on the target and came out at about 4,000 feet. We found one bomb had not been released. We had to go round again, this time at about 5,000 feet. On into our position we went and then ran into more trouble with flak and searchlight. We did another dive and this time came out at 300 feet. That was mighty close."

... In the desert living was a hardship. Water was the great problem and a man might go six weeks without a bath. They were pestered with flies. It was too hot to sleep in the daytime and a man was expected to be out every second night. In some areas there were no prepared landing fields... The crews had to make runways on the sand by clearing away stones... Life on the ground was spent almost entirely in tents. The flies were inconceivably numerous and sand, borne by the desert winds penetrated everything, even the food...

"Flt.-Sgt. Dave Miller of Sarnia was a member of my squadron in Africa. He was reported missing last fall. There also was a boy, PO. Ray Vaupel, with us. He also was lost on an operation. He was from the Goderich district."

In early April 1944, Flt.-Lt. Harry B. Turnbull, then an air bomber instructor at No. 4 Air Observer School in London, Ontario, was presented with the Distinguished Flying Cross medal. He had been awarded the decoration in May 1943 for "courage and devotion to duty worthy of high praise" while on operational sorties around Malta and during the North African Campaign. His citation recorded that during a large number of sorties his navigation had been of a high standard. The citation also stated, "A meticulous and determined officer he has obtained many successful hits on enemy land targets and amongst shipping. On one occasion he started three fires one night."^N

At least four young men from Sarnia, all members of the Royal Canadian Air Force, gave their lives in the North Africa Campaign, including David Miller, Alexander Smith, Howard Thompson and Frederick Wise. Howard Thompson is buried in a war cemetery in Egypt, the other three have their names inscribed on the Alamein War Memorial in Egypt.

• **SARNIA'S FIRST MEMORIAL CROSSES:** In May 1941, the first Memorial War Crosses began to arrive in Sarnia, with notification that others were to be expected. The memorial crosses were issued by the Canadian Government to the mothers and widows of members of the Canadian navy, army, air force, and Canadian merchant seamen who lost their lives while in service to the country. The crosses were of sterling silver with a wreath of laurel leaves entwined between the arms and maple leaf superimposed. The crosses are suspended from a purple ribbon. On the reverse side was engraved the name and regimental number of the deceased. Accompanying the memorial crosses were engraved cards bearing the inscription, "*This memorial cross is forwarded to you by the minister of national defence on behalf of the government of Canada in memory of one who died in the service of his country.*"

Among those in Sarnia that received memorial crosses in May 1941 were Mrs. M.G. Harris (mother) and Mrs. J.M. Harris (widow) of RCAF Sergeant-Pilot John M. Harris; Mrs. E.J. Powell (mother) of RCN Ordinary Seaman Stephen B. Powell; and Mrs. H.O. Le Gare (mother) of RCNVR Able Seaman Hector Le Gare. Their stories are included in this Project.

• **THE SARNIA AMBULANCE:** In November 1941, the *Sarnia Observer* published a letter that had been received by the Sarnia Rotary Club. The local Rotary Club had donated an ambulance through the Canadian Red Cross to the British Red Cross Society in June 1940. The letter had been sent from Miss Jean Dixon in England, the driver of the

Sarnia Rotary ambulance. Miss Dixon was a member of the F.A.N.Y.'s, the First Aid Nursing Yeomanry. In her letter, she expressed her deep appreciation for the gift of the ambulance and provided some insight into the life of an ambulance driver during the hectic times of constant German air raids. Following are portions of her letter:

Dear Members,

... Your ambulance has had many adventures since it left you... It arrived at Liverpool where it was unloaded and was taken to an old and romantic castle the seat of one of the previous dukes, a wonderful place with courtyards, little windows and ancient doorways. It reminded me of Walt Disney's drawings and fairy stories.

At this time I was stationed in London and from there we used to take convoys of six to ten ambulances twice a week to London to have stretchers, blankets, water bottles and other equipment put in before they went out to the commands. It now has a number GGP512 and early one morning we set out from London to the British Red Cross Society headquarters, southern command, where it was cleaned and polished by the girls who were on a fortnight's course. After a last check-over it was posted to Plymouth where it was to stay for several months. Miss Dixon was then transferred to Plymouth.

Here I met your ambulance again but this time we were not to be parted. The first thing to do was christen him. He always reminded me of a penguin so thinking of Pip and Squeak's nephew I called him Stanley. I expect you have heard of the terrible blitzes on Plymouth so perhaps you can imagine some of the exciting and terrible things that happened there...

How we all came out alive I still cannot understand. On three occasions was the actual building in which we were in hit and the last time we crawled out of the ruins of our billets after a land mine had knocked it to the ground. We had many tense moments. Once an incendiary bomb hit the back of Stanley and I jumped out expecting to find my co-driver hurt but to find her underneath with only a small burn on her hand. Our nights were spent collecting the wounded – the days collecting the dead and cleaning the ambulances. After the last blitz Stanley was the only ambulance left out of the original 10, and five or six very tired F.A.N.Y.'s clanked into the battered Stanley with their salvaged belongings for the journey back to H.Q., leaving the burnt and battered Plymouth a memory they will never forget.

In Bath, the first thing I did was to take Stanley to the nearest workshops where he stayed for nearly a week. His bonnet and cab roof were badly damaged and several large shrapnel marks all had to be repaired. The windows had to be ordered so I drove him for some time with a badly cracked windscreen and no side windows. Now he is himself again and I spent some time polishing the new paint and patching the roof with a puncture outfit. The affection which I have for him is really amazing. I never realized it was possible to be so fond of a machine even in his grumpiest of moods. He has never let me down and although I took handfuls of glass from his tires, not one puncture did he have.

We have quite a lot of work here driving about 400 miles a week... I am sending you some photographs which may interest you. One, as you will see is Stanley before he was sent to the workshops. Before I finish I should like to thank you all again for your kind gift and also for the ambulance and the many other things which you and your countrymen have sent to help us win this war...

- **AIRGRAPH SERVICE:** Also in November 1941, Sarnians were taking advantage of the new "airgraph" service started at the post office. It was a means to send correspondence to members of the armed services overseas by air with a minimum of cost and delay. Messages were written on a letter-sized form obtained from the post office. The form was then sent immediately to Toronto where it was photographed on miniature film. A small negative was then made, sent overseas, and upon reaching the U.K., developed. A print five inches by four was made, placed in an envelope and then delivered. The cost of sending a message of about 15 lines was 10 cents, and it was delivered in four or five days.

- **A MAN CALLED INTREPID and CANADA'S SPY SCHOOL:** Approximately a four hour drive from Sarnia, was a top-secret training school for spies—commonly known as Camp X. To the British it was known as STS (Special Training School) No. 103; the Canadian military called it Project J; and the RCMP called it S25-1-1. It was born after British Prime Minister Winston Churchill instructed the British Security Co-ordination chief—Canadian William Samuel Stephenson—to create "the clenched fist that would provide the knockout blow" to the Axis powers.

William Stephenson was born William Samuel Clouston Stanger on January 11, 1896 in Winnipeg. He was the son of William Hunter Stanger, an immigrant from Orkney Islands, and Sarah Johnston of Winnipeg. In 1901, on William's fifth birthday, he learned that his father William Sr., had been killed during fighting in the South African (Boer) War. In an odd twist, Winston Churchill, who was on the North American lecture circuit retelling stories of

his own experiences in the Boer War, happened to be in Winnipeg at this time. Years later, Stephenson's two partners at a critical moment in history were Winston Churchill, prime minister of Britain; and Franklin Delano Roosevelt, president of the United States.

When William Sr. died, Sarah was left to bring up three children and there was no way she could support them. William was adopted by Vigfus and Kristin Stephenson, and he took the name of his adopted parents. Growing up in the prairies, William was a self-reliant boy who devoured books and loved boxing, and worked at a lumber mill where his adopted father worked. In his early teens, he experimented with electricity, steam engines, kites and crude airplanes. In January 1916, one day after his twentieth birthday, William enlisted in the 101st Overseas Battalion, CEF, in Winnipeg. He stood five feet five inches tall, was single, and recorded his occupation as telegrapher. He arrived in England in July 1916 and later that month arrived at the Western Front trenches with the Royal Canadian Engineers. He suffered the trauma of a couple of poison-gas attacks and was sent back to England as "disabled for life".

But William was eager to get back to the front so, fudging his medical history, he wangled a transfer to the Royal Flying Corps. After five hours' instruction, he was a fully-fledged fighter pilot. As a member of what was widely regarded as the "Suicide Service", Stephenson won the Distinguished Flying Cross "for conspicuous gallantry and skill" and was awarded the Military Cross for his actions against the enemy. He had a record of twenty-six enemy aircraft shot down; was wounded when he was shot down and captured; and later organized his own elaborate escape. He had the French Legion of Honor and Croix de Guerre with Palm to add to his other medals. On surviving the Great War Stephenson recalled, "I had a guilt feeling that I should have died with the others. Being still alive, I had an obligation to justify my survival."

He was hired by the University of Manitoba to teach math and science while he studied experiments in public broadcasting. While there he invented several devices in communication technology, including the wirephoto and then a radio facsimile method of transmitting pictures without need of telephone or telegraph wires. He moved to Britain in 1921 to develop and market this invention to newspapers and rapidly earned a fortune. He pursued various business ventures and inventions and launched himself on a career as an industrialist, manufacturing such diverse products as radios, phonographs, automobiles, and airplanes. He also moved into construction, real estate and steel.

At the beginning of WWII, Stephenson was placed in charge of **British Security Co-ordination** (counterespionage) in the Western Hemisphere, with headquarters in New York. There he acted as the liaison between Churchill and Roosevelt, and was instrumental in the formation of the forerunner to the US Central Intelligence Agency. His organization's activities ranged from censoring transatlantic mail, breaking letter codes and forging diplomatic documents, obtaining Vichy French and Italian military codes, protecting against sabotage of American factories producing munitions for Britain, and training (at Camp X) allied agents for surreptitious entry into Nazi-occupied Europe.

Businessman, inventor, fighter pilot and master spy best known by his wartime code-name "Intrepid" (given to him by Churchill), Sir William Stephenson was knighted by King George VI (for his services to the British Empire); was awarded the Companion of the Order of Canada (our country's highest civilian award); and awarded the US Medal for Merit (the first non-American to receive the highest US civilian honour). He is commemorated by a statue in Memorial Park in Winnipeg. Ian Fleming, best-selling author of the James Bond novels said, "James Bond is a highly romanticized version of a true spy. The real thing is William Stephenson." ^{2N, 11D}

Canada's Spy School: Located on the northwestern shore of Lake Ontario, between Whitby and Oshawa, **Camp X** was the first official site for British, Canadian and American intelligence officers during the war, and would be the only such school in North America. Opened on December 6, 1941 (one day before Pearl Harbour was bombed), this paramilitary training installation was one of several dozen around the world that was commanded by Britain's Special Operations Executive (SOE), a branch of the British MI-6. Camp X had two main objectives: to train Allied agents in espionage activities such as sabotage, subversion, deception, intelligence and other 'special means'; and to serve as a major radio communication link between North and South America and European operations of SOE (the vital and highly sophisticated radio and telegraph communications network between Britain, the U.S. and Canada, with its high-speed transmitter known as Hydra).

Subjects taught to the secret agents training at Camp X included; how to interrogate prisoners, safe blowing, information gathering, lock picking, explosives training, encoding/decoding, Morse Code, recruiting techniques for partisans, unarmed combat and the art of silent killing with the thrust of a knife.

An arm of the Camp X organization was Station M (for magic), that operated from the basement of Toronto's Casa Loma museum, where scientists and seamstresses worked secretly manufacturing items secret agents needed once behind enemy lines, including; compasses concealed in combs, silk scarves printed with detailed maps, clothes made with cloth and buttons from enemy countries, forged visas, passports and currency created on typewriters smuggled out of enemy countries, cameras that shoot bullets, swords disguised as canes, suitcase radios and lipstick tubes that concealed a dagger.

Many of those trained at Camp X were sent behind enemy lines in Europe and Asia to cause damage and disruption, and/or spread disinformation, while also gathering information useful to the Allied war effort. It is believed at least 500 (some estimates up to 2000) Allied agents trained at Camp X, with many notable figures known to have been there in various capacities, including: William Stephenson, Ian Fleming (author of 12 James Bond novels), Paul Dehn (British film critic and screenplay writer – *Goldfinger*, *The Spy Who Came in from the Cold*, *Planet of the Apes* and *Murder on the Orient Express*), Roald Dahl (British author – *James and the Giant Peach*, *Charlie and the Chocolate Factory* and *Fantastic Mr. Fox*) and Stirling Hayden (American film actor). During the Second World War and decades after, those connected with Camp X were sworn to secrecy. Today, the former site of Camp X is a park, appropriately named “Intrepid Park”.^{2E, 2N, 8P, 11D}

• **THE BATTLE OF HONG KONG**, December 8 – 25, 1941: Since the early 1930's, Japan had been invading territories—China it's primary target—as it expanded it's empire. Victorious on the battlefield, brutal atrocities by the Japanese army followed in the aftermath, including raping, torturing, and murdering 200,000 civilians in Nanjing, and the use of biological and chemical weapons on civilians.

Hong Kong was a British Crown colony, but in the 1930's, Britain concluded that it was a mere “outpost” of the Empire, worth defending, but refusing to reinforce it. After Japan launched their major offensives into China in 1937, Britain decided Hong Kong could be a strategically important island on the south coast of mainland China. Britain believed that reinforcing Hong Kong might even deter war. After all, the United States had moved its Pacific Fleet from California to Pearl Harbour, Hawaii. With two British and two Indian infantry units already in Hong Kong, Britain asked Canada to provide more troops for it's defence. The British had already decided not to commit more of their own forces to the colony, based on various studies that showed it would be extremely difficult to defend – a conclusion never communicated to Canadian authorities. In September 1941, Canada agreed to Britain's request to reinforce Hong Kong, as many of its leaders were anxious for the army to increase its role in the war. It would be the Canadian army's first engagement of the Second World War, and it would be a disaster.

On October 27, 1941, a force of 1,975 Canadian soldiers, which included two Canadian army Nursing Sisters, two medical officers, two dentists and three chaplains, were sent to Hong Kong (the destination was unknown to most of those on board until after leaving port), with the task of defending the island against any Japanese Empire attack. The forces core was two infantry battalions, both classified by army headquarters as, “in need of refresher training or insufficiently trained and not recommended for operations.” The Canadian battalions comprised of the Royal Rifles of Canada (of Quebec) and the Winnipeg Grenadiers had no battle experience, some had barely fired their rifles. It was felt that they would have some time there to get more training as there was little chance of an attack. It was hoped the Canadians would see only garrison duty, but the directives to their commanding officer also said they would “participate to the limit of your strength in the defense of the colony should the occasion arise.” British intelligence assured the Canadians that if the Japanese did attack, it would be of little consequence, because according to the racist stereotype of the day, they were small, nearsighted and unable to fight at night. Arriving in Hong Kong on November 16 aboard the cargo ship *Awatea*, (escorted by *HMCS Prince Robert*) the Canadians landed ahead of their 212 trucks, universal carriers, and motorcycles which would never arrive—they were diverted to United States forces in the Philippines.

The British colony of Hong Kong consisted of Hong Kong Island and the adjacent mainland areas of Kowloon and the New Territories. Upon arrival, the Canadians were soon to discover that the military garrison's defensive positions were poorly maintained, with outdated guns, no radar equipment, no significant air or naval defence, and a slew of other deficiencies. A total of 14,000 soldiers made up the defence force, consisting of British, Canadian and Indian regiments and Hong Kong Volunteer Defence Corps. The plan to defend the colony was to divide the force into two brigades, one to defend the mainland, and the other to be stationed on the island to guard against an invasion from the sea. The majority of the two inexperienced Canadian battalions were positioned on the island.^{D, 4H, 6F, 6Z, 8M}

In early December 1941, the Japanese launched a series of surprise attacks almost simultaneously on Pearl Harbour, Northern Malaya, the Philippines, Guam, Wake Island and Hong Kong. At 0755 on December 7, 1941, hundreds of Japanese fighter planes, bombers and torpedo planes attacked the American Pacific Fleet in **Pearl Harbor**, Hawaii. It was over by 1000 hours. The surprise strike killed more than 2,400 American service people and civilians and wounded nearly 1,200 more while destroying 188 planes and demolishing or damaging eight battleships. The Japanese attack on Pearl Harbour, not preceded by a declaration of war and without warning, was referred to by United States President as the “date which will live in infamy.” The United States declared war on Japan the following day. The Canadian government asked King George VI to declare war on Japan on behalf of Canada immediately after the attack, and Canada became the earliest Allied government to do so.

The attack on the Hong Kong mainland began on December 8th morning (December 7 in Canada), less than 8 hours after the attack on Pearl Harbor. The Japanese plan of attack was simple: force the defenders back, clear the mainland, then assault the island itself. They enjoyed the advantages of air and artillery superiority, and their troops, numbering 52,000, were tough, well-trained, highly motivated, and had seen combat in China. Through intense fighting, often at night, and behind destructive air raids and heavy artillery bombardment, the Japanese successfully advanced through to the mainland coast. By the morning of December 13, the defences were overrun, and the last Allied soldiers, including some Canadians, left the mainland. The Canadians were reorganized into an East Brigade (containing the Royal Rifles) and a West Brigade (containing the Winnipeg Grenadiers). On December 13, and again on December 17, the Japanese demanded the surrender of the garrison. Both times, the demand was refused, and though the defenders were in a hopeless position, they were determined to delay the Japanese as much as possible.

On the night of December 18, under cover of heavy shellfire, the Japanese in large numbers, crossed the one kilometer narrow passage from the mainland to the island of Hong Kong. By the next day, they had pushed to the centre of the island, swarming across it, occupying a number of high points on the island, and using them to rain down fire on the Canadian defenders. The Canadian brigades, now cut in two, were forced back towards the island’s western and southern shores through rugged, steep hill country. The Canadians fought valiantly against overwhelming odds, against battle-toughened troops that far outnumbered them in strength, and who were backed with a heavy arsenal of artillery and air support. One corporal said, *“I taught one fellow how to load and discharge his rifle behind battalion headquarters in the hills. He was killed before he even got to fire it.”* A lieutenant said, *“Some of these soldiers were just too damn young. I remember one who was wounded – I suddenly realized that he was only a child of 16 or 17.”*

By the fifth day of the battle, the island was split, the water reserves were lost, ammunition was running low, and the defenders had endured much of that time with little food, water, or sleep.^{4H} The Canadians had no significant air or naval defence and had no hope of being relieved or resupplied. The Canadians continued to hold out with uncounted acts of heroism and sacrifice. On Christmas Day, 1941, after 17 ½ days of fighting against overwhelming odds, Hong Kong was surrendered. Although all the fighting ended, the killing did not stop. In various parts of the island, Japanese soldiers embarked on a killing frenzy; subjecting the captives to sadistic acts of horror that included horrendous beatings, beheadings, assaulting and murdering nurses, bayoneting wounded soldiers in hospital beds, and rampant murder.^{D, 4H, 6F, 6Z, 8M}

When the barbaric behaviour subsided, the remaining gallant Canadian, British and Indian combatants, and British civilians, were marched into captivity. Canadian prisoners were put in camps in Hong Kong, and later, a group was sent to Japan as slave labour. What lay ahead was a period of grim imprisonment, a living hell, for almost four years. A Canadian Signaller who would survive the camps later said, *“I thought I had gone through hell, but (after the battle) found that I had only entered the gates. I was subjected to starvation, disease... (and) slow torture. At one point I was down to 108 pounds. I was just a bag of walking bones.”* The treatment of the Canadians in Japanese hands was far worse than it was for those Canadians who fell into the clutches of the Nazi’s.^{D, 4H} The Japanese were ruthless, sadistic captors and the Canadian prisoners endured the hardships of starvation, malnourishment, diseases, savage beatings, torture, insect and vermin infestations, slave labour and execution. Few Red Cross parcels ever reached Hong Kong POWs, and those that did the captors usually sold on the black market or kept them for their own use.

Hong Kong would not be liberated by the Allies until August of 1945. The Hong Kong veterans would finally return to Canadian soil in October 1945. The auxiliary cruiser *HMCS Prince Robert*, which had helped transport Canada’s troops to the ill-fated defence of Hong Kong in 1941, returned to the Pacific theatre and had the satisfaction of assisting in the liberation of the prisoners of war in Hong Kong. Many of those who did return were so

broken in body and spirit that they died premature deaths in the years that followed. The Hong Kong campaign, the Canadian Army's first combat action in the Second World War, was the only significant action in Canadian military history in which 100 percent losses were inflicted. Not a man escaped either capture or a grave.^{D, 4H, 6F, 6Z}

One of the Canadians killed defending Hong Kong was British-born Sergeant-Major (Warrant Officer Class II) **John Robert Osborn** of the Winnipeg Grenadiers. Osborn had served in the Great War, emigrated to Canada in 1920, soon married and had children, settled in Winnipeg and worked on the railway. He joined the Winnipeg Grenadiers in 1933. During the Battle of Hong Kong, on the morning of December 19, 1941, John Osborn had led his company of Winnipeg Grenadiers up the steep Mount Butler and recaptured the hill at bayonet point before being forced to fall back. Osborn and a small group covered the withdrawal and when their turn came to fall back he single-handedly engaged the enemy, exposing himself to heavy enemy fire to cover their retreat. That afternoon his small company was surrounded by Japanese soldiers tossing grenades. Osborn caught several and threw them back. When one landed out of his reach, he yelled a warning to his mates and flung himself on the grenade which exploded killing him instantly. His bravery and self-sacrifice undoubtedly saved the lives of many of his comrades. John Osborn was the first Canadian to receive the Victoria Cross in this war. He left behind his wife Margaret and five children.^{D, 2N, 7A}

Of the 1,975 Canadians who went to the indefensible and isolated colony of Hong Kong; 290 were killed in battle (among the dead were several who had been wounded, but after surrender, were bayoneted or machine-gunned by blood-lust Japanese), 493 were wounded and 1,685 were marched off to endure for another forty-four months the subhuman conditions of Japanese prisoner of war camps. Beginning in January 1943, the first Canadian POW's were sent to Japan as slave labour. Over 15 months, 1,184 Canadian POW's were sent there to work in mines, factories and at the docks. Of the 1,685 Canadians that were captured, 264 of the POW's died in captivity through neglect, abuse, disease, torture, systemic malnutrition, and outright murder (128 in Hong Kong and 136 in Japan). With 1,047 killed or wounded, the casualty rate was more than 50%, one of the highest of any Canadian theatre in the Second World War. For those that survived their cruel imprisonment and returned to Canada, almost every one was plagued by physical and psychological problems for the rest of their lives.^{D, E, 2E, 2N, 3A, 4H, 4I, 8M} One young man from Sarnia, Max Berger, gave his life in the Battle of Hong Kong. His story is included in this Project on page 579.

In mid-October 1945, twenty-five year old **Private George Francis Robinson**, a member of the Winnipeg Grenadiers, made a surprise visit to his parents, Mr. and Mrs. Frank Robinson, Bluewater, Sarnia. He had spent almost four years in a Japanese prison camp. He told his story to the *Sarnia Observer*. He had been a member of the garrison at Hong Kong when it fell on Christmas Day, 1941. He wasn't captured until the following day. He had been with an outpost in the mountains when a British officer broke through the Japanese lines and said they were to surrender. They had plenty of heavy and light machine guns, but ammunition was running short and the water supply was exhausted. They would smash their guns and the Japanese moved in immediately.

Robinson described how inside the prison camp, the Japanese guards were always trying to cause trouble; for instance, one guard would offer a prisoner a cigarette. As soon as the prisoner lit up, the guard would give the nod to another guard who would step up and smash the cigarette against the prisoner's teeth. Food was always short and consisted mainly of steamed rice three times a day with occasional treats of mule or horse meat, tripe or grasshoppers in soy sauce. His starvation diet reduced him from 162 pounds to 107 at the end of the war. While he was in Hong Kong, an epidemic of diphtheria broke out in the camp and killed a number of fellows. George himself got the disease but, fortunately, recovered.

In the spring of 1943, Robinson was moved to Nagata, several hundred miles north of Tokyo. The move was made in the stinking hold of a salvaged Chinese steamship into which 305 prisoners were jammed so that there was no room to lie down. At Nagata, he was employed with other prisoners as a stevedore unloading ships. There were no regular hours. If a ship came in, the prisoners worked until they had unloaded her, sometimes laboring from 5 a.m. until midnight. He was inclined to pity the Japanese girls who also worked as stevedores, carrying 200-pound bags. On his return to Sarnia, he planned to spend two weeks with his parents and then return to Winnipeg to enter high school in preparation for a course on diesel engineering. He said, after the blackout in Japan, that the bright lights of Canada are what appealed to him now and, although the food was sumptuous in Canadian restaurants, he frequently could eat only part of a regular portion.

• **THE DIEPPE RAID**, France, August 19, 1942: By the spring of 1942, the Soviets were pressuring the Allies to open up a second front against the Nazi's, in order to relieve some of the pressure of the fighting on the Eastern Front. The Americans were insisting on a full-scale cross-channel attack into France by the end of the year. At the

same time, Canadian Army divisions and armoured brigades were growing stronger by the day, but for the most part, sat in Britain and trained month after month, and trained some more. The men grew bored and angry as war raged elsewhere—they were eager to get into the action. The Allied Command came up with a plan to placate the Soviets, and to appease the Americans, and the Canadians wanted to take the lead.

The Allied plan, headed by Vice-Admiral Louis Mountbatten of Combined Operations, was for a cross-channel raid, targeting the small French resort town of Dieppe. Code-named *Operation Rutter*, training for the raid began in England in May 1942, with the invasion scheduled for July 4. The weeks of training involved navigating obstacle courses, bayonet fighting, unarmed combat, climbing cliffs, firing weapons from the hip, embarking and disembarking from landing craft, demolition training and river crossings. On July 2 and 3 the troops embarked on landing ships for another training exercise, and once they were all aboard, were fully briefed that in fact, this was the actual operation against the enemy. But the weather deteriorated on the night of July 3, thwarting the plans, delaying the operation. The sailing was postponed repeatedly until it was decided to launch the attack on July 8. On the morning of July 7, due to a number of factors including unfavourable weather, the raid was cancelled again. Many of the Canadians were disappointed to hear the operation had been scrubbed—one Canadian journalist reported that some of the men cried openly. Many involved in the planning wanted to abandon the raid as it was obvious that the Germans knew something was up because of the concentration of shipping. Yet despite the debate, the operation was revived not long afterward, and renamed *Operation Jubilee*.

The code name for the operation came out of a discussion with Canadian William Stephenson (British Security Co-ordination chief), refugee scientist Chaim Weizmann and other Jewish leaders. Stephenson recalled, “Somehow we got talking about Jewish biblical traditions. If ever Hitler were destroyed and Europe liberated, it would be like that biblical period when slaves are freed and the land restored to its rightful owners—the period that Jews traditionally call Jubilee.”^{11D}

The new operation would be streamlined from the original plan: the use of capital ships (heavy warships) was discounted; the cutting of anti-aircraft ships; and the scrubbing of heavy bombers to soften the target (instead, suppressive strafing runs by fighter-bombers would be used).^{D, E, 2N, 4H, 6Z, 11D}

The raiding force on Dieppe would involve approximately 6,100 troops, made up of close to 5,000 Canadians of the Second Canadian Infantry Division, 1,000 British commandos and 50 American Rangers. It was the first major Canadian engagement in the war (after Hong Kong), and would become one of the darkest chapters in Canada’s military history.

The **revised plan** would involve troops coming ashore at five different points along a 16 kilometre-long stretch of heavily defended coastline, and without the heavy air bombardment in the original plan. Puy and Pourville, two minor beaches on the flanks, were to be captured at 4:50 a.m. Half an hour later, two Canadian infantry battalions, the Essex Scottish Regiment and the Royal Hamilton Light Infantry, supported by the tanks of the Calgary Regiment, were to raid the main objective, Dieppe. Both the Essex Scottish and Royal Hamilton units drew their recruits from southwestern Ontario, including Sarnia.

Dieppe was the fifth in a series of “pinch raids” that followed the successful raids on the islands of Lofoten and Vagsoy in Norway and the unsuccessful ones at Saint-Nazaire and Bayonne in western France. Many reasons for the purpose of the Dieppe raid were given, including; to destroy radar and other military installations, damage enemy shipping and port facilities, to seize a neighbouring airfield, to capture a German divisional naval headquarters in order to acquire intelligence documents, gather information from prisoners, and it would serve as a test run for the future invasion of Europe.

Recently declassified documents have shown that at its heart, the raid was a “**pinch**” (British slang for “steal”) operation designed to capture cryptographic material for code breakers in Bletchley Park in England. Cryptography, the ability to break into and read the enemy’s enciphered communications, was becoming a major weapon. In mid-March 1942, confirmation came that vessels frequenting Dieppe carried the four-rotor Enigma machine. The goal of the raid was to capture German documents, code-books and a four-rotor Enigma encryption machine (the Germans had been transitioning from a three-rotor to a four-rotor machine, a major concern for the Allies, especially in the Battle of the Atlantic). A Royal Marine Commando unit was to follow the Canadians on the main beach to seize and extract the encryption material, then take it to Lieutenant Commander Ian Fleming of James Bond fame, who was waiting on a command ship offshore. The keys for the operation to be successful were speed, surprise and shock.^{D, E, 2N, 3O, 4H, 6Z}

The Germans had spent months fortifying the port of Dieppe with dense coils of barbed wire entanglements and concrete barriers. They demolished anything along the beaches that could be used for cover. They had multiple machine guns, light mortars, and medium artillery all situated to saturate the beaches with intense fire. Many of the German guns were in positions along cliff walls overlooking the beach. German command had even issued warnings to the garrisons to be prepared for an amphibious landing, especially when the tides were low, singling out August 19.

The Raid: On August 18, Canadian and Allied troops boarded approximately 250 landing ships and slipped into the English Channel as the dusk melted into a beautiful clear night, and made for the French coast across the English Channel. As they approached the coast in the early morning hours of August 19, things started to go wrong, as part of the landing force encountered a small German convoy. A sharp, violent sea battle ensued and the German coastal defenses on the shores of Dieppe were alerted.^{D, E, 2N, 3O, 4H}

West of the main Dieppe beach, British Commandoes came ashore (near Varengeville) and the South Saskatchewan Regiment came ashore at Pourville at 4:50 a.m. (code named Green Beach) on time and in the dark. The Canadians initially encountered less resistance than on the other parts of the beach, and were able to make some inroads. As enemy reinforcements rushed forward, resistance intensified, and the Germans were able to push back the Saskatchewans. The Cameron Highlanders of Canada landed at Pourville around 5:50 a.m., taking heavy fire yet they pushed forward. With the Germans still holding much of the high ground and Canadian casualties mounting, both regiments were soon forced to halt and begin their methodical retreat. Both the Saskatchewans and the Camerons suffered heavy losses during the withdrawal.

East of Dieppe, British Commandoes came ashore scattered (near Petit Berneval) and the Royal Regiment of Canada and the Black Watch (Royal Highland Regiment) of Canada came ashore on the narrow beach at Puys at 5:10 a.m. (code named Blue Beach). They were behind schedule and had lost the advantages of surprise and darkness. The Canadians encountered much more resistance from the fully-alerted Germans beginning when the landing craft ramps dropped. Men were bowled over by machine-gun and mortar fire, those that survived pushed through a pile of bodies and waded through the red, cold water toward the beach to the seawall for some cover. Landing craft continued to arrive, despite dozens of slain Canadians floating in the water, crumpled on the beaches and lying motionless along the seawall. There were some minor successes at Puys, but the butchery would continue for several hours. The Canadians were pinned on the beach, unable to advance, and those who were not killed were taken prisoner.^{D, E, 2N, 4H}

On the main beach at Dieppe, the Essex Scottish Regiment and the Royal Hamilton Light Infantry arrived ashore at 5:20 a.m. (code named Red Beach and White Beach), as daylight was breaking instead of under the cover of darkness, to the already alerted German defences. The landing craft first had to negotiate through the mortar and machine-gun fire, and underwater mines that blew a number of them out of the water. The well-entrenched enemy in concealed gun positions sitting atop 75 foot-high cliff tops, as well as from their pillboxes, concrete bunkers, and hidden sniper posts cut down the fully visible Canadians as the landing craft ramps opened. The men waded into the surf, pushing through the firestorm trying to cross the cobblestone beaches to the protection of the concrete seawall. Mortar fire proved the most deadly weapon, crashing down on the beach, sending steel fragments and stone fragments in all directions. The battle broke down into a series of isolated engagements as the front-line formations lost all coherence. A small number of Canadians were able to make it through the German defenses to the town of Dieppe, though the vast majority simply endured the crippling fire on the beach.

About 5:35 a.m. on the main beach, the 14th Canadian Army Tank Battalion (known as the Calgary Regiment) landed at Dieppe to provide close support for the infantry. A number of the Churchill tanks were damaged or sunk before they made it to the beach. The remaining tanks moved up and down the beach, enduring heavy machine-gun and mortar fire, and for some, the shingle beach (consisting of large pebbles, known as “chert”) broke their treads disabling them. Tanks were unable to get off the beach because the exits were blocked by concrete barriers. The immobilized tanks would continue to fight, supporting the infantry and contributing greatly to the withdrawal of many of the soldiers. The tank crews themselves became prisoners of war or died in battle.

At 7:00 a.m., after receiving inaccurate messages about the success on the main beach, the Les Fusilliers Mont-Royal Reserve Battalion were sent in, landing on the Dieppe main beach, arriving headfirst into the maelstrom of fire, wading into knee-deep water already filled with the bodies of dead Canadians. They suffered heavy casualties. One of the officers of the battalion described his experience of taking two or three steps on the beach

before being hit by a piece of shrapnel; *“You say a bullet or a piece of shrapnel hits you but the word isn’t right. They slam you the way a sledgehammer slams you. There’s no sharp pain at first. It jars you so much you’re not sure exactly where you’ve been hit-or what with. This piece of shrapnel hit me in the right shoulder and knocked me down. I felt confused and shaken up, the same feeling you get on the football field after getting tackled from behind. Stunned, surprised, frustrated.”* The officer managed to get to his feet and started to bandage himself up but was soon hit again, this time in the cheek. He continued to move forward, watched a close friend get killed right beside him, and was soon hit a third time, this time by a bullet through his right arm. Yet he kept on, trying to reach higher ground to direct his battalion, when he was hit again by shrapnel in the right leg. After passing out, his men carried him to the beach for evacuation.

One of the members of the Les Fusilliers taking part in the Dieppe Raid was seventeen year-old Private Robert Boulanger of Grand-Mere, Quebec (he had enrolled at age 15, lying about his age at his enlistment). Following is a portion of a letter he wrote to his mother and father over a three-day period as he waited on land and sea with his fellow Fusiliers to cross the English Channel to Dieppe;

17-18-19 August 1942

Dear Dad and Mum,

A few minutes ago, we were gathered together to learn that we’ll finally be embarking to go and fight the enemy in the next 24 hours. Even though I shouted “hurray” like all the others in the platoon, I don’t feel very brave, but rest assured that I’ll never dishonor the family name.

We’ve been training hard for this day. I have a lot of confidence that we’ll be victorious in our first engagement and that you’ll be proud that I was one of the participants...

Where we are right now, our Colonel, Dollard Menard, just confirmed the news and, in secret, told us the place where we’ll be attacking the enemy. I’m sorry, but I can’t reveal either the name, or the location. We know exactly the situation we’ll be fighting in, and we’ll attack with confidence.

Our chaplain, Padre Sabourin, gathered together everyone who wanted to receive general absolution, as well as Holy Communion. Almost everyone answered the call...

... I am continuing my letter on board our assault craft, which is taking us to our target. We’re lucky, because the sea is very calm, the temperature and the weather are good. They told us that our engagement with the enemy will take place around 5:30. In the meantime, I’m using the time to check my rifle once more and my equipment, for a third time, all the while listening to my comrades talking about different things. Some are telling jokes, but listening to them I can feel their tension, which I feel myself too.

... The moon is bright enough so I can continue. We’ve been sailing for two and a half hours, and I have to be quick before it gets too dark. I’m taking advantage of the time to ask for forgiveness for all my faults and the pain that I’ve caused you, especially during my enlistment... I hope that if I come home alive from this adventure, and if I return home at the end of the war, I’ll do everything that I can to dry your tears, Mum; I’ll do everything in my power to help you forget all the anxieties I’ve caused... But when you learn how bravely I fought, you’ll forgive me for all the pain I have caused you.

Dawn is just starting on the horizon, but during the night I’ve recited all the prayers that you taught me, and with more fervor than usual. A few minutes ago, I thought that we were already in action with the Germans. Over there, on our left, the roar of cannons and the lit-up sky made us think so...

It’s much brighter now, and I can see much better to write, I hope that you can read my writing. They’ve told us that we’re very near the French coast. I think so, as we can hear the gunfire as well as the noise of explosions, even the whistling of shells passing overhead... A landing craft right beside us just got hit, and it disintegrated along with all on board. We didn’t have time to see much, because in the space of a minute or two, there was nothing left.

O my God! Protect us from a similar fate. So many comrades and friends who were there a couple of minutes ago gone forever. It’s horrible. Other boats in our group and other groups have been hit, and have suffered the same fate... I love you a lot, and tell my brothers and sisters that I love them with all my heart.

Robert Boulanger

This was Robert Boulanger’s last letter home—he would be killed during the Dieppe Raid and is buried at Dieppe Canadian War Cemetery. On January 21, 2014, the city of Dieppe inaugurated seven streets in a new development, each named after an individual connected in some way to the raid. One of them, not far from Dieppe Cemetery, is “Rue du Soldat Robert Boulanger.”^{8M}

Above the Dieppe battlefield, the RAF and RCAF fought in the largest air battle that had been seen to that point in Western Europe. The raid was supported by 1,000 aircraft from 74 Allied air squadrons, eight belonging to

the Royal Canadian Air Force. Allied air squadrons included fighters, fighter-bombers, tactical reconnaissance and smoke screen layers. Throughout the day, Spitfires, Hurricanes, and P-51 Mustangs engaged Luftwaffe Fw 190 and Messerschmitt 109 fighters, and Ju 88 bombers. The Allied air forces provided protection for the ships and chased off enemy fighters that raked the infantry pinned on the beaches, but the cost was high. The Royal Air Force lost 106 aircraft, the highest single-day total of the war. The Royal Canadian Air Force lost 13 aircraft.^{D, E, 2I, 2N, 4H, 6D, 6Z}

One of four Army co-operation squadrons detailed to reconnoiter at Dieppe on August 19 was *RCAF No. 414 Squadron*, later to be known as the *City of Sarnia Squadron*. One of the squadron members flying on that day, on his first mission, was twenty-five-year-old Pilot Officer Charles Herbert “Smokey” Stover of Sarnia. More information on the *City of Sarnia Squadron* and Charles Stover is on page 508.

The Dieppe retreat: By 11:00 a.m., with the main beach a ruin of blood, tangled metal and bodies, it was clear that the raid could not continue, and the retreat began. Landing craft pushed through enemy fire, mortars and mines, struggling to get to shore, and as they opened their doors, the craft and men running to them were easy targets for the German gunners, snipers, mortar teams and enemy fighter pilots. On the beach, brave Canadians rushed back and forth between the seawall to the beaches to pull injured comrades to safety. Some of the badly wounded men drowned as Dieppe’s 22-foot tide swept in. Through great courage, many men were taken off the beaches under heavy fire, and by mid-afternoon, the last boat had departed. The remaining Canadians were forced to surrender, and with hands up and heads bowed, they were led from the corpse-strewn beaches and through Dieppe.^{D, E, 2N, 4H, 6Z}

The Cost at Dieppe: Of the 4,963 Canadians that took part in the battle that lasted only nine hours, only 2,210 returned to England (over 590 of those were wounded but survived, while approximately 30 would die as a result of their wounds). Another 1,946 Canadians were taken as POW’s (over 570 of them were wounded and over 70 would die in captivity). In the Dieppe Raid, 907 Canadians lost their lives – the single most costly day for the Canadian Army during the Second World War.^{D, E, 2N, 4H, 6Z} At least 36 young men from Sarnia took part in the Dieppe Raid, a number of whom were wounded and/or captured, and one Sarnian, Glyn Jones, gave his life at Dieppe. His story is included in this Project on page 776.

Dieppe news in Sarnia: In the first few days after the Dieppe Raid, relatives and friends of Sarnia and Lambton troops overseas waited anxiously for news of their loved ones who were members of the fighting units that had stormed the beaches. In Sarnia, like the rest of Canada, initial reports were that the Dieppe Raid was a success. The August 19 headline in the *Sarnia Observer* stated, “Canadian Troops Lead Allies In the Largest Commando Raid of the War” with subheadings “Wage Ferocious Battle With Nazis Around Dieppe, France; Use Tanks, Heavy Weapons” and “Canadian, British and U.S. Air Forces Maintain Constant Umbrella Over the Commandos – More Than Thousand Planes Believed Participating-Blasts Heard Across Channel”. The following are portions of reports from the *Sarnia Observer* in the first days after Dieppe;

Canadian army forces, supported by British, American and Fighting French Commandos, stormed the French coast on the broad beaches around Dieppe at dawn today, and with tanks and the greatest aerial umbrella ever spread aloft fought on throughout the day against the German defenders... Despite the unprecedented scope of the attack by the Commandos, the BBC repeatedly announced that the action was not an invasion intended to create a front in Western Europe but was only a raid. This was supported by the return to Britain this afternoon of some of the forces who had accomplished their mission speedily... While fighting is still continuing on the French coast, it is known that Canadians flying fighter planes already have caused damage among the Nazi air opposition...

Another Sarnia headline read; “Every Goal Achieved in Nine-Hour Battle – Dieppe Flaming and Shell-Torn After Engagement – Strength of Land Force and Air-Naval Units Still a Secret”;

New assaults on Nazi-occupied Europe, attacks to make ruined Dieppe a mere sample of what full-blown invasion will be, were being predicted today with the forces of four nations barely ashore after the fiercest smash against the Nazis’ gun-studded coast, Canadian troops spearheaded the nine-hour assault... Power-driven barges and other vessels arrived along the home coast throughout the night bringing the tired troops back... The Allied raiders brought back a number of German prisoners, including officers... That Dieppe, once a bastion of German anti-aircraft defence and a sally port for Nazi submarines, lay flaming and shell-torn was of secondary interest. What mattered was that Canadian, British, American and Fighting French Commandos – had stormed that formidable coast and had achieved every goal in a nine-hour battle engineered with such precision that it wound up within six minutes of schedule. What mattered was that the Germans had been dealt a jolting blow where they had boasted they were invulnerable... In Ottawa, Defence Minister J.L. Ralston said in a statement last night that

“casualties were severe” but added that “our men battled their way forward, reaching objectives which included the destruction of many of the enemy’s defence works.” ... Many of the Commandos came back with wounds, the majority minor ... Although ambulances and hospital trains carried off some of the men from the waterfront, and the floor of a former dance hall soon was filled with the slightly wounded, many of the others stepped ashore from their power-driven sea-going barges elated and singing despite their fatigue and the grime of battle on their torn uniforms.

Another *Observer* story, written by a Canadian Press War Correspondent, began with the headline; “Ontario Troops Led Main Attack On Dieppe Proper”;

Units of two infantry regiments-the Royal Hamilton Light Infantry and the Essex Scottish of Windsor, Ont.- with the Calgary Tank Regiment carried the main attack on the Dieppe raid yesterday right into the town itself and battled Germans in the streets to capture the main portions of the town ... After a tremendous naval bombardment and aerial bombing of the promenade area by the sea, these units landed on the beach in front of the town and stormed Nazi-held buildings, barricades and strong points ... By this operation, the Canadians carried out the underlying objective of the raid which was to test German defences on the coast and obtain information about them.

Dieppe was left with many parts of the town wrecked and burning and, as the raid-fleet sailed for England, I could see from the boat I occupied with an attack force a pall of smoke hanging over the port. Several strong gun positions and batteries of coastal artillery were destroyed and a radio direction-finding station was smashed. Hundreds of Germans were killed. The Nazis themselves admitted 400 killed and wounded. The Canadians brought back a number of German prisoners ... Canadian shock troops had a rough time of it at several points and losses probably will not be small.

One other *Observer* headline read; “Sarnia Boys in Raid On Dieppe”;

A dispatch from London, England, to the effect that units of two infantry regiments – the Royal Hamilton Light Infantry and the Essex Scottish of Windsor – with the Calgary Tank Regiment carried the main attack of the Dieppe raid yesterday is an indication that officers and men from Sarnia and Lambton County participated ... Among Sarnia and Lambton county soldiers who are attached to the fighting units are the following: With the Essex Scottish Regiment: Capt. Alex Hayes, Lieut. Maurice J. Chilton, Lieut. Arthur Hueston, Lieut. Neal M. Watson, Sgt. William Graham, Pte. J. Crockett, Pte. Jack Graham, Bandsman Robert Lothead, and Piper A.C. Wighton, all of Sarnia; also Pte. Thomas Donnelly, Pte. Howard Hilborn, Pte. Lorne Johnson, Pte. Mac Moloy, Pte. Douglas Rinker, Pte. Ernest Rinker, Pte. Walter Smith, Pte. Edward Welten, Pte. Jack Welten, Pte. Edward Schram, and Pte. Walter Smith, all of Thedford; and Pte. C.L. Morley, Pte. Ralph Storey, and Pte. Carman Young, all of Petrolia; along with Eugene Warwick of Forest (a member of the Royal Hamilton Light Infantry).

The *Sarnia Observer* also included German reports from Berlin that contradicted the Allied success reports;

The German high command claimed today that the Allied forces which attacked Dieppe yesterday lost 1,500 men in prisoners alone, along with many dead and wounded, against 400 German casualties. (These and other of the Berlin claims of Allied shipping and aerial losses in the Commando raid were far out of proportion with the Allied announcements.) ... The attack was repulsed, the war bulletin claimed, without bolstering the coast defence forces with reserves. “All strong points, battery emplacements and railway stations on the French coast were kept intact by their crews,” the communiqué said.

In the first few days after the Dieppe Raid, lists of names of wounded and missing soldiers were released and printed in the newspapers that included a number of local men – many of them Sarnia engineers who had transferred to the Commandos just months prior and who had been rated as particularly adept exponents of this type of warfare. A number of local men, once they returned to England, were able to wire home to their parents that they were on the raid and now safe. In the days following, the casualty lists from Ottawa were printed with an ever increasing number of names, with more and more Canadian soldiers listed as killed in action, missing in action, seriously wounded or wounded. One headline in the *Sarnia Observer* read, “Canadian Casualty List Grows”. It became apparent that the Dieppe Raid was anything but a success.

Sarnian’s Dieppe Experiences: In the weeks and months following, stories of some of the Sarnia men’s experiences at Dieppe were printed in the *Sarnia Observer*. Following are portions of several of these stories:

> **Arthur Hueston**, the son of Mr. and Mrs. H.M. Hueston of North Christina Street:

Soldiers recalled the gallant heroism of Lieutenant Arthur Hueston (Essex Scottish Regiment) of Sarnia, Ontario. He and his platoon were on a tank landing craft and as the ramp was lowered at the beach machine-gun fire and shells

crashed around them, streams of bullets pouring into the boat. A corporal was hit in the mouth and Hueston crouched to help him. Then some kind of high explosive landed inside the craft, setting the tank on fire. The other tanks clanked ashore and the boat started to drift off the beach. It was 20 yards from land when Hueston and his men jumped into the water and started to swim in. They were all wearing "Mae Wests" but the weight of their arms and ammunition made swimming difficult. Hueston reached the beach which was laced with fire. He didn't give a thought to his own safety but in the true officer tradition thought only of his men. He threw off his equipment, said a soldier who was there with him, and went back into the water trying to rescue men who were still floundering in the sea. He finally had to give up and it is believed he crossed the beach to the seawall. His parents in Sarnia would receive the news in mid-September 1942 that their son Arthur was reported missing in the Dieppe Raid. A portion of Arthur Hueston's description of his experiences as a POW are on page 517.

> **Lieutenant William ("Bill") Alexander Ewener** was born in April 1905 in Battersea, London, England. He came to Canada with his parents in 1908. He had played football for the Sarnia Collegiate junior and senior teams, the intermediate Wanderers, the Sarnia Imperials (as a lineman) and the University of Western Ontario Mustangs (a center), before the war. He was an employee of Imperial Oil Limited for five years (in Peru), and returned to commence his studies at the University of Western Ontario for his Bachelor of Arts Degree. He then studied medicine for four years prior to enlisting in April 1940 with the 11th Field Company, later attached to the 7th Field Company, Royal Canadian Engineers. He was the son of Mr. and Mrs. W.G. Ewener of 494 Wellington Street: *Shortly after Ewener leaped ashore at the head of a group of Royal Hamilton Light Infantry men, the unit that bore the brunt of the assault with the Essex Scottish he was struck in the chest by a machine gun bullet. Despite the insistence of others that he withdraw from the action, Ewener refused to do so. He picked up the equipment of another wounded man and then continued with the attack. Some time later he was seen dressing the wounds of wounded comrades. "He refused to withdraw until the last cat was hung," one of his comrades told Fred Griffin, noted war correspondent of the Toronto Daily Star.*

During William's recovery in England from the serious chest wounds and shrapnel wounds in the legs that he received, he wrote to his parents in Sarnia. He made no reference to the action, to how he was wounded, nor to the extent of his wounds. He assured his parents that he was well on the way to recovery. In expressing thanks to his Sarnia, London and Toronto friends, he wrote, *"The tears were very close to my eyes when the cables started to arrive from so many friends back home. It hardly seemed possible that so many would act spontaneously at such a time... It was certainly a grand way to cheer me up when things looked blackest."* In writing about his recovery in hospital, *"The first week we spent here was marvelous despite the pains of our wounds and the sharpness of our tempers as all of us were incensed we had to leave good friends in unfriendly territory. Every one is impatient to get back in harness and help avenge those we left behind."*

Lieutenant William Ewener was awarded the Military Cross for his actions at Dieppe. He was the first Sarnian to win the Military Cross in World War II. The official citation is written as follows: *Landing with the first wave of attackers from the Royal Hamilton Light Infantry, Ewener suffered chest wounds almost immediately on reaching White Beach. In spite of his wounds he organized his demolition party and attempted to cross the beach and esplanade, although exposed to extremely heavy machine gun fire, in order to reach a road block objective. When more of his men were wounded he carried a 75-pound charge of explosives as far as the Casino. Lieut. Ewener continued to show great determination throughout the entire operation and refused to leave until the last groups were taken from the beach.*

There were further reports from some of Ewener's men that William Ewener calmly dressed the wounds of others on the beach while awaiting evacuation. He was also reported to have carried a wounded sergeant and later a wounded corporal to safety in the face of heavy shell fire. One of those rescued in this fashion was believed to have been Ronnie Taylor of Sarnia. It was not until months later, in October 1942, that William disclosed to his parents how dangerously wounded he was, and that he was near death for some weeks after he returned to England from Dieppe. Modestly he wrote of his exploits that gained him the M.C., *"I must have carried on in a sort of semi-conscious daze."* Shortly after he landed on the beach, he was hit in the left chest just above the heart by a heavy machine gun slug or a light anti-tank gun bullet. The lead hit a rib and was deflected toward the breastbone and came out of the right chest. The concussion collapsed the upper part of his left lung. On the barge which returned him to England, he collapsed in the bottom of the boat which was, *"two-thirds full of water and blood, and I was yanked to safety."* He would remain in an English hospital from August 1942 until February of 1943. In August 1943, he would be promoted to Acting Captain, attached to the 30th Field Company, Royal Canadian Engineers.

> **Lance Corporal John Molyneax ("Red") Fisher**, along with his brother Bill, enlisted at the Sarnia recruiting office on the first morning it was opened on September 4, 1939 with the First Field Park Company. Prior to enlisting, John was employed as a tinsmith by Howard and Mundy for six years. After Dieppe, John wrote to his mother, Mrs. Frank Grant of 151 Proctor Street, only days later. Following is a re-cap of his experience: *He summarized his injuries as a piece of shrapnel in his right foot and possibly a piece of bone chipped off where he was struck by a shell fragment. He never mentioned his exploit of storming and knocking out a German machine gun nest that was cutting swaths in the ranks of the Canadians on the beach at Dieppe. Lance Corporal Fisher's only concern in the letter were fear that his mother would worry, sorrow at the number of pals he lost that day, a fountain pen he left behind at Dieppe and the sore foot he was nursing.*

For his actions on that day, Corporal Jack Fisher was awarded the Military Medal. The official citation is written as follows: *Immediately upon landing with L.-Sgt George Hickson (Kitchener, Ontario), Fisher was wounded in the foot and ordered out of action, but later took a sapper and tried to get into Dieppe. With high explosive charges he destroyed a machine gun position, killing the personnel. Unable to proceed because of heavy enemy fire he was returning to the machine gun position when he met an infantry officer with a large number of sticky bombs. These were carried forward and placed against a wall of a building in the esplanade. Fisher detonated them all, setting the partly-ruined building on fire. Returning to the Casino he organized the returning Royal Canadian Engineers personally for evacuation, and destroyed the remaining demolition packs in the building. During the whole operation, L.-Cpl. Fisher was an inspiration to all by his display of personal bravery and initiative, although wounded.*

Lance Corporal John Fisher received his medal from King George at an investiture ceremony in Buckingham Palace in October 1942. In 1943, he married a British woman, Mary Teresa O'Shea, who would arrive in Sarnia in August 1944, one of a number of "war brides". See Mary Teresa Fisher, page 544.

> **Sapper John (Jack) Stevens:** In mid-January 1943, the *Canadian (Sarnia) Observer* printed the story of the first Sarnia man to return home after participating in the Dieppe Raid. Following is a portion that story:

Two Boats Sink Under Sarnia Boy

Bearing scars of battle sustained in the historic Dieppe raid of August 19, 1942, Sapper John Stevens, 23, modest former drug clerk, is home with his parents, Mr. and Mrs. Charles Stevens, 260 Maxwell Street. Sapper Stevens arrived last night and was welcomed as he stepped from the train by his parents, two younger brothers, Jim, 15 and Bill 7... and a small group of relatives and friends.

Sapper Stevens was under fire for the full eight hours, a section of his unit of the Royal Canadian Engineers was in action on the beach. It was not until he had debarked on a tank landing craft that he was struck by mortar fire and machine gun shells from a dive bomber. As the tank carrier sank, a destroyer raced up and rescued the group of Canadians clinging to it. Aboard the destroyer Sapper Stevens was given sedatives, but a short time later a dive bomber scored a direct hit and the destroyer sank. Despite his wounds the Sarnia lad managed to swim until he was again picked up by a submarine chaser. Fifty Canadians, some wounded, were aboard when it tied up at a dock in an English port. The greater part of Sapper Stevens left ankle was shot away and part of the calf of his leg. He was also struck on the right elbow. Despite the nature of his wounds, he is able to walk with the aid of a cane. "We wanted action and we got it," he said. "The one thought of the boys over there is to get another chance to avenge those who fell."...

"We landed on the beach in front of the tobacco factory at 5:20 in the morning," Sapper Stevens said. "They knew we were coming. They had massed two divisions of approximately 40,000 to meet us." The Canadians who comprised at least 80 percent of the raiding party numbered no more than 5,000 to 6,000. The electric light plant was the particular objective of the Stevens party, consisting of 26 men under the command of Lieut. L. Watt, Toronto. Each man was heavily armed and carried explosives on his back. They had been instructed to blow up the plant, but didn't reach it.

A group of the Royal Regiment of Canada (Toronto) was assigned to protect the engineers as they pressed forward to their objective, but the Royals were practically wiped out by the heavily concentrated fire of the German defenders. For some time, Sapper Stevens assisted in the unloading of many Churchill tanks. It was the first time the Churchills had been in action. "We proved we could land 'em," he observed...

The young Sarnian paid tribute to the work of the R.A.F. and the R.C.A.F. "Nazi planes were falling all around us," he said. "We had mastery of the air." He also had words of praise for the Royal Navy and the doctors

and nurses. "When we returned to Britain we were met by a fully equipped hospital train," he said.

...Sapper Stevens said that men who never swam before, swam when precipitated into the water, after landing or rescuing craft had been sunk... The losses would have been heavier had it not been for the gallantry of the wounded, who lying on the beach fought a rear-guard covering action as the others were evacuated, the soldier said. He declined to mention the part he had played in this phase of the battle. "You can't beat the spirit of the British people, their morale is high. They couldn't do enough for us," he said.

John (Jack) Stevens later married and settled in Sarnia. Years later, his daughter Dee, married Thane Hughes, whose father (Private Lloyd George Harvey Hughes) had landed at Juno Beach on D-Day.

Sarnians at Dieppe: One year after the Dieppe raid, in mid-August of 1943, the *Canadian (Sarnia) Observer* wrote a feature listing some of the men from Sarnia who took part in the Dieppe Raid – at least 36 of them. Many of them were part of the Essex Scottish Regiment, which had many men from Sarnia and district. The Sarnians who took part in the raid included Capt. William A. Ewener (wounded, received Military Cross); John Fisher (won Military Medal); Privates John J. Hawkins, Roy Huggett, Harvey Huggett, Jack Stevens (wounded), Ronnie Taylor (wounded), William Black, John Crockett, and Charles Crockett; Corporal R.D. Taylor; Sappers John J. Stevens, Milton D. Sinasac, and Robert O. Soucie; Sgt. Cecil Charles Clarke and his two sons, Lance-Sgt. Jack Clarke and Corporal Reg Clarke; and Bombardier Michel Pruliere. Among the prisoners of war were Lieutenants Arthur M. Hueston, Neal M. Watson, and Thomas Doherty (did excellent work getting heavy tanks ashore); Corp. Grenville Ward; Gnr. N. Demeray; Pte. L. Date; and Malcom Moloy (Thedford). Reported missing were Corporals Jack Graham and Lyle H. Robertson; Sappers Glyn Jones, C.M. Blondin, Alvin J. Archer, D.A. Dunn, Frank R. Scriver, Russell P. Johns, "Chick" Hewitt, and Albert W.T. Brown; Sgt. C.J. Towler and others.

More information on Prisoners of War and Sarnia POW experiences, including descriptions by Lt. Neal Watson and Lt. Arthur Hueston, is on pages 513-517. Information on Sergeant John "Jack" Clarke, Corporal Jack Graham and Glyn Jones is in the biography section.

In October 1943, as part of a Victory Loan campaign, the *Canadian (Sarnia) Observer* printed a poem written by a young London, Ontario girl, Mona Gould. The youthful author wrote this moving tribute in memory of her older brother, Lt.-Col. Howard McTavish of London, Ontario. He had been killed on active service with the Royal Canadian Engineers in August of 1942 at Dieppe.

*This was my brother
At Dieppe,
Quietly a hero
Who gave his life
Like a gift,
Withholding nothing
His youth...his love...
His enjoyment of being alive...
His future, like a book
With half the pages still uncut
This was my brother
at Dieppe
The one who built me a dollhouse
When I was seven,
Complete to the last small picture frame,
Nothing forgotten
He was awfully good at fixing things,
At stepping into the breach when he was needed.
That's what he did at Dieppe
He was needed,
And even death must have been a little shamed
At his eagerness!*

In the days and months following the Dieppe raid, many of the planners, commanders and participants offered their assessments. Lord Mountbatten of Combined Operations said, *"It is impossible to overestimate the value of Dieppe. It was the turning point in the technique of invasion. Many vital lessons were learned. The men who died at Dieppe gave to the Allies the priceless secret of victory. For every man who died at Dieppe, at least ten or more must have been spared in the invasion of Normandy."*

Among the men who survived Dieppe, many insist they were shortchanged. One Canadian survivor said, *"Every man knew his job and was eager to get a crack at the enemy. We wanted to give a damn good show, to the world, to Canada and to the Germans. We were not afraid despite the odds, and we would do our jobs whatever we ran into when we landed. You can imagine our feelings when we were spotted and knew we were sitting ducks at the mercy of God and the Germans... Everything seemed to go wrong. I'll always remember the faces of the survivors, after the surrender, officers and men sitting on the beach among our dead, crying. We felt robbed of the chance to fight and show what we could do... On the beach where we landed, it was a massacre, a bloody mess."*^{6F}

Canadians return to Dieppe: September 3, 1944 was a solemn day for the men of the 2nd Canadian Infantry Division. A little over two years after assaulting Dieppe, the division returned to the place of its greatest single-day loss of the war. Very few of those soldiers were veterans of the original raid two years earlier. Every unit that had landed in 1942 had been virtually wiped out. Every regiment had to be painstakingly rebuilt, so on their return, each of the nine regiments included merely 25 or so survivors of the 1942 raid.

After a long and almost uneventful drive from Rouen, a halt was ordered outside city limits on the eve of August 31, 1944. The next morning, the division's lead elements entered Dieppe from the south receiving a tumultuous greeting from overjoyed citizens. Though it was feared that the Germans might put up a ferocious struggle for Dieppe, the Canadians encountered no Germans; the port town had been taken without a shot being fired.

On the morning of September 3 the survivors of the Dieppe attack attended religious services at the Canadian war cemetery on the southern outskirts of the town. On the day of the disastrous Dieppe Raid, and without being ordered by the Germans, the locals removed the hundreds of dead raiders, burying them in a cemetery they built that overlooked the beach. The people of Dieppe planned and recorded every plot with each deceased ID, and maintained the cemetery during the many long months of German occupation since the Canadian raid. In the cemetery, lay more than 700 of the Canadians killed on August 19, 1942. On that afternoon of September 3rd, 1944, the citizens of Dieppe officially welcomed their liberators as the entire division paraded through the main part of the town, led by the massed pipe bands of its Highland Regiment.^{6Z}

On September 27, 1944, the *Sarnia Observer* included a story about a local boy revisiting Dieppe, under the headline *Dieppe Raid Vet Returns*. **Sapper Dennis Mills**, the son of Mrs. Charles Mills (and the late Mr. Mills) of Victoria Avenue in Point Edward, was a member of the Canadian forces in the unsuccessful Dieppe raid, and was with the army that recaptured it. Dennis Mills was originally with the Lambton 11th Field Park Company, enlisting only five or six days after the war began. He would go overseas in the summer of 1940. As a member of a Field Company of the Royal Canadian Engineers, he would take part in the Dieppe Raid, and later, in the D-Day landing in June 1944. Following is a portion of Sapper Dennis Mill's letter to his mother about his revisit to Dieppe;

"The following day we were back in Dieppe. It seemed funny to walk around those streets that two years ago were so hostile; I went down to the beach almost to the very spot where we landed two years ago. Jerry had it well fortified, it was no wonder it was such a slaughter getting in there from the water. I am beginning to realize how lucky I was to get back from that raid... Yesterday morning all the Dieppe raid men held a memorial service at the cemetery for our dead comrades. The French people buried our boys and have kept up the graves very nicely. It is a pretty little cemetery not far from the water, and it is now all green grass with quantities of flowers. They say one French lady has visited it and placed fresh flowers on some of the graves almost every day for the past two years. There are about 800 of our boys buried there. The Germans must have guessed we would wish to visit the place because they had mines in the cemetery but it didn't do them any good."

Dieppe Commemoration: The Dieppe Canadian War Cemetery is located approximately five kilometres south of Dieppe, in the town of Hautôt-sur-Mer. The hillside cemetery is unique in that its headstones have been placed back to back in long double rows. The Germans buried these war dead, the same way they buried their own. After they liberated the region, the Allies chose not to disturb the graves. Today, the cemetery is maintained by the Commonwealth War Graves Commission. Of the 944 members of the British and Allied Armed Forces interred at Dieppe, 707 are Canadians, most of them victims of the Dieppe Raid. One of those buried at Hautôt-sur-Mer is Sarnia's twenty-one year old Glyn Jones who was killed in the Dieppe raid.

Following the war, the town of Dieppe created a small park at the western end of the esplanade in which it has erected a memorial of its own. Standing in the centre of the *Square du Canada* (Canada Square), the Dieppe-Canada Monument is a testimony to the long and warm association between Canadians and the people of the region, the Normans, which has existed since Samuel de Champlain sailed to found New France. The names of people and events which have linked Canada and Normandy over the centuries have been recorded on the monument. Mounted on the wall behind it is a plaque that commemorates the Raid on Dieppe. Following is a translation of its inscription: ON THE 19TH OF AUGUST 1942 ON THE BEACHES OF DIEPPE OUR CANADIAN COUSINS MARKED WITH THEIR BLOOD THE ROAD TO OUR FINAL LIBERATION FORETELLING THUS THEIR VICTORIOUS RETURN ON SEPTEMBER 1, 1944.^{D, 8M}

Dieppe Veterans Remember in Sarnia: In mid-August 1973, more than 400 veterans from World War II gathered together in Sarnia for an annual three-day convention. The Dieppe Veterans and National POW's Association was held at the Canterbury Inn, Sarnia, where members shared stories and life experiences. Two men recalled some of their thoughts of the ill-fated Raid;

- Al Brown: *"Anyone says he wasn't scared during the raid just isn't human."* He added that after about one hour the constant fear numbs the body's nerve system. *"That certainly doesn't mean we got careless."*

- John Hewitt (of Sarnia): *"We could hear machine gun bullets splattering against the steel side of our landing barge. It's a feeling of overwhelming and absolute fear. But it had to be done and we were there."*

• **SARNIA INDUSTRY CONTRIBUTES TO THE WAR EFFORT:** By the spring of 1940, war production in Canada was expanding rapidly. By the end of the war, Canada had produced millions of shells, thousands of airplanes, hundreds of warships, and hundreds of trucks – more than Germany, Italy, and Japan combined. Nearly thirty Crown corporations were established to manufacture everything from war-related polymers to weapons of war, and to streamline the extraction and production of raw materials.^{4H} Sarnia, as an innovator in industry, made very significant contributions to the ultimate success of the Allies.

When the Japanese entered World War II, they captured the majority of the Allies' natural latex and natural rubber supplies from Southeast Asia, cutting off the western world's supply. Just how serious the situation was can be summed up by a report to the American Congress which said, "of all the critical and strategic materials, rubber is the one that presents the greatest threat to the safety of our nation and the success of the Allied cause... if we fail to secure quickly a large new rubber supply, our war effort and our democratic economy will both collapse."^N Canada and its allies scrambled to create a synthetic rubber plant to fuel war needs, a top priority for the success of the war effort. Canadian Prime Minister Mackenzie King went to Washington for a summit meeting with U.S. President Franklin Roosevelt. The leaders decided to launch a crash program aimed at building several synthetic rubber plants. Sarnia, described in a 1939 letter to the editor of the *Observer* as a "quiet little market town", was one of those selected as the site to spearhead development of synthetic petroleum-based rubbers for war materials.

Polymer Corporation Limited: Sarnia was chosen as a site because its Imperial Oil refinery (established in Sarnia in 1897) would be a primary source for some of the chemicals needed; and the transportation network, with access to rail and the St. Clair River, allowed for efficient transportation of other raw materials as well as the finished product. Polymer Corporation Limited was built at the request of the Government of Canada in February of 1942 as a Crown Corporation, at a cost of \$50 million. In an incredible, almost impossible industrial and chemical engineering achievement, Polymer Corporation began production of rubber in the summer of 1943, just 13 months after plant construction began.

It was the beginning of Sarnia's **Chemical Valley**. The Polymer plant site covered eight city blocks and produced 5000 tons of artificial rubber from oil every month. The product was used in everything from the tires of vehicles and warplanes, inflatable boats, piping, gaskets, electrical cable insulation, and shock absorbers to airplane parts. Much of it was sold to the U.S. as part of the common war effort. The establishment of Polymer Corporation and **Dow Chemical** (which produced styrene) to manufacture synthetic rubber during the war was a great success and began Sarnia's rise as a major petrochemical industry. Over the years ownership of the plant passed from Polymer to Polysar, to Bayer and Lanxess.

A whole new suburb would develop across from the gates of Polymer, to provide housing for the thousands of construction workers and tradesmen who were employed in excavating, carpentering and pipe-fitting, and for the workers in the synthetic rubber plant and their families. Known as the village of **Blue Water**, it began as barracks and bunkhouses, and grew to a sprawling collection of over 500 homes, 26 businesses including a hotel, grocery

store, clothing store, barber and beauty shops, two schools (Bluewater Public and St. Thomas Aquinas) and two churches. The name Blue Water was adopted in 1944 with the establishment of a post office. The village was annexed to the City of Sarnia in 1951. The village flourished even after the war, having a population of over 2,300 in 1956, many of them French-Canadians, along with scores from Italy, Greece, Portugal and other countries. As heavy industry expanded in the years after, and with resident's health and safety concerns, the Blue Water residents were eventually all relocated by 1966 and the village was demolished.^{N, z}

Clarence Decatur Howe was born in Waltham, Massachusetts in 1886. Prior to World War II, **C.D. Howe** made his mark in Canada first as a teacher of civil engineering at Dalhousie University in Halifax (1908-13), then with his own engineering firm in Port Arthur (Thunder Bay), specializing in designing and building grain elevators across Canada's west and across the world. Entering politics in 1935, he was elected as a Liberal MP in 1936 where he would go on to reorganize the Canadian harbour system, restructure the Canadian National Railway (CNR), help create the Canadian Broadcasting Corporation (CBC), and help launch Trans-Canada Airlines (which would become Air Canada).

In 1940, Prime Minister William Mackenzie King appointed Howe to head the Department of Munitions and Supplies, tasked with running Canada's war-production program, leading Canadian industry in retooling for the war effort. Assisted by a team of leading industrialists and top businesspersons (known as Howe's "dollar-a-year-men", because they were paid a token government salary of \$1 a year), his department created dozens of Crown corporations, uniquely Canadian government-owned businesses. He led Canadian industry's effort to manufacture vast amounts of supplies of every kind—ships, heavy bombers, anti-submarine vessels, motor vehicles, weapons, ammunition, radar and radio equipment—for the Canadian armed forces and for Britain and the Allies as well. C.D. Howe played a central role in establishing Polymer Corporation Limited in Sarnia, having "the guts, the strength to go ahead when it needs to be done," according to author Matthew Bellamy, who wrote *Profiting the Crown*, about Polymer Corporation.^N When the war ended, it was Howe who decided to keep Polymer operating as a Crown corporation, with the aim of making Sarnia the centre of a new Canadian chemical industry.

In 1944, C.D. Howe was put in charge of a new portfolio, the Department of Reconstruction. He was tasked with reorganizing Canadian industry back into a peacetime free-enterprise economy (avoiding widespread unemployment and inflation), and ensuring employment for demobilized soldiers. In 1948, he was appointed Minister of Trade and Commerce, in charge of armament production programmes during the Korean War and in the early stages of the Cold War. Over his years of service, he had developed the reputation as the most successful businessman-politician of his day, becoming known as the "Minister of Everything".^{N, 2I, 2N, 3F, 6Z} More information on C.D. Howe is on page 536.

Imperial Oil Company: The Petroleum industry was established in the Sarnia area in 1858, with the discovery of crude oil at Oil Springs. In 1897, Imperial Oil Company moved to Sarnia from Petrolia and built a refinery, and a pipeline that linked it to the Petrolia oil fields. Sarnia was an ideal location for Imperial Oil's relocation with a five-year tax break from Sarnia's town council; crude oil arriving by pipeline from Petrolia and Oil Springs; and easy access to shipping in the port.

When Imperial Oil moved to Sarnia from Petrolia, it became a major employer in the city. During wartime, not only did many of its employees take leaves to serve their country, the company also produced materials for war. Paul Spearman, a 40-year Sarnia employee who had a keen interest in researching the role that Imperial's Sarnia site played in Canada's history said, "During World War I, this site supplied wax, grease and lube oil to the war effort. Then during World War II, we manufactured approximately three million steel barrels in our drum plant. These drums, filled with product, were used on the beaches of Normandy and islands in the Pacific. Not many people know that."

The Imperial Oil Review was a magazine published in Toronto to inform shareholders and employees about the petroleum industry in Canada, and was a medium to exchange their opinions, suggestions and experiences; and to acquaint them with interesting and useful information about the Company's business. The first volume was published in May 1917, and continued every year (either monthly, every second month or quarterly) until 2014. In December 1918, the *Imperial Oil Review* printed an Honour Roll with the names of 545 "Employees of Imperial Oil who served with the Allied Forces". Among the names were 24 who made the supreme sacrifice. Of those fallen soldiers, six were from Sarnia—Charles Barnes, William G.H. Bendall, Edward F. Causley, Peter J. Ford, William N. Hanna, and Alfred Weston. Their bios are included in the World War I section of this Project.

During World War II, for those employees who joined the armed services, Imperial had one of the most generous policies of any Canadian company to support its employees. Employees who enlisted received one month's salary as a bonus. Leaves of absence were granted with full accrual of service credits and "top-up" pay was provided to cover the difference between the lower military pay and what the employee had received from the company. There was also a guarantee of re-employment at the end of hostilities.^{3x}

In April 1949, the President of Imperial Oil Company unveiled a Memorial Plaque at the Sarnia refinery. The bronze Sarnia Refinery Plaque lists the names of twenty-four Imperial Oil employees who made the ultimate sacrifice in World War II. Of those twenty-four names, 21 of them are inscribed on the Sarnia cenotaph (Frederick H. Irwin, W. John Rogers, and Jack Thurlow are not on the Sarnia cenotaph). The bios of all twenty-four are included in this Project. The transcribed "Sarnia Refinery Plaque" is included in this Project on page 1164.

Over time, the location of the plaque became a mystery. It was not until 2019 that Kristina Zimmer, the Public and Government Affairs Manager at Imperial in Sarnia, located the plaque. "It's mounted on a wall outside a set of rarely used exit doors that face Clifford St," Zimmer explained. "I can understand why people wouldn't notice it." Kristina made a second discovery in November 2019 – a second identical plaque. In November 2020, Imperial donated this second plaque to Royal Canadian Legion, Sarnia Branch 62.

Electric Auto-Lite Limited: Established in 1929, Electric Auto-Lite in Sarnia made a major contribution to the war effort. Throughout the war, the company manufactured millions of vitally important war products for the motorized sections of the Canadian First Army. Principal products included generators, starting motors, electric distributors, ignition coils, circuit breakers, voltage regulators, spark plugs, battery cables, and miscellaneous items such as dashlamps, filters, aerial bases, fuse blocks and fan extensions. These products were used in military vehicles, self-propelled gun mounts, gun tractors, tanks and heavy-duty trucks. During the war, more than 50 percent of the workers in the Auto-Lite plant were women, each one individually trained to handle high precision jobs. Electric Auto-Lite was later renamed Prestolite and functioned until 1978.

Holmes Foundry was opened in 1918 at Exmouth and Christina Streets, originally owned by Michigan industrialists Sen. Lyman Holmes and Louis G. Blunt, and was called Holmes Blunt Limited. In the early days, Ford Motor Company contracted the plant for a steady supply of engine block castings. In March 1937, workers participated in one of the rare sit-down strikes in Canadian history. It ended 48 hours later in a riot, when workers were beaten and driven from the Holmes Plant by an armed mob of local goons. During World War II, Holmes Foundry made engine blocks for Ford-built army trucks. John Blunt of Sarnia, the son of the original owner who later took over the foundry, served with the U.S. Navy during the war.

American Motors (AMC) acquired twenty-five percent interest in the plant in January 1966. At that time, the plant had supplied AMC with motor castings (blocks) since 1962. In July 1970, American Motors acquired 100% of Holmes Foundry. At one time, there were three separate operations in Sarnia at the Holmes facility: the Caposite Insulation Plant (closed in 1974); the Holmes Insulation Plant (moved to Scott Road around 1974); and the Holmes Foundry. It was not until October of 1981 that Holmes Foundry finally became a Division of American Motors, Canada. With the acquisition of AMC, Chrysler Corporation took ownership of the Holmes Foundry facility and its manufacturing business in 1987. Chrysler scheduled the operation for closure on September 16, 1988. Unfortunately, Holmes Foundry left a dark legacy in Sarnia due to the poor working conditions and violations of provincial health and safety laws. As early as 1952, Ministry of Health inspections conducted at Holmes Foundry raised concerns

about “silica, noise and smoke”. Many of the workers and family members would suffer an array of illnesses including respiratory diseases, leukemia, various cancers and mesothelioma.

- **CAMP IPPERWASH:** In September 1942, Camp Ipperwash opened, the latest and most up-to-date military training centre, located between Forest and Thedford. Originally it was planned as the A-29 Advanced Infantry Training Centre, but it would become the home of No. 10 Basic Training Centre, which had been transferred from Kitchener. It was a basic training centre for infantry troops. Approximately 48 buildings were to be erected on the 2,200+-acre site at an expense of \$1.2 million, with plans to accommodate 2,000 men for basic training. Structures were to include sleeping quarters, mess halls, a dental clinic, a 150-bed hospital, a nurses’ residence, officers’ buildings, a fire hall, quartermaster stores, a supply depot, a salvage storehouse, an engineers’ workshop, N.C.O.’s quarters, Canadian Women’s Army Corps buildings, lecture halls, a large drill hall, a recreational building, a guard house, a sewage disposal plant, and a water pumping and purification plant.

The first troops from Listowel and Kitchener moved into the camp over the Thanksgiving Day weekend in mid-October 1942. Work had begun on Camp Ipperwash on April 27, 1942, and in late November of 1942, Camp Ipperwash was formally opened by the Honourable Colonel J.L. Ralston, Minister of National Defence. One of the comments made by Colonel Ralston to the troops was, “The Canadian Army cannot be the biggest army in the world, but it can be the world’s best, and above all, remember that the citizens of Canada are not only standing behind you, they are standing beside you all the way.”

Camp Ipperwash had been on a parcel of land comprising the Stoney Point Reserve, controlled by the Chippewas Stoney Point First Nation. In a contentious decision, the Department of National Defence used the War Measures Act to expropriate the land from the Department of Indian Affairs, against the wishes of the Chippewas. The government then moved some 15 families who had previously resided in the area further west to the Kettle Point Reserve. The Kettle Point band, which supported itself by fishing, acting as guides, and cutting wood in the winter, swelled to approximately 400 members, making it larger than the Sarnia Reserve. The 1941 expropriation agreement indicated that the property would be returned to the First Nations when it was no longer needed for a military purpose. Although the First Nations rejected the offer, the government moved forward with the expropriation.

After the war, the government did not return the land to the First Nations as promised, and continued to use it as a training facility for several decades. It was not until approximately 15 years after the Ipperwash Crisis of the mid-1990s that the government finally relented and offered to return the land to the Chippewas of Kettle and Stoney Point. In 2015, the federal government finally reached a formal agreement to return the land that was ratified by the First Nations community in September of that year. The final settlement returning the Camp Ipperwash lands to the Chippewas of Kettle and Stony Point First Nation, along with \$95 million compensation was officially signed in mid-April 2016. The federal government finally returned Ipperwash Provincial Park to the First Nations in 2020.

- **THE ROYAL CANADIAN AIR FORCE:** At the start of the Second World War, the Royal Canadian Air Force (RCAF), which had been established on April 1, 1924, had only 4,000 personnel and fifteen squadrons up to strength for mobilization (twelve for home defence and three for overseas service), totaling 230 aircraft. By the early part of 1944, the RCAF had reached its peak strength, equipped with seventy-eight squadrons in service (43 for home service and 35 for overseas), becoming the fourth largest allied air force in the world. Approximately 249,000 Canadian men and women would serve around the globe with the RCAF in World War II, with a significant number of them as part of British RAF units (Sarnians would serve in RCAF, RAF and RNZAF squadrons).

At the start of the war, there was no shortage of Canadian volunteers for the air force, both to serve in the established RAF and the growing RCAF, in fact, more Canadians would serve in the RAF than in Canadian squadrons.^{4H} Memories of family members who had survived the horrors of the trenches of the Great War kept many from enlisting in the infantry. Tales of Sopwith Camels, Fokkers and other First World War aircraft, and the daring feats of Canadian aces like William Barker, Roy Brown and Billy Bishop, made tens of thousands of Canadians enamoured with the romance of flight. Thousands of eager Canadians joined the woefully underequipped Royal Canadian Air Force. With so few openings, many went overseas and joined Britain’s Royal Air Force, many eager to be fighter pilots (though most would end up in Bomber Command).^{2S, 3G, 4H, 6Z}

Canadian airmen that perished in the Second World War included: approximately 10,000 in Bomber Command; another 4,000 in all the other RCAF commands or lost as prisoners of war; and close to an equal number died in training accidents; for a total of 17,101 killed. Only 1,555 airmen were wounded, which was a far lower number than the army casualty figures. The comparatively small number of wounded attests to the all-or-nothing

nature of the air war, in which most crews died together in fiery crashes.^{D, E, 2I, 2S, 4H, 4I, 6Z}

RCAF Organization: During the war, the RCAF comprised three main parts: the Home War Establishment (Western and Eastern Air Commands); Overseas War Establishment; and the British Commonwealth Air Training Plan. Each part of the RCAF provided a different service. **Home War Establishment** was responsible for protecting Canada's coasts from enemy attack and for protecting allied shipping. **Overseas War Establishment** involved operational duties in Britain, northwest Europe, the Mediterranean, North Africa, and Southeast Asia, with squadrons participating in most roles, including fighters, bombing, reconnaissance, coastal defence, anti-submarine, transport, army co-operation and others. RCAF squadrons were also involved in operations in Egypt, Sicily, Italy, Malta, Ceylon, India and Burma.

British Commonwealth Air Training Plan (BCATP): Under a deal signed on December 17, 1939—in the British Commonwealth Air Training Plan (BCATP)—Canada agreed to provide facilities and training for airmen from every part of the Commonwealth, including Australia, New Zealand, the United Kingdom and Canada. Canada was chosen as the training country because of its abundance of wide-open spaces, good flying conditions, and the fact it was far from the dangers of enemy activity. Canada had to recruit instructors, build air bases, acquire aircraft, and develop training schools for different specialties.

Training facilities throughout Canada turned out a steady stream of pilots and aircrew for overseas operational service. BCATP facilities included training schools, elementary and service flying training schools, flying instructor's schools, general reconnaissance schools, air navigation schools, air observer schools, wireless schools, bombing and gunnery schools, flight engineers' schools, and radar schools among others. In its five-and-a-half-year lifespan—from December 1939 to March 1945—the BCATP would cost the Canadian government nearly \$2 billion and employ 104,000 Canadians at 230 training sites from coast to coast and in every province.

The first BCATP graduates went overseas in November 1940, and ultimately, over 131,500 airmen—pilots, navigators, bomb aimers, wireless operators, air gunners, air observers, and flight engineers—graduated from the BCATP, more than half of them—over 70,000, were Canadian. BCATP trained and supplied air and ground crew personnel to Commonwealth Bomber Command, Fighter Command and Ferry Command. Because the Plan also attracted American aviators before the U.S. entered the war in 1941, it trained nearly 2,000 aircrew who, after Pearl Harbor, would return to the U.S. and form the nucleus of the U.S. Army Air Force. Winston Churchill would say of the BCATP, it was “one of the major factors, and possibly the decisive factor of the war.”

The training site at Brandon, Manitoba, is now the **Commonwealth Air Training Plan Museum**, a National Historic Site. Located on the grounds of the Museum, is the “They Grew Not Old” Memorial, unveiled on September 10, 2014, a 300 foot long black granite wall etched with the names of over 19,000 fallen members of the Royal Canadian Air Force (RCAF) and fallen Canadians who served in any Commonwealth air force, including the Royal Air Force (RAF), Royal Australian Air Force (RAAF) and Royal New Zealand Air Force (RNZAF).^{E, 2I, 2S, 4H, 4Q, 6Z, 9W}

Aircrews in Commonwealth squadrons were normally of several nationalities. In fact, there were more Canadians serving in the Royal Air Force (RAF) than there were in the RCAF. Conversely, no RCAF squadron overseas was composed entirely of Canadians. Most of them had a number of Britons, Australians, New Zealanders, South Africans and other Commonwealth nationalities, as well as a few Americans, Poles, French or others.^{8M}

RCAF Training: The RCAF prided itself on maintaining the highest educational standards of the three services, as air war required intense training. The majority of Canadian airmen that graduated from the air training program in Canada (BCATP), would serve in bombers, and Canadians contributed the second highest numbers to Bomber Command, forming a third of the force by the end of the war.

There were 94 BCATP training schools at 231 sites across Canada. At these specialist schools for pilots, air observers, bombers, gunners, wireless operators, and navigators, flight training was carried out in older, undersized planes such as Harvards, Tiger Moths and Avro Ansons. For example, Elementary Flying Training Schools commonly used Tiger Moth, Fleet Finch and Fairchild Cornell aircraft. The more advanced Service Flying Training Schools used single-engine North American Harvards (fighter pilot trainees) or twin-engine Avro Ansons, Cessna Cranes or Airspeed Oxfords (for bomber, coastal and transport trainees).

Inexperienced pilots and Canadian weather resulted in accidents of all kinds, and approximately 3,000 training deaths (including Sarnians) occurred in the BCATP schools. The pilot training was the longest and most difficult. For those who were successful in their Elementary Flying Training and their Service Flying Training (a

minimum of 25 weeks at the start of the war), they would receive their “wings,” usually pinned on by a senior RCAF official or a Great War ace.

They would then cross the Atlantic to Britain, and be sent to the RCAF Personnel Receiving Centre (PRC) in Bournemouth, England, and separated into fighter and bomber pilots. From there, the flyers would be sent off to Advanced Flying Units (AFU) for further training, and be introduced to two- and four-engine bombers. Instructors tried to put crews into the air for eighty hours of flying, with much of this being, “circuits and bumps” (takeoffs and landings) and “stooging” around England. The combination of using outdated, battle-scarred two-engine bombers that were prone to mechanical failure, along with pilot error, resulted in hundreds of crews killed during training. One type of out-dated aircraft used for training was the Whitley bomber—it was responsible for the loss of a number of airmen—aircrew referred to it as the “flying coffin”.

The next step was to form into flying crews, which was done at the RAF Operational Training Units (OTU) in a rather unique and “unmilitary-like” fashion. Navigators, wireless operators, gunners, bomb aimers, flight engineers, and pilots were herded into a hanger, loosened up with a bit of beer, then the men were left to decide their own crews in a rather haphazard way that somewhat resembled a high school dance. New close-knit families were born, a crew of seven in the big, four-engine planes that were further welded together over time by their sharing of danger and reliance upon one another for survival. After crewing up, the finishing school was the Heavy Conversion Unit (HCU), where the crews were allowed to fly the precious four-engine Short Stirlings, Handley Page Halifax and Avro Lancaster bombers. The Lancaster was by far the better of the aircraft – it could fly faster, higher, and carry a heavier bombload in its massive bomb bay. There was no easy way to learn how to fly the heavy bombers, and again, training crews suffered a litany of disasters, crashes and deaths. By the end of the war, Bomber Command lost over 8,000 Allied airmen who were killed in training or by accidents alone. At least nine of Sarnia’s fallen bombers’ deaths occurred during training.^{D, 4H, 6Z}

RAF Ferry Command: This was formed in July 1941 to “ferry” aircraft from American and Canadian factories to the front line squadrons overseas. Aircraft were first transported to Dorval, Quebec and then flown to RCAF Station Gander in Newfoundland for the trans-Atlantic flight to the United Kingdom. The Command’s operational area was the North Atlantic, tasked with bringing the larger planes, the twin-engine and four-engine aircraft that had the range to do the trip over the ocean. This was pioneering work in 1940: the distance, inadequate navigation instruments and frequent bad weather over the Atlantic were considered too much of a risk. The programme became so successful that in 1941 a second route was created for smaller-range aircraft, which called for re-fueling at bases in Labrador, Greenland and Iceland. A third route, the South Route, would link the U.S. to Egypt.

In March 1943, Ferry Command was reorganized when all ferrying functions were grouped under a single command, so Ferry Command became No. 45 (Atlantic Transport) Group of the RAF’s Transport Command, still headquartered in Dorval. Once the planes were delivered overseas, the crews were flown back to Canada for the next run. Trans-Canada Airlines (TCA), bought a few Lancasters and modified them to carry passengers and freight. This was the forerunner of Air Canada and the company’s first transatlantic flights. During the war, over 9,000 aircraft were ferried across the Atlantic to Allied fighter, bomber, maritime patrol and transportation squadrons.^{3F} At least one Sarnian lost his life as part of Ferry Command, F/O Melvin Ramsay.

BOMBER COMMAND: When the Second World War began, the RCAF had one bomber squadron. It had been formed at Halifax on September 5, 1939, four days after Germany’s invasion of Poland and five days before Canada declared war on Germany. No. 10 Squadron was equipped with obsolete, two-man, open-cockpit Westland Wapiti biplanes, which could carry a 260-kilogram bomb load 850 kilometres.^{8M}

During the course of the war, one of this country’s most significant contributions was the approximately 50,000 Canadians who served with RCAF and RAF Bomber Command operations overseas. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel (approximately 125,000 Commonwealth personnel would serve in Bomber Command).

Under pressure from the Canadian Government, who wanted their own identifiable presence in Allied air operations, an all-Canadian group was formed. **No. 6 (RCAF) Bomber Group** was activated in early January 1943, predominantly manned by Canadian officers and crew. Initially, three of the earlier-formed squadrons flew two-engine Handley Page Hampdens. With time, most of the No. 6 Group squadrons were flying twin-engine Vickers Wellingtons, and some the four-engine Halifax heavy bombers. With time, all the Canadian squadrons began to convert over to the “heavies”, four-engine Handley Page Halifax (Mark II and Mark V) and Avro Lancaster heavy

bombers. The Lancaster could carry an 8,165-kilogram bomb load four thousand kilometres. The Halifax's were inferior aircraft to the Lancaster in just about every category save one: they had larger and better-placed escape hatches. Poorly assembled, with a lower operational ceiling than the Lancaster, slower, and with an inferior bomb-carrying capacity, they were cold and uncomfortable. Worse, they could be highly dangerous to their crews. Their exhaust flames were easily seen at night, they offered poor downward vision, their tail assemblies were badly designed, and their controls were too sensitive for the sort of violent manoeuvres required to evade night fighters. Loss rates of Halifax aircraft were consistently higher than the Lancasters.

Halifax Bomber

Wellington Bomber

Lancaster Bomber

The No. 6 (RCAF) Bomber Group headquarters was at Allerton Hall (known to airmen as “Castle Dismal”), a rambling, seventy-five-room mansion near Knaresborough. The 6 Group squadrons were spread out over a number of airfields in the Yorkshire area in the north of England. Consequently, the Canadians had to fly at least half an hour longer than RAF squadrons stationed further south in order to reach their objectives. Between the Canadian bases and the North Sea, was a range of hills with a few peaks as high as 450 metres. Fully loaded bombers taking off for a night's mission had to clear these hills, sometimes in fog or low cloud, while bombers returning from long and grueling night flights had to avoid them while searching for their home fields. The extra distance put considerable strain on crews who were already in the air for six or seven hours, especially if returning after being shot up and sustaining damage. The No. 6 Group grew to contribute 15 RCAF heavy bomber squadrons to RAF Bomber Command.

No. 6 Bomber Group would launch more than 40,800 sorties over enemy territory (including Germany, North Africa, Sicily and Italy); drop a total of over 126,000 tons of bombs; and lose 814 aircraft. During the course of the war, approximately 8,000 decorations for bravery were awarded to No. 6 Group aircrew. At least 28 of Sarnia's fallen airmen served with No. 6 Group squadrons including six from No. 419 Squadron, five from No. 426 Squadron, four from No. 431 Squadron, three from No. 425 Squadron, two from No. 429 Squadron and one from 405 Squadron (a Pathfinder Squadron).

The **Pathfinder Force** was made up of experienced, hand-picked crews from bomber squadrons with elite navigational abilities. These aerial rangers, equipped with the latest target-finding technologies, were the spearhead of the bomber stream, arriving first over the target and dropping coloured flares to pinpoint and highlight the area to be bombed by the follow-on force. At least three of Sarnia's fallen served in Pathfinder Squadrons – Gordon Fordyce (RAF 156 Sq.), Curtis Goring (RCAF 405 Sq.), and Charles Nash (RAF 83 Sq.).^{D, 2S, 3F, 4B, 4H, 4I, 6Z}

The men who served in Bomber Command faced some of **the most dangerous conditions** of anyone fighting in the war. The odds of survival were slim, especially early in the war. As casualties rose, it meant that more and more inexperienced green aircrews were thrust into the front lines. A veteran sergeant noted that, *“Novice crews didn’t get the good kites. They were reserved for the ‘old-timers’ who had developed the habit of returning them.”* A large proportion of aircrews were shot down in their first couple of sorties; after some eighteen months of training and tens of thousands of dollars expended. A Canadian airman observed the frantic pace, *“New crews arrived and went missing before you had the chance to know them.”* It took time to learn how to survive in the air. Experience saved lives, but luck eventually had to run out.

The bomber crews went “over the top” two or three times a week in a relentless battle of attrition. The risks were so high that almost half of all aircrew never made it to the end of their tour. For the first three years of the war, the service career of an airman was to be 200 operational hours, after which he was pulled from the front lines and made a trainer or staff officer. In August 1942 it was changed, the regular duration for a “tour” of duty became 30 combat sorties. Reaching that plateau merely entitled an airman to a six-month rest from operations (often instructing at a training station in Britain, or even sent back to Canada) and then a return to combat for a second tour of 20 operations. When an airman completed his first tour, he received his gold-plated Operational Wings—they were worn with pride; they had been earned the hard way. By mid-1943, airmen in bomber command had a 17 percent chance of completing a thirty-operation tour, while only 2.5 percent saw a second tour to the end. The chances of surviving a tour of 45 sortie operations in the winter of 1943/44 was about 15%, lower than that in the trenches of the First World War. By the wars end, almost half of all aircrew never made it to the end of their tour.^{D, 2S, 3F, 4B, 4H, 4I, 6D}

The night-bomber war was both a highly technical and a physically and emotionally demanding business. It continued to grow more complex as airmen began to rely more and more heavily on electronic measures to find targets, and countermeasures to avoid radar-equipped German night-fighters. The Germans, well aware of Bomber Commands efforts to hide their aircraft or to hit their targets more effectively, tried to neutralize every new device and technique that the British came up with. Thus the night-bomber war became a highly technical war of measure and countermeasure. Night-fighter detection devices, bomber-borne radar devices, jamming, radar detection, electronic countermeasures, spoof raids, ghost raids, broadcasting fake ground-controller instructions were some of the highly technical tasks carried out in aid of the bombers. It was not surprising then that the novice “sprog” crews, who had not even honed basic skills, were disadvantaged in the night-bomber war. Statistics showed that sprog crews were far more likely to be lost on operations than those who served at least half of their normal thirty-mission tour of duty.^{6Z}

The seven-man bomber crews in Halifaxes and Lancasters worked together under great pressure on their night sorties. Take-offs were often tense, with a roaring aircraft loaded with tons of bombs and more than 6,000 litres of highly-flammable aviation gasoline racing down the runway. The winter weather over northern Europe was usually bad; high winds, cloud, and icing of aircraft control surfaces made navigation a nightmare. At high altitudes, the aircrew shivered in sub-zero temperatures, their oxygen masks sometimes freezing up. Flying in pitch darkness, without lights, there was always the danger of bombers colliding in mid-air. As they flew toward their target, they faced anti-aircraft batteries over coastal areas and over major urban centres. German radar stations tracked the incoming bombers and directed German night fighters (Messerschmitt Bf 110 and 109’s, Junkers Ju 88’s and Focke-Wulf Fw 190’s) who waited for them in the night skies over Europe. After the bombers passed through the fighter screen, they encountered the defences over their target areas, which were protected by additional fighters, and anti-aircraft guns that turned the skies into a hail of shrapnel. Powerful searchlights could illuminate the bombers for the flak guns, and “coning” (when multiple searchlights caught a bomber) could blind the airmen. Planes that were “coned” had at most a few seconds to go into a deep dive before the flak guns took aim. The dive itself was no guarantee of salvation. The searchlights sometimes followed the plane down. Other times, pilots shook the searchlights only to be trapped in the dive. Unable to pull up, they crashed into the ground, and some crashed into another bomber. Evading the enemy defenses made for challenging flying that sometimes caused aircraft to go into a spin, while the pilot fought for control. Escape from a damaged plane was difficult and many of the Canadians who survived being shot down over enemy territory would become prisoners of war.^D

Of those who were flying Bomber Command at the beginning of the war, only ten percent survived to the end of the war. Nearly 10,000 Canadian airmen perished in the Bomber Command offensive against Germany and occupied Europe.^{D, 2S, 3F, 4B, 4H, 6Z, 9N} At least sixty young men from Sarnia lost their lives while serving in Bomber Command, representing approximately 66% of Sarnia’s RCAF fallen.

A Bomber Sortie: The flight by a combat aircraft on a mission against the enemy was referred to as a “sortie.” A typical heavy bomber sortie began with a call from air force group headquarters to the squadron usually in the early morning. An operational board would be updated with the list of crews scheduled to fly that night, but no target would be announced. Usually in the early afternoon if it was a night operation, the aircrews would meet in the briefing room. There, lead briefers would describe the target and its importance, and reveal a large map on which pins and coloured strings were arranged to indicate the path leading to the target. A meteorological officer would provide a weather briefing that included expected cloud cover, potential icing situations and wind speeds. An armament officer discussed their bomb loads. When the briefing was over, the aircrews would have several hours to kill. In these anxious hours, some tried to sleep but rest was difficult. Some sat and listened to the radio in the mess or played billiards. Many would write letters for mothers, fathers, and children, searching for phrases and sentiments that would convey comfort should they fall.

Later in the day, most of the aircrews were driven out to check their “birds,” which were being readied and “bombed up,” by the dedicated ground crews. Along with loading the bombers with “Cookies” and incendiaries, ground crews pumped thousands of gallons of petrol into the fuel tanks, loaded oxygen cylinders for the breathing apparatus, and aero-mechanics scoured engine, instrument, and hydraulic systems for faults, and completed repairs.

Since the airmen slept by day and flew by night, the scheduled flying crews were given a solid breakfast at dinner time, around 7:00 p.m., usually real eggs and bacon. After eating, they donned their gear and waited to be transported to the planes. Crew members handed over their wallets and personal effects to the intelligence section for safekeeping, in case they were shot down and captured by the enemy. Along with their flying suits, airmen were outfitted with warm flying boots, a heavy white turtleneck sweater, white silk gloves, a Mae West life jacket, a leather helmet with earphones built in, an oxygen mask with intercom system built in, escape kits (with foreign currency, maps, matches, razors, food, gum, and a compass), and a parachute. When the sun went down, the aircrews would convene at their aircraft and wait for a sign that the operation was either a go or cancelled due to bad weather. As tensions rose, airmen would check out their aircraft. Most were superstitious so they ensured that they had their lucky charms or lucky clothing items, and they would talk or daydream while under the wings, and most men chain-smoked while they waited. Then, the control tower would fire a green flare to indicate that the operation was on. They each urinated on the tailwheel for good luck and then the seven-man crew would climb into the belly hatches of their aircraft for start-up.^{4B, 4H, 6Z, 9K, 9W}

The Halifax and Lancaster bomber engines rumbled and roared as each one taxied out of their dispersal area. As each bomber reached the takeoff point, the pilot stood on the brakes and ran up the throttle. After receiving the thumbs-up signal from their ground crews, brakes were released, and each heavily loaded bomber would build up its speed down the runway. One pilot said about takeoff, *“It’s funny how you take a last look around at the sun and trees, things you don’t ordinarily notice. And you think some. About your first day at school or the first time you went skating. You also think about the folks at home and how they’re going to feel if you go missing.”* When a bomber was at its maximum bomb load and fuel, and without hydraulic controls, the airmen worked hard to get the bomber off the ground. As one flying officer described the difficulty, *“you had to lift off the ground by brute force, and by the time you were airborne you had worked up a real sweat.”* If all went well, the bomber would pull away from the runway and into the darkening sky over southern or eastern England.

The first bombers circled the airfield waiting for the rest of the squadron, then all the planes flew together along the coast to the crossing point, before turning east. The bombers were not pressurized and only poorly heated, and it was incredibly loud inside, so it was a miserable and frigid flight for the seven crew members who sat for hours on end, with little chance to stretch or move. When the bomber reached 10,000 feet, all were ordered to put on their oxygen masks. If deprived of oxygen over 10,000 feet, they would quickly lose consciousness and possibly die. Squadrons of bombers from bases across Britain formed up into the **bomber stream**, a dense formation of planes flying through the night that could stretch back dozens of kilometres. The first ever “thousand-bomber raid” took place on the night of May 30/31, 1942, when more than 1,000 RAF aircraft flew together in formation, a “bomber stream” to attack the German city of Cologne. At least one Sarnian, Warrant Officer James Quinn (included in this Project), would take part in this raid.

As engines droned away, each man performed his assigned task. The wireless air gunner (WAG) monitored the radio and peered out into the dark to try to spot German night fighters. The navigator watched his Gee set or his Oboe or his H2S (navigational devices) or took star shots. Gunners peered into the darkness, hoping to get a glimpse of an approaching night fighter in time to warn the pilot. The pilot would try to keep the aircraft flying straight and

true in the night air, usually made turbulent by the passage of hundreds of other bombers. If there was moonlight, the crew could sometimes see other bombers and there was less chance of collision, but there was also a better chance of being spotted by night fighters. If there was no moon, or if the bomber was flying in thick cloud, it was as if they were blindfolded, never knowing when they might contact another bomber, or be blasted away with cannon fire from a night fighter from below. The night fighters common mode of attack was to sidle underneath an unsuspecting bomber, open fire at wing tanks or bomb bays, and blow bomber and crew to eternity with no warning at all.

On their way to the target, bombers had to evade anti-aircraft batteries and enemy night fighters. The standard defensive armament of all the RAF/RCAF heavy bombers was the .303 machine gun, usually located in a rear turret, a mid-upper turret, and a nose turret. The lack of a belly turret of any sort left a dangerous blind spot underneath the aircraft. The small calibre and limited range of the guns they did have severely handicapped the bomber crews ability to defend themselves. In fact, Bomber Command air gunners were instructed to hold their fire unless they had a very good chance of hitting an enemy fighter, otherwise, they might attract the attention of the enemy.

Following is RCAF Flying Officer Noel Shank's description of his experience of being in the rear turret of a Lancaster Bomber; *"As the tail gunner, all I did was sit in that little cupola at the back end of the Lanc and stare out into the darkness for five or six hours. The turret was beyond the tail of the aircraft, and I could look back, up, and sideways, and I had a pretty good view forward too. Sometimes I removed the clear Plexiglas shield in the rear of my turret – it made it very cold inside, but I could spot planes better... I was the only one with that kind of view. I was the eyes of the crew, helping us avoid any encounters with German fighter planes. I knew that as a tail gunner I was a target for the Germans. My chances of surviving were about 15 percent, but it's funny, once we were airborne, I never thought I would be shot down."* (Note: F/O Noel Shanks would fly thirty missions and survive the war).^{9K}

One low-tech defence system employed by the RAF/RCAF (introduced July 1943)–code-named **"Window"** –was the dropping of tens of thousands of strips of foil as they approached the target, each about ten inches long and three-quarters of an inch wide, silver on one side and black on the other. The foil effectively blinded the German radar-controlled anti-aircraft guns. The Germans developed a similar radar counter-measure, called Duppel.

During the final bomb run over the target, it was difficult for pilots not to flinch as they flew through the bursting bombs, tracer bullets, flares, and black puffs of flak exploding above, below, and in front of them, buffeting the bomber, even sending pieces of jagged steel through the wings or fuselage. As one pilot later remembered, *"Gun flashes, photoflashes, bomb bursts, streams of tracer of all colours, and everywhere searchlights. Our target runs were like the weavings of a demented bird."* After releasing its bombs, the pilot could begin to gain altitude, with the greatest danger being that the bombers would drift into one another or be struck by another plane's bombs. After leaving the target area, crews would scan the skies, manning their guns, as enemy night fighters pursued and picked off bombers on the outside, below or above the stream, especially the wounded ones, those trailing smoke or limping back on three engines. Some German stalkers would trail the stream for hours before attacking, others would work their way into the stream, following them back to their bases before attacking. In addition, the bombers had to deal with other perils, such as harsh weather, lightning, ice forming on the wings, fuel shortages and mechanical failure.^{D, 4B, 4H, 6F, 6Z, 9N}

Coming home, the bombers occasionally arrived to clear skies in a breaking dawn; often they came back to fog-shrouded runways. Crippled aircraft had priority to land, while the rest circled and tried not to collide in the clouds before the control tower called them down. Shot-up bombers often landed hard, on one wheel or on their belly, skidding along, veering off the runway, crashing through bushes and buildings, or bursting into flames on impact. Many of the planes carried wounded or dead airmen. Ground crews would pick up the flyers to drive them to the official debriefing, despite the fact that most of the crews had gone eighteen to twenty hours without sleep, and they were dehydrated from heavy sweating, lack of water, and reliance on oxygen. At the debriefing room, airmen received a stiff tot of rum, which could be taken straight or mixed with coffee. When debriefing was concluded, the airmen returned their equipment and parachutes, went to the mess for a meal, and then to bed. Noting the empty beds around them, they wondered if their chums had landed at another base, bailed out over Europe, or been killed in a fiery crash. Said one airman, *"You never saw your friends actually die. They were just missing from the station the next day."* After a sortie, lockers were emptied, names came off the roster board, and the war went on.^{4H, 4I, 6Z}

Almost every operation saw bombers disintegrate in fiery explosions, or torn apart by night fighter cannons or ground-based flak. A doomed aircraft that did not immediately disintegrate in mid-air, lost power and would begin its downward freefall. If control could not be regained, the order went out to "abandon the bird", often in a cheery

quip, “Lads, time to hit the silk.” After the pilot gave the order to abandon the crippled bomber, he stayed in the cockpit, keeping the plane steady to provide his crew with extra minutes to escape. Crew members, some wounded and burned, would have to battle the G forces in the plummeting aircraft, with the wind howling through the gaping holes in the fuselage, and fire sweeping down the plane, in their attempt to move toward the narrow escape hatches. Very few airmen had ever jumped with a parachute, some of which malfunctioned or caught fire. The challenge for anyone to escape can be attested to by the fact that only 11 percent of Lancaster crews survived being shot down, while 29 percent survived in the Halifax. Statistics indicated that pilots and rear gunners had the lowest chance of escaping a plane in flight. Those parachuters lucky enough to not land in water and drown, or get caught up in a tree or some other structure, faced new challenges on land in enemy territory. Even German civilians, seeking retribution against the *terrorflieger*s – terror flyers – could exact revenge on the Allied airmen.⁴¹

For airmen that went “missing”, the notification of the next of kin in Canada was often mired in bureaucratic tangles. Multiple official letters were sent to anxious family members to update them about their missing son, husband or father. No one knew if the airmen was dead, on the run, or in a prisoner-of-war camp. Most were killed by enemy fire, or when their planes exploded, but some parachuted safely and were captured on the run. Those at home agonized over the lack of information. As the months stretched out, hope faded. Possessions were usually sent back to Canada, along with a letter from the commanding officer, the padre, and maybe a few squadron comrades. Grieving families prayed for a miracle – that they had been protected by the French or Dutch resistance, or they were POW’s, or they had evaded capture. For downed airmen that were able to evade capture and return to England with the help of European resistance fighters, they were not allowed to return to active service again. There was the possibility that they might be shot down again and captured, with the risk that they could reveal the identities of the underground contacts or give away their escape route.^{9w}

More often, the missing were gone: atomized into vapour, burned beyond recognition, lost in the sea, or buried in graves by the German military or French civilians. It was not until after the war, when investigators could examine crash sites, talk to locals, exhume bodies, and exhaust all avenues that they could declare an airman killed.⁴¹

Airmen fought a stop-and-start war—almost daily flying into danger for a few hours then returning to the relative luxury of a safe bed and a warm meal. They did not endure the extended misery experienced by soldiers in the field, nor did they suffer through long, monotonous periods of waiting, broken by brief bouts of terror, as sailors did. At their base, the mess was the flyers’ retreat from the outside world. There they could read quietly, write letters home, smoke cigarettes and talk about their operations, their near misses, and those who never returned. The parties, which were frequent, were often wakes for crews who had been lost the night before. Airmen nonchalantly observed that former comrades had “gotten the chop” or “gone for a Burton” – a phrase whose origins apparently revolved around a type of beer, Burton Ale, and meant that the airman had gone for an extended drink and would not be returning. As one Canadian airmen stated, “*We followed the old dictum: ‘Eat, drink, and be merry, for tomorrow we may die.’*”

Playing music, cards or darts, singing songs, and playing pranks on each other were used by the airmen as a means to relax, forget, build camaraderie and escape the tensions of their situations. Crews did things together to build morale knowing that they relied on each other to survive. According to one Canadian airman, “*In a strange country the crew took the place of the family and friends left behind in Canada.*” Nearly all the air bases were close to villages or cities to which the flyers could escape, so they were a part of the home front, and were in daily contact with the British people. The airmen invaded the streets, shops, dance halls and the pubs that were filled with good cheer and boisterous folk. The British people rarely complained about the Canadian interlopers, knowing that the young warriors may be in the skies overhead the next day, risking everything for them.^{4H, 4I}

During the first seven months of the Bomber War—until May 1940—Bomber Command limited itself to leaflet campaigns (dropping Allied propaganda over Germany) and largely ineffective raids on naval targets. In a shift in strategy during the first years of the war, RAF bombers carried out daytime precision bombing targeting German industry and command centres. The results had limited impact on German wartime production, as the visible bombers were blown out of the skies by anti-aircraft guns and German fighters, which led to unacceptable losses.

In January 1943, British Prime Minister Winston Churchill and American President Franklin Roosevelt, along with their advisors, met at the Casablanca Conference in North Africa to discuss strategies, allocation of resources and diplomatic policy. One of the directives agreed upon was the “**Pointblank Directive**”, which would set the strategic direction for the bombing campaign that would continue for the last two years of the war. The

Combined Bomber Offensive, would be conducted from the United Kingdom whereby the British and Commonwealth forces (RAF and RCAF) and the United States Army Air Force (USAAF) would strike the Germans with around-the-clock bombing. The Pointblank Directive began with the words: “The primary objective of Bomber Command will be the progressive destruction and dislocation of the German military, industrial and economic system aimed at undermining the morale of the German people to the point where their capacity for armed resistance is fatally weakened.”^{9N}

Americans (USAAF – the Eighth Air Force in the European Theater) flying their B-17 Flying Fortresses would strike by day, and the British and Commonwealth forces (RAF and RCAF) flying their Halifax and Lancaster bombers would strike at night, especially targeting the industrial heartland of Germany, the Ruhr—home to some of Europe’s most important producers of oil, steel, and chemicals. The USAAF daylight bombing campaign was based on the strategy of “precision bombing”, whereas the RAF/RCAF night campaign was based on the strategy of “area bombing”. By the second half of 1943, German industrial production had slowed, and military resources were stretched as Hitler scrambled to protect his cities, thereby undermining the German war effort.

By late fall 1944, after liberating France, the Allied air forces became more effective – the Luftwaffe fighter threat was all but gone, airfields were built, navigational systems improved, more aircraft were available, and the number of tons of dropped bombs increased significantly. In this new environment, from August 1944 to the end of the war, the RAF and RCAF carried out more daylight raids. These raids brought new challenges as targets could be better located, but ground flak guns could also see the planes without radar. The relentless Allied aerial assault of high explosive bombs (often dropped by the first wave planes) and incendiary bombs (dropped by the second wave) largely reduced portions of the German cities to rubble, including Cologne, Hamburg, Hanover, Duisburg, Stuttgart, Chemnitz, Leipzig, Dusseldorf and Berlin.

The opening raid of **Battle of Berlin** was launched in August 1943, a concerted air campaign by RAF Bomber Command against the German capital. The Commander-in-Chief of Bomber Command, Air Marshal Arthur Travers Harris, believed that continual air attacks on Berlin would break the German will to wage war. The raids became more intense beginning in November 1943. The distant and well-defended target was not popular choice with bomber crews. The series of raids on the “Big City” continued until March 1944. Over the seven months, Bomber Command attacked the capital nineteen times, and although the bombs did much damage, Berlin was not “wrecked”.

One of the most infamous Bomber Command missions came late on the night of February 13, 1945, against the city of **Dresdan**. Dresdan had been bombed before but had never been subjected to a sustained attack. Seven hundred and ninety-six bombers, including sixty-seven Lancasters from RCAF’s No. 6 Group targeted the city that night, which erupted into a firestorm. The blaze could be seen by approaching bombers at least 200 kilometres away.

The Allied bombing campaign would continue until late April 1945. Almost two million tons of bombs had been dropped on Germany; more than sixty cities had been destroyed; and hardly a town or village had escaped the bombs. Wartime surveys revealed that the bombing campaign showed the German people that they were losing the war (in spite of propagandists that were claiming otherwise), and the disruption and fear precipitated by the bombers was the most trying and morale damaging aspect of the war. In the last two years of the war, the bombing campaign had certainly been effective in wearing Germany down: the Luftwaffe had been systematically destroyed; the German synthetic oil industry had been destroyed; havoc had been wrecked on the German rail and canal transportation systems; it diverted personnel and material resources from the rest of Germany’s war efforts; German war industry had been halted; and it no doubt saved the lives of Allied soldiers as they moved into the towns and cities hit by bomber command.

In post-war years, some questioned the value of the final bombing campaign against Germany, suggesting it was more punitive. It was not. Though the Nazi war machine was only months away from collapsing, Hitler and his band of criminals were unwilling to surrender. Nazi leaders demanded that the German soldiers, and civilians who supported them, fight to the end. When Dresdan was hit, the First Canadian Army, for example, was battling in the Rhineland, and it would endure two and a half gruelling months of combat, often against fanatical resistance and at the cost of 5,000 more Canadian dead. Beyond the fighting armies, V-2 rocket attacks continued against British civilians, the Jews continued to be gassed to death in sickening numbers, the Dutch continued to starve, and the horrible list of atrocities and madness went on and on.^{4H, 4I, 6Z, 9N}

The Dambusters Raid: On the night of May 16-17, 1943, Bomber Command was involved in an operation that has been the subject of feature films, documentaries, novels, non-fiction books, magazine articles and dramatic

paintings. “**Operation Chastise**” was a stunning attack deep inside Germany on targets long thought to be unassailable. On that dark May 16-17 night, lit only by the moon, 133 young hand-picked and specially trained airmen of No. 617 Squadron took off in 19 specially-modified Avro Lancaster bombers, formed up and flew extremely low over the English Channel across the Dutch coast. Each of the 19 Lancaster bombers could only carry one of the specially-designed “wacky” bombs.

Having trained for months to deliver a very special weapon, the aircraft were to fly low, beneath radar coverage, navigate deep into Germany, locate and attack a series of massive dams on tributaries of the Ruhr River Valley. The dams were fiercely protected—torpedo nets in the water stopped underwater attacks, and anti-aircraft guns defended them against enemy bombers. Behind each of these dams—the Möhne, the Sorpe, the Eder and the Ennepe—were massive reservoirs of water that, it was hoped, would flood factory sites downstream and bring much of Germany's industrial production to a standstill. The attacks would be carried out using a special spinning explosive device which, when released from a Lancaster bomber at exactly 60 feet AGL (above ground level), at exactly 230 miles per hour and at a specific distance from the reservoir-side face of the dam, would fall to the water and then bounce like a skipping stone, in decreasing bounces, until it fell exactly at the face of the dam. The barrel-shaped bombs would then roll down the face of the dam to a specific depth where a hydrostatic sensor would detonate the bomb like a depth charge, weakening the dam's structure, causing the stored water to breach the dam, flooding the industrial complexes downstream.^{3G, 4B, 6H}

The 133 members of the “DamBuster” squadron was made up of hand-picked and specially trained crews from the Royal Air Force, Royal Australian Air Force, Royal New Zealand Air Force and 31 members from the Royal Canadian Air Force (including one American). The crews took off in three waves and found their targets and, facing walls of searchlights, night-fighters, heavy flak and cannon fire from the dams' batteries of anti-aircraft guns, they pressed home their attack, with only the moon to guide them. The steel and concrete Möhne and Eder Dams were breached causing extensive flooding below the Möhne, and 25 bridges were swept away below the Eder. The Sorpe Dam (made of earth) sustained only minor damage, and the attack against the Ennepe Dam was unsuccessful.

The flooding required a huge effort to rebuild the dams, rebuild bridges, railways, and roads, dredge new channels for river traffic, and replace and repair factories. Seventy thousand people were diverted from their regular wartime duties just to repair roads, railways and bridges. Water and power supplies were significantly disrupted as well. The attack deep into Nazi German was also a huge morale boost for the Allied forces and on the home front. The DamBuster's success came at a cost. Of the 19 aircraft from No. 617 Squadron that participated, eight were shot down. Of the 133 men involved, 53 were killed and three became prisoners of war (including one Canadian). Of those killed, 14 were Canadian. Seven of the sixteen Canadians who did return received military decorations.^{3G, 4B, 6H, 9N, 9W}

Bomber Command Sacrifices: Of the 125,000 Commonwealth personnel who served in Bomber Command, a total of 55,573 died in action. This includes over 10,000 Canadians. The death rate in Bomber Command was more than 44 percent, and nearly 10,000 crew members were taken as prisoners of war, and another 8,400 were wounded. Most who flew were very young and the vast majority were still in their late teens—the average age of those serving was 23.

Bomber Command Honoured: The **Bomber Command Museum of Canada** in Nanton, Alberta reports that of every 100 airmen who joined the Command, “45 were killed, six were seriously wounded, eight became prisoners of war and only 41 escaped unscathed (at least physically)... It is a loss rate comparable only to the worst slaughter of the First World War trenches.”^{4B, 9W}

One of the tributes at the Bomber Command Museum of Canada (formerly the Nanton Lancaster Society Air Museum) is **Canada's Bomber Command Memorial**. The wall, consisting of five panels of polished granite, displays almost 10,700 engraved names of Canadians killed in the Second World War while serving in Bomber Command. Also inscribed on the Memorial Wall are the words of Father J.P. Lardie (Chaplain 419, 428 Squadron RCAF):

Three thousand miles across a hunted ocean they came, wearing on the shoulder of their tunics the treasured name, 'Canada', telling the world their origin. Young men and women they were, some still in their teens, fashioned by their Maker to love, not to kill, but proud and earnest in their mission to stand, and if it had to be, to die, for their country and for freedom.

One day, when the history of the 20th century is finally written, it will be recorded that when human society stood at the crossroads and civilization itself was under siege, the Royal Canadian Air Force was there to fill the

breach and help give humanity the victory. And all those who had a part in it will have left to posterity a legacy of honour, of courage, and of valour that time can never despoil.

At the end of the war, medals and bars were awarded to veterans, but no special recognition was given to those involved in the perilous missions of Bomber Command, at least in part due to the controversy over the morality and value of the bombing campaign. Nearly seven decades after the end of the Second World War, the service and sacrifice of Bomber Command, including that of tens of thousands of Canadians, was finally recognized. In June 2012, the Canadian government announced that Bomber Command veterans would receive a special **Bomber Command bar** to be worn on the ribbon of their Canadian Volunteer Service Medal, which all service personnel had been issued at war's end.

In the same month, Queen Elizabeth II unveiled a new **Bomber Command Memorial** in Green Park, London, England. The centerpiece of the stone memorial is a bronze sculpture of a seven-man aircrew, protected by a roof made of metal recovered from an RCAF Halifax III bomber, 426 Squadron, shot down over Belgium in May 1944. The Halifax had been recovered from a swamp in 1997 with three members of the crew still at their stations. The base of the memorial is inscribed with the following words by the ancient Greek statesman Pericles, "Freedom is the sure possession of those alone who have the courage to defend it."^{D, 2E, 2I, 4I, 9W, 10U}

In April 2018, the **International Bomber Command Centre** on Canwick Hill near Lincoln, England was officially opened as part of the 100th anniversary celebrations of the RAF. One of the features at the centre is the UK's tallest war memorial, a spire 102 feet in height, which is the same height as the wingspan of a Lancaster bomber. The spire is encircled by walls with the engraved names of 57,821 young men and women who gave their lives while serving in or supporting Second World War Bomber Command.^{D, 2E, 2I, 4I, 9W, 10U}

Both the Bomber Command Memorial in London and the International Bomber Command Centre in Lincoln honour the more than 55,000 members of Bomber Command, including approximately 10,000 Canadians, including Sarnians, who died in missions over Europe, as prisoners of war or in training accidents.

Located in Hamilton, Ontario, the **Canadian Warplane Heritage Museum** has one of only two remaining Lancaster bombers in the world that still flies today. After World War II, most of the Lancasters ended up as scrap metal. When the Royal Canadian Air Force decided to decommission its last three remaining Lancasters, the town of Goderich, home of Elementary Flight Training School #12 during the war, expressed an interest in obtaining one as a memorial. Through the efforts of the Goderich Branch of the Royal Canadian Legion, the town was chosen to be the final resting place of an Avro Mark X Lancaster heavy bomber, arriving in June 1964. The aircraft never saw service in the Second World War, but did serve in RCAF Maritime patrols on the east coast. In Goderich, the Lancaster was mounted on cement pillars at the Sky Harbour aerodrome, and dedicated as an official war memorial in a September 1968 ceremony. In the years following, it suffered from vandalism and exposure to the elements.

In 1977 the aircraft was donated to the Canadian Warplane Heritage Museum with the goal to restore it to flight condition. A small army of volunteers and staff with the museum carried out the restoration over the next decade until, at last, in September 1988, the Lancaster flew again. The Lancaster bears the insignia of RCAF #419 'Moose' Squadron. It is dedicated to the memory of Pilot Officer Andrew Mynarski of Winnipeg, the son of Polish immigrants, who sacrificed his life trying to rescue his tail gunner when their Lancaster was hit by enemy fire in June 1944. As the crew bailed out of their burning craft, Mynarski fought through flames to free his trapped rear gunner who was jammed in the rear turret. Mynarski was last seen engulfed in flames as he stood to attention, saluted the gunner and said "Good night, Sir." Mynarski died of severe burns, but all of the other crewmen survived. P/O Andrew Mynarski was posthumously awarded the Victoria Cross for his bravery. The Lancaster bomber is on display in the Hamilton museum, and is a mobile memorial in the summer, flying in air shows across the continent.^{6K, 6L}

Sarnia's Air Force Sacrifices: Sarnia contributed more than its share to the Royal Canadian Air Force and Royal Air Force. Of the 185 Sarnia World War II fallen soldiers included in this Project, 91 of them lost their lives while serving with the RCAF and RAF, representing close to 50% of Sarnia's World War II deaths. Sarnia airmen participated in many roles and in all theatres of war; serving in bomber command, in fighter squadrons, in coastal command protecting allied shipping, in ferry command, in transport command, in army co-operation and in reconnaissance.^{D, E, 2I and 2S}

Of the 91 Sarnia RCAF/RAF fallen, approximately 60 of them lost their lives while serving in Bomber Command, representing 66% of Sarnia's airmen. This includes Sarnians lost in the two-engine medium/light bombers Wellingtons (12), Hudsons (4), Hampdens (2) and Blenheims (2); and the four-engine heavy bombers

Halifaxes (23) and Lancasters (20), Liberators (2) and Stirlings (2).

At least nineteen Sarnia airmen lost their lives during training; nine in Bomber Command, seven in training aircraft, two in Fighter Command, and one while aboard an RCAF supply ship.

Note: Information on RAF Fighter Command, RCAF Fighter Squadrons and Sarnia contributions is on page 508.

Following is the official poem of the Royal Canadian Air Force and Britain's Royal Air Force, written in 1941 by 19-year-old RCAF Pilot Officer John Gillespie Magee Jr.:

High Flight

*Oh! I have slipped the surly bonds of Earth
And danced the skies on laughter-silvered wings;
Sunward I've climbed, – and joined the tumbling mirth
of sun-split clouds, and done a hundred things
You have not dreamed of – wheeled and soared and swung
High in the sunlit silence. Hov'ring there,
I've chased the shouting wind along, and flung
My eager craft through footless halls of air...

Up, up the long, delirious, burning blue
I've topped the wind-swept heights with easy grace.
Where never lark, or even eagle flew –
And, while with silent lifting mind I've trod
The high untrespassed sanctity of space,
– Put out my hand, and touched the face of God.*

• **THE BATTLE OF SICILY**, July 10 – August 6, 1943: After the Russian victory over German forces at Stalingrad in January 1943, and the combined British and American victory over Axis forces in North Africa in May 1943, the Allies had to decide where to strike next. While the battles for North Africa had raged back and forth, the Canadian Army remained in the United Kingdom. They trained and trained and trained some more, their main purpose—to provide defense for the UK in case of an attack. From the start of the war, Canadian commanders had held to the ideal that First Canadian Army should fight together, as the Canadian Corps had done in the First World War. Allied commanders felt that the major difficulties posed by trying to move the entire Canadian Army by sea to some fighting front, and then insert them into an ongoing campaign somewhere were not worth it. It was felt it was best to keep them in the UK until the time came to assault France, and they could be used all at once.

It was Winston Churchill who convinced Franklin Roosevelt that the Allies should attack the “soft underbelly” of Europe next, opening up the Mediterranean. This would be the Italian Campaign, which would begin with the invasion of Sicily. In Canada, there were demands from the public for the country to play more of a role in the ground war. The Canadian government pushed the Allied commanders for their forces to be included in this campaign, and prevailed. However, the First Canadian Army would be split, with one-sixth of the Canadian Army being sent to this theatre (they would not reunite with the rest of the Canadian Army until the spring of 1945). Canadian commanders chose to send the 1st Canadian Infantry Division and the 1st Canadian Army Tank Brigade to Sicily. Sicily would be the first sustained Canadian Army land operation of the Second World War.^{4H, 6Z}

One reason that the landings on Sicily would be successful was the result of an elaborate deception carried out by British Intelligence (MI5). In April 1943, the Allies' plan, known as ***Operation Mincemeat***, involved transporting then releasing a corpse (a dead tramp) disguised as a British officer to be found by enemy forces adrift in the Atlantic Ocean off the coast of Spain. Handcuffed to his wrist was a briefcase containing forged documents that supposedly revealed the Allies' plans to invade Greece and Sardinia, and not Sicily. The body was found by a fisherman who gave it to his government authorities who, in turn, passed it to the Nazis. German intelligence accepted the authenticity of the documents (they even made it to the desk of Hitler himself) and they diverted much of their defensive effort from Sicily to Greece. The bizarre covert operation saved thousands of British, Canadian and American lives, and helped change the course of the war. The extraordinary tale of deception has been the subject of a number of books and films.^{4T}

Voyage to Sicily: After years of battle training in England, the Canadians were issued new weapons before departing for Algiers in mid-June 1943. One Bren gun, the primary light machine gun, was issued for each section of

ten men. They were also issued Thompson .45 submachine guns, similar to the ones used by American gangsters like Al Capone. Most infantrymen remained riflemen, equipped with the .303 Lee-Enfield rifle with its skewer-type bayonet, and most soldiers stuffed their pockets with hand grenades when they went into battle. The rifle companies were the core of a battalion's fighting strength and were expected to take the highest casualties. Support companies included mortar platoons, universal carriers (all-purpose, lightly armoured tracked vehicles), anti-tank platoons and pioneer platoons (to clear mines and maintain positions).^{4H}

Even getting to Sicily was no easy task for the Canadians. Ninety-two ships left Britain in two convoys, one fast, one slow. On June 19 the first (slow) transports carrying the Canadians from the UK directly to Sicily left Scotland; a second group of transports (fast) sailed five days later. The men did not know where they were going, but the fact that they had traded their Canadian-built Ram tanks for American Sherman tanks (the standard battle tanks used by both the British and Americans in North Africa) must have given them a clue. The fast convoy reached Sicilian waters unharmed; the slow one lost three ships to U-boats over a two-day period, killing 58 Canadian soldiers, along with the loss of thirty artillery pieces and more than 500 vehicles.^{D, 4H, 6Z}

Sicily is a mountainous island, extending about 250 kilometres from east to west, located about 90 kilometres north of the island of Malta. For the Italian and German forces in Sicily, the interior of the island was a defensive planner's dream. It featured steep cliffs, the 3,000-metre-high snow-capped Mount Etna in the northeast, poor interior roads, and countless sharp grades leading to hilltop towns and villages.^{4H}

Code-named **Operation Husky**, the multinational invasion force was made up of British, American, Canadian and French personnel, commanded by General Dwight D. Eisenhower. It was the largest armada ever assembled to date, some 100 kilometres long, and included 160,000 troops, 3,000 ships, 4,000 aircraft, 14,000 vehicles, 600 tanks and 1,800 artillery pieces. Waves of bombers had preceded the invading force in the days before, smashing enemy fortifications. In the early morning hours of July 10, 1943, the Allied forces, comprised of seven divisions, came ashore on twenty-six beaches, along a 70-kilometre stretch of the southern tip of Sicily. The 25,000 Canadians landed in the south on the Pachino Peninsula, on a beach code-named "Bark West," the Americans in the southwest (General George Patton's U.S. Seventh Army), and the British in the southeast (General Bernard Montgomery's British Eighth Army). Commanding the 1st Canadian Infantry Division was General Guy Simonds, who would rise to become one of Canada's best generals. Some of the Canadian troops were quickly ashore with no opposition, but for others, there were delays due to the late arrival of landing craft, and some grounded on a sandbar about a hundred metres from the beach. Platoon commander **Farley Mowat** (later a Canadian author) was there: *"This was the moment toward which all my years of army training had been building... Revolver in hand, Tommy gun slung over my shoulder, web equipment bulging with grenades and ammo, tin hat pulled firmly down around my ears, I sprinted to the end of the ramp shouting 'follow me men!' ... and leaped off into eight feet of water."*

All along the beachheads, the Italian defenders offered little or no resistance, most surrendered at first sight of the invading force. The lead assault groups drove hard and captured their initial objectives. On moving forward, since most of the Canadian vehicles had been lost at sea, the men would have to walk. Makeshift mule teams were organized to carry the heavier equipment, the animals "requisitioned" or hired from the locals. That first day set the pattern for most of those that followed: the men walking up steep roads or making their way over rocky hillsides under a broiling sun in unbearable heat, with water rationed and clouds of mosquitos and flies to torment them every time they stopped to rest. For the first five days, as the Canadians marched northward through the hills into the interior, they encountered virtually no opposition, and took hundreds of Italian prisoners.^{D, 2N, 4H, 6Z}

Fighting in Sicily: As the Canadians continued to march up Sicily islands dusty mountainous winding roads, in scorching temperatures above 40 degrees Celsius, their designated route had them fated to run into major concentrations of German troops offering stiff resistance. The Germans rearguards were not ready to give up, and planned a measured retreat from the island to Italy, while holding the high ground in a series of lines. With better machine guns and mortars, and all the advantages the terrain provided that channelled the Allies into chokepoints and ambushes, the dug-in Germans made a stand on every mountain and ridge, in every village and town. Most of the time, the Germans would put up stiff resistance for several hours, then use the cover of darkness to withdraw to their next defensive position.

The fierce fighting in Sicily would last more than four weeks until August 6, 1943, during which Canadians battled through approximately two hundred fifty kilometres of difficult mountainous country, over mine-filled roads, across ravines, over blown up bridges and culverts, over cliffs, and in some cases house to house fighting and hand-

to-hand combat. The unflagging tenacity of the 1st Canadian Infantry Division as they fought through stiffening German resistance prompted the Germans to nickname them the “Red Patch Devils” after their divisional shoulder patches. The Canadians advanced northward liberating such towns and villages as Grammichele, Piazza Armerina, Valguarnera, Assoro, Leonforte, Nissoria, Agira, Regalbuto and Adrano. By August 17, the Germans had evacuated the island to the Italian mainland, with all their men and masses of armour, artillery and transport vehicles, while Sicily had been conquered by the Allies in 38 days.^{4H, 6Z}

Agira was one of a number of Sicilian towns taken by the Canadians as they advanced northward across the mountains and over the island's hot, barren terrain toward the Strait of Messina. The campaign to capture Agira, perched on a high peak and reachable only by narrow roads that twist and climb, was supposed to be over in two days or less. It was not. It would take five days against fierce German and Italian resistance before Agira was taken. Lt-Col GWL Nicholson described the entrance of the Canadians;

“...about noon an officer of the 1st Canadian Field Regiment, whose eagerness to select a good vantage point for his task of observing fire for the Patricias had carried him right into Agira, found no sign of enemy activity, but streets crowded with people who gave him an enthusiastic welcome. The bombardment was cancelled, and at 2:30 two PPCLI companies entered the town. They received an ovation from the populace on the outskirts; but as they climbed the steep streets into the heart of Agira they met a different kind of welcome from enemy pockets of resistance. It required two hours of fairly stiff house-to-house fighting and the employment of a third rifle company, as well as assistance from a squadron of tanks to clear the town.”

The town fell on July 28—three days after the resignation of Mussolini—and following five days of hard fighting in what proved to be the Canadians' biggest battle of the Sicilian campaign.^{D, 6Z}

Canadian sacrifices in Sicily: The taking of Sicily helped secure the Mediterranean Sea for Allied shipping, and contributed to the downfall of Italian dictator Benito Mussolini. On September 3, the new Italian government accepted an armistice with the Allies, and the unconditional surrender was announced on September 8. The Battle of Sicily saw 565 Canadians die, with another approximately 1,800 Canadians wounded or taken prisoners of war. One in eight Canadians was killed or wounded in Sicily, and the casualty rate was much higher among the infantry.^{D, E, 2N, 4A, 4H} At least three young men from Sarnia gave their lives in the Battle of Sicily, including Private Carl Burke, WO1-Pilot James Lowry (RCAF) and Trooper Donald McClure. Burke and McClure are both buried in Agira Canadian War Cemetery, the largest in Sicily.

A Sarnian in Sicily: Sergeant Jesse Euston Harold Jr. was one of many Sarnians who took part in the Battle of Sicily. Jesse Euston Harold Jr. was the son of Jesse Euston Harold Sr. (born February 18, 1878 in Fleetwood, Lancashire, England) and Florence (nee Cameron) Harold (also born in England). Jesse Harold Sr. had served in the Boer War, with the British Army, King's Own Royal Lancaster Regiment, and also served in World War I. In 1913, Jesse Sr. and Florence Harold, along with their three children at the time; Gladys, Kenneth and Cyril, immigrated to Canada, departing from Liverpool aboard the *SS Canada*, arriving in Quebec on June 11, 1913. He recorded his past occupation as soldier; his intended destination as Montreal; and intended occupation as farm labourer. On January 18, 1915, at the age of 36, Jesse Harold Sr. enlisted with the 33rd Overseas Battalion in London, Ontario. Five months later, he was discharged from the 1st Battalion, Canadian Garrison Regiment in London. Approximately eight months later, on March 1, 1916, he enlisted again in London, Ontario with the 142nd Battalion. He arrived in England on November 11, 1916, and four months later, on March 15, 1917, he arrived in Havre, France as a member of the 4th Canadian Labour Battalion. One week later, he was transferred to the 11th Battalion, Canadian Railway Troops. Jesse Harold Sr. rose to the rank of Corporal, and served in England, France and Belgium. He survived the Great War, being discharged on demobilization in March 1919. After the war, the Harold family resided at 526 Oxford Street, London, Ontario.

Jesse Harold Sr. and Florence Harold had seven children together: Gladys Ellen Elizabeth (born 1909), Kenneth Victor (born 1911), Cyril Bertram (born 1912) (these three were born in England); and Ruby (born 1916), **Jesse Euston Jr.** (born 1917), Harley (born 1921) and Ernest (born 1923) (the latter four were born in Ontario). Matriarch of the family Florence Harold passed away at the age of forty on March 2, 1928 in London, Ontario. At some point, Jesse Harold Sr., and his sons Harley and Ernest moved to 148 South Front Street in Sarnia.

Jesse Euston Harold Jr., following in his father's footsteps, would serve in the Second World War. In early September 1943, Jesse Harold Sr. in Sarnia received a letter that his son Jesse Jr. had written from an army hospital base in North Africa. Jesse Harold Jr.'s wife and daughter were residing in Toronto at the time. In the letter to his father, Sgt. Jesse Harold Jr. told of his escape from enemy territory in Sicily after being seriously wounded.

Lying flat on his back in a cast on a hospital cot, Jesse Jr. couldn't write the letter himself, so he recited his words to Lieut. H.P. Carson, who sat by Jesse's bed and wrote the words Jesse wanted his father in Sarnia to read. The following are excerpts of that letter, from the September 2, 1943 *Sarnia Observer* story under the headline; "Sarnia Soldier, Cut Down By Axis Machine-Gunner, Pens Graphic Story Home":

Dear Dad,

Just a few lines to let you know I am in hospital, and that everything is alright now... while I was in Sicily, they thought I might lose both my legs... I have been flown to hospital here and now the story has changed... myself and an officer had gone about two miles into the enemy area when they knocked us off our motorcycle with a mortar... while we were standing in the middle of the road, he started to chop us down with a machine gun... Neither one of us stood a chance... The Transport Officer got it with one bullet, clean through the head. I started moving about so he chopped me across the legs and feet, a bullet in the chest, and one in the left shoulder. I made it to the wall at the side of the road before I fell down. When I fell down, I couldn't move, perhaps just as well, because every time I moved, a sniper on the rooftop went to work. But he wasn't very good.

Sgt. Harold then described returning to his comrades. He said he was very still for a few hours, and then he started to drag himself back.

I could feel myself a bit weaker, because I was pouring blood, and could only step up one pace at a time. It took me half a day to drag myself a quarter mile. I didn't break any speed records.

He then described how he fell into a culvert, and stayed there for two days.

I still can't realize how I managed to get my right boot off, because my foot was just hanging on... two bullets in the same ankle.

He described how he had been more afraid of being taken prisoner than anything else and that he had lost his tommy-gun. His only weapon was a pistol, and as he lay in the culvert for two days, German patrols passed along the road at night. He wrote that he had nearly called out when he heard their voices. After he was rescued, he learned that a patrol from his own base had gone out to try to locate him, but they had travelled on the opposite side of the road from the culvert, *because they had been dropping mortar and shells on my particular side... I knew that only too well... one of them dropped within five feet of my hole.*

After two days in the culvert, he was picked up by his comrades. He wrote in his letter that authorities in Sicily thought he would have to lose his legs, but when he was flown to Africa, doctors determined no amputation was necessary. Besides the extent of his leg injuries, Sgt. Harold suffered bullet wounds in the chest and shoulder, but, *the mortar didn't do much harm... broke my nose and a piece went through my cheek...*

He finished the letter saying that he would be up and be able to go back to the front in a few months.^N

Sgt. Jesse Euston Harold Jr.

Notes: Jesse Euston Harold Sr. passed away at the age of seventy-eight on January 30, 1957 in London, Ontario. Jesse Jr.'s brother Ernest Harold also served in the war, a Sapper with the Royal Canadian Engineers. Ernest Harold passed away at the age of thirty-three in 1956 and is buried in Lakeview Cemetery in Sarnia. On June 21, 1934, Jesse Jr.'s brother Cyril Bertram (residing at R.R. #2 Devine Street, Sarnia) married Lucy Grosvenor Abram (born in England) in Point Edward. Jesse Jr.'s sister Gladys Ellen Elizabeth Harold married Arthur Abram in 1934 in London, Ontario. Arthur Abram, the brother of Lucy Grosvenor Abram, was a tinsmith at the time.

Gladys and Arthur Abram resided at 1606 London Road in Sarnia, and are connected to the longtime business in Sarnia—Abram's Heating and Cooling. Gladys Abram (1909-1984) and Arthur Abram (1899-1970), and his sister Lucy G. Harold (1905-1965), are all buried together in Blackwell Cemetery in Sarnia.

- **THE ITALIAN CAMPAIGN** continues, September 3, 1943 – February 25, 1945: In the early morning hours of September 3, 1943, on the fourth anniversary of Britain's declaration of war, the British Eighth Army along with the 1st Canadian Infantry Division crossed the Strait of Messina under the cover of a massive artillery bombardment and came ashore on mainland Italy at Reggio Calabria. They were met with little enemy resistance—the Germans, anticipating a punishing naval bombardment, had pulled back from the beaches, while the Italians had been secretly discussing terms of surrender after Mussolini's removal from power on July 25, 1943. The Germans caught wind of the Italians' overture and acted quickly; disarming more than a million Italian combatants, murdering some 12,000 officers, and eventually imprisoning 650,000 soldiers, some of which were conscripted as forced labour. Massive German reinforcements were also rushed into Italy.

On September 8, 1943, Italy surrendered, though the occupying Germans made it clear their fight was not over, and they would fight for every metre of mountainous terrain. The Italians had hoped to avoid large campaigns on their home soil, but the Germans refused to relinquish the ground, and easily transitioned from scornful ally to cruel occupier. On September 9, the American Fifth Army, with two British divisions, landed at Salerno about 450 kilometres north of the British/Canadian force. They were met by a stiff German resistance, and fierce battles would continue for a week with more than 8,600 Allied casualties before the Germans were driven back.

Liberating Italy would be a painstaking northward crawl up the mainland, lasting 20 months, over narrow twisting roads, over mountainous peaks and steep gorges, across swift rivers often having to rebuild collapsed bridges, through challenging weather ranging from extreme heat to bitter cold and snow, against a series of well-protected defences held by some of the German army's best troops.^{D, E, 3F, 4K, 4H, 4I, 6Z}

The Allied strategy in Italy, as it was in Sicily, was to push northward—with the British Eighth Army (including the Canadians) fighting up the eastern side of Italy, while the American Fifth Army would take the west. The Canadians marched northward snaking along winding roads leading up and over fortified hills, moving from gravel and dirt roads to narrow animal paths. Whether using trucks, jeeps, Universal Carriers, mules or foot-slogging, travel was always slow and dangerous. At every step, they encountered evidence of the Germans' scorched earth policy. Bridges and culverts were blown up, overhanging cliffs were dynamited, houses and barns were stripped, food stocks and animals were seized, wells were fouled, and **mines** were an ever-present danger. As one Canadian soldier wrote, "*There was nothing more terrifying to men than mines... You just never knew when your next step would be your last.*" The Germans used about thirty types of mines and many were encased in wood, making them difficult to locate. One of the variations, the Bouncing Betty, jumped out of the ground when stepped on, exploding at waist height scattering lethal fragments of metal into the victim.

The Canadians remained on the leading edge of the Eighth Army advance, always pushing ahead, and despite ambushes, shellings, sniper fire, traps, and mines, there were few major stand-up battles. In early October, after trekking some 700 kilometres, the weather turned, bringing rain and cold temperatures, and soon malaria and jaundice took down hundreds of Canadians. In late October 1943, the Canadians were pulled out of the line, to the mountaintop town of **Campobasso**, a small city of some 17,000 people. The town became an Allied rest centre that provided food, shelter, drink, local culture and entertainment for the troops. The Canadians overran the place and soon it became known as "Canada Town" and "Maple Leaf City", its streets renamed after Canadian landmarks.

The Canadians—the 1st Canadian Infantry Division and the 1st Canadian Armoured Brigade—were put back into the line on December 1, and given the objective to cross the Moro River and capture the Adriatic port of **Ortona**. Ortona was a small town built on a rocky outcrop poking into the Adriatic, with a small port below it, that had been rocked by shellfire and half destroyed by German engineers. Some Canadian officers thought the Germans might evacuate the town, rather than engage in a costly urban fight for a place that had little military significance. The Germans however, were determined to make a stand both in the town and south of it along several defensive positions, their "Winter Line", to stop the Allied advance. The Germans had many advantages there—they were dug in, and were fighting on the defensive and employing the natural barriers formed by the terrain, including rolling hills, rivers, and broken ground. Vile winter weather and heavy rains had also turned the countryside into a gluey quagmire. Ortona would become one of the defining Canadian battles of the war.^{D, E, 3F, 4H, 6Z}

Crossing the Moro River and the Battle of Ortona, December 6 – December 28, 1943: The first obstacle that faced the Canadian troops to their Ortona objective was the Moro River. Winter rains had turned the stream into a swollen river, and its soft bottom and high, muddy banks made it a serious obstacle. The battles to the south of Ortona saw both sides rely heavily on massed mortar and shellfire, and the bombardments were the most intense faced by Canadians to that point in the war. Devastated farmhouses were fought over in see-saw battles, vineyards became sites of mass killing, irrigation ditches were held with brutal tenacity. The battlefield soon resembled the shell-blasted, muddy wasteland of the Great War's No Man's Land. Attacks and counterattacks continued as the Canadians slowly advanced, with heavy casualties on both sides in what Canadian war correspondent Matthew Halton described as "*little Passchendaeles of mud and blood.*"

On December 8, working under fire, Canadian combat engineers were able to establish bridges over the Moro River for the Sherman tanks (that would engage the German Panzer Mk III and Mk IV tanks) and troops to cross. After crossing the Moro, the Canadians came to the next formidable position, known as "The Gully," a deep trench 5 kilometres long and measuring about 60 metres deep. Ranging from 60 to 200 metres wide, it was filled with thorny acacias, olive trees lined its slopes, and the Germans were dug-in all around it, with established camouflaged machine-gun positions, anti-tank mines and heavy artillery gun support. The Gully required a frontal assault by the Canadians against a deeply fortified position. Behind a creeping barrage and as both sides ground down over a period of days, Canadian battalions one after another continued to press forward. By December 19, the Germans evacuated "The Gully" and fell back into Ortona. With the support of British, Indian and New Zealand divisions, crossing the Moro, attacking the Gully and reaching the edge of Ortona cost 1,000 Canadian casualties.^{D, E, 2N, 3F, 4A, 4K, 4H, 7Q}

Ortona was perched on a high ridge and was impregnable from 3 sides—flanked by sea cliffs on the north and east, and by a deep ravine on the west. The town, a mere 450 metres across, was cut through with steep, narrow streets commanded by four-storey stone houses that stood shoulder-to-shoulder, often with shared walls, deep cellars and underground passages that linked them to other structures. At nightfall on December 20, as Christmas neared, led by the Loyal Edmonton Regiment and the Seaforth Highlanders of Canada, the Canadians began their slow advance into the western outskirts of Ortona. The Germans had turned the town into a fortress, and were determined to fight for every metre of ground. Most of the streets were choked with rubble from demolished buildings, leaving only a few open to draw the Canadians into kill zones; machine guns swept the streets with overlapping fire; snipers attacked from ingeniously camouflaged positions; buried mines were scattered everywhere; chicken wire attached over windows and other openings to keep out grenades; hidden flame-throwers, concealed anti-tank rocket-launchers and tanks lying half buried in the rubble were a constant threat; and booby traps were everywhere—entire houses were laced with explosives, ground-level doors, staircases, even toilet chains, bottles of wine and bibles were triggered to explode. The Canadians were forced into savage house-to-house fighting in small actions involving platoons, sections, even half-sections. With the streets a death trap, one of the techniques perfected by the Canadians was known as "**mouse-holing**", which involved using "beehive" high explosives to blow holes in the granite walls of adjoining buildings, lobbing grenades through gaps to the floors below, to advance from room to room, from house to house.

Ortona was the first episode of urban combat-city fighting in the Italian theatre, and although the Canadian Army was unprepared for combat in a built-up area, it was forced to learn quickly. In a few short days, the Canadians were able to adapt to this most difficult form of warfare and share its lessons with Allies far and wide. The Canadians became masters of **urban warfare**, steadily advancing in the gritty battles that raged back and forth in the ruins. The losses were significant on both sides; Ortona became a labyrinth of death, earning the nickname "Little Stalingrad." Canadian war correspondents broadcast from the town, providing hour-by-hour progress to Canadians at home, also picked up by the BBC and American radio networks, making Ortona an important symbol.

On December 25, the Canadians "celebrated" Christmas in Ortona with soldiers going in shifts to a bombed-out church courtyard for Christmas dinner with the sounds of machine-gun fire and exploding shells close by. A Canadian Army veteran witnessed the spectacle and described it: "*Over the crash and din of the surrounding battle came the skirl of bagpipes and the raised voices of men singing Christmas carols. Through a smokey haze I saw men seated at tables covered with white napery. Three hundred yards away the enemy had active machine-gun posts, mortar bombs and shells creating a hellish dissonance, as cool young subalterns (in true Christmas tradition) served Canadian turkey with dressing and vegetables.*"^{6Z}

Matthew Halton, a war correspondent for the Canadian Broadcasting Corporation during the Second World War, was known as "the voice of Canada at war". His gripping, passionate broadcasts chronicled the action of

Canadian soldiers at the front lines in Italy and Northwest Europe. Following is a portion of Matthew Halton's grim experience at Ortona on Christmas Day 1943;

With CBC sound engineer Art Holmes, Matthew took the recording van to a field hospital behind the lines where an accordionist was playing carols for the wounded. He strung the microphone cable from the van into a ward for "life cases" – those who might or might not live. He recorded several carols and interviewed an English nurse who said, "It's been grand looking after the Canadian soldiers." The ward then began to empty, and Matt was about to roll up the cable and leave when a wounded man appeared to come out of a coma. He said to the accordionist, "Corporal, I've been dreaming of home. Would you play something for me? Play 'I'm Dreaming of a White Christmas'." Matt immediately whispered into the microphone to sound engineer Holmes outside, "Art, start recording at once." The corporal sat on the edge of the bed and played and sang. Matt let the sound come full up in the last thirty seconds of his broadcast of the event, adding no words except his signoff. Matt wrote to his wife the next day about what he felt he couldn't tell his listeners: the soldier died shortly after the carol. "All the horror that had been hardening and callousing in my soul in the last six weeks seemed to dissolve in pity and I stood in the shadows as weak as a child."^{7Q}

After a week of fierce fighting, the German position in Ortona was untenable—they had suffered heavy casualties, and their escape routes were virtually cut off. On the 27th, the remaining survivors began to filter away from the town, leaving their unburied dead in the streets. Ortona was in Canadian hands on December 28. The Battle of Ortona was over at a cost of over 2,330 Canadian casualties including 1,372 killed. In the month of December, all of the infantry battalion's rifle companies had been reduced by more than 50 percent. Worn down by combat, along with lack of sleep, poor food, and exposure to harsh weather led to almost 600 Canadians diagnosed with battle exhaustion. Located five kilometres from Ortona is Moro River Canadian War Cemetery, which contains 1,376 Canadian graves. One of those graves contains the remains of Private William Buchner, age 20, of Sarnia, who was killed Christmas Eve 1943.^{D, E, 2N, 3F, 4A, 4K, 4H, 6Z}

In the **early months of 1944** in Italy, the Canadians were about 2 kilometres north of Ortona, which was then an important winter headquarters and seaport for supply. They faced the Germans who were dug in along a series of ridges. There was an empty and blasted No Man's Land between the two sides, abandoned by day yet active at night. The bleak slush and mud landscape resembled that of the battlefields of World War I, with slit trenches, more permanent trenches, weapon pits and concentrations of barbed wire, where sniper fire back and forth was a constant.

During April and May, the Eighth British Army, including the 1st Canadian Corps, were secretly moved to the western side of Italy to join the Fifth U.S. Army in the struggle toward Rome. It was up to the British, with the Canadians as one of the key formations in the line, to probe and harass enemy positions, gather information, raid and patrol aggressively. Key commanders such as General Bernard Montgomery and Supreme Commander Dwight Eisenhower had departed Italy for Britain to lead the planned upcoming assault on Europe, so it was evident to all that Italy was becoming less significant to the military planners. Now the role of the Allies was to hold down the German forces there in battle so they could not be transferred to shore up the Western or Eastern fronts.

The strength on the ground between the two forces in Italy was about equal, but the Allies had colossal advantages in the air since most of the German air force had been pulled back to defend the homeland against the Allied bombing campaign. However offsetting the Allied airpower, the Germans had all the benefits of fighting on land of their choosing, employing high ground and choking off narrow road networks. The static trench warfare continued through the cold winter months in Italy, operations met with successes and failures, and casualties mounted. Soldiers looked out for one another. A Canadian infantryman remembered, *"Those men were your real true friends. The friendships you make in battle are different from any other kind of friendships... Perhaps it's just that you both faced death together and during that time a special bond was welded."*^{E, 3F, 4I}

In March 1944, messages of thanks to the city of Sarnia for cigarettes sent overseas at Christmas were received by city officials. One of the letters was from **Major J.M. Colling**, padre with the Canadian Army unit of the Central Mediterranean Force in Italy and former minister at Devine Street United Church in Sarnia. The following are portions of that letter:

The 14,000 cigarettes from the City of Sarnia arrived in this busy Italian town. Please convey to His Worship the Mayor and the council my deep appreciation of these gifts. Cigarettes are welcome at any time, but in this battle zone they are indeed highly prized and appreciated. When I return, I hope to have the privilege of stating verbally what these gifts mean to troops in an area like this.

As perhaps you know, I have been in this area since November. I have seen a great deal. Death and life are

words full of meaning here. I cannot, of course, give any information, but you can gather a good picture of our activities here from the radio and the news dispatches. I am still with the casualty clearing station, where I have been attached for the past two years. We have been very busy lately.

The Canadians have displayed the utmost bravery here. This country is one of the most difficult to wage war in. It requires a good man just to walk from one place to another. To carry on a defensive war, as we are doing, calls for the utmost in stamina and courage. Our Canadian lads have shown their breeding. We meet many British, Indian, New Zealand and American troops. A fine fellowship exists among all the forces here... Each fighting force respects the others here, for we are all together in the common aim to end the European war as soon as possible. Germany appears to be reeling but, in her desperation, she can still strike hard blows... Great sacrifices are ahead but our victory is certain.

I met two Sarnia lads in our station lately – Privates Waltham and Gray. We had a good chat and talked about the good people of Sarnia. All the lads are longing for the day when we can return. Some, like myself, are going on their fifth year away from home, but all the lads here are proud of the fact that they are here in this sad hour to hasten the victory of free men over the tyrants who would enslave humanity. As you know, we are attached now to the famous 8th Army. It has a glorious record, with still greater victories to come. I hope matters are going well in the city. Give my kind regards to Miss Stewart, Alderman Crompton and the others. With kindest personal regards to you and yours.

Yours gratefully, J.M. Colling

The Battle of Anzio (Operation Shingle), January 22 – June 4, 1944: After the capture of Ortona, the next big prize in the Allied commanders plans in their drive northward was the capital city **Rome**. Blocking the way, the Germans had two formidable lines of reinforced fortifications: the Gustav (Winter) Line, stretching from the Adriatic to the Mediterranean; and behind it the Adolf Hitler Line; both daunting defensive positions. In an attempt to bypass these defensive lines, and enable an attack on Rome, Allied forces launched a large amphibious landing north of these lines, in the boggy, undulating area of Anzio and Nettuno on Italy's west coast.

On January 22, 1944, some 36,000 Allied troops were part of the initial landings, composed of American and British forces, and a small contingent of Canadians, members of the First Special Service Force (FSSF)–the “**Devil's Brigade**”. The German defenders were caught by surprise, and the landings were initially a resounding success. Before long however, German defenders rallied, and with reinforcements, added artillery and a harassing Luftwaffe, they prevented a breakout from the beachhead. In just days, Anzio became a killing zone. Conditions remained difficult for the Allied forces, and for several months they were unable to mount the desired breakout. A succession of attacks resulted in heavy casualties on both sides in what would bog down into a four-month stalemate. The Allies finally broke out in late May, ending the siege at Anzio, at a cost of 7,000 British and Americans killed, and 36,000 wounded and missing. The Canadians of the FSSF served a key factor on the front line of the Anzio perimeter and played an important role in the eventual breakout from Anzio and the pursuit to Rome. It was at Anzio where the unit was dubbed “the Devil's Brigade”. Sarnia's Joe Glass, a member of the FSSF, was wounded at Anzio. Information on “Sarnia's Black Devil” Joe Glass is on page 491.

After the breakout from Anzio, American commanders were eager to be the first into Rome, so instead of making an attempt to trap the retreating German Army, they turned their forces north-west towards the city. As a result however, the forces of the German Tenth Army, with all their weapons and equipment, were able to withdraw and rejoin the forces north of Rome, and regroup to man strong defensive positions, such as the Gothic Line. This meant the Allies, including the Canadians, would have to continue to slog north through difficult terrain fighting a well-armed and determined enemy.^{E, 6Z}

The Battle of Monte Cassino, January 17 – May 18, 1944: On the western side of the Gustav Line, German positions generally ran along the valleys created by the Rapido River, Liri River and the Garigliano River. The entrance to the Liri valley, which had a highway that led to Rome, was dominated by the huge hill Monte Cassino, which was crowned by an ancient Benedictine monastery. In front of the hill stood the little town of Cassino. The Allied mission to dislodge the well-entrenched German forces from this mountain, to capture Cassino, and to clear the path to Rome began in mid-January 1944. It would turn into a bitter struggle consisting of four separate battles with firefights in the hills, tank attacks in the valleys, river crossings, street fighting, and the controversial bombing of the hilltop abbey and the town of Cassino. It would stretch over four months and involve forces from many nations, including British, American, French, Australian, New Zealand, Indian, South African, Polish and Canadian (tanks of the 1st Canadian Armoured Brigade). The battle ended on May 18 when a British Division captured the city of

Cassino, and Polish troops captured the battered abbey at the summit of Monte Cassino. The following day, a CBC war correspondent who climbed the hill described the carnage; *"I have never seen such a grisly sight. There were dead that had stormed and taken the fortress only yesterday. And there were the dead that had tried to take it months ago. I almost stumbled over a head that had almost mummified. The horrible thing about these battlefields above Cassino was that the men who fought there lived with the dead around them."* The Battle of Monte Cassino came at a cost of 55,000 Allied casualties.^{D, 3F, 4A, 6Z}

The Battle of Liri Valley, May 11 – early June 1944: Also referred to as *Operation Diadem*, this was the breaking the Gustav and Hitler Lines. In the spring of 1944, the Germans still held a line of defence north of Ortona, and held the Monte Cassino fortification that blocked the Liri Valley corridor to the Italian capital of Rome. Determined to maintain their hold on Rome, the Germans had constructed two formidable lines of fortifications: the **Gustav Line (Winter Line)**, that straddled the valley of the Liri River; and ten kilometres behind it was the kilometer-deep **Adolf Hitler Line**. Both Lines were daunting defensive positions bristled with pillboxes, tank turrets mounted on concrete emplacements, reinforced redoubts, anti-tank guns, and vast concentrations of barbed wire and mine fields.

The British Eighth Army, including the 1st Canadian Corps, were moved to join the Fifth U.S. Army, and the French Expeditionary Force in the battle through these lines on the western side of Italy. The main attacks went forward on May 11, with one of the most intense artillery barrages ever used by the Allies. The 1st Canadian Armoured Brigade assisting the 8th Indian Division, and the French Corps were both successful in penetrating the Gustav Line defences in several places. Those Germans not killed, wounded, or captured withdrew to the Hitler Line.

The assault on the Adolf Hitler Line was launched by the Eighth Army, with soldiers from ten national forces, on the hazy morning of May 23. *Operation Chesterfield* was the assault by the 1st Canadian Division on the Hitler Line, where two brigades of three infantry regiments advanced behind a complicated creeping barrage against strong enemy opposition. Through a crossfire of bullets, shells and mortar fire, and past barriers of barbed wire 6 metres deep in places, minefields that blew off feet and legs, and a string of craters 5 to 9 metres wide, and as tanks were being blown away, the Canadians pressed on. Within the devastation, it was advance, find cover, shoot, and advance again. The strain was tremendous—one Canadian Lieutenant-Colonel, who was ordered to the rear for a rest, his eyes reddened with tears, clutching dozens of identity discs from killed soldiers was heard saying, *"Those were fine boys. They're gone. I haven't anybody left. They are all gone."* The Canadians were able to breach the Hitler Line, one of the most formidable enemy positions in Italy—the cost to the Canadians on the 23rd, and in repelling counterattacks in the early hours of the 24th, was 879 killed and wounded.

Having broken the Hitler Line, the tanks of the 5th Canadian Armoured Division and infantry groups poured through toward the next obstacle, the Melfa River on May 24. Desperate fighting took place in the forming of a bridgehead across the Melfa. Once the Canadians were over the river, however, the major fighting for the Liri Valley was over by the end of May. The Allies marched towards Florence on their way to Rome, while the I Canadian Corps moved along a line parallel to the Liri River, through Ceprano to Frosinone on May 31.

On June 4, 1944, **Rome fell** to the Americans as the Germans had evacuated the city to avoid being surrounded. The Canadians did not take part in that triumphant entry into Rome as I Canadian Corps had been put in reserve a few days earlier (a snub that incensed the Canadian troops). The only Canadians in Rome on that historic day were those of the Canadian-American First Special Service Force (FSSF), who entered Rome as the spearhead of the U.S. 2nd Corps. Less than 48 hours after Rome was captured, the D-Day invasion of Northwest Europe began on the Normandy beaches.^{D, E, 3F, 4I, 6F}

Most of the Canadians who fell in the Liri Valley are buried in two cemeteries in the area south of Rome, Caserta War Cemetery and Cassino War Cemetery. Cassino War Cemetery is the largest Second World War cemetery in Italy, with over 4,200 Commonwealth headstones that includes 855 Canadians who died during the battles of the Gustav and Hitler Lines and the advance toward Rome. Two Sarnians are buried at the Cassino Cemetery; Private Garnet Core, age 21, and Corporal William P. Williams, age 24—both were killed in May 1944.

The D-Day Dodgers: With the invasion of Normandy, France on June 6, 1944 and the advance thereafter through Northwest Europe, the Italian Campaign was overshadowed and became a largely forgotten theatre. But the "D-Day Dodgers," as they were nicknamed by some, continued marching and fighting in the bitter, costly Italian Campaign until the spring of 1945. The rank-and-file soldiers fighting in Italy transformed the "D-Day Dodgers" epithet into a mark of pride.^E

Summer in Italy, 1944: In June and July 1944, Canadian soldiers in Italy had a period of rest and reorganization, in order to prepare for their resumption of fighting in early August. Many of the Canadians spent much of summer out of the line in a valley of the Volturno River, and increased leave to a number of cities including rest camps at Bari and Salerno. Here soldiers had time to relax, and enjoy the wine and beaches. Travelling entertainment companies featuring dancers, singers, and musicians; and their own in-house productions that involved the ever-popular cross-dressing, lewd humour, ridiculous songs, topical jokes and outrageous skits, always lifted the boys spirits. Sports offered leisure breaks with soldiers banding together to play soccer and baseball games. Another pleasant distraction was the army newspaper, *The Maple Leaf*, which had published its first issue on January 14, 1944. It was filled with stories from Canada about politics, war-related work, and, most popular with the men, sports. The paper highlighted Allied victories and Canadian deeds of valour, and it became a mainstay with the troops. But it also offered frank accounts of combat, interviewed survivors who spoke of their near-death experiences, and even addressed the challenge of battle exhaustion. So popular was *The Maple Leaf* in Italy, that by war's end, editions appeared in other theatres, including England, France, Belgium, Germany, and the Netherlands.⁴¹

The Gothic Line (the Green Line): Stretching like an armour-toothed belt across Italy's upper thigh, the Gothic Line was the last major German defensive line in Italy, and the most fortified position the German army had yet thrown into the Allied Forces' path, even more daunting than the Hitler Line. The line ran roughly between Pisa on the west coast and Pesaro on the Adriatic coast, through the Apennine Mountains, and separated the Allies from the Po Valley and the Lombardy Plain in northern Italy. Since many factories producing vital supplies were located in the north, the Germans would fight hard to prevent a breakthrough. Despite being needed in the eastern and western theatres, Hitler rushed a dozen additional divisions to the Italian front during the summer of 1944, including new panzer divisions. There were few replacements coming into the system for the Allies, and though they had an enormous advantage in the air, the ground forces were approaching parity. The Gothic Line was meant to be impregnable, a series of strong-points, exploiting the natural terrain features, composed of machine-gun posts, anti-tank guns, mortar- and assault-gun positions and tank turrets set in concrete, as well as anti-tank mines, anti-personnel mine fields, bunkers, barbed wire obstacles, snipers, and anti-tank ditches, all arranged in depth. Many of the German defenses had been built using thousands of slave-labourers.

In August 1944, the Canadian Corps were moved back on the Adriatic coast of eastern Italy. In late August, the Gothic Line assault was spearheaded by I Canadian Corps within the Eighth Army, in a battle that would be referred to as "**Canada's Month of Hell.**" The Canadians were flanked to the right by II Polish Corps and to the left by V British Corps.

Breaking the Gothic Line and the Road to Rimini, August 25 - September 21, 1944: On August 25, the entire Canadian Corps began its attack on the Gothic Line (*Operation Olive*), first by crossing the Metauro River, the first of six rivers lying across their path, with their final objective of capturing Rimini. For twenty-eight days, the 1st Canadian Infantry Division and 5th Canadian Armoured Division relentlessly battered their way forward through a rugged killing ground, in a maze of fortified ridges and towns, hills and deep valleys, over blown-out bridges and roads blocked with debris from toppled buildings, and across rivers. The road to Rimini was fraught with dangers, and Canadian soldiers were constantly channelled into open killing grounds exposed to enemy crossfire, and into large **mine fields**. Anti-personnel *Schumines* were tremendously frightening—in miniature wooden boxes, they carried a seven-ounce explosive that was powerful enough to blow off a man's feet, fracture legs, hips, and pelvis bones, and drive bones and metal fragments up into the groin. *S-mines* (Schrappnellminen) sprang several feet into the air before spraying ball-bearings in all directions like a shot-gun blast. A chaplain close enough to witness an advance into a mine field described the carnage; "*As soon as the mines started going off, the enemy opened up with machine-gun fire from the adjoining hills on both flanks, accompanied by a barrage of shells and mortars... It was agonizing to hear the cries of the wounded.*"⁴¹

There were fierce engagements all along the front, with some Canadian units thrown back, while others held their ground, while others breached the line. Bitter fighting resulted in gruesome losses on both sides, but despite the confusion at the front and enemy counter-attacks, the Canadians kept grinding forward in step-by-step progress, often engaging in close-quarters and hand-to-hand combat, taking targets such as, Coriano, San Fortunato, San Martino, and Montecchio. On September 21, the Allies entered a deserted Rimini – the city ruined by fire missions, aerial bombs, and demolitions, with 75 percent of its buildings destroyed. The breaking of the Gothic Line was one of the most important offensives won by Canadian forces in the Second World War, and the most difficult in the entire Italian campaign. It was the Canadian Army's crowning achievement of the Italian campaign, but also its most

costly, with 4,511 casualties including 1,016 killed.^{D, E, 2N, 3F, 4K, 4I} Two of the cemeteries that contain the graves of Commonwealth soldiers who were killed in the advance to Rimini are Gradara War Cemetery—contains 1,192 Commonwealth headstones, including those of 369 Canadians; and Coriano Ridge War Cemetery—contains 1,940 graves including 427 Canadians. Sarnia's Lieutenant Edward Stokes, age 23 is buried at Gradara; and Sarnia's Private Leslie Kirk, age 23 is buried at Coriano Ridge.

Italy Winter 1944-45: Throughout the late fall/winter of 1944 and January 1945, the Allies continued their advance northward on the Germans, with the terrain and weather being the enemy's best defence. Incessant rain turned the ground into a quagmire of mud, as they trekked northward in the cold, criss-crossing rivers, irrigation canals, and dykes, with all bridges blown and most positions covered by mortar fire. The constant shelling accounted for hundreds of lives lost on both sides, depleting all of the units, and along with sickness, the front was all but stalemated.

In mid-October 1944, the Allies entered the town of **Cesena**, which had been abandoned by the Germans. Steady pressure against the enemy was the order of the day after that, and the Allies continued their advance. At the end of November, with the British Eighth Army, they continued what was called the "advance across the rivers" to **Ravenna**. Along with German defences and counterattacks, one bridgeless, swollen river, stream and canal after another presented itself as an obstacle on the way from Rimini to Ravenna. The Canadians would participate in the liberation of Ravenna in early December, as well as four other towns, 30 villages, almost 1000 smaller communities, and three well-defended water lines within a nine-mile area. North of Ravenna, the Allies were challenged by two main rivers: the Lamone and Senio, which would be left behind despite bitter counterattacks. The Canadians would continue to press on. They reached the Senio River by year's end and this would be the farthest advance they would make in Italy as they subsequently settled into a defensive campaign.^{D, 3F}

Following are four of the cemeteries in Italy that contain the graves of Commonwealth soldiers who died during the northward push in Italy in the winter of 1944-45: Cesena War Cemetery—contains 775 Commonwealth graves, including 307 Canadians—three are from Sarnia, Private Charles Krohn, Private Thomas Mills and Private Donald Neal; Ravenna War Cemetery—contains 937 Commonwealth soldiers, including 438 Canadians—four are from Sarnia, Private Joseph Aubin, Private George Humble, Corporal Paul Larson and Private John Wilson; Villanova Canadian War Cemetery, located along the Lamone River just outside the village of Villanova—contains 206 Canadian graves—three are from Sarnia, Private Melvin Fisher, Private James McClure and Private Floyd Williams; and Argenta Gap War Cemetery which marks the final stages of the hard fighting in Italy in the spring of 1945—contains 625 Commonwealth burials, including Sarnian Private Robert Wade.^D

At this time in France, the Normandy campaign had been won, and the Germans in Western Europe were on the verge of collapse. In northern Italy, the fighting season closed down in early January because of the harsh weather, and both sides knew that the war would never be decided in Italy.^{4I}

Canadians Remembered in Villanova: Donna Maxwell is a Canadian researcher/writer who, taking an interest in her family's military history, has journeyed to France, Holland, Germany and Italy. During one of her "tours" in Italy, she met Italian citizens near Cassino and in Villanova who were knowledgeable about the fighting in the area during WWII. Following is a portion of a story she wrote for the *Battlefords News-Optimist*;

In the village of Villanova lives Rosalia Fantoni. As a small child she lived in fear and hunger as war raged on around her. Her father and uncle (partisans) were hung by the SS in front of their home just two weeks before the Canadians liberated Villanova. Villanova was liberated on December 11, 1944 by the Cape Breton Highlanders. For many years Rosalia has remembered their sacrifice and wanted to know all she could about Canadians. She read books, travelled to Canada in her dreams, remembering the kindness and peace brought to her by these men. She wanted to know about them to "understand the generosity that drove their actions." She has written a book called *Casa lontano da casa* (Home Away From Home). It is a collection of stories, poems, some military history and all the Canadian War dead resting in Villanova are listed in the back of the book. She feels strongly that these men should not be forgotten. An excerpt from Rosalia's book is as follows:

"For many soldiers, time stopped on the soil of Romagna, in the town of Villanova, on the river Senio. Their homes were far away in Canada, where the rays of the moon lay gently on the faces of children falling asleep in a young and healthy fatigue. Their 'home away from home' was the war-torn country of Italy, the towns of Villanova and Bagnacavallo. Here, a place where fear kept people indoors, holding their breath while the distant noise of bombs loomed everywhere. By night, only the voice of the fountains sounded through the streets of towns frightened into

submission by the spectre of death, where only the innocent victims of unannounced aerial bombardments remained, their bodies strewn amid shards of glass and rubble. The liberators, caked in mud and dust, made their way through villages of destroyed houses, schools full of evacuees and refugees, unusable railways; and in the background, the constant rumble of bombs, the grenades that wrought havoc on so much human life, artillery fire that made the walls shake and the air tremble. The memory of these days survives in its telling; and suffering, in its telling is like a great thaw - the thaw that turned the snow of Auschwitz to tears. It is vitally important that we keep these memories alive!"

Rosalia's dream came true and she and her son Alessandro visited Canada in 2010. Every December 11, a ceremony is held at the Villanova cemetery and each grave glows with a small candle. The research group of Villanova/Bagnacavallo want to publish another book. They want to know more about the men buried in Villanova. They would like to place a face to the name of these men, know something about them. They consider these boys as their own sons, exact words spoken to me by an Italian gentleman who was there to greet us at the cemetery. As he spoke to me he cried as he told me he had two boys. Clearly these men have not been forgotten.^{9P}

Operation Penknife: After engaging in vicious fighting for 20 months, the Canadians would not participate in the final victory in Italy, which would last into early May 1945. In February 1945, the 1st Canadian Corps began the move into northern Italy to be re-united with the First Canadian Army in northwest Europe. The Allied commanders had decided to move the British and Canadian troops from Italy to fight in Europe, driving into Holland and Germany. In *Operation Penknife*, 60,000 Canadians and thousands of vehicles assembled from widely scattered locations to be funneled out of Italy. The speed and deceptions involved in the operation were so successful that the Germans did not realize the Canadians had left until one month later.

Canada's Italian Campaign Sacrifices: More than 92,700 Canadian soldiers took part in the 20-month Italian Campaign. Canadians fought in Sicily and Italy until February 25, 1945, playing a vital role in victories in battles such as Agira and Adrano in Sicily, and Motta, Campobasso, the Moro River, Ortona, Anzio, Cassino, the Gustav Line, the Hitler Line in the Liri Valley, the Melfa River Crossing, Cerrone, the Gothic Line, Coriano, Rimini and Ravenna in Italy. During the Italian Campaign, the longest-running land campaign the Allies undertook during the war, nearly 6,000 Canadians would lose their lives, almost 19,500 were wounded, and 1,004 were taken prisoner. In all, there were over 26,000 casualties, more than one in four of those who served. One Canadian lieutenant recalled, *"Many times during the fighting in Italy, I considered my life as lost. You knew absolutely that you could not continue to go into battle engagements where you were constantly exposed to artillery fire, machine guns, snipers, mortars, schu-mines, tanks, or booby traps, without eventually catching a packet. And death had become a familiar occurrence, among your serving comrades, and in the forward areas where German soldiers lay stiff and cold after every battle. You knew it was only a matter of time until your own number came up."* D, E, 2I, 2N, 3F, 4A, 4K, 4I

Many young men from Sarnia took part in the Battle of Sicily and the Italian Campaign. Along with three young Sarnians who gave their lives in the Battle of Sicily; Carl Burke, James Lowry (RCAF) and Donald McClure, at least sixteen more young Sarnians gave their lives in Italy including; Joseph Aubin, William Buchner, Garnet Core, Melvin Fisher, George Humble, Leslie Kirk, Charles Krohn, Paul Larson, James McClure, Thomas Mills, Donald Neal, Edward Stokes, John Wade, Floyd Williams, William Patrick Williams, and John Wilson. Most remain there either buried in Commonwealth War cemeteries or are remembered with their names etched on memorials in Sicily and Italy, including Agira, Moro River, Cassino, Gradara, Coriano, Ravenna, Cesena, Argenta Gap and Villanova.

• **SARNIA'S BLACK DEVIL:** One of the more storied units that took part in the Battle of Italy was the **First Special Service Force (FSSF)**, formed in July 1942, nicknamed *die schwarzen Teufeln* (The Black Devil's) by the Germans. It was a joint United States and Canadian elite commando unit—their legendary accomplishments were the inspiration for a 1968 Hollywood movie, *The Devil's Brigade*.

One of members of the Black Devil's was Sarnia-born **Joseph (Joe) Millard Glass**. He was born on March 14, 1920, the son of John Wesley and Harriet Millard Glass. He had two brothers; Charles and John (Jack), and one sister, Ellen. Joe grew up on Water Street in Sarnia and later Point Edward. He attended local elementary schools and Sarnia Collegiate, until he left school at age 16 to help support his family. He became a boat deckhand on the Great Lakes. When the war began, colour-blindness kept Glass out of the navy so he joined the army in Chatham in 1940. He was serving as a bayonet instructor in Ottawa when he volunteered for the designated 2nd Canadian Parachute Battalion in 1942, later changed to the 1st Canadian Special Service Battalion. This battalion would be a part of a newly formed special force of United States and Canadian troops, known as the First Special Service Force (FSSF),

which was activated in early July 1942. "It was supposed to be a suicide outfit," Glass told *The Sarnia Observer* in 2004. He added he didn't really believe that claim and joined because it was a chance to get into combat. He and the other select rugged volunteers of the force travelled to Helena, Montana for intensive training that included stealth tactics, hand-to-hand combat, parachute jumping, mountain climbing, ski training, weapons training and handling explosives for demolition. From the outset, the FSSF was armed with a variety of non-standard or limited-issue weapons, such as the Johnson light machine gun and the sleek, double-edged V-42 combat knife. Helena, Montana is also where Joe would meet his future wife, Dorothy Frances Strainer. They married on March 6, 1943.^{N, 4J, 11H}

Following its initial training in Montana, the FSSF moved to Norfolk, Virginia in April 1943 to undertake amphibious training. After successful completion of this training, the force was relocated to Fort Ethan Allen, Vermont in May 1943. In early July, it arrived in San Francisco, its port of embarkation for its first operational mission: to assist in the recapture of Alaska's Aleutian Islands. On August 15, 1943, FSSF spearheaded the invasion force of the island of Kiska. Joe was scheduled to jump from the sky to join the battle, but never got the chance--the Japanese had evacuated the island. FSSF was then ordered back to San Francisco.

The next mission assigned to First Special Service Force was a tougher one—to assist the Allies in the conquest of Italy. After landing in North Africa in early November, the FSSF, including Joe Glass, disembarked at Naples, Italy on November 19, 1943. The FSSF brigade was sent to Italy to be used like infantry, but against objectives that were considered too tough for ordinary soldiers. In early-December 1943, the brigade was tasked with assaulting two enemy-held peaks that had halted the Allied advance: Monte la Difensa and Monte la Remetanea behind it, both were more than 900 metres high. The two-day operation involved a grueling seven-hour climb up the sheer rocky face of Monte la Difensa, with all supplies—including water—carried by the soldiers, followed by a lay-up during daylight. On the second night, the assault force scaled the few remaining metres to the top and attacked at dawn on December 3, taking the Germans completely by surprise. On December 5, they pushed forward along a narrow ridge that led to Monte la Remetanea, coming under machine-gun and mortar fire, but pressed on, taking their objective. The Force had captured the first peak in hours, wiping out a strategic enemy position, where previous American and British forces tried and failed, suffering many casualties in futile attempts to capture this pair of mountain peaks. This incident was the basis of the film *The Devils Brigade*. Over seven days – all the while exposed to howling winds, freezing rains, and with little shelter – the FSSF brigade captured the two mountains, suffering 511 casualties.

Mountain fighting continued at places like Monte Sammucro, Radicosa, Monte Majo, and Monte Vischiataro. After a brief period of rest, the special force was sent to the Anzio Beachhead, south of Rome. It was at Anzio that the unit was dubbed the "Devil's Brigade" after the discovery of a personal diary of a German officer containing a passage that said, "*The black devils are all around us every time we come into the line. We never hear them come.*" The officer was referring to them as "black" because the brigade's members would smear their faces with black boot polish for their covert operations at night, often overwhelming German defenders without firing a shot, and then disappearing into the night.

It was at Anzio in May 1944 where Joseph Glass was severely wounded when hit by artillery shrapnel while part of a morning operation near the German trenches. "*A big piece of shrapnel from an '88' went through my chest and out my back. My lung collapsed, it broke all my ribs connected to the backbone and I was paralyzed from the waist down. When I started coughing up blood, I told a friend of mine, 'Say goodbye to my wife and kid.' They picked me up and dragged me out of there, and then another shell hit me in the arm.*" Glass was transported to the beachhead hospital in a Jeep, and there, the doctors wired his ribs onto his backbone and removed one rib to repair his lungs. Joseph Glass was recovering in hospital when the unit led the breakout at Anzio two days later. Less than two weeks later, the FSSF were one of the first Allied units to enter Rome.^{N, 2E, 4J, 4I, 11H}

The Devil's Brigade continued fighting the war in Italy, then southern France to the Franco-Italian border. In just two years, the Devil's Brigade liberated towns in Italy and France, and accounted for some 12,000 German casualties and captured some 7,000 prisoners. While an operational success, the unit was plagued by bureaucratic issues and was disbanded suddenly in December 1944. It would be the basis of future special force elite units such as the American Green Berets, Delta Force and Navy SEALs, and Canada's Joint Task Force 2 (JTF2) military unit.

After recovering in Naples, Joe was eager to return to his unit but his wounds were too serious. He was shipped to France and later England before coming home to Sarnia to be reunited with Dorothy and his young son. They stayed in Sarnia for a short time, and then moved to Helena in 1946 where they settled and raised four children:

Charles, Robert, Dottie and Victoria. Joe Glass worked hard to support his family, sometimes working as many as three jobs at one time. His jobs included driving a cab, truck driving, delivering milk, selling insurance, manager of the Moose Club, selling cars, working at a bakery and finally operating a family fish and chip business with his wife and son. Joe and Dorothy always attended the annual First Special Service Force reunions. Dorothy was the love of his life and they were married for over 67 years, and along with their four children, they had 10 grandchildren and 14 great-grandchildren. Joe was preceded in death by his wife Dorothy in December 2010, and he would live to the age of 92, dying on April 1, 2012 in Helena. He was buried with military honours in Montana State Veterans Cemetery.

In September 1999, the main highway between Lethbridge, Alberta and Helena, Montana was renamed the “First Special Service Force Memorial Highway.” This highway was chosen because it was the route taken in 1942 by the Canadian volunteers to join their American counterparts for training. In February 2015, the United States Congress awarded the FSSF the Congressional Gold Medal, the highest civilian award.^{N, 4J, 11H}

• **THE TEA BOWL:** One cold, wet winter evening in 1944, Major Dennis Whitaker of the Royal Hamilton Light Infantry—a former quarterback with the CFL Hamilton Tigers and one of the few officers to survive the ill-fated raid on Dieppe—found himself sitting in a London pub next to a lieutenant in the American Special Services. The conversation turned to football and the lieutenant told Whitaker that he had recently received enough equipment from the States to field six teams. Several rounds later, the idea of an international match as a morale booster had taken hold, a challenge issued and a toast proposed before each went his separate way into the London black out. Plans were made, equipment was loaned to the Canadians and an order was placed with a London silversmith for a trophy—an eight-inch high sterling silver teapot—to be awarded to the winner of the now dubbed “Tea Bowl”, a nod to their British hosts.

Whitaker scoured the ranks for players and formed his Canadian Army team, named the “Mustangs”, who were even relieved of regular duties and allowed six weeks of hard training. The all-soldier Mustangs included a number of CFL players and three Sarnians; Ken Withers, Charles Living and Nick Paithouski (brother of Michael Paithowski who is included in this Project on page 915). The game was to be a hybrid, with the first half played under American rules, and the second under Canadian rules. The U.S. Army Central Base Station team was named the “Pirates”.

The Tea Bowl was played on February 13, 1944 before over 30,000 servicemen and bemused civilians, wrapped in scarves and fortified with rum to ward off the cold, in White City Stadium in London. Kickoff was at 2:45 p.m. The game was even broadcast on radio across the British Isles. With the threat of a German Luftwaffe attack, RAF Spitfires were deployed to cover the skies above the stadium during the game. After a scoreless first half, bands took to the field to dazzle the now boisterous fans. In the second half, the Canadian Army “Mustangs” took charge, and went on to defeat the U.S. Army Central Base Station “Pirates” team by a score of 16 to 6, to claim the Tea Bowl trophy.

Captains Frank Dombrowski (U.S.) and Dennis Whitaker (CAN)

Stung by the loss, the Americans called for a rematch. Their new team, the U.S. 29th Army team, named the “Blues”, was reinforced with a contingent from the University of Iowa Cornhuskers and former NFL Philadelphia Eagles all-star quarterback Sergeant Tommy Thompson. The rematch, played on March 19, 1944, again in White City Stadium, this time before a crowd of 50,000, was dubbed the “Coffee Bowl”. The U.S. “Blues” defeated the Canadian Army “Mustangs” team by a score of 18 to 0. The outcome of the two games were really irrelevant, what

counted was the camaraderie, the friendly competitiveness, and a sense of shared purpose. Less than three months later, the Allied forces joined together in something much larger – the D-Day landings in France. Some of the football game participants took part in the landings, including the U.S. 29th Division who landed on Omaha Beach, where many of the players in the Coffee Bowl were killed or wounded.

Sarnians Nick Paithouski would survive the war while Charles Living would lose his life in a Lancaster bomber over Germany (his story is included in this Project on page 815). Denis Whitaker would survive the war to become a Brigadier General and one of the country's foremost military historians. He passed away in 2001. At his home in Oakville, Ontario, among the souvenirs of a long and distinguished career displayed with pride, was a tiny silver teapot—a memento of a bright moment in a dark winter of war.^{8B, 8C, 8D, 8E, 8K}

• **D-DAY (JUNE 6, 1944) and OPERATION OVERLORD**, Normandy, France: The Allied invasion of France, code-named *Operation Overlord*, began on this date. It was the start of the Battle of Normandy and the “beginning of the end” of the war. This massive invasion into “Fortress Europe” involved Canadian, British and American forces crossing the English Channel to an 80-kilometre stretch of the heavily-defended coast in Normandy, France. The Germans had spent four years fortifying the French coast, their 4,500 kilometres of “**Atlantic Wall**”, with artillery encasements, machine gun nests, snipers, pillboxes, razor wire, concrete bunkers, over 4 million underwater and land mines, anti-tank walls (“hedgehogs”) and beach obstacles. The Germans’ first line of defence was supported by Panzer Divisions: made up of hundreds of tanks, armoured vehicles, and multiple battalions of battle-hardened infantry troops.

The mission required a full moon to help light the way for advance aircraft, among other things, and a low-ish tide, so landing craft could see the mines and detritus planted near the shore by the German army. The operation was delayed 24 hours from the original planned invasion date of June 5th due to bad weather (high winds and low clouds). D-Day, also referred to as the “longest day,” was the largest seaborne invasion in history. The Allied force comprised approximately 156,000 soldiers, 7,000 ships and landing craft, 50,000 vehicles, 1,500 tanks and 11,000 planes in total. There were five landing zones: Gold Beach (United Kingdom); Sword Beach (United Kingdom and France); Utah and Omaha Beaches (United States); and the middle beach, Juno Beach (Canada). The toughest landings were on Omaha and Juno. Eleven months after D-Day, Germany would surrender.^{D, E, 2N, 4I, 6Z}

Planning the Invasion: The planning for the invasion had begun seriously in March 1943, and with the appointment of American general Dwight Eisenhower as Supreme Allied Commander, the planning took on a new urgency. Eisenhower took over the bomber offensive, redirecting the bombers away from German cities to targeting German fortifications in France, and French railways, bridges, road networks, and canals, to degrade the enemy’s ability to strike back at the Allied invasion force. Along with USAAF B-17’s and B-24’s, RCAF Lancasters and Halifaxes of No. 6 Bomber Group dropped thousands of tons of explosives on German coastal defences. RCAF fighters and fighter bombers flew reconnaissance operations and attacked German airfields, radar sites, road and rail targets and bridges. The land armies would be commanded by the British general Bernard Montgomery, who would also command the 21st Army Group, consisting of British, Canadian, Polish, Free French and other national formations.

The Allied operation was a gamble and the odds against success were a continual concern of the planners. General Montgomery shared his dire predictions of high casualties with his staff. General Eisenhower was braced for disaster, and on the eve of the assault, he drafted a letter taking full responsibility for the operation’s failure. British army predictions for the Canadian and British landings on D-Day were 9,250 killed, wounded or missing—of these, 3,000 could drown.^{8M}

One reason for the success of the D-Day assault was due to the Allies elaborate web of deception, code-named *Operation Bodyguard*, that had begun a year in advance of the invasion. The plan, initiated by the British Security Services (such as MI5 and MI6), contained several operations in an elaborate global disinformation campaign, involving every branch of the secret war machines of Britain, the United States and Russia. The goal was “to induce the enemy to make faulty strategic dispositions in relation to operations by the United Nations against Germany.” The plan was intended to mislead the German high command as to the time and place of the invasion, and to keep German reinforcements in the wrong place for as long as possible after the landing.^{4S}

The plan specifically covering the actual cross-Channel invasion to Normandy was code-named *Operation Fortitude*. The *Fortitude North* deception involved creating a fictitious army (British Fourth Army) that was amassing in Scotland with plans to invade Norway, and the *Fortitude South* deception involved creating a fictitious

army (1st U.S. Army Group, led by General Patton), a force of 150,000 men, amassing in southeast England with plans to invade Pas de Calais. With the Germans focused on these two major landings, the real Allied army was massing in southwest England, preparing to attack the real target in Normandy.

The Allies successfully misled the German high command into thinking the Normandy beach invasion was only a diversionary ploy by using a variety of tactics including: fake troop camps; strategically placing dummy aircraft made of wood and canvas and decoy landing crafts (known as “wetbobs”) composed of canvas over steel frames; along with inflatable Sherman tanks and vehicles made of rubber and wood; creating bogus airfields and decoy lighting, all of which could be seen by German aerial reconnaissance; and “leaking” information through diplomatic channels, spies and double agents (the “Double Cross” system) and fake wireless signals; having an actor impersonate General Montgomery (the D-Day ground troops commander), to be seen days before the invasion far from the launch area; bombing campaigns on Pas de Calais in the days prior to D-Day; even infiltrating the German homing pigeon service with British “double-agent” second-rate carrier pigeons; and on D-Day, dropping dummy paratroopers away from Normandy. The First Canadian Army had been involved in the ruse since April 24, participating in **Operation Quicksilver**, which disseminated fictional messages by wireless to create a picture of the army preparing to attack at Pas de Calais.

On D-Day, since the Normandy attack was assumed to be a diversion, German command thought it was not necessary to wake Hitler and tell him it had started. He slept in until ten o’clock that morning. When finally told the invasion had begun, he was cheerful, convinced the attack would be repelled with ease. Even after the June 6th Normandy landings, Hitler was so convinced that the landings there were merely a diversionary ploy, he kept the entire Fifteenth Army of 150,000 men and much of their armour in reserve at Pas de Calais, where it waited for an attack that never came. A week after D-Day, only one German division had moved from Pas de Calais to Normandy, so the Allied bridgehead, so vulnerable in the first days and weeks, was firmly established. *Operation Fortitude* was one of the most successful strategic deceptions and creative intelligence operations of all time.^{3Y, 4S, 6Z}

The cross-Channel naval phase of this campaign was code-named **Operation Neptune**. The sea lanes had to be cleared or the Allied troop ships would be sunk before they ever reached land. *Neptune* would be the largest armada ever assembled in human history, with some 7,000 vessels, including over 1,200 warships ranging from battleships to torpedo boats. The Royal Canadian Navy supplied about 10,000 sailors in 126 Canadian destroyers, frigates, corvettes, motor torpedo boats, landing craft and minesweepers which assisted in pre-invasion Channel sweeps, transporting men and equipment, covering the invasion, providing anti-submarine escort, clearing mines, and bombing shore targets. On June 6, RCN destroyers such as *Algonquin* and *Sioux* supported the men going ashore by bombarding German fortifications; RCN corvettes protected the landing craft that ran the troops to the beaches; RCN minesweepers cleared the approach lanes; and RCN landing craft of various sorts ferried in infantry, tanks, trucks, artillery, and other equipment directly to the beaches.^{4I, 6Z}

Gearing Up: The vast majority of men with the Canadian Division had no battle experience, and had been training hard in Scotland and England for more than a year. The invading force was placed in quarantined camps in preparation for the assault, and the Canadians were issued new kit that included: 1937 British-type olive-green battledress; new Mark III assault helmets (nicknamed “tortoise”) which were covered in fishnet to hold wound dressing; live ammunition; grenades; canteens; mess kits; an entrenching tool; French francs; maps; chocolate bars; cigarettes; and small backpacks jammed with a personal hygiene and toilet kit, a camouflage/anti-gas cape, spare socks, and perhaps a few sheets of paper for writing home. Infantrymen carried a range of weapons that included Lee Enfield rifles and bayonets, Sten and Bren machine guns, PIATs (anti-tank weapons), along with anti-tank mines, wire cutters, wireless sets, and long cylindrical Bangalore torpedoes. As soldiers waited in their camps, they poured over maps, photographs and three-dimensional models of the invasion beaches, constructed from information meticulously collected over the previous months. The models and pictures showed the layout of the Normandy coastline and important landmarks—houses, church spires, headlands—so that every officer and soldier would know their objectives and what awaited them.^{2N, 4I}

A Letter Home: On their way across the English Channel on June 5, the soldiers were provided with pencils and paper and given instructions to write a letter home. One of the soldiers aboard one of the military ships was Lance Sergeant Edwin Worden, a member of the Regina Rifles. On this cold and stormy night, waiting for his first taste of combat, he wrote the following letter to his British war bride Lily:

To my darling wife:

How are you tonight? fine I hope. See darling I find it very hard to write this to you. I only wish I could have

seen you but I can say this, I am fine and feel a 100 per cent for I know I have someone waiting for me, who is very brave and knows how to smile.

We are going in to-morrow morning as I write this we are out on the water so the big day has come. I often had wondered how I would feel but I don't feel any difference, as I ever did before thanks to you. I know I can truthfully say if it was not for you I would feel different but it is the love and trust I have for you and that will help me over many a rough spot.

I am glad in away that it has come for it means you and I can be together sooner something I have always prayed for and I know you have to. So promise darling you will not worry for I'll be alright and home before you know it.

Just you and Mum look after each other and time will pass swiftly. Now before I close I want to say again that I love you very much and you mean the world to me. So now darling I'll say good-night and God bless you till we meet again soon.

Yours forever, Love Ted

P.S. Tell Mum that I am thinking of her too, and not to worry but look after you. I am enclosing a message they gave us. Good-night I'll write as soon as I get a chance.

L/Sgt. Edwin Worden would survive D-Day. In early-April 1945, the twenty-eight-year-old Edwin Worden was killed in action while fighting during the liberation of the Netherlands. He was never reunited with his wife Lily and he never saw his son Donald.^{D, 21, 7A}

Paratroopers: The first Canadians to land in Normandy were over 500 Canadian paratroopers of the 1st Canadian Parachute Battalion, who were dropped behind enemy lines by C-47 Dakota aircraft and glider-aircraft in the very early morning hours of June 6. As the aircraft crossed the French coast, German anti-aircraft fire had opened up. Some of the aircraft were shot out of the sky, others were damaged but not destroyed, flying as best they could. Weaving to avoid the ground fire, and battered by the windy weather, many were blown off course. The heavily-laden parachutists landed throughout the designated drop zone between the Orne and Dives Rivers (south of the British Sword Beach). Some were shot as they floated to earth; others were tangled in trees; some drowned in areas that had been flooded by the Germans, their eighty pounds of kit dragging them down.

Scattered “all over hell’s half acre,” as described by one of the survivors, they were outnumbered, and only lightly armed. Their first challenge was to find one another, then they had to organize to fulfill their assigned objectives. In the dark, they moved through the enemy rear area shooting up sentries and detonating bridges. After a night of skirmishing, the 1st Canadian Parachute Battalion had captured a German headquarters, destroyed a key bridge, and seized an important crossroads, all the while sowing confusion and disorder within enemy ranks. Of the 541 who jumped from the aircraft, 116 were killed, wounded or taken prisoner on that first day.^{3F, 41, 61, 6Z}

Juno Beach: The Canadian sector Juno Beach covered an area of approximately eight kilometers, stretching from the small (fortified) fishing port of Courseulles-sur-Mer on the right; the small village Bernieres-sur-Mer in the centre; and the small village Saint-Aubin-sur-Mer on the left. The Canadian assault on D-Day was divided into two sectors – “Mike” (on the right) and “Nan” (on the left). Approximately 14,000 Canadian soldiers, led by the **3rd Canadian Infantry Division** and the **2nd Canadian Armoured Brigade**, would storm Juno Beach on D-Day.

The 3rd Infantry Division was chosen because it was the only one of the three Canadian infantry divisions available for the job: 1st Division was in Italy; 2nd Division was still rebuilding after the disaster of Dieppe. The 3rd Canadian Infantry Division was composed of three brigades: the *7th Canadian Infantry Brigade* (the Canadian Scottish Regiment, the Royal Winnipeg Rifles, and the Royal Regina Rifles); the *8th Canadian Infantry Brigade* (the Queen’s Own Rifles, the North Shore Regiment, and the Le Regiment de la Chaudiere); and the *9th Canadian Infantry Brigade* (the Highland Light Infantry, the North Nova Scotia Highlanders, and the Stormont, Dundas and Glengarry Highlanders).

A shortage of landing craft constrained how many divisions could be put ashore in the first wave on D-Day. Around three thousand Canadians would be in the first landing group, led by four regiments: in the “Mike” sector were the Royal Winnipeg Rifles (known as the “Little Black Devils”) and the Regina Rifle Regiment, as well as an attached company of the Canadian Scottish Regiment, with the rest of The Canadian Scottish in reserve. Ten minutes later the “Nan” sector was to be tackled by the Queen’s Own Rifles of Canada and the North Shore (New Brunswick) Regiment, backed up by Le Régiment de la Chaudière.

D-Day Approach, First Wave: While crossing the English Channel on June 5 in violent weather, on board the rocking ships, officers briefed their men with aerial photographs, padres gave sermons to calm nerves, and several ships witnessed impromptu sing-alongs. One soldier recalled, *"I thought about the things that meant a lot to me - my home. The shroud of Dieppe crept into my idling thoughts once in a while."* Another recalled, *"We knew some of us were going to die but we didn't know who."* About 10 kilometres off shore, the assaulting infantry scrambled down the landing nets hanging on the sides of the large transports to their waiting LCAs (Landing Craft Assaults) with their motors running, which were tied loosely alongside the transports. Each LCA held anywhere from twenty-five and thirty-five men per craft. Trying to hold the wet, clammy ropes in the dark, with choppy waters rocking the boats, and while carrying more than sixty pounds of equipment, men knew that one wrong footstep could have fatal results. During the eighty to ninety minute run-in, the LCAs pitched wildly, dropping and rising repeatedly, as cold water sloshed over the steel sides drenching the men. One soldier recalled, *"There wasn't much talk... as we came closer, it was a strange silence that gripped us."* Above their heads were the ear-shattering sounds of the Allied naval guns bombarding the enemy in an attempt to neutralize them.

On final approach, vomit rolled in the pitching crafts, foam-flecked geysers erupted from the sea as enemy shelling crashed down, and bullets pinged off the steel hulls. The landing craft spread out as they neared the beaches. Some of the LCAs could not navigate past the welded iron pyramids of jutting steel (known as "tetrahydraz"), and the layers of wooden stakes (many were hung with mines that exploded on contact). As the ramps at the front of each boat dropped, men descended into a maelstrom of mortar and machine-gun fire. Eyewitnesses gave chilling accounts of landing craft blown out of the water, body parts floating in the red bilge. Many of the Armoured Fighting Vehicles (AFVs) designed to explode mines, act as flame-throwers, and bridge culverts and small gulleys, all in support of the infantry, were late, or didn't make it to shore at all. In some sectors, the DD (duplex drive) tanks went ashore ahead of the infantry as planned, but in most cases they arrived well after the infantry. Above the beaches, RCAF Typhoon fighter-bombers dove on enemy objectives, while RCAF Spitfires and Mustangs fought the few Luftwaffe in the air, and blasted away at targets with their machine guns and cannons. It would turn out that the aerial bombardment and rocket fire, combined with the naval bombardment, did little to destroy or even suppress the enemy defences. It was largely a matter of luck as to whether a man lived or died in the rush across the sand and in the attacks on the German fortifications above the high-tide line.^{D, E, 2N, 3F, 4A, 4I, 6Z}

D-Day Landing, Juno Beach "Mike" sector: The first wave of Canadians waded ashore at about 7:50 a.m., as two lead companies of the Royal Winnipeg Rifles, with a company of the Canadian Scottish Regiment ran up the packed sand of "Mike" sector. The 29-ton Sherman tanks of the 1st Hussars were delayed, having to "swim" into shore using their DD (duplex drive) flotation devices, landing about 20 minutes after. The German fortified concrete gun positions straddling the harbour hadn't been put out of action by naval gunfire, so the first wave faced at least fifteen MG-42 machine guns, firing more than five hundred bullets per minute, as well as riflemen, mortars, and anti-tank guns. The infantry were ordered to clear the beach as quickly as possible, but many never had a chance to set foot on dry soil. They were gunned down as the landing craft doors dropped, their bloodied bodies hurled backwards. Others only took a few strides onto the sand before a bullet found them. Storming into the face of sweeping machine-gun fire, some went to the ground and dug, others crawled through the sticky sand, most continued forward firing and throwing grenades, looking for gaps in the barbed wire that was up to 10 metres deep in places. Supported by Hussars tanks, the infantrymen surged forward, overcoming the German resistance, snuffing out the last of the enemy around 10:30 a.m.

To the left of the Little Black Devils, the Regina Rifles landed around 8 a.m. During their run-in, two of the LCAs carrying twenty-five men each struck mines and were blown apart. On the beach, they faced enemy machine guns in a concrete bunker, as well as rifle and mortar fire from the dunes. The Reginas scrambled forward over 350 metres of open ground, shooting and advancing, some sacrificing their lives to draw fire so that others could continue closing the distance with the enemy. One Major wrote after the battle, *"There were two kinds of people on the beach, the already dead and those that will be killed there. It was better to press on and get away from the predetermined gun, and mortar fire, also machine guns."* The Reginas, supported by the tanks of the 1st Hussars, made it off the beach after about thirty-five minutes of fierce fighting.⁴¹

D-Day Landing, Juno Beach "Nan" sector: The Queen's Own Rifles went in after a delay of thirty minutes, circling far from shore, in the hope that their tanks would catch up to them. The Sherman tanks of the Fort Garry Horse arrived late because of the rough water, so the Rifles faced the fire alone. They landed under fire at 8:12 a.m., facing 180 metres deep of beach swept by interlocking fields of machine-gun and shell fire, then a 4.5 metre

wall. Despite what looked like a slaughter, the Queen's Own charged forward. A Rifleman recounted, *"We were the best trained troops, but there was one thing they didn't teach us – it strikes me very strongly – they didn't teach us how to react when someone suddenly becomes a lot of pieces in front of you."* Uncut barbed wire and mine fields channelled the Canadians into a killing ground, where the bodies of soldiers accumulated. Running and firing, the infantrymen crossed the murder zone and cleared the enemy pillboxes by throwing grenades through aperatures and spraying the interiors with Sten and Bren gun fire.

To the left, the North Shore Regiment faced a vast concrete bunker housing a hundred-man garrison that had survived the naval and aerial bombardment. Exiting the landing craft, the men rushed forward in sprints before dropping to the coarse sand. A Chaplain described it as, *"Into the jaws of death. The beach was sprayed from all angles by the enemy machine guns and now their mortars and heavy guns began hitting us... The noise was deafening. You couldn't hear our huge tanks that had already landed and were crunching their way through the sand. Some men, unable to hear them, were run over and crushed to death... When a shell came over, you dug into the sand and held your breath... waited for the blast and shower of stones and debris that followed. Then, when it had cleared a little, right next to you, perhaps someone talking to you half an hour before, lay dead."* The North Shore soldiers pushed forward, aided by Sherman tanks of the Fort Garry Horse that overran several German positions. The North Shore Regiment also had to defeat hidden enemy snipers that were popping up from a network of underground tunnels.⁴¹

D-Day Continues: Guns of the Royal Canadian Artillery were quickly put ashore on the Juno beaches to lend additional support. The Royal Canadian Army Medical Corps treated the wounded. All the while, the sappers of the Royal Canadian Engineers blasted paths through enemy obstacles and the Royal Canadian Corps of Signals ensured smooth communications. Around 10:30 a.m., the Canadians exited the beaches, moving into the surrounding French towns that were occupied by the Germans. Reserve companies and more battalions spearheaded the attack inland, dealing with enemy snipers, mines and pockets of resistance in slow and vicious fighting. On the beaches, those injured soldiers who could, pulled themselves to the safety of the seawall to be treated by medical personnel. Some of the wounded smoked calmly, while others stared off with morphine-glazed eyes; many were slumped over, unconscious, bleeding out, or dead. A number of hurt Canadians lying along the water's edge were dragged out to sea, too weak to fight against the tide. Blood stained the water red, and Canadians floated lazily face down in the swill. The dead lay curled up and spread out. Some seemed to have died without a mark on them, while others were little more than eviscerated meat. A Canadian journalist reported, *"The German dead were littered over the dunes, by the gun positions. By them, lay Canadians in bloodstained battledress, in the sand and in the grass, on the wire and by the concrete forts. I saw friends I had known, men who had joined the army in the first months of the war - and now had died in their first action here on the Normandy beach. They had lived a few minutes of the victory they had made. That was all."*

Beach masters from the RCN directed traffic and tried to ease congestion, hurrying thousands of men and vehicles off the beaches that continued to be under shellfire. The French Canadians in Le Regiment de la Chaudiere greeted the civilians in their own language, one of the few delights for the French men, women, and children who witnessed their small villages become a battleground. A Captain remarked, *"It's rather amazing to see people whose homes you have just blasted to bits coming out with tears in their eyes to welcome you."* By the end of the day, the Canadians had advanced farther inland than any other Allied formation – to a depth of 11 kilometres. After the mad rush to get off the beach and pushing inland as far as possible, a member of the Queen's Own Rifles had time to think about the awful events of the day, *"It was on this evening that a moment came when some reality sank in about all the things that had happened during the day. It hurt. We had reached only the edges of Bernieres-sur-Mer when we learned that half of our original company – those I had joined up with in June of 1940 – had been killed or wounded. And we'd taken still more casualties as we'd gone on to Anguerny. The tears came. I went behind a wall. So many had been lost."*⁶²

D-Day numbers: Some 150,000 Allied soldiers had breached the Atlantic Wall and were ashore by the end of D-Day, along with 900 tanks and another 5,000 guns and vehicles. There were 7,500 Allied casualties on June 6, about 40 percent suffered by the Americans on Omaha Beach. At Juno Beach, the Canadians had clawed their way forward, sacrificing their lives on the beaches and fighting skillfully to overcome a fortified opposition that was stronger than that of any other beach save Omaha. Approximately 14,000 Canadians landed in Normandy on D-Day, the cost was high – 47 were captured, 715 were wounded and 359 lost their lives, although that was about half of what was predicted by the operation's planning officers.^{D, E, 2I, 2N, 3F, 3G, 4A, 4I}

D-Day news arrives in Sarnia: In the early morning hours of June 6, 1944, Canadians across the country awoke to the voice of Prime Minister Mackenzie King in Ottawa on the radio addressing the nation. Following are portions of that D-Day address:

At half past three o'clock this morning, the government received official word that the invasion of Western Europe had begun. Word was also received that the Canadian troops were among the Allied forces who landed this morning on the northern coast of France. Canada will be proud to learn that our troops are being supported by units of the Royal Canadian Navy and the Royal Canadian Air Force. The great landing in western Europe is the opening of what we hope and believe will be the decisive phase of the war against Germany. The fighting is certain to be heavy, bitter and costly... No one can say how long this phase of the war may last, but we have every reason for confidence in the final outcome... Let the hearts of all in Canada today be filled with silent prayer for the success of our own and Allied forces and for the early liberation of the peoples of Europe.

On D-Day, major newspapers ran early editions with oversized and dramatic headlines. However specific information on the attack, such as exact location, regiments involved and extent of success could not be released. In Sarnia, the *Canadian (Sarnia) Observer* headline read, "ALLIES GAIN BEACHHEADS: Armies Slash Into Normandy In Auspicious Start To The Assault On Hitler's Europe." Families and friends across Sarnia and Lambton County read the following details provided in the *Observer*:

- British, American and Canadian troops landed on the Normandy coast in tremendous strength.
- the initial landings ranged from 6:00 to 8:25 a.m. B.S.T. (midnight to 2:25 a.m. E.D.T.).
- Germans broadcasts said they were bringing reinforcements continuously up to the coast where "a battle for life or death is in progress."
- the German radio began broadcasting a constant stream of invasion flashes almost as soon as the first troops landed.
- Allied headquarters kept silent until 3:32 a.m. B.S.T. (9:32 E.D.T.) when the following communiqué was issued: "Under the command of General Eisenhower, Allied naval forces supported by strong air forces began landing Allied armies this morning on the northern coast of France."
- Part of the mammoth assault was all-Canadian. R.C.A.F. fighter pilots who flew the first sorties over the beachhead area, returned to base to refuel and continued throughout the day to provide cover for the Canadian assault force. R.C.A.F. Canadian bombers joined the R.A.F. aircraft in the previous nights hammering of the French coast. Royal Canadian Navy ships carried Canadian troops to the beaches, landing in the first assault waves, and continued to ferry reinforcements in and casualties out.

The 'local news' page of the *Sarnia Observer* on D-day carried the headline, "LOCALLY – BELLS ANNOUNCE INVASION – CLOSE SCHOOLS: City Hears News Early In Morning." Following are some of the local details carried in the *Observer*:

- D-Day has arrived... The formal Allied announcement came at 3:32 a.m. and, although people had waited for months for some word that the invasion was on, the "big news" was not generally known until around eight o'clock.
- In accordance with a pre-arranged plan, church bells were rung between 7:30 and 8:00 o'clock as a signal that the invasion had started.
- Many people caught the significance, but others called the *Canadian Observer* to enquire the meaning.
- The few people who heard the first announcements over the radio about four o'clock called their friends by telephone and many families ushered in the day gathered around their radios to follow the progress of the landings.
- Hundreds of copies of an extra edition of the *Canadian Observer* were bought by readers anxious for details. After Eisenhower's announcement of the landing, as quickly as special news stories were received over the teletype machines, *Observer* staff set it in type and by 7:30 o'clock, an extra edition was on the streets.
- Hundreds of Sarnians of all ages gathered in city churches to meditate and to offer prayers for the success of the Allied invasion. Inside the solemn and silent places of worship, many eyes were dimmed with tears as citizens thought of loved ones now facing the enemy and of those who had already laid down their lives in the cause of freedom. Services were held through the course of the day at Our Lady of Mercy and St. Joseph's Roman Catholic Churches, Canon Davis Memorial Church, St. George's Church, St. Paul's United Church, Central United Church and the Point Edward Presbyterian Church.
- Five years prior to D-Day, almost to the day, on June 7, 1939, Sarnia and Lambton residents by the thousands had flocked to London, Ontario to see Their Majesties King Edward VI and Queen Elizabeth on their cross-Canada tour. That day, many of the people who traveled to London and members of the local military units which formed part of the guard of honour were now serving in military units of the Canadian Army, Navy and Air Force, and likely some of them were pushing onto the beaches of France.

With limited information being released about D-Day, families in Sarnia couldn't know if their fathers, sons, husbands, relatives and friends were among the thousands of Canadians who took part in the invasion. It would be weeks before the *Canadian Press* could reveal the names of regiments and some of the details of the D-Day invasion.

Sarnians at D-Day: There were a number of Sarnians who landed on the beaches of Normandy that June 6 morning. There were no Sarnia fatal casualties that first day, but there would be in the days following. **Corporal George Caven**, the son of Mr. and Mrs. Hugh Caven of 334 Stuart Street, husband of Mrs. Thelma Caven of 266 Ontario Street, Sarnia and father of a two-year old son, Paul, was a member of the Canadian Scottish Regiment, and was scheduled to take part in the assault on D-Day. In late July of 1944, his wife Thelma received a number of letters he'd written over the previous two weeks, including one that he wrote to her on June 6, 1944 as he was waiting in a barge that was standing off the coast of France. He had been discharged two days previously from hospital. Following are portions of that letter:

I suppose that when you heard the news this morning of the greatest assault that has ever been made in any war, that you would be worried, and thousands of other people would be the same way... I am writing this from the ship and we are just pulling away from the French coast at Le Havre. I am still in the sick bay of the ship with a touch of pleurisy as the M.O. would not let me make the assault with the boys. He is sending me back to England for a few weeks rest.

You have no idea of the tremendous forces we have had and up to now the casualties are very small, and I pray to God they will remain so. Our company had a special job to do and, although some of the boys were dumped out of their craft by a mine, they all reached the beach and carried on with their work... All our boys were in the best of spirits and were confident that they would succeed in the job each had given him to do.

Cpl. Caven enclosed with his letter, a copy of the circular from General Dwight Eisenhower, which had been given to each man the night before the invasion. With this, he said, each man was given a carton of cigarettes and a certain amount of French money, so that he could buy anything he might need after landing. The circular from General Eisenhower read:

Soldiers, Sailors and Airmen of the Allied Expeditionary Force: You are about to embark upon the Great Crusade, toward which we have striven these many months. The eyes of the world are upon you. The hopes and prayers of liberty-loving people everywhere march with you. In company with our brave Allies and brothers-in-arms on other Fronts, you will bring about the destruction of the German war machine, the elimination of Nazi tyranny over the oppressed peoples of Europe, and security for ourselves in a free world.

Your task will not be an easy one. Your enemy is well-trained, well-equipped and battle hardened. He will fight savagely. But this is the year 1944! Much has happened since the Nazi triumphs of 1940-41. The United Nations have inflicted upon the Germans great defeats, in open battle, man-to-man. Our air offensive has seriously reduced their strength in the air and their capacity to wage war on the ground. Our Home Fronts have given us an overwhelming superiority in weapons and munitions of war, and placed at our disposal great reserves of trained fighting men. The tide has turned! The free men of the world are marching together to Victory!

I have full confidence in your courage, devotion to duty and skill in battle. We will accept nothing less than full Victory! Good luck! And let us all beseech the blessing of Almighty God upon this great and noble undertaking.

One well-known Sarnian who took part and survived the D-Day invasion was **James Doohan**, best remembered to a generation of television viewers for his role as Montgomery "Scotty" Scott, the chief engineer on the starship *Enterprise*, in the popular television and film series *Star Trek*. The youngest of four children of an Irish immigrant family, James was born March 3, 1920, in Vancouver, British Columbia. The Doohan family moved to Sarnia in 1926 and resided at 167 ½ Lochiel Street. James Doohan's father was a veteran of World War I, where he served as a major. James' brother, William Patrick Doohan attended St. Joseph's Separate School and Sarnia Collegiate Institute, joining the Lambton Regiment at the age 15 as a signaller. He would go overseas with the 97th Battery in November, 1941 with the rank of captain. He rose up the ranks to being a major in the Royal Canadian Artillery to lieutenant-colonel, in command of an artillery regiment in the First Canadian Division. He would serve in Tunisia, Italy and Holland. In May of 1945, William Doohan was awarded Mention in Dispatches in recognition of gallant and distinguished service overseas.

James Doohan attended Sarnia Collegiate where he excelled in math and sciences. His acting debut came at SCITS when he played Robin Hood in a school show. At age 19 he joined the Royal Canadian Army Cadet Corps and when WWII began, he joined the Royal Canadian Artillery, rising up the ranks becoming a lieutenant in the 13th Field Artillery Regiment. His first combat action was on D-Day, when the twenty-four-year-old James Doohan was in command of 120 men.

On the night of June 6, close to the front, the infantry regiments lay low in their slit trenches waiting to drive off probing enemy counterattacks. With the enemy lurking somewhere in the dark, infantrymen were edgy and trigger-happy. Lieutenant James Doohan had gone forward to find the guns of the 13th Field Regiment, and on his return to his command post, he was shot six times by an overzealous Canadian sentry. He sustained four wounds in the leg, one in his chest and one through his right middle finger. The shot to the chest likely would have been fatal had it not been for a silver cigarette case in his shirt pocket that deflected the bullet. The lucky case was a gift from his brother, given to James before he enlisted. Approximately one week later, Mr. and Mrs. W.P. Doohan in Sarnia received a telegram informing them that their son, *Lieutenant James Doohan was reported wounded in action*. His finger had to be amputated, something he would conceal during his acting career. After recovering from his injuries, he would become a qualified pilot, being posted to 666 (AOP) RCAF Squadron that was stationed at Apeldoorn, Holland. Though he never saw action again, James developed a reputation as being one of the craziest pilots in the Royal Canadian Air Force.

“Calamity” tank in Sarnia: Outside the Sarnia Royal Canadian Legion hall sits a tank that was donated to the City of Sarnia by the First Hussars and Sarnia Legion in 1970. The tank is model type M4A2 HVSS Sherman medium tank with a 76-mm gun. The tank was christened “Calamity” to honour First Hussars member Brandon (Brandy) Conron, who drove a tank named “Calamity” as the Canadians stormed ashore on D-Day, June 6, 1944. Note: More information on the Sarnia Royal Canadian Legion and “Calamity” is in the WWI section on page 202.

Alfred Brandon Conron was born November 29, 1919 in St. John’s, New Brunswick. When war was declared in 1939, Conron was a student at Western University, and he enlisted in London’s First Hussars. He left Western for the army in January 1940 and returned for his convocation in June in uniform from Camp Borden. He was with the First Hussars when they landed on Juno beach on D-Day.

As part of 2nd Canadian Armoured Brigade, the 6th Canadian Armoured Regiment (1st Hussars) assaulted the beach in support of the 7th Canadian Infantry Brigade of the 3rd Canadian Infantry Division. The First Hussars tanks went ashore on Juno Beach at Courseulles-sur-Mer and Bernieres-sur-Mer. The special tanks used were “duplex drive” (DD) amphibious tanks developed for the assault landing. These Sherman tanks were fitted with a collapsible canvas screen that inflated around the hull of the tank, displacing enough water to allow them to float. Two propellers were fitted at the rear of the tank for use in the water, allowing the tank to ‘swim’ to shore.

Brandon Conron was part of “C” Squadron, landing on the Mike sector of the beach, 45 minutes after the first wave. As traffic began to pile up on the beaches, isolated groups of Germans continued to rain down fire. Some of the tanks discovered a place to get off the beach through cutting in an embankment some 200 yards left of the specified exit. The following is the account of events taken from “A History of the First Hussars Regiment”:

The tanks paused momentarily at the top of the embankment to neutralize entrenched infantry there and then pressed on across 1000 yds. of heavily mined open ground to a canal. On reaching the bridge over this tank obstacle Battle Capt. “Brandy” Conron dismounted from his tank to remove the barbed wire obstacle and inspect the bridge while machine-gun fire clipped the ground all about him. Finding that it was not strong enough to carry tanks, he climbed up on the back deck of leading troop officer Lieut. McCormick’s tank to pass this information. While standing there Capt. Conron was wounded in both legs by a mortar bomb.^{5Z}

“C” Squadron would cross the Caen-Bayeux railway line that first day, becoming “the only unit of the allied invasion forces known to reach its final objective on D-Day,” but at a cost of at least 21 First Hussars killed in action on D-Day. Brandon Conron would be evacuated to England, and later returned to Normandy and his regiment. Not long after, he was promoted to Major, given command of a tank squadron, and in April 1945, was awarded the Distinguished Service Order (DSO), “for gallant and distinguished services in the field.” Following the Normandy Campaign, the regiment fought in Belgium, Holland and Germany. Brandon Conron returned to southwestern Ontario after the war: married Caroline Spencer in May 1949, the daughter of General Spencer of the 1st Hussars; returned to Western University as an English professor and administrator; and would write and publish a variety of works, including the revised edition of “A History of the First Hussars Regiment: 1856-1980” in 1981.^{2D, 3F, 5Z, 6A, z}

In Normandy, the Canadian M4A4 **Sherman medium tanks** were on par with the German Mk IV tanks, but were no match for the enemy’s Panthers and Tigers. The Panther and Tiger tanks were newer and much heavier, and better-gunned than the Shermans. When the German tanks were situated in a hull-down position (with their forward-sloping armour facing the enemy), they were nearly impervious to Canadian fire. The Shermans were able to destroy Panthers and Tigers from the flank or back when they gained a chance. The Shermans, with their higher profile and

lighter armour, and with high-octane fuel running through rear fuel cells, were dangerously vulnerable to all calibres of enemy anti-tank shells. Sixty percent of the Shermans in Normandy were wiped out by a single shot from a 75mm or 88mm shell. Moreover, two thirds of all the tanks “brewed up” when hit. Bursting into flames was so common that the Shermans earned the ironic nickname of “Ronsons,” after a brand of cigarette lighter with the memorable slogan “lights first every time.” Many crews burned alive before they could bail out of the tank. Before long, the modified Sherman Firefly tanks (with its tank-stopping 17-pound gun) and Sherman Crab tanks (mine-clearing tanks) joined the standard Sherman tanks. The Fireflies were equipped with a 17-pounder gun, which fired an armour-piercing Sabot shot, double the power of a standard 75mm Sherman gun.^{41, 62}

The First Hussars: In 1856 in London, Ontario, a group of settlers who had trained in cavalry skills formed an independent cavalry unit, the First London Volunteer Troop of Cavalry. It would amalgamate with several other troops including ones in St. Thomas, Courtright and Kingsville. It was deployed to meet the Fenian threat in 1866, and again in 1870, and would undergo several changes in title. In April 1892, the regiment was officially designated the 1st Hussars.

During the Boer War, the 1st Hussars sent a contingent of officers and men to South Africa, and earned the Regiment’s first Battle Honour. During World War I, the 1st Hussars served as part of the 7th Canadian Mounted Rifles. The soldiers fought with distinction, often seeing action dismounted as infantry, and were awarded thirteen additional Battle Honours including at the Somme, Hindenburg Line, Arras, Vimy, Cambrai and Amiens. One of the more famous members of the 1st Hussars in the Great War was Forest-born and Petrolia-raised George Stirrett. The Sarnia Armoury is named in his honour. His story is included in the WWI section of this Project on page 131.

Upon the outbreak of World War II, the 1st Hussars were the first Non-Permanent Militia to be mobilized, moving overseas in 1941 as part of the 5th Canadian Armoured Division. The 1st Hussars would be one of the armoured units to take part in the Normandy landings on D-Day.

In 1964, as part of the larger London-based regiment, the 1st Hussars “C” Squadron was formed in Sarnia. The local squadron was based out of the federal building in downtown Sarnia until moving to the armoury in 1983. In late September 2019, as part of the 1st Hussars C Squadron 55th Anniversary weekend, a plaque was unveiled at the George Stirrett Armoury. The plaque, located beside a Cougar AVGP (armoured vehicle general purpose), tells the story of the 1st Hussars “C” Squadron on D-Day and the story of the Cougar tank named “Cataraqui”. Following is the content on the plaque:

1st Hussars “C” Squadron

On the sixth of June, 1944, the First Huusars were one of three Canadian Armoured Regiments to lead the assault on Juno Beach. 2 Troop, C Squadron, of the 1st Hussars, led by Lt. Bill McCormack, supported the Winnipeg Rifles in taking the French town of Creully and then pushed on to their objective, Secqueville-en-Bessin. In doing so, they became the only element of the Allied Seaborne assault forces to reach their objective. Finding themselves isolated without infantry or anti-tank support, they retraced their steps and rejoined the Regiment.

Cataraqui “The Story of”

Lt. McCormack’s tank was named “Cataraqui” and thus to honour the actions of 2 Troop, on the 6th of June, we have named this Cougar “Cataraqui” and affixed the same Tactical signs that would have been on his original Sherman Tank. Cougar AVGP’s were originally issued to the 1st Hussars in 1983 and were intended to be used by Primary Reserve, Armoured Units as a tank trainer. However, the vehicles were deployed to Bosnia-Herzegovina on a Peacekeeping Mission. They served the 1st Hussars Regiment well until they were retired in the year 2005.

Following D-Day, the Regiment took part in the bitter battles in the Normandy bridgehead, the closing of Falaise Gap, and clearing of the cross channel guns at Calais. The 1st Hussars fought with distinction through Belgium and Holland, ending the war in Germany. During this period, the 1st Hussars won 72 Decorations, Certificates, or Mentioned in Dispatches, more than any other unit in the 1st Canadian Army, and were awarded 20 additional Battle Honours for outstanding Bravery, including at Normandy, Falaise, Caen, Calais, The Rhineland, Apeldoorn and North West Europe. Members of the Gallant Hussars have served and continue to serve in peacekeeping missions around the world including in the Middle East, Bosnia, Kosovo, and Afghanistan with NATO and the United Nations.^{3G, 5R}

• **CONDUCT UNBECOMING:** One of the worst war crimes in Canadian history occurred during the battle of Normandy, following the June 6, D-Day landings. As many as 156 Canadian soldiers, taken prisoner by German forces, were executed by their captors, the 12th SS Panzer Division (fanatical Hitler Youth known as “Hitlerjugend”)

in scattered groups in various pockets of the Normandy countryside from June 6 to 11. The 12th SS Panzer were young men that had been raised to believe in the German master race and were quite prepared to die for the Führer while led by experienced and—in most cases—bloodthirsty officers. Even German troops called the 12th SS the “Murder Division.” This was Hitler’s order as retribution for the invasion on France.

On June 7, dozens of members of the North Nova Scotia Highlanders and the 27th Canadian Armoured Regiment were taken prisoner around the village of Authie. The Germans took their prisoners to Abbaye d’Ardenne, an ancient stone church, where later that night, eleven of the Canadian prisoners were taken into the Abbaye’s garden and shot in the head. The next morning, seven more Canadian POW’s were taken outside and shot. On June 8, sixty-four Canadians, including several dozen members of the Royal Winnipeg Rifles, were taken prisoner near Putot-en-Bessin. The prisoners were marched to the Chateau d’Audrieu where later in the day, forty-five of the Canadians were murdered throughout the day. One of those murdered on June 8, 1944 was **John Lychowich**. He was originally from Manitoba and had moved to Sarnia to work at Polymer Corporation before enlisting in August of 1943. John Lychowich’s name is on the Sarnia cenotaph and his story is included in this Project on page 834.

The Canadian prisoner cold-blooded murders and the consequent search for justice is documented in the book *Conduct Unbecoming: The Story of the Murder of Canadian Prisoners of War in Normandy* by Howard Margolian. Adding to the savagery exhibited by the fanatical resistance, there were numerous accounts of Nazis pretending to surrender and then throwing a grenade; prisoners being deliberately struck by vehicles while being marched away; setting up an ambush with a white flag to draw out the Canadians and working with other comrades to gun them down in the open; and an incident when the bodies of two murdered prisoners were ground to pulp beneath a tank after they were deliberately pulled out into the street.^{D, 2N, 4I, 7P, 8M}

• **THE BREAKOUT FROM NORMANDY:** While the Allies had pride in their achievement of breaching the Atlantic Wall on June 6, no one was naive enough to believe that the war was over. It was critical to establish a secure bridgehead in order to bring in the constant supply of materials and men necessary, so that the armies could continue to expand east across France. Two **Mulberry harbours**—giant artificial harbours made up of roughly 6 miles (10 km) of flexible steel roadways that floated on steel and concrete pontoons—were towed across the English Channel and put together off the coast of Normandy (Omaha and Gold beaches). Though one was destroyed in a violent storm on June 19th, the artificial harbours did allow the Allies to unload 2.5 million men, a half million vehicles, and 4 million tons of goods to the front lines. Even into mid-July, Hitler continued to believe that the Normandy landings were a diversion, and that the major Allied thrust was still to come on Pas de Calais. Yet even with their focus on the north, the Germans had or were massing three of their best armoured divisions—the 21st Panzer Division, the 12th SS Panzer Division, and the Panzer Lehr Division—around the city Caen.

Because of Allied air superiority, the Germans had great difficulty moving reinforcements up by day, but they could and did move by night. German tenacity and defensive tactics, along with effective anti-tank weapons and superior tanks, neutralized the Allied air superiority. While the Allied leaders expected to have their armies advancing east across France within weeks, instead, it would take a whole summer of tenacious fighting against a skilled and fierce enemy, for them to break out of their narrow Normandy bridgehead. The Allied plan, **Operation Goodwood**, devised by the commander of all Allied land forces on the continent, British General Bernard Montgomery, was for the Canadians and British to tie down the main German armour and infantry units in the east by taking the strategic city of Caen (originally a D-Day objective). This constant pressure would free the Americans to break out west from their positions. It also meant that the Canadians and British would continually confront the best of the enemy’s troops.^{D, 3F, 3G, 4I, 6Z}

Lead elements of the 3rd Canadian Division marched forward from the Normandy bridgehead at first light on the day after D-Day, known as D+1. The plan was to spread out to the northwest of Caen (a town the Germans were determined to defend at all costs), advancing to contact with the enemy. The Canadians met the German armour the morning of D+1, when spearheads of the 12th SS Panzer Division counterattacked the North Novas and the 27th Canadian Armoured Regiment at the town of Authie. Each day, various regiments set new objectives and faced fierce battles and vicious counterattacks. The infantry backed by Sherman tanks and artillery attempted to push across fields, farms, battling past stone homes, mansions and villages. Every day and night, Canadian soldiers at the front dug their slit trenches to protect against bullets, and mortar splinters. There were successes in advancing and occupying a number of small villages, including Bretteville, Norrey, Putot, and Les Buissons, but there were also devastating defeats. Each day, casualties on both sides mounted.

The Canadian citizen soldiers bent but did not break against a force of fanatical Hitler Youth, and elite enemy soldiers who had fought on the Eastern Front. The Allies were able to carve out a foothold on the French mainland, slowly expanding the front, but had yet to achieve a decisive breakthrough. After six days of ferocious and continuous fighting, the 3rd Canadian Division and the 2nd Armoured Brigade suffered over 1,000 Canadians killed and nearly 2,000 wounded. In that first week after D-Day, at least four Canadians lost their lives in France; Russell Jolly and John Lychowich, both members of the Royal Winnipeg Rifles; and William Barr and Ross Pole, both members of RCAF Bomber Command.^{D, 41, 6Z}

In early July 1944, the Canadians were ordered to seize the village of **Carpiquet** (a small town outside of Caen), and the airfield that lay just to the south of the town. The terrain and defences favoured the Germans, and the Canadians predicted a “tough show”. Beginning on July 4, Canadian battalions moved across open farmers’ fields, behind a creeping barrage of artillery, air and naval gun support in a battle that resembled those of the Great War. From low concrete bunkers surrounding the control buildings and hangars, the SS made the airfield into a killing zone with interlocking fields of machine-gun fire backed by mortars and artillery. Against this fierce opposition, and enemy counterattacks, the Canadians were successful in capturing the airfield and clearing Carpiquet by July 8. However in the bitter fighting against the fearsome 12th SS, over 100 Canadians were killed and more than 250 were wounded. The North Shore Regiment suffered the heaviest losses, one of its’ survivor recalled, *“I am sure that at some time during the attack every man felt he could not go on. Men were being killed or wounded on all sides and the advance seemed pointless as well as hopeless. I never realized... how far discipline, pride of unit, and above all, pride in oneself and family, can carry a man, even when each step forward meant possible death.”* The next objective was the city of Caen.^{3F, 41, 6Z}

Caen, a city of 55,000, had been pounded by Allied fire for weeks. British forces would carry out the main assault, with the Canadians on the right flank, in what was called **Operation Charnwood**. On the night of July 7, Caen was struck again by a mammoth air bombardment designed to crush the enemy defences. The Germans remained an effective fighting force, as most of them were well dug-in on the outskirts of Caen in areas that had not been targeted, including the Canadian front that received few bombs, due to the Allies’ fear of their aircraft hitting the Canadian positions. In fact, the bombardment backfired since the tangled ruins it produced only enhanced the enemy's defensive capabilities.

Through two days of agonizing fighting against enemy fortified positions, barbed wire, anti-personnel mines, tanks, machine gun, rifle, artillery and mortar fire, Canadian and British regiments were able to capture Caen on July 9 (the Allies had originally hoped to capture Caen on June 6, D-Day). In the centre of the city, a Canadian flag was erected, and emerging from the rubble, the liberated French brought out flowers and wine for the grimy and dust-covered Canadians. The Canadian dead were gathered, their possessions sorted, dog tags collected, and last rites given by the padres. Bodies were wrapped in blankets, until there were no more blankets. The battle for Carpiquet and Caen cost the Canadians 330 men killed and 864 wounded—losses comparable to those on D-Day itself.^{D, E, 2N, 3F, 3G, 41, 6F, 6Z}

When CBC reporter **Matthew Halton** entered Caen with the Canadian troops, he reported that the city looked like the end of the world:

We came suddenly on to a little square, Place de la Lycee Malherbe. There, to our astonishment, we saw a great church and school that weren't damaged at all. The church was the famous Abbaye-aux-Hommes, a thousand years old... Not one bomb or shell touched this church.

If you could go there and see the rest of Caen, you would say this was a miracle. I went into the church and saw a tapestry of our times that I will never forget... There were two thousand people in there, mostly women and children. They lived and slept for several weeks there. Babies have been born at the foot of the Sanctuary, and wounded people had been tended above the tomb of William the Conqueror after being brought in from the shambles outside... Throughout all the shelling and bombing during those apocalyptic weeks, the mass was celebrated in the church three times a day... Outside, the world crashing and burning but the church never once hit by a bomb or shell...

As we moved slowly down the great nave, hundreds gathered around us to shake our hands... When these people saw our shoulder patches, they cried “Long Live Canada!” All were calm and dignified but their enthusiasm was deep and touching. There was a ceremony in the square outside. The flag of France was raised and they sang “La Marseillaise,” weeping, the broken and tortured voices of unbroken people.”^{6F, 7Q}

Digging all the time: One of the Canadians taking part in the breakout from Normandy was Saskatchewan-

born Denis Chisholm of the Regina Rifles. He had joined the Regina Rifles at age sixteen, and landed in Normandy shortly after D-Day at the age of twenty. Following is his description of some of the perils they faced moving beyond Caen:

Everybody tends to think the worst thing for an infantryman is machine guns or rifles, but the worst is mortars and shelling. You have no idea what it's like. You would come under some of those barrages and they'd be up to an hour you know, just constant, big 88-mm, some of those big shells coming in. Air bursts, they were a bugger; they would explode at just above roof-top level and they were timed to blow up and rain down on you. If you were lucky you would find cover in a slit trench. That's another thing. In Normandy we were digging all the time. It was hard work. The tough part in Normandy was the chalk. There would be about two feet of dirt and then you hit this damn chalk and digging into that wasn't easy. The first thing a soldier asked when he met up with soldiers who were holding a position was not 'How's the enemy?' or 'What's going on up there?' it was 'How's the digging?' You just wanted to get down below ground as quickly as possible. Whenever we were moving we were looking for depressions in the ground, some place to dive into.^{8M}

In October 1944, the *Canadian (Sarnia) Observer* featured a story on one Sarnian's act of bravery during the Battle of Normandy. **Private Keith Withers** was the son of Mrs. Stella Withers of 409 Lydia Street. The story was told by Lance Corporal Willard Smith of Ridgetown, who credited Private Withers and another soldier with risking their lives and saving Smith from certain death. In telling of his rescue, Lt-Cpl. Smith said that after attacking east of Caen, his unit came under heavy attack, with intense shell and mortar fire from German infantry and Tiger tanks on either flank. On this particular night, Lt-Cpl. Smith, Private Withers and a driver (name unknown) were riding in a carrier. According to Lt-Cpl. Smith, "*The carrier had to take a bumpy country road that the Germans had charted every inch of the way. They plastered us and all we had was the speed of the carrier, 25 or 30 miles an hour, against their accuracy. An 88 finally came through the carrier, and I was wounded and losing consciousness... The carrier was loaded with munitions and afire, but Withers and the driver, disregarding the danger got me clear and into a hole before the fire reached the grenades and the carrier went up in flames.*" Private Keith Withers would suffer serious burns in the incident and was sent to hospital in England.

For Home We Fight: Corporal Tom Quinn, a British Columbia soldier with the Canadian Army, wrote a letter to from France in July 1944 to a neighbor. He focused on the imagined life of one French family so like his family at home.

Mollie,

... This is being written in an empty shell scarred house in the suburbs of a French town. Perhaps empty is not a good word to describe it for although the people who once lived here are gone their spirits still remain. I felt their presence when I stepped into the room, their living room I guess it was, and looked at the tables and chairs, at the sideboard full of old china and glassware, and dozens of odd little ornaments that have been handed down from one generation to another.

I felt their presences even more keenly as I looked into cupboards full of clothes and clean linen, and bed clothes, into drawers full of all sorts of odds and ends, full of the story of their lives, school books, scribblers, pencils, all the things you'd find in your own drawer at home. And now I think perhaps that it is not the spirits of the occupants of this house but the spirit of my own home that is in this room.

I looked in the bedroom upstairs and the tears smarted my eyes as I looked at the tiny cradle with the doll tucked neatly away under the little quilt, as if small hands had done it only last night.

The long years rolled back and I saw my sisters tiny hands tucking the quilt around the silent occupant of that cradle and heard my sisters voice telling it to go to sleep, that she'd be there in the morning.

The ghosts of the past filled the room to overflowing so I left.

This house has taught me one reason why we fight, - to preserve the mainstay of civilization – the Home.

So Mollie please write to me even if you have nothing to say (that sounds very Irish) for your place has always been like a second home to me, and a letter from home renews our determination to get this war over and done with so that we can get back to the things we love.

Goodbye for awhile, Tom

Mollie wrote to Tom again and again, and he did come home.^{7A}

The Battles of Verrières Ridge and Falaise: The Canadian component of *Operation Goodwood*, known as *Operation Atlantic* was launched by the Canadians on July 18, 1944. This Canadian offensive had the objectives of capturing the eastern section of Caen and securing the western bank of the Orne River and Verrières Ridge, with the

goal of driving on to Falaise. Verrières Ridge, an 88 metre-high kidney-shaped hill overlooked the main road running south from Caen, and was providing the Germans with a commanding view over Canadian positions. The stone-walled village atop the Ridge provided excellent protection for German troops and armour, and the tall grain and many clumps of trees provided excellent cover. It had to be captured in order for the Canadians to advance to their next target, Falaise.

The Canadian push towards Falaise was completed in several phases; operations *Spring*, *Totalize* and *Tractable*. The German forces, that included a battalion of nearly invulnerable massive 55-ton Tiger tanks, had furiously built up their defences, incorporating anti-tank guns, machine-gun pits, and mortar teams into the elevated landscape. They had been ordered by Hitler not to give an inch of ground. Beginning on July 18, with heavy artillery support and tactical air power, Canadian and British forces began their push southward advancing across the Orne River, through a number of villages toward Verrières Ridge. During each phase of the operation, strong German defensive tactics, reinforcements and effective counterattacks by elite Panzer formations resulted in heavy Allied casualties.

Most notable was the attack, ***Operation Spring*** that began in the early morning hours of July 25, 1944. The well-entrenched, battle-hardened German troops knew that the attack was imminent, and had sent reinforcements there. One of the regiments involved in the assault was the Royal Highland Regiment of Canada (the Black Watch). As the Black Watch advanced up the slope, they were caught in a maelstrom of German tank, anti-tank, mortar, machine-gun, and sniper fire. Of the approximately 325 members of the Black Watch who ascended Verrières Ridge on that morning, 123 were killed, 83 were captured and 101 were wounded. By the time it was called off, with only limited gains, *Operation Spring* as a whole had produced huge losses: more than 1,500 Canadian casualties of whom about 450 had perished. Except for Dieppe, the July 25 attack was the bloodiest day of World War II for Canada.

Though *Operation Spring* was a failure, it did serve one valuable purpose. On July 25, the American forces farther west began their thrust out from the Normandy bridgehead in *Operation Cobra*. The Germans, believing the British/Canadian operation towards Falaise was the main Allied push, delayed transferring experienced SS forces to take on the Americans. *Operation Spring* was to the Americans advantage, providing an important few days for the success of *Operation Cobra*.^{D, E, 3F, 3G, 4A, 4I, 6F, 6Z}

The Falaise “Gap”: By early August 1944, the Allied armies had launched a huge pincer movement — with British, Canadian and Polish units moving out of Caen, south towards the town of Falaise, and American forces, having finally broken through enemy lines in the west, circling south and east around what remained of the German Army in Normandy. The goal was to encircle and destroy the German Seventh Army and Fifth Panzer Army in an area referred to as the Falaise Pocket (also known as the Chambois pocket—the area between the four cities of Trun-Argentan-Vimoutiers-Chambois near Falaise, France).

Operation Totalize began before midnight on August 7 with Allied heavy bombers pounding the German defences. Columns of Sherman tanks moved out into the night with supporting infantry behind a rolling artillery barrage. They were kept moving in the right direction by light beams, radio beacons, tracer fired parallel to their advance, and artificial moonlight (searchlights shone on low clouds). Improvised armoured troop carrier vehicles, known as “defrocked” Priests or “Holy Rollers”, and later as “Kangaroos”, proved effective in transporting Canadian infantrymen rapidly on their targets. It was the first time ever that armoured personnel carriers were used to carry infantry into battle. The attack achieved initial success, as the first defensive lines were overrun including the ridge at Verrières where Canadians had died in the July campaign. However, in spite of the heavy bombing, the German artillery, mortar, 88mm anti-tank guns, infantry and tanks (including the murderous 12th Panzer Division), put up a grim resistance during numerous counter-attacks. Errors in Allied bombing even inflicted casualties on their own troops. Fighting continued until August 10: the Canadians had advanced some 13 kilometres, had some 600 killed, but failed to break through the German “ring of steel” defence line.

Operation Tractable was launched on August 14. The Germans had learned of the attack the day before when a Canadian officer lost his way and drove into enemy lines. He was killed and his driver taken prisoner; in the jeep was a copy of the Allied plan. This time, the operation was launched in daylight, again with heavy Halifax and Lancaster air bombardment, tank columns, supporting infantry in their Kangaroos, Wasps (universal carriers with a mounted flame-thrower), a creeping artillery barrage and a smoke screen cover. As with *Totalize*, a number of bombers mistakenly dropped their bombs short of their targets, causing a number of Allied casualties. Pushing slowly forward against a fierce German resistance, that included savage house-to-house fighting in Falaise against enemy

fanatics that had been told to hold on until death, this time the assault succeeded. Falaise was taken on August 18.

Although the Falaise Gap had been narrowed, a series of fierce enemy assaults and defenses prevented the quick closing of the Gap. Intense fighting continued for the Canadians against desperate enemy forces fighting for their lives, through the towns such as Trun, St. Lambert and Chambois. The Falaise "Gap", through which the Germans were retreating was finally closed on August 21, with the linking up of American, Canadian and Polish forces. While thousands of Germans were able to slip out of the trap, close to 8,000 destroyed, damaged, or abandoned German tanks, trucks, and guns lay behind, and over 150,000 German prisoners were captured.

The Caen to Falaise drive had taken the Allies through rolling farmland, winding roads, and small villages, all protected by German guns and tanks. The closing of the Gap was the last episode of the Normandy campaign. After the Allied victory in Normandy, Germany could no longer hold France. On August 25, **Paris was liberated** by French and American troops, ending four years of German occupation. A German commander, Major General Dietrich von Choltitz, had defied Hitler's order to level the French capital rather than give it up.^{D, E, 2N, 3F, 3G, 4I, 6Z, 8M}

• **THE BATTLE OF NORMANDY ENDS:** The June 6th, 1944 landings in France marked the opening of the Battle of Normandy. From the D-Day landings through to the encirclement of the German army at Falaise on August 21, 1944, the Battle of Normandy was a brutal attrition campaign, one of the pivotal events of the Second World War and the scene of some of Canada's greatest feats of arms. Canadian sailors, soldiers and airmen played a critical role in the Allied invasion force that swept into France that summer. Pushing against fierce and ruthless German forces, including the fanatical 12th SS Panzer Division, Canadians encountered tense battles as troops moved forward. Canadians advanced at Carpiquet, Caen, Bourguebus Ridge, St. Andre-sur-Orne, Verrieres Ridge and the Falaise Gap. In the first few days after the landing, between June 7-12, Canadian casualties totalled 2,831 – of whom 1,017 died. Over the ten weeks between June 6 and the end of August 1944, there were over 18,400 Canadian casualties, including more than 5,300 Canadians killed during the Battle of Normandy.^{D, E, 2N, 4I}

Two principal military cemeteries contain the graves of Canadian soldiers killed in the Battle of Normandy: Beny-sur-Mer Cemetery—Canadian soldiers killed during the early stages of the battle; and Bretteville-sur-Laize—Canadian soldiers killed in the later stages of the battle. The Beny-sur-Mer cemetery contains 2,048 gravestones—all but five are Canadians.⁴¹ At least sixteen young men from Sarnia gave their lives during the Battle of Normandy including; Douglas Aiken, William Barr, Isaac Bell, Frederick Birkinshaw, Allan Campbell, Norman Ellis, Francis Goring, Russell Green, Thomas Hamilton, Russell Jolly, Thomas Lee, Joseph Legare, George Loney, John Lychowich, John McKernan, and Ross Pole. Ten of these Sarnia fallen soldiers are buried in the two principal Normandy cemeteries.

The Normandy campaign was won in seventy-seven days, twenty-three short of the pre-battle planners' estimates. Yet after the campaign, the Canadian forces were criticized by some, including by British General Bernard Montgomery, for being unaggressive, poorly led and slow in achieving their goals. Military experts have since pointed out that the Canadians, from D-Day onward, faced not only a formidable enemy with superior tanks and other weapons, but that the assault objectives, fortified on the best tactical ground, were exceptionally difficult targets to capture. Assessing the Canadian performance in the battle to close the Falaise Gap, a Canadian gunner said, *"Armchair strategists writing of those days – whether British, American, or Canadian – have all spent too much time wondering why we were so slow getting down past Falaise to meet up with the Americans. They should have spent more time wondering how men ever summoned up the necessary moral courage and physical stamina to get there at all."*⁴¹

RCAF support at Normandy: Throughout the battle in France, RCAF fighters and bombers flew in support of the Allied ground forces, and began their own offensive sorties against an ever-dwindling Luftwaffe. Spitfires, Mustangs and Hurricanes flew in search of their prey behind enemy lines. They were involved in reconnaissance, dogfights, flying bomber escort, train-busting and even suppressing German V-1 rockets. The first V-1 rocket was launched on June 13, 1944 from Pas-de-Calais. Known as "buzzbombs", these unmanned missiles contained a ton of high explosives and rained down on London and other areas. RCAF fighters shot down many of the rockets, and a few even used their wings to tip the rockets off course. Typhoon fighter-bombers (known as "Tiffies") swooped down on targets attacking vehicles, bridges, canals, railway yards, tanks, and artillery pieces, constantly harassing enemy movements of men and supplies. The Allied bombers continued to pound roads and rail lines, along with military and industrial areas in Belgium and France, profoundly damaging the Nazi war machine. Airpower did not win the battle in Normandy, but it eroded German combat effectiveness and demoralized the enemy. At sea and in

the English Channel, Coastal Command bombers and fighters, including RCAF Wellingtons, Sunderland flying boats, Canso flying boats and Liberators attacked enemy warships and German merchant ships, and were winning the war against the German U-boats.⁴¹ Six of Sarnia's Battle of Normandy losses were RCAF: Douglas Aiken, William Barr, Allan Campbell, Francis Goring, Thomas Lee and Ross Pole.

• **RCAF FIGHTER SQUADRONS:** After the Battle of Britain (July 10 – October 31, 1940), the Spitfires and Hurricanes of **Fighter Command** began patrolling across the English Channel to engage the enemy. Twelve RCAF fighter squadrons were deployed: eight were day fighters, three were night fighters, and one was an intruder unit (sought to harass enemy planes as they left or returned from their bases). Aggressive fighter sweeps varied in scale: from “rhubarbs,” in which a few pilots “stooged” across the Channel to shoot up targets of opportunity; to more organized mayhem, known as “rodeos,” in which larger numbers of fighters sought out the Luftwaffe; and “circuses,” which saw several squadrons and light bombers attacking predetermined sites.

RCAF pilots learned to fly in the “finger four” position, so named because it resembled the fingers on an outstretched hand. In combat, the four fingers broke off to the basic two-plane fighting unit, a leader and his wingman, one the “shooter” and the other the “eyeball.” The wingman defended the more experienced leader, and stuck close to him through twists and turns, watching for enemy fighters coming from behind, above or below.^{2S, 4H}

Among the Sarnians who flew as members of a fighter squadron, two of the more famous are Charles Stover (see below) and Harry Dowding, who shot down at least six enemy planes. Harry's younger brother, Pilot Officer-Air Gunner John Dowding, is included in this Project. At least six Sarnians lost their lives while serving with fighter squadrons, including; Allan Campbell (Typhoon), Francis Goring (Mustang), James Lowry (Spitfire), Rodolfo Mendizabal (Hurricane), Frederick Wise (Hurricane) and James Wright (Spitfire).

Each air squadron—whether part of Fighter Command, Bomber Command, Transport Command, Coastal Command or Army Co-operation Command—had its own separate identity. To avoid confusion with the (British) Royal Air Force, the Canadian squadrons were given numbers 400 to 449 to indicate that they were Canadian. Besides being numbered between 400 and 449 (save for a few oddities), each was also given a title or nickname, with many linked to Canadian animals, birds, or cities. For example, six of Sarnia's fallen airmen were part of No. 419 (Moose) Squadron, part of Bomber Command.^{2S, 3G, 4H, 6Z}

RCAF “City of Sarnia” Squadron: Under the British Commonwealth Air Training Plan, one of the new squadrons formed for service under RAF operational control was adopted by the City of Sarnia. The *R.C.A.F. No. 414 Army Co-operation Squadron* was formed in mid-August of 1941 at Croydon, England. Initially it was formed from a detachment of eight officers and 69 airmen provided by No. 400 Squadron and 200 ground crew personnel supplied by the Royal Air Force. Assigned to Army Co-operation Command, No. 414 Squadron was equipped with Lysander IIIA and Curtis Tomahawk I/II aircraft. Based at numerous airfields in England, the No. 414 Squadron initially occupied itself with exercises and training with the Army, and the air defence of Great Britain during the early period of its career. On June 28, 1943, assigned to the 2nd Tactical Air Force, its name was changed to *414 Fighter Reconnaissance Squadron*, and was based at numerous airfields in England. Flying Mustang and Spitfire aircraft, the squadron provided reconnaissance, intelligence and ground attacks.

The Wing Commander for RCAF Overseas Headquarters asked the people of Sarnia to support the 414 fighter/reconnaissance squadron as part of the war effort, as the squadron's commanding officer was a Sarnia native. In March of 1944, No. 414 Squadron was officially adopted by the City of Sarnia council in honour of **Commander Charles “Smokey” Stover** of Sarnia, who was the commanding officer of the unit at the time. The decision to adopt the unit resulted from a letter received by Sarnia Mayor W.C. Hipple from Wing Commander R. Irwin, Director of Public Relations at the overseas headquarters of the R.C.A.F. Commander Irwin pointed out that the squadron not only was commanded by a Sarnian but, from time to time included other residents of this city. People in Sarnia wrote letters to the members of the squadron so they felt a part of home. School children gathered pennies and nickels and lined them up along the curb on Christina Street. The unit was so beloved in Sarnia that residents not only dispatched occasional parcels of cigarettes and exchanged letters with members of the squadron, but also raised \$21,000 to buy a new plane for the squadron.^{N, 2S, 3G and 3H}

The *R.C.A.F. No. 414 “City of Sarnia” Squadron (Sarnia Imperials)* was unofficially known as the ‘Black Knight Squadron’. Its badge included a black knight atop a white horse with red trimmings above a cloud. The squadron's colours were black, red and white and its motto was, “Totis Viribis” (With all our Might).^{2S and 3H}

In early June 1942, the *No. 414 Squadron* began to re-equip with Mustang Mk I's. Not long after, the Squadron got its chance to take a more active role in the war. In August of 1942, the 414 Squadron was one of four Army co-operation squadrons detailed to reconnoiter at Dieppe. The *414 Squadron* employed the Mustangs over Dieppe on August 19th of 1942, where the first aerial victory ever claimed by a Mustang pilot was credited to the unit. After Dieppe, the squadron resumed training and exercises and soon flew various operations that included coastal patrol, tactical and photo-reconnaissance ("populars"), intelligence and offensive low level ground attacks ("rhubarbs"). They targeted railway locomotives, enemy ships, aircraft on the ground, enemy troops and vehicles on the road. In preparation for D-Day, the *414* pilots flew photographic and tactical reconnaissance along the French coast. On D-Day, it undertook spotting missions for naval gun fire.^{2S, 3G and 3H}

Dunsfold, 1943

Charles Stover is bottom row, second from right.

Charles Herbert "Smokey" Stover, the son of Mrs. Frances Stover of 191 ½ South Mitton Street, was born in Sarnia on September 8, 1915; grew up in Sombra; and was a former pupil of Sarnia Collegiate Institute. In his second year as a mechanical engineering student at Queen's University, he enlisted in March of 1941 in London, Ontario. Charles received his air training at No. 3 Initial Training School (graduating July 15, 1941); No. 4 Elementary Flying Training School (graduating September 1, 1941); and No. 13 Service Flying Training School, where he received his wings on November 21, 1941. He arrived in England in January 1942. He was posted to *Squadron 414* on March 3, 1942 as a Pilot Officer. The squadron was initially flying Tomahawks and would change over to Mustangs in June 1942. Charles' nickname "Smokey" came from a popular American comic strip created by cartoonist Bill Holman, about a wacky fireman named Smokey Stover.

Charles "Smokey" Stover's first mission was in a Mustang at the infamous Dieppe Raid, on August 19, 1942. On that day, the squadron was tasked with reporting on German concentrations and troop movements. During the Dieppe battle, Stover was able to evade a group of four attacking German Focke-Wulf 190's (FW-190's) which seemed to jump him from above. Another member of the squadron flying with Stover saw them coming and shouted, "Quick, get out of it," over the inter-communications phone. Stover got out of it by diving to "naught" feet. Stover said, "I went down so low I didn't notice a cement telephone pole which clipped off half my wing." He added, "There was a crash. The next thing I knew I'd left four feet of wing behind me. I sure wasted no time getting out of that place." He belly-landed safely back at the base, minus part of one wing and half of his aileron. The Dieppe invasion was a Canadian disaster and included 106 RAF aircraft lost, including two from *414 Squadron*.

Charles Stover shows off what's left of his wing

In December 1942, Charles Stover was promoted to Flying Officer. In November 1943 he was appointed as Squadron Leader of *414 Squadron*, replacing the previous S/L who was listed as missing on a mission. From January to June in 1944, the squadron was very active flying missions into France to photograph various enemy positions and airfields in preparation for D-Day. In January 1944, Squadron Leader Stover led the R.C.A.F. "*City of Sarnia*" Mustang squadron on a daylight raid in which four enemy planes were destroyed over the French city of Chartres, southwest of Paris. The enemy planes were downed so quickly that the Nazis did not fire a single shot in reply.

On May 12, 1944, Charles Stover was one of four members of the R.C.A.F. to receive the Distinguished Flying Cross (DFC). The recommendation for Stover to receive this award was made in March 1944, when Stover had flown 55 sorties (79 operational hours). The DFC citation reads, *Squadron Leader Stover has been engaged on operations since August 1942. He has completed a large number of flights with outstanding courage and resolution, the first of his sorties being during the Dieppe operation. In August 1943, he led a mission to the Paris area where he destroyed Junkers 88 and damaged enemy locomotives and a tug. During another operation in November 1943, he shared in the destruction of a Junkers 52. Many of the sorties completed by this officer have involved deep penetrations into enemy territory, while others have been on reconnaissance and photographic duties. At all times Squadron Leader Stover has shown outstanding skill and devotion to duty on operations and by so doing has provided a great inspiration to those under him.*

A portion of the recommendation written by Group Captain E.H. Moncrieff read, "This officer has proved himself to be a most competent and outstanding Squadron Commander, displaying at all times the greatest determination in the execution of his duties, and his outstanding skill as a reconnaissance pilot and unswerving devotion to duty are an example to all those who serve under his command."

Charles "Smokey" Stover with his dog *Blackie*

On June 6, 1944, D-Day, the *414 Squadron* served as reconnaissance spotters for the navy, directing naval bombardment, with Squadron Leader Charles Stover directing the fire of the 15" guns of the U.S.S. *Nevada*. "*At times it made your hair stand on end to see the melee of planes of every description over the bridgehead... I personally have never seen and have never imagined such a scene of concentrated air action. It was a roof not an umbrella of fighters, intruders and bomber aircraft. It prevailed all the way from Cherbourg to Le Havre, and I imagine the Canadians on the ground, making their record-breaking dash for Caen, will have been as impressed by it as we were in the air.*" As reconnaissance spotters for the navy that day, *414 Squadron* carried out two flights, one immediately after the other, returning to the nearest point of England to refuel at half-time. Their first flight took them in just at daybreak. Each of their planes was in touch by a special wireless band with a certain battleship or cruiser in the coastal bombardment. On arriving over the beach, as the landing barges drew near, the pilots called up their ship and immediately the ship opened with sighting shots on the prearranged target, most of them German shore batteries and rocket mountings. After pasting these first targets and coming home to a temporary refueling point in England, the *Sarnia 414 Squadron* pilots raced right back into the fight with a free hand to locate targets inland for the battleships.

In the days following D-Day, *414 Squadron* pilots went out daily to take aerial photographs of occupied territory and to spot enemy movements from the air, often flying at tree-top level over their target, disregarding flak or other opposition. They also had their share of combat in the air and conducted fighter sweeps with outstanding success.

On June 23, 1944, Charles Stover was wounded when his Mustang was shot up by a group of German FW-190's east of Caen, forcing him to bail out, landing 500 feet inside Allied lines and wrenching his back. He would recover at a mobile field hospital in France before being evacuated to England. His logbook entry of the event reads, *"Flight Lieutenant Norm Rettie as #2 – bounced by 7-8 FW190's East of Caen – Norm was shot up – landed safely – I was shot down, bailing out at Birville at approx. 500-750' landing 500 feet inside British lines injuring back. Air evacuated from France to England."*

In mid-August 1944, Charles Stover returned to Sarnia on leave. In late August, Stover and his English-born wife Edna (nee Dismore) received tokens of friendship and esteem at a civic reception in the council chamber at Sarnia city hall. At the ceremony, he revealed that the *City of Sarnia Squadron* which he commanded was one of six R.A.F. and R.C.A.F. reconnaissance formations whose photographs made possible the successful invasion of France. Since January 1944, thousands of pictures of the Normandy coast had been taken by the three Canadian units participating in the prelude to the invasion. In presenting Charles Stover with a gift and welcoming Mrs. Stover to the city, Alderman W.C. Nelson stressed that the reception was a gesture of appreciation to all Sarnians on active service. As Alderman Nelson stated, *"Our little gathering is to welcome back to their home city, Squadron Leader Stover, D.F.C., and Mrs. Stover and their family, and to express to Squadron Leader Stover the appreciation of our citizens in the signal honor he has achieved. Our city values deeply, though perhaps silently, the achievement and the sacrifices of every soldier. No words of ours can compensate for the sacrifice and the tragedy of war on the right to live that was theirs. We owe to you and to them all something that perhaps is deeper than can be expressed in words but will I hope, find expression in an unforgettable way in the lives of us all."* Charles Stover, in accepting his gift, remarked that he was proud to have been named leader of the *City of Sarnia Squadron* and added that other members were just as glad to serve in it because of this city's fame in the world of sport.

Charles Stover remained in the Air Force until May 1945, and continued to serve post-war in the RCAF Reserve between 1949-1952. He returned to Sarnia and was employed at Shell Oil until his retirement in 1977. He was a beloved husband of Edna for 60 years and they had three children together: Ronald, Murray and Gail. He was appointed Honorary Colonel of 414 Squadron in 1993. Charles Stover passed away in November 2002, and is buried in Riverside Cemetery, Sombra, Ontario. His aircraft was recovered in an archeological dig near Caens in 2003, just six months after Charles Stover passed away. ^{N, 2S, 3H, 3I and 3J}

RCAF No. 414 Squadron 'Mustang' aircraft

No. 414 Vickers-Submarine 'Spitfire' XIV

In August 1944 until the end of the war, *414 Squadron* flew Spitfire IXs and Spitfire XIVs and, operating from bases in France and later Germany, continued to support the Allied armies as they advanced towards Germany. The *414*, despite not being a fighter squadron, accounted for 29 enemy aircraft destroyed and 11 damaged, 76 locomotives and 13 naval vessels destroyed. Their primary function—reconnaissance—cannot be summed up statistically, but the squadron won repeated tributes from the Army units with which the squadron operated. The impressive record came with a heavy price. In all, the *City of Sarnia Squadron* lost 22 pilots.

At the end of the war, the squadron was disbanded at Luneburg, Germany on August 7, 1945. The *'Sarnia Imperials'* *414 Squadron* Second World War battle honours included the Defence of Britain, 1942-43; Fortress Europe, 1942-44; Dieppe, France and Germany, 1944-45; Normandy, 1944; and Arnhem, Rhine, and Biscay, 1943. Over the years, the *414 Squadron* has been disbanded (1945, 1950) and re-activated (1947) numerous times. In November of 1952, during the Korean War, it was re-activated in Quebec, as a fighter squadron equipped with F-86 Sabres, similar to the one in Germain Park. Today it exists as No. 414 Electronic Warfare Support Squadron based in Ottawa, providing electronic warfare support to the combat training of the Canadian Forces. ^{2S, 3G and 3I}

- **COMBAT MEDICINE:** During the Second World War, the **Royal Canadian Army Medical Corps (RCAMC)** was based on a structure similar to that established during the Great War. The medical element of the division was intimately tied to the fighting forces, with each 18,500-strong division served by three field ambulances, an advanced dressing station, a field dressing station, and casualty clearing stations. Closer to the front, each battalion had a regimental medical officer (a trained doctor) and a team of stretcher-bearers. Further to the rear were hospitals.

At Normandy, as in other theatres, medical personnel dealt with the horror and destruction of combat, where shrapnel, bullets, mortar bombs, and shell splinters shattered bone and tore through flesh. A Canadian battlefield surgeon recalled the mayhem at Normandy, under the fall of shells while in tents close to the front, *"We saw the tragic sights from which we were never to be free for ten long months. Men with heads shattered and grey, dirty brains oozing out from the jagged margins of skull bones. Youngsters with holes in their chests fighting for air and breathing with a ghastly sucking noise. Soldiers with intestines draining feces into their belly walls and with their guts churned into a mess by high explosives. Legs that were dead and stinking – but still wore a muddy shoe... Boys who came to you with a smile and died on the operating table. Boys who lived long enough for you to learn their name and then were carried away in trucks piled high with the dead."*

During every action, day or night, **stretcher-bearers** would race across the battlefield, often exposing themselves to enemy fire, to offer front-line care. Patching up the wounded, tying off severed arteries and splinting fractures – they sought to stabilize the wounded, offer some pain relief, and organize parties to carry the injured to the rear. The evacuated would be gathered at an **advanced dressing station** (or Regimental Aid Posts) which were set up in haste to deal with the wounded as quickly as possible. It was here that triage, that is, rapid diagnosis, essential first aid, sorting and labeling of cases in order of priority for further evacuation was carried out.

Evacuating the injured farther to the rear to the battalion's medical officer, usually involved **field ambulance units**—jeeps, trucks or universal carriers that travelled along pitted and shell-pocked roads that left patients in agony from the constant jarring of broken bones and internal injuries. At the **field dressing stations**, doctors, orderlies, and nurses studied the casualties where they were ranked according to priority of treatment, and performed immediate surgery on those who required it. Official reports noted that most patients required an immediate two to three pints of blood to keep from slipping into shock.

A Canadian nurse described the flood of patients; *"It was so tragic, all these boys with arms and legs blown off. You can't explain what it's like to try and deal with all these casualties. They were filled with shrapnel and had every imaginable injury."* Screams, moans, and cries rose and fell in make-shift medical collection areas, that were often overwhelmed. It was common, remarked a member of the Royal Winnipeg Rifles, for men to wail for their mothers. Harsh choices had to be made in managing the avalanche of bloodied men. As one young Canadian Private was taken into a tent to be operated on, he wondered why some of the more grievously injured were not cared for first. A stretcher-bearer replied, *"They're set aside because the doctor reckons they're past saving. They'll probably all be dead by morning."*

The next step was the transfer to a **Casualty Clearing Station**, a temporary hospital for surgery and short-term convalescence of the sick and wounded, until they could be evacuated. For patients on the operating table, lacerated openly or bleeding internally, plasma and blood transfusions were essential and saved countless lives. **Penicillin**, which was first introduced on the battlefield in Italy in January 1944, was a new super-drug that was a significant step in combatting the spread of infection. As in previous wars, many soldiers hemorrhaged to death before reaching medical care, but if they made it to the operating table, they had a high chance of survival. The RCAMC treated 84,000 patients, achieving a 93 percent survival rate for wounds and 99.91 percent for victims of disease.

Doctors and nurses also treated psychologically traumatized patients. By this time, it was recognized that even the most ardent warriors could break down under the unnatural strain of harsh living, constant stress, poor food, lack of sleep, concussions from the blast of high explosives, and appalling carnage. While "shell shock," "battle stress," and "battle fatigue," were terms for the conditions of succumbing to the stress of sustained combat, the military and medical command settled on **"battle exhaustion"** as the official term. Sleep, therapeutic talks, and keeping the patients close to the front – within earshot of the explosions, were the methods used to treat the worn-out soldiers, so that they could regain strength and return to full duty with their units. There are no records available on how many soldiers were returned to their units, only to break down again.

Men with severe wounds were sent back to Britain by air lift or by hospital ship to stationary hospitals or

long-term convalescent homes across England. Soldiers with trauma to their bodies often required multiple surgeries, needed time for bones to heal, and ran the risk of secondary infections. The goal of the military was to return the men to health, and then to their units. Some, of course, would never fight again, and would face a new battle in rehabilitation. A young man from London, Ontario, nineteen years old when he was wounded in Normandy, reflected on his time in hospital: *“A young lad was in the bed beside me. He was seventeen. He had his right leg off. The fellow on my other side had both hands off. Those were the kind of things you ran into in the hospital. The young lads with shock in their eyes.”* A Canadian Nursing Sister, shaken by the broken boys she cared for, described many as *“like young children.”* She hated *“that even with surgery some wounds were too horrific to ever heal. It was hard to accept what war can do.”*

An organization of which no one wished to be a member was the **Guinea Pig Club**. It consisted of burned servicemen of the Commonwealth air forces and some tank crews, and the name came from the multiple operations that members underwent to graft new skin over their burns. In the Great War, burned soldiers often succumbed to infection and gangrene. Now, new treatment and drugs kept many alive, and the challenge was to remake faces and bodies out of the melted-wax-like skin and fire-scorched extremities. Advances in medicine, care and reconstructive surgery (including skin grafts and plastic surgery) ensured that many men survived ghastly disfigurements and catastrophic burns that before the war, would likely have been fatal. The Guinea Pig Club grew to 590 members, including 170 Canadians.^{3F, 4I}

• **PRISONERS OF WAR:** Approximately 9,500 Canadians became prisoners of the Germans, Italians and Japanese, the majority held by the Germans. Estimated Canadian POWs include about 7,000 Canadian army, 2,500 air force and 100 navy members. International laws had been beefed up in response to inhumane practices of the Great War – the 1929 Geneva Convention set rules and standards meant to protect POWs. But not all countries signed the agreement, and some that did, flouted it. German POWs in Canada and England fared best of all—so much so that some emigrated to Canada after the war. Many of the Allied POWs in German camps, including about 8,000 Canadians, were abused, some were brutalized, and all went hungry. Prisoners of Japan, which considered surrender to be shameful, were used as slave labour, starved, denied medical treatment, beaten, tortured and murdered. Prisoners in Japan died at seven times the rate of those in Germany and Italy.^{2E}

For captured allied prisoners, their war was not over. A new war had to be fought: one in bleak conditions, in camps that were surrounded by a high double fence with barbed wire in the gap between them, under the watchful eyes of armed guards in elevated towers; with attack dogs patrolling perimeters; crammed into barracks infested with fleas, lice and rats; and dealing with interrogations, strict rules, multiple daily roll calls, control over mail, boredom, and food that was meagre and always in short supply. During the long months and years of incarceration, the half-starved prisoners faced what they called “barbed wire disease,” a malaise of restlessness and depression. An RCAF prisoner described the mental shock of life as a POW, *“The complete loss of freedom, anxiety about the future, thoughts about family and loved ones so far away, inadequate food and sheer boredom, all ate at the prisoner.”* Canadian organizations such as the Red Cross and YMCA sent life-saving parcels. The packages contained treats and sweets (dried fruit, chocolate, tea); canned foods like Klim milk powder, butter, cheese, tinned meat; and cigarettes; along with reading material, sporting equipment, art supplies and even musical instruments. Few Red Cross relief parcels were distributed to the POWs in Japan; storehouses full of them were discovered after the war.^{2E, 4A, 4I}

Nearly everything about prisoner camp life in Japan contravened the Geneva Conventions. Along with the brutal inhumane treatment by their captors mentioned above, exchanges of sick and wounded were refused, and names of captives were reluctantly supplied after 18 months. Camps teemed with insects; prisoners were exposed to the elements; malnutrition, starvation and open latrines spawned disease; doctors were not given equipment or medicine to treat the sick, but were punished for deaths; many prisoners were unable to communicate with their families for years—stacks of letters to and from prisoners were recovered after the war; and inspectors were routinely denied permission to visit and prisoners were beaten for complaining to the few who were allowed in. After the war, the Canadian former prisoners of the Japanese were united in a decades-long fight for compensation and veterans’ benefits. They waited until December 8, 2011, for an apology from Japan; by then, most who had suffered at their hands had died.^{2E}

For the POWs in German camps, in January 1945, Germany decided to concentrate POWs inside its borders before the Soviet Army’s advance. Thus began “The March”, in which prisoners, weakened by years of starvation, were forced to walk westward up to 30 kilometres a day, some for as long as six weeks, often in bitter cold. Many of the POWs died from exposure and exhaustion.

The Great Escape: Prisoners of war felt it was their duty to disrupt work activities or to escape. The Germans accepted this attitude in the first half of the war, treating escape attempts almost like a game. A daring escape from the Stalag Luft III prisoner-of-war camp (a Luftwaffe-run POW camp near Sagan, Poland) was made famous in a 1963 Hollywood movie starring Steve McQueen as a U.S. Air Force officer, in *"The Great Escape"*. The Hollywood account, a blend of fact and fiction, overstated the American involvement, in fact, it was a British and Canadian story. The real escape, more than a year in the making, involved as many as 2,000 POWs, extraordinary coordination, secrecy, vigilance, ingenuity, bravery and a battle of wits inconceivable for the time. Officers involved were air force members from Britain, Canada, Australia, New Zealand, South Africa, Greece, Norway, Netherlands, Poland and others nations. Canadians played a prominent role in the escape—from a camp designed to be "escape-proof"—ranging from digging, carrying out key roles such as forging documents, intelligence activities, tunnel security, organizing diversions and teaching conversational German to soon-to-be escapers.

One of the most highly valued planners was **Wally Floody**, an RCAF Spitfire pilot born in Chatham, Ontario, who grew up mostly in Toronto. As a teenager, he worked in the mines near Timmins and Kirkland Lake. As a member of No. 401 Squadron, he was shot down on his first operation on October 27, 1941, over Saint-Omer, France. Not long after arriving in his first POW camp, British escape planners approached him, and according to Floody, *"I had worked in the gold mines in northern Ontario, but if you had [an air force] commission and had worked in a mine, the Englishmen figured you had to be an engineer, and if you had worked in a mine you knew a lot about tunneling in sand. But there was absolutely no similarity between the two."*^{6D} Floody became responsible for designing and constructing the escape tunnels, earning him the nickname the "Tunnel King".

Beginning around January 1943, hundreds of men laboured to build three escape tunnels simultaneously, nicknamed "Tom", "Dick" and "Harry". A fourth tunnel, "George" was also created—it was used to store equipment for an after-Soviet occupation. The POW's excavated, hauled, hid and disguised the dispersal of several hundred tons of sand. To avoid microphones, the tunnels were more than nine metres down. Every night, diggers with home-made tools went down into the tunnels through secret hatches in their huts that were covered by cement slabs in a kitchen, washroom and under a stove. The tunneling work was dangerous and difficult, and the structures were extremely complex with sophisticated electrical, rail system and ventilation systems. Prisoners scrounged for and reused materials, others forged false identity papers, or tailored uniforms and blankets into civilian clothing, or stood watch as the work went on, or constructed compasses and maps, and more were "penguins"—distributing excavated sand throughout the camp. The "penquins" had specially constructed bladders sewn into their wide pants, and would move with a stiff-legged, waddling walk, releasing the dirt, scuffing it into the existing soil and sand to ensure the colour of the excavated dirt would not be noticed by the guards.

The tunnel named "Dick" had to be abandoned due to camp expansion, and "Tom" was discovered in November 1943, the 98th tunnel uncovered in the camp. The tunnel "Harry" was plagued with problems: a frozen escape door, collapsing walls, an air-raid blackout, and the tunnel exit emerged 28 metres short of the woods.

On the cold, moonless night of March 24, 1944, the breakout began with a plan for 200 designated Commonwealth air officers to escape through the 336-foot-long tunnel code-named "Harry". As dawn broke on March 25, however, German guards outside the compound spotted prisoners emerging from the exit hole that came up just shy of the woods, and set off the alarm. Only 80 of the airmen (including 9 Canadians) managed to get out of the tunnel, and of those, 76 managed to escape into the darkness of the surrounding pine forest. Over the next few days, all but three of the escapees were captured. In a rage over the incident, Hitler called for the execution of all the escapers. After the POWs recapture, imprisonment, and interrogation, many of the officers were taken out and shot in twos and threes by Gestapo death squads. In total, the Gestapo covertly and illegally murdered fifty Commonwealth air officers (the perpetrators claiming the prisoners were shot while attempting to escape custody). Their bodies were cremated and buried in a remote corner of the Stalag grounds to hide the truth. Six of the dead were Canadians. Twenty-three of the escapers were returned to the prison camp. Only three escapers were successful in getting away and returning to their home countries. Although the escape did not succeed, it did divert tens of thousands of Germans away from the war effort as armed troops, SS forces, police, Hitler Youth, and Home Guard defences were mobilized in searching for the escapees.^{E, 3G, 4I, 6D}

A twist of fate would save Wally Floody, the "Tunnel King". Several weeks before the big breakout, Floody, along with several other "top suspects" were transferred by the suspicious Germans to another camp. Floody would survive the war, though he was not liberated until several weeks after VE Day, when the Soviets exchanged him for Russian POWs the Americans had liberated. After the war Wally Floody was awarded the Order of the British

Empire; gave evidence at the Nuremberg Trials; founded the RCAF Prisoners of War Association; and later became a technical advisor on the film set of *"The Great Escape"*.

Sarnia's POW's: In late October 1944, as part of a drive to encourage citizens to purchase Victory Bonds, the *Canadian (Sarnia) Observer* carried a full page advertisement with the headline, "HELP BRING THESE BOYS HOME." The advertisement contained the photos and names of, "Some of the Lambton Boys who are in POW camps." The Sarnia/Lambton POWs included were Pte. Malcolm Moloy (taken prisoner in the Dieppe Raid, August 19, 1942); Sapper Charles M. Blondin (taken prisoner in the Dieppe Raid, August 19, 1942); Flying Officer Gene Atyeo, R.C.A.F. (taken prisoner between August and September, 1944); Cpl. Robert A. Zink (taken prisoner between July and September, 1944); Sapper Alvin James Archer (taken prisoner in the Dieppe Raid, August 19, 1942); Sgt. Robert H. Hammett, R.C.A.F. (taken prisoner about August 1943); Flight Sgt. John D. (Bunt) Murray, R.C.A.F. (shot down over Norway in April 1942); Lance Bombardier Norris A. Demeray (taken prisoner after the Dieppe Raid, August 1942); Lieut. Arthur M. Hueston (taken prisoner following the Dieppe Raid, August 1942); Sapper Jack L. Date (prisoner of war since the Dieppe Raid, August 1942); Lieut. Neal Watson (taken prisoner during the Dieppe Raid, August 1942); Flight Sergeant Joseph J. Barr, R.C.A.F. (taken prisoner between April and May, 1944); Leslie Harris, Merchant Marine (taken prisoner from Imperial Oil Tanker, March 1941); and Flight Lt. George Wm. Gardiner of Petrolia (taken prisoner between July and August, 1944).

Letter to a POW: For the families at home, having spouses, siblings, or children behind barbed wire in a prisoner of war camp caused a perpetual state of worry and stress. The following is a letter written in January 1942 by a Vancouver mother to her son, Jack Rose, a prisoner, who had been captured in the Battle of Hong Kong. At the insistence of the Japanese censors, she wrote in block letters;

MY DARLING SON JACK,

SO FAR WE HAVE RECEIVED NO LETTER FROM YOU. I DO HOPE THAT YOU ARE RECEIVING OUR LETTERS. DARLING I HOPE YOU ARE WELL AND IN GOOD SPIRITS. I PRAY FOR YOU EVERY NIGHT, MY DARLING YOU ARE NEVER OUT OF MY THOUGHTS. I SOMETIMES FEEL THAT I CAN'T GO ON ANY MORE BUT I AM GOING TO CARRY ON & HAVE ONLY ONE THOUGHT IN MIND TO SEE YOU AGAIN. DARLING HOW I WILL TAKE CARE OF YOU WHEN YOU COME HOME. FOR MY SAKE KEEP YOUR CHIN UP. SAY YOUR PRAYERS EVERY NIGHT. DARLING I AM GOING THROUGH IT WITH YOU. EVERY ONE KEEPS ASKING ABOUT YOU. MAY GOD BLESS YOU & TAKE CARE OF YOU. I AM SURE HE WILL HEAR MY PRAYERS. I AM PRAYING FOR A LETTER SOON. DARLING I LOVE YOU SO MUCH THAT IT HURTS.

MOTHER

Jack Rose would endure almost four years of severe maltreatment during his captivity as a prisoner of war under the Japanese military. He would survive the war and return to Canada. Though the maltreatment by the Japanese soldiers made him experience nightmares for decades and Post Traumatic Syndrome Depression, he would marry and have three children. He would go on to be an earnest supporter of the Japanese Canadian Redress movement – working to rectify wartime human rights injustices inflicted on Japanese Canadians by the Canadian government. Though his support broke ranks from other surviving POW's, he was committed to fight racism in order to make Canada a better country.^{7A}

Prisoners at the end: The Canadians who became POWs in Asia faced an extremely harsh ordeal. The vast majority of them were captured in the Battle of Hong Kong in late 1941, so would suffer as POWs for nearly four years. The Japanese camps were often run with great brutality, with prisoners enduring abuse, torture and execution at the hands of the cruel Japanese prison guards. The food rations provided for the prisoners were particularly meagre, resulting in malnourishment and starvation. Many Canadian POWs would be forced to toil in mines and shipyards in Japan, where working conditions were terrible. Medical studies conducted years after the war ended, proved that most of the Hong Kong veterans endured lifelong illnesses, went blind at an early age, and died prematurely young, their malnourished and disease-ridden bodies never able to fully recover from the wartime ordeal.⁴¹

In Germany, the conditions in these POW camps were difficult but, for the most part, many prisoners of the German camps had adequate food and were treated relatively humanely, in accordance with the Geneva Convention. There was one group of Canadian prisoners who had a very different experience than most. These were the 26 Canadian airmen who, along with 142 other British, American, Australian and New Zealand airmen, spent several months in Buchenwald Concentration Camp in eastern Germany in the summer and fall of 1944. While in Buchenwald, they experienced inhuman conditions, including starvation, disease and the constant threatening

presence of cruel guards. Buchenwald was a "death camp," used by the Nazis to systematically murder those they wanted eliminated. The Allied airmen imprisoned there would often see the piles of corpses stacked up, awaiting the crematorium. More than 250,000 people were held captive in the camp between 1937 and 1945, with more than 50,000 of them losing their lives there. In October 1944, the Allied airmen would be transferred to a regular German POW camp for downed airmen.

For the rest of the Canadian POWs in German camps, as the war continued and Nazi Germany began to collapse under the Allied onslaught, prisoners behind barbed wire were in a desperate situation. By the last full year of the war, almost all the prisoners were suffering from systemic malnutrition. The Germany economy was crippled and Allied bombing of transportation lines disrupted Red Cross package deliveries. Prisoners' rations were cut significantly, usually to less than 750 calories a day, about one quarter of the requirement for adult males. By early 1945, the German POW system collapsed—the hundreds of thousands of prisoners became a tremendous burden. With the Russians advancing in the east, the order went out from Berlin to begin a **forced march** of prisoners to the west.^{D, 2N, 4A, 4I}

Wasted prisoners, almost all of them inadequately dressed, were hounded under the threat of execution through the snow drifts and freezing conditions, allowed to stop only at night in barns. Often not fed for days on end, the long parade of starving prisoners shared the road with thousands of refugees and starving civilians. A Canadian airman recounted a memory from his march; *"One day in a severe snowstorm, ... we passed a convoy of German soldiers moving westward. Their personal equipment was being hauled in larger wooden wagons pulled by Hungarian and Russian women. We tried to share with them some of the food we had, but one of the guards smashed his rifle into the face of one of the women who accepted a piece of bread. That stopped our philanthropy... One woman, wearing sacking on her feet and wrapped in a ragged blanket, shouted to us as she passed – 'Courage, Englander.'"* During the Canadian airman's fifty-one days of marching some 650 kilometres with little food, he often thought of that brave woman who had offered him solace. He was determined *"to be no less courageous."*^{4I}

The "death march" pushed the already battered prisoners to the brink of survival. They were lice-ridden and diseased, with bloodied and blistered feet, malnourished with gnawing hunger, and frostbite ate into their extremities. The Canadians banded together to aid the helpless. Those who could no longer walk were carried by mates or put on makeshift sleighs. There was little sympathy for the prisoners at the highest levels of the Nazi command. After the unyielding bombardment of German cities in early 1945, a raging Hitler considered executing thousands of Allied prisoners in retaliation. He was talked out of it. In the last weeks of April 1945, the German guards overseeing the prisoners disappeared. They did not want to be around when the prisoners gained access to guns. Most of the Canadians were liberated in late April or early May 1945. Had the war gone on a few more weeks, it is likely that large numbers of prisoners would have succumbed to starvation or disease.

In all theatres, 9,724 Canadians became prisoners of war (including 1,685 captured at Hong Kong, and 1,946 who were captured at Dieppe). Airmen made up 2,475 of the prisoners (25%), the navy claimed 98 (1%), and the rest were from the army (74%). Some men spent more of the war behind barbed wire than in combat, and hundreds of Canadian POWs lost their lives while in captivity. The experiences of Canadian POWs were difficult, and, sometimes deadly – but all were left with the lasting emotional impact of their harsh experiences. Once home, their experiences as a prisoner were very difficult for civilians to understand, which further made the transition to "normal" life difficult for many. The efforts of all these Canadians helped ensure that victory in the Second World War was achieved.^{D, 4A, 4I}

Two Sarnia POW stories: In mid-February 1945, the *Canadian (Sarnia) Observer* featured the story of **Lieutenant Neal Watson**, the first local man captured at Dieppe to return to Sarnia. After four years away from Sarnia, including two and one-half years in a German prison camp, Neal was first greeted by his parents, Mr. and Mrs. Harry J. Watson, 339 ½ North Christina Street at the Brantford train station. When Neal and his parents arrived at the Sarnia train station, they were greeted by family members, a crowd of welcomers, and the skirl of the bagpipes, as played by Pipe-Major James Stewart, an 80-year-old veteran of the Boer War and the First World War. Once home, despite the ever-present worry about censorship regulations, Neal Watson spoke of his experiences.

He had enlisted in July 1940 and had gone overseas in February 1941 with the rank of lieutenant with the Essex Scottish Regiment of Windsor. Then in December 1941 he had started special battle training in England in preparation for the Dieppe raid. Leaving Britain before midnight on August 18, 1942 and assaulting the beach at Dieppe about 5:20 a.m. the next day, Neal Watson was among the first ashore, crossing the barbed wire and reaching

the seawall before the Nazi defenders opened devastating fire upon those who followed. After hiding below the seawall and being under fire for eight hours, he was taken prisoner about noon on August 19. Watson would spend most of his imprisonment at Oflag VIIB, an officers' camp near Munich, Germany. Eventually, Neal would be repatriated in an exchange of Allied and German prisoners of war in Switzerland. Neal Watson also brought good news of other Sarnians who were still prisoners of war in Germany, specifically, Lieut. Arthur M. Hueston and Lieut. Thomas B. Doherty. He described life in the prison camp as "not ideal"; however, the strictly curtailed food rations were adequate and the German doctors were among the few Nazis he had a good word for. Neal added that the Red Cross parcels, the cigarettes from Sarnia, and the gifts from various churches made life easier for him and all the prisoners.

In late May 1945, **Lieut. Arthur Hueston** had returned to Sarnia. Hueston was a platoon commander in the Essex Scottish Regiment, who was also taken prisoner at Dieppe in August, 1942. Hueston was released in late April of 1945 when the 47th Tank Battalion of the United States Army overran Moosburg prison camp where he was held. Hueston had been in Oflag VIIB, where most of the Canadian officers from Dieppe were imprisoned, but was moved to Moosburg late in the war. Around 2,000 Allied prisoners were marched from Oflag VIIB to Moosburg after American forces advanced across the Rhine. More information on Lt. Arthur Hueston is on page 461. The following are portions of Lieut. Hueston's description of his experiences:

Our column was scarcely out of the compound when it was strafed by Allied fighter bombers. Twelve soldiers were killed and 39 were wounded... The march was continued under cover of darkness to Moosburg, the distance was 80 miles... Moosburg was a frightful camp with about 110,000 prisoners of all nationalities packed into a small area. Some lived in tents, others in lousy barrack huts with one tap to 250 men. It was almost impossible to wash or shave. Most prisoners lived in their clothes all the time. German rations consisted largely of rotten potatoes, mouldy black bread and turnips fit for cattle. One man could carry on his shoulder the weekly issue for 2,000 prisoners. Minute quantities of margarine and sugar were provided, along with turnip-pulp jam usually so full of maggots even hungry prisoners could not stomach it. In summer we had one blanket as thin as a handkerchief, in winter, we were promised another but it didn't arrive until mid-winter. Fuel was always so scarce that we spent most of the day breaking up furniture for the fire. In winter, we were given enough coal to boil five cups of tea per man a day, but in summer, there was no coal. Most of the books we received from Canada ultimately found their way into the smokeless heaters.

The prisoners at Moosburg watched the three-hour battle that liberated their camp until they had to take cover; *We watched the whole show until we noticed bullet holes in the tents. Then we decided it was time to get out of the way.*

Note: Another Sarnian, **Corporal Jack Graham**, was captured at Dieppe. His story is in this Project on page 724.

• **THE LONG LEFT FLANK**, northern France/Belgium, late August – early October, 1944: After their breakout from Normandy in late August 1944, Allied forces advanced rapidly across France and into Belgium, and soon were nearing Germany. The Canadians were given the less glamorous but vital tasks of clearing coastal areas in the north of France and Belgium, opening the English Channel ports for supplies essential to the Allied advance; and capturing the launching sites of German V-1 rockets to put an end to their attacks on southern England.

British Army Field Marshal Bernard Montgomery and Supreme Headquarters Allied Expeditionary Force General Dwight D. Eisenhower wanted the French ports opened, but they could not fully supply First Canadian Army while providing sufficient materiel for the upcoming Operation Market Garden. So First Canadian Army was put on a strict ammunition and fuel diet. As a result, the Canadians nicknamed themselves the **Cinderella Army**—not only undersupplied but given the dangerous siege warfare and unglamorous port-clearing task while British and American troops swanned in the limelight toward Germany. The First Canadian Army (that included two Canadian infantry divisions, a Canadian armoured division, a British Corps and a Polish armoured division) would also play a leading role in opening the Scheldt estuary (tidal river), gateway to the Belgian port of Antwerp.

The First Canadian Army, fighting on the left flank of the Allied forces, pushed rapidly eastward through France towards Belgium. Despite moving forward, the Canadians were reminded on August 25 that they were far from the campaign's centre of gravity, as Paris was liberated by French and American troops to worldwide celebration. In late August the Canadians surged forward in a series of stop-and-start advances, including three days of fierce fighting cleaning up a pocket of stiff resistance in the forest of the Londe, crossing the Seine and reaching **Rouen** on August 30th. The skirmishes and shoot-outs resulted in hundreds of casualties due to enemy mines, shells, and bullets. The Germans were determined to hold the Channel ports at all costs. These coastal fortresses were built

around hardened positions of concrete steel and defended by seaward naval guns as part of Hitler's Atlantic Wall. They had been heavily fortified with concrete gun bunkers, minefields and anti-tank defences; artillery, mortars and machine guns were well-sited; and the German defenders had resolved not to surrender. In order to achieve their objectives, Canadian divisions were split up and spread over a battlefield that ranged for more than 100 kilometres.

On September 1, 1944, the 2nd Canadian Infantry Division were welcomed into **Dieppe**, where hundreds of Canadians had been killed two years earlier. Regiments that fought in the disastrous raid in 1942 were now given the privilege of liberating it. Only three hundred survivors of the Dieppe attack were there; most of the five thousand Canadians who took part in the raid had been killed, wounded, or taken prisoner.^{7Q} The liberators were greeted with wild cheering, waving flags, singing of songs including "The Maple Leaf Forever," bottles of wine and flowers. A Canadian Major wrote, "*Mothers held their children high to catch a glimpse of the heroes from Canada.*" Following is a portion of a letter written by a Canadian officer to his family on September 2; "*I cannot possibly convey the cumulative effect of passing for hours through a liberated countryside... the population, free once more, welcoming the oncoming troops with smiles and flowers and the V-sign... The scene in a liberated town is quite extraordinary. The place, of course, is festooned with flags... Everyone seems to be in the street, and no one ever seems to tire of waving to the troops passing in their vehicles, who likewise never tire of waving back (particularly at the female population). The young people wave and laugh and shout; the children yell and wave flags; the mothers hold up their babies to see the troops, and wave their little paws too; the old people stand by the roadside and look happy; and the Army rolls through...*" On September 3, the Canadians held a ceremony to honour the memory of their fallen comrades from August 19, 1942. By September 7, 1944, the port installations had been restored and the first supply vessel docked.

Canadian forces were involved in a miserable siege from September 6-14, against the heavily fortified port city of **Dunkirk**. To make matters worse, it seemed to rain constantly throughout the first weeks of September, making the ground sodden and muddy. The 10,000 German defenders blasted the outnumbered and outgunned Canadians, forcing them to dig into the muck. When the front was handed over to British troops on the 14th, Allied Command decided to simply starve out the garrison. This meant that the Dunkirk port facilities were denied to the Allies, with the Germans occupying them until May 9, 1945, one day after Germany surrendered.

After the fall of the port of **Le Havre** led by British Corps on September 12, the Canadians began their assault on the port city of **Boulogne**, a 10,000-man garrison bristling with gun emplacements, pillboxes, bunkers and minefields, and sheltered by thick concrete and steel. After days of intensive artillery bombardment and air raids, the Canadian infantry launched their advance on September 17, hugging an artillery barrage, facing a dug-in enemy that outnumbered them. One Canadian officer commented, almost in tears, "*It was inspiring and awe-inspiring to watch the attacking companies, like ants, moving up the slope under heavy fire and over mines. With every puff of smoke and dirt you wondered what fellow had got it.*" The battle would rage for six days until the remaining German soldiers surrendered on September 22nd. The six-day battle ended with 9,517 prisoners taken. Allied casualties numbered 634, including 462 Canadians killed or wounded.

The Canadians continued to move onward in a series of battles against coastal batteries until reaching the fortress of **Calais**. Behind low-lying marsh barriers, the German defensive network bristled with concrete pillboxes, minefields, wire obstacles, anti-tank guns and infantry posts. The German guns there had spent much of the war hurling 2,000-pound shells across the English Channel. After eight days, the Canadians finally overwhelmed the garrison of 7,520 who defended the town, with combined air bombardments, artillery fire and the infantry fighting their way forward metre by metre, falling on October 1. Some 20,000 civilians were safely evacuated, about 7,500 Germans were taken prisoner, and Canadian casualties were less than 300.^{D, E, 3F, 4I}

The taking of Dieppe, Le Havre, Boulogne and Calais did virtually nothing to ease the Allied supply problems. The ports were too small or too damaged to make any difference. Operations continued up the coast, past the French-Belgian border, through Belgium and towards the Netherlands.

As the Canadian and British troops pressed north, they overran flying-bomb sites housing the feared **V-1 Flying Bombs** (the first cruise missiles). The Germans launched the first V-1 ("Vengeance weapon") at London on June 13, 1944, one week after the Allied landings in Europe. These pilotless flying bombs packed with explosives were designed to fly above targets in Britain, run out of fuel, fall from the sky, and detonate on impact. The Germans would fire over 9,500 V-1's (referred to as 'Buzz bombs' or 'Doodlebugs' by Londoners), and over 5,000 of the later **V-2 Rockets** at England. The bombs rained terror down on London and southern England for months, killing over

8,000 civilians and injuring another 22,000 in the rocket bombardments. As the launch sites were overrun by Allied forces, the V-1s were directed at the port of Antwerp and other targets in Belgium. Destroying the V-1's was another Allied strategic objective success.

At least six Sarnians, all army, lost their lives while fighting along the "long left flank" in northern France and Belgium during September of 1944, including: James Banks, Charles Berry, Joseph Fisher, Jens Carlo Jensen, Robert Ramsay and Ernest Russell.

Operation Market Garden, September 17 – 25, 1944: The Second British Army had captured the port of Antwerp, Holland with all its facilities virtually intact on September 4, 1944. Unfortunately, the Scheldt Estuary—45 miles of waterways leading to Antwerp—remained in German hands. *Operation Market Garden* mission's objective was to capture the eight bridges that spanned the network of canals and rivers on the Dutch/German border. The plan, devised by British Field Marshal Bernard Montgomery, consisted of two operations: "Market" – airborne forces tasked with seizing bridges and other terrain; and "Garden" – British ground forces tasked with moving northward. *Operation Market Garden* would have allowed for a rapid advance of British Second Army troops and armoured units over the Lower Rhine and into Northern Germany, bypassing the fabled Siegfried defensive line. If all carried out as planned, it should have ended the war by Christmas 1944.

The Operation began on September 17, 1944, when three British and American airborne divisions descended from the sky by parachute drops and glider landings, along with a brigade of Polish parachute troops, landing behind enemy lines, in daylight, at Eindhoven, Nijmegen and Arnhem in Holland. It was the largest airborne operation up to that time. Several bridges between Eindhoven and Nijmegen were captured at the beginning of the operation. Allied paratroopers—naturally lightly armed and armoured—wound up going against crack German troops with tanks and machine gun support. The operation failed at a bridge over the Rhine River at Arnhem, '**a bridge too far**', where British forces encountered far stronger resistance than anticipated. By September 20, the bridge at Arnhem could no longer be defended, and the remaining British forces, with dwindling supplies, sought refuge within the town itself. Once German tanks and troops moved into the town, the British were taken prisoners or killed in house-to-house fighting. On September 25, small assault boats manned by British and Royal Canadian Engineers were used to evacuate whatever battered troops they could out of the area, across the Neder Rhine, running the gauntlet of mortar and shellfire. They saved hundreds of paratroopers from death or imprisonment.

Of a total force of 35,000 Allied soldiers involved in Operation Market Garden, 1,400+ were killed and more than 6,000 were taken prisoner. One of those killed during operation "Market" had a Sarnia connection and is included in this Project. Squadron Leader-Pilot Robert Alexander of RCAF #437 (Transport) Husky Squadron was aboard Dakota III aircraft KG387 dropping supplies to paratroopers at Arnhem when his aircraft was shot down on September 21, 1944.

Any hope for a speedy end to the war appeared to be dashed. Capturing a major port now became a top priority as establishing adequate supply lines for the winter now became of paramount importance. The confusion of *Operation Market Garden* had also resulted in tens of thousands of German troops moving into the Scheldt area. It would be here that the First Canadian Army would have to fight to capture the much-needed port.

Arnhem bridge, the 'bridge too far', was eventually destroyed by American bombers in a raid on October 7th, 1944, in an effort to deny German use of the route. In 1948, it was rebuilt and named the "John Frost Bridge" in honor of the British commander who unsuccessfully held it. ^{D, E, 4A, 4I, 11D}

• **THE BATTLE OF THE SCHELDT**, Northern Belgium and the Netherlands, October 1 – November 8, 1944: This battle was the beginning of the Liberation of the Netherlands. In early September 1944, British forces and the Belgian Resistance had captured the inland port of **Antwerp**, Belgium at the mouth of the Scheldt River. The Belgian resistance had prevented the Germans from destroying the massive protective locks before they pulled out, so Antwerp was taken virtually intact. Antwerp was the second greatest port in Europe – its 50 kilometres of docks, along with quays, warehouses, hydraulic and electric fixed and floating cranes, grain elevators, and established railway facilities was an ideal landing ground for supplies for the continuing war effort, nearly 1000 ships could berth at its docks. Access to this port was vitally important to supply Allied armies in their drive for victory in Western Europe following D-Day.

However, Germans occupiers, dug in on the outskirts of the city, still controlled the 45-mile-long **Scheldt Estuary** (tidal river) that connected the port of Antwerp to the North Sea. The Germans, under express orders from

Hitler to hold the Scheldt, reinforced their men, planted thousands of mines in the waterway, and prepared to defend every metre of the estuary. As long as the Germans held control of the sea approaches and the long winding estuary, Allied shipping to the port would be impossible. The mere occupation of Antwerp was not enough—all the lands surrounding the Scheldt would have to be cleared of German troops, and its waters cleared of mines. The task of liberating the Scheldt estuary was entrusted to the First Canadian Army.

The Scheldt estuary was made up of the interconnected areas of the South Beveland Peninsula, the Breskens Pocket as well as the island of Walcheren that commanded the river's mouth. Located in the Belgian-Dutch border area, this is a region of polders, low-lying fields conquered over the sea and bordered by a network of dykes and canals. The roads are built on top of the four- or five-metre high dykes. In this totally flat and wet countryside, no one could move without being spotted. The German forces, highly trained, well-fortified and heavily entrenched, had flooded the whole area by blowing up the dykes that held back the North Sea. On every battlefield, the Germans could wait for the attacking Canadians to come at them over open and often flooded ground that was heavily mined. The Canadians would spearhead the operation in four phases.

In the first phase, beginning on October 2, the objective was to clear the area north of Antwerp. The 2nd Canadian Infantry Division advanced through stiff and well-entrenched resistance that were on higher ground, to clear the area up to the access route of the South Beveland peninsula. Casualties were heavy as the Canadians attacked over open, flooded polder land—a quagmire made worse by driving rain, booby traps and mines. On October 13th, on what would come to be known as “**Black Friday**”, the Canadian 5th Infantry Brigade’s Black Watch Battalion was decimated for a second time within four months, losing 145 men and all its commanders in an especially violent and merciless engagement. On October 16, as the Allied artillery brought down a heavy concentration of fire within metres of the Canadian troops, the Germans fell back and the town of Woensdrecht—the first objective, was secured.

The 4th Canadian Armoured Division continued to push north clearing a number of Belgian towns, then into the Netherlands to liberate **Bergen-op-Zoom** on October 24. The high cost of these battles is starkly evident in two large Commonwealth War Graves cemeteries near the city, one of which, Bergen-op-Zoom Canadian War Cemetery, contains 1,087 dead, most of whom are Canadian, including three Sarnians; Robert Alexander, Robert Dionne and George Esser.

In the second phase, **Operation Switchback**, in a two-pronged assault, the 3rd Canadian Infantry Division and 4th Canadian Armoured Division battled a tenacious resistance along the Scheldt Estuary’s southern shore, in what was called the **Breskens Pocket**. Beginning on October 6, backed by extensive artillery support and “Wasps” (tanks equipped with flame-throwers), the Canadians crossed the Leopold Canal. Under constant small-arms and shell fire, the Canadians spent every day digging into the ground, their slit trenches filling up with water before they had dug even a metre into the mulch. With Spitfire and Typhoon fighter bombers support overhead, and the use of tracked amphibious troop carriers nicknamed “Terrapins” and “Buffaloes”, the infantry battled forward clearing the flooded farmland of the Breskens Pocket by November 3. A Canadian infantryman wrote, “*Heavy casualties were suffered by both sides... and the ground was littered with both German and Canadian dead.*”

In the third phase, **Operation Vitality**, the objective was to clear the area north of the Scheldt Estuary, known as **South Beveland**. Beginning on October 24, the 2nd Canadian Infantry Division advanced north to the village of Woensdrecht, then west across a narrow isthmus to take South Beveland Peninsula. Mud, mines, and strong enemy resistance dashed hopes of a quick advance, and the Beveland Canal—bisecting the peninsula—proved to be a major obstacle. The advance was another case of too few men asked to do too difficult a job against a well-dug-in enemy especially skilled at defence. An amphibious landing by British forces behind the canal defenses helped the Canadian advance. Once positions on the Beveland Canal were cleared, German resistance on South Beveland collapsed and remnants of the German forces there withdrew to Walcheren Island by November 2.

In the fourth phase, **Operation Infatuate**, the last objective was to clear **Walcheren Island** and its coastal batteries. It remained the one great obstacle to the use of the port of Antwerp. Its defences were extremely strong and the only land approach was a long narrow causeway that ran over saltmarshes and mud flats, 1.2-kilometres long and 40-metres wide, from South Beveland. Both ends of the causeway were blocked with concrete bunkers and barbed wire, and all of the German mortars and artillery guns were focused in on the narrow bridge. To make matters worse, the flats that surrounded the causeway were too saturated for movement on foot while at the same time there was not enough water for an assault in storm boats.

The attack on Walcheren Island included an initial heavy RAF bombing to breach the island's dykes, which submerged much of the island. Three different attacks would be launched on the island beginning in late October. The 2nd Canadian Infantry Division were tasked with advancing across the only land approach, the narrow causeway, in what was planned as a lightning move from the east. British forces planned amphibious operations from the south and west.

For the Canadians, beginning on October 31, it would take a grim 3-day struggle to establish a precarious foothold on the island. The futile frontal assault across the narrow causeway resulted in many casualties. It turned out to be only a diversion to attract the Germans from the amphibious operations by British forces taking place elsewhere on the island beginning on November 1.

By November 8, Walcheren Island fell to the Allied forces, and the Battle of the Scheldt came to a close. Allied minesweepers had already begun clearing the West Scheldt, and three weeks later, the first convoys carrying war supplies entered Antwerp. The first ship to arrive as part of a convoy on November 28, by chance, was the Canadian-built *Fort Catarqui*. In Antwerp, she was given a ceremonial greeting: there were bands, national anthems, representatives of both Eisenhower's and Montgomery's headquarters, the American and British port authorities and the Belgian government and army. There was one oversight—no one had thought to invite a representative of the First Canadian Army that had made it all possible.

Under Hellfire: Dr. Joseph Greenblatt, a Lieutenant from Ottawa, was part of a field ambulance unit serving an artillery regiment of the 3rd Canadian Division. His unit accompanied the Division as it advanced through France, Belgium and into the Netherlands, where his field ambulance unit faced heavy shellfire. Following is a portion of a letter he wrote to Fran, his fiancée:

Hello my Dearest,

... Remember in the second last letter I told you that I had some rather horrific experiences just lately. Well about three nights ago I had the climax of the whole show. For some reason or other Jerry decided my position was the most important target in this whole area & therefore from 9:30 p.m. to 6:30 a.m. every three to five minutes he dropped one in a radius of 50 yards from my position. He scored four direct hits on the house in which I was sleeping & shook me up no end & then dropped two on the barn I used for working in. Naturally he caused casualties amongst my boys – one killed and five wounded – but what was the worst thing is that in the middle of all this one had to stand up all the time & work in the middle of all this. I could hear the boom of the gun in the distance then you would wait for two seconds & then the shriek of the shell coming in your direction would freeze your blood. The inclination was of course to duck under cover & you would look at the patient lying so helpless & terrified on the stretcher seeking protection & fortitude from you & you knew you couldn't leave him. So you worked as quickly as you could & tried to pacify the poor defenceless bloke all the time those horrid missiles would come at you. I don't think I'll forget that night – it lasted for a year of time...

Dr. Greenblatt would take his field ambulance on to Germany, survive the war and return home to marry Fran.^{7A}

Sacrifices of the “Water Rats”: Led by the First Canadian Army, the Allies had pushed into northern Belgium and southwestern Netherlands beginning on October 1, 1944 continuing until November 8th, 1944. The Battle of the Scheldt was among the most difficult and grueling struggles in the war. For the Canadians, since D-Day, the infantry battalions had been gutted, with high casualty rates and a steady loss of experienced men, which were far beyond the projected rates. The bitter fighting took place in a bleak environment made worse by the wet and winter cold, in a flooded and freezing muddy quagmire. Yet the gritty Canadians continued to fight on, playing a crucial role in the coalition warfare, and delivering victory. The under-strength and less-experienced Canadians who participated in the battle earned the nickname “**water-rats**,” bestowed upon them by British Field Marshal Montgomery, since they were often in miserably wet conditions.

A Canadian infantryman described his memories of fighting in the Scheldt; “*There were days of bright sunshine during the Scheldt battles, usually after morning mist and fog, but these have been forgotten. The abiding memory is of grey skies, rain, fog, bone-chilling dampness, boots, battledress and blankets soaking wet, cold food, matches that wouldn't light, the soldier's weariness that is as much fear as lack of sleep, and everywhere, mud and water.*” British war correspondent R.W. Thompson described the scene as the 2nd Canadian Division drove toward the enemy, “*The wind-driven rain seemed to join the dark evil sky to the dark evil land, so that the small space they had won resembled the inside of a tureen squelching with mud and water like some foul stew. Even the dikes had been crushed and churned into the gray muck of the featureless wilderness. There were no fires. There was no rest. Men lived and died and slept always wet and caked with ooze. The Germans had mined and booby-trapped their*

dead. The bloated bodies in the mud of the polders and the dark waters of the dikes had proved as dangerous dead as alive. Bodies exploded at a touch to destroy men in their rare moments of compassion.” D, E, 2I, 3F, 4A, 4I, 6F, 6Z

The Battle for the Scheldt ended in Allied victory, but the cost was high. The Canadians suffered more than 6,300 casualties including more than 800 killed. At least twelve young men from Sarnia gave their lives in the Battle of the Scheldt including; Robert Alexander (RCAF, in *Operation Market Garden*), Robert Dionne, John Esselment, George Esser, Clifford Hebner, Francis Jarvo, Gerald Kelly, Charles McIsaac, Ernest Ottaway, Walter Totten, Wilford Walker (Battle of Kapelsche Veer in January 1945), and Richard Wilson. These Sarnians are buried in the Belgium cemeteries; Adegem Canadian War Cemetery – Esselment, Kelly, Ottaway, and Totten (and Jens Jensen, killed one month earlier during fighting along the long left flank); and Schoonselhof Cemetery, Antwerp – Hebner, Jarvo and McIsaac (and T. Elliott, killed April 1944, Bomber Command); the Dutch Bergen-op-Zoom Canadian War Cemetery - Alexander, Dionne and Esser; the Dutch Groesbeek Canadian War Cemetery – Walker (and 11 other Sarnians); and the Dutch Groesbeek Memorial – R. Wilson.

• **NIJMEGEN WINTER:** After the Battle of the Scheldt, the First Canadian Army was put into reserve. Over that winter of 1944-1945, most of the weary Canadians were given a rest, although the front was never quiet, with patrols and large-scale raids remaining constant. Canadian troops were stationed along the Nijmegen sector in the Netherlands, the area fought over during Operation Market Garden in September. The Canadians were to hold and defend the Nijmegen salient and a small piece of Allied-held territory north of the Maas River, across the Nijmegen bridge, known as “the island.” This bridgehead would be used as a starting point for crossing the Rhine, and they had to give the enemy the impression that an assault was imminent to force it to leave troops in that area.

The Germans did their best to push the Canadians out of “the island”, by flooding the area and constantly harassing them with mortar fire, artillery and aggressive patrols. Constantly vigilant, the Canadians dug deep slit trenches, covered them with whatever was handy, and tried to keep warm from the snow and cold, in one of the coldest winters on record in northern Europe. During this supposedly quiet period, as they experienced their sixth Christmas of the war, between November 9 and December 31, 1944, approximately 1,239 Canadians were killed or wounded.^{3F, 4I, 6Z}

In the five months after Normandy 1944, Canadian infantry units had been devastated in the constant fighting, and were at skeleton levels, with those shortages carrying over into 1945. Men had been killed in action, or evacuated after being wounded, others were made prisoners by the enemy, and others suffered battle exhaustion under the constant stress of ever-present death, facing mortars, shells and bullets every day. A Canadian Private described the composition of his ever-shifting battalion in the final four months of the war: “*In my platoon, which was always under strength – 18 or 20, instead of 33-35 – the most common age was 19 or 20... Our NCOs (corporals, sergeants, and company sergeant major) might have been 22-26 years old. Our officers were not much older – 23 and up. I recall how shocked I was to discover that one of my heroes, a captain, was only 23. I, at 19, always thought of him as a very senior adult.*” Of his comrades, he said, “*Many were farm boys, strong, tough, used to hard work and hardship, loyal to one another, with no high expectation of their life ahead.*” Impressed with his officers, he noted, “*They were involved in the front lines of battle as were we. They led, they fought, they endured the same shit, mud, lack of sleep, danger, irregular food and casualties of the men they commanded.*”^{4I}

The Battle of the Bulge (December 16, 1944 – January 25, 1945): In mid-December, Hitler ordered a last-ditch offensive in the Ardennes Forest region in Belgium, France and Luxembourg. He gambled that his troops could cut deep into Allied territory, retake Brussels and Antwerp and create a serious setback in the Allied cause. The Germans called the attack “Autumn Fog”; the Americans dubbed it the “Battle of the Bulge”. Hitler believed that his forces would be able to surround and cut off Canada’s First Army, America’s First and Ninth Armies and Britain’s Second Army. The massive surprise attack caught the Allied forces completely off guard, and the enemy achieved some initial successes. However, the German fuel and supply lines could not meet the demands at the front, and the weather cleared to allow for Allied air support. With United States forces bearing the brunt of the fighting, this last major offensive by the Germans was defeated, and they were pushed back to their initial positions. Approximately 55,000 troops of the British Army, including the 1st Canadian Parachute Battalion participated in the Ardennes battle. For the 600,000 American troops involved, it was one of the largest and bloodiest battles fought in the Second World War. The Germans were left severely depleted of men and equipment, as the survivors retreated to the defenses of the Siegfried Line.

- **THE BATTLE OF THE RHINELAND**, Germany, February 8 – March 10, 1945: In February 1945, the Allies launched a great offensive which was designed to drive the Germans eastward back over the Rhine River, the last significant natural barrier between Allied forces and Germany. There were to be two formidable thrusts: the First Canadian Army would leave the Nijmegen salient and drive southeast to clear the narrow strip of land between the Rhine River and the Maas River; while the Ninth U.S. Army, would drive northeast and converge with the Canadians on the Rhine in the town of Xanten. Xanten was the key to the Rhine crossings at Wesel.

The First Canadian Army, under the command of General Harry Crerar, was strengthened by the addition of Allied formations, including British, Dutch, Belgian and Polish units, making it the largest force ever commanded by a Canadian. Enemy defences were well prepared, with anti-tank ditches, minefields, networks of trenches and fortified positions, as they had four months to improve their defences to prevent the invasion into Germany. Winter rains and thaw had turned the ground into a thick muddy quagmire. Rain and grey skies covered the battlefield and this limited the air support that could be provided. For the first time, fighting was to take place on German soil and a fierce opposition was expected.

The first phase, known as **Operation Veritable**, was a two-prong attack launched by three British divisions and the 3rd Canadian Infantry Division on February 8, 1945. The attack was preceded by a crushing air and artillery attack on enemy positions, including a “pepper-pot” barrage—mortars, machine guns, tanks, anti-aircraft guns and rockets—supplementing the field guns.

The Canadians advanced from the Nijmegen salient through the flooded fields on the left flank known as the Waal Flats. Canadian divisions played a small but vital role in *Veritable*. Destroyed dykes flooded the area and hampered the advance and at times troops had to flounder through water three feet deep. The advance was slow; engagement ranges were short; and the few dry roads, which were mined, became natural killing grounds as troops were channelled along them. Engineers threw down Bailey bridges (portable, pre-fab truss bridges) to span impassable fields. The Canadian “water rats” were able to advance across flooded land in Buffalo amphibious vehicles and achieve significant gains.

For the most part, the British, on the right flank, bore the brunt of *Veritable*. They had to advance over muddy and congested roads, through bombed-out villages, and then through the Reichswald Forest Reserve—a thick stand of trees that made movement difficult, as did the snow, mud, and wet leaves and pine needles. Here also, the Germans had planted mines and booby traps everywhere, and had constructed low bunkers to protect their machine-gun and sniper emplacements. The British slogged through the Reichswald against a determined enemy, making it through the woods after three costly days of fighting.

A Canadian Lieutenant-Colonel said, “*The Germans fought like hell – like demons. This was their last stand for their homeland, and they were not giving an inch.*” Hard-line Nazi officers even executed their own soldiers—those who wanted to surrender—as a warning to other soldiers to not give up the fight. In a foot-by-foot advance through the pine forest of the Reichswald and the water-logged countryside, and against fierce enemy counter-attacks, the British and Canadian soldiers fought their way forward, through village after village, until on February 21, they had cracked the vaunted Siegfried Line. The enemy’s refusal to surrender angered Allied soldiers, who were frustrated by the prolonged war that was killing off their friends, keeping them from home, and requiring that they battle through cities and towns that were often ruined during liberation.

The second phase, **Operation Blockbuster**, launched February 26th, involved clearing the dense Hochwald Forest and the surrounding area, with the goal of eventually reaching Xanten, which lay on the Rhine. This time, the 2nd Canadian Corps would play the major role, with British forces guarding the right flank of the Canadians. The Hochwald, like the Reichswald, was densely forested and easily defended. In front of the Hochwald was the Schlieffen Position, a belt of strong defences backed up by nine German infantry divisions. The Canadian advance, involving the 2nd and 3rd Canadian Infantry Divisions and the 4th Canadian Armoured Division, was especially vicious and costly, another agonizing repetition of the Reichswald battle. Troops made and held slight gains measured in hundreds of yards, against fierce enemy counter-attacks and tanks, handicapped by the mud and rain, as they struggled forward. Every advance was met with German anti-tank and anti-personnel mines and unusually heavy concentrations of artillery and mortar fire. It took until March 3 to clear the enemy from Hochwald Forest, and March 10 to capture the town of Xanten.

The planned American assault from the southwest, *Operation Grenade*, was delayed, and not launched until February 23. So during the delay, the Germans were able to shift their reserves to the Canadian front. Even as the

American Ninth Army made rapid advances towards the Rhine on their front, the Germans continued to divert their reserves to block the Canadian advance. On March 7 came the electrifying news that the First US Army had captured a railway bridge across the Rhine at Remagen, and were pushing straight across the river. On March 8, the Canadians began the battle for Xanten. Resistance continued until March 10 when the Germans, after withdrawing to the east bank of the Rhine, blew up the last bridges.

Following the Battle of the Rhineland, the Allied Supreme Commander wrote to First Canadian Army Commander General Harry Crerar:

Dear Crerar,

I have previously sent out general messages of congratulations to the several parts of this Allied force, covering our most recent operations. The purpose of this note is to express to you personally my admiration for the way you conducted the attack, by your army, beginning February 8 and ending when the enemy had evacuated his last bridgehead at Wesel. Probably no assault in this war has been conducted under more appalling conditions of terrain than was that one. It speaks volumes for your skill and determination and the valor of your soldiers, that you carried it through to a successful conclusion. With warmest personal regard,

Sincerely,

DWIGHT D. EISENHOWER

Rhineland sacrifices: During this month of fighting in the battle for the Rhineland, the Canadian casualties were 5,304 killed, wounded, and captured – slightly more than during the attritional battles of the Normandy campaign.^{D, E, 2N, 3F, 3Z, 4A, 4I} At least six young men from Sarnia gave their lives in the Battle of the Rhineland, including; Lieutenant Jack Brunette, Private Wilfred Durocher, Trooper Arthur Everingham, Lieutenant William Graham, Private Patrick McLaughlin and Private Harley Williams. All six are buried in Groesbeek Canadian War Cemetery, Netherlands. In total, there are twelve Sarnians buried in Groesbeek Canadian War Cemetery, the most Sarnians in any World War I or World War II cemetery.

Crossing the Rhine: The final stage of the Rhineland Offensive was the crossing of the Rhine River itself. The actions started on March 23, 1945 with the crossing near Wesel (*Operation Plunder*), which was one of several coordinated Rhine crossings. In support of the crossing, 14,000 paratroopers were dropped behind enemy lines (*Operation Varsity*) in the largest airborne operation performed in a single day. Led by British and US divisions, a million soldiers from three countries participated in crossing the Rhine, including the 9th Canadian Infantry Brigade and the 1st Canadian Parachute Battalion. Though the Germans were vastly outnumbered and outgunned, they put up a fierce resistance, and both Canadian groups fought for their lives. The operations were a success, and with the Allies crossing the Rhine, the days of the Third Reich were numbered. After the crossing of the Rhine, the First Canadian Army was given two tasks: to liberate western Netherlands and to march through northeastern Netherlands and northern Germany up to the Weser River.^{3F, 4I}

“Don’t worry...”: As the final spring offensive began in 1945, civilians in France, Belgium and the Netherlands watched Allied soldiers pushing ever deeper into Germany. Canadians at home would receive news of the successes but knew little of what men at the front suffered. Canadian Lt. Jack Scott, who acted as a military censor, wrote the following about letters mailed home by soldiers, *“I found a kind of pattern in the letters I had to censor – soldiers are squawkers but there were few complaints in the letters. Soldiers talk endlessly among themselves about soldiering; the letters home hardly mention the war. You ran across sudden unrelated sentences: ‘Does Mrs. Hennessey still run the grocery store?’ or ‘Did you get the garage painted?’ And one line was almost the same in every letter: ‘Don’t worry about me. I’m okay.’”*^{6F}

A Sarnia letter home: In early March 1945, the *Canadian (Sarnia) Observer* printed an unnamed soldier’s letter that had been received by George A.C. Andrew, a former Sarnia mayor and harbourmaster. George Andrew had himself lost two sons in the war—William Charles Andrew (October of 1941) and George Varnum Andrew (December of 1943)—their stories are included in this Project. The young unnamed soldier from Sarnia was George Andrew’s acquaintance and was in the air force overseas. In the letter, the writer told of the misgivings, fears felt and dread of the process of rehabilitation by many soldiers concerning their return to civilian life. Written towards the end of World War II, the sentiment expressed in the letter is likely representative of many young soldiers in any war as their service nears an end. The following is a portion of that letter:

It is quite a problem to know what to do when the war is over. I have been in service since September 1939, and the thought of being a civilian again rather frightens me. As I haven’t a permanent job to go to, I’m afraid I shall be at a loss to know what to do for the first six months at least. One thing is certain-it will be a great deal more

difficult to change from soldier to civilian than it was to make the opposite transition. In the service one leads a sheltered existence in many ways and it will be a rude awakening for some young fellows, including myself, to have to get out and fight for a living in an entirely different way than that to which we have been accustomed. It will be difficult too, to give up at one fell swoop, rank, prestige and authority attained through conscientious effort and ability, and to exchange it all for a civilian suit, the bottom of the ladder again, and the knowledge that many years of one's life has been entirely wasted. I didn't mean to talk about these things but they have been on my mind for some time so I had to talk to someone. Please forgive me.

• **THE LIBERATION OF THE NETHERLANDS**, February 7 – May 5, 1945: In May of 1940, the Netherlands, despite its declaration of neutrality, was invaded by the German blitzkrieg and put under German control. This would lead to five years of suffering for the Dutch people. Most of the Jewish population would be wiped out; thousands of men were forcibly sent to Germany to work as slave labourers in factories, many never to return; resistance efforts were brutally crushed; transportation, fuel and power networks were destroyed; and much of the country's resources went to Germany, resulting in shortages of food, fuel, clothing and other basic goods for the Dutch. Records after the war would show that 104,000 Jews had been murdered and another 150,000 or so Dutch had died during the occupation. The suffering culminated in what the Dutch dubbed the *Hongerwinter* (Hunger Winter) of 1944-45, when fuel shortages, exhausted food supplies and the worst weather Europe had seen in half a century caused over twenty thousand Dutch men, women and children to perish from starvation, cold and disease, while hundreds of thousands more were desperately ill before the liberation.

Arriving in Northwest Europe over the span of March and April 1945, the 1st Canadian Corps who had been fighting in Italy since the summer of 1943, joined their comrades of Canadian Army Corps who had landed on D-Day and fought battles through France, Belgium, and Germany. For the first time in history, two Canadian army corps would fight together. The two Canadian Corps were to liberate the northern Netherlands and occupy parts of Germany, where about 100,000 enemy troops remained. The First Canadian Army was given two tasks: to liberate western Netherlands, and to clear the northeastern part of the Netherlands and northern Germany.

On the **northeastern front**, beginning on March 23, the 2nd Canadian Corps progressed rapidly, delayed primarily by blown bridges, flooded polders, and mined roads, as German resistance got weaker. The Canadians were supported in their fierce push by their Polish and Belgian allies and the Dutch resistance. In many locations, such as Zutphen, Groningen and Deventer, they endured several days of stiff fighting against a resilient enemy. Difficulties included; snipers on the roofs, machine-guns hidden in cellars, fanatical Dutch Nazi and Dutch SS fighters, and SS soldiers disguised in civilian clothing that fired at Canadian soldiers. Near Zutphen, Canadian soldiers came across a heartrending sight, Stalag VI C, a camp for prisoners captured on the Russian front. By April 25, Canadian troops had liberated the remainder of the Dutch territory and occupied the plains of northern Germany up to the Weser.

On the **western front**, beginning on April 2, the 1st Canadian Corps drove toward the major cities. Often fighting in house-by-house battles, village by village, Canadian and Allied forces were able to take control of the cities of Arnhem – or what was left of it, and Apeldoorn by mid-April. In some cases, the Germans surrendered with little bloodshed, but in other incidences, the Canadians experienced fanatical resistance and fierce clashes.

As they moved forward, Canadian troops observed increasing signs of malnutrition in the civilian population; there was indeed a major risk of famine in western Netherlands. Their meagre rations had been cut repeatedly in the last year of the war by the occupiers, and now most were wasting away on less than 500 calories a day. Many of the Dutch were forced to eat flower bulbs to survive. German troops in the area were surrounded and likely to flood the region if attacked. In mid-April 1945, for the Allies, saving Dutch lives now took priority over killing Germans. To avoid a humanitarian crisis, on April 22, Canadian offensive operations in Western Holland were halted. Truce negotiations were started with local German authorities, a temporary cease-fire was agreed on, and a section of the front was demilitarized to allow food to be brought in by trucks and aircraft.

On April 29, **Operation Manna** began with Royal Canadian Air Force and Royal Air Force bombers dropping bundles of vital relief supplies by air to many on the brink of misery and starvation, including to German-occupied Rotterdam, Amsterdam, and the Hague. The relief flights brought one Canadian pilot enormous satisfaction as Dutch families raced out of their farms, waving and cheering as the bomber bay doors opened to drop essential supplies; *"As the mission went on, we saw that every barn over which we flew had painted on its roof the words 'Thank-you, Canadians!'"* Beginning on May 2, the ground-based **Operation Faust** was launched, as Canadian and British truck convoys rolled into no-man's-land delivering tons of food and fuel to Dutch civilians. This delivery

system would continue daily through the narrow gap in the battlefield. Soldiers at the front chose to go hungry, giving away their food to the grateful civilians who greeted them not only as liberators but as saviours.⁴¹

A Canadian Major described the scene as the Canadian 1st Division marched into the Hague and Rotterdam, *“With the fields of tulips in full bloom, this was the Holland Canadians had always imagined. But the joyous reception was more than most veteran troops had dreamed of. There were flags flying on every building. In towns and cities the streets were full of singing, dancing people. Military vehicles were bombarded with flowers. Crowds closed in until military traffic could scarcely move. Happy men, women and children hung on the sides of jeeps, trucks, tanks and cars.”*

After the liberation celebrations, the Canadians set to work to help Holland get back on its feet. In addition to delivering thousands of tons of food a day to major cities, Canadian soldiers volunteered to work on farms. Others cleared rubble in war-damaged towns or sawed up trees felled by Germans in retreat. Canadian engineers helped drain flooded areas, cleared canals of broken bridges and built new ones. Canadian boys were taken into the Dutch homes, fêted and celebrated, nurtured, and shown kindness. Many of the Canadians reciprocated by adopting entire households, providing food, chocolate, and cigarettes, and handing over money, working around the house, and acting as adopted sons.^{41, 6F}

In May 1945, Mrs. Maynard Elliott of 134 North Russell Street in Sarnia received a letter from Miss Betty Schaapma, of Harlingen, Holland. Mrs. Elliott’s husband, Maynard, was a sergeant in the R.C.A.F., and their son was Eldon (Buddy) Elliot, a Private with the Highland Light Infantry of Canada, who had been wounded in Belgium in January of 1945. In Miss Betty Schaapma’s letter, she praised Private Eldon Elliott, and expressed the gratitude of the Dutch people for the prominent role that the Canadian forces played in the liberation of their country, including her town of Harlingen. Following is a portion of her letter:

Our town was liberated from German tyranny the night of April 16-17. How glad and grateful we are; we can’t say it with words. Five years we lived in anguish and fear and at last we can breathe again. Next to God we give thanks to the brave Canadian soldiers. Your countrymen were received with tumultuous cheering and the people opened their doors to them to show how grateful they were. In this way, we made your son’s acquaintance. It was a great pity that he had to move again but we hope that he soon may return, safe and well, to Canada. He is such a neat, calm boy. On a map, he showed us where you are living. I am sending you a clipping from the first newspaper since VE-Day.

The clipping was of a proclamation of “Our Liberators”, printed in both English and Dutch. “We welcome you, our liberators, as bringers of peace and goodwill. May the five years of brutal oppression and humiliation of our people, years of indescribable grief, disappear like a nightmare, out of which we may awake in the clearness of a new day.”

Netherlands sacrifices: The lives lost in the final days of the war were a testament to the continuing sacrifice required against an enemy who refused to surrender. In April 1945 alone, almost 1,200 Canadian soldiers died in the fight for Dutch freedom, a further 114 would fall in the early days of May, including 12 on May 7, the last day of battle in Europe.^{D, E, 2I, 2N, 3F, 3M, 3Z, 4I}

Over the nearly eight months of bitter and difficult fighting during the Scheldt Campaign and the Liberation of the Netherlands, more than 7,600 Canadian airmen, sailors and soldiers gave their lives while fighting in Holland.^{D, E, 2N, 3F, 3M, 3Z} Along with at least eighteen young men from Sarnia who lost their lives during the Battle of the Scheldt and the Battle of the Rhineland, at least five other young men from Sarnia gave their lives in the Liberation of the Netherlands including; Gunner Thomas Brydges, Bombardier Kenneth Burr, Corporal Adam Conway, Private John McLagan and Sergeant Charles Richards.

The three main Canadian War Cemeteries in the Netherlands are Holten, Bergen-op-Zoom and Groesbeek. At these three main cemeteries, there are two Sarnians buried at Holten Canadian War Cemetery; John McLagan and William Metcalfe; three at Bergen-op-Zoom Canadian War Cemetery: Robert Alexander, Robert Dionne and George Esser; and twelve Sarnians at Groesbeek Canadian War Cemetery; Jack Brunette, Thomas Brydges, Kenneth Burr, Adam Conway, Wilfred Durocher, Arthur Everingham, William Graham, Patrick McLaughlin, Howard McRae, Charles Richards, Wilford Walker and Harley Williams (and a 13th, Richard Wilson, is on the Groesbeek Memorial). There are also five Sarnians buried in other Dutch cemeteries; Hugo Borchardt, Maurice Church, Arthur Parsons*, Thomas Powell, and Leslie Sutherland.

*Information on A. Parsons and the Halifax JB803 Monument in Muiden is included in this Project on page 921.

In the Netherlands, May 4 became the national **Remembrance Day** (“Dodenherdenking”), a solemn occasion and one the Dutch mark with ceremonies at the Canadian War Cemeteries at Holten, Groesbeek and Bergen op Zoom among others. On that day, people all over the country observe two minutes of silence at 8:00 p.m. At Holten, children from the area lay yellow tulips before each of the 1,393 headstones. In Groesbeek, thousands of Dutch citizens walk in silence at sundown to the cemetery to pay their respects to more than 2,300 Canadians buried there. Because Bergen op Zoom was liberated during the Scheldt fighting on October 27, 1944, commemorations at the cemetery there are held on that date. A highlight is the Wageningen parade and festival in the town where the Germans surrendered. Crowds of more than 120,000 people attend – reaffirming the strong memory of the events of war that forever bind Canada and the Netherlands together.

Dutch Liberation Day (“Bevrijdingsdag”) is celebrated on May 5, the date in 1945 on which Canadian General Charles Foulkes accepted German surrender in the Netherlands and the occupation of the Netherlands officially ended. It is a national holiday marked by celebration – a happy day, a day for fun and picnics and laughter and parties. Everyone gets the day off work and there are music festivals throughout the country. The people celebrate their freedom, democracy and joy. But for the Dutch, the rule has always been, “First commemorate, then celebrate.” So before all the fun and festivals, May 4 is the day to remember.

Dutch schoolchildren are steeped in war and liberation history. The schoolchildren lay yellow tulips before the headstones and tend to the thousands of gravesites of Canadians who died fighting in their country. They place wreaths at the ceremonies at Holten and Groesbeek, and every Christmas Eve, children are at the centre of a candlelight ceremony at Holten Canadian War Cemetery and other Commonwealth War Graves in Holland, placing candles on the graves of the fallen, forever remembering their sacrifices.^{2N, 30}

Canada’s Dutch Princess: When Germany invaded Holland, they intended to capture Dutch Queen Wilhelmina. However, the Royal Family escaped in time to Britain, along with the Dutch government. With Britain under siege, the Dutch Crown Princess Juliana and her two young children were sent to greater safety in Ottawa in June 1940. Another daughter, Princess Margriet, was born in exile while living in Ottawa (the only royal ever to be born in North America). In fact, Canada ceded the one Ottawa hospital maternity room temporarily to the Netherlands so that the royal child could be delivered on Dutch territory, thus she would have full Dutch citizenship.

Their wartime stay would have a lasting impact on Canada’s relationship with the Netherlands. In the spring of 1945, in appreciation for Canada’s sacrifice and for providing safe harbor to the Dutch Royal Family, Princess Juliana sent Ottawa 100,000 tulip bulbs. That tradition has continued over the years, with 10,000 bulbs gifted annually to Ottawa, culminating in the Canadian Tulip Festival. After the war, peaking in the early 1950’s with more than 20,000 arrivals a year, a large wave of Dutch people immigrated to Canada seeking a better life, including to the Sarnia-Lambton area.

In 1995, fifty years after they liberated the Netherlands, some 15,000 strong Canadian veterans were honoured in that country with celebrations and parades. With cheering crowds, signs, banners and Canadian flags everywhere, Canadian historian J.L. Granatstein described the moving scenes at Apeldoorn, Netherlands: *“I shall never forget the sight of young mothers in their twenties, weeping and cheering simultaneously while holding their babies up to get a sobbing veteran’s kiss. Nor will I forget the Dutch mothers telling astonished and typically blasé Canadian reporters that they were doing this because they wanted their children to be able to say that they had been touched by one of the men who liberated the Netherlands a half-century before.”*⁴¹

• **THE WAR ENDS IN EUROPE:** On April 25, 1945, the American and Russian troops met on the Elbe River. A few days later, Hitler committed suicide in a Berlin bunker to avoid capture by the Soviet armies that were swarming through the city (a day after Mussolini was executed by Communist forces in Italy). On May 2, the German armies in Italy surrendered. On May 5, 1945, Germany surrendered the 120,000-strong Twenty-Fifth Army to the 1st Canadian Corps commander General Charles Foulkes at Wageningen in the Netherlands. Almost simultaneously, Germany surrendered about 93,000 troops in northwest Germany to the 2nd Canadian Corps commander General Simonds. Total surrender of Germany came in the early hours of May 7, with celebrations around the world set for the next day, May 8, 1945 - V-E Day.^{D, E, 3F, 3M, 3Z, 4I, 6F}

In the spring of 1945, on two separate occasions, reports surfaced that the Germans had surrendered. The first, on April 28, was erroneous; the second on the morning of May 7, was merely premature.^{2N}

The following is a portion of CBC war correspondent **Matthew Halton’s** report that was broadcast across the nation from the now silent front lines;

The German war is over – five little words that one hardly dares to speak... Young men have grown old in a morning. Gentle men have grown callous at slaughter... And then someone tells you it's over and your first thought is, "No more Canadians will die."...

Not again in this war will Canadians huddle against the wet earth of Europe in shuddering dawns and then rise to their feet and move out into the storm of steel. Not again shall we see brave men who can stand no more. No more mounds of earth beside the road... The anger of the guns has died away...

Today the sun rises as it hasn't risen for nearly six years and soldiers I've talked to don't quite know what to do about it. They shave and have breakfast. They clean their guns. They try to brush the mud off their clothes. They ask if there is any mail. After all, they've lived strange, dangerous lives. It's hard to believe that if they stand up in the open, nobody will shoot at them. Death has walked at their side. It's hard to believe for a day or two that the nightmare is over...^{7Q}

The headline on the May 7, 1945 *Sarnia (Canadian) Observer* newspaper read:

*Complete Surrender of Germany to Allies is Reported Unofficially Today
Formal Announcement Of Cessation Of Hostilities Is Scheduled For Tomorrow*

The front page story described that a number foreign Associated Press correspondents, along with broadcast statements from German and Danish radio, were reporting that Germany had surrendered. The German broadcast statement was attributed to the German Foreign Minister in which he stated that Grand Admiral Karl Donitz, whom Hitler had appointed as his successor in late April 1945, had ordered "unconditional surrender of all fighting German troops. After almost six years of struggle we have succumbed." Allied Supreme Headquarters in Paris were not denying the truth of the reports, instead merely saying that no story of German capitulation "is authorized." Parliamentary correspondents were reporting that telephone conversations were taking place between Winston Churchill in London, Joseph Stalin in Moscow and Harry Truman in Washington who were undoubtedly trying to synchronize simultaneous release of the news.

• **V-E DAY:** On May 7, 1945 in Rheims, France, at 2:41 am local time, Germany signed the Instrument of Surrender document, which brought World War II in Europe to an end. Official confirmation of the German unconditional surrender came the following day on May 8th at 9 am EDT. "Victory in Europe Day" or VE Day was celebrated on May 8, 1945. Across the Dominion, wild celebrations broke out in the streets. Not everyone embraced the wild festivities, as families who had lost a loved one, as well as countless additional others related to the fallen, must have been unsure of how to mark the end of a six-year nightmare. The war was not yet over – the war with Japan was still underway – but the major threat of Nazi Germany had ended.

Sarnia celebrates V-E Day: In Sarnia, May 8, 1945 VE Day was observed with restraint. Mayor W.C. Hipple gave his permission for a parade that started a tour of downtown streets at 4 o'clock in the afternoon. The procession included the Lambton Garrison band (assembled on short notice), marchers, the big ladder truck of the fire department, children and numerous decorated automobiles. Union Jacks, Stars and Stripes and assorted flags of other Allied nations were flown throughout the day from stores, business blocks and many private homes. Paper streamers hung from upstairs windows of hotels and other buildings.

During the evening between 3,000 and 4,000 participated in street dancing to the music provided by Ken Williamson's orchestra. Though some were critical of the belated and unimpressive nature of the city's observance, Mayor Hipple defended the celebration. "Personally, I am very happy over the restrained way in which the people of Sarnia observed the occasion. I sincerely believe that those who clamored for a more extensive celebration were persons who have not been bereaved in this war or who do not have any relatives still overseas. Those with reasons for sorrow or worry are fully as well satisfied with our quiet observance as I am."

Lieutenant Col. S.G. Stokes, M.C., V.C., officer commanding the 11th Field Company, R.C.E., upheld Mayor Hipple's attitude on the celebration. Stokes asserted that Sarnia's observance of VE-Day was quite in keeping with its standing in the Dominion as regards its' contributions to the armed forces. He pointed out that Sarnia's percentage of volunteers for the various services was relatively high compared with that of other cities and he thought this was a sound reason for the restrained celebration. Such restraint reflected credit on their relatives at home. Local citizens were also well aware of the news of the Halifax celebrations that had occurred the previous evening.

In Halifax, the poorly co-ordinated VE-Day celebrations that began on May 7, rapidly declined into a rampage of looting and vandalism that lasted for two days. The joyous gatherings degenerated into out-of-control

riots and chaos that resulted in community leaders closing the bars and liquor stores. In the aftermath, the navy was blamed for losing control of its sailors, although civilians and other service members had taken part in the destruction and the city officials had been extraordinarily inept in planning for the war's end. **Admiral Leonard Murray**, Canada's only theatre commander of the war, became the scapegoat. It was an inglorious end to Murray's career as Canada's most distinguished flag officer, and after having spent the war fighting the U-boats, he was unceremoniously removed from command a few days after the riot. Murray lived out his remaining days exiled in England, almost entirely forgotten by Canadians at the time of his death in 1971.⁴¹ More information on Commander Murray is on page 435.

The front page of the May 9, 1945 *Sarnia Canadian Observer* carried reports on a number of the major events that were occurring at the time. Headlines of the stories on the front page included GOERING AND KESSELRING ARE CAPTURED; Halifax "Peace" Riot To Be Investigated; Joy Reigns In Moscow; Victory Is Celebrated In Most European Capitals; and Final Act Of Surrender Takes Place In Berlin.

On Sunday, May 13, 1945, a national day of prayer and thanksgiving for the Allied victory in Europe was observed in cities across Canada, including Sarnia. The Sarnia observance included a parade that began at city hall and moved to the cenotaph in Victoria Park for a special memorial service. It was estimated that more than six thousand local citizens assembled in the park or witnessed the parade. The mile-long procession included bands representing the Sarnia Garrison; the Air Cadet band and Sea Cadet band; drummers and buglers of the 11th (Reserve) Field Company; R.C.E. marchers of the Canadian Corps and Canadian Legion; members of the city council; scores of veterans of the two World Wars; the 26th (reserve) L.A.A. (Light Anti-Aircraft) Battery army unit under the command of Lieut.-Col. S.G. Stokes and Major J. Newton; Sea Cadets and Air Cadets; two Red Cross nursing units; Imperial Oil nurses; and the St. John Ambulance Brigade and its nursing division.

Before the paraders reached Victoria Park, the spectators there heard Prime Minister Winston Churchill start his radio broadcast that was amplified to the crowd from London, England. Major F.G. Hardy, chaplain of the 7th Regiment, R.C.A., and rector of St. George's Anglican Church, conducted the religious segment of the memorial service that included hymns, prayers and a sermon. Parents and relatives of those who died overseas had the honor of placing the first wreaths at the base of the cenotaph. Wreaths were also laid on the cenotaph on behalf of the city, (by Mayor W.C. Hipple), the Canadian Corps, the Canadian Legion and the Legion's Ladies Auxiliary. The ceremony came to an impressive end with the sounding of "The Last Post" and "Reveille" and the playing of "God Save the King."

• **OPERATION EXODUS:** By May of 1945, prisoner of war camps were being liberated throughout occupied Europe. Though the ex-POWs had been cut loose, they were holed up in former prisons, fenced compounds, hospital wards, warehouses and makeshift tent cities, with many suffering from illness, fatigue and starvation. Learning of their plight, Prime Minister Winston Churchill gave their repatriation the highest priority. "Operation Exodus" involved RAF Bomber Command, including RCAF 6 Group, making nearly five hundred round trips in Lancasters, Halifaxes, and other heavy bombers tasked with flying the POWs home. Many of the POWs had been three, four and five years in enemy stalags, mostly cut off from the Allied war effort, and all of them entirely reliant on their own resourcefulness to survive the war. According to one "Exodus" RAF pilot, as he witnessed the physically weakened and emotionally drained ex-POWs arrive back home on the airfield tarmac, *"Some got down on their hands and knees and kissed the concrete. Others simply burst into tears where they stood, while others lay on the grass and sobbed. I was thunderstruck..."*

By the end of the 23-day operation, Allied Bombers had brought over 75,000 ex-prisoners home. Pilot-Officer-Air Gunner Orval Clare Evers of Sarnia was part of Operation Exodus. On May 9, 1945, one day after VE Day, Orval Evers was part of a 5-man crew aboard a Lancaster aircraft transporting ex-POWs from Belgium back to England. Tragically, the aircraft crashed in France, killing all 24 ex-prisoners on board, along with the entire Lancaster crew including Orval Evers. His story is included in this Project on page 679.^{3F, 6D}

• **DEMOBILIZATION:** With the war in Europe over, the impatient, angry, and lonely soldiers, sailors and airmen wanted to get home, to their wives, lovers, children (some they had never seen), and families. But the Allies needed their units in the field to ensure the German nation would abide by the surrender agreement and, even more worrisome, to ensure that the Soviet forces did not keep pushing westward to occupy all of Germany. Shortages of transport and shipping also ensured that the demobilization of several million men would not be timely.

Almost from the start of the war, the Canadian government had planned for its finish. A demobilization

system which took into account length of service and prioritized men, attempted to ensure that there was a “first in, first out” policy tempered by suitable exigencies for men with families. A complicated point system awarded two points for each month of service in Canada, three for each month of service overseas and a 20% bonus if they were married. The higher the score, the better the chance for a quick return home. Soldiers who volunteered for duty in the Pacific War were given top priority for going home. This meant however, that as individual service personnel were sent home and welcomed in their communities, the regiments, squadrons, or ships, could not be celebrated or feted as a whole.

During the demobilization delays, the commanders were urged to keep their officers and men mentally and physically active. There was military training, organized recreation, education courses and trade instruction were offered, and there was generous leave. Canadians converged on London, and many also visited relatives throughout England, Scotland, Wales and Ireland.^{D, 41}

By early July 1945, Sarnia soldiers began returning home. Through the co-operation of the Sarnia Canadian Legion, Branch 62, the Red Cross and civic authorities, soldiers returning from overseas were being royally welcomed at the Canadian National tunnel depot. A loud-speaker for each train bringing veterans to the city, provided martial music before each arrived and then announced the names of those aboard. Jimmy Stewart, a World War I veteran, played the bagpipes as the servicemen stepped off the train. A reception booth set up in the waiting room provided them with information. Each man also received two packages of cigarettes from the Canadian Legion, bearing a sticker with the Legion crest and a message of welcome.

• **THE HOLOCAUST:** The Holocaust was Nazi Germany’s state-sponsored, step-by-step persecution and mass killing of Jews and other targeted groups between 1933 and 1945. When Canadian and Allied troops swept into Germany and its conquered territories, they confronted the horrific atrocities taking place in the Nazi concentration camps. On April 12, 1945, Canadian forces liberated the Westerbork Transit Camp in the Netherlands, including 900 Dutch Jews who were still interned there. Anne Frank was among the over 100,000 Jews, Gypsies and resistance members that had been taken to Westerbork during the war. Also in April 1945, Canadian and British forces liberated Bergen-Belson concentration camp in northwest Germany, where Anne Frank had been killed (more on Anne Frank is on the next page). At “Belson”, the liberating soldiers discovered approximately 60,000 prisoners inside, most of them half-starved and seriously ill, and another 13,000 corpses lying around the camp unburied. Approximately 100,000 Russian prisoners of war and civilians, mostly Jews, had died in this camp during the war.

A Canadian who had survived flying in a RCAF Halifax bomber during the war, was part of a crew that flew dignitaries to the Belson death camp, to witness the sickening sights, *“As my eyes surveyed this devastation – and as my mind came to realize the full scope of the wickedness explicit here – I wondered how this had been allowed to happen by a literate people, people who could build bridges and compose beautiful music, who loved their children, and who could pray to a God they recognized. The horror of seeing the victims, their nondescript bodies – or what was left of their bodies – entwined in lime pits with the bones of their friends, their parents, their children; of those dead eyes – if they had not yet rotted from the sockets – without a fire left in them; the horror of that remains with me to this day.”*⁴¹

When Canadian and other Allied soldiers liberated more death camps, such as Auschwitz (in Poland) and Buchenwald (in Germany), and witnessed first-hand the enormous evil that had taken place, their lives were changed forever. The camps revealed a genocidal war of unimaginable scope and savagery. Hitler had sought to create a "master race" through the systematic destruction of all Jews and other so-called racial and ethnic inferiors that included political dissidents, the physically and mentally disabled, Gypsies, and homosexuals. In particular, however, the Jews were the intended victims of his "Final Solution." As many as 6 million Jews, including 1.5 million children, perished at the hands of Nazi executioners during the Holocaust. The atrocities of the Holocaust revealed for many the evil of Hitler’s Third Reich and confirmed the justness of the war.^{41, 51}

On November 1, 2005, the UN General Assembly adopted a resolution to designate January 27 as **International Holocaust Remembrance Day**. The date marks the liberation of Auschwitz-Birkenau concentration/extermination camp. The first commemoration ceremony was held on January 27, 2006, at the UN Headquarters in New York City.

Canada’s **National Holocaust Monument** was unveiled in Ottawa on September 27, 2017. It serves as a memorial to the six million innocent Jewish men, women and children who perished, and to recognize the incredible contributions Holocaust survivors have made to Canada. The drive to build a national Holocaust monument was

spearheaded in 2007 by Laura Grosman, then an 18-year-old University of Ottawa student, who learned that Canada was one of the few Allied nations lacking such a memorial. Titled *Landscape of Loss, Memory and Survival*, it is an open-air pavilion made up of six triangular slanting concrete walls that seen from above, takes the shape of the 6-pointed Jewish Star of David – like the cloth stars Jews and other persecuted victims were forced to wear. The six triangular spaces represent the badges that marked the six different classes of prisoners in the concentration camps. Photographs (by Canadian photographer Edward Burtynsky) have been enlarged and applied to the concrete walls of the monument, depicting scenes from six Holocaust sites: Treblinka, Auschwitz, Berlin, Mauthausen, Theresienstadt and Warsaw. The upper level of the monument provides a direct view of the Peace Tower on Parliament Hill.

Anne Frank was one of the thousands of Jews throughout Holland that went into hiding during the Holocaust. Born in Frankfurt, Germany on June 12, 1929, she was the daughter of Edith and Otto Frank, a German businessman. Anne had one sister, Margot Frank, who was three and a half years older. Fleeing Nazi persecution of Jews in Germany, the Frank family moved to Amsterdam in the fall of 1933. On May 10, 1940, the German army invaded the Netherlands. The Dutch surrendered on May 15, 1940, marking the beginning of the Nazi occupation of the Netherlands. By October 1940, the Nazi occupiers began imposing anti-Jewish measures in the Netherlands. On July 5, 1942, sister Margot Frank received an official summons to report to a Nazi work camp in Germany. The very next day, the Frank family went into hiding in makeshift quarters in an empty space at the back of a building in Amsterdam, which they referred to as the Secret Annex.

Anne, her sister Margot, and their parents Edith and Otto Frank, along with another Jewish family of three, and an eighth person, would remain sheltered in the Secret Annex for more than two years. The group lived in constant fear of being discovered and could never go outside. Shortly before going into hiding, Anne had received a diary as a gift for her thirteenth birthday. During her time in hiding, never once stepping outside, Anne Frank wrote about her fears, experiences and wishes in her diary. In addition to her diary, Anne filled a notebook with original stories and collected quotations from other writers in her ‘book of beautiful sentences’. Anne Frank wrote in her diary that she wanted to become a writer or a journalist in the future, and that she wanted to publish her diary as a novel called ‘The Secret Annex’.

In a diary entry written in mid-July 1944, a few weeks before her family was captured, fifteen-year-old Anne Frank wrote, “*I hear the approaching thunder that, one day, will destroy us too. I feel the suffering of millions. And yet, when I look up at the sky, I somehow feel that everything will change for the better, that this cruelty too shall end, that peace and tranquility will return once more.*” The family was eventually betrayed, discovered by the Gestapo on August 4, 1944, and in early September 1944 were deported to Auschwitz concentration camp in Poland. Upon arriving at Auschwitz, the men and women were separated. This was the last time that Otto Frank ever saw his wife and daughters. After several months of slave labour, Anne and Margot were transferred in late fall to the Bergen-Belson concentration camp in Germany.

Anne’s father, Otto Frank, was the only one of the eight people that hid in the annex to survive the war. Edith Through the winter of 1944-45, Edith Frank in Auschwitz hid each scrap of food she would get, saving it for her daughters, refusing to eat herself. Edith Frank fell ill and died as a result of starvation at Auschwitz in early January 1945. Fifteen year-old Anne Frank and her sister Margot died only days apart, of disease (typhus) and deprivation in Bergen-Belsen in February or March 1945. Their bodies were thrown into a mass grave. Several weeks later, on April 15, 1945, British soldiers liberated the camp.

After the war, friends convinced Otto Frank that his daughter’s diary had great expressive power, and on June 25, 1947, *The Secret Annex* was published. It was translated from its original Dutch version and first published in English as *The Diary of a Young Girl* in 1952. Anne Frank and her *The Diary of a Young Girl*, became one of the most enduring, moving and widely read firsthand accounts of the Jewish experience during the Holocaust. The names Auschwitz, Sobibor, Dachau, Treblinka, and Bergen-Belson will forever haunt history – the concentration camps where millions of Jews and others deemed undesirable were systematically annihilated.^{41, 9L}

Remembering Sarnia’s Jewish soldiers: In late March 1945, a plaque honouring 14 Jewish members of the armed services from the City of Sarnia was unveiled during the regular Passover rites, in the Ahavas Isaac Synagogue, Davis Street, Sarnia. The plaque was unveiled by FO. Morris Skosov, D.F.C., following a brief service by Rabbi A. Roness. Rabbi Roness paid tribute to these Jewish warriors, and compared the deliverance of the ancient Hebrew peoples from the bondage of Egypt to the deliverance of all people from the scourge of Hitler’s war. Of the fourteen Jewish men on the plaque, seven had enlisted in the Air Force, six in the Army and one with the Navy. Nine

of these men had been overseas, and three of them made the supreme sacrifice. The men, all from Sarnia, honoured on the plaque were M. Berger, S. Bernard, R. Heller, I. Haber, M. Kirk, Dr. I. Mann, A. Rosen, G. Shabsove, M. Skosov, Mitchell Smith, Murray Smith, L. Swartz, I.B. Zierler, Isaac Zierler. At the time of the unveiling, 1.5 million Jewish enlisted with the Allied armies, 15 000 of them from Canada. The three men on the plaque who lost their lives while serving were Max Berger, Mitchell Smith and Isaac Buck Zierler—their stories are included in this Project.

The *MS St. Louis*: There have been dark moments in Canada's history when this nation was not so accepting of immigrants. Canadian immigration policy decisions have been made based on prejudice, racism, religious intolerance and anti-Semitism ideals that were common in Canadian society at the time. Two examples in times of war are: Canada denying entry of over 370 Sikh, Muslim and Hindu passengers aboard the *SS Komagata Maru* off the coast of Vancouver in May-July 1914; and Canada's rejection of over 900 Jewish refugees aboard the *MS St. Louis* off the coast of Nova Scotia in June 1939.

On May 13, 1939, four months before the war began, the ocean liner *MS St. Louis* carrying more than 930 European Jewish refugees (mostly German Jews who had lost everything at the hands of the Nazis) set out from Hamburg for a two-week transatlantic voyage to Havana, Cuba. The refugees, carrying entrance visas to that country, hoped to live there in peace. Many of them were the elite of European Society who had paid for Cuban visas at the embassy in Berlin. Some were officially "stateless" and many had lost their businesses and homes. Others had been freed from Dachau and Buchenwald on the condition they promptly leave Germany.

By the time the vessel reached Cuban shores, officials had revoked all but a handful of those visas. Increased anti-Semitism, the corrupt sale of landing certificates, and changes to immigration regulations in Cuba kept the ship and its passengers in port for days. So the Captain, unsuccessful in appealing to the Cuban authorities who ordered the ship out of Cuban waters, carried on towards Florida. But Americans dispatched the Coast Guard to make sure Jewish passengers would not swim to the United States. Despite many groups and prominent Americans writing to U.S. President Roosevelt on behalf of the refugees, American officials refused to accept them.

Word of the plight of those aboard the ship had reached Canada. A number of prominent Canadians petitioned the government to provide sanctuary for the refugees. But Canadian officials refused the opportunity to save them. According to one Canadian immigration official at the time, "*No country could open its doors wide enough to take in the hundreds of thousands of Jewish people who want to leave Europe: the line must be drawn somewhere.*" Though the ship was just two days from Halifax harbour, the refugees were turned away by Canadian authorities. The *MS St. Louis* returned to Europe, docking in Antwerp, Belgium on June 17, just over a month after it had first left for Cuba. Some passengers were taken in by Belgium, France, Holland and the U.K. (many of these countries fell under Nazi control over the course of the war). About 500 ended up back in Germany, in concentration camps where more than 250 of them perished. This event inspired a book and film titled, *Voyage of the Damned*. In January 2011, a memorial sculpture commemorating the *St. Louis* refugees was unveiled at the Canadian Museum of Immigration at Pier 21, where the ship would probably have landed.

Between 1933 and 1945, Canada admitted fewer than 5,000 Jewish refugees, the lowest number of refugees among developed countries.^{21, 2N} After the war, Canada was profoundly shaped by approximately 40,000 Holocaust survivors, who resettled across the country after the war.

• **THE WAR IN THE PACIFIC AND SOUTH-EAST ASIA:** Canadian Forces, primarily the Royal Canadian Air Force, were involved in the war against Japan in South East Asia from the outset. Even before the initial Japanese attacks of December 1941, Canadian airmen trained as radar operators, mechanics and electrical engineers, had been loaned to the RAF and posted in the Far East. The Royal Canadian Air Force (RCAF) would be involved in the war in South East Asia for the duration, with transport squadrons in support of the British army, and with general reconnaissance squadrons, bomber escort groups and fighter squadrons. Canadian airmen, including some from Sarnia, were also assigned to RAF's Far East Command, serving in Malaya, Singapore, Java, Burma, India and Ceylon.

The Canadian contribution to the naval war in the Pacific was minimal. Although a few Canadians did serve in Royal Navy ships, no units of the Royal Canadian Navy served in this area. Canadian Merchant Seamen also served throughout the Far East on ships of both Canadian and Allied registry, carrying troops and cargo essential to fight the war in the Pacific. As the Battle of the Atlantic wound down in late 1944, plans were laid for a Canadian Pacific fleet of some sixty ships, which would include fleet carriers, cruisers, and a large number of escort vessels. The first of this contingent to sail for Pacific waters was the light cruiser *HMCS Uganda*, crewed by 700 officers and

men (more information on the *Uganda* is on page 534).

Two dozen Canadian Army officers were attached to the British 14th Army in Burma and South East Asia Command Headquarters as observers during the latter part of 1944. One of the most unusual Canadian contributions was their role as “mule skimmers”, escorting shipments of mules from North America to the jungles of India and Burma. The mules were essential for transporting needed supplies across the mountainous terrain to the Allied forces fighting there. A number of Canadians also served in support of the “Chindits” in Japanese-occupied Burma. The “Chindits” were members of the 77th Indian Infantry Brigade, part of the largest Special Services operation in the war, who undertook long-range operations behind enemy lines. Canadians were involved with the Chindits as the aircrew of some planes supplying the force, air force liaison officers, and radio communications personnel. Canadians were also involved in other special groups in the Far East, such as Canloan officers borrowed by the British; a “Sea Reconnaissance Unit” (frogmen spearheading British Army assaults); and a group of Japanese-Canadians and Chinese-Canadians who volunteered working as interpreters with intelligence units or with the secret “Force 136” – an elite commando team that operated behind enemy lines (involved in resistance movements, sabotage, espionage and providing information about the enemy).^{D, 21}

Hong Kong: The Canadian Army’s first combat action in the Second World War was in Hong Kong. In early December 1941, the Japanese launched a series of surprise attacks almost simultaneously on Pearl Harbor, Northern Malaya, the Philippines, Guam, Wake Island and the British Crown Colony of Hong Kong. Two Canadian infantry battalions, composed of approximately 2,000 inexperienced soldiers, were part of a total of 14,000 Allied soldiers charged with defending Hong Kong. After 17 days of fighting against overwhelming odds, Hong Kong was surrendered on December 25, 1941. Every single Canadian in the battle was either killed, wounded or captured. One Sarnian, Max Berger, was killed in the Battle of Hong Kong. More information on the Battle of Hong Kong is on page 454.

Singapore: In February 1942, Japanese forces invaded the British stronghold of Singapore, nicknamed “Gibraltar of the East”. The fall of Singapore to the Japanese Army on February 15, 1942, resulted in the surrender of over 70,000 British, Canadian, Australian and Indian troops. British Prime Minister Winston Churchill called it the “worst disaster” in British military history.

The Aleutians and Canada’s west coast: In the spring of 1942, the Japanese were also expanding their area towards North America. In June 1942, their forces landed on the islands of Attu and Kiska in the Aleutians off the coast of Alaska. In response, the Americans rushed reinforcements to Alaska. With no road link between that region and the rest of the continent, over the course of a year, thousands of construction troops laboured to cut the Alaska Highway. Also in June 1942, a Japanese submarine shelled Estevan Lighthouse on the west coast of Vancouver Island, causing minor damage. In response, Canada committed two army divisions and considerable air and naval forces to the defence of the West Coast.

The Burma Campaign: This campaign began in December 1941 when the Japanese moved through Thailand and invaded the British colony of Burma. The Japanese saw Burma as a stepping-stone to India as well as protection for their troops fighting in the Malayan peninsula and in Singapore. At little cost, by May 1942 they had driven the British Indian troops west into India. The campaign had a number of notable features that included dense jungles, mountainous terrain, lack of roads for transport, prevalent disease, and weather conditions that included severe heat and monsoon seasons. British attempts to get Burma back in 1942 and 1943 were unsuccessful. The Japanese gave some independence to Burma in 1943, but forced local workers, along with prisoners of war, to build the Burma-Thailand Railway. Over 100,000, a third of the labourers, died from overwork, malnutrition and disease.

In March 1944, the Japanese tried to invade India from Burma. British-led Indian Army troops held the Japanese for more than eighty days, until the monsoon rains started. One third of the Japanese force of nearly 85,000 died of disease, the greatest defeat of the Japanese army to that point of the war. Toward the end of 1944, the British 14th Army (many Canadians were part of it), American and Chinese Allied Forces began the offensive that led to the successful reoccupation of Burma in 1945.

Approximately 8,000 Canadians served in the Burma Campaign. Some Canadians served in the British 14th Army in its British and Indian units with infantry and armoured regiments. RCAF No. 413 Squadron was posted to Ceylon in March 1942, flying Catalina (or “Canso”) flying boats, carrying out reconnaissance, convoy-protection and anti-submarine duties over the Indian Ocean. RCAF Squadrons 435 and 436, based in India and Burma, flew Dakota medium-range transport aircraft (“Daks”) on supply-dropping missions for the British army beginning in December

1944. These planes would drop troops, ammunition and food supplies by parachute into small clearings to be collected by the Allied forces fighting in the area; or later, the planes would land on primitive airstrips built by military engineers. Canadians also flew with RAF squadrons aboard Liberator long-range aircraft on bombing, patrol and supply missions. Referring to themselves as the “Burma Bombers”, they attacked such targets as railways, ships, bridges and enemy troop concentrations. Canadians also served in fighter squadrons, as pilots in Mohawks, Hawker Hurricanes, Spitfires, Thunderbolts and other fighter planes in combat missions over Burma, eastern India and other areas in the region. Canadian fighter pilots shot down Japanese bombers and fighter planes, and undertook reconnaissance duties and pinpoint bombing and strafing efforts on enemy trains, pipelines, roads, ships and airfields.

The battles to defend India and Burma were called by the soldiers who fought them, “The Forgotten Campaign”, because of the low priority given to the forces there for equipment and supplies and the lack of publicity given the fighting. Of the estimated 8,000 Canadians who served in the region, approximately 500 men died and many others were wounded or captured.^{D, 2I, 8L}

After VE Day: After the Victory-in-Europe in May 1945, Canada and the Allied forces prepared to dedicate their efforts and resources in the struggle against Japan. Japan was already soundly beaten by late 1944, but the Japanese army and people vowed to never surrender. An American invasion of the Japanese homeland would be a costly affair, and casualty projections were in the hundreds of thousands for the Allies, in addition to the millions of civilians who would be cut down. Women and children were being trained to defend every foot of Japanese terrain, often armed with only sharpened sticks. Canadian military command wished to be in at the final fight, though the government was reluctant. The Canadian Government decided on a “Volunteers Only” policy, so any force that would go to the Pacific Theatre would be composed of only those who volunteered. Experienced service personnel in Britain and Europe were given the option of serving in the Pacific, and 20,000 had volunteered by mid-July 1945, many enticed to do so because they would first be allowed to return home to their families for a brief visit. Approximately 80,000 Canadians volunteered to join the Pacific Force that began concentrating at nine stations across Canada in July 1945, along with 60 Royal Canadian Navy ships, manned by 13,500 men.^{D, E, 4I, 6Z}

HMCS Uganda: One of the few Canadian warships in the Pacific Theatre following the defeat of Germany was the Royal Canadian Navy cruiser *HMCS Uganda*. The Crown Colony-class light cruiser had been transferred to the RCN in October 1944. It would be the only Canadian warship to fight against the Japanese. It engaged in hostilities against Japan beginning in early April 1945, during the **Battle of Okinawa**, the last and largest of the Pacific Island battles. The *Uganda* served to augment the British Pacific Fleet, and also joined the United States Third Fleet for operations against the Japanese. Participating in the Battle of Okinawa, it’s primary role was to help defend the Allied battleships and carriers against Japanese air attacks, including Kamikaze pilots determined to smash their bomb and fuel-laden planes into Allied ships. *Uganda* also bombarded Japanese shore positions, including airfields at Sukuma, Formosa (Taiwan), Sakishima Gunto Islands and the naval base at Truk, in the Caroline Islands. The 82-day Okinawa island battle began April 1, 1945 and ended on June 22, 1945, and was the Pacific War’s bloodiest, with an estimated 241,000 lives lost – including almost 150,000 Okinawan civilians. In July, *Uganda* supported carriers operating against Tokyo.

With the end of the war against Germany, the crew, in keeping with Canadian government policy announced in April 1945, were asked if they would volunteer to continue serving against Japan. For a variety of reasons the majority voted no, and despite threats and offered prizes, the ship left the Pacific Theatre in late July for its home port in Esquimalt, British Columbia. The ship became known ever after as “the ship that voted itself out of the war.”^{T, X, 2E, 2I, 5I, 6Z}

In August of 1945, the *Sarnia Observer* featured a story on a local sailor who had been on the ship, likely the only sailor of this city to take part in the Pacific War against the Japanese during this period. **Leading Steward Charles Taylor**, whose wife Mary and six children resided at 165 South Forsythe Street, Sarnia, had joined the Royal Canadian Navy 15 months prior. He had trained at Quebec, Cornwallis and Charleston, South Carolina where he boarded the *Uganda*, crossed the Atlantic to England, and then to the Pacific. Charles Taylor travelled over 63,000 miles aboard the *Uganda*, two thirds of it on active service in the Pacific theatre.^N

Japanese Balloon Bombs: In November 1944, Japan launched the first intercontinental weapon system – balloon bombs. In *Operation Fu-Go*, the balloons were launched from the Japanese mainland, hitching a ride on the jet stream at about 30,000 feet. These weapons could float silently across the Pacific Ocean taking between 30 and 60 hours, landing on North America’s west coast. The bark/paper balloons were filled with hydrogen gas; were unmanned; and carried an anti-personnel fragmentation bomb and incendiary devices. The intent was to spark vast

forest fires that would create havoc, dampen morale and disrupt the war effort. Between November 3, 1944 and mid-April 1945, more than 9,000 of these balloons were launched, with an estimated 1,000 reaching North America, from northern Mexico to Alaska, and as far inland as Manitoba and Michigan. Those that reached Canada, landing in British Columbia through to Manitoba, caused no notable damage.

Closer to Sarnia, one balloon was found 10 miles from Detroit and another one was found near Grand Rapids, Michigan. In both Canada and the U.S., governments pressured the media to suppress the stories of the balloon bombs, partly to avoid setting off a panic, but also to deprive Japan the details about the effectiveness of the weapons. The only casualties of this weapon occurred in May 1945, when a pregnant school teacher and five children (between the ages of 11 and 14) were killed instantly as they investigated a large paper balloon they'd found in the woods in Oregon. There were concerns in the military that the Japanese would use the balloons to deliver chemical and biological weapons. Lacking any evidence of success and with the destruction of their hydrogen factories, Japan shut down the Fu-Go campaign in April 1945. Many of the balloon bombs were unaccounted for, and the remains of some are still being found today throughout western North America.^{2E, 5H}

The Atomic Bomb: Through the summer of 1945, preparations continued for the Canadian contribution in the last phase of the War against Japan – **Operation Coronet** – the planned invasion of the Japanese Home Islands in the early spring of 1946. Included was the 24,000-strong Canadian Army Pacific Force (CAPF), which was organized on lines similar to the United States army; would use U.S. weapons; and was scheduled to train in the U.S..

All preparations stopped when the United States B-29 bomber *Enola Gay* dropped the first atomic bomb (nicknamed “Little Boy”) on **Hiroshima** on August 6, 1945. The three-metre-long device carried the explosive power of twenty thousand tonnes of TNT, and leveled ten square kilometres of the Japanese city.^{2E, 7A}

The Tuesday, August 7, 1945 *Sarnia Canadian Observer* front page headline read;

CITY OF HIROSHIMA & JAPANESE MORALE ARE BADLY SHAKEN BY NEW ATOMIC BOMB

Fear Of Latest Weapon Bared In Broadcasts – Tokyo Admits Extensive Destruction in Military Centre
San Francisco, Aug 7 – The new atomic bomb shook both the military city of Hiroshima and the Japanese morale, enemy propagandists indicated today in a broadcast lifting some of the secrecy on the devastating effect of the new “diabolic weapon.” The bomb was dropped by parachute yesterday morning, exploding in the air and spreading extensive destruction across the city...

Another story in the same issue described Winston Churchill’s response to the dropping of the atomic bomb;
Winston Churchill said last night that it was “by God’s mercy” that Allied and not German scientists discovered the secret of atomic power “long mercifully withheld from man.” The success of the historic achievement, he added, stood “to the everlasting honor” of the late President Roosevelt... Mr. Churchill said German efforts toward developing atomic power “were on a considerable scale, but were far behind, although the enemy had possessed some atomic secrets.”... The former Prime Minister praised as “most valuable” the contribution of the Canadian government which “provided both indispensable raw material for the project as a whole, and also the necessary facilities for work on one section of the project which has been carried out in Canada by the three governments in partnership.”

On August 9, 1945 three days after the first atomic bomb was dropped on Hiroshima, the United States dropped a second atomic bomb (nicknamed “Fat Man”) from the B-29 bomber *Bockscar* on **Nagasaki**, devastating a third of the city. On that same day, 27-year-old RCAF **Lieutenant Robert Hampton Gray** of Trail, British Columbia, led eight Corsair fighter-bombers to target Japanese shipping in Honshu’s Onagawa Bay. Despite his plane being badly damaged by anti-aircraft fire, Lt. Gray continued his attack on a destroyer – sinking it with one 500-pound bomb. Almost at once, Gray’s aircraft exploded and then plunged into the sea. His body was never recovered. Robert Gray was posthumously awarded the Victoria Cross, and was the last Canadian to die in Second World War combat.^{2E}

Five days later, the Tuesday, August 14, 1945 *Sarnia Canadian Observer* front page headline read;

JAPS SURRENDER

SECOND WORLD WAR OVER

Tokyo Accepts Terms Drafted at Potsdam

The atomic bombs caused thousands of deaths, the result of the initial blast, fireballs and radiation sickness. Nonetheless, the casualties from the two atomic bombs, despite their horror, were far fewer than if the Americans and

Allied forces, including Canadians, had fought their way through the Japanese towns and villages. A few hundred Canadians in Japanese prisoner-of-war camps witnessed the fireballs. Close to death from starvation and fearful that the camp guards would murder them after an American invasion, a Canadian who had survived four years of captivity believed, *"If it weren't for the use of the atomic bombs, as horrible as it was, I would not have survived."*⁴¹

Canada's Role in "The Manhattan Project": Much of the uranium used in the August 6, 1945 Hiroshima bomb came from Canada. It had been mined near Great Bear Lake, Northwest Territories and refined at a nuclear facility in the town of Port Hope, Ontario.

In May 1930, radium and uranium deposits were discovered by a Canadian prospector at Port Radium in the Northwest Territories. The Eldorado Mining Company was established to extract and refine the rich radium deposits. For much of the 1930s, uranium was simply a by-product of the refining process and the Company had little use for it. In the late 1930s, there were tons of uranium ore in storage at the Port Hope refinery. By late 1939, radium mining had ended at the Eldorado Gold Mining Company. In 1941, the private mine was reopened to supply the U.S. with the uranium needed to develop the nuclear bomb. The Canadian government bought the company one year later and nationalized Eldorado's uranium-related assets.

In early 1939, German scientists proved that uranium atoms could be split (fission), releasing energy, thus beginning the race for a bomb. By 1940, British scientists had figured out how to make an atomic bomb using enriched natural uranium. Following the attack on Pearl Harbor, the Americans became involved and initiated their own program code-named "The Manhattan Project". In 1942, a team of British and French scientists were moved to Montreal from war torn Europe to continue their research. In the meantime, the nuclear facilities at Port Hope were switched from refining radium to refining uranium. Uranium ore from a mine located near Great Bear Lake in the Northwest Territories and a mine in the Belgian Congo was used.

As the war continued and the Americans research and development of atomic weaponry advanced, so did the orders for uranium ore. During this time, Canadian government officials, including Prime Minister William Lyon MacKenzie King and Minister of Munitions and Supply **C.D. Howe**, were aware of uranium's potential as a bomb. In August 1943, secret agreements had been signed in Quebec City by the United States, Britain and Canada outlining the role of each country in the development of the bomb. The **Quebec Agreement** stipulated that the Bomb would not be used "against each other," or "against third parties without each other's consent". It also established a Combined Policy Committee of six to deal with the Bomb: three Americans, two Britains and Canadian C.D. Howe. British, French and Canadian scientists were at work in Montreal (and later at the nuclear reactor located at Chalk River, Ontario) focusing on the best ways to produce plutonium for bombs.

When C.D. Howe heard the news that the uranium bomb had destroyed the city of Hiroshima, he released a prepared statement to the press: "It is a distinct pleasure for me to announce that Canadian scientists have played an intimate part, and have been associated in an effective way with this great scientific development." For the first time, Canadians were told that uranium from Great Bear Lake, refined at Port Hope, and scientists working in a secret laboratory in Montreal, had played an important role in the British-Canadian-American Atomic Bomb Project. Three days later, a plutonium bomb was dropped on Nagasaki. The plutonium used for that bomb came from Canadian uranium irradiated in the world's first nuclear reactors in Hanford, Washington. More information on C.D. Howe is on page 467.

V-J DAY: The dropping of the two atomic bombs on August 6 and August 9, would lead to Japan's unconditional surrender on August 14, 1945. "Victory over Japan Day" or VJ DAY was celebrated on August 15, 1945 (August 15 in Japan, but because of the time zone difference, August 14 in North America). The term has also been used for September 2nd, 1945 when Japan's formal surrender took place aboard the *U.S.S. Missouri*, anchored in Tokyo Bay.^{D,E}

Petty Officer **George Kimball** of the United States Navy was aboard the *U.S.S. Missouri* and witnessed the signing of the Japanese surrender. George Kimball was from Brigden, having spent his boyhood days there and in Sarnia and the vicinity. His grandmother, father and uncle resided at the Kimball store. Petty Officer Kimball wrote to his father George Senior, to tell his impressions of the event. Following are portions of his letter:

It's hard to believe that it is all over. A short time ago we were at war without much prospect of finishing it very soon. Our boat was chosen for the signing of the surrender terms and from where I was stationed I had a good view. It was a solemn and impressive ceremony and there was no doubt that by the expressions on the faces of the Japanese delegation they sensed the gravity of the occasion. The Japs were a very dejected group of men. There were

tears in the eyes of many as they left the ship... The signing of the surrender terms was an awe-inspiring sight and one I will never forget. I was very proud to be a sailor on the mighty Missouri and in on the history making event. Yes, our chests were out, but all was serene. There was no hilarity and it seemed more of a solemn ritual. We are all proud that we have been able to win this war, and we hope it will be the last war that will have to be won. Many have died with this hope. Let us pray that it carries those charged with the forming and preserving of peace to a successful accomplishment of the task.

Sarnia Pacific-SE Asia Sacrifices: Max Berger of Sarnia was one of the 290 Canadian soldiers who lost their lives during the Battle of Hong Kong. At least two Sarnians, both members of the RCAF, lost their lives in the war against Japan during the Burma Campaign: Rodolfo Mendizabal in a Hurricane air crash in India; and Clare Thain when his Dakota aircraft crashed while dropping paratroopers behind Japanese lines in India. Another Sarnian, Wilfred Knight, lost his life in the South Asia theatre in a Liberator air crash in Ceylon one month after VE Day.

• **SARNIA CELEBRATES THE END OF THE WAR:** After almost six years of war, celebrations of the war's end began in Sarnia on the evening of Tuesday, August 14, 1945. Following are portions of the report of the impromptu V-J Day celebrations from the Thursday edition of the *Sarnia Observer*:

City Heard News Tuesday – Celebrated All Day Yesterday

Official word of the Japanese surrender was heralded in Sarnia by the blowing of factory whistles, the ringing of church bells, and a bedlam of horn blowing and cheering. A spontaneous wave of excitement swept up and down the streets. Within a few minutes after the official announcement was made at seven o'clock (Tuesday), people began to appear in the streets. Many headed for downtown. People shook hands. Paper fluttered from upper story windows. People ran around throwing confetti and motorists blew their automobile horns. Children got out their whistles, and noise makers. By eight o'clock, Front and Christina streets were jammed. Huge crowds drifted up and down the streets cheering and shouting, singing and laughing... also blowing paper horns. Motor traffic was heavy as hundreds of cars joined in the procession up Christina and down Front. The din was almost unbearable.

Members of the Sea Cadet Corps band were to have a practice, but news of victory changed the plan. As soon as the ratings heard the announcement of the war's end they tuned up their instruments and paraded up Christina Street. They were the first band on the scene and helped start off the spontaneous celebration. It was only a few minutes after seven o'clock that freighters in the river began saluting each other. All up and down the St. Clair, ships' whistles tooted and members of the crew waved and shouted to those on shore. While Sarnia celebrated the occasion, echoes of the Port Huron celebration kept drifting across the St. Clair River and rockets of various colours frequently brightened the sky. The downtown streets remained crowded until two o'clock after which time the diehard celebrants of iron constitution removed themselves to whatever restaurants were open and there drank coffee and held sing-songs until the early hours of the next morning.

The official victory celebrations in the city took place on Wednesday, August 15, with a parade through downtown. Following are portions of the report from the *Sarnia Observer* on the celebration:

Parade Tops Wednesday Celebration

Citizens, young and old, thronged the downtown area of the city yesterday afternoon and lined Christina Street to the gates of the Athletic Park to witness the largest and best parade ever organized in the history of the city. Determined that no matter what happened, the culmination of the war should be fittingly celebrated, men of the Branch No. 62 Canadian Legion got busy immediately following VE-Day and began to organize... Henry Brown and Eric Parsons on whom had fallen the bulk of the planning and organization headed the parade with other members of the Canadian Legion bearing the colours of the Allies, and for fully three quarters of an hour a stream of marching units and decorated floats and vehicles passed along the line of march from the city hall to Athletic Park.

Participants in the parade included; the Sarnia Garrison, veterans of the recent war and veterans of the war of 1914, Sarnia Garrison Band, Sea Cadet Band and cadet units, groups of new Canadians, a group of girls in native costume, Scouts, Cubs and Beavers, Sarnia and Port Huron Salvation Army Corps, beautifully-decorated bicycles, and floats entered by Imperial Oil, Polymer Corporation, Mac-Craft, and Knights of Pythias.

Other reported comments included;

- *Whatever was lacking in the VE-Day celebration was more than made up by the enthusiasm and vim with which people entered into VJ-Day.*

- *Many people said they hadn't seen as good a celebration in this city since the Old Home Week in 1925.*

Members of the Canadian Legion bearing the colours of the Allies headed the parade, with a stream of

marching units and decorated floats and vehicles moving from the city hall to Athletic Park. Participants included the Sarnia Garrison Bugle Band; veterans of World War I and World War II; the Sarnia Garrison Band; cadet units; the Sea Cadet Band; groups of new Canadians such as the Chinese community (restaurant and café owners, chefs and laundry proprietors); First Nations in costume; Scouts, Cubs and Brownies; Sarnia and Port Huron Salvation Army Corps Bands; a group of beautifully-decorated bicycles; fire trucks and floats entered by among others, Imperial Oil, Polymer Corporation, Mac-Craft, Praill Florist Shop and the Knights of Pythias.

At the park, after a reviewing stand and salute by Lt-Col. Eric Harris and Major William Ewener, there was a short religious service, a welcome given by Mayor W.C. Hipple, and a poignant one minute of silence was held in memory of the men who would not return. Lt-Col. Harris followed with a short speech in which he reminisced on the service and parade held on the same spot in the spring of 1940 before the men of the Sarnia units left for England. Following this was another heartfelt one minute of silence in memory of the men who would not return. Hymns and the singing of the National Anthem closed the event. The celebrating continued throughout the day and into the night, with the streets just as crowded and noisy as they were the night before. Crowds of people, old and young, gathered beside City Hall to watch the program of entertainment arranged by the Celebration Committee that included singers, dancers and artists. Jack Kennedy's orchestra provided the dance music following the program, when the street was taken up with dancers and the dancing continued until midnight.

Sarnia pays tribute: On August 19, 1945, hundreds of Sarnians formed a parade in which they paid tribute to those who died in the two World Wars and offered prayers of thanksgiving for the newly-won peace. This date also commemorated the third anniversary of the costly Dieppe Raid of August 19, 1942. The parade moved away from the Sarnia Legion headquarters, proceeded up George Street to Christina Street to the cenotaph at Victoria Park. Taking part in the parade was the Lambton Garrison band; the Sea Cadet band from *R.S.S.C. Repulse*; members of the Canadian Legion, the Red Cross, and the Canadian Corps; city officials; and a delegation of Port Huron Legion members and other organizations. At the cenotaph, persons who had lost loved ones in both World Wars laid wreaths in their memory. The service consisted of hymns and prayers, conducted by Rev. G.G. Stone of St. Paul's Anglican Church, Point Edward who was assisted by Rabbi A. Roness of the Ahavas Isaac Synagogue. The service concluded with a minute of silence in memory of the fallen, with the "Last Post" and "Reveille" being sounded.

The dying continues: Similar to the First World War, the signing of surrender documents at the end of the Second World War did not mean the end of soldiers dying. At least ten young men from Sarnia, included in this Project, lost their lives after VE Day and VJ Day. This includes: Orval Evers, John Duncan and Robert Wilcox (all three in May 1945); William Metcalfe and Wilfred Knight (both June 1945); Cecil Dawdy (in July 1945); Wallace Lang and Howard McRae (both November 1945); and Allan McLellan and Edward Shea (both 1947). Many more of Sarnia-Lambton veterans had their lives shortened, and died as a result of their war experiences.

- **SARNIANS POST-WAR PLANS:** In late August 1945, the *Sarnia Observer* interviewed and printed the responses of many of Sarnia's former fliers, soldiers and sailors on their postwar plans. Service men did not expect any assistance from the government other than the gratuities to which they were entitled. Many of them planned to enter fields of small business, where they could be their own boss; for example, owning service stations, fish and chip shops, bake shops, furniture markets and transport services. Farm boys' opinions varied—from wanting to return to their parents' farms to asking their dads to break up the farms so that they could continue on their own. Some had decided not to return to the farms at all—either because they had taken educational courses overseas and now wanted to do something different, or because their injuries of war made them physically unable to do the heavy work of farming. Other servicemen wanted to return to the universities and schools that they had left to continue their educational training. Others wished to return to their former places of employment, though for some, they were physically unable to do so. Quite a few of the men interviewed admitted that they were still mentally in what they called "a muddle".

- **SARNIANS COME HOME:** In late October 1945, the men of the **26th Field Battery, R.C.A.**, returned home to Sarnia, five and a half years after leaving the city and having been through England, France, Belgium, Holland and Germany. Though many did not return and the personnel of the unit had changed again and again over that time, it was still Sarnia's Battery. When it was mobilized in September of 1939, the unit was composed almost entirely of Sarnia and Lambton County men. On its return, only three original members of the 26th Battery were still with the unit: BSM Peter Oleniuk, 355 South Russell Street; BSM Douglas Urie, Watford; and Sgt. Charles McEwen of Wyoming. Sixteen other Lambton County men returned with the unit, from Sarnia, Petrolia, Forest, Watford, Arkona, Sombra, Alvinston, Courtright and Thedford.

The train had been met earlier in the morning in Toronto by Captain James Doohan, an original member of the unit back in 1939. As the special train pulled into the Cromwell Street station on a sunny Saturday morning, they were greeted by a tremendous ovation from crowd gathered along the Ferry Hill approach. A guard of honour of almost 50 former members of the Battery, the Garrison Bugle Band and the bands of the Sea Cadets and Air Cadets met them. The unit marched up the slope to Cromwell Street and, through the cheering crowds that included many relatives and friends, made its way up Christina Street to the city hall where Mayor W.C. Hipple and members of the city council were present to extend the official welcome. Mayor Hipple in his brief word of welcome said, "Sarnia is proud of you, we can only hope you will be able to enjoy some of the comforts for which you have so valiantly fought." He also paid a tribute to the members of the Battery who were left behind, assuring their loved ones of the city's pride in them and their sympathy for those left to mourn. When the unit broke off for half an hour, the men were immediately surrounded by groups of relatives and friends. Following is an excerpt from the *Sarnia Observer* eye-witness report of the scene:

Many affecting scenes were witnessed as wives, mothers, and sweethearts greeted their loved ones. Gunner J.A. Good of Watford was greeted by his wife and three year-old son Bobby who found it hard to understand the new daddy who hugged him so closely. One of the few Sarnia men to return with the unit was Gunner Jack Devereaux, son of Mr. and Mrs. Thomas Devereaux, 518 Confederation Street, who, in addition to his parents, was greeted by his wife and a small son Jimmy whom he had never seen. 'It's just great, it's wonderful' was all that he could say, in the midst of being hugged almost to death by his relatives.

The square was then cleared for the final fall in and the brief march up Christina Street to the armory for final pay and documentation.

Two weeks later, army public relations headquarters released a historical sketch of the 26th Field Battery. Formed at Sarnia on September 3, 1939, it was in Guelph until May 25, 1940, when it was amalgamated with the 53rd Battery of Cobourg, to enter the Fourth Field Regiment. It embarked for England on August 22, 1940. The unit supplied two NCOs and ten gunners for the Dieppe raid in 1942, but all were either taken prisoner or killed. The unit arrived in Normandy on July 6, 1944. The Battery was among those that saw action in several battles; for the Falaise Gap (at Caen); the campaign to open the port of Antwerp, on Beveland Peninsula; the battle of the Rhine, the liberation of Holland; and the conquest of northwest Germany. The Battery casualties were listed as totaling 40 killed in action and 200 wounded.

Mid-November 1945 also marked the homecoming celebration of the **11th Field Company** and the **First Field Park Company**, two Royal Canadian Engineer units that were mobilized in Sarnia and trained and fought together on the battlefields. Both units commenced their training at Bright's Grove until December 1939, when they were transferred to Wolseley Barracks in London. Assigned to the Second Canadian Division, both companies proceeded overseas in 1940—the 11th Field Company arriving in England in September and the Field Park Company in December. The Second Canadian Division was concentrated in the Aldershot area in southern England, where they continued training and were tasked with the responsibility of defence against any possible German invasion.

In the summer of 1942, detachments from the 11th Field and First Field Park were secretly transported to the Isle of Wight to commence training for the raid on Dieppe. Of the 65 men who went from the 11th Field Company, five were killed, 42 were captured and only 18 returned to England. Of the 24 men who went from the First Field Park Company, four were captured, and 20 returned to England. Following Dieppe, the units were reorganized and began another long period of training. One month after D-Day, the Second Division landed on the coast of Normandy. Then the busy days for the sappers began as the 11th and First Field Companies, combined with other units of the Second Division, pursued the German army along the French coast. The engineers cleared roads of mines and built bridges, often done while under fire. Somehow they kept up with the infantry. They continued to Antwerp and the Scheldt Campaign in Belgium, into northwest Germany and Holland. After VE-Day, the engineers were involved in reconstruction efforts in Germany and Holland.

In the third week of November 1945, the men of Sarnia's own 11th Field Company, R.C.E. returned home aboard a special train. As the train pulled slowly into Cromwell Street on a rainy afternoon, over one thousand cheering citizens greeted it. Of the 160 men who arrived, only six were from Sarnia and Lambton County—the rest were from points all across Canada, but that did not matter—Sarnia was welcoming the "Triumphant Eleventh", its *own* unit back home.

Children from the public schools were dismissed an hour-and-a-half early to enable them to attend, along with many high school students. The soldiers then marched from the station along Christina Street to the City Hall

Square, every inch of the route lined with a cheering, admiring throng. After a short welcome by Mayor W.C. Hipple, the soldiers were moved into the market building, where they were handed packets of cigarettes and chocolate bars from Canadian Legion representatives and Sarnia Red Cross members. Each man then cashed their \$100 cheque which had been handed them in England before leaving; passes were checked; warrants exchanged to tickets and train connection times were provided. From the market, they were directed to the armories where a banquet was awaiting them. In many cases, families of the men had travelled long distances to be in Sarnia to greet them. The wives, mothers and children were made just as welcome at the banquet. Hours later, the men were transported to the evening train to move on to their next destinations, which was to be followed by 30 days leave before their discharge. The *Sarnia Observer* headline of the event the next day read, "Tumultuous Accord As Triumphant 11th Field Reach Home".

Also during the third week of November 1945, at the Canadian National Railways station in Windsor, thousands and thousands of next-of-kin, loved ones, wives and well-wishing neighbours welcomed home the **Essex Scottish Regiment**. Many from Sarnia journeyed to Windsor to join in the mass celebration. A number of Sarnia and Lambton County men had enlisted with the unit when it first mobilized in September 1939, and more joined the regiment as replacements. After training at Camp Borden, the Essex Scottish proceeded overseas in July 1940. On August 19, 1942, the Essex Scottish Regiment landed on the machine-gun swept beaches of Dieppe where the unit suffered 98 percent casualties.

Local Sarnia soldiers with the Essex Scottish who arrived on the train in Windsor included R.J. Campbell, T.C. Cote, G.R. Goddall, W.L. Guzi, J.P. Harvey, L.I. Lowrie, M.A. MacIntosh, S.D. McClymont, B.C. Tripp, J.F. Woodcock, F.J. Bulman, and L.A. Nahmabin (Sarnia Reserve). Other local arriving soldiers were F. Butler and N.R. Stephenson (Arkona); D.G. Gordon and C.H. Jolly (Petrolia); O.S. Hayes (Point Edward); and J.B. McGill (Corunna). Waiting relatives were overjoyed when the troop train pulled into the station. They broke through the cordon line of city policemen, while many hundreds looked down from the roof-tops of buildings on Sandwich Street across from the C.N.R. station. Led by the Essex Scottish pipe band, the regiment marched up Ouellette Street to Windsor armories where documentation and leave passes were issued.

On **November 11, 1945**, for the first time, Sarnia's veterans of World War II, along with veterans of the Great War, took part in the Remembrance Day memorial service held at the cenotaph in Victoria Park. Before the service, the veterans, along with members of the Canadian Corps Association, the Canadian Legion, the Lambton Garrison Band and the Sarnia Sea Cadets Band marched from the armory along Christina Street to the cenotaph. Mayor Hipple; representatives of the Canadian Legion and its Ladies Auxiliary; the Canadian Corps; the 26th Battery; the Sarnia Jewish Community; the I.O.D.E. and several private individuals laid wreaths on the cenotaph in memory of Pte. Melvin K. Fisher, Lieut. Ernest Ottaway, Sapper Charles E. Berry, W.O. Leslie Sutherland and Sgt. John C. Clarke. Following the laying of the wreaths, the two minutes of silence, and the playing of the "Last Post" and "Reveille", the veterans then marched to special services at St. John's and St. George's Anglican churches.

News home after the war: As in the First World War, many families, including some in Sarnia, did not receive news of the fate of their loved ones until after the war ended. This was particularly true for those who served with the RCN and RCAF. For those lost at sea or who failed to return from an air mission, their bodies were never recovered. During the war, next of kin were only notified by telegram that their loved ones were "listed as missing in action". Post-war, grieving families prayed for a miracle—that they had been rescued, were POW's or had been protected by Allied resistance.

It was not until after the war, when investigators—including those from the Ministry of National Defence, Commonwealth War Graves Commission and the Missing Research and Enquiry Unit—discovered or could examine crash sites, exhume bodies, identify discovered remains, and determine the fates of many of the lost. Often it wasn't until many weeks or many months after the war ended that parents and young widows were notified by telegram that their loved ones were "now for official purposes presumed dead" or "officially declared killed in action."

Mothers, fathers, and young widows, their lives shattered after receiving the news, and cruelly after the war had ended, were left to wonder where and how their sons and husbands had died, and about their last agonizing moments in a faraway land. They were not given the opportunity to say good-bye to their loved ones or to give them a proper funeral. It was very common for those mothers, fathers and wives, until they themselves passed, to always hold out hope that their son or husband would someday return home and walk through their front door.

• **RETURNING HOME:** The **Department of Veterans Affairs** was created in 1944 to handle the matter of helping the large number of veterans who had to make the transition from fighting a war to becoming productive members of society. By March 1946, close to 600,000 women and men were discharged from the Canadian forces. They arrived in Canada, mainly docking at Halifax, and then travelled on by rail to cities and towns across the Dominion. Even after returning home, all of the overseas service personnel remained members of the armed services, but were given thirty days leave during which time their papers were processed. Final medical and dental examinations were provided, along with opportunities to receive counseling, though few decided to talk to the psychologists for fear it would delay their return to civilian life.

Upon their discharge from the military, veterans' support included: \$100 to buy civilian clothing; a war service gratuity of \$7.50 for each thirty days of service, plus an additional 25 cents for each day overseas, and one week's pay for each six months service outside Canada (each veteran received an average of \$488); spouses of those who had died in the service received pensions, set at 75% of what a disabled veteran would have received, and the children received additional benefits; and the children of Canadians killed in service received financial support to pursue higher education. War-service buttons and release certificates were part of the final transition, and the demobilized were allowed to retain their uniforms but were to hand in all weapons.^{D, 41}

The Canadian government was determined to be more generous to its returning veterans than had been the case after the First World War. **The Veterans Charter**, passed in 1944, was a collection of legislation and benefits that provided important assistance to the returning service personnel. It provided \$1.2 billion for the re-establishment of Canada's veterans. The *Reinstatement in Civilian Employment Act* guaranteed the returning men and women their old jobs back, plus any promotions they might have received. The federal civil service was instructed to hire veterans – first, those who had war-related disabilities; second, those who had served overseas; and third, the widows of killed service personnel. Though the women's wartime formations were disbanded (Army-CWAC, Air Force-RCAF-WD and Navy-WRCNS), some of those who served took advantage of the Charter—many used their wartime experience as a springboard to enter the job market; others benefited from access to veterans' education programs.

To help veterans buy land for their homes or businesses (including farms) the *Veterans' Land Act* provided grants and loans of up to \$4,500 for land, plus \$1,200 for equipment. The *Veterans Rehabilitation Act* provided opportunity for service personnel to attend university for free, or to receive vocational training. Low-interest loans were available under the *Veterans Business and Professional Loans Act* to start-up businesses and new farms. For those who had trouble finding work, the government provided financial assistance—initial benefits were \$13 a week for married veterans and \$9 for unmarried veterans. While some veterans slipped through the new social security net, and others, such as First Nations, were treated unequally, or, like the merchant sailors, even denied veterans status, there was a sense that Canadians were repaying some of the debt owed to those who had made the sacrifices and had defended the country.^{D, 41, 51}

As part of Canada's post-war reconstruction, the government established the **Family Allowance** program in 1945. Generally referred to as the "baby bonus," it was a monthly allowance to families with children to help cover the costs of child maintenance. It was Canada's first universal welfare program for it was paid to Canadian families with children regardless of income. Payments varied according to age, ranging from \$5 per month for children under age five, to \$8 for children age 13-15. The idea for the program came in the waning years of the war, with the hope it would help ward off a postwar economic slump. It meant that when Canadian soldiers came home, they would receive an average of \$5.94 per month for every child they added to the "Baby Boom". Over the years, Family Allowance has undergone restructuring and modifications, to what it is today, the Canada Child Tax Benefit, which targets low-and-middle income families.^{2N}

Treated unfairly: Two groups were treated unjustly by the Canadian government's Veterans Charter after the war: the merchant seamen, the "fourth arm" of Canada's fighting services; and the First Nations soldiers. The merchant seamen had delivered the vital troops, munitions, food and fuel around the world, and suffered proportionately higher casualties than any other Canadian military arm. An estimated 12,000 Canadian men and women served in the merchant navy during the Second World War. All volunteers, the mariners received a marginally higher pay rate than Navy sailors, but had little opportunity for advancement or decoration, and received no benefits or pensions after the war. Yet because the mariners were not in uniform or organized as a fighting arm, and because of a series of government and later veterans groups' decisions, the merchant mariners were not recognized as veterans. It was not until 1992 that merchant mariners were granted official veteran status, and began receiving disability pensions, allowances and health care.^{41, 5N}

Despite the fact that status Aboriginals were not Canadian citizens, did not have the right to vote, and they had been exempt from military service since the First World War, approximately 4,300 First Nations and Metis voluntarily served during the Second World War. After the war, the Veterans Charter that applied to all veterans, also applied to the First Nations soldiers who served—so they were entitled to receive all the same benefits as their white comrades. However, this would not be how it actually took place. A number of factors combined with the result being that, the majority of First Nation warriors were denied benefits, educational opportunities, employment, access to hospitals and rehabilitation services. These inhibiting factors included: unequal access to information and counselling (as most returned to bands and reserves that were isolated); administrative differences (three federal bureaucracies with overlapping jurisdictions—Veterans Affairs, Indian Affairs, and National Defence); bureaucratic errors (Indian Affairs, who controlled much of the resources and finances, sometimes actively dissuaded them from following up with Veterans Affairs); a large amount of disinformation (reliance upon their local Indian Agent for accurate details and advice on programmes); and underlying prejudice. It was not until 2002, after decades of persistence from aging veterans and a series of Royal Commissions and Senate studies, the government finally agreed to provide compensation and full veterans benefits to First Nation veterans.^{D, 3G, 4I, 5N, 6M}

Treating the Wounded: Of the 55,000 Canadians wounded in World War II, more than 29,000 were listed as seriously disabled from their wounds, and most required years of care, surgery, treatment, and rehabilitation. Men who were once happy-go-lucky youths with full futures, returned battered and broken, facing a dark path ahead. By 1946, the Department of Veterans Affairs was running more than thirty hospitals, many of them recently constructed, the largest being Sunnybrook in Toronto. Four facilities offered specialized treatment for paraplegics; new prosthetic limbs were manufactured and distributed; and veterans had skin peeled off and grafted onto other parts of their bodies in the hope of healing burn wounds.^{4I}

Closer to Sarnia was Westminster Veterans Hospital in London, Ontario. Built in 1918 as a psychopathic hospital, as a military hospital, it was used primarily to treat and rehabilitate veterans with psychological injuries and shell shock suffered during World War I. Soon the need for medical and surgical treatment for veterans was established. The hospital expanded during World War II to treat the injured and sick from nearby training camps. Following World War II the focus returned to long-term and acute care for veterans with disabilities.

More difficult to treat were those who bore the psychological wounds of war. The unending stress of combat, the never-ending fear of death, and the savagery of what they witnessed and experienced took a tremendous psychological toll on soldiers. A Canadian tank officer who fought through Italy, and like countless veterans, was haunted by the war, believed that, *“There isn’t anybody who was in real battle who came out unmarked.”*^{4I}

In the First World War, it was called “shell shock”, and in the Second World War, it was known as **“battle exhaustion,”** “war neurosis,” “combat fatigue,” and “combat stress reaction.” Any soldier in any unit, of any rank, from infantry soldier to bomber command to navy sailor, could be stricken with battle exhaustion. Soldiers too long under fire, watching comrades being killed in horrific fashion, facing constant dangers, and enduring abnormal living conditions with poor weather, lack of sleep and poor nutrition could effect even the bravest of the brave. As with post-WWI, doctors knew little of what is now known as **Post-Traumatic Stress Disorder (PTSD)**, so there were few treatment programs after the war for returned veterans who suffered from it. For these sufferers, they experienced distressing memories, nightmares, flashbacks, sleep disturbances, mood swings, depression, and anxiety.^{D, 6Z}

Closed fraternity: Though many wives and children caught a glimpse of the war that continued to rage in the minds of veterans, most ex-servicemen would not talk about the internal struggle. They came from a generation that was not given to sharing their emotions, and many, even if they were so inclined, could not find the words to capture the swirling stories and hurtful images. Many, if not most, Second World War veterans were reluctant to recount their wartime experiences, choosing instead to suppress the horror of it all as they built new postwar lives back home. Who could understand their experiences and the horrors they witnessed? What was there to say about the battles, the chaos and the carnage? A wartime historian for the 5th Canadian Armoured Division observed, *“The war has been fought on an island, suspended in the time and space, that had little relation to the life we left or to the one which we were now returning. That, after all, is true of any war. Those who have taken part belong to a fraternity that is forever closed.”*

Hundreds of thousands of veterans took solace by turning to one another. Most veterans stayed in touch with at least a handful of their former comrades by joining the Canadian Legion or other military service clubs that

marked the communities across the country. As the years marched on, reunions were arranged for units, ships, or squadrons. Here, aging veterans would come together to recount stories and honour those who passed. An aging RCAF veteran described his relationship with his wartime companions: *"We remain friends despite the passage of forty years and despite following widely differing careers and living in different countries... But when we do meet, the decades contract to weeks and it's as though we are still comrades in arms."*⁴¹

• **WAR BRIDES:** The long garrison years for Canadians in England, and occasional periods of leave spent in Britain had allowed relationships to flourish. Chance encounters, local social events and dances ensured that Canadian servicemen met the young women in nearby cities, towns and villages all over the United Kingdom. Inevitably, many fell in love. Although some war brides describe whirlwind romances, others had known their Canadian servicemen fiancés for one, two, even three years before deciding to marry. The Canadian army officially discouraged such marriages, but nevertheless accepted the inevitable and assisted the newlyweds. Another difficulty for some—the women's parents were opposed to the marriage: they foresaw that a marriage to a Canadian serviceman would result in loss and separation from their daughters as most war brides would emigrate to Canada. Despite it all, love found a way. Family and friends helped the young couples organize simple weddings and receptions during a time of blackouts, rationing and an uncertain future.

By the end of World War II, nearly 48,000 marriages between Canadian servicemen and European women who met during the war produced approximately 22,000 children. Most of these brides were from Britain (about 94%), but also from other areas of Europe such as the Netherlands, Belgium, France, Italy, Denmark and Germany. After the war, thousands of Canadians decided to make their life in Britain, but given the depressed state of the nation's economy, most opted to move their new families home to Canada. Between 1942 and 1948, 43,454 "war brides" and 20,997 children were transported to Canada. Some came to Canada during the war years, crossing the U-boat infested waters of the North Atlantic in troop ships.

The Canadian government established the Canadian Wives' Bureau (on Regent Street in London, England) whose job it was to assist the wives of Canadian servicemen and their children. The government provided the war brides with free sea and rail passage (one way) from their original homes to their destinations in Canada, as well as daily food allowances and free access to medical care on boats and trains. Most of the women and children travelled separately from their husbands, who were still in uniform, and so English, French, Belgian, and Dutch war brides set off for the terrifying leap into the unknown. Many war brides describe receiving just a few days notice before it was time to sail for Canada. There were often heart-wrenching scenes as young women said goodbye to their families.

Some war brides described their voyage to Canada as a great and wonderful adventure. They made friends, feasted on the plentiful supply of food onboard ship, and did what they could to help out those with small children. Others described themselves as homesick, heartsick and seasick. Travelling, sometimes during the winter or with the threat of enemy U-boat attack, with crying children, enduring seasickness, and dealing with the shock of leaving home often did not make the trip an easy one—even on a converted luxury liner. Volunteer Aid Detachments (VADs) like the Canadian Red Cross and the Salvation Army provided thousands of hours of assistance in transporting the war brides to Canada.

First docking in Halifax and passing through Pier 21, they were met there by Red Cross and Salvation Army volunteers, who offered the new Canadians a warm welcome and gifts of food and clothes for the children (from 1928 until 1971, Pier 21 was Canada's front door to over a million immigrants, wartime evacuees, refugees, troops, war brides and their children). Most of the brides and their children would then board special war-bride trains bound for various points across Canada. Some of these women found themselves in large cities with all the modern amenities, others ended up in rural cities and towns like Sarnia, while others traveled for seemingly endless days across the Dominion to the prairie wheat fields or to the west coast. For the most part, war brides were met with warm receptions from new family members and welcoming communities. Many of these young brides had a difficult transition to married life in Canada, due to isolation, language issues, climate, unfriendly in-laws, different foods and customs, inflated expectations, and discrimination. These brave young women followed their hearts, said goodbye to their families and made their new homes in cities and towns like Sarnia, raising their families, building and enriching the communities in postwar Canada.^{D, 2F, 2N, 30, 41, 6Z}

An estimated 200 British war brides moved to Sarnia between 1942 and 1947 with their Canadian military husbands. The group met regularly at the local YMCA, then located on Mitton Street, a way to forge friendships and help ease the homesickness and loss of family and friends left behind. Over the years, war bride groups across the

country held annual national gatherings. In 1987, Sarnia hosted a reunion attended by 325 war brides and their husbands at the Holiday Inn in Point Edward.^{10P}

One British “war bride” who returned to Sarnia was featured in a *Canadian (Sarnia) Observer* article. Mrs. **Mary Teresa Fisher** (nee O’Shea), of London, England, wife of Lance Corporal John Molyneux (Red) Fisher (see page 463), arrived in Sarnia in 1944. She had experienced almost five years of war, and as a registered nurse, had plenty of work to do. She experienced the Battle of Britain; was in the dance hall at the time Lieutenant John “Jack” Wright of Sarnia was killed (see page 1062); experienced the early days of the German bombing blitz and the unmanned V-1 and V-2 rocket attacks. In 1942, she met Canadian Army Lance Corporal John Fisher of Sarnia, and they were married in October of 1943 in All Saint’s Church, London, England. One year prior, in October of 1942, Lance Corporal John Fisher had been awarded the Military Medal for bravery in the field during the raid on Dieppe.

Mary Fisher arrived in Sarnia in mid-August of 1944. She described her trip over as very uneventful with calm sea all the way but, “I was seasick the whole time I was on shipboard.” She was one of a party of 200 women and children who arrived in Canada. Those sailing to Canada were given one week’s notice and were not allowed either to bid anyone good-bye or to write to their families. They crossed the Atlantic without convoy. Upon arriving in Sarnia, she was impressed by all the lights, since she had not seen a city illuminated at night in almost five years. She was very surprised to see the abundance and variety of fruit and vegetables at the Sarnia market, so she didn’t think the rationing in Canada was anything compared to that in England. She found most things here—for example, trains, stations, and cars—were made on a larger scale. The houses here, however, were smaller than those in England, and not as high, but the grounds around the houses were larger with more grass, but fewer flowers. She stated two things that she will have to get used to are, “sleeping in a bed (my usual sleeping place in London was under the kitchen table), and your Canadian heat waves.”

• **WORLD WAR II NUMBERS:** The Second World War killed at least 60 million combatants and civilians. While battles were fought on continents and oceans around the world, the majority of dead were civilians rather than soldiers. The Soviet Union bore the brunt of fighting against Germany and paid the price with an estimated 27 million dead (only 4.7 million of these were combatants). The Chinese had more than 15 million killed as Japanese soldiers, famine, and disease swept over their communities. Germany lost over 6.9 million dead, of whom 5.3 million were combatants. The Holocaust resulted in six million murdered Jews and others deemed “undesirable.” Poland lost more than 5 million dead, the majority being civilians. Japan lost over 2.5 million. Italy was left with some 455,000 dead, Britain lost over 449,000 killed, and the United States lost approximately 419,000. It is unknown how many combatants and civilians were wounded during the Second World War, but the number is more than 100 million.^{4I}

At the start of World War II, in September of 1939 alone, more than 58,000 Canadian men and women had volunteered to serve in the Canadian Forces. Canada was the first Commonwealth country to send troops to Britain in 1939. Over the course of the War, approximately 1.1 million Canadians and Newfoundlanders would serve. This included approximately 100,000 in the Royal Canadian Navy; 12,000 in the Merchant Navy; 250,000 in the Royal Canadian Air Force; and 730,000 in the Canadian Army. During 1939-45, more than 40% of the male population between the ages of 18 and 45—and virtually all of them volunteers—enlisted.^{D, E, 7P}

Sarnia’s population in 1939 was recorded as 18,240. An estimated 3,000 Sarnia men and women served in the Second World War. The *Sarnia War Remembrance Project* records the names of 185 Sarnia World War II fallen soldiers. Of the 185 fallen soldiers—49 of them have no known graves—over 26% (vs. 36% in WWI). The median age of Sarnia’s World War II fallen soldiers is 23 (vs. 26 in WWI). In World War II, almost 70% of Sarnia’s fallen were age 25 and under, including almost one third of them between the ages of 17 and 21.

In World War II, the deadliest year for Sarnia’s sons was 1944. During that year, 71 Sarnia sons lost their lives in battle. The three months of August, September and October 1944 were particularly calamitous with 35 Sarnia lost lives. This compares to the three months of the Hundred Days Campaign of World War I where 33 Sarnians were killed. World War II Sarnia lives lost by year include; 0 in 1939, 3 in 1940, 11 in 1941, 23 in 1942, 40 in 1943, 71 in 1944, 35 in 1945 and 2 in 1947.

In World War II, technological advances changed the methods by which war was fought. Close to 45% of Canada’s World War II fallen lost their lives while in service with the Royal Canadian Air Force or the Royal Air Force. For Sarnia, close to 49% of its World War II fallen served in the RCAF/RAF. Six out of every ten Canadian airmen belonged to Bomber Command. Almost two thirds of Sarnia’s fallen airmen belonged to Bomber Command. In the generation prior, of the Canadians who lost their lives in World War I, less than three percent died in service with the air forces.^{2B}

The exact number of Canadian war deaths remains uncertain due to the use of different methods of accounting and the variety of sources. The most commonly accepted number for Canadian World War II war deaths is 47,000. Of the approximate 47,000 fallen Canadians of World War II, the casualties by branch were:

Royal Canadian Navy 2,200 + Merchant Navy 1,600 (8%);

Royal Canadian Air Force 18,000 (38%);

Canadian Army 25,000 (53%).^{D, E, 2N, 3F}

Sarnia's World War II fallen by branch is:

Navy – 20/185 (11%), Air Force 91/185 (49%) and Army 74/185 (40%).

• **WAR GRAVES:** Canada did not repatriate its dead, except in the rarest of circumstances. Tens of thousands of young Canadians were left overseas, buried near to where they fell in combat, and often alongside their comrades in arms from throughout the Commonwealth. When the battle moved on, and at the end of the war, the bodies were disinterred from graves and gathered together in permanent Commonwealth War Graves Commission (CWGC) cemeteries. Established in May 1917, the CWGC ensures that 1.7 million people who died in the two World Wars will never be forgotten. Originally called the Imperial War Graves Commission, all its Commonwealth members presented a common view opposed to repatriation of war dead. It was committed to the equal treatment of all war dead, and that these cemeteries “in foreign lands would be the symbol for future generations of the common purpose, the common devotion, the common sacrifice of all ranks.” After the Second World War, just like after the First World War, nations where fighting took place once again offered land for war cemeteries. The Commonwealth War Graves Commission cares for cemeteries and memorials at 23,000 locations in 153 countries.^{C, 3G}

Note: More information on the CWGC is in the WWI section of this Project on page 200.

Note: Canada changed its policy against the repatriation of war dead in July 1970. Canadian Armed Forces personnel killed overseas after 1970 have been repatriated to Canada. Canada continues to respect the previous non-repatriation policy for the remains of service members killed on operations before 1970.^{3G}

In these war cemeteries in foreign lands, Canadians lie buried side by side regardless of rank, religion, or colour. Every headstone contains the national emblem (eg. the Maple Leaf) or regimental badge; soldier rank; name; unit; date of death; and age of each casualty. Inscribed below these are an appropriate religious symbol and a more personal dedication (epitaph) chosen by relatives.^{2B, 4I} All epitaphs of Sarnia's fallen are on page 1205.

Of Sarnia's 185 Second World War fallen included in this Project, 136 have graves, and they lie buried in 64 cemeteries scattered around the world, including in Algeria, Azores, Barbados, Belgium, Egypt, France, Germany, Iceland, India, Italy, Netherlands, Portugal, Sicily, Sri Lanka, the United Kingdom and Canada.

• **THOSE WITHOUT A GRAVE:** In World War II, many of the fallen, particularly members of the Royal Canadian Navy, the Merchant Navy and the Royal Canadian Air Force do not have graves. Lost at sea or in crashes, their bodies were never found or recovered; however, they are remembered with their names inscribed on war memorials. One of these many memorials has the poignant inscription, “TO WHOM THE FORTUNES OF WAR DENIED A KNOWN AND HONOURED GRAVE.” It was one more sad reality of war, a tragic nightmare that family members back home had to cope with.

Of Sarnia's 185 Second World War fallen included in this project, 49 have no known graves. Their names are inscribed on memorials located around the world, including the Runnymede Memorial in England, the Alamein Memorial in Egypt, the Malta Memorial in Malta, the Groesbeek Memorial in the Netherlands, the Sai Wan Memorial in Hong Kong, the Singapore War Memorial in Singapore, the Arlington National Memorial in Virginia, USA, and the Halifax Memorial and Ottawa Memorials in Canada.

• **CASUALTY IDENTIFICATION PROGRAM:** During and in the immediate aftermath of both World Wars, the Imperial War Graves Commission (now the Commonwealth War Graves Commission) and Canada's Grave Registration Units attempted to identify and provide Canadian soldiers with proper burials. During the World Wars and the Korean War, more than 27,000 members of Canada's Navy, Army and Air Force went missing in action and have no known grave. Although active searches for the remains of Commonwealth soldiers were suspended after 1921, Commonwealth countries continue to attempt to identify the remains of missing service members. The bodies of missing Canadian Armed Forces members continue to be found to this day, disgorged from swamps, dug up from farmer's fields, or discovered in heavily wooded areas.^{4I}

The remains of war dead, often found with military artifacts, are discovered during construction projects, road works, archaeological digs, and farming activity, especially near known battlefields. In Canada, the Department

of National Defence–Casualty Identification Program attempts to identify newly discovered remains of military personnel who went missing during active service. Since being established in 2007, the Casualty Identification Program has successfully identified 28 Canadian soldiers. Identified human remains are buried with a name, by their unit and in the presence of their family. The Program arranges for a proper military funeral and headstone.^{3G, 3M, 5W}

A number of disciplines help the casualty identification process, including history, archaeology, anthropology, laboratory sciences, forensic odontology, genealogy and DNA testing. Typically, the found bone remains are sent to a lab for forensic analysis, historians work on narrowing down service members who went missing in the area the remains were found, artifacts (eg. unit identifiers, personal effects) are used to close in on the soldier's identity, and a genealogist searches for viable DNA donors to match with the bones.^{3G}

Sarah Lockyer, PhD, a forensic anthropologist, took over as coordinator of the Casualty Identification Program in 2015. In a November 2017 interview at the CWGC about her work she said, "For me personally it's important because it returns their identity to them. They are no longer faceless, no longer nameless. For my military colleagues, it gives a sense that the military will always take care of you. No matter what."^{3M}

One case investigated by the Casualty Identification Program were the possible remains of Sarnia's Private Ralph Louis Ackerman (included in the WW I section of this Project on page 213). Since 2010, the remains of 19 missing Canadian First World War soldiers were found in the area of the town of Vendin-le-Vieil, France.^{5W} One set of these remains were found in the same area that Private Ackerman was killed. He was killed in action on August 15, 1917 on the first day of the Battle of Hill 70 in France. In May 2018, the Casualty Identification Program contacted this author seeking information for their work on creating a lineage that would lead to a viable DNA donor in order to test against Pte. Ackerman's DNA, thereby either discluding him from candidacy or positively identifying the remains as Pte. Ackerman.^{3c} Dr. Sarah Lockyer was the keynote speaker at the Flanders Fields Dinner at the Royal Canadian Legion Branch 62 in Sarnia in November 2018.

• **WAR MEMORIALS:** Many of Canada's fallen are solemnly commemorated overseas, but grieving families also needed memorials closer to home. Almost every town, village, and hamlet across Canada has a memorial for the Great War, but the question raised in 1945 and after was whether new memorials should be erected. After the Second World War, Canadians across the country wanted to somehow mark the new war, but there was little appetite for building thousands of new stone monoliths. Canadians embraced functional memorials that would enrich the living and provide contemplative spaces where they could reflect upon those who gave their lives in the war. Across the country, gardens, libraries, wooded areas, hockey arenas, even beaches were created to honour the Second World War fallen. There was some controversy and debate with these "new memorials," particularly from the Legion, who felt these spaces would fail to "inspire remembrance and reverence." Ultimately in most communities, the Legion's insistence that existing Great War memorials in towns, villages, and cities across the Dominion could be adapted to include those killed during the Second World War won out.^{4I}

The original Sarnia cenotaph was unveiled in November 1921 with the names of 60 World War I fallen on it. One year later, another 42 World War I fallen names were added. As soon as the Second World War ended, discussions began in Sarnia on creating some kind of memorial to commemorate the local fallen. Debate followed on the proposals that included: a general purpose auditorium (with facilities for hockey, sports, music, and exhibitions); a memorial recreational centre (composed of a park, playing field area and a recreational building); a war memorial library building (with a library, small auditorium, art gallery, local history room, and a small chapel); a memorial park (which would include a formal garden and cenotaph, and buildings suitable for cultural education); and a Lambton County museum and small chapel (which would be added to the Sarnia Public Library).

In November 11, 1955, more than ten years after the conclusion of World War II, the "new" renovated Sarnia cenotaph was re-dedicated. Bronze tablets from the original cenotaph, that listed the names of over 1000 Sarnians who served in the Great War, and 102 fallen, had been removed and placed on the outside west wall of the Canadian Legion on Front Street. The original grey marble monument had been enlarged by the addition of two new "wings", on which were inscribed the names of Sarnia's fallen soldiers from World War I, World War II and the Korea War.

In November 2019, the Sarnia Legion Branch 62 and Sarnia Historical Society completed a refurbishing of the Sarnia cenotaph. Based on the research in *The Sarnia War Remembrance Project*, 26 new names were added to the cenotaph, including 10 more from WWI and 10 more from WWII. Names inscribed on the Sarnia Cenotaph include 112 from WWI, 169 from WWII, 4 from Korea, 1 from In Service to Canada and 2 from Afghanistan. More information on the Sarnia cenotaph is in this Project on page 11.

Many of Canada's Second World War Air Force and Navy fallen are memorialized on one of two War Memorials. The **Runnymede Memorial** in Surrey, England commemorates by name over 20,000 men and women of the Air Forces of the British Commonwealth who were lost in the Second World War during operations from bases in the United Kingdom and North and Western Europe. The Runnymede Memorial is inscribed with the names of 3,050 Canadian airmen, including at least twenty-three airmen from Sarnia.

The **Halifax Memorial** in Point Pleasant Park, Halifax, Nova Scotia, dedicated in November 1967, is inscribed with the names of over 3,200 Canadian men and women of the Navy, Army, and Merchant Navy who lost their lives at sea. Part of the memorial dedicatory inscription reads: *Their graves are unknown but their memory shall endure*. The Halifax Memorial includes 274 casualties from World War I and 2,847 from World War II. At least sixteen of the names are from Sarnia—2 from World War I and 14 from World War II.

Runnymede Memorial

Halifax Memorial

The **National War Memorial** in Ottawa, *The Response*, was unveiled in May 1939, and is clearly a Great War memorial, with its multiple sculptured figures in period uniforms. After the Second World War and the Korean War, some felt there was a need for a new national memorial to commemorate the sacrifices of the fallen from those wars. Though there were initial plans in 1963 to erect a national shrine of remembrance in Ottawa, to be unveiled in 1967, they fell through due to lack of public support. It was not until 1982 that the dates of the Second World War and Korean War were added to the existing national memorial.^{D, 2N, 41}

• **LOST BUT NOT FORGOTTEN:** The Second World War fallen were memorialized in other ways too, including formal and informal naming programs across the country. The most prominent was an official federal program started in 1947 to designate geographical features such as mountains and lakes after fallen servicemen. Thousands of geographical places across the country carry the names of service personnel, as a way to honour their sacrifice.⁴¹ One example is Squadron Leader-Pilot Robert Wilfred Alexander (included in this Project), who was killed when his Dakota aircraft was shot down over Arnhem, Netherlands in September 1944. A bay and a Point in the Northwest Territories is named in his honour.

Sarnia Street Names: The City of Sarnia has several streets named to honour a few of the city's fallen soldiers including; Barclay Drive, Berger Road, Eddy Drive, Quinn Drive and Wheatley Drive. Eddy and Wheatley are World War I fallen soldiers; Barclay, Berger and Quinn are World War II fallen soldiers. The stories of all five of these fallen are included in this Project. Information on all of Sarnia's street names is available in the *Streets of Sarnia Project*, written by Tom St. Amand and Randy Evans, published in 2016.

Sarnia Memorial Plaques and Honour Rolls: After both the First and Second World Wars, many of the local churches and several institutions in Sarnia created memorial plaques and honour rolls to commemorate their members who served and those who made the ultimate sacrifice. A complete record of all Sarnia war-related memorial plaques and honour rolls, including Aamjiwnaang First Nations, churches of various dominations, two high schools and even the Canadian Bank of Commerce, are included in this Project beginning on page 1154. Following are descriptions of two of these local plaques;

Imperial Oil Company – Sarnia Refinery Plaque: In April 1949, the President of Imperial Oil Company unveiled a Memorial Plaque at the Sarnia refinery. The bronze Sarnia Refinery Plaque lists the names of twenty-four Imperial Oil employees who made the ultimate sacrifice in World War II. Of those twenty-four names, 21 of them are inscribed on the Sarnia cenotaph. More information on the Sarnia Refinery Plaque is on page 467 and 1164.

Sarnia Collegiate Remembers: The original Sarnia Collegiate was built in 1891 and was located on London Road, at the end of Brock Street. In October 1922, Sarnia Collegiate Institute and Technical School officially opened at its new location, at the end of College Avenue on Wellington Street. During the Second World War, many Sarnia Collegiate students and graduates served in that war, some making the ultimate sacrifice.

On June 6th, 1951, a war memorial plaque to honour the memory of former students of Sarnia Collegiate Institute and Technical School who were killed during World War II was unveiled at a public ceremony held in the school auditorium. Sarnia Mayor W.C. Nelson, military and educational dignitaries, and relatives and friends of the men being honored were among the guests present. As strains of the “Last Post” and “Reveille” re-echoed throughout the auditorium and flags were lowered, then raised by representatives of the three branches of the armed service, the plaque was unveiled by Robert Dobbins, the oldest soldier in seniority on the staff. The bronze plaque, two feet by three feet, had the names of 111 former pupils who made the supreme sacrifice in the Second World War.

Lieut.-Col. W. Eric Harris, former commanding officer of the 26th Field Battery, Royal Canadian Artillery spoke to those gathered, “We come here today on the seventh anniversary of D-Day to publicly testify and proclaim that the memory of those who died in war will remain forever green, fresh and lively in our hearts. Let us hope and pray that in spite of threats and fears of another war current in the world today, there will be still not another call to graduates of this school, a call that they already have met twice in a generation. They did not die in vain. Today we have a free world, united in the face of potential aggression, because of their sacrifice.”^N

Sarnia Collegiate Institute and Technical School and St. Clair Secondary School were amalgamated by the Lambton Kent District School Board in 2016 to create Great Lakes Secondary School. The “Sarnia Collegiate Institute War Memorial Plaque” was one of the historical artifacts that made the move in 2019 to the renovated Great Lakes school site on Murphy Road. It is prominently displayed in the main hall. The transcribed “Sarnia Collegiate Institute & Technical School War Memorial Plaque” is included in this Project on page 1169.

Extensions of *The Sarnia War Remembrance Project*: It took approximately eight years for this author to complete *The Sarnia War Remembrance Project*—a way to forever commemorate and remember the sacrifices of the local fallen, the veterans and their families. Over the course of his research, the author, along with other volunteers and contributors including Lou Giancarlo and Tom St. Amand, completed a number of local projects derived from the SWRP. These projects further honoured those who served in the Boer War, in both World Wars, in Korea, in Afghanistan and In Service to Canada. Information on some of these SWRP extensions are included in this Project: returning the “Big Tom” cannon to Veterans Park (page 9); Veterans Park storyboards (pages 5 and 19-20); the Catholic Soldiers Honour Roll in St. Patrick’s High School (page 1139); the addition of 26 new names to the Sarnia cenotaph in November 2019 (page 17); special “Sarnia Remembers” issues of the *Sarnia Journal* each November; and the secondary designation of a 4 kilometre section of Highway 40 as “Veterans Parkway” (page 1140).

• **REMEMBERING:** A Canadian veteran wrote the following in *The Legionary* in the immediate aftermath of the Second World War, shedding light on the place of memory in veterans: “*One minute he wants above all to forget what he has been through, the pals he has lost and all the miseries of war. The next moment he knows that he can never forget. He won’t ever forget, and something within him cries out that the people here at home must be made aware of the ghastly, bloody price paid by the ‘few’ for the freedom of the ‘many.’*”

A Canadian Major who had served in with the Stormont, Dundas and Glengarry Highlanders during World War II, wrote the following in the early 1990’s, “*Our ranks are thinning fast. The veterans will never forget, but at times we worry whether our children are taught the price for freedom they take for granted.*”⁴¹

“St. Crispin’s Day speech”, From *Henry V*, spoken by King Henry

*That he which hath no stomach to this fight,
Let him depart; his passport shall be made...*

*From this day to the ending of the world,
But we in it shall be remember’d;
We few, we happy few, we band of brothers;
For he to-day that sheds his blood with me
Shall be my brother...*

*William Shakespeare
circa 1600*

BIOGRAPHIES OF SARNIA'S WORLD WAR II FALLEN SOLDIERS

AIKEN, Douglas Earl (#J/85822)

Douglas Earl Aiken's life and death reflect his commitment to his family at home and his bravery in fighting for freedom abroad. His story also highlights the anguish his mother felt for years after her son passed away.

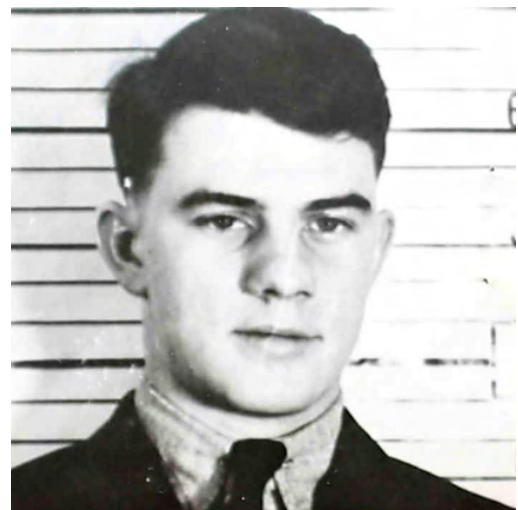

He was born in Sarnia on June 9, 1921, the son of Norman Russel and Loretta Mae (nee Hillier) Aiken, of 214 Proctor Street. His parents Norman and Loretta Aiken were both born in Sarnia Township and Douglas had one brother, Laverne Russell (born 1919), who would also serve in the war, a Lieutenant with the Royal Canadian Electrical and Mechanical Engineers (RCEME). Parents Norman and Loretta were married in February 1917 in Sarnia.

Norman Russel Aiken's job as a C.N.R. locomotive engineer in Sarnia cost him his life when he was killed in a train accident in April 1937. It was a difficult time for the family and for Douglas who was sixteen years old when he lost his father. His father saw him graduate from Johnston Memorial Public School (1927-1934, now Pauline McGibbon Public School) but not from Sarnia Collegiate (September 1934 to May 1940). Despite the family's tragedy, Douglas remained active in gymnastics, swimming, rugby, hockey, baseball and basketball.

To help support his mother "Retta", Douglas worked part-time as a paper carrier and wrapper for the *Canadian Observer* from 1937-1940 and part-time at Brown's Ice Company checking ice and caring for the books in 1939. Not one to shy away from work, Douglas also worked at the Sarnia Bridge Company, as a fitter and welders helper from July through October 1940.

Douglas Aiken also served in the Cadet Corps for five years. He had attempted to enlist in the RCAF in early November 1939, but was turned away because he was too young. On October 12, 1940, the same year he graduated from high school, Douglas Aiken, 19, successfully enlisted in the Royal Canadian Air Force in London, Ontario. One of Douglas' reference letters was from R.J. Knowles, Circulation Manager at the *Canadian (Sarnia) Observer*. In the letter, Mr. Knowles wrote of Douglas: *This is to give Douglas Aiken an unqualified recommendation. For three years previous to last January, he was a carrier salesman for the newspaper under the writer's personal supervision. In that time he performed all duties to our entire satisfaction. He displayed qualities of promptness, financial responsibility and shown a willingness to snap into any job assigned him. He is a hustler. Douglas Aiken is a fine type of young man.*

Douglas stood five foot seven inches tall, had blue eyes and brown hair, and was single. Although he had been residing with his mother before he enlisted, Douglas was now on the move: first to No. 1 Manning Pool, Toronto and then to Dunnville, Ontario where he began his air training at #6 Service Flying Training School (SFTS). The teenaged Aiken impressed at #6 SFTS. When the course ended, his Commanding Officer would write a report assessing Douglas as being, *Very conscientious and hard working. Has shown marked ability in all jobs he has handled... Highest possible recommendation and am sure will succeed in anything he undertakes... Recommended for Pilot.*

Pilot Officer Douglas Earl Aiken

Douglas would continue his training at #1 Initial Training School (ITS) in Toronto, #7 Elementary Flying Training School (EFTS) in Windsor and #9 SFTS in Centralia, Ontario. It was at Centralia on April 6, 1943, that Aiken was awarded his Pilot's Flying Badge. After spending a two-week furlough in Sarnia with his mother and friends, Douglas would return to duty in Halifax by late April 1943.

A few weeks later, on May 16, Aiken would embark overseas from Halifax for the United Kingdom, disembarking on May 24. He soon discovered that his training was not over. Initially posted to #3 Personnel Reception Centre (PRC), he would continue his training at #15 (Pilots) Advanced Flying Unit (AFU), and #18 (P) AFU, #82 Operational Training Unit (OTU), and 1657 Conversion Unit (CU). The Chief Instructor at No. 5 Lancaster Finishing School wrote of Pilot Douglas Aiken, *Slightly above average Pilot and Captain. Good crew. Drills O.K. Sound type of N.C.O. Will do well with experience.* During all his training, Douglas had flown many different types of aircraft: Anson, Moth, Oxford, Wellington, Stirling and Lancaster.

In March 1944, Douglas Aiken would become a member of RAF #44 Rhodesia Squadron "Fulmina Regis Iusta" (The King's Thunderbolts are Righteous), part of **Bomber Command**.

Loretta Aiken in Sarnia would receive the news that her son, Douglas Aiken, had been promoted to the rank of Pilot Officer-Pilot early in the month of June 1944. He had written to his mother the week before, mentioning that he had been engaged in missions over enemy-held territory in Europe.

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

At the outbreak of the war, #44 squadron was part of RAF No. 5 Group bomber unit, equipped with Handley Page Hampden aircraft. In 1941 the squadron was renamed No. 44 Rhodesia Squadron in honour of that colony's contribution to Britain's war effort. In December 1941, it became the first squadron receive the Avro Lancaster. The squadron spent the rest of the war as part of Bomber Command's main bombing force. It was based at RAF Waddington until May 1943, then relocated to RAF Dunholme Lodge and later to RAF Spilsby.

The **Battle of Normandy** would begin for the Canadians with the June 6, 1944 D-Day landings at Juno Beach. After breaching the "Atlantic Wall" of "Fortress Europe", Allied armies began their break out from the narrow Normandy bridgehead to carve out a foothold on the French mainland. It would take a whole summer of tenacious fighting, pushing against fierce and ruthless German forces to advance east across France. In a brutal campaign of attrition, the Canadian army, supported by the navy and air force, faced fierce battles and vicious counterattacks as they clawed their way forward liberating villages and towns.

On June 25, 1944, approximately one year after he arrived overseas, the Lancaster aircraft ND751 (markings KM-J) that Douglas Aiken was piloting on a bombing mission in France was lost during operations in the Battle of Normandy. A total of 730 aircraft had set off at 22:30 hrs. on June 24 to bomb various locations. No. 44 Squadron had embarked from RAF Dunholme Lodge to bomb its target: Pommereval V-1 site in France. Despite it being nearly midnight, the operation was carried out on a clear moonlit night. The consequences were fatal. With the help of effective searchlight units, German night fighters destroyed many aircraft. Twenty-two Lancasters were lost, including Lancaster ND751 piloted by Douglas Aiken that crashed at Criquetot-sur-Longueville. It was Aiken's 18th and final operational sortie.

In late June 1944, Loretta Aiken would receive a telegram in Sarnia from the R.C.A.F. Casualty Officer in Ottawa informing her that her son, PILOT OFFICER DOUGLAS AIKEN WAS REPORTED MISSING IN ACTION AFTER AIR OPERATIONS OVERSEAS ON JUNE 25. The missive provided no other specific details, but stated that further details would be forwarded when available.

In April 1945, Retta Aiken would write a letter to the Secretary, Department of National Defence for Air in Ottawa in response to a request from them. The letter, in part, reads as follows:
Dear Sir:

In conjunction with your recent request relevant to information concerning my son P/O Douglas Earl Aiken, it is with the deepest regret that I must inform you that no further news of him has been received...

A year passed after she had received the initial telegram and a frustrated and worried Loretta Aiken wrote the following letter to Lady Ellissen in England. The Sarnia mother was desperately looking for news about her son,

Douglas. The letter, sent in early June 1945, in part, reads as follows:

Dear Madam,

My son, P/O Douglas Earl Aiken, J85822, R.A.F. has been missing since June 24-25/44. I have never received any word whatever of him and in this length of time he hasn't been presumed dead. Could you possibly tell me something about him. I am so anxious and worried about him now that the war in Europe is over.

Would you please tell me about the mission he was on and what you think could possibly happen to him. I would be so grateful and it would relieve my mind so much if you could tell me all. Also could you do anything about having his personal belongings sent home, also any moneys.

It was not until late June 1945 that Loretta Aiken received the dreaded telegram from Ottawa about her missing son, informing her that, PILOT OFFICER DOUGLAS E. AIKEN IS NOW FOR OFFICIAL PURPOSES PRESUMED TO HAVE BEEN KILLED IN ACTION JUNE 25 1944. Douglas Aiken would later be officially recorded as, *Previously reported "missing" after air operations, now for official purpose, "presumed dead," overseas (France)*. Perishing with Douglas Aiken were WO. Robert Alexander Riddoch; P/O Alfred Montigue Simmons, Sgt. John Hare (RAF), Sgt. Horace Arnold Lewarne (RAF), and John Lewis (RAF); and FS. Frank Sidney Rawson (RAF). In June 1946, Douglas' mother Loretta Aiken would receive a War Service Gratuity of \$562.82 for the loss of her son.

In October 1946, the R.A.F. Missing Research and Enquiry Unit released a report to the Air Ministry in London, England, detailing their findings about Lancaster ND751. After visiting and investigating the area around the scene of the crash in Criquetot-Sur-Longueville, they compiled a report. It reads in part as follows:

... I visited M. ARSON, a witness named in the Gendarmerie Report, and obtained the following information: Six burnt bodies were removed from the crash by the Germans. A seventh body, fairly intact, was found in a field some distance away, and before it was removed, the French obtained the name SHEPHERD from the man's clothing.... The bodies were buried in the local cemetery, the intact one in a coffin by itself and the other six in three further coffins, two in each coffin.

... I visited the cemetery and found four graves fairly well kept with four wooden crosses, the inscriptions on which had been obliterated by the weather.

... To sum up, it would appear that the seven airmen interred at Criquetot are in fact the crew of the Lancaster that this enquiry concerns. It is possible that the name SHEPHERD may have been obtained from a piece of borrowed clothing worn by the victim... The only means of obtaining further information seems to be by exhumation.

In January 1947, the RAF exhumed the four graves at Criquetot-Sur-Longueville Communal Cemetery. In Grave No. 2, they determined that there were "definitely two bodies in the coffin, one at head and one at foot" and "both were badly burnt and decomposed." There were also a few scraps of clothing, flying suit and parachute harness inside. After exhuming the four graves, the R.A.F. No. 1 Missing Research and Enquiry Unit (MREU) released their findings to the Air Ministry in London, England. A portion of the Wing Commander's report is as follows:

... Grave No. 2 – This grave contained two bodies. Number one had a CANADA flash and Sgt stripes. It was impossible to see whether there had been a crown above the stripes, as the sleeve was badly burned. There was also a shirt of greenish hue, which I have since confirmed, is supplied to airmen of the R.C.A.F. From these facts, it seems probable that the body is that of J.89960 P/O. SIMMONS, A.M. (R.C.A.F.), who was at the time of the crash R.151533 F/S/ SIMMONS, A.M. In addition, he was the only Canadian in the crew who would have been wearing Sgt. stripes.

The second body is probably that of J.85822 P/O AIKEN, D.E., for, as will be seen after reading the summaries of GRAVES 3 and 4, he is the only one of the crew left unaccounted for.

... To sum up, all the members of the crew have now been accounted for. Their graves have also been identified, though on calculation, rather than positive facts...

Her son had been declared dead nearly four years ago, but in her Proctor Street home, Loretta Aiken was still searching for answers about her son's final resting place. Following is a portion of a letter she wrote to the Air Ministry in February 1948:

Dear Sir,

March 3 – 1947 I rec'd a letter from you stating that you had found my Son's grave at Criquetot Communal Cemetery, Seine, Inferieure, France, and exhumation would be carried out in an endeavor to effect individual identification. You haven't let me know yet whether you have done so and I would like to have his identification discs.

It is nearly a year and I feel I should have some proof that he is buried there by now. I would also like to know if the Gov't would return his body to Canada to be buried in our family plot. I cannot afford to do that myself. Please give me this information as soon as possible.

The Wing Commander, for Chief of the Air Staff in Ottawa responded to Douglas' mother in April 1948:
Dear Mrs. Aiken,

... The results of the exhumations carried out in Criquetot-Sur-Longueville Communal Cemetery have just been received. Grave 1 was found to contain Sergeant Lewis; your son and Pilot Officer Simmons were in Grave 2, Flight Sergeant Rawson and Warrant Officer Riddoch were in Grave 3, and Sergeant Lewarne and Sergeant Hare were in Grave 4.... I regret that your son's identification discs were not recovered. The above identifications were reached through the tracing of laundry marks, and regimental numbers on clothing, supplemented by rank and aircrew trade badges, and physical descriptions.... Following the cessation of hostilities with the German Reich, the Imperial War Graves Commission, which is comprised of representatives of all parts of the British Empire, seriously considered the possibility of returning the remains of deceased personnel who died while serving Overseas to their respective countries for re-internment. After careful and sympathetic consideration, it was unanimously agreed by the concerned that the remains of personnel who died while serving overseas should not be returned to their respective countries for burial either at the expense of the Government concerned or of the next-of-kin. Among the reasons for this decision was the fact that to allow the removal of a few individuals would be contrary to the principle of equality of treatment. The reverent and perpetual care of the burial places of all who served in the Royal Canadian Air Force is the task of the Imperial War Graves Commission (of which Canada is a member). The Commission will also erect a headstone at the grave. Unhappily, there are great numbers of these headstones to be erected, and it will quite naturally take considerable time. May I again offer you and the members of your family my deepest sympathy in the loss of your gallant son.

Twenty-three-year-old Douglas Aiken is buried in Criquetot-Sur-Longueville Churchyard, France British Plot, Joint grave 2. On his headstone are inscribed the words, REST IN PEACE.

ALEXANDER, Robert Wilfred (#J/2833)

Robert Alexander's story defines the sacrifices that his young family and he made. The highly decorated pilot was admired for his aviation skills and was very popular with the members of his squadron.

He was born in Norwich, Ontario on August 20, 1920, the eldest son of Wilfred (a farmer, born in Langton, Ontario) and Isabel Johnstone (nee Hagan, born in Belfast, Ireland) Alexander. Parents Wilfred and Isabel Alexander were married on November 10, 1919 in Belfast, Ireland. When Robert enlisted, his parents were residing in Norwich, Ontario where father Wilfred was a farmer. Robert had two brothers, James William and Howard John, and one sister, Catherine May. Catherine would marry, becoming Catherine Daiken, and she would serve with the Y.M.C.A. Services overseas in England during the war.

Robert's education provided him with opportunities that would change his life. He attended Norwich Public School, 1926-1931 and Norwich High School, 1931-1937. While in school, he was active in rugby (WOSSA), hockey, basketball (Intercounty League), swimming and hunting. His activities weren't restricted only to athletics. During this time, Robert was a member of the Cadet Team and a member of the Dominion of Canada Rifle Association (DCRA) for three years. He also competed in the small-bore rifle competitions at Ottawa for three years and was an Officer in the High School Cadet Corps.

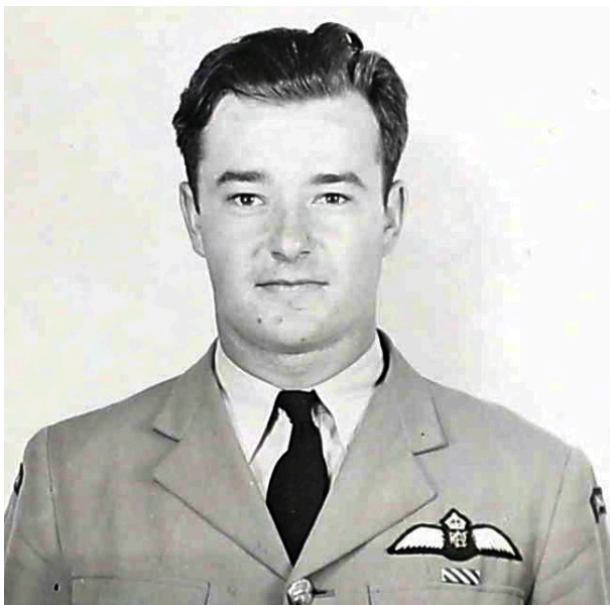

After completing high school, Robert attended London Normal School in 1937-1938, graduating as an elementary teacher. He attended University of Western Ontario summer school in 1939, taking courses in mathematics and geology. Prior to enlisting, Robert was as a public elementary school teacher from 1938 to 1940 at S.S. #14 Burford, New Durham, Ontario.

At age 19 and still single, Robert Alexander enlisted in the Royal Canadian Air Force in London, Ontario on October 21, 1939. He stood five feet eight inches tall, had brown eyes and dark brown hair and requesting flying duties at the time, he was accepted and sent home to await further notice. He was soon a member of the first classes in the Commonwealth Air Training Plan, reporting for duty on April 12, 1940. The Recruiting Officer would record of Robert, *A bright, intelligent, deliberate thinker type. Quite self reliant and efficient. Has had a little flying experience. Should be good material.* Robert would begin his air training at #1 Air Observers School (AOS) in Malton; continuing with Armament Training at #1 Bombing and Gunnery School (BGS) in Jarvis; and #1 Advanced

Air Observers Training in Trenton, Manitoba. He would be awarded his Air Observer's Badge and commission at Trenton on October 24, 1940.

In November 1940, Robert was transferred from Trenton to Rockcliffe, England with the RAF Trainees Pool, and went on active operational duty in Europe. Alexander was soon in the thick of fighting and distinguished himself. In March of 1941, he was stationed with Middle East Command in Egypt, and made more than 50 sorties from North African bases. In April of 1942, he was awarded the Distinguished Flying Cross (DFC) for heroic service in the Middle East. He was at the time with the R.A.F. Headquarters Staff in the Middle East and served there until he was posted home. In late August 1942, he would begin a three-and-a-half month Specialist "Navigator" course at #31 Air Navigation School (ANS) in Port Albert, Ontario.

His posting in Canada precipitated another change in Robert Alexander's life. On September 19, 1942, Robert married Milfred Florence Armstrong, the only daughter of Mr. and Mrs. Wellington Armstrong of Alvinston, Brooke Township. At the wedding ceremony in Alvinston, Muriel Craven, cousin of the bride, served as bridesmaid, and James Alexander, brother of the groom, served as the best man. After a brief wedding trip, the couple moved to Goderich. Robert and Mildred Alexander would have one child, born September 13, 1943, a son, James Robert, and the family resided in Alvinston, their address listed as R.R. #4, Norwich.

Squadron Leader-Pilot Robert Wilfred Alexander

Robert Alexander with his wife Milfred Florence

Married only four months, Robert answered the demands of the war and was on the move. Upon completing his air navigation course, in January 1943 he continued his training at #12 Elementary Flight Training School (EFTS) in Goderich and then #5 Service Flying Training School (SFTS) in Brantford, Ontario. The Squadron Leader at #12 EFTS wrote of Robert, *This student is an exceptional student in all his general flying... Airmanship and Airsense exceptional.* The Chief Instructor at #5 SFTS wrote of Robert, *Experienced, capable and conscientious. This officer has proved himself above average in all stages of his training.* He was then posted to the **R.A.F. Transport Command** at Dorval, Quebec where he was awarded his Pilot's Flying Badge on July 9, 1943.

Six months later Robert made one of the most fateful decisions of his young life. Now 24, he had been married for a mere year and a half and his son, James Alexander was only four months old. In December 1943, Robert completed his last Will and Testament in North Bay. In it, he bequeathed all of his real and personal estate "unto my beloved wife, Mildred Florence Alexander, absolutely forever." On January 28, 1944 Robert returned overseas for another tour of operations, flying in a Dakota from Dorval to the United Kingdom. He would never see Milfred and James again.

He was posted to #512 Transport Squadron until September 14, 1944 where he became a member of RCAF #437 (Transport) Husky Squadron "Omnia Passim" (Anything, Anywhere) with the rank of Squadron Leader-Pilot. He would be promoted to Squadron Leader only one week before his death.

No. 437 Squadron was formed in September 1944 at RAF Blakehill Farm, Wiltshire as a general transport

squadron, equipped with Douglas Dakota—a twin-engine military transport aircraft. It then had the distinction of being the only RCAF squadron in **Transport Command**. The squadron flew on towing and transportation operations in Great Britain, Norway, Belgium and Germany.

In early September 1944, Allied forces had captured the inland port of Antwerp, Belgium, the second greatest port in Europe at the mouth of the Scheldt River. However, German forces still controlled the 45-mile-long Scheldt estuary (the Belgian-Dutch border area) that connected the port of Antwerp to the North Sea. The Allied objective of *Operation Market Garden*, September 17-25, was to capture the eight bridges that spanned the network of canals and rivers on the Dutch/German border. The plan consisted of two operations: “Market” – airborne forces tasked with seizing bridges and other terrain, and “Garden” – British ground forces tasked with moving northward. After a week-long battle, the operation failed at a bridge over the Rhine River at Arnhem, ‘**a bridge too far**’, and resulted in 1,400+ Allied soldiers killed and more than 6,000 were taken prisoner. It was during this operation that Robert Alexander would lose his life. After the failed *Operation Market Garden*, it would be the First Canadian Army who were entrusted with liberating the estuary and capturing the much-needed port—the **Battle of the Scheldt** (October 1-November 8, 1944) would be among the most difficult and grueling struggles in the war.

RCAF #437 Squadron at first consisted of just fifteen Dakotas, and twelve of these were deployed during the “first lift” of Operation Market Garden on September 17. Each Dakota carried paratroops and towed a Horsa glider. One of the Dakotas had to abort the mission, but otherwise, the others released their loads and returned safely to base. A further four glider towing sorties were completed over the following days, thereafter the Squadron participated in resupply operations to the troops at Arnhem. On September 21, during the “fifth lift”, the air forces suffered their cruelest losses, due to intense anti-aircraft fire and a large number of Luftwaffe aircraft that caused havoc amongst the unescorted, slow and unarmed transports.

On the September 21 “fifth lift” of Operation Market Garden, sixty-four Stirling aircraft and fifty-three Dakotas would be responsible for delivering desperately needed supplies at Oosterbeek. They would fly over two hours in four well-separated waves. The weather that day was very poor with low cloud and haze, which would have a detrimental effect on the fighter escort aircraft (Spitfires, Mosquito’s and Mustangs). The first two waves were well protected, but the last two made their approach without any fighter protection at all, and added to this, the flak defences were very strong.

RCAF #437 Squadron had ten of its Dakotas in the air on that day. Robert Alexander was in one of them, part of a five-man crew aboard Dakota III aircraft KG387 that left its base at RAF Station Clifton, York at 1314 hours. The aircraft was one of 117 engaged on a risky pannier dropping mission to resupply airborne forces (paratroopers) north-west of Arnhem. A heavy volume of the German’s light calibre anti-aircraft fire and small arms fire in the vicinity of the dropping zone crippled Allied planes. Enemy fighters were also attacking along the route home from Arnhem to Eindhoven.

Between 16:30 and 17:00 hours, after dropping supplies at Arnhem and climbing to 7,000 feet above the haze that persisted in the area, enemy flak shot down Alexander’s aircraft. Robert Alexander maintained control of the aircraft long enough for two of his crew to bail out. Following is a portion of an account of the events from Alan Cooper’s “Air Battle for Arnhem”:

Flight Officer John Rechenuc, who was in the Astro Dome, was told by the pilot (Alexander) to go to the rear to see if there had been any damage, he reported back that there was no damage. He then went to his radio seat to record what he had done, then they were hit and Bob Alexander was wounded with his head and arm bleeding badly, he slumped over the controls and did not move again. The starboard controls were shot away and the engine ran away at a very high pitch. Then came a second hit, this time the navigator Flight Officer William McLintock, and the second pilot were hit and wounded, and Flight Sergeant Andrew McHugh, on hearing the metal striking, stood up, but as he did a bullet lodged in his back and he fell face downwards in the aisle. Then there came a succession of about seven bursts and the aircraft was on fire from stem to stern. Rechenuc then went over to McHugh to see how badly he was hit, McHugh stood up and gave the order to bail out... they put on their chutes and made their way to the back of the aircraft... (where) Lieutenant Corporal Jones was putting on his chute. By this time the tail of the aircraft was a mass of flames, John Rechenuc bailed out and McHugh pushed the air despatcher out. The Dakota did a half circle to the left and disappeared behind a clump of trees in a dive, all that could be seen after that was a great big puff of black smoke from where the aircraft disappeared...

RCAF #437 Squadron lost six out of the ten Dakotas that day. Both Robert Alexander and Flying Officer

W.S. McIntock went down with the aircraft and were killed on a farm near Son, Netherlands. Flying Officer J. Rechenuc and Flight Sergeant A. McHugh descended by parachute and returned safely to the United Kingdom. Interviewed on his return, F/S A. McHugh was unable to provide any definite details as to the location of the crash. McHugh came down in a canal and came to when American soldiers were lifting him out of the water. The soldiers had watched him and his burning aircraft come down, about 13 to 18 miles from Arnhem in the S.S.W. direction. The soldiers took him in a jeep to the dressing station in Kindenganden, Holland. F/O J. Rechenue, who succeeded in bailing out, stated that Squadron Leader Alexander and F/O McIntock, were unable to bail out. Squadron Leader Alexander's identity card was reportedly found by a civilian, but no other information was found.

Approximately one week after the crash, Milfred received a telegram in Alvington informing her that her husband, SQUADRON LEADER ROBERT ALEXANDER, R.C.A.F. IS MISSING IN ACTION OVERSEAS. A few days later in September, she received a letter from the Royal Air Force, Blakehill Farm, Swindon, Wilts. The letter in part read as follows:

Dear Mrs. Alexander,

... It is with deep regret that I write to you this date to convey to you and to Bob's family the feelings of my entire Squadron. Although Bob has only been in this Squadron for a short while I have known him for well over a year and I miss him greatly. In confidence Mrs. Alexander I should like to tell you as much as I know the circumstances surrounding the flight. Bob was detailed to take off at approximately 13.30 hours on the 21st of this month to carry out a resupply mission on some of our troops who were cut off by the enemy. There was a considerable amount of flak and fighter opposition and after Bob's machine was hit two of his crew jumped by parachute and landed safely behind our lines, it is not known however whether Bob jumped out or attempted to land his aircraft somewhere. At the present however no word has been heard from him. All we can do is hope and pray that he is safe somewhere.

We lost one of our best crews when this aircraft did not return. There had been a great future mapped out for Bob in this Squadron. He had done a great number of trips over enemy territory and had always shown himself as a fearless pilot and a great leader of men. Bob was extremely popular with the boys in this Squadron, of which a great number had been with him for a number of years.

There is always the possibility that Bob may be a prisoner of war, in which case you will either hear from him direct or through the Air Ministry, who will receive advice from the International Red Cross. Your husband's effects have been gathered together and forwarded to the Royal Air Force Central Depository, where they will be held until better news is received, or in any event for a period of at least six months before being forwarded to you through the Administration of Estates, Ottawa.

May I now express the great sympathy which all of us feel with you in your great anxiety, and I should like also to assure you how greatly we and his comrades in the Royal Air Force honour and admire the heroic sacrifice your husband has made so far from his home. The operation in which Bob participated that day will go down in the annals of Royal Canadian Air Force History as one of the epic air operations of the war. If there is anything further that I may do for you please do not hesitate to write and if I receive any further news I will communicate with you...

Squadron Leader-Pilot Robert Wilfred Alexander

In September 1945, R.A.F. Missing Research and Enquiry Unit in Holland released a report to the Air Ministry in London, England, detailing their findings about the missing members of Dakota KG387. After visiting and investigating the alleged area of the crash, they compiled a report. It reads in part as follows:

The police sergeant at SON was visited and states that he saw a four engine aircraft come down in the vicinity after an attack by enemy fighters on or about 22/23rd September, 1944. Six of the crew are buried in the local American Cemetery. The parachute of one of the crew who jumped, failed to open. The police sergeant is almost certain that no Dakota crashed at Son. I also confirmed that there was no trace of either of these Officers in the American Cemetery or at the U.S. Graves Registry in Son.

Robert Alexander was later officially recorded as, *Previously reported missing after air operations, now presumed dead, overseas (Holland)*. Robert left behind in Alvinston his wife Milfred and their one-year old son James. Twenty-four-year-old Robert Alexander is buried in Bergen-op-zoom Canadian War Cemetery, Netherlands, Grave 24 C.1-3. On his headstone are inscribed the words, OLDEST SON OF WILFRED & ISOBEL, NORWICH, CANADA HUSBAND OF MILDRED F. FATHER OF JAMES ROBERT. He also has a memorial headstone at Norwich Village Cemetery.

For his service and bravery, Robert was awarded the following citations: 1939-45 Star; Africa Star; France and Germany Star; General Service Medal; Canadian Volunteer Service Medal and Clasp; Air Observer Badge earned on October 24, 1940; Pilots Flying Badge earned on January 9, 1943; and Operational Wings awarded posthumously on January 28, 1947. Alexander Bay and Alexander Point, in the Northwest Territories were named after Robert Alexander.

ANDERSON, William John (#V/19542)

William ("Bill") Anderson served aboard one of the sturdy little "work horses" of the Royal Canadian Navy, one of Canada's busiest ships in the Battle of the Atlantic. Tragically, he lost his life off the east coast of Canada six months before the war ended to what British Prime Minister Winston Churchill said was "... the only thing that ever really frightened me during the war..."

He was born in Sarnia on May 20, 1921, the youngest son of Edward James and Mary R. Anderson of 111 Alfred Street, Sarnia. His parents were married in Sarnia on May 29, 1910 and in the next decade would have five children. One of their children, Kenneth Anderson, passed away in June 1914 at the age of 5 months. Surviving William after the war were his two brothers--Stanley C., serving as a patrolman in the R.C.N.V.R. in Halifax, and Edwin J., in St. Thomas, Ontario—as well as and sisters, Mrs. Margaret Olenuik of St. Catharines, and Eileen A. Anderson in Sarnia. William attended St. Patrick's High School and Sarnia Collegiate Institute and was a member of St. Joseph's Catholic Parish. Prior to enlisting, William had been a machine operator employed with Electric Auto-Lite Limited in Sarnia for approximately one year.

On August 28, 1941, the 20 year-old William Anderson enlisted in the Royal Canadian Naval Volunteer Reserve (RCNVR) in Windsor, Ontario. He stood six feet tall, had blue eyes and black hair, was single, and resided on Alfred Street with his parents at the time. After initially being posted to Windsor Division (*HMCS Hunter*) as an Ordinary Seaman, he was transferred to St. Hyacinthe, Quebec, where in May 1942, he would celebrate his 21st birthday while attending naval school. He would continue his naval training at several HMCS bases and ships including *Stadacona*, *Hochelaga*, *Kentville*, *Fort Ramsay*, and *HMCS Toronto*. In April of 1944, William would return to Sarnia on a nine-day leave to visit his family and friends, the first furlough he had in 20 months. On June 9, 1944 William Anderson of the RCNVR would become a member of the corvette *HMCS Shawinigan*, with the rank of Leading Coder.

Beginning on the opening day of the Second World War, the **Battle of the Atlantic** would be the longest continuous campaign of the war, and one in which Canada played a central role. The Royal Canadian Navy, along with the Royal Canadian Air Force (RCAF) and Canada's Merchant Navy, played a vital role in defending the country's eastern coast and escorting convoys of ships carrying men and essential machinery, arms, fuel and basic resources between North America and Europe.

The *HMCS Shawinigan (K136)* was a Flower-class corvette, originally designed to accommodate a standard crew of less than fifty. Commissioned on September 19, 1941 at Quebec City, it was one of the sturdy little "work horses" of the RCN and was to become the 9th corvette and 19th Canadian warship lost in the war. She was in the navy's convoy escort and patrol fleet. Her sea miles totaled more than 150 000, and she had been one of the busiest

vessels of her class, escorting convoy runs in the Atlantic Ocean and off the east coast of Canada. Few ships of her class spent more time at sea during the period when German U-boats were most active in the North Atlantic. During the two years prior to her sinking, she did not lose a ship under her charge. Men who served aboard her had been acclaimed for fighting efficiency, for rescue work and attacks on enemy U-boats. She escorted hundreds of thousands of vital war supplies and shipping to Allied ports.

Flower Class Corvette *HMCS Shawinigan K136*

On November 24, 1944, the *HMCS Shawinigan* and a United States Coast Guard Cutter *Sassafrass* escorted the ferry *Burgeo* from Sydney, Nova Scotia to Port aux Basques, Newfoundland. Ferries on this route were always escorted after the tragic loss of the passenger ferry *SS Caribou* two years earlier. In mid-October of 1942, the *Caribou* had been torpedoed on the same route and 136 lives were lost, including ten children. In November 1944, the three ships made an uneventful crossing to Port aux Basques, at which time the *Shawinigan* detached to continue doing an independent anti-submarine patrol in the area. The *Shawinigan* was scheduled to rendezvous with the *Burgeo* the following morning for the return to Cape Breton. But the *Shawinigan* never made it.

On that fateful November 24 moonlit night, the *Shawinigan* maintained radio silence while performing anti-submarine patrol in the Cabot Strait between Newfoundland and Cape Breton Island. Nearby, German U-boat *U-1228* was trying to repair a faulty snorkel without success and had decided to return to Germany for repairs. It was now 9:30 p.m. As soon as *U-1228* started her return route into the Atlantic, she sighted the *Shawinigan*. In its first recorded attack on enemy shipping, *U-1228* fired a single T-5 Gnat torpedo that struck the corvette in the stern.

Four minutes after the attack, the *Shawinigan*, with its entire crew, disappeared in a plume of frigid Atlantic water and a shower of sparks. The ship had no time to transmit any messages and authorities later speculated that the *Shawinigan's* depth charges exploded as she sank, adding to the destruction. The next morning, the *Burgeo* left Port aux Basques on schedule in the fog but could not find the *Shawinigan*. They maintained radio silence and did not inform command of *Shawinigan's* failure to appear.

Unescorted, the *Burgeo* made for Sydney and arrived on November 25 at 6 pm. Suspecting something had happened to *Shawinigan*, naval officers in Sydney ordered an air and sea search for the missing corvette, but bad weather put a stop to much of that. A day or so later, searching ships came upon fragments of wreckage, an empty Carley float and six bodies, which were all that remained to indicate what had happened to the *Shawinigan*.

A third of *Shawinigan's* crew were twenty years old or younger and no crewmember survived the tragic sinking. Seven officers and 84 crew members, including William Anderson, were lost. It is impossible to record exactly what happened to *Shawinigan* during her final moments. Some sailors were probably killed instantly by the horrific explosion; others inevitably died in the icy water as the ship sank. Those fortunate enough to get into their life vests and survive the explosion would later die in the freezing North Atlantic.

The *Shawinigan* was one of only three RCN ships lost with all hands. Twenty-seven year old Petty Officer Stoker Michael Paithowski, another Sarnian, was also on board and perished in the sinking. His name is also inscribed on the Sarnia cenotaph and his story is included in this Project.

In late November of 1944, parents Edward and Mary Anderson in Sarnia would receive a telegram from the Department of National Defence informing them that their son, LEADING CODER WILLIAM J. ANDERSON HAS BEEN REPORTED MISSING AT SEA. The message contained no other information and intimated that a letter would follow. Mary had received a letter from her son William only one week prior, in which he had stated that

he was well and getting along O.K.

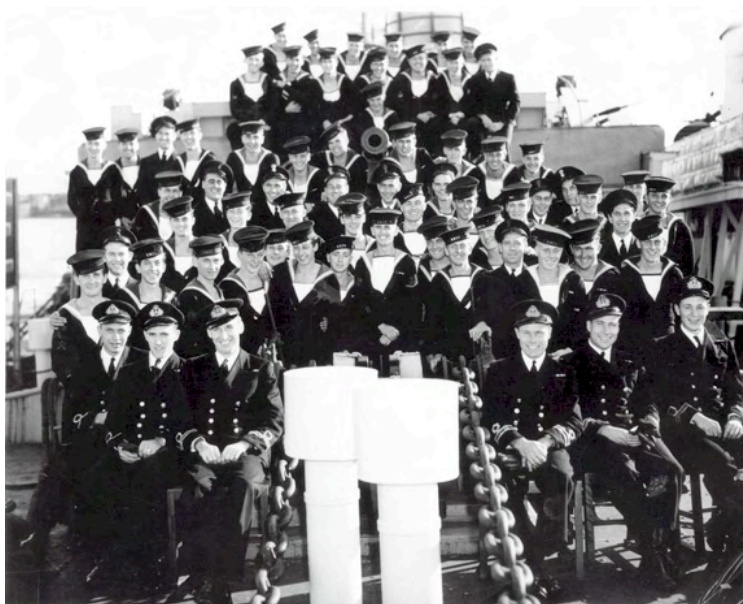

On December 7, 1944, in a dispatch from Ottawa, the Hon. Angus L. Macdonald, Minister of National Defence for Naval Services, announced the loss of the *H.M.C.S. Shawinigan*, while on operational duty in the North Atlantic. He gave no details but said the ship's complement had been lost and five bodies have been recovered and identified. It was announced locally that two Sarnia seamen, William Anderson and Michael Paithowski, were members of the crew of the *Shawinigan* and were reported missing. In December 1944, parents Edward and Mary Anderson received a letter from the Secretary of the Naval Board. A portion of it reads as follows:

Dear Mr. Anderson,

Further to my letter of the 29th of November, 1944, details of the disaster in which your son has been reported missing are now being released. H.M.C.S. "SHAWINIGAN", a Royal Canadian Navy corvette, was lost while on operational duty at sea. Seven officers, including her Captain, Lieutenant W.J. Jones, R.C.N.R., and seventy-eight ratings are missing. The bodies of five other ratings have been recovered and identified. There are no known survivors. It is requested that you will regard this information as confidential until an official announcement is made. May I again express sincere sympathy with you in your anxiety.

L/Coder William John Anderson

Crew of the *Shawinigan* 1944

In mid-February of 1945, parents Edward and Mary Anderson in Sarnia would receive a telegram from Ottawa informing them that their son, LEADING CODER WILLIAM J. ANDERSON WHO WAS REPORTED MISSING AT SEA LAST NOVEMBER IS OFFICIALLY PRESUMED LOST. Later, the Navy would inform the Anderson family that William Anderson was officially recorded as, *Missing, presumed dead, when the ship in which he was serving, H.M.C.S. 'Shawinigan' was lost while on operational duty at sea.* It was understood that William's mother, Mary, would receive the Memorial Cross in the near future.

In July 1945, parents Edward and Mary Anderson received a War Service Gratuity payment of \$442.73 for the loss of their son. In August 1945, they received another letter from the Secretary of the Naval Board.

Dear Mr. Anderson:

Further to my letter of the 15th of February, 1945, the Department is now able to release additional information regarding the loss of your son's ship and I am accordingly passing on the following particulars which will, no doubt, be of interest to you.

H.M.C.S. "SHAWINIGAN" sailed from Sydney, N.S., on the 24th of November, 1944, to escort a merchant ship to Port Aux Basques, Newfoundland, and arrived off Port Aux Basque that night. In accordance with orders she was then to carry out a patrol in the area for the duration of the night, after which she was to meet the same merchant ship the next morning and return with her to Sydney.

The merchant ship arrived in Sydney unescorted on the night of the 25th of November and after it was ascertained that "Shawinigan" had not appeared at the designated rendezvous to provide escort as instructed, searches were instituted and "Shawinigan" was discovered to be missing.

It was the opinion of the Department at the time that the ship had been torpedoed by an enemy submarine during the night of the 24th/25th of November, 1944, as submarines were known to be operating in the area; and this has since been confirmed from German evidence. Although no survivors were found, a few bodies were recovered by later searches, due to tidal movements, some distance from the area in which "Shawinigan" was known to be operating. As a result, the position of the sinking can not be exactly ascertained, although from German evidence and the Department's computation, it is estimated to be in the vicinity of the three mile limit off Channel Head, near Port Aux Basques, Newfoundland.

It was not until after the war ended and *U-1228* surrendered, that the details of what had happened to the *Shawinigan* that night were uncovered. When the U-boat commander was interrogated in May 1945, he stated the ship sank quickly, followed by two underwater explosions. He saw no survivors in the water. Fifty-three years after the sinking, on June 14, 1997, at Trois Rivieres, Quebec, the Prime Minister of Canada Jean Chretien and his wife would take part in a Royal Canadian Navy ceremony to officially commission the new *HMCS Shawinigan (704)*. A memorial monument dedicated to the 91 lost was also unveiled. Twenty-three-year-old William Anderson has no known grave. He is memorialized on the Halifax Memorial, Nova Scotia, Canada, Panel 12.

ANDREW, George Varnum (#J/19070)

George Varnum Andrew's wartime experiences in the RCAF were fraught with danger, but he was well aware that his next mission as a rear-gunner could be his last. He flew over 20 bombing sorties before his luck ran out.

He was born at 111 North College Avenue on January 11, 1923, the son of former Sarnia mayor and harbourmaster, George A.C. and Elizabeth Harriet (nee Varnum, born in Moore Township, Lambton) Andrew. Parents George A.C. and Elizabeth Andrew were married on October 24, 1906 in Moore Township, Lambton County. When he enlisted to fight in 1941, George was emulating his father.

George A.C. (or George Senior, born 1882 in Lambton County), a carpenter by trade, was a World War I veteran. At age 35 and married with two children, he had enlisted to serve with the Royal Flying Corps in October 1917 in Toronto. He stood five feet four and a half inches tall, and would be transferred to the Royal Air Force with the rank of Second Class Air Mechanic and served in Canada. After the Great War, he served as a City of Sarnia alderman on a couple of occasions and was elected Sarnia's 42nd mayor of Sarnia in 1924. When he did so, his second youngest son and namesake was a year old.

Typical of this time, the Andrew family was large and included six children besides George: Florence Evelyn (born March 24, 1909 in Brigen); twins George Edwin and Ralph Varnum (born 1912, but both died six months after birth in October 1912); Muriel Eileen (born June 1915 in Sarnia); William Charles (born 1921); and Robert Barrett (born 1926). Both of his sisters got married, becoming Mrs. John (Muriel) Little (of Sarnia), and Mrs. Stephen (Florence) Endico (of Detroit). George's younger brother, Robert, was a member of the Central Century Club and attended the University of Toronto. George's older brother, William, would lose his life while serving in World War II (see below).

George was an active youth. He was educated at George Street Public School from 1929-1936, and then Sarnia Collegiate from 1936-1940. During his high school days, George participated in rugby, hockey, basketball and baseball. Perhaps it was during this time that George incurred a serious injury to his knee. He was also on the Signalling Team and was an officer in the High School Cadets for two years. His church was very important to him. George was an active member of Central United Church and, even while serving in war, corresponded with Rev. E.W. Jewitt, pastor of the Church.

The next stage of George's young life determined his fate. When he left high school he was qualified to be an electrician but could not find work. Now 17, George applied to join the RCAF in London, Ontario in January 1940, but was turned away because he was too young. After not being accepted, still in January 1940, he then applied to enter the Royal Canadian Navy, as a Boy Seaman. He was accepted and was posted to *HMCS Naden*, in Esquimalt, British Columbia beginning in May 1940; however, the continual marching during training aggravated his bad knee. Two months after being posted in B.C., George was declared "medically unfit" due to a left knee joint issue and was discharged from the Navy.

George was determined to serve his country. A year later, on March 3, 1941, George enlisted again in the

Royal Canadian Air Force in London, Ontario. This time, the 18 year old was successful. He stood five feet eight and a half inches tall, had brown eyes and dark brown hair, was single and resided at home with his parents on College Street at the time. George also expressed an interest in making the Air Force a career after the war. The Recruiting Officer recorded that George Andrew was, *Well qualified and recommended-rugged type. Keen to learn and anxious to fly as fighter pilot. Best fitted for Pilot or Observer.*

He was constantly on the move in training, not unusual at the time. After being posted initially to #1 Manning Depot in Toronto, George would then receive air training at #6 Service Flying Training School (SFTS) in Dunnville, at #1 Initial Training School (ITS) in Toronto, and #21 Elementary Flying Training School (EFTS) in Chatham, New Brunswick.

George's personal life changed as well. In New Brunswick on September 13, 1941, the 18 year old married Esther Jones, the daughter of Mrs. Annie Jones of Sarnia. At the wedding ceremony at the United Church manse in Chatham, Miss Catherine Anne Richards of Newcastle, New Brunswick served as bridesmaid, and Leading Aircraftman Donald Allen of Toronto served as the best man. George's brother-in-law, Glyn Jones, would join the Canadian Army and would later be killed during the raid on Dieppe, on August 19, 1942 (see Glyn Jones in this project). While her husband George was overseas, Esther Andrew resided with her mother at 114 ½ North Christina Street, Sarnia.

After George's posting in Chatham, he would continue his air training at #9 SFTS in Summerside, Prince Edward Island, before returning to Sarnia on a leave in November 1941. On November 5, 1941, while at home with his family, George received news of the sinking of the *SS Vancouver Island*. The news was devastating--with reports of no survivors, including of his brother William Charles Andrew.

Despite the terrible news of William's death, George continued his intensive air training: at Composite Training School (KTS) in Trenton; #1 Wireless School (WS) in Montreal; #4 Bombing and Gunnery School (BGS) in Fingal, Ontario; and #34 Operational Training Unit (OTU) at Pennfield Ridge, New Brunswick. In August 1942, George Andrew graduated receiving his Air Gunners Badge and Sergeant stripes at Fingal Bombing and Gunnery School. The Commanding Officer at #4BGS wrote of Andrew, *Very keen about his job, hard working and reliable with a good knowledge of his work.*

On September 25, 1942, George Andrew embarked overseas from Halifax for the United Kingdom, disembarking on October 8. In Sarnia, Esther's fears were allayed when a cable from her husband in early October confirmed his safe arrival in England. Initially posted to #3 Personnel Reception Centre (PRC), he would be transferred to #22 Operational Training Unit (OTU) in late October 1942. In mid-February 1943, George Andrew would become a member of RCAF #426 Thunderbird Squadron "On Wings of Fire", part of **Bomber Command**, with the rank of Flying Officer Air Gunner.

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

No. 426 Squadron was established at RAF Dishforth, Yorkshire, on October 15, 1942, as part of No. 4 Group. In January 1943, it was transferred to No. 6 (RCAF) Group. The squadron was equipped with Vickers Wellington aircraft to deliver bombs and mines to the enemy. In June 1943, the squadron transferred to RAF Linton-on-Ouse and switched to Avro Lancaster bombers. Later in April of 1944, the squadron began to convert to Handley Page Halifax bombers that they used until the end of the war in Europe. The thunderbird crest used by the squadron originates from North American natives, and according to myth, signifies disaster and death to anyone on the ground who perceives it.

As part of #426 Squadron, George took part in many daring raids over enemy territory, including raids on Berlin, Leipzig and Frankfurt. Their crew had a very close call during a raid on Essen on May 27/28, 1943. Eight minutes after their bomb run, at 14,000 feet over Bochum, heavy flak hit their Wellington. Sharpnel made a flying sieve of their aircraft, holes appearing in the astrodome, the top and side of the rear turret, the bomb aimer's Perspex screen, the port propeller, the bottom of the port engine, the port and starboard tail plane, and the tail. Despite the damage, the aircraft got back to Dishforth with no one on board injured.

In September of 1943, while in England, George cabled Esther and informed her that he had been promoted

to Flight-Sergeant retroactive to February 3. What the 22 year old did was not for the faint of heart, however. On August 23 and again in early September of 1943, George was part of a group of Halifax and Lancaster squadrons of the R.C.A.F. that, along with scores of other Canadians flying big R.A.F. bombers, carried out massive night poundings known as “blitz raids” on Berlin. From his position as a rear gunner during the heavy bombing of Berlin, George saw German planes drop numerous flares in an attempt to light up the attacking bombers.

Flying Officer-AG George Varnum Andrew

In a letter to his parents George Sr. and Elizabeth Andrew in Sarnia in September 1943, twenty year-old George described being a rear-gunner of a Lancaster bomber in the Berlin raids. This excerpt could represent any air-gunner's typical experience.

Perhaps you'd like an idea of the feelings that run through us on a trip. First of all we are warned for operations. That is the signal for us to inspect our aircraft and equipment carefully. Then a lot of us write letters home. It helps a lot to build up courage. Next comes briefing, where we are told the target and given all the possible details on hazards, routes, etc., and are given take-off times. We usually spend the rest of our time playing cards, reading or writing more letters. Believe me, we are all thinking very much of home at that stage, for we have been told the target, and having probably been there before, we realize only too well the hell we must go through to reach it.

An hour or so before the take-off we go down to the hangers and start dressing for the job at hand. This entails a lot of work, for putting on all our gear is like harnessing a horse, only worse. Now the time for take-off is drawing near and we are watching our watches closely while we smoke a final cigarette and drink a cup of hot coffee. We look out and see the crash wagon and ambulance standing by. We call them “vultures.” And here comes Happy. He is our padre, a flight-lieutenant, and a swell guy. He comes down for every take-off, and is always the first one to greet us when we come back. I wouldn't feel right taking off without Happy around. Now the flight commander tells us to get cracking. We all hold our breath until we are safely off the deck, for we are carrying quite a load of cookies for Hitler.

Over the target, the crew finds itself in a heavy barrage of smoke and flak. The bomb-aimer has his sight on the target and is directing Freddy along an accurate course. We are all watching the sky closely for fighters who sometimes fly through their own hell to get to us. We are also watching the searchlights to see if they are probing for us or some other poor beggar. Once they get the lights on us, hell breaks loose, for then they pump the flak right at the intersection of the lights, where we are supposed to be. Freddy doesn't care for the stuff any more than we do, and makes sure that we don't park in that intersection for too long at a time.

All this time we are drawing near to our aiming point and the bomb-aimer is still giving directions to bring it up to the hair-line of the sight. Now he's got it, the bomb bays swing open and release their tons of explosive, the camera clicks and takes a picture of the target – the aiming point we hope, for it is an honor to bring back a picture showing the exact aiming point. He shouts, ‘Okay, Freddy, bombs gone. Let's get the hell out of here!’ Freddy sets a new course to get us out of the target area. I can see the target, for we are passing over it now, and it is exposed to

my view. The air-gunner gets the last view and is therefore relied upon for a good description of bombing results. The target is blazing brilliantly in many colours, and I can see explosions billowing up thousands of feet into the air.

Homeward bound, we cannot relax until we are circling over our base. Now we are down, and Happy is handing out the cigarettes while we talk it all over. We report to intelligence and give him the stuff you read in the papers as well as a lot you don't see there. Now a meal, then to bed to rest up in case we are on again tonight.

At no time were the dangers of flying over enemy territory more evident than on the night of October 20, 1943. On that night, George took part in a bombing raid by RCAF bombers of the Thunderbird and Goose Squadrons and a heavy force of R.A.F. bombers. Their mission was to flatten objectives in Leipzig, Germany. Take-off was scheduled for 17:15 hrs, the round trip being about seven hours. George was flying in Lancaster Bomber DS686, nicknamed "D for Donald", that was carrying one 4,000-pound bomb and 3,120 pounds of incendiaries. About halfway to the target, a single-engine night-fighter, a German Messerschmitt 109, attacked their bomber. The enemy aircraft attacked four times, hitting the tail plane and fuselage, disabling the mid-upper turret, and wounding the mid-upper gunner (Sgt. McGovern) with cannon shells. He suffered wounds in the arms, legs and chest, and was temporarily blinded in one eye.

The Lancaster flew corkscrews and diving turns while the gunners returned fire, in particular, Fl/Sgt. Andrew, the rear gunner, who warned his pilot of each attack. They shook off the fighter and could have turned and gone home then, their aircraft now being so badly holed; however, they kept going to Leipzig. Several minutes later, they were attacked three times by a German Junkers-88. The Lancaster was able to shake that attack and lost the enemy in the clouds. The damage to the bomber was extensive: the mid-upper turret disabled; two of the rear turret guns were inoperable; the pilot's windscreen was smashed; a hydraulic-system failed; the navigation and wireless equipment were riddled with bullets; the trailing aerial had been shot away; and many bullet holes were in the fuselage, the wing and near the inner fuel tank. Only the pilot's skillful flying and George Andrew's marksmanship saved it from certain destruction. During the seven attacks, Andrew had fired 2200 rounds.

Despite the damage, Lancaster DS686 continued on to its target. Since the release mechanism had been shot up, the bombs had to be released manually, the pilot (Frederick Stuart), in the words of other members of the crew, had "to perform superbly" with his damaged navigating instruments to bring them back to England. In a *Canadian Press* dispatch describing the raid, George Andrew had helped keep the Nazis at a distance, especially over the target where his plane was attacked seven times by enemy fighters. The returning fliers described it as one of the toughest nights the Canadians had ever experienced. Ice, rain and lightning all played havoc with the aircraft and heavy clouds sheltered the target. The Leipzig raid involved 358 Bomber Command Lancasters, of which seventeen were lost that night. It was George Andrew's 20th raid. When their aircraft arrived back at its base, more than one hundred cannon and machine gun holes were counted in the fuselage.

L – R: F/Sgt. **George Andrew**, F/O Dunphy and F/O Dodge inspect the damage sustained by their Lancaster from attack by German night fighters during a raid on Leipzig, October 20, 1943

George Andrew was promoted from Flight Sergeant to Pilot-Officer for exceptional work as rear gunner in the raid on Leipzig. Flying Officer Jimmy Dodge was on board the Lancaster aircraft on that fateful October 20th

bombing mission. In a letter to his mother in Spirit River Alberta, Dodge wrote that, *Too much praise cannot be given to Fred Stuart our RAF skipper and George (Andy) Andrew our rear-gunner. They were the ones mostly responsible for getting us out of the jam we were in, and of course Rod Dunphy (Winnipeg) our navigator, who did a marvellous piece of work.*

Sadly, Pilot-Officer George Andrew lost his life exactly two months later as part of a bombing mission involving 650 Bomber Command aircraft. On the night of December 20, 1943 and on his 22nd raid, Andrew's Lancaster Mark II aircraft LL630 (markings OW-D) took off from Linton on Ouse on a night operation against Frankfurt, Germany. The German controllers were able to accurately plot the route as soon as the main force left the English coast and were therefore able to deploy night-fighters at many points along its route. A diversionary raid on Mannheim failed to draw off many fighters until the main raid was over. The target was mainly cloud covered whereas the forecast had predicted clear conditions. Pathfinder marking did not, therefore, go to plan. The Germans used decoy fires and also decoy target indicator. By a twist of good fortune, considerable creepback resulted in the bombing coming back over the city. Pilot Officer George Andrew's Lancaster aircraft was shot down at 20:30 hrs. near Koblenz, Germany. German documents would later state that the aircraft crashed near Gulz, 13 km N.E. of Belgard, Germany. Of the 650 aircraft taking part in the operation, there were 41 losses, 10 of which were Canadian planes.

In late December of 1943, parents George Senior and Elizabeth Andrew would receive a telegram in Sarnia from the air force Casualty Officer at Ottawa informing them that their son, PILOT OFFICER GEORGE VARNUM ANDREW IS MISSING AFTER R.C.A.F. AIR OPERATIONS ON DECEMBER 21. No other details were contained in the message. The Andrews tragically had a second son reported missing in the war, the one previous being William Charles Andrew, who was reported missing in mid-October of 1941 (see below).

In early February of 1944, George's wife, Esther, now residing on North Christina Street, received a telegram from the RCAF Casualty Officer at Ottawa. It stated that REGRET TO ADVISE INTERNATIONAL RED CROSS QUOTING GERMAN INFORMATION STATES YOUR HUSBAND PO. GEORGE VARNUM ANDREW LOST HIS LIFE DECEMBER 20 BUT DOES NOT GIVE ADDITIONAL PARTICULARS. PENDING FURTHER CONFIRMATION YOUR HUSBAND IS TO BE CONSIDERED MISSING BELIEVED KILLED. PLEASE ACCEPT MY SINCERE SYMPATHY. LETTER FOLLOWS. Perishing with Pilot Officer-Air Gunner George Andrew were P/O Thomas Herbert Hastings (RAF); F/O.s Roderick James Dunphy, John William Flynn (RAF), Albert John Rudman (RAF), and Frederick John Stuart (RAF); and Sgt. Frank Richard Taylor (RAF).

In August 1944, Esther received from the Group Captain, RCAF Records Officer in Ottawa, an "RCAF Certificate of Presumption of Death" notice that read: *This is to certify that J19070 Pilot Officer George Varnum Andrew, RCAF, has been officially reported as missing since the 20th day of December, 1943, and that, full inquiries having been made, there appears to be conclusive proof that he is dead. For official purposes, therefore, he is presumed to have died on or since the above mentioned date.*

Also August 1944, Esther received a registered letter from the Air Marshal, Chief of the Air Staff:
Dear Mrs. Andrew,

I have learned with deep regret that your husband, Pilot Officer George Varnum Andrew, is now for official purposes presumed to have died on Active Service Overseas on December 20th, 1943. I wish to offer you and the members of your family my sincere and heartfelt sympathy. It is most lamentable that a promising career should be thus terminated and I would like you to know that his loss is greatly deplored by all those with whom your husband was serving.

George Andrew was later recorded as, *Previously reported "missing" after air operations, now for official purposes, "presumed dead," overseas (Germany).* For parents, George Senior and Elizabeth Andrew in Sarnia, this was their second son that they had lost in the War. George Senior would also lose a nephew in the war, Sarnia born Leonard Andrew, who was killed during the Dieppe Raid in August of 1942.

Early in 1945, Esther received a War Service Gratuity of \$508.99 for the loss of her husband. In October 1946, she would receive the following letter from the RCAF Records Officer in Ottawa:

Dear Mrs. Andrew:

It is a privilege to have the opportunity of sending you the Operational Wings and Certificate in recognition of the gallant services rendered by your husband, Pilot Officer G.V. Andrew. I realize there is little which may be said or done to lessen your sorrow, but it is my hope that these "Wings", indicative of operations against the enemy,

will be a treasured memento of a young life offered on the altar of freedom in defence of his Home and Country.

In September 1948, Ester Andrew would receive a letter from the Wing Commander, RCAF Casualties Officer in Ottawa informing her that, *the Graves Registration Service have advised that the Graves 9 to 13 in Plot 10, Row E in the Rheinburg British Military Cemetery have been registered collectively with the names of the five unidentified members of your husband's crew, including your husband. May I take this opportunity to again extend my sincere sympathy.*

Some time after the war, Esther re-married and resided in Sarnia as Esther Sygrove. Twenty year-old George Varnum Andrew is buried in Rheinberg War Cemetery, Germany, Coll.Grave 10.E.9-13.

ANDREW, William Charles (Civilian)

William ("Bill") Andrew had an interest in technology and communication and in serving his country in war. Both interests cost the 20 year old his life in 1941.

He was born at 111 North College Avenue on March 7, 1921. He was the eldest son of ex-Sarnia mayor and harbourmaster George A. C. Andrew and Mrs. Elizabeth Harriet (nee Varnum, born in Moore Township, Lambton) Andrew. Parents George A.C. and Elizabeth Andrew were married on October 24, 1906 in Moore Township, Lambton County.

Serving in the military was a pattern with men of the Andrew family. William's father, George A.C. (or George Senior, born 1882 in Lambton County), a carpenter by trade, was a World War I veteran. At age 35 and married with two children, he had enlisted to serve with the Royal Flying Corps in October 1917 in Toronto. He stood five feet four and a half inches tall, and would be transferred to the Royal Air Force with the rank of Second Class Air Mechanic and served in Canada. After the Great War, he served as a City of Sarnia alderman on a couple of occasions and was elected Sarnia's 42nd mayor of Sarnia in 1924.

Typical of this time, the Andrew family was large and included six children besides William: Florence Evelyn (born March 24, 1909 in Brigden); twins George Edwin and Ralph Varnum (born 1912, but both died six months after birth in October 1912); Muriel Eileen (born June 1915 in Sarnia); George Varnum (born 1923); and Robert Barrett (born 1926). Both of his sisters got married, becoming Mrs. John (Muriel) Little (of Sarnia), and Mrs. Stephen (Florence) Endico (of Detroit). William's youngest brother, Robert B., was a member of the Central Century Club and attended the University of Toronto. William's other brother, George of the RCAF, would lose his life while serving in World War II (see above).

Growing up, William showed an interest in technology and communications. An active member of Central United Church, he attended Sarnia public elementary school and graduated in electricity from Sarnia Collegiate. He then took a Radio Operator course at the Canadian Electronic School in Toronto and, upon his return, spent his spare time experimenting with wireless equipment. In the winter of 1940, he applied for enlistment when the RCAF issued a call for radio technicians.

He was rejected because of a slight defect in his one knee but another opportunity arose six months later, in the summer of 1941. William answered the call for recruits put out by the British Civilian Technical Corps, headquartered in Washington, D.C. The **British Civilian Technical Corps** was recruited largely in the United States and Canada and comprised young men not likely for call for actual military service. The British CT Corps' purpose was to assist civilian technicians in Britain by repairing vital equipment used by the British Armed Forces. Salaries ranged from \$24-\$38 per week. Technicians included skilled radio and automobile mechanics, electrical wiremen, instrument repairers, metal workers and other technical trades.

William Andrew passed his Civil Service exam as a radio technician and wireless expert in Port Huron with marks of 100% on his examinations. He reported for duty as a radio technician with the British Civilian Technical Corps at Montreal on September 4, 1941. His family was to hear from him for the last time on October 5, 1941.

Beginning on the opening day of the Second World War, the **Battle of the Atlantic** would be the longest continuous campaign of the war, and one in which Canada played a central role. The Royal Canadian Navy, along with the Royal Canadian Air Force (RCAF) and Canada's Merchant Navy, played a vital role in defending the country's eastern coast and escorting convoys of ships carrying men and essential machinery, arms, fuel and basic resources between North America and Europe.

In September 1940, the Royal Canadian Navy armed merchant cruiser *HMCS Prince Robert* was deployed from the British Columbia coast to South America to support Britain's blockade of ships. Britain hoped to prevent German merchant ships in neutral ports from returning to Germany or to be fitted as raiders. On September 25, 1940, the *Prince Robert* captured the 9,500-ton German merchant ship *Weser* off the coast of Mexico, one of the first important Canadian prizes of the war. The *Weser* was brought to the British Columbia coast and renamed the *SS Vancouver Island* for service in the Royal Canadian Navy. It would move to the east coast where it would make several trans-Atlantic crossings until it met its end from a German U-boat.

Civilian Tech Corps William Charles Andrew

SS Vancouver Island (under her former name *Weser*)

On October 1, 1941, William Andrew was aboard the *SS Vancouver Island* as it left Cape Breton Island as part of a fifty-two ship convoy on its way to Belfast and Cardiff. On October 15, 1941, the convoy was intercepted by thirteen U-boats that over the next three days sank eleven ships. On the first day of the attack, the *SS Vancouver Island* was sailing behind the main convoy as a straggler when it was spotted by one of the German U-boats. In the mid-Atlantic, at about 10:50 pm, the *SS Vancouver* was struck by two torpedoes fired by German U-boat *U-558*.

Back in Sarnia, word of the attack and possible loss of 19 men of the British Civilian Technical Corps was received by the *Canadian Observer* on November 4, 1941. The British Press Service announced the loss on behalf of the Royal Air Force delegation at Washington. The information released was that the boat was presumed to have been sunk in the Atlantic Ocean, but the date was uncertain and no information was available yet of any survivors. Despite the meager details available, relatives and friends of William Andrew were hopeful that he would be safe. William's parents had been worried about their son, because they hadn't heard from him for so long and they wanted to send Christmas presents to him.

On November 5, 1941, while William's brother, LAC George Andrew of the R.C.A.F. was home on leave from his Eastern Air Command post, the following official news arrived to his parents:

It is with most profound regret that I have to convey to you, the news that your son is among the list of missing passengers from a ship on which he was taking passage to the United Kingdom as a member of the British Civilian Technical Corps. The ship is missing and is presumed sunk, but the date is unknown and there is no news of any survivors. In expressing their deepest sympathy the Air Council gratefully acknowledges the generous motives which inspired your son to give his services in the defence of human liberty and progress.

W.C.G. Cribett, R.A.F. Delegation, Washington, D.C.

Later, it was disclosed that no one survived the attack on the *SS Vancouver Island*. William Andrew and eighteen other members of a detachment of the British Civilian Technical Corps were lost at sea. In total, the sinking of the *SS Vancouver Island* resulted in 102 deaths: sixty-four crew, six DEMS gunners, and thirty-two passengers. Two years later, George Sr. and Elizabeth Andrew would lose a second son in the War. George Sr. would also lose a nephew in the war, Sarnia born Leonard Andrew, who was killed during the Dieppe Raid in August of 1942. Twenty year-old William Charles Andrew is memorialized on the Ottawa Memorial, in Ottawa, Canada, Panel 1, Column 3. SOURCES: A, B, C, G, J, N, P, R, S, U, 2A, 2D, 8X

AUBIN, Joseph Leopold (#A/115076)

Joseph Leopold Aubin's life would end as a result of his bravery during the campaign in Italy, a bloody series of battles fought by the Allies to drive the Nazis back to Germany.

Joseph was born in Sarnia on September 22, 1923, the only son of Frederic Wilfred and Marie Stella (nee Thibault) Aubin, of Cemetery Road, Sarnia. Parents Wilfred (a labourer) and Stella Aubin would marry on January 31, 1921 in Sarnia, and tragically in December 1921, would give birth to a still-born baby. Joseph, their only son, would have one sister, Laurette Aubin, born in 1926. Joseph Aubin did not complete grade eight, finishing his schooling at age sixteen. Joseph was active in baseball, softball and bowling, and was a member of Our Lady of Mercy Catholic Parish. Joseph had several odd jobs after leaving school including washing cars and working in a factory, before obtaining work at Sarnia Bridge Company.

Nineteen year-old Joseph enrolled under the National Resources Mobilization Act (NRMA) on November 24, 1942 in London, Ontario. He was residing at home with his mother on Cemetery Road and working at Sarnia Bridge Company as a steelworker at the time. His plan was to become a motor-mechanic after the war. Joseph would receive his Basic Training in Chatham, and Advanced Training at Camp Ipperwash. In April 1943, Joseph was transferred to the 1st Battalion, Victoria Rifles of Canada in Sussex, New Brunswick, with the rank of Rifleman. In September 1943, he would continue his training at Niagara-on-the-Lake, and then Allanburg in March 1944.

In June 1944, twenty year-old Joseph Aubin completed his Canadian Army Attestation Papers, becoming a member of the Canadian Infantry Corps. He stood five feet eight inches tall, had blue eyes and brown hair, and was single at the time. On November 20, 1944, Joseph would embark overseas from Halifax for the United Kingdom, as a Rifleman with the Victoria Rifles. Once in England, he became a member of the Canadian Infantry Training Regiment (3 CITR). On January 23, 1945, he would embark from the U.K. to Italy, becoming a member of the Loyal Edmonton Regiment, Royal Canadian Infantry Corps (R.C.I.C.).

The **Italian Campaign**, the first sustained Canadian Army operation of the War, began with the invasion of Sicily in July 1943. The fierce fighting on the island would last more than four weeks, during which the Canadians would advance through difficult mountainous terrain, against an ever-stiffening German resistance. By August 17, the Germans had evacuated the island to the Italian mainland. In early September, Canadian and Allied forces would invade Italy. Though Italy surrendered shortly after, the occupying Germans made it clear their fight was not over. Liberating Italy would be a painstaking northward crawl, lasting 20 months, over a range of landscapes, through challenging weather, and against a series of well-protected defences held by some of the German army's best troops.

Approximately one month after arriving in Italy, Private Aubin would lose his life there on February 24, 1945, at the very end of the Italian Campaign. During fighting, Joseph was severely wounded by a mortar, and would die as a result of his wounds. His remains were buried on February 25, at a location recorded on the Army Field Service Card as "2 CIB Cem Bagnacavallo sh 89/III NW Fusignano MR 424395".

In early March 1945, Joseph's parents in Sarnia would receive a telegram from Ottawa informing them that their only son, PTE. JOSEPH LEOPOLD AUBIN HAS DIED IN ITALY OF WOUNDS RECEIVED IN ACTION. No other details were received. At the end of March 1945, Stella Aubin in Sarnia would receive the following letter from the Acting Director of Records, for Adjutant-General:

Dear Mrs. Aubin:

Further to this Headquarters' telegram of the 4th of March 1945, informing you of the regretted death of your son, A-115076 Private Joseph Leopold Aubin, in keeping with the policy of the Canadian Army of informing the next-of-kin of all details of battle casualties, the following paragraph informs you of the wounds sustained by Private Aubin.

According to information obtained by this Headquarters from the Canadian Army Medical Authorities, your late son died as a result of a bomb (mortar) fragment large wound to the left temporo-parietal region with cerebral laceration and a wound to the large left biceps (no fracture but) with dissolution of the main nerves and arteries. Please accept my sincere and heartfelt sympathy for the irreparable loss you have suffered.

Joseph Aubin was later officially recorded as, *Overseas casualty, Died of wounds received in action, in the field (Italy)*. In mid-March of 1945, a requiem high mass was celebrated in Our Lady of Mercy Church for the repose of the soul of Pte. Joseph Aubin. In October 1945, Stella Aubin would receive a War Service Gratuity of \$92.10 for the loss of her only son Joseph. In August 1946, Stella Aubin would receive a letter from the Colonel, Director of Records, for Adjutant-General. Following is a portion of that letter:

Dear Madam:

Information has just been received from overseas that the remains of your son, A115076 Private Joseph Leopold Aubin, have been carefully exhumed from the original place of internment and reverently reburied in grave 4, row G, plot 5, of Ravenna British Empire Cemetery, five miles West of Ravenna, Italy. Marked map is enclosed. This is a recognized military burial ground and will receive care and maintenance in perpetuity.

The grave will have been marked with a temporary cross which will be replaced in due course by a permanent headstone suitably inscribed. While it cannot now be stated when this work of permanent commemoration will begin, before any action is taken you will be communicated with and an opportunity will be given you to submit a short personal inscription of your own choice for engraving on the headstone...

Twenty-one-year-old Joseph Aubin is buried in Ravenna War Cemetery, Italy, Grave V.G.4. On his headstone are inscribed the words, HEAR MY UNWORTHY PRAYER. PRESERVE ME FROM ALL DANGER. GIVE MY IMMORTAL SOUL A PLACE AMONG THE CHOSEN.

BANKS, James Keith (#A/50059)

James Keith Banks was underage when he signed up to serve his country. As he fought in France and Belgium for his country, his thoughts were always with his family back home.

He was born on May 5, 1923, the son of Ambrose and Doris Lewella Banks (later Rumohr), of 221 Tecumseh Street, Sarnia. His parents were married in Sarnia on May 24, 1922. James Keith had one brother, William Lyle, one sister Hannah Betty, and a half brother Raymond Vern Rumohr. When James Keith Banks was eleven years old, he lost his father Ambrose who died on February 24, 1935. His mother would remarry, to Fredrick Nelson Rumohr. Growing up in Sarnia, Keith, as he was known, attended London Road and Devine Street public schools and Sarnia Collegiate for two years, completing grade ten. He participated in baseball, rugby, soccer and swimming and his hobbies included fishing, cooking, playing the guitar and the mouth organ, and collecting stamps and coins. Prior to enlisting, Keith had been employed as a pinsetter at a Sarnia bowling alley (August 1937-September 1938), and then a Sarnia lumber mill (December 1938-August 1940).

Seventeen year-old Keith Banks enlisted in the Canadian Army in Chatham, Ontario on August 11, 1940--his mother signed him up. He stood five feet eleven and a half inches tall, had blue eyes and light brown hair, was single, and resided with his mother at the time. Keith recorded that he joined the army in order to help his mother. His plan for after the war was to enter the field of carpentry. On his Occupational History Form, he recorded his date of birth as May 5, 1923. On his Attestation Paper he declared his birthdate as May 5, 1921, making himself two years older than he was. All of his subsequent military records (including his Registration of Death) therefore record his date of birth as May 5, 1921. When Keith enlisted, his brother Lyle was sixteen, his sister Betty was thirteen, and his half brother Vern was only a couple of months old.

Passing himself off as a nineteen year-old, seventeen year-old James Keith Banks was taken on strength into the Kent Regiment, and began his training in Chatham, Ontario. He would continue his training with the Kent Regiment in London, Ontario and New Westminster, British Columbia. He would embark overseas for the United Kingdom on December 29, 1942, becoming a member of the Canadian Infantry Reinforcement Unit (CIRU), where he would continue his training. On February 27, 1943, Keith was transferred, becoming a member of the Highland Light Infantry of Canada, R.C.I.C., with the rank of Private. By March 1944, he had advanced to the rank of Lance Corporal. Keith Banks, as a member of the Highland Light Infantry of Canada, would embark from the U.K. in early June 1944, arriving in France on June 6, 1944 – **D-Day**.

The Canadian landings on Juno Beach would mark their beginning of the **Battle of Normandy**. After breaching the “Atlantic Wall” of “Fortress Europe”, Allied armies began their break out from the narrow Normandy bridgehead to carve out a foothold on the French mainland. It would take a whole summer of tenacious fighting, pushing against fierce and ruthless German forces to advance east across France. In a brutal campaign of attrition, the Canadians faced fierce battles and vicious counterattacks as they clawed their way forward liberating villages and towns including Bretteville, Carpiquet, Caen and Falaise.

Once while on leave in London, England, Keith got to meet his grandfather and his uncle for the first time. Keith and his mother Doris exchanged letters often (though they were edited by the military). Doris told him of the coupon books for food, gas rations, and the things that the radio and newspaper were saying about the war in England. Keith was originally paid \$1.40 per day as a Private, and his first pay cheque sent home was used to pay for

his sister Betty's first two wheeled bicycle, where she became the envy of the neighbourhood. Keith's letter's told of the deaths he saw and the bad living conditions he endured. In his last letter home, one his mother received the day before Keith was to die, he described how, because his Major was killed, he became a Corporal.

After the Allied breakout from Normandy, Canadian forces were assigned the **"Long Left Flank"**, the less glamorous but vital tasks of clearing coastal areas in the north of France and Belgium of German occupiers; opening the English Channel ports for supplies essential to the Allied advance; and capturing the launching sites of German V-1 rockets. In a series of stop-and-start advances against stiff resistance in fortified positions, the Canadians liberated ports and villages including Rouen, Dieppe, Dunkirk, Boulogne and Calais. It was during the early stages of this operation, a series of stop-and-start advances against stiff resistance in fortified positions, that Corporal Keith Banks would lose his life.

On the morning of September 6, 1944, Keith Banks and his regiment were on first patrol, a reconnaissance toward the town of Isques, between two of the enemy-defended hills. While making their way toward the objective, the patrol came under heavy fire from the hills and was pinned down. Corporal Keith Banks and Major G.D. Sim were severely wounded at this time. While they were pinned down, a relief was assembled and sent out while the three-inch mortars of the battalion plastered the hills. The patrol was successful in extricating itself, but Cpl. Banks and Major Sim did not survive. Their bodies were not recovered until the following day. When soldiers recovered the bodies, 25 prisoners, badly shaken by the pounding they received, were also brought back. James Keith Banks remains were buried at a location recorded on the Army Field Service Card as "MR.696458 France Near Churchun Condette S of Boulogne".

Keith's stepfather Fred and mother Doris Rumohr in Sarnia would receive a telegram from the Director of Records in Ottawa during the third week of September 1944 informing them that their son, LANCE CORPORAL KEITH BANKS WAS REPORTED MISSING IN ACTION IN FRANCE. The next day, they received another telegram from the Director of Records, this one reading: MINISTER OF NATIONAL DEFENCE DEEPLY REGRETS TO INFORM YOU THAT A50059 LANCE CORPORAL JAMES KEITH BANKS PREVIOUSLY REPORTED MISSING IN ACTION HAS NOW BEEN OFFICIALLY REPORTED KILLED IN ACTION SIXTH SEPTEMBER 1944 STOP IF ANY FURTHER INFORMATION BECOMES AVAILABLE IT WILL BE FORWARDED AS SOON AS RECEIVED.

In October 1944, Doris Rumohr on Tecumseh Street in Sarnia, received the following letter from the Brigadier, Acting Adjutant-General:

Dear Mrs. Rumohr:

It was with deep regret that I learned of the death of your son, A50059 Lance Corporal James Keith Banks, who gave his life in the Service of his Country in the Western European Theatre of War, on the 6th day of September, 1944.

From official information we have received, your son was killed in action against the enemy. You may be assured that any additional information received will be communicated to you without delay.

The Minister of National Defence and the Members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

James Keith Banks was later officially recorded as, *Overseas casualty, killed in action, in the field (France)*. In October 1945, Doris Rumohr received a War Service Gratuity of \$543.26 for the loss of her son James Keith Banks.

In January 1946, Doris Rumohr received a letter from the Colonel, Director of Records, for Adjutant-General. Following is a portion of that letter:

Dear Madam,

Information has just been received from overseas that the remains of your son, A50059 Lance Corporal James Keith Banks, have been carefully exhumed from the original place of internment and reverently reburied in grave 7, row B, plot 8, of Calais Canadian Military Cemetery, St. Inglevert, France. Marked map is enclosed. This is a recognized military burial ground and will receive care and maintenance in perpetuity.

The grave will have been marked with a temporary cross which will be replaced in due course by a permanent headstone suitably inscribed. While it cannot now be stated when this work of permanent commemoration will begin, before any action is taken you will be communicated with and an opportunity will be given you to submit a short personal inscription of your own choice for engraving on the headstone...

Twenty-one-year-old (though listed in records as twenty-three years old based on Attestation Papers) James Keith Banks is buried in Calais Canadian War Cemetery, Leubringhen, France, Grave 8.B.7. On his headstone are inscribed the words, SO EASILY REMEMBERED BUT HARD TO FORGET. MAY GOD GRANT YOU, KEITH ETERNAL REST.

BARCLAY, James (#A/9908)

James Barclay had plans to continue with his career at the CNR after the war. While stationed in England awaiting deployment, he would have a very special visit with a family member.

James was born July 5, 1923 in Aberdeenshire, Scotland, the youngest son of George (John) and Anne Barclay, who were married in Scotland on November 18, 1923. The Barclay family moved to Sarnia when James was two years old. George and Anne Barclay resided at 512 Campbell Street, Sarnia and later R.R. #2, Sarnia. James had one brother, Alexander, who would also serve in the army during the war. James attended Johnston Memorial and Russell Street Public elementary schools, leaving school at age fifteen. He worked on farms for a time, and then worked at the Canadian National Railway in Sarnia for three years, listing himself as a labourer.

Eighteen year-old James Barclay enlisted in the Canadian Army on November 7, 1941 in London, Ontario. He stood five feet seven inches tall, had hazel eyes and brown hair, was single, and resided at home with his parents at R.R. #2, Sarnia at the time. James had expressed his desire to return to the CNR after the war, as a mechanic, and the company had promised to give him employment. James would receive army training in Kitchener (#10 Basic Training Centre), Hamilton (Canadian Army Training School), and Red Deer, Alberta (Royal Canadian Army Service Corps-RCASC). He would embark overseas for the United Kingdom on December 29, 1942, becoming a member of the Canadian Army Service Corps Reinforcement Unit (CASCRU).

James' brother Alex Barclay, with the rank of Gunner, would arrive overseas in December of 1941, with the Royal Canadian Artillery. James Barclay would arrive overseas in early January of 1943. At one time the two brothers, both in the army, would be stationed only four miles apart for six months. On one occasion, they would spend two days together. James Barclay would attain the rank of Private with the Royal Canadian Army Service Corps (RCASC).

On September 26, 1943, Private James Barclay and a Private Mallette, were travelling together on two motorcycles on a road in Tadworth, Surrey, England. They were involved in a motorcycle accident where both motorcycles crashed into a 3-ton lorry. James injuries included a fractured skull and laceration of the brain; he would die one day later, at approximately 0955 hours, as a result of his injuries. Parents George and Anne Barclay of R.R. #2 in Sarnia would receive the following telegram from the Director of Records in Ottawa on September 27: REGRET DEEPLY A9908 PRIVATE JAMES BARCLAY NOW OFFICIALLY REPORTED DIED TWENTYSEVENTH SEPTEMBER 1943 STOP FURTHER INFORMATION FOLLOWS WHEN RECEIVED.

A few days later, his parents received another telegram from Ottawa informing them that their son, PTE JAMES BARCLAY, DIED IN AN ARMY HOSPITAL OVERSEAS, FROM INJURIES SUSTAINED IN A MOTORCYCLE ACCIDENT THE PREVIOUS DAY. The telegram stated that the cause of James' death was SEVERE CRANIAL CEREBRAL INJURY DUE TO MOTORCYCLE ACCIDENT ON DUTY SUNDAY. The parents were given no details as to how or where the accident that took the life of their son occurred, nor were they given any word as to the funeral. Parents George and Anne hoped that his brother Alex would be able to attend the funeral services in England.

In early October 1943, Anne Barclay received the following letter from the Major-General, Adjutant-General:

Dear Madam:

I deeply regret to inform you that your son, A.9908 Private James Barclay, gave his life in the Service of his Country in the United Kingdom on the 27th day of September, 1943.

You may be assured that any additional information received will be communicated to you without delay. The Minister of National Defence and the members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

In the court inquiry held shortly after the accident, it was determined that Pte. Barclay and Pte. Mallette, both who were on motorcycles and on duty, were travelling at an excessive rate of speed. The two motorcyclists had

rounded a curve and then collided with the lorry that was turning on to the road. Pte. Barclay died in the accident and Pte. Mallette was seriously injured. Later, James Barclay's death certificate would record his cause of death as: *fractured skull, laceration of the brain, severe cranial cerebral injury due to motorcycle accident while on duty*. In July 1945, his parents received a War Service Gratuity of \$255.86 for the loss of their son.

In September 1946, Anne Barclay in Sarnia would receive from the Colonel, Director of Records, a photograph of the grave and marker over James' burial place in Surrey, England. Twenty year-old James Barclay is buried in Brookwood Military Cemetery, Surrey, United Kingdom, Grave 45.J.10. On his headstone are inscribed the words, AT PEACE IN JESUS' ARMS SAFE AND SECURE FROM ALL HARMS.

One year after James Barclay's death, the following In Memorium was printed in the *Sarnia Observer*:
In loving memory of our dear son and brother, Pte. James Barclay, who died in England one year ago today, September 27, 1943.

*Had he asked us, well we know
We should cry "O spare this blow."
Yes, with streaming tears should pray;
"Lord, we love him; let him stay."*

Sadly missed by Father, Mother and brother Alex (overseas).

Barclay Drive in Sarnia is named in his memory.

BARR, William John (#J/92196)

William John Barr had just turned eighteen when he decided to serve his country. He would lose his life in defence of freedom as a member of RAF Bomber Command in the early days of the advance at Normandy, as Allied forces liberated villages and towns in France.

He was born at Sarnia General Hospital on May 11, 1924, the son of Joseph William and Edith Isabella (nee Chester) Barr, of 260 Devine Street, Sarnia. Joseph and Edith Barr were married in Detroit, Michigan on January 7, 1906. William Barr had two sisters and one brother at the time of his death. His sisters were Leona Marie (born 1906, who became Mrs. Robert J. Weston), residing at 214 Confederation Street; and Pauline Jessie (born 1907), who became Second Lieutenant Pauline Jessie Barr serving with the U.S. Army as a nurse in Port Huron. His brother, Donald Alexander (born 1909) also resided at 214 Confederation Street, Sarnia, with his sister Leona.

William John Barr was educated at Devine Street and St. Joseph elementary schools, and was a member of St. Joseph's Catholic Parish, Sarnia. William would attend Sarnia Collegiate Institute, from September 1937 to 1942, graduating at age eighteen. He participated in basketball, swimming and handball, and was a member of the Lambton Garrison Band since 1940, where he played the French horn. At the age of sixteen, William would lose his father, a former railroad employee, who would die on December 22, 1940 at the age of 62.

William Barr enlisted in the Royal Canadian Air Force on May 14, 1942, in Sarnia, three days following his eighteenth birthday. He attended high school until mid-June 1942 and accepted odd jobs until he was called to serve in July 1942. He stood five feet eight and a half inches tall, had gray eyes and brown hair, was single, and resided at home on Devine Street with his mother at the time. His plan for after the war was to attend university. The RCAF officer that interviewed William at enlistment wrote of William, *Better than average material in every respect. Keen to become a Pilot and willing to work.*

Initially posted to #1 Manning Depot (Toronto), William Barr would receive air training at #6 Initial Training School (ITS Toronto), #4 Bombing and Gunnery School (BGS Fingal), #4 Air Observer's School (AOS London), #1 Air Gunner's Ground Training School (AGGTS Quebec) and #9 Bombing and Gunnery School (BGS Mont-Joli, Quebec). William was awarded his Air Gunner's Badge on September 3, 1943. Several months earlier, in June 1943, William spent a brief furlough at home with his widowed-mother Edith on Devine Street. It would be exactly one year after his last leave in Sarnia, that William would lose his life overseas. On October 8, 1943, William Barr would embark overseas from New York for the United Kingdom.

William would arrive at RAF Bournemouth, and was soon posted to No. 16 Operational Training Unit (OTU), and later to 1654 Heavy Conversion Unit (HCU). On May 25, 1944, William Barr would become a member of RAF #630 Squadron "Nocturna Mors" (Death by Night), part of **Bomber Command**, with the rank of Pilot Officer-Air Gunner. During his time in England, he wrote regularly to his widowed-mother, Edith, insisting that he wasn't flying combat missions, because she feared for his life.

Air Gunner's Course

BACK L to R: Gray (Sask), Barron B. (Guelph), Anderson (Man), Johnson (Man), Lough R. (Belleville), Beattie A.N. (Montreal)

FRONT L to R: Fisher J. (Ottawa), Reesor D. (Kitchener), Rodgers (Montreal, Missing 25-1-44), **William Barr**, Lunnnon (Sask), Stirling J. (Montreal)

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

The **Battle of Normandy** would begin for the Canadians with the June 6, 1944 D-Day landings at Juno Beach. After breaching the "Atlantic Wall" of "Fortress Europe", Allied armies with the support of the navy and air force, began their break out from the narrow Normandy bridgehead to carve out a foothold on the French mainland. It would take a whole summer of tenacious fighting, pushing against fierce and ruthless German forces to advance east across France.

No. 630 Squadron was formed in November 1943 based at RAF East Kirkby, Lincolnshire, and was equipped with Avro Lancaster aircraft, the British four-engine heavy bomber. Between November 18, 1943 and April 25, 1945, the squadron took part in many major raids, including each of the 16 big raids made by Bomber Command on the German capital during what became known as the "Battle of Berlin".

On June 9, 1944, only three days after the D-Day landings, William Barr was part of a seven-member crew aboard Lancaster aircraft PB121 (markings LE-F) that took off from its base at East Kirkby at 21.48 hours. The night operation's target was to bomb the rail junction at Etaples, France. Sometime during the night of June 9/10th, after a long-running battle with a night-fighter, the aircraft was hit, burst into flames and crashed over the Etaples target, near Omerville (Val d'Oise), which is about 34 miles northwest of Paris. Six of the crew members were killed and buried in a plot of ground approximately 100 yards behind the Mairie at Omerville, France, Grave No. 3. One member of the crew, F/O D.C. Percy was taken Prisoner of War. Perishing with Pilot Officer-Air Gunner William Barr were P/O Russell Edward Dennis; Claud Morley Houghton (RAF); and Sgt.s William James Bott (RAF), John Charles Cameron (RAF) and Horace Ison (RAF).

In mid-June 1944, Edith Barr in Sarnia received a telegram from the Director of Records in Ottawa advising her that her son, SERGEANT WILLIAM J. BARR HAS BEEN REPORTED MISSING AFTER AN OPERATIONAL FLIGHT ON JUNE 10. Also in mid-June 1944, Edith Barr received a letter from the Wing Commander of R.A.F. Station, East Kirkby. Following is a portion of that letter:

Dear Mrs. Barr,

Before you receive this letter you will have been notified by the Air Ministry that your Son, Sergeant William J. Barr, was a member of an aircraft of this Squadron which failed to return from an operational mission last night

and it is with deep regret that I have to write to confirm this.

The aircraft was detailed to take part in operations against the enemy but, as is usual, radio silence was maintained after take-off and therefore it is not possible to determine the cause of its failure to return.

Your son was a most capable Air Gunner and a member of an excellent crew who had carried out operations against the enemy successfully. I have every confidence in the Captain, Flight Sergeant Houghton, who would, I know do everything in his power to ensure the safety of his crew both in the air and on the ground in the event of a forced landing. There is, of course, the possibility that the crew were able to abandon the aircraft and land safely in enemy territory. If, as we all sincerely hope, this was the case, then news will reach you from the International Red Cross Committee. May I express the very sincere sympathy which I personally and all members of my Squadron feel for you during this most distressing and anxious time...

Pilot Officer-Air Gunner William John Barr

In mid-July 1944, Sgt. William Barr's name would appear on the Department of National Defense for Air casualty list as, *missing on active service after air operations overseas*.

In early February of 1945, his mother received notification from Ottawa informing her that her son, Sergeant William J. Barr, missing since June of 1944, *has been promoted to the rank of Pilot Officer by the R.C.A.F.* The promotion dated back to June 8. In mid-May 1945, three months after receiving the promotion notification, and one week after VE Day ending the war in Europe, Edith received a telegram from Ottawa informing her that her son, PO. WILLIAM BARR, R.C.A.F. WAS KILLED IN ACTION OVER OMERVILLE, FRANCE ON JUNE 10 LAST. Though reported missing shortly after June 10, 1944, this was the first official word of his death to reach his family.

William Barr was later officially recorded as; *Previously reported missing in action after air operations, now for official purposes, presumed dead, overseas (France)*. Twenty year-old William Barr is buried in Omerville Communal Cemetery, Seine-et-Oise, France, Coll. Grave 3. On his headstone are inscribed the words, ETERNAL REST GRANT UNTO HIM, O LORD; MAY HIS SOUL REST IN PEACE.

BELL, Isaac George (#A/50270)

Isaac (Ike) Bell, as a teenager with plans to work at Imperial, enlisted in the army to serve his country. He would give his life in the advance at Normandy as Allied forces liberated villages and towns across France.

Isaac was born on December 28, 1920, the only son of George Issac (occupation Janitor) and Sylvia Gladys (nee Ellis) Bell, of 467 ½ Nelson Street, Sarnia. George and Sylvia Bell were married in Sarnia on August 1, 1912. Isaac was born on his father's farm in Dawn Township, and the family moved to Sarnia in 1929. Isaac was the youngest in the family and had three sisters: Rachael Daisy (born 1910), Alma Eva (born 1913) and Catherine (born 1914). Isaac attended public schools in Sarnia and prior to enlisting he was employed as a sailor for seven months, and then in the Sarnia Fish and Chip Shop and the Park Meat Market. At some point before Isaac enlisted, his mother

Sylvia would pass away.

Nineteen year-old Isaac Bell enlisted in the Canadian Army on August 14, 1940 in Chatham, Ontario, becoming a member of the Kent Regiment. He stood five feet five and a half inches tall, had blue eyes and red hair, was single, and he recorded his occupation as being a sailor for three years. His plan for after the war was to gain employment with Imperial Oil Limited in Sarnia. Isaac would receive his army training in Chatham, London, Halifax, Niagara-on-the-Lake and New Westminster, British Columbia. He would embark overseas for the United Kingdom on May 1, 1942, where he would be attached to the Canadian Division Infantry Reinforcement Unit (CDIRU). In July 1942, Isaac would become a member of the Highland Light Infantry, R.C.I.C., with the rank of Private.

Isaac Bell would continue his training in the U.K., and rise to the rank of Lance Corporal. He embarked, as a member of the Highland Light Infantry of Canada, from the U.K. in early June 1944, arriving in France on June 6, 1944 – **D-Day**. His father George Bell in Sarnia, would receive a letter from Isaac not long after the Normandy landings. George Bell said that in the last letter he received from Isaac, his son stated that he had not had his uniform off in 18 days.

Corporal Isaac George Bell

The **Battle of Normandy** would begin for the Canadians with the June 6, 1944 D-Day landings at Juno Beach. After breaching the “Atlantic Wall” of “Fortress Europe”, Allied armies began their break out from the narrow Normandy bridgehead to carve out a foothold on the French mainland. It would take a whole summer of tenacious fighting, pushing against fierce and ruthless German forces to advance east across France. In a brutal campaign of attrition, the Canadians faced fierce battles and vicious counterattacks as they clawed their way forward liberating villages and towns including Bretteville, Carpiquet, Caen and Falaise.

Corporal Isaac Bell would lose his life on July 8, 1944, killed in action during the Battle of Normandy. His remains were buried at a location recorded on the Army Field Service Card as “MR 987813 Beny-Sur-Mer, France”. On July 13, 1944, Isaac Bell’s name would appear in the *Canadian (Sarnia) Observer* as “is now with the D-Day invasion forces in France.” Approximately one week later, his widowed-father George would receive the following telegram from the Director of Records in Ottawa; MINISTER OF NATIONAL DEFENCE DEEPLY REGRETS TO INFORM YOU THAT A50270, ACTING LANCE CORPORAL ISAAC GEORGE BELL HAS BEEN OFFICIALLY REPORTED KILLED IN ACTION EIGHTH JULY 1944 STOP IF ANY FURTHER INFORMATION BECOMES AVAILABLE IT WILL BE FORWARDED AS SOON AS RECEIVED.

At the end of July 1944, George Bell received the following letter from the Major-General, Adjutant-General:

Dear Mr. Bell:

It is with deep regret that I learned of the death of your son A50270 Acting Lance Corporal Isaac George Bell who gave his life in the Service of his country in France on the 8th day of July, 1944. From official information we have received, your son was killed in action against the enemy. You may be assured that any additional

information received will be communicated to you without delay.

The Minister of National Defence and the members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

Isaac Bell and another Sarnian, Private Frederick Birkinshaw (included in this project), both lost their lives on July 8, 1944 while fighting with their Canadian Army units in France, during the Battle of Normandy. Isaac Bell was later officially recorded as, *Overseas casualty, killed in action, in the field (France)*. At the time of his death, he was survived by his widowed-father George, an employee of Electric Auto-Lite Limited and his three sisters: Mrs. Perry (Catherine) Ferns of Cecil Street; Mrs. Edward (Alma) Cuthbert of South Mitton Street; and Mrs. Daisy Reynolds of Devine Street, Sarnia. In October 1945, George Bell would receive a War Service Gratuity of \$507.74 for the loss of his only son Isaac.

In January 1946, George Bell received a letter from the Colonel, Director of Records, for Adjutant-General. Following is a portion of that letter:

Dear Sir,

Information has just been received from overseas that the remains of your son, A50270 Lance Corporal Isaac George Bell, have been carefully exhumed from the original place of internment and reverently reburied in grave 1, row C, plot 15, Beny-sur-Mer Canadian Military Cemetery, Beny-sur-Mer, France. Marked map is enclosed. This is a recognized military burial ground and will receive care and maintenance in perpetuity.

The grave will have been marked with a temporary cross which will be replaced in due course by a permanent headstone suitably inscribed. While it cannot now be stated when this work of permanent commemoration will begin, before any action is taken you will be communicated with and an opportunity will be given you to submit a short personal inscription of your own choice for engraving on the headstone...

Twenty-three-year-old Isaac Bell is buried in Beny-Sur-Mer Canadian War Cemetery, Reviers, France, Grave XV.C.1. On his headstone are inscribed the words, I HAVE FOUGHT A GOOD FIGHT. I HAVE FINISHED MY COURSE. I HAVE KEPT THE FAITH.

BELL, Joseph Griffiths (#V/35750)

Joseph “Joe” Bell, athletic and young, twice risked his life to save others before he was later killed in action in 1943. The death of their only son left a void for parents Joseph and Edith in Sarnia.

He was born in Brantford, Ontario on February 18, 1922, the only child of Navy Lieutenant Joe “Griff” and Edith Laura Bell, who grew up at 144 Davis Street, Sarnia. His parents had been married in Woodstock on September 17, 1917, five years before Joe’s birth and, at some point, the family moved to Sarnia. Joe was a talented young man. He received his education at Brantford, at Sarnia public schools, and at Sarnia Collegiate. As well, he was a member of Central United Church and of the Central Century Club. With the latter, he played softball and basketball, but his athleticism shone at SCITS. At Sarnia Collegiate, he was an outstanding all-round athlete who starred in high school football, in WOSSAA basketball and rugby, and in boxing and wrestling. He was also on the school’s track, shooting and swimming teams, and was a member of the Boy’s Athletic Association at Sarnia Collegiate. His talents weren’t confined to sports. Joe wrote Sarnia Collegiate news for the *Canadian (Sarnia) Observer*. In October 1940, prior to enlisting, Joe became a banker employed with the Canadian Bank of Commerce in the Sarnia and Parkhill branches, as Senior Ledger Keeper. The bank granted him a leave of absence for him to enlist.

The men in the Bell family had much in common. They were, for instance, both eager to do their duty. In an unusual twist, Joe “Griff” Bell would follow his son by joining the navy in August of 1943. The navy was a natural fit for him, for “Griff” had been active in marine affairs for years; for example, at the Sarnia Yacht Club during its early history, his main hobby was building outboards, motorboats and sailboats. His shop was situated in the building known as the *H.M.C.S. Repulse*, the local Sea Cadet headquarters at the corner of Front and Johnston Streets. Like his son, “Griff” Bell was talented. Prior to coming to Sarnia, “Griff” was a member of the Brantford Symphony. In Sarnia, he was a drummer and xylophone soloist with the Lambton Garrison Band and a member of the Devine Street United Church Sunday School orchestra. To join the navy, he was granted leave of absence by the Ontario Hydro Electric Power Commission, where he had been employed for 31 years. “Griff” Bell would be a Lieutenant in the special branch of the Supervising Naval Engineers’ Department, Royal Canadian Naval Volunteer Reserve, stationed at Deep Brook, Nova Scotia.

Prior to joining the navy, Joe Bell had attempted to enlist in the air force, but was unsuccessful. Eager to serve, Joe, age 20, was successful in enlisting in the Royal Canadian Naval Volunteer Reserve on May 4, 1942, in Windsor, Ontario. He stood five feet ten inches tall, had blue eyes and brown hair, and was single. When he enlisted he was residing at his parents' Davis Street home. Joe's navy training was rather extensive. It included serving on a number of establishments and ships: the *HMCS Hunter* (Windsor); *HMCS St. Hyacinthe* (Quebec); *HMCS Stadacona* (Halifax); and the *HMCS Avalon* (St. John's, Nfld.). He was also posted on the Corvette *HMCS Morden (K170)* on the North Atlantic convoy for approximately one month in November-December 1942. Ironically, the *Morden* would later be involved in rescue operations involving the ship on which Joe Bell would lose his life.

Beginning on the opening day of the Second World War, the **Battle of the Atlantic** would be the longest continuous campaign of the war, and one in which Canada played a central role. The Royal Canadian Navy, along with the Royal Canadian Air Force (RCAF) and Canada's Merchant Navy, played a vital role in defending the country's eastern coast and escorting convoys of ships carrying men and essential machinery, arms, fuel and basic resources between North America and Europe.

Joe's athleticism served him well in two situations that occurred within two months of each other. An article, dated December 14, 1942 in the *Canadian Observer*, provided details about an attack on a merchant ship that occurred on October 22nd. On that date, the German submarine *U-443* had torpedoed the Canadian Pacific Steamships cargo and passenger vessel *Winnipeg II* as it was en route from Liverpool to St. John, New Brunswick. Joe Bell was a member of the gallant crew of the Corvette *HMCS Morden* that rescued the approximately 200 crew members and passengers of the torpedoed merchant ship. Everyone aboard was rescued before the *Winnipeg II* sank--from the crew and the adult passengers to the children, including a 7-month old baby. Though the *Morden* had living quarters for only 60 persons, the crew somehow managed to find space for the 200 survivors before it docked in St. John's Atlantic port. Later, on December 12 when he was stationed in Newfoundland, Joe suffered second-degree burns when he helped rescue several people from a disastrous fire that swept the Knights of Columbus Hostel in St. John's.

Though Joe's parents in Sarnia were pleased to learn that their son participated in the rescue, they were still worried. They had been reading the dispatches from St. John's, Newfoundland that described the ravaging fire that had destroyed the K. of C. hostel. Reportedly, a large number of service men had lost their lives. Mr. and Mrs. Bell in Sarnia anxiously awaited further news about their son Joe, fervently hoping that their son's ship had not been docked in St. John's. Only days after the fire, Joe's mother Edith in Sarnia would receive the following registered letter from the Secretary of the Naval Board:

Dear Mrs. Bell,

I regret I must confirm the telegram of the 14th of December from the Minister of National Defence for Naval Services informing you that your son, Joseph Griffiths Bell, Ordinary Coder, O.N. V35750, Royal Canadian Naval Volunteer Reserve, has been admitted to hospital in St. John's, Newfoundland suffering from injuries.

According to reports received, your son was one of a large number of Service personnel who were being entertained in the Knights of Columbus Hostel in St. John's when that building was completely destroyed by fire late in the evening of Saturday, 12th December.

While the extent of his injuries is not known, you may rest assured that your son is receiving the best possible medical care and you will be notified immediately of any change in his condition.

The fire in the hostel was devastating for two reasons. Ninety-nine people died and many more were burned horribly, including Joe Bell who spent time convalescing in a St. John's hospital. Beyond the deaths and injuries, however, were the suspicious circumstances of the tragedy. The fire occurred on a Saturday night when the K. of C. hostel was crowded, for it was a gathering place for Newfoundland civilians and U.S. servicemen based on the island. Wartime blackout regulations meant that plywood shutters covered the windows, thus preventing light from escaping into the inky night. Those shutters became death traps for the hundreds of people scrambling to get out through the smoke and flames in the auditorium. Investigators concluded that the fire had been deliberately set, likely enemy sabotage orchestrated by agents of Nazi Germany. The hostel tragedy was one of many suspicious fires in St. John's that winter.

In early February 1943, nearly two months after the fire, Edith Bell had still not heard any more information about her sons' condition. She wrote the following letter to the Secretary of the Naval Board:

Dear Sir,

On December 14th we were advised by telegram from your office, that our son Joe Griffiths Bell... was

injured in the St. John's K. of C. fire and admitted to the Naval Hospital there. In a letter which followed two days later, you stated that you did not know the extent of his injuries. Now, with the exception of one letter written by our son about the Dec 22, we have not received any communication from Naval authorities, Naval Hospital, no, not even a chaplain. Naturally we are very much concerned. Civilian morale is of paramount importance at this time. The citizens of our country are entitled to the utmost consideration in cases such as this. We have tried to be patient but at a loss to know, why we are not further advised as to his condition. After seven (7) weeks we feel that we are perfectly within our rights in asking for full particulars as to our sons condition. Thanking you in anticipation of an early reply...

Following is a portion of the response from the Secretary of the Naval Board she received later that month:

... I am directed to inform you that the department has received no information concerning your son... The injuries which he sustained in the Knights of Columbus Hostel fire were not of a sufficiently serious nature to warrant his being placed on the seriously ill or dangerously ill lists and in the absence of further reports, it must be presumed that he is progressing satisfactorily.

Under the stress of wartime conditions it is not possible to render individual reports on Naval personnel confined to hospital and it is only cases of serious or dangerous illness that such reports are received...

Joe did not report for active duty for three months. He spent almost three weeks recuperating in hospital and even played basketball for the Naval Basketball Team. On April 16, 1943, he was posted on the Canadian destroyer *HMCS St. Croix* with the rank of Coder. In a letter to his mother not long after that, Joe told of being transferred to a destroyer, but did not name the boat. He also told of his enjoyable visit to Scotland, a country he spoke of in glowing terms and his expectation of being home on furlough shortly.

Navy Coder Joseph Griffiths Bell

The Canadian Town Class destroyer *HMCS St. Croix* (181) operated in the North Atlantic. Aboard the same ship was Ordinary Telegraphist Robert C. Rigby (included in this project), and Stoker Second Class William Norman Roder of Arkona. The *St. Croix* was one of the “four-stacker” destroyers acquired by Great Britain from the United States Navy in September 1940, in exchange for sites for air and naval bases on British territory in the Atlantic area (she was formerly the *U.S.S. McCook*). The *St. Croix* and six other destroyers, transferred to the Royal Canadian Navy at the time, were manned immediately by Canadian crews and performed invaluable service on Atlantic convoy duty. Of note, one of those transferred destroyers was the *St. Clair*. Despite repeated problems with minor equipment failures, the *HMCS St. Croix* had put to sea time and time again and distinguished herself in the early days of the Battle of the Atlantic. Guarding vital convoys and patrolling for German submarines, she was credited with two U-boat kills (*U-90* in late July 1942 and *U-87* in early March 1943) and picked up many survivors of German U-boat attacks on Allied ships. The *St. Croix* was to be the first of the destroyers to be lost.

In August 1943 *St. Croix* was transferred from the Mid-Ocean Escort Force (MOEF) to the Royal Navy's Western Approaches Command. Along with the RCN Town Class destroyer *St. Francis* and the RCN corvettes *Chambly*, *Morden* and *Sackville*, the *St. Croix* became part of Escort Group 9, a support group of North Atlantic

convoys. The support groups were designed to reinforce the close escort of endangered convoys or to hunt submarines in mid-ocean and kill them.

In mid-September, Escort Group 9 was ordered to reinforce Escort Groups B 3 and C 2, which were guarding the westbound convoys ONS-18 and ON-202, respectively. ONS-18, the slower convoy, had sailed from the United Kingdom on September 13; the faster ONS-202 had departed several days later on a similar track and was now approaching the south of Iceland, just behind the first convoy. At sea, a patrol line of U-boats awaited. On September 20, after the Admiralty picked up increasing signs of a German submarine concentration, they ordered the two convoys to merge, a combined assemblage of 63 merchant ships. As the convoys closed their gap, the escorts were picking up U-boat signals. Undoubtedly, the U-boats were gathering in large numbers and the wolf pack was maneuvering into position for a night attack. They were about to measure the success of their newest “secret weapon”, the Gnat acoustic torpedo. Fired in the direction of the intended victim, the Gnat was designed to circle until it picked up the appropriate propeller noise, then hone in on it.

Town Class Destroyer *HMCS St. Croix 181*

Escort Group 9 took up outer screening positions ahead and astern of the merchant ships, on the port (south) side of the convoy. Unfortunately, as the collection of escorts and merchant vessels headed west, fog and rain engulfed them. On the night of September 20, *St. Croix* was on station to the rear of the merging convoys when it was ordered to proceed farther astern to check out a possible U-boat sighting reported by an orbiting Coastal Command aircraft. In the gathering gloom, *St. Croix* turned eastward and headed back along the convoy track, zigzagging at 24 knots. As it approached the spot where the sighting was reported, her captain ordered the *St. Croix* to begin an asdic sweep.

At 9:51 pm, the German U-boat *U-305* struck the *HMCS St. Croix* with two Gnat torpedoes near her port propellers. With the two massive explosions, the ship glided to a stop and listed immediately and uncontrollably. To the British frigate *HMS Itchen*, a few miles away, she sent the cryptic message, “*Am leaving the office.*” It was the last word from *St. Croix*. Seconds later, a third electrically directed torpedo, the final blow, hit the stern of the *St. Croix*. A tremendous explosion occurred, flames shot into the air, and within three minutes, the *St. Croix* was gone. Eighty-one members of her crew remained on life rafts and Carley floats, clinging to whatever they could.

Two RN ships from the escort force, the *HMS Itchen* and the RN corvette *Polyanthus*, rushed to the area, to see what had taken place and what could be done. The frigate *HMS Itchen* signaled: “*St. Croix torpedoed and blown up. Forecastle still afloat. Survivors in rafts and boats. Torpedoes fired at me. Doing full speed in vicinity. Will not attempt to P.U. survivors until Polyanthus arrives.*” But the RN corvette *Polyanthus* was herself torpedoed by *U-952* just after midnight. It sank rapidly with the loss of all hands save one. *Itchen* then had to become involved in attempting to locate the attacking U-boat. Later, in the foggy daylight of September 21, the *Itchen* was eventually able to pick up one *Polyanthus* survivor and 81 *St. Croix* survivors, but only after they had been in the very cold water for thirteen hours. Most of those lost had perished in the sea after abandoning the ship.

The few hours of rescue came to an ironic and bitter end two days later. On September 23, 1943 at approximately 2:00 am, the German U-boat *U-666*, using a Gnat torpedo, struck the *HMS Itchen*. Apparently hit in its’ magazine, the *Itchen* exploded with an ear-splitting roar and a spectacular display of pyrotechnics and then

vanished into the sea. Only three men survived this time: two from the *Itchen* and one from the *St. Croix*, 23-year old Stoker William Allan Fisher of Black Diamond, Alberta. In total, 147 lives were lost from the *St. Croix*, including twenty-one year-old Joseph Bell.

Last known photograph of the *St. Croix* ship's company
St. John's, Newfoundland May 30, 1943

Toronto Daily Star October 1, 1943

In October 1943, the sole survivor of the *St. Croix*, Stoker William A. Fisher, told his story in a newspaper account. Following is a portion of his account:

We were part of an escort detailed to a large convoy. We received a signal that submarines were about. We stayed astern of the convoy, but on September 20, we had come up and take on oil from a tanker in the convoy. On our way back to our position we saw a Canadian four-motored Liberator signaling us. We were told that they spotted a submarine and dropped depth charges. We flashed two boilers and made for the spot at 24 knots. As we neared, we had to reduce speed. As we slowed up we were hit in the screws. Fisher said there was no panic and no one thought of abandoning ship. But in two minutes another torpedo struck, this time near the mess deck, and water began to pour in. The captain, Lieutenant Commander Dobson, then issued orders to abandon ship.

Some men were injured by the explosions which followed the torpedoes; some were burned and cut. They were put in the motor launch before it was lowered over the side. The motor boat pulled away. Meanwhile attempts were made to lower a 60-passenger oar-driven whaler... Carley floats were dumped over the side and the men began jumping into the water. *No one seemed worried then, many of the crew laughed that they would be due for 29 day survivors' leave.* The rowboat pulled away from the sinking destroyer, and picked men out of the water. *Even then I thought the ship would be saved. Then I saw the captain dive off the boat. I knew everyone was off then and that the captain had given up hope.*

Fisher was in charge of the motor boat. *No one in the boats died during the night. It was morning that everything happened. Men on the Carley floats insisted on getting into the rowboat. As the men got in, it settled lower in the water. Just before the rescue ship came along, it sank. The whaler did not have any injured men aboard. They were oil-grimed and cold. I saw men who were tough, big men. They hung out all night in the hope a boat would pick them up. Then when the boat did not come into view they died. I guess they couldn't hang out any longer. We dropped them into the sea.*

Sixty men were still alive on the whaler. The ship that headed to their rescue was the Royal Navy frigate *Itchen*, completed last September. As the frigate steamed through the lifting morning mist, the men in the whaler received the signal that the *Itchen* would come directly to their rescue. As the *Itchen* neared, a torpedo was seen to explode 30 yards to her stern. A message was flashed to the *Polyanthus*, a corvette of the Flower class, to come out of the convoy escort and circle the *Itchen* while the men were taken aboard. *The Polyanthus was just coming in and she was struck. I guess she went down in about 10 minutes. We rescued 10 men in our whaler. The Itchen headed for the convoy.... On September 2, two days after we were rescued, we were ordered to our action stations because submarines were around. We had three orders. The first started at 6 at night. There was another one at 7 and again at 9. At 9 o'clock I was standing beside the funnel when a torpedo struck. I was knocked 30 feet and landed against a gun platform. As I crawled toward the rail I kept yelling for my pal... He didn't answer and I jumped over the side. As I hit the water there was another explosion and I felt that my stomach was being squeezed through my ears. The water just cracked. When he reached down to tug off his boots, his left boot was missing. It had been blown off.*

Fisher grabbed a board and looked to see other men jumping from the ship. Most of them drowned. A Carley float drifted by and Fisher jumped on. During the night others jumped on, but most of them died.

In late September of 1943, Edith Bell in Sarnia would receive a cable from the Navy informing her that her son, JOE GRIFFITHS BELL, R.C.N., HAS BEEN REPORTED MISSING AT SEA. Father Lieut. J. Griff Bell, who was a member of the Royal Canadian Navy Volunteer Reserve, was away from home in Cornwallis when the news arrived in Sarnia. For parents Griff and Edith Bell, the last thing they knew was that Joe was aboard a destroyer. It was not until October 1, 1943 that the Honourable Angus L. MacDonald, the Minister of National Defence for Naval Services officially announced the sinking of the destroyer *St. Croix*. No details of the sinking were released, other than the list of names of 147 men who lost their lives. Included in the list were Surgeon-Lieutenant William Lyon MacKenzie King, nephew of the prime minister; Ordinary Telegraphist Robert Charles Rigby (a Sarnia-connection, and included in this Project); Stoker Second Class William Norman Roder of Arkona; and Sarnian Coder Joseph Griffiths Bell.

Joe's death was officially recorded as, *loss of H.M.C. ship, at sea*. The sinking of the *St. Croix* was the heaviest single loss suffered by the R.C.N. in the war. Within weeks of this incident, the Royal Navy and the Royal Canadian Navy began to equip their escorts with towed decoy devices to counter the homing torpedoes – the British used Foxer, and the Canadians utilized the simpler and lighter CAT gear – thus effectively neutralizing one of Germany's most important new innovations.

In early January of 1945, a morning service was held in Central United Church, Sarnia, to honour the memory of Coder Joseph Griffith Bell, lost at sea in September of 1943, and Private Melvin Fisher, killed in action in Italy in December of 1944 (included in this Project). Both men were members of the congregation. The Rev. E.W. Jewitt extended the sympathy of all the congregation to the bereaved parents, and voiced the hope for a just and enduring peace. In July 1945, parents Joe "Griff" and Edith Bell received a War Service Gratuity of \$189.85 for the loss of their only child in war.

Twenty-one-year-old Joseph Griffiths Bell has no known grave. His name is inscribed is on the Halifax Memorial, Nova Scotia, Canada, Panel 10. On the Sarnia cenotaph, his name is inscribed as J.C. Bell.

BERGER, Max (#A/56551)

Max Berger is one of five of Sarnia's fallen who has a street named for him. One of many Canadians killed in the vicious Battle of Hong Kong in 1941, Private Berger has no known grave.

He was born in Sarnia on November 6, 1919, the son of Morris and Regina Berger of 167 Davis St., Sarnia. The Bergers had two other children besides Max: a son, Joseph and a daughter, Laura. The patriarch, Morris, was born in Geszterid, Hungary around 1862 and he married Regina in Hungary in 1902.

The Bergers immigrated to New York in 1902 and then moved to Michigan. By 1914, they were residing at 167 Davis Street. Morris was a shoemaker by trade who operated out of his home. Max grew up in Sarnia and attended three years at Sarnia Collegiate and, as the Bergers were a Jewish family, was active in Canadian Young Judaea. After graduation, he worked for Maidment's Taxi, was later employed at St. Thomas as an electrician for six months, and worked as an assistant manager at a Toronto fish and chips shop for over two years. While serving as a Private with the Elgin Regiment Militia (from July 1940), Max, 21, decided to enlist. With the Elgins, he would receive training at #11 Militia Training Centre in Woodstock and then #1 District Depot in London, Ontario. Sadly, his mother, Regina, passed away before he enlisted in Windsor.

It was on March 26, 1941 that Berger enlisted in the Canadian Army. At that time, he stood five feet four inches tall, had brown eyes and dark brown hair, and was single. He recorded his occupation as an electrician who was residing at the family home on Davis Street. From the Army District Depot in Windsor, he would receive training at Canadian Army Training School (CATS) in Hamilton, where he was qualified as an electrician. In mid-October 1941, he was transferred to #2 District Depot in Toronto, becoming a member of the Royal Canadian Army Service Corps (RCASC), Headquarters "C" Force with the rank of Private.

Max's first overseas assignment was an important one. On October 27, 1941, he was part of a force of 1,975 Canadians who embarked from Vancouver, B.C. for Hong Kong to help defend the isolated Crown Colony. While on board the ship to Hong Kong, Max wrote a letter home in November 1941. It would be the last time the Bergers would hear from Max.

Private Max Berger

The size of the Canadian force signified the urgency of their mission. The Canadian Hong Kong force comprised two battalions: the Winnipeg Grenadiers and the Royal Rifles of Canada. It also included a brigade headquarters group and various specialist details (including a signal section, two medical officers, two nursing sisters and three chaplains). The Canadian force would be a part of 14,000 Allied troops (also from the United Kingdom, Hong Kong, China and India) who were tasked to defend the island of Hong Kong and the adjacent mainland areas.

It would be a difficult and almost impossible task for two reasons. First, the Canadian battalions had no battle experience when they arrived at Hong Kong on November 16, 1941. It was felt that the Canadian soldiers would have some time in Hong Kong to get more training. Instead, they became the first Canadian soldiers to fight as a unit in the Second World War when Japan attacked almost simultaneously Pearl Harbour, Northern Malaya, the Phillippines, Guam, Wake Island and Hong Kong.

The **Battle of Hong Kong** began when the Japanese attacked the Colony's mainland positions on December 8 (December 7 in North America), less than 8 hours after the attack on Pearl Harbour. The attack forced all Allied mainland troops to withdraw to the island. It was here that the first Canadian infantryman to die in World War II was killed. Private John Gray was captured and executed by the Japanese on December 13, 1941 in Hong Kong. On December 18, the Japanese crossed the one kilometer narrow passage from the mainland to the island of Hong Kong. The invasion force of battle-toughened troops was overwhelming in strength and backed with a heavy arsenal of artillery and air support. Heavily outnumbered, the Allied troops had no significant air or naval defence and had no hope of being relieved or resupplied. The Canadians performed valiantly and held out for as long as possible.

Max Berger spent the early part of the battle delivering supplies to frontline units with a dwindling pool of motor transport, including local taxis. When it became impossible to continue their supply activities, Max's unit became a part of an adhoc unit of Royal Canadian Army Service Corps. They then joined another scratch force comprising Royal Canadian Army Ordinance troops who were holding the north end of what was called the Ridge position. The Ridge position was the only link between the two main British positions and, if it were lost, the Allied formations would be split in two. The fighting for the position was fierce and, faced with overwhelming odds, the British forces tried to pull back on December 18th. It took them two tries and they succeeded the second time. Sometime between December 19th and 22nd, Private Max Berger and Corporal Albert Jackson of the Royal Canadian Army Service Corps were killed, along with Corporal G.G. Desroches, Staff Sergeant G. Jackman and Private F.C. McGuire of the Royal Canadian Army Ordinance troops.

On Christmas Day, 1941, after 17 ½ days of fighting, the British Colony was surrendered. Even before the battle had officially ended, Canadians would endure great hardships at the hands of their Japanese captors. On December 24, the Japanese overran a makeshift hospital in Hong Kong, assaulting and murdering nurses and bayoneting wounded Canadian soldiers in their beds. The fall of Hong Kong marked the end of the Canadian Army's first combat action in the Second World War, and was the only significant action in Canadian military history in which 100 percent losses were inflicted—not a man escaped either capture or a grave. The Canadian Army's

significant losses included: 290 dead and 493 wounded. Most of the Canadian survivors were held in prisoner of war camps either in Hong Kong or in Japan. Many of them died there; others endured almost four years of suffering until the end of the war. Of the 1,975 Canadians who sailed from Vancouver to Hong Kong, 557 were killed in battle or died in POW camps, and 493 were wounded, a casualty rate of more than 50%. Altogether, over 2000 men and women of the British Commonwealth died in the defence of Hong Kong.

Private Max Berger was not listed as *Missing in Action* until October 1942, and it was not until January 1943 that Max Berger was eventually recorded as, *Overseas casualty, killed in action, in the field (Hong Kong) between December 8th/25th, 1941*. The date of his death was later confirmed to have taken place and amended to December 19, 1941. His body was never recovered.

In mid-January 1943, Morris Berger on Davis Street in Sarnia, received the following letter from Army Lieutenant-Colonel F.W. Clarke, Department of National Defence in Ottawa:

Dear Mr Berger:

I wish to express to you my deep sympathy in the loss of your son A-56551 Pte. Max Berger who, as you have now been officially advised, has been killed in action. I know that you will derive some comfort from the fact that he laid down his life bravely for his country. You will already have received from National Defence Headquarters a pamphlet containing information regarding pension regulations, disposal of personal effects, and other matters. Please feel free to write to me if there is anything in connection with which you think I can be of any assistance to you.

In April 1946, widowed-father Morris Berger in Sarnia received a War Service Gratuity of \$124.91 for the loss of his son.

Twenty-two-year-old Max Berger is commemorated on the Sai Wan Memorial, Victoria, Hong Kong, China, Column 28. On this white granite memorial are inscribed the names of over 2,000 people, 228 of them Canadians, who died in Hong Kong and who have no known grave. Max Berger, one of the 290 Canadian soldiers killed during the defence of Hong Kong from December 8-December 25, 1941, has his name inscribed on this memorial. Max Berger's name is also inscribed on the Hong Kong Veterans Memorial Wall in Ottawa, Ontario. Unveiled in August 2009, the six-metre granite wall is etched with the names of the 1,975 Canadians who fought in the Battle of Hong Kong.

Max Berger and thirteen other local men had their names engraved on a plaque honouring fourteen Jewish members of the armed services from Sarnia. The plaque was unveiled in the Ahavas Isaac Synagogue, Davis Street, Sarnia on March 30, 1945. The men, all from Sarnia, honoured on the plaque were: M. Berger, S. Bernard, R. Heller, I. Haber, M. Kirk, Dr. I. Mann, A. Rosen, G. Shabsove, M. Skosov, Mitchell Smith, Murray Smith, L. Swartz, I.B. Zierler, Isaac Zierler. Three of the men--Max Berger, Mitchell Smith and Isaac Buck Zierler--made the supreme sacrifice. In 2008, the city honoured Max Berger further by naming Berger Drive in his memory.

BERRY, Charles Edward (#A/20681)

Charles Berry did not have to serve, but he wanted to because of a sense of duty. His epitaph still epitomizes his bravery and patriotism: OUR DEAR SON & BROTHER. HE LIES AMONG THE BRAVE. AT HIS COUNTRY'S CALL HIS LIFE HE GAVE.

He was born in London, Ontario on January 1, 1923, the son of Edward Lee and Mary Philip Berry. The family would move a few years later to Sarnia, residing at of 142 North Brock Street and then at 234 Queen Street, Sarnia. Charles' upbringing was unsettling at times. It began in February 1932 when his father, Edward, passed away when Charles was only nine. Mary then remarried but her second husband, Mr. Bailey, would also die (before Charles enlisted). The new union, however, meant some half-siblings from the Bailey family for Charles' brother, Lorne Kenneth, and his sisters, Elaine and Mildred. Their new family included three half-brothers and two half-sisters. At the time of Charles' death, Milton and Harold Bailey were both on active service overseas, and Wilfred Bailey was stationed at a training camp in Halifax, Nova Scotia. Charles' two half-sisters were Edith (became Edith Riley, Sarnia) and Winnifred (became Winnifred Anderson, Windsor).

Charles completed his formal education after grade eight when he left school at the age of fourteen. He enjoyed swimming and playing football. He then put his athleticism to good use in the work field for the next four years. Prior to enlisting, Charles was employed as a truck driver from 1938 - 40, hauling coal and moving furniture, earning \$18.00 per week. For the summers of 1940 and 1941, he worked as a sailor and deckhand on lake freighters

with the Toronto and Sarnia Elevator Company, earning \$22.00 per week.

On December 15, 1941 in London, Ontario, Charles Berry, 18, enlisted in the Canadian Army. He stood five feet eight and a half inches tall, had grey eyes and brown hair, and was single. He recorded his address as 142 N. Brock Street, his occupation as truck driver, and his reasons for joining the army were “a sense of duty and my brothers are in the army”. Like other recruits, Charles was soon on the move. He started at No. 1 District Depot in London, received Basic Training in Kitchener, and was then transferred to Royal Canadian Engineers Training Centre (RCETC) in Petawawa. His biggest move came on September 26, 1942, when Charles Berry would embark overseas from Halifax for the United Kingdom. He was 19 years old.

In November of 1942, his mother Mary in Sarnia received a cable from Charles informing her that he had arrived safely and was posted somewhere in England. Charles received further training as a member of the Canadian Engineer Reinforcement Unit (CERU), attached to the 8 Canadian Field Squadron, Royal Canadian Engineers. In early June 1944, Charles would embark from the U.K., arriving in France on June 9, 1944.

The **Battle of Normandy** had begun for the Canadians with the June 6, 1944 D-Day landings at Juno Beach. After breaching the “Atlantic Wall” of “Fortress Europe”, Allied armies began their break out from the narrow Normandy bridgehead to carve out a foothold on the French mainland. It would take a whole summer of tenacious fighting, pushing against fierce and ruthless German forces to advance east across France. In a brutal campaign of attrition, the Canadians faced fierce battles and vicious counterattacks as they clawed their way forward liberating villages and towns including Bretteville, Carpiquet, Caen and Falaise.

In July 1944, a month into the Normandy Campaign, he would become a member of the Royal Canadian Engineers, 6 Field Coy, with the rank of Sapper. After the Allied breakout from Normandy, Canadian forces were assigned the “**Long Left Flank**”, the less glamorous but vital tasks of clearing coastal areas in the north of France and Belgium of German occupiers; opening the English Channel ports for supplies essential to the Allied advance; and capturing the launching sites of German V-1 rockets. In a series of stop-and-start advances against stiff resistance in fortified positions, the Canadians liberated ports and villages including Rouen, Dieppe, Dunkirk, Boulogne and Calais.

As a member of the Royal Canadian Engineers (RCE), he was part of the troops that enabled the army to move—they repaired and built roads, airfields and bridges; cleared mines and road blocks; and filled in craters and anti-tank ditches, all while working alongside combat troops at the front and often under fire.

On September 22, 1944, Charles Berry would lose his life while fighting along the “long left flank” in France. In early October 1944, Mary Berry in Sarnia would receive the following telegram from the Director of Records in Ottawa: MINISTER OF NATIONAL DEFENCE REGRETS TO INFORM YOU THAT A20681 SAPPER CHARLES EDWARD BERRY HAS BEEN OFFICIALLY REPORTED KILLED IN ACTION TWENTYSECOND SEPTEMBER 1944 STOP IF ANY FURTHER INFORMATION BECOMES AVAILABLE IT WILL BE FORWARDED AS SOON AS RECEIVED.

In late October 1944, Mary, now residing on Queen Street, received the following letter from an Army Major-General, Adjutant-General:

Dear Mrs. Berry,

It was with deep regret that I learned of the death of your son, A20681 Sapper Charles Edward Berry, who gave his life in the Service of his Country in the Western European Theatre of War, on the 22nd day of September, 1944. From official information we have received, your son was killed in action against the enemy. You may be assured that any additional information received will be communicated to you without delay. The Minister of National Defence and the Members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

Charles Berry would later be officially recorded as, *Overseas casualty, killed in action, in the field (France)*. His remains were originally buried at a location recorded on the Army Field Service Card as “MR.672474 sheet 49 S.W. Buried in rear of Mde Duval-Grisette’s house on West side of road at Ecault France.” In December 1945, Mary would receive a letter from the Colonel, Director of Records, for Adjutant-General. Following is a portion of that letter:

Dear Madam,

Information has just been received from overseas that the remains of your son, A20681 Sapper Charles Edward Berry, have been carefully exhumed from the original place of internment and reverently reburied in grave

10, row D, plot 4, of Calais Canadian Military Cemetery, St. Inglevert, France. Marked map is enclosed. This is a recognized military burial ground and will receive care and maintenance in perpetuity.

The grave will have been marked with a temporary cross which will be replaced in due course by a permanent headstone suitably inscribed. While it cannot now be stated when this work of permanent commemoration will begin, before any action is taken you will be communicated with and an opportunity will be given you to submit a short personal inscription of your own choice for engraving on the headstone...

In July 1945, twice-widowed Mary Berry received a War Service Gratuity of \$475.83 for the loss of her son. Twenty year-old Charles Berry is buried in Calais Canadian War Cemetery, Leubringhen, France, Grave 4.D.10. On his headstone are inscribed the words, OUR DEAR SON & BROTHER. HE LIES AMONG THE BRAVE. AT HIS COUNTRY'S CALL HIS LIFE HE GAVE.

BIRKINSHAW, Frederick (#A/50051)

The easier choice for Frederick Birkinshaw would have been not to serve. At age 29, however, the father of three left his job, his wife and his young children to fight for the cause of freedom.

Frederick Birkinshaw was born in Nottingham, England on October 19, 1910, the only son of William and Lucy (nee Sands) Birkinshaw. William and Lucy, both born in Nottinghamshire, England, were married on February 2, 1907 at Holy Trinity Church in Nottinghamshire. At some point, William immigrated to Canada and came to reside in Sarnia where he was employed by Imperial Oil as a mason. He was one of the very first men to enlist--on August 15, 1914--eleven days after the United Kingdom including Canada declared war on Germany.

William Birkinshaw, born December 2, 1888 in Nottingham, England, enlisted in the Canadian Over-Seas Expeditionary Force in Sarnia on September 14, 1914 becoming a member of the 1st Battalion. The twenty-five-year-old married father stood five feet three-and-a-half inches tall, and had brown eyes and brown hair (the recruiter recorded William's age as 28). William recorded his address as 213 Tecumseh St., Sarnia; his next of kin as his wife Lucy in Nottingham, England; his trade or calling as lace trade (later Imperial Oil); and his prior military service of "7 years Territorials and Nott. and Derby Regiment and several months with the 27th Regiment St. Clair Borderers".

Eight days later, he underwent his medical examine in Valcartier, and one week later, on September 30, 1914, he embarked overseas bound for the United Kingdom. After just over four months of training in England, Private William Birkinshaw arrived in France on February 10, 1915 as a member of 18th Infantry Battalion. He would serve in France for 10 months.

Private William Birkinshaw

In early April 1915, the 1st Division of Canadians arrived at the Ypres salient battlefield in Belgium, an area traditionally referred to as Flanders. It was here that the Canadians engaged in their first battle of the war, the Second Battle of Ypres, their baptism by fire. It was during this battle that William was buried while in action. He survived the incident and remained on duty, but did not feel right.

In June 1915, he received medical attention at Etaples suffering with lumbago and rheumatism, and later became troubled with back pains. In mid-July, he was hospitalized at No. 20 General Hospital in Etaples due to myalgia, and was hospitalized twice more with the same condition. William remained in Reserve in France until he

was transferred on December 22, 1915 to the 36th Reserve Battalion at West Sandling in England.

In February 1916 at Shorncliffe, William was recorded as “suffering with myalgia, pains in back and legs since June 1915, approved for light duty for 2 months”. From March 18 to April 12, 1916, he was in Moore Barracks Casualty Hospital in Shorncliffe due to myalgia before being returned to duty. He was hospitalized again in early June at West Sandling and again in mid-September at Folkestone with the “disability myalgia”.

In March 1917, William was transferred to the 4th Reserve Battalion at Bramshott, and in January 1918 was posted to Western Ontario Regimental Depot (W.O.R.D.), returning to Canada in February 1918. In late May he returned to England, posted to the 4th Reserve Battalion at Camp Witley. One year later, in May 1919, he returned to Canada, and was discharged on June 5, 1919 in Quebec on demobilization.

The rest of the Birkinshaw family immigrated to Canada in June 1919, arriving at a Quebec port aboard the *Metagama* passenger ship from Liverpool, England. Frederick was eight years old at the time. The family initially settled at 275 Rose Street in Sarnia.

Besides Frederick, the Birkinshaw family comprised his older sister, Mae, and his two younger sisters, Margaret and Irene. After Lucy, their mother, passed away, William remarried on July 14, 1927. Frederick would also have two half-brothers, Donald and Edward Phillips, who both served in the Canadian Army.

Frederick received his education in Sarnia and left school at the age of fourteen. Between leaving school and finding work, Frederick, now 21, married a young lady named Margaret Elizabeth in Port Huron, Michigan on October 19, 1931. Frederick and Margaret would have four sons: Bruce Fredrick (b. January 18, 1932); William Henry (b. July 7, 1934); Charles Edward (b. September 24, 1937); and Frederick Clarence (b. December 1, 1942). Their youngest son was born when Frederick was overseas and he never had a chance to see him. Sadly, their infant Frederick Clarence died when he was just three and a half month old, on March 25, 1943.

At wartime, the family resided at 279 Shamrock Street and both parents worked to support their family. Margaret was an employee of Sarnia Refinery and a female delegate on the Joint Industrial Council for Sarnia Refinery for 1945. Frederick worked at Imperial Oil Limited for two years as a clay filter worker and painter.

Their lives changed when Frederick, now 29 and a father of three, enlisted in the Canadian Army. Enlisting in Chatham on August 11, 1940, he stood five feet five inches tall, had brown eyes and black hair, and he and his family were residing on Shamrock Street at the time. His army training kept him busy and on the move. He was taken on strength into the Kent Regiment, and received training with that Regiment in London, New Westminster (B.C.) and Windsor, Ontario. In April 1942, he was transferred to the Highland Light Infantry (H.L.I.) of Canada, R.C.I.C., posted in Windsor. On May 1, 1942, Private Frederick Birkinshaw of the H.L.I. made the biggest move of his life when he embarked overseas for the United Kingdom.

Private Frederick Birkinshaw

Once in the U.K., he became a member of the Canadian Division Infantry Reinforcement Unit (CDIRU), remaining with his unit, the Highland Light Infantry. He would continue his training in the U.K., advancing to the rank of Lance Corporal in August 1943. In mid-September 1943, he reverted to the rank of Private, at his request. All of this training was in preparation for one of the most historic battles in history. Private Frederick Birkinshaw would arrive with the Highland Light Infantry in France on June 6, 1944: **D-Day**.

The **Battle of Normandy** would begin for the Canadians with the D-Day landings at Juno Beach. After breaching the “Atlantic Wall” of “Fortress Europe”, Allied armies began their break out from the narrow Normandy

bridgehead to carve out a foothold on the French mainland. It would take a whole summer of tenacious fighting, pushing against fierce and ruthless German forces to advance east across France. In a brutal campaign of attrition, the Canadians faced fierce battles and vicious counterattacks as they clawed their way forward liberating villages and towns including Bretteville, Carpiquet, Caen and Falaise.

One month after the D-Day landings, on July 8, 1944, the father of three would lose his life, while fighting at Caen during the Battle of Normandy. Frederick's remains were originally buried on August 7, 1944, at a location recorded on the Army Field Service Card as "Buron France 98857245".

Frederick Birkinshaw and another Sarnian, Corporal Isaac Bell (included in this project), would both lose their lives on July 8, 1944 in France. In mid-July of 1944, Margaret in Sarnia would receive a telegram from the Director of Records in Ottawa with information about her husband stating that, PTE. BIRKINSHAW WAS KILLED IN ACTION ON JULY 8. FURTHER INFORMATION WILL BE FORWARDED WHEN RECEIVED. The telegram did not state where Pte. Birkinshaw was killed, but Frederick's father William had several letters from his son recently in which he intimated he participated in the D-Day invasion of France, and had been at Caen. At the end of July 1944, Margaret received the following letter from an Army Major-General, Adjutant-General:

Dear Mrs. Birkinshaw,

It was with deep regret that I learned of the death of your husband A50051 Private Frederick Birkinshaw who gave his life in the Service of his Country in France, on the 8th day of July, 1944. From official information we have received, your husband was killed in action against the enemy. You may be assured that any additional information received will be communicated to you without delay.

The Minister of National Defence and the Members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

Frederick Birkinshaw was later officially recorded as, *Overseas casualty, killed in action, in the field (France)*. He was survived by his father William, his wife Margaret and their three sons, Bruce (age 12), William (age 10) and Charles (age 7), along with his two half-brothers--Donald and Edward Phillips--and his three sisters: Mae (Mrs. Archie McDonald of Pontiac, Michigan), Margaret (Mrs. Margaret McDonald of Shamrock Street, Sarnia) and Irene (Mrs. Irene Cooper of Rose Street, Sarnia). William Birkinshaw, patriarch of the family and Great War veteran, passed away in February 1959 and is buried in Lakeview Cemetery in Sarnia.

In June 1945, Margaret Birkinshaw received a War Service Gratuity of \$676.67 for the loss of her husband Frederick. In August 1947, the Director of Records would send her a photograph of the grave and the marker over the burial place in Bretteville-Sur-Laize, France, of her late husband. Margaret would later reside at 524 South Christina Street, Sarnia. Thirty-three-year-old Frederick Birkinshaw is buried in Bretteville-Sur-Laize War Cemetery, Calvados, France, Grave XXVI.H.7. His name is also inscribed on the Sarnia Refinery Plaque. Unveiled in 1949, the plaque has the names of 24 Sarnia Imperial Oil employees who made the ultimate sacrifice in World War II. BORCHARDT, Hugo Hysert (#J/21171)

A young father to two children, Hugo Borchardt, 30, was killed in action two months before the war ended. The words on his headstone capture the essence of Flying Officer Borchardt: HE DID WHAT HE COULD.

He was born in Kitchener (then named Berlin) on September 25, 1913, the only son of Maximilian Paul and Mary (Mae) Almera (nee Hysert, born in Toronto) Borchardt. Max (born in New Stettin, Germany) immigrated to Canada in 1906 and four years later, on April 19, 1910, married Mae in Kitchener. In 1916, the Borchardts moved to Sarnia, and would reside at 257 Emma Street where Max supported the family by working as a stone carver and a cutter.

Max and Mae were blessed with four children: three daughters--Ruth Eleanor (born 1912), Clara Louise (born 1916) and Frieda Marie (born 1919)—and one son, Hugo. Hugo attended Central United Church and was educated at Devine Street Public elementary school from 1920-1927. Sarnia Collegiate provided him a high school education for four years and Hugo kept himself busy before he graduated in June 1931. He took technical courses in electrical, drafting, machine shop auto mechanics and woodworking, and was a member of the gymnastics team.

Hugo's hobbies were landscape oil painting and amateur radio, but work took much of his time. It seems as if he was always on the move, earning money in a variety of jobs. His work ran the gamut from being a deck hand with Canada Steamship Lines and Morse Steamship Company to being a mechanic with Electric Auto Lite and with

Collingwood Ship Yard. He was also hired as a painter with Kellogg Construction, with C.D. Shand and with H.A. Miller in Sarnia. If that weren't enough, he spent time as a steel rigger for six months with Superior Steel Products.

During these busy years, a young lady from Sarnia caught his fancy. Violet Constance Mary Shand was her name and on March 6, 1936, at age 23, Hugo married Violet (the daughter of Mr. and Mrs. William C.D. Shand of 203 North Vidal Street) at St. George's Church in Sarnia. Hugo and Violet Borchardt resided initially at Oakwood Corners (now the corner of Colborne Road and Lakeshore Road) and later 356 ½ Nelson Street. In the next few years, Violet gave birth to a daughter, Marilyn Dianne (born July 24, 1937) and a son, Hugo Sergei Junior (born January 1943).

On November 21, 1941 in London, Ontario, Hugo Borchardt, age 28, enlisted in the Royal Canadian Air Force. He stood five feet seven inches tall and had hazel eyes and dark brown hair. The married father of one (at the time) expressed his ambition to be a pilot. Like every other serviceman, Hugo was soon on the move, drawing farther and farther away from his family. From #2 Manning Depot in Brandon, Manitoba, he would first receive air training at Service Flying Training Schools (SFTS) in Penhold and Calgary. Next up was #2 Initial Training School (ITS) and Elementary Flying Training School (EFTS) in Regina before he attended Composite Training School (KTS) in Trenton, Ontario. He then trained at #4 Bombing and Gunnery School (BGS) in Fingal, close to St. Thomas, before he was transferred to Quebec. After attending #8 Air Observer School (AOS) in Ancienne, he was awarded his Air Observers Badge and commission as a Pilot Officer on November 20, 1942. Following his graduation and a seven-day leave, he instructed at Mountainview and Mossbank, Saskatchewan. In late January 1943, Hugo would spend a 10-day furlough with his wife and two young children on Nelson Street before returning to his duty as an instructor at Mossbank Bombing and Gunnery School.

F/O-BA Hugo Borchardt

Hugo Borchardt with his children Marilyn and Hugo Jr.

A significant change in Hugo's life included with moving to Sarnia, marrying Violet, and being a father to two young children, was going overseas to fight. On a Saturday evening in early August 1943, Bob Powers and his wife hosted a farewell party at their home in Sarnia to honour Hugo before he went overseas. Around 30 friends gathered to wish him good luck during an evening of dancing and singing. Bob Powers offered a toast to the guest of honour and Archie Reeves, after an appropriate speech, presented Hugo with a black leather Gladstone bag. The evening was brought to a close with the singing of "He's a Jolly Good Fellow," and "Auld Lang Syne."

Hugo Borchardt embarked overseas for the United Kingdom in late August 1943. He initially continued his operational training in England. He then went on operations with the RAF #90 Squadron. He was flying on Lancaster bombers from this squadron's base at Tuddenham, Bury-St.Edmunds, Suffolk, England. As a member of RAF #90 Squadron "Celer" (Swift), part of **Bomber Command**, he attained the rank of Flying Officer Bomb Aimer in December of 1943.

During the course of the war, one of this country's most significant contributions was the approximately

50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

No. 90 Squadron was reformed from previous incarnations in May 1941 at RAF Watton, equipped with the American B-17 Flying Fortress tasked with carrying out daylight missions. The squadron was disbanded in February 1942. The squadron was reformed in November 1942, as a night bomber squadron, part of No. 3 Group at RAF Bottesford, equipped with Short Stirlings. By June 1944, the squadron was equipped with Avro Lancasters, the British four-engined heavy bomber.

Hugo had been in the U.K. less than a year when he was killed in action on his twelfth mission over enemy territory. On July 21, 1944, he was a member of the crew of Lancaster Mk. 1 aircraft LM183 (markings WP-L) that took off from Tuddenham on a night operation targeting the Meerbeck oil plant in Homburg, Germany. Hugo's Lancaster was part of a group of 149 Lancasters and eleven Mosquitoes taking part in the operation. German night fighters caught the Lancasters by surprise and twenty were lost in this raid, including two from #90 Squadron. Borchardts' LM183 aircraft crashed near Boxtel (Noord-Brabant), in the southern part of the Netherlands. Perishing with RCAF Flying Officer-Bomb Aimer Hugo Borchardt were RAF members Sgt.s Spencer Christopher Butcher, Jeremiah Francis Dineen, Harry Richard Hunnisett; WO. James William Butterworth; F/L Philip John Rossington and F/O Harold Francis Sargent Best (RCAF). The remains of the crew members were buried in Woensel Cemetery, Eindhoven.

In late July 1944, Violet received a telegram from Ottawa that informed her that her husband, FLYING OFFICER HUGO BORCHARDT HAS BEEN REPORTED MISSING WHILE ON OPERATIONAL DUTIES OVERSEAS. Days later Violet received this letter from the Wing Commander of No. 90 Squadron, RAF Station, Tuddenham, Suffolk.

Dear Mrs. Borchardt,

It is with the deepest regret that I have to confirm the notification that you will have already received that your husband, Flying Officer Hugo Hysert Borchardt, is missing from air operations on the night of 20/21st July, 1944. Your husband was detailed to carry out an important raid against the enemy, and his aircraft failed to return. No word has been received from the aircraft up to the time of writing, and any further information received will be immediately communicated to you.

I do not wish to raise false hopes, but there is every possibility that your husband is either a prisoner of war, or else is attempting to escape from enemy territory. The International Red Cross Society will immediately notify you in the event of any definite news from the enemy. Your husband will be a great loss to the Squadron, where he always carried out his duties in a conscientious and exemplary manner, and on behalf of myself and all members of the Squadron, I would like to offer you our sincere sympathy.

At a time like this words can be of little avail, but if there is anything I can do to help you, do not hesitate to write to me, for I will do anything within my power.

Approximately 7 months later, in late February 1945, Violet received another telegram informing her that her husband Hugo Borchardt was now officially presumed dead. Days later, she received a letter from the R.C.A.F. Casualty Officer, for Chief of the Air Staff in Ottawa.

Dear Mrs. Borchardt:

Confirming my telegram of recent date, I regret to inform you that advice has been received from the International Red Cross Committee at Geneva concerning your husband, Flying Officer Hugo Hysert Borchardt, previously reported missing on Active Service. The report quotes German information which states that your husband lost his life on July 21st, 1944, but does not contain any further particulars. The International Red Cross Committee is making every effort to obtain the location of your husband's grave. However, I feel sure you will appreciate the difficulties attendant upon securing additional details.

Since this information originates from enemy sources it is necessary for the present to consider your husband "missing believed killed" until confirmed by further evidence, and in the absence of such evidence his death may be presumed for official purposes when the lapse of time has shown that unhappily there is no reasonable doubt that your husband has lost his life. May I assure you and the members of your family of my deepest sympathy.

Approximately two months after Violet received the above letter, VE Day was declared, marking the end of war in Europe.

Two months after VE Day, in late July 1945, Violet received another letter from the R.C.A.F. Casualty Officer, for Chief of the Air Staff in Ottawa. Following is a portion of that letter:

Dear Mrs. Borchardt:

Further to my letter dated February 22nd, 1945, concerning your husband, Flying Officer Hugo Hysert Borchardt, a further report has now been received from Overseas. This report advises that the aircraft of which your husband was a member of the crew was shot down on July 21st, 1944, and that he was buried in the General Cemetery at Eindhoven-Woensel, Section KK, together with the remainder of his crew. Eindhoven-Woensel is located one mile north of Eindhoven, Holland.

Now that Air Ministry has presumed your husband's death for official purposes his personal effects, monies, etc. will shortly be forwarded to the Director of Estates... who will distribute them in accordance with his wishes as expressed in his Will. Please be assured that if at any time in the future further word concerning your husband is received you will be advised immediately.

I sincerely hope that you can find consolation in the fact that your husband risked his life willingly in the defense of freedom. What we all owe to him is beyond estimation. May you be fortified by the spirit of courage and hope which enabled him to discharge his duties whatever the cost.

Hugo Borchardt was later officially recorded as, *Previously reported missing after air operations, now for official purposes, presumed dead, overseas (Germany)*. He left behind his wife, Violet, and their two children, Marilyn, age 7, and Hugo Junior, age 1 1/2. In August 1945, Violet Borchardt received a War Service Gratuity of \$460.84 for the loss of her husband. Hugo was also survived by his three sisters who at the time were: Ruth Eleanor Windover, residing in Petrolia; Clara Louise Karr, residing on Kathleen Ave.; and Frieda Marie Powers, residing on Cromwell St. in Sarnia.

In January 1947, Hugo's mother Mae would receive her only son's Operational Wings from the Wing Commander for Chief of the Air Staff. Accompanying the Wings was this letter:

Dear Mrs. Borchardt:

It is a privilege to have the opportunity of sending you the Operational Wings and Certificate in recognition of the gallant services rendered by your son, Flying Officer H.H. Borchardt. I realize there is little which may be said or done to lessen your sorrow, but it is my hope that these "Wings", indicative of operations against the enemy, will be a treasured memento of a young life offered on the altar of freedom in defence of his Home and Country.

In October 1947, the RAF Missing Research and Enquiry Unit released their report on the investigation and findings of four of the graves they exhumed in Woensel Cemetery in May 1947 of the crew of Lancaster LM183. A portion of their findings included the following information: *Grave 102 – no means of identification; Grave 103 – In this grave were found Sergeant's Chevrons and an electrically heated flying glove... Since Engineers did not wear electrically heated flying gloves, this grave contains SGT. HUNNISETT; Grave 104 – An A/B Brevet showed that this grave holds F/O BORCHARDT; Grave 105 – No means of identification...*

Thirty year-old Hugo Borchardt is buried in Eindhoven (Woensel) Cemetery, Netherlands, Plot KK. Grave 103. On his headstone are inscribed the words, HE DID WHAT HE COULD.

BRAKEMAN, Jesse Clemence (#R/68117)

Jesse ("Clem") Brakeman, an only child, would enlist right after graduating high school, leaving behind his widowed mother. He would lose his life serving as a proud member of one of Canada's greatest contributions to the Allied efforts.

Jesse was born in Toronto on August 7, 1920. He was the only child of the Jesse Clair and Rose Adelle Brakeman of 175 Penrose St., Sarnia. His father, born in Franklin, Pennsylvania, passed away when Jesse was only three years old. Jesse's mother Rose, born in Exmouth, Devon, England, immigrated to Canada in 1909. Rose was a secretary at the local yard office of the Canadian National Railways, where she was to work for 40 years. Jesse's grandmother, Mrs. Harriet A. Clemens, resided at 175 Penrose St., Sarnia.

Jesse received his education at Lochiel Street Public School, 1926-1933, and Sarnia Collegiate Institute beginning 1934 and graduating in 1940. He was active in football, baseball, hockey and lacrosse, and his hobbies included model aircraft building and music. He was a member of St. George's Church, Charlotte Street, Sarnia, and worked part time for five years for the Windsor Daily Star, Sarnia Bureau.

Nineteen year-old Jesse (Clem) Brakeman enlisted in the Royal Canadian Air Force on June 26, 1940 in London, Ontario. He stood five feet eight and a half inches tall, had blue eyes and red hair, and was single. He recorded his occupation as student, and lived at home with his mother on Penrose Street at the time of his enlistment. His request was to be an Air Gunner or Air Observer. After being posted to #1 Manning Depot in Toronto, Jesse would receive his air training at #1 Initial Training School (ITS) in Toronto, #1 Air Observer School (AOS) in Malton, and #1 Bombing and Gunnery School (BGS) in Jarvis. He was awarded his Air Gunner's Badge on December 15, 1940, before being posted to RCAF Station Rockliffe in Ottawa in late December 1940. In early February 1941, he was transferred to Eastern Air Command (EAC) in Halifax.

Sgt.-AG Jesse Clemence Brakeman

Jesse would embark overseas for the United Kingdom on February 15, 1941. Upon arrival, he cabled his mother Rose in Sarnia, telling her that he had arrived safely, and he was feeling fine. In the U.K., he was initially posted to #20 Operational Training Unit (OTU) for further training. On May 31, 1941, Jesse became a member of the RAF #214 (Federated Malay States) Squadron "Ultor In Umbris" (Avenging in the Shadows), part of **Bomber Command**, with the rank of Sergeant-Air Gunner. By July 1941, he had shot down his first German plane.

During the war, one of Canada's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

No. 214 Squadron disbanded after World War I and was resurrected in 1935. In April 1937 the squadron was based at RAF Feltwell, and in May 1939 began being equipped with Vickers Wellington Mark I's—a British twin-engined, long-range medium bomber. The squadron's first offensive operations were in June 1940, while based at RAF Stradishall. In September 1941 the squadron was adopted by the British Malay Federation and had their name incorporated into its title. Serving in No. 3 Group, the squadron flew many missions against naval and industrial targets in Fortress Europe, and took part in mine laying operations. Over the course of the war, the squadron moved to various bases and converted from Wellingtons to Short Stirling and B-17 Flying Fortress II bombers.

Just over a year after he enlisted, on September 3, 1941, Jesse Brakeman's Wellington Mark IC aircraft R1717 (markings BU-) was lost during a bombing operation over enemy territory. The Wellington took off from Stradishall on a night operation to Frankfurt, Germany. It was presumed to have crashed in the sea off the French coast. Perishing with Sergeant-Air Gunner Jesse Brakeman were FS. James Patrick McKay (RCAF); Sgt.s Lionel Black (RAF), Leslie Whitehouse Price (RAF), and Clifford Hambleton (RAF); and F/L. Reginald Hubert May (RAF).

On September 4th, widowed Rose Brakeman received a telegram from the R.C.A.F. Headquarters in Ottawa, informing her that her only son, SERGEANT-PILOT JESSE CLEMENS BRAKEMAN WAS REPORTED MISSING AS THE RESULT OF AN AIR OPERATION OVERSEAS RECENTLY. There were no further details

concerning the air operations, so the *Canadian Observer* reported that, “the fact that he was designated as missing held out some hope that he might have been forced down over Nazi-held countries in Western Europe or made an escape in some other manner.” The telegram from Ottawa was a severe shock to Rose, particularly because word that he had shot down his first German plane in July had just recently arrived home.

In late June 1942, a “Notification of Death” was issued by the Flight Lieutenant, for Director of Personal Services, Air Ministry, in London, England. It stated: *CERTIFIED that according to the records of this department CAN/R68117 Sergeant Clemence Jesse BRAKEMAN, Royal Canadian Air Force, was reported missing and for official purposes to have lost his life on the third day of September, 1941, as the result of air operations. Information received through the International Red Cross states that this airman is buried in the Municipal Cemetery, Dunkirk, France.* Twenty-one-year-old Jesse Brakeman was buried in the Dunkirk Town Cemetery, Nord, France, Plot 2 Row 2 Grave 20. On his headstone are inscribed the words, GOD BE MERCIFUL TO MY SON. REUNITE HIS SOUL WITH THOSE OF HIS DAD AND HIS PALS. MOTHER.

BROWN, George William (#J/12195)

George William Brown and his mother had already endured enough tragedy in their lives when George enlisted as a teenager. He would end up giving his life for the Allied cause, serving in Bomber Command, as did many other Canadians.

He was born in Moose Jaw, Saskatchewan on September 24, 1921, the son of George Morton and Bathia (nee Riddle) Brown, of Sarnia. Both of his parents were originally from Scotland, George from Edinburgh and Bathia from Aberdeenshire. They were married on June 8, 1914 in Moose Jaw, Saskatchewan. Bathia gave birth to a baby boy in October 1915, but tragically, it died at only nine days old on October 13, 1915. Born in 1921, George William Brown would be their only child. More tragedy hit the Brown family on November 1, 1927 when father George Sr., a hotel clerk, died at the age of forty-six, in Moose Jaw. George William was only six years old at the time. George attended Alexandria elementary school, 1926-1935, and Central Collegiate, 1935-1937, both in Moose Jaw, Saskatchewan. Mother Bathia and her only son would come to Sarnia when George William was approximately sixteen years old. They lived at 333 Wellington Street.

After George arrived in Sarnia, he attended Sarnia Collegiate from September 1937 until June 1940. He was active in swimming, hockey and baseball. After graduating, George was employed for a short time in 1940 with the Canadian National Railway Freight Office in Sarnia as a relief clerk. He then worked with T.E. Pressey Transport in Sarnia as a truck driver for nine months until he enlisted. In a reference letter written by the head of Pressey Transport (Christina Street) on behalf of George’s application for the Air Force, the transport head wrote: ... *We wish to advise that this man has been with us approximately one year, having come to us from the Sarnia Collegiate and Technical School. We find him to be an able worker, honest and morally above reproach. He is an experienced motor vehicle operator, and his education is of the best. We regret losing a man of his caliber but trust same will be temporary.*

Nineteen year-old George William Brown enlisted in the Royal Canadian Air Force on June 23, 1941 in London, Ontario. He stood five feet nine and a half inches tall, had blue eyes and brown hair, was single, and lived with his mother Bathia at 333 Wellington Street. He recorded his occupation as truck driver. His preference was to be a Pilot or Observer, and his ambition for after the war was to stay with the Air Force in commercial aviation. From #1 Manning Depot in Toronto, he would receive his air training at #6 Initial Training School (ITS) in Toronto, #20 Elementary Flying Training School (EFTS) in Oshawa and #6 Service Flying Training School (SFTS) in Dunnville. He was awarded his Pilot’s Flying Badge on June 19, 1942, then continued his training at Central Flying School in Trenton. He was transferred to #8 Service Flying Training School (SFTS) in Moncton, New Brunswick where he was a flying instructor, and then posted to #36 Operational Training Unit (OTU) in Greenwood, Nova Scotia.

In late April 1944, George Brown would embark overseas for the United Kingdom, where he would be attached to 13 Operational Training Unit (OTU), RAF Colerne. On August 21, 1944, George would become a member of R.N.Z.A.F #487 New Zealand Squadron “Ki Te Mutunga” (Through to the End), part of **Bomber Command**, with the rank of Flight Lieutenant, Flying Officer-Pilot.

During the course of the war, one of this country’s most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel.

The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

F/L-Pilot George William Brown

RNZAF #487 was formed as a day bomber unit in August 1942 at RAF Feltwell, Norfolk. Initially equipped with the Lockheed Ventura, a twin-engine medium bomber, they were crewed by Royal New Zealand Air Force pilots. In August 1943, the squadron, based at RAF Sculthorpe, Norfolk, began to re-equip with de Havilland Mosquito aircraft—a twin-engine, shoulder-winged light bomber. With a crew of two, the Mosquito served a variety of roles: tactical and night bomber; day or night fighter; maritime strike aircraft; photo reconnaissance; and pathfinder operations. The Mosquito was unusual in that its frame was constructed almost entirely of wood, so was nicknamed “The Wooden Wonder” or “Mossie” to its crews.

On September 17, 1944, George’s Mosquito aircraft MS979 crashed after take-off from #487 base, then at RAF Thorney Island, en-route to Holland. Approximately one week later, Mrs. Bathia Brown in Sarnia would receive a telegram informing her that her son, FLIGHT-LIEUTENANT GEORGE WILLIAM BROWN HAS BEEN REPORTED MISSING AFTER AIR OPERATIONS OVERSEAS ON SEPTEMBER 16. One week after the incident, the Wing Commander of No. 487 Squadron, R.A.F. Station Thorney Island, wrote the following letter to Georges’ mother:

Dear Mrs. Brown,

It is with deep regret that I have to write to you on this sad occasion, about your son George. I am afraid I have very little I can tell you as we have no idea what happened to him or his aircraft. The Squadron was operating over Holland on the night of the 16th September. We never received anything from George on the wireless from the time he took off, nor did any of the other aircraft see him.

I have every hope that he was able to reach our lines and get out in his parachute, in which case it is doubtful if we would hear anything before about a fortnight. In case he came down in the water both he and his navigator Flying Officer Fuller, as well as the aircraft were equipped with rubber dinghies and rations for several days, so they might easily have been picked up and now be a prisoner of war. He may have landed on the enemy side of the line. I am afraid it will be quite a long time before the Red Cross will hear anything. However don’t give up all hope as a number of the people who are listed as missing turn up in the end.

The Service has lost an excellent Officer and Pilot in your son, and we have lost a good friend. The whole Squadron join me in sending you our very deepest sympathy for your great loss.

Approximately eleven months later, Bathia Brown still waited for information about the fate of her only child. In a letter to the Secretary, Department of National Defence for Air she wrote: *I will now confirm that I have had no news nor evidence concerning him since he was reported missing on Sept 16, 1944. I thank you for informing me that the Research & Inquiry Service are investigating into the fate of all missing Air force personnel & I will be glad to hear from you if any trace of my son is secured however small.*

In a Post Presumption Memorandum dated August 1946, the file information records: *LOST AT SEA – The body of the navigator of this crew was washed up from the sea. No news has been received of F/Lt. Brown so it is now assumed that he perished with the aircraft at sea.*

In early December 1946, Bathia was still searching for information about her son. In another letter to the Department of National Defence for Air she wrote: *I am writing you regarding my deceased son, F/L George William Brown J-12195 reported killed in action Sept 17, 1944. He went out his last flight in a light aircraft plane, along with him was his navigator Roy Fuller (RAF). Their mission being finding enemy movements by road and rail in Holland. It has come to my knowledge that when the British forces went into Holland, the inhabitants of South Beveland, an island off the Dutch coast, told them they had found Roy Fuller's body & had buried him in the church cemetery at Driewegan... & gave them his identity cards & discs. Other things found on his person were sent to his mother, who identified them as her son's who was flying with George that night. I'm sorry to trouble you after all this time but I'm asking you if you could find out if there was ever any trace of George found because where his navigator was, he would be. I hope to hear from you at your convenience.* Yours truly, Bathia Brown

In December 1946, Bathia received the following letter from the RCAF Casualty Officer, for Chief of the Air Staff in Ottawa:

Dear Mrs. Brown:

In reply to your letter I regret that although no further information has been received concerning your son, Flight Lieutenant George William Brown, it is felt that you would be desirous of knowing that investigations have been carried out by the Royal Air Force Missing Research and Inquiry Services on the Continent into the loss of you son and his aircraft.

The lack of news of your son after so long a period and the fact that his Navigator, Flying Officer Roy Allan Fuller, was recovered from the sea and buried in the Driewetan Baarland (Church Cemetery) South Beveland, Holland undoubtedly leaves no doubt that the aircraft crashed into the sea. The possibility, therefore, of obtaining further news seems very remote.

You may rest assured that should any further information come to hand you will be informed immediately. Please accept my sincere sympathy with you in your sad loss and in the anxiety you have suffered.

George Brown was later officially recorded as, *Previously reported missing after air operations, now for official purposes, presumed dead, overseas (England)*. In late January 1947, Bathia received the following letter from the Wing Commander for Chief of the Air Staff:

Dear Mrs. Brown:

It is a privilege to have the opportunity of sending you the Operational Wings and Certificate in recognition of the gallant services rendered by your son, Flight Lieutenant, G.W. Brown. I realize there is little which may be said or done to lessen your sorrow, but it is my hope that these "Wings", indicative of operations against the enemy, will be a treasured memento of a young life offered on the altar of freedom in defence of his Home and Country.

Twenty-three-year-old George Brown has no known grave. His name is inscribed on the Runnymede War Memorial, Panel 244.

BROWN, Paul Albert (#N3119)

Paul Albert Brown was eager to serve, enlisting as a seventeen year-old before war was declared. He would lose his life in what would turn out to be the longest and deadliest battles of the war and to what British Prime Minister Winston Churchill said was "... the only thing that ever really frightened me during the war..."

Paul was born in Domville, Ontario, near Prescott, on July 8, 1920. He was the son of Albert Glen (of Domville, Ontario) and Ada Helena (nee Anderson) Brown. Albert and Ada Brown were married in Ontario on November 15, 1916. Paul had one brother, Charles Russell (who would serve with the RCAF), and two sisters: Jean Anderson and Eleanor Louise. When Paul was eight years old, he would lose his father Albert who passed away on March 12, 1928 at the age of forty-one. Mother Ada Brown and family would move to Sarnia some time after Albert's death and live at 225 Maria Street. Paul would reside in Sarnia for approximately eleven years, and he attended Johnston Memorial Public School and Sarnia Collegiate. During his school days, he used to spend his spare time on farms. He was also active in Central United Church Century Young Men's Sunday school for many years. He would work on a farm only one summer before leaving high school in November 1937 to volunteer to serve in the navy.

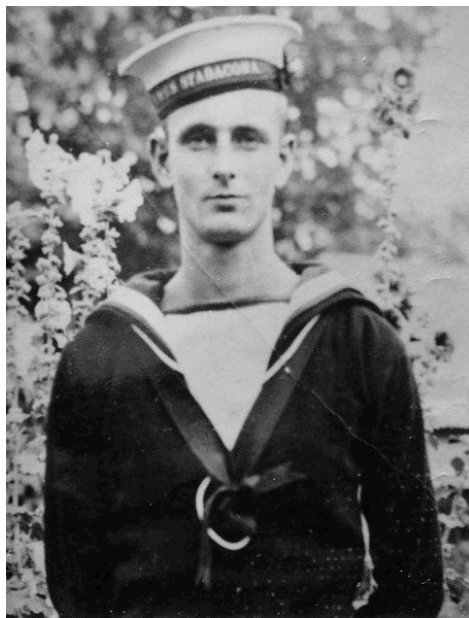

One of the reference letters obtained by Paul Brown for his application to enter the Navy was from Ross W. Gray, Member of Parliament for Lambton West. In his January 1938 letter to the Naval Secretary, Department of National Defence in Ottawa, Ross Gray wrote in a letter with House of Commons letterhead:

Dear Sir:

This is to certify that I have known Paul A. Brown for the past twelve years. He is anxious to join the Naval Service. His application will show his educational ability and I desire only to say that in my opinion he would make an excellent applicant as he is a good, clean young man of excellent habits and character.

Paul Brown would complete his formal "Application for Entry in the Royal Canadian Navy" on January 8, 1938. Because Paul was under the age of 18 when he enlisted, a Consent Paper was required with a parent's signature, which his widowed mother Ada provided, dated January 25, 1938 in Sarnia. Ada, a Sarnia school teacher, would pass away two and a half years later on August 14, 1940 in Sarnia General Hospital at the age of forty-six. Approximately four months after her death, Paul Brown would lose his life while serving in the Navy.

On April 7, 1938, at the age of seventeen years and nine months, Paul Brown would officially become a member of the Royal Canadian Navy. He stood six feet tall, had blue eyes and brown hair, and was single. He lived with his widowed mother Ada on Maria Street in Sarnia at the time. He was first stationed at *HMCS Stadacona* training barracks in Halifax, with the rank of Boy Seaman. He was guard of honour for our King George VI and Queen Elizabeth during their cross-Canada visit and happened to be on the same ship as Their Majesties. In October 1938, Ordinary Seaman Paul Brown received his elementary training on *HMCS Venture*, a training ship that was similar to the *Bluenose*. On February 11, 1939, he was posted on the *HMCS Skeena* where he advanced to the rank of Able Seaman. Seven months later, on September 10, 1939, Canada would declare war on Germany. Paul Brown would be posted to *HMCS Stadacona* in Halifax on October 21, 1939. On November 26, 1939, Able Seaman Paul Brown became a member of the *HMCS Saguenay*, serving as a pom-pom gunner. In letters received by his relatives, Paul had said that he had been "all over the world."

Able Seaman Paul Albert Brown

River Class Destroyer *HMCS Saguenay* D79

Beginning on the opening day of the Second World War, the **Battle of the Atlantic** would be the longest continuous campaign of the war, and one in which Canada played a central role. The Royal Canadian Navy, along with the Royal Canadian Air Force (RCAF) and Canada's Merchant Navy, played a vital role in defending the country's eastern coast and escorting convoys of ships carrying men and essential machinery, arms, fuel and basic resources between North America and Europe.

The *HMCS Saguenay* (D 79) was an A-Class Destroyer commissioned for service in the Royal Canadian Navy in 1931. The *Saguenay* was the first warship ever to be custom built for the Royal Canadian Navy. In the early morning hours of December 1, 1940, the *HMCS Saguenay* was part of a group escorting a convoy about 300 nautical miles west of Ireland. Travelling at twelve knots and in a zigzagging pattern, she noticed a flare shot up from the dark sea that had been fired by a U-boat moving in to attack the rear of the convoy. The *Saguenay* increased her speed and made for the position of the flare. At approximately 3:50 am, the submarine was sighted half a mile distant. Almost simultaneously, a torpedo struck the *Saguenay*. The torpedo had been fired by the Italian submarine *Argo*. The *Saguenay* bow was blown off, and flames broke out and raced through the ship. The *Argo* surfaced again, circling to

get in a second shot. Able Seaman Clifford McNaught demonstrated the kind of courage indicative of the remaining crew. Clifford was suffering from painful burns to his face, and his hands were horribly mangled. He nevertheless dashed forward to assist the short-handed gun crew by passing shells to them. The *Saguenay* crew were able to fend off the *Argo*. The British destroyer *Highlander* arrived within an hour or so to find the *Saguenay* limping slowly forward. Ninety men were transferred to the *Highlander* to reduce casualties in case of another torpedo attack. Throughout the night and most of the next day, a skeleton crew remained on board the *Saguenay* continuing to fight the fires.

By noon of the next day, the *Saguenay*, “the ship that would not sink” had managed to limp to the British port Barrow-in-Furness on one engine. The ship would be out of service for six months. A total of 21 of the *HMCS Saguenay* crew lost their lives in the U-boat attack, and another 18 were wounded. Two of the lost crew members were from Sarnia. Paul Brown was reported missing and presumed killed in action in the damaging of the destroyer *Saguenay*. Paul Brown was later officially recorded as, *Death due to enemy action, at sea*. Also on board the ship was Able Seaman Hector Le Gare of Sarnia, who was also killed in the attack. His name is also inscribed on the Sarnia cenotaph and his story is included in this Project. Paul Brown and Hector Le Gare were the second and third casualties from Sarnia to lose their lives in the Second World War.

At the time of Paul’s death, his siblings were: Charles Russell Brown (with the RCAF, stationed at Moncton, N.B.); Jean Anderson (nee. Brown) Knight (a school teacher in Sault Ste. Marie, Ontario); and Eleanor Louise Brown (later Eleanor Hutchinson, of 230 North Vidal St., Sarnia, and later Toronto, Ontario). Approximately one week prior to the attack, Paul’s sister, Miss Jean (Brown) Knight in Sault Ste. Marie, had received a letter from him, but it was so rigorously censored that she could not derive much information from it. Paul’s brother, Charles Russell Brown, had been corresponding with Paul, and the two brothers had hopes of spending Christmas together in Halifax. One week after the attack, Paul’s sister, Miss Eleanor Brown in Sarnia, would receive a telegram from the Minister of National Defence for Naval Affairs, informing her that Paul was missing. At an assembly at Sarnia Collegiate, principal F.C. Asbury announced the loss of the two former students, Hector Le Gare and Paul Brown, which was followed by a period of silence in respect to the memory of the two Canadian sailors.

Paul Brown’s brother, Corporal Charles Russell Brown of the R.C.A.F, who was posted in Moncton New Brunswick at the time, received the following letter from the Naval Secretary in mid-December 1940:

Dear Sir:

It is with very deep regret that I confirm the telegram of the 9th December from the Minister of National Defence for Naval Services that your brother, Paul A. Brown, Able Seaman, R.C.N., O.N. 3119, is reported to be missing from H.M.C.S. “SAGUENAY”, believed killed in action following damage to this vessel by a torpedo on the 1st December, 1940.

Please allow me, therefore, to express sincere sympathy with you in your sad loss on behalf of the Chief of the Naval Staff and the Officers and men of the Royal Canadian Navy, the high traditions of which your brother has helped to maintain.

Paul Brown was the first member of the Central Century Club to pay the Supreme Sacrifice. In mid-December 1940, he was honoured at a service at Central United Church. The pastor of the church, Rev. E.W. Jewitt paid tribute by saying, “These young men who are giving their lives are giving them to preserve the freedom and liberty of us all.” In August 1945, Paul’s siblings: Charles Russell, Jean and Eleanor would receive and share the War Service Gratuity of \$256.77 for the loss of their brother. Twenty year-old Paul Brown has no known grave. His name is inscribed on the Halifax Memorial, Nova Scotia, Panel 4.

BRUNETTE, Jack

Jack (Junior) Brunette was an athletic, intelligent university student exhibiting leadership qualities when he enlisted to serve. He would lose his life in the largest single day parachute drop of the war.

Jack was born in Windsor, Ontario on November 20, 1922, the son of John (Jack) and Emma Mae (nee Payne) Brunette. Father John (Jack) Brunette (born Feb. 6, 1897 in Ottawa) married Emma Mae (born Oct. 12, 1902 in London, Ontario) in Windsor, Ontario on September 2, 1922. John (Jack) was an Army Captain with the Stormont Dundas and Glengarry Highlanders, stationed in Ottawa. The family lived at 112 Lisgar Street, Ottawa. Jack (Junior) was a graduate of Cornwall Collegiate Institute (1937-41), where he was active in football, hockey, lacrosse, baseball, hunting and fishing. After graduating high school, Jack attended Western University (studying Chemistry)

in London, Ontario. He had worked during summer holidays on farms, in a clothing store and driving truck. Prior to volunteering to serve overseas, Jack had been a member of the Reserve, the 2nd Battalion of the Stormont, Dundas and Glengarry Highlanders (August 15, 1940-May 1, 1942), and then the Western Canadian Officers Training Corps (May 1, 1942-December 21, 1942). The Commanding Officers comments about Jack Brunette included: *Excellent education, appearance and power of expression and personality... Energetic, sincere about his work, very good qualities of leadership, above average material.* After attending Western University for four months, Jack volunteered to serve.

Jack Brunette, Western University 1943

The twenty year-old student enlisted in the Canadian Army on January 15, 1943 in Kingston, Ontario. He stood five feet ten and a half inches tall, had grey eyes and light brown hair, and was single. He lived at 305 Cheapside Street, London, Ontario at the time. His plan for after the war was to return to his studies at Western University. Jack would receive his army training at Kingston (#3 District Depot); Brockville (Officers Training Corps, advancing to 2nd Lieutenant in April 1943); Camp Borden (Canadian Infantry Training Centre, advanced to 1st Lieutenant in May 1943); Winnipeg (#10 District Depot); Camp Shilo, Manitoba (Canadian Infantry Training Centre; and Canadian Parachute Training Centre, where he became qualified as a parachutist in November 1943); and Vernon, British Columbia (completing a Demolition Course at Canadian School of Infantry).

Lieutenant Jack Brunette would embark overseas for the United Kingdom on April 10, 1944, attached to the Canadian General Reinforcement Unit (CGRU), a member of the 1st Canadian Parachute Battalion, R.C.I.C.. He would continue training in the U.K. until December 1944, when he would embark from the U.K., arriving in Belgium on December 26, 1944. The Battle of the Scheldt had ended in mid-November 1944, so over the winter of 1944-1945, most of the weary Canadian troops were stationed along the **Nijmegen sector** in the Netherlands. They were given a rest, although the front was never quiet, with patrols and large-scale raids remaining constant, during one of the most frigid winters on record in northern Europe. The Germans did their best to push the Canadians out of “the island” by flooding the area and constantly harassing them with mortar fire, artillery and aggressive patrols. Jack Brunette would see action in the Dutch-Belgium area until late-February 1945, when he would return to the U.K..

In February 1945, the Allies launched a great offensive, the **Battle of the Rhineland** that was designed to drive the Germans eastward back over the Rhine River. There would be two formidable thrusts: one by the Ninth U.S Army; and one by the First Canadian Army, strengthened by the addition of Allied formations. The resilient Germans had spent months improving their defences; winter rains and thaw had turned the ground into a thick, muddy quagmire and the enemy would fight fiercely to defend their home soil. During one month of fighting, the Canadians would succeed in clearing the Reichswald Forest, in breaking the Siegfried Line and in clearing the Hochwald Forest. But victory came at a high cost.

The final stage of the Rhineland Offensive was the crossing of the Rhine River itself. The actions started on March 23, 1945 with the crossing near Wesel (*Operation Plunder*), which was one of several coordinated Rhine crossings. In support of the crossing, 14,000 paratroopers were dropped behind enemy lines (*Operation Varsity*) in the largest airborne operation performed in a single day. Led by British and US divisions, a million soldiers from

three countries participated in crossing the Rhine, including the 9th Canadian Infantry Brigade and the 1st Canadian Parachute Battalion. Though the Germans were vastly outnumbered and outgunned, they put up a fierce resistance. The operations were a success, and with the Allies crossing the Rhine, the days of the Third Reich were numbered.

On March 24, 1945, Lieutenant Jack Brunette would emplane in the U.K. and was parachuted into Germany, during *Operation Varsity* of the Battle of the Rhineland. He was part of the 14,000 paratroopers who were dropped behind enemy lines in support of the crossing of the Rhine. On the day he parachuted into Germany, Jack Brunette would lose his life during fighting there.

Only one and a half months after Jack's death, the war in Europe would end. He was later officially recorded as, *Overseas casualty, killed in action, in the field (Germany)*. At the time of Jack's death, his mother Emma's address was recorded as changed from Lisgar Street, Ottawa to 322 ½ Durand Street, Sarnia. Jack Brunette's remains were buried at a location recorded on the Army Field Service Card as "Temp Burial ground adjoining Communal Cem. sh Q1 1/100000 158,471 P1RC G6". His remains would later be carefully exhumed and reburied in Groesbeek Cemetery. Twenty-two-year-old Jack Brunette is buried in Groesbeek Canadian War Cemetery, Netherlands, Grave XXII.C.2. On his headstone are inscribed the words, I HAVE FOUGHT A GOOD FIGHT, I HAVE FINISHED MY COURSE, I HAVE KEPT THE FAITH. II TIM. IV.7.

BRYDGES, Thomas Edwin (#A/28400)

Thomas Brydges, along with three of his brothers, would serve his country bravely in the liberation of France, Belgium and Holland. Thomas was described by his comrades as a "faithful diligent member of the crew" and "the best gunner in our troop".

Thomas Edwin Brydges was born in Sarnia on January 2, 1918, the eldest son of Thomas Bertie and Elizabeth (nee Beebe) Brydges, of Eureka Street, Petrolia. Parents Thomas Bertie (born in Camlachie) and Elizabeth were married in Sarnia on March 21, 1917. Thomas and Elizabeth were blessed with twelve children together: daughters Frances Dorothy (born 1919, died 1933); Kathleen Pearl (born 1922); and Blanche Elizabeth (born 1931); and nine sons: Thomas Edwin; Alvin Bertie (born 1921); Arthur Beebe (born 1924); Charles Vincent (born 1925); Allen Ross (born 1927); James Ralph (born 1928); Eldon Wesley (born 1933); John Dalton (born 1936); and Lorne Elmer (born 1939). Father, Thomas Bertie, supported his large family working at the Mueller Plant in Sarnia. Over a number of years, the Brydges family lived in Sarnia, Camlachie, Enniskillen Township and Petrolia.

Thomas did not attend high school, leaving school at the age of thirteen. This was common at the time, especially in large families where everyone did what they could to help support the family. Thomas was the first of the Brydges boys to enlist and when he did, he was working both as a farmer and as a driver, employed by Ernie Kells, Oil Producer.

Twenty-three-year-old Thomas Edwin Brydges enlisted in the Canadian Army in London, Ontario on January 7, 1941. He stood six feet one and a half inches tall, had brown eyes and brown hair, and was single. He lived in Petrolia with his parents at the time. His plan for after the war was to become an electrician. From #1 District Depot in London, Thomas received his army training at the Royal Canadian Artillery Training Centre in Woodstock, attaining the rank of Gunner, before returning to #1 District Depot, London in mid-March 1941. On April 8, 1941, he embarked overseas bound for the United Kingdom.

In the U.K., Thomas initially was attached to the Canadian Artillery Holding Unit (CAHU) where he continued his training. In mid-June 1941, he became a member of the Royal Canadian Artillery (RCA), 4th Field Regiment, with the rank of Gunner. He remained in the U.K. with the 4th Field Regiment for approximately three years, and in January 1943 he received a Good Conduct Badge.

In early July 1944, Thomas departed from the U.K., arriving in France on July 7, 1944, during the **Battle of Normandy**. The Battle had begun for the Canadians with the June 6, 1944 D-Day landings at Juno Beach. After breaching the "Atlantic Wall" of "Fortress Europe", Allied armies began their break out from the narrow Normandy bridgehead to carve out a foothold on the French mainland. It would take a whole summer of tenacious fighting, pushing against fierce and ruthless German forces to advance east across France. In a brutal campaign of attrition, the Canadians faced fierce battles and vicious counterattacks as they clawed their way forward liberating villages and towns including Bretteville, Carpiquet, Caen and Falaise.

After the Allied breakout from Normandy, Canadian forces were assigned the "**Long Left Flank**", the less

glamorous but vital tasks of clearing coastal areas in the north of France and Belgium of German occupiers; opening the English Channel ports for supplies essential to the Allied advance; and capturing the launching sites of German V-1 rockets. In a series of stop-and-start advances against stiff resistance in fortified positions, the Canadians liberated ports and villages including Rouen, Dieppe, Dunkirk, Boulogne and Calais.

In early September 1944, Allied forces had captured the inland port of Antwerp, Belgium, the second greatest port in Europe at the mouth of the Scheldt River. However, German forces still controlled the 45-mile-long Scheldt estuary (the Belgian-Dutch border area) that connected the port of Antwerp to the North Sea. The Canadians were entrusted with liberating the estuary. The **Battle of the Scheldt** was among the most difficult and grueling struggles in the war. The bitter fighting against a well-fortified and heavily entrenched enemy, took place in a bleak environment made worse by the winter cold in a flooded and freezing muddy quagmire.

Having arrived in France in July 1944, Thomas Brydges of the 4th Field Regiment, RCA, would be with the Canadian troops as they advanced across Normandy, the "Long Left Flank", and the Scheldt, through France and Belgium, toward the Netherlands. Years earlier, in May 1940, the Netherlands, despite its declaration of neutrality, had been invaded by the German blitzkrieg and put under Nazi control. It lead to five years of suffering for the Dutch people.

In March 1945, the 1st Canadian Corps (who had been fighting in Italy) joined their comrades of the 2nd Canadian Corps (who had fought through France, Belgium, and Germany). For the first time in history, two Canadian Army corps would fight together. The two Canadian Corps were tasked with the **Liberation of the Netherlands**, on two fronts— northeastern Holland and northern Germany, and Western Holland. Grateful residents greeted the Canadians as heroes as they liberated towns and cities. It was never easy. The freedom fighters faced destroyed roads, bridges and dykes; experienced days of fierce clashes against a resilient, sometimes fanatical enemy; and engaged in house-to-house fighting. Many Canadians were killed in the Liberation.

Three of Thomas' brothers also served with the Canadian Army, and all four of the Brydges boys would serve in Holland. After Thomas enlisted in January 1941, his brother Alvin Bertie was the next to enlist, followed by Arthur Beebe and then Charles Vincent. In early March 1945, Thomas' brothers were: Private Alvin Brydges, who had been overseas for about two years; Private Arthur Brydges, who had been overseas for one year (both Alvin and Arthur were with field ambulance units); and Private Charles Vincent Brydges, who had enlisted in April 1944, and arrived overseas early in 1945, serving in the infantry with the Lincoln and Welland Regiment at only eighteen years of age. In January 1944, Thomas would spend a short leave together with his brother Alvin in Scotland. In late February 1945, he and his brother Arthur met in Holland and were able to spend a short time together. Only weeks later, Thomas would lose his life. His three brothers were all serving overseas in Holland at the time of Thomas' death.

Gunner Thomas Edwin Brydges had been overseas for almost four years when, on March 12, 1945, he would lose his life while fighting in Holland, during the Liberation of the Netherlands. Thomas Brydges' remains were buried at a location recorded on the Army Field Service Card as "Nijmegen Holland Cdn Mil Temp Cem".

In late March 1945, Thomas and Elizabeth Brydges in Petrolia received a telegram from the Director of Records in Ottawa informing them that their son, GUNNER EDWIN BRYDGES WAS KILLED IN ACTION IN HOLLAND OR BELGIUM RECENTLY. In April 1945, his mother received the following letter from an Army Major-General, Adjutant-General:

Dear Mrs. Brydges:

It was with deep regret that I learned of the death of your son, A28400 Gunner Thomas Edwin Brydges, who gave his life in the Service of his Country in the Western European Theatre of War on the 12th day of March, 1945.

From official information we have received, your son was killed in action against the enemy. You may be assured that any additional information received will be communicated to you without delay.

The Minister of National Defence and the Members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

In late May 1945, Elizabeth received the following letter from the Colonel, Director of Records, for Adjutant-General:

Dear Madam:

Information has now been received from the overseas military authorities that your son, A28400 Gunner Thomas Edwin Brydges, was buried with religious rites in a temporary grave located at a point approximately three miles South-West of Nijmegen, Holland.

The grave will have been temporarily marked with a wooden cross for identification purposes and in due course the remains will be reverently exhumed and removed to a recognized military burial ground when the concentration of graves in the area takes place. On this being completed the new location will be advised to you, but for obvious reasons it will likely take approximately one year before this information is received.

Thomas Brydges was later officially recorded as, *Overseas casualty, killed in action, in the field (Holland)*. In mid-April of 1945, his parents would receive high tributes to the worth of their son Thomas, both as a man and as a soldier in letters of sympathy from his padre, Capt. A. Marshall Laverty, 4th Field Regiment, RCA, and his friend, T.S.M. Urie, Watford, of the same battery. The padre's letter stated that Thomas was killed instantly on March 12th in the Reichwald Forest, Germany, when he encountered a mine. He was a "*faithful diligent member of the crew,*" the padre stated, and the funeral service was attended by the second in command, the acting battery Commander, and a great number of his friends. He added that the burial took place at Nejmegen, Holland, temporarily and it was expected that the Canadian dead would later be concentrated in a permanent cemetery. In expressing his great loss in the passing of Thomas Brydges, T.S.M. Urie stated he knew "Slim" better than anyone in the battery. "*He was on my gun crew for over three years and I can safely say he was the best gunner in our troop.*"

In late 1945, Elizabeth Brydges, who was then residing at 292 Confederation Street, Sarnia, received a War Service Gratuity of \$863.55 for the loss of her son. In November 1947, Elizabeth would receive from the Director, War Service Records, a photograph of the grave and marker over the burial place in Nijmegen Cemetery in Holland, of her late son Thomas Edwin Brydges. For the remainder of their lives, Thomas' parents and his siblings rarely spoke about their beloved Thomas Edwin—the pain of his loss was too difficult to reminisce.

Twenty-seven-year-old Thomas Edwin Brydges is buried in Groesbeek Canadian War Cemetery, Netherlands, Grave IV.A.2. On his headstone are inscribed the words, NOBLY HE FELL WHILE FIGHTING FOR LIBERTY. Thomas Brydges' name is also inscribed on the Petrolia cenotaph in the Town of Petrolia. In November 2019, his name along with 25 others was added to the Sarnia cenotaph, engraved in stone to be remembered always.

Thomas' brother Charles Vincent Brydges also served in the Canadian army, as a Private with the Lincoln and Welland Regiment. In the spring of 1945, twenty year-old Vincent Brydges was wounded in action at the front lines in Holland. He was taken prisoner of war but it was not for long. With the Allied forces pressing the retreating Germans, Vincent was released and left behind by the enemy as they fell back. A wounded Vincent was picked up by the advancing Allies and was returned to England with other repatriated prisoners before being shipped back home to Canada.

In mid-April 1945, approximately one month after Thomas' death, Thomas Sr. and Elizabeth in Petrolia received a telegram informing them that their 20-year old son, PRIVATE CHARLES VINCENT BRYDGES HAS BEEN LISTED AS MISSING IN ACTION IN WESTERN EUROPE. The same day that Thomas and Elizabeth received the telegram, Vincent walked in the front door of their home. About one month later, they received a telegram informing them that Charles Vincent was now safe in England. The war in Europe would end on May 8, 1945.

BUCHNER, William Hiram (#A/4526)

When William (Bill) Buchner enlisted at age 18, he hoped to make serving in the Canadian Army a lifelong career. He never got the chance. Within two years, he was killed on Christmas Eve in The Battle of Ortona.

He was born in Montrose Township, Ontario on May 4, 1923, the son of Warren Hiram (born Welland, Ontario) and Ruth Edith (nee Booth) Buchner. Parents Warren and Ruth Buchner were married in Chippewa, Ontario on September 17, 1923. In 1932, when Bill was only nine years old, his father Warren passed away. Ruth Buchner remarried a Mr. Smith and the family resided at 108 South Mitton Street and later 142 1/2 North Victoria Street. Bill's family expanded with his mother's second marriage. Already a brother to Robert Elmer, Harold (born 1930) and Virginia Lumley, Bill now had a half-brother, Peter Huffman, and a half-sister, Dorothy Kemp.

His education was brief, typical of the time. Growing up in Sarnia, Bill attended Wellington Street Public School and played softball in the school league. He would leave school after completing grade eight at age fifteen and, before enlisting, worked as a labourer on a farm, for a junk dealer, in a factory and as a rigger at a grain elevator.

From 1940 – 1942, he was a labourer at Canadian Carborundum in Niagara Falls.

Now 18, Buchner enlisted in the Canadian Army on January 10, 1942 in London, Ontario. He stood five feet ten inches tall, had grey eyes and brown hair, and was single. He resided at home with his mother at 225 Cromwell Street, at the time. For Bill, his enlisting was the first step to a permanent job. His ambition post-war was to remain in the Army.

Six months later he left Canada to fight. From #1 District Depot in London, in this half year, Bill received his army training at #10 Basic Training Centre in Kitchener and the Infantry Training Centre at Borden. On June 2, 1942, as a Private with the RCR reinforcements, he would embark overseas for the United Kingdom, where he would be attached to the Canadian Infantry Reinforcement Unit (CIRU).

After further training in the U.K., on June 13, 1943, Private Buchner would embark from the U.K., arriving in **Sicily** in early July 1943 with the Royal Canadian Regiment (RCR). The **Italian Campaign**, the first sustained Canadian Army operation of the War, began with the invasion of Sicily on July 10, 1943. The fierce fighting on the island would last more than four weeks, during which the Canadians would advance through difficult mountainous terrain, against an ever-stiffening German resistance. By August 17, the Germans had evacuated the island to the Italian mainland. In early September, Canadian and Allied forces would invade **Italy**. Though Italy surrendered shortly after, the occupying Germans made it clear their fight was not over. Liberating Italy would be a painstaking northward crawl, lasting 20 months, over a range of landscapes, through challenging weather, and against a series of well-protected defences held by some of the German army's best troops.

The Canadian Army smashed the Axis defences in the Battle of Sicily and then moved on to fight them on the road to Rome. In an October 1943 letter home to his mother, Bill had little to say about the engagements he had been through, but did describe the Italian country as “pretty” and that “the weather is sure hot over here”. Also in October 1943, Bill was hospitalized for just over a week dealing with a case of malaria.

Sadly, on Christmas Eve 1943, Bill Buchner was killed in action during the **Battle of Ortona**. The battle to capture the town of Ortona was a bitter and costly affair. Ortona was situated strategically on a high ridge that was impregnable from three sides. The battle to capture it was the first episode of urban combat (city fighting) in the Italian theatre. The Canadians were victorious but in that week of fierce fighting during the Christmas season, they incurred 2,330 casualties, including 1,372 killed. One of the fallen was Private Bill Buchner. His remains were buried five days later on December 29, 1943 at a location recorded on the Army Field Service Card as “Lanciano Sh 141/2 R. side of road MR316154 Gr 8”. His remains would later be exhumed and reburied in Moro River Canadian War Cemetery.

In early January 1944, Ruth in Sarnia would receive a telegram from the Director of Records in Ottawa, informing her that her son, PRIVATE WILLIAM HIRAM BUCHNER WAS KILLED IN ACTION ON DECEMBER 24 WHILE FIGHTING IN ITALY. The telegram said that further information would be forwarded when available. In February 1944, Ruth Edith Smith, then residing at Victoria Street, received the following letter from a Major-General, Adjutant-General:

Dear Mrs. Smith:

It was with deep regret that I learned of the passing of your son, A.4526 Private William Hiram Buchner, who gave his life in the Service of his Country in the Mediterranean Theatre of War on the 24th day of December 1943.

From official information we have received, your son was killed in action against the enemy. You may be assured that any additional information received will be communicated to you without delay. The Minister of National Defence and the members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

William Buchner was later officially recorded as, *Overseas casualty, killed in action, in the field (Italy)*. In July 1945, Ruth Smith received a War Service Gratuity of \$331.37 for the loss of her son William. Twenty year-old William Buchner is buried in Moro River Canadian War Cemetery, Italy, Grave VII.D.15.

BURKE, Carl Victor (#B/74572)

Married and the father of a five year old, Carl Burke was killed in the Invasion of Sicily. His family's grief is evident on his epitaph: IN LOVING MEMORY OF ONE WHO WILL NOT BE FORGOTTEN BY HIS WIFE AND DAUGHTER.

He was born in Cobalt in Nipissing County, Ontario on February 28, 1913, the only son of Clarence Herman and Margaret (nee Malloy) Burke, of Timmins, Ontario. Parents Clarence and Margaret Burke were married on November 21, 1912 in Haileybury, Ontario. The young couple knew tragedy after they were married. Two of their daughters died young: Dorothy May at age 15 in 1934; and Margaret Kathleen at age 11 in 1936. Carl had two sisters, Rita Adeline (Guidolin) and Thelma Irene (Worth), who resided in Timmins, but the loss of their two daughters must have been devastating to the parents.

Significant changes were occurring in Carl's life after completing grade 11 in Timmins. He met Rita Maria St. Jean of Sarnia, whom he married on March 8, 1935 in Timmins. Carl and Rita Burke would reside at 18 Southern Avenue and later 257 Birch South Street in Timmins. Carl began working as a dairyman for a while; however, like his father, he worked in the mines and from 1937 -1939, he was a miner-drill operator with Hollinger Mines in Timmins. Getting married and finding a steady job prepared Carl for perhaps the biggest change in his life to date: Rita gave birth to a daughter, Leda Dorothy. As it turns out, Leda was their only child.

Carl's life changed again when he enlisted in the Canadian Army in Timmins on June 28, 1940. The newest member of the Central Ontario Regiment, Canadian Active Service Force, Algonquin Regiment was twenty-seven years old, stood five feet nine inches tall, and had hazel eyes and brown hair. He recorded his occupations as dairyman and miner-drill operator, was residing on Birch Street in Timmins at the time.

After receiving his army training in Toronto and the Infantry Advanced Training Centre (IATC) at Camp Borden, Burke would embark overseas for the United Kingdom on October 5, 1941. He would continue his training as part of the Canadian Infantry Holding Unit (CIHU), then the Canadian Infantry Reinforcement Unit (CIRU). In late December 1941, he became a member of the 48th Highlanders of Canada, R.C.I.C., with the rank of Private.

After many months of battle training in England, on June 15, 1943, Private Burke was among the Canadians who were issued new weapons before departing the U.K. for Algiers. Ninety-two ships left Britain in two convoys, one fast, one slow. The men did not know where they were going, but the fact that they had traded their Canadian-built Ram tanks for American Sherman tanks (the standard battle tanks used by both the British and Americans in North Africa) must have given them a clue. On their voyage, three ships in the slow convoy were lost to U-boats. Carl Burke would arrive on the southern tip of **Sicily** as part of a huge Allied invasion force on July 10, 1943.

The **Italian Campaign**, the first sustained Canadian Army operation of the War, began with the invasion of Sicily on July 10. Code-named *Operation Husky*, the multinational invasion force was made up of British, American, Canadian and French personnel, commanded by General Dwight D. Eisenhower. It was the largest armada ever assembled to date. They would need it, for Sicily posed several challenges for the invaders.

Sicily was a mountainous island and, for the Italian and German forces there, the interior was a defensive planner's dream. For the Canadians, as they marched up Sicily island's dusty mountainous winding roads, in scorching temperatures above 40 degrees Celsius, their designated route had them fated to run into major concentrations of German troops offering stiff resistance, while holding the high ground in a series of lines. The fierce fighting on the island would last more than four weeks, and by August 17, the Germans had evacuated the island to the Italian mainland. In early September, Canadian and Allied forces would invade Italy. Though Italy surrendered shortly after, the occupying Germans made it clear their fight was not over. Liberating Italy would be a painstaking northward crawl lasting 20 months.

Carl Burke would not be alive long enough to see the taking of Sicily. As the Canadians trudged inland up the steep and twisting roads, the Germans were waiting for them. The married father of one would lose his life on July 23, 1943, only two weeks after arriving in Sicily. He died from gun shot wounds inflicted the previous day. Carl Burke's remains were buried on July 23 at a location recorded on the Army Service Field Card as "150 yds West of Scuoli Elementary School, near orchard, Valguarnera, Sicily Sh.55, MR 3577". His remains would later be exhumed and reburied in Agira War Cemetery in Sicily.

On August 10, 1943, Rita, now living at 228 Davis Street in Sarnia, would receive the following telegram from the Director of Records in Ottawa: REGRET DEEPLY B74572 PRIVATE CARL VICTOR BURKE NOW

OFFICIALLY REPORTED DIED TWENTYTHIRD JULY 1943 AS RESULT OF WOUNDS RECEIVED IN ACTION STOP FURTHER INFORMATION FOLLOWS WHEN RECEIVED.

Private Carl Burke was later officially recorded as, *Overseas casualty, died of wounds received in action, in the field (Sicily)*. At the time of his death, Carl left behind Rita and Leda, now five. At the time, Leda was living with her maternal grandmother, Eugene St. Jean, at 307 Exmouth Street as Rita was completing a business course and found it necessary to board her out temporarily.

In February 1945, Rita Burke received a War Service Gratuity of \$472.39 for the loss of her husband Carl. Later, Rita would remarry, becoming Rita Stewart, and residing at 286 St. Vincent Street in Sarnia.

In August 1948, five years after their only son's death, Clarence and Margaret Burke were still waiting to receive a photograph of Carl's grave. In a letter written to the Department of National Defence, Clarence Burke wrote:

Dear Sir's,

I wrote the Imperial War Graves Commission in England for a photograph of my sons grave CV Burke in Agira Canadian Cemetery Sicily. On July 23rd 1946 two photographs was taken of his grave and forwarded on to Canadian Headquarters to be forwarded to his next of kin and as I or his mother has not recd a photograph, I would like to know if there is a chance of ever getting one.

It is not known if the Burkes ever received a photograph. Thirty year-old Carl Burke is buried in Agira War Cemetery, Sicily, Grave D, B, 401. On his headstone are inscribed the words, IN LOVING MEMORY OF ONE WHO WILL NOT BE FORGOTTEN BY HIS WIFE AND DAUGHTER.

BURKE, David Warnock (J/86415)

The Halifax Bomber that David Burke was flying on a bombing mission in 1944 has never been located. Nor have authorities found the remains of its seven crew members. Flying Officer Burke's name is inscribed on the Runnymede War Memorial in Surrey.

David Warnock Burke was born in Sarnia on October 12, 1918, the only son of Captain David Wilson Burke and his wife Ethel Ellen of 145 North Euphemia Street. Parents David Wilson and Ethel Burke were married in Penetanguishene, Ontario on December 31, 1912. The Burke family also included two daughters, Dora Warnock and Marion Wilson Burke, who were both residing in Hamilton at the time of David's death.

David was educated at a Sarnia public elementary school and then Sarnia Collegiate High School from September 1933 to June 1937. He was a member of the Central Century Club and had played hockey for the Club. While in high school, he played junior and senior WOSSA rugby and City League hockey. He was also fond of swimming and skating. His interests extended beyond athletics. After graduating from a technical program (electricity) at Sarnia Collegiate, he attended the Radio College of Canada in Toronto. Here, he took the Commercial Operating Course for six months. While at school in Toronto, David became very interested in amateur radio, and he also took some flying lessons. Following his studies, he received an Amateur Radio Certificate and was employed as a radio operator by Trans-Canada Air Lines in Winnipeg for seven months. When he decided to enlist in the second year of the war, it was a natural fit for Burke, 21, to eventually join the Air Force.

David Burke enlisted in the Royal Canadian Air Force in London, Ontario on February 21, 1940. He stood five feet nine and a half inches tall, had hazel eyes and dark brown hair, and was single. He recorded his occupation as wireless and electrical mechanic, and was living at the family home at 145 North Euphemia Street. His training, not surprisingly, was quite extensive. He received training in wireless and then served as an instructor at No. 1 Wireless School Montreal and No. 3 Wireless School in Winnipeg. In February 1942, he switched his focus and was successful in his application to re-muster as a pilot. He would receive air training at #2 Initial Training School (ITS) in Regina and #2 Elementary Flying Training School (EFTS) in Fort William (flying Tiger Moth's and Harvard's).

David made an excellent impression on his commanding officer at #2EFTS. In one report, he wrote of Burke: *A capable, dependable airman who has done well and who has cooperated well in assisting as instructor of signals. He is quiet, self-confident and determined to succeed. He has the bearing and ability along with the experience to make a good officer.* David would continue his training at #2 Service Flying Training School (SFTS) at Uplands, where he was awarded his Pilot Flying Badge on December 18, 1942.

Nearly a year after enlisting, Burke embarked overseas from Halifax for the United Kingdom on January 15,

1943. He would continue his training in England and Scotland at #9 Elementary Flight Training School (EFTS) and #14 Advanced Flying Unit (AFU). He would then serve with #20 Operational Training Unit (OTU) and #1658 Heavy Conversion Unit (HCU), making a number of trips over Germany in Halifax bombers. On February 12, 1944, David would become a member of RAF #640 Squadron, part of **Bomber Command**, with the rank of Pilot Officer-Pilot.

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

RAF #640 Squadron was formed at RAF Leconfield, Yorkshire on January 7, 1944. It was equipped with Handley Page Halifax Mk III bombers, and operated as part of No. 4 Group in Bomber Command. In March 1945, the squadron re-equipped with Halifax VI bombers.

P/O-Pilot David Warnock Burke

On August 7, 1943, David wrote a letter on Canadian Legion War Services letterhead to his older sister Dora who was residing in Toronto at the time. Following is that letter;

Dear Dora,

I hope you agree with the old saying "better late than never", because I'm afraid I'm late answering you this time. I've had a couple letters from you since I last wrote; from now on I'll keep up better because we are night flying now and it means hanging around all day sleeping and resting – no time to go out much.

If we fly at mid night, we are briefed at 5:30 pm and again at 9:30 and then start getting ready. It takes quite a bit of preparing, before you go out on a big trip in a big ship. We leave the crew room $\frac{3}{4}$ of an hour before take off and go to dispersal in a truck with all our equipment – parachutes, rations, oxygen gear, maps, gen sheets (general information sheets), sextant and a million other things. The bomb aimer checks his bombs and bombing circuits, sights, etc. The navigator checks his charts and gets his computer and all his instruments out on his table. The radio opr gets his equipment all tested etc. I run up the engines and double check them and all the fuel cocks and flying instruments radio aids. The tail gunner gets his guns all adjusted and stores the rations away etc. Finally when all this is done we roll out on the field and away we go.

Our trip run from 5 to 6 hours and we fly away up in the oxygen region. We made one trip of six hours without ever seeing the ground or the stars – we were in thick cloud flying instruments and dead reconning by the navigator. It sure is different than any flying we did before. It is quite interesting and I like it.

The whole crew all live together in one hut now and we are getting to know each other very well. The navigator and I hang around together more than anybody else – I mean we go together, to town, and usually one or two of the other guys.

Ted Paige the bomb aimer is next friendliest, I suppose the reason being that the Pilot Nav and Bomb Aimer work together more than the rest. The WOP, Bill Haden sort of keeps to himself (although he gets along with us fine) but there are some guys on this camp who he knew before and of course he goes out with them: besides he doesn't

work so close to the rest of us he is in his cubby hole, pretty well by himself listening out on the wireless. Don Buckler the rear A.G. doesn't say very much and doesn't go out with us very much, he is quite a lot younger than the rest of us and I think that sort of puts a line between us so far as social time goes. Of course as far as crew work goes, he is right there.

I expect to get a leave about August 21 or 31 at the very latest and after that we will go (I expect) on to four engine Halifax bombers. At present I'm flying a Wellington Bomber which is the biggest twin engine bomber in existence. Its an old name, but the new Marks are right up to date. I like them very much. There is a small chance we may stay in Wellington, but I doubt it.

Have you seen the pictures I sent Mom, the ones I took in London last winter? I suppose by now your holiday boat trip is gone for another year. What about the new job prospects? Any gen from the British Government people?

You asked me if the crew is all Canadian, no it isn't. Wally Mustoe (NAV) is English and Bill Haden is English as well, the rest are Canadian.

Well Dora, I guess I've about run out of gossip for now,

So long

Your little brother Dave

On March 31, 1944, Pilot Officer-Pilot David Burke was on his fourth operation, as part of a crew aboard Halifax bomber LW500 (markings C8-Z) that took off from Leconfield on a bombing raid targetting Nuremburg, Germany. Approximately 795 aircraft took part in the operation. High-cloud was expected to offer protection to the bomber stream but the target would be clear for the bombing run. A Mosquito meteorological flight had predicted that in fact that would not be the case, but the raid went ahead anyway. The German controller ignored the diversionary raids and had his fighters circling close to the route of the main force. Consequently, the fighters engaged the bombers before they reached the Belgian border. The clear conditions allowed the fighters to pick off bombers at will. Strong winds meant that some of the bombers went off the intended route and as a consequence many bombed Schweinfurt in error, some 50 miles from Nuremburg.

Burke's Halifax bomber LW500 made it to Nuremburg and unleashed their bombs, but they never made it back to base. As it returned from the raid, it was hit by German flak over the French coast near Dieppe. All seven crew members of LW500 were lost in the crash. Halifax LW500 was one of 108 Allied aircraft that would be lost on this night. The operation had one of the highest percent losses of any raid and little damage was caused to the target.

Days after the crash, Captain Burke in Hamilton would receive a telegram informing him that his only son was, REPORTED MISSING 31-MARCH-44 AFTER AIR OPERATIONS (OVERSEAS) OVER NUREMBURG GERMANY. Perishing with Sarnian David Burke were Sgts Weir Crory, Reginald Arthur Eastman, William Haden, Allan James N. Jamieson and Michael Martin Stilliard, and F/O Frederick Walter Woods. In early 1948, investigators believed that they had found the remains of Halifax LW500 at a crash site at Weimar Schmieden, Germany. After notifying the next of kin of the find, it was later determined that the crash site was in fact that of another Halifax (LW537) lost the same night.

Along with David Burke, one of the crew members lost in Halifax LW500 was F/Sgt. M.M. Stilliard (RAF). The father of M.M. Stilliard (in Surrey, England) would receive word in January 1948 that the crash site and graves of the crew had been located; however, in July 1949, the Casualty Branch in England wrote a letter to Mr. Stilliard informing him of the error that they had made. David Burke's father would receive a similar letter. Following is a portion of the letter sent to Mr. Stilliard:

Dear Mr. Stilliard,

I am very sorry to reopen a subject which I am sure must be most painful to you, but since this Department's letter of 7th January, 1948, the Missing Research Organisation in Germany has submitted a report of its investigations, and it is with reluctance that I have to convey to you details of a distressing nature.

You will recall that in the letter of the 26th November, 1947, reference was made to burial of unknown airmen in the local cemetery at Weimar Schmieden and to a search of records of aircraft crews known to have operated over enemy territory on the night of 30/31st March, 1944. Unfortunately, this search was confined only to aircraft crews of which no news had been received since time of "take off".

German documents have now come to light which leave no doubt that the acceptance of graves 9 to 11, Row H, Plot 4, in the British Military Cemetery at Hannover (Limmer) for your son and his six companions was an unfortunate error.

These documents show that a Halifax aircraft was shot down at 1 am. on the 31st March, 1944, near

Fladungen, East North-East of Frankfurt on Main and Midway between Eisenach and Schweinfurt, and that five members of the crew were taken prisoners, ... and two unknown dead who were buried in the local cemetery at Weimar Schmeiden.

The two unknown were later identified as 1452226 Flight Sergeant M.M. Stemberge (pilot of Halifax LW 537) and the rear gunner 1822442 Sergeant J.D. Goskirk. The evidence revealed at exhumation of the grave at Weimar Schmeiden, (chiefly "pilot's wings and a ring with initials M.M.S.") confirms the information contained in the German documents. In view of these circumstances, no doubt, you will wish to return the ring sent to you so that I may send it on to the next of kin of Flight Sergeant Stemberge.

I feel sure that you would wish to know that should the Royal Air Force Missing Research and Enquiry Service fail to locate the resting places of your son and his companions, their names will be perpetuated on the Memorial to the Missing which is to be erected in this Country to commemorate those gallant airmen who gave their lives and have no known graves. In conclusion, please accept my sincere regrets for the distress occasioned by the contents of this letter.

David Warnock Burke was later officially recorded as, *Previously reported missing after air operations, now for official purposes, presumed dead, overseas (Germany)*. In January 1951, his parents received a War Service Gratuity of \$624.09 as compensation for the loss of their only son. Twenty-five-year-old Pilot Officer-Pilot David Burke has no known grave. His name is inscribed on the Runnymede War Memorial, Surrey, United Kingdom, Panel 249.

BURR, Kenneth Leslie (#A/104953)

Bombardier Kenneth Burr, 21, had his life planned when he returned from Europe after World War II. His desire to learn arc-welding and, eventually, to start his own trucking business ended when he was killed in action in late December 1944.

He was born in Sarnia Township on August 9, 1923, the son of Gordon Nelson and Harriet Isabel (nee Kemsley) Burr of Lakeshore Road, R.R. #3, Sarnia. Parents Gordon and Harriet Burr were married on March 28, 1918 in Sarnia. Gordon and Harriet would be blessed with nine children over the next two decades. Daughters Helen Matilda (born 1919), Mary Elizabeth (Scott) and Ruth Ann (Handy), and six sons: John Nelson (born 1921); Kenneth (born 1923); Gordon Jr. Howard (born 1925); James Robert (born 1927); Franklin Stuart (born 1933); and Gerald Norman (born 1938). Gordon supported his growing family by being a pipefitter with Imperial Oil. It must have been devastating for the entire Burr family to experience the loss of two family members so young. Helen Matilda died in February 1927 at age eight and Gordon Jr. at age 17 died in November 1942.

Kenneth received his early education at Clark's schoolhouse on Point Edward Road and then attended Sarnia Collegiate. He was enrolled in a technical course there from 1934 to 1936 and in his spare time he played rugby, hockey and baseball. After leaving high school at age thirteen, he worked as a fisherman and gravel truck driver for 2 years and then worked at Holmes Foundry as a blacksmith and core makers helper for 3 years. Immediately prior to enlisting, he was employed at Anglin-Norcross Limited at the Polymer Plant in Sarnia, working in construction as a blacksmith and a rigger. Kenneth was assured he would have a job with them on his return from war. He had much to look forward to in post-war Sarnia. He had a desire to learn arc-welding and wanted to start his own trucking business eventually.

At 19, Kenneth Burr enlisted in the Canadian Army on October 23, 1942 in London, Ontario. He stood five feet ten inches tall, had blue eyes and fair hair, and was single. He was living with his parents on Lakeshore Road at the time. From #1 District Depot in London, he would receive army Basic Training in Chatham, Advanced Training as a Medium gunner at the Canadian Army Training Centre in Petawawa, and Driver and Motor Mechanic's courses in Woodstock and London.

Burr embarked overseas on November 25, 1943, a bit more than a year after he enlisted. He became a member of the Canadian Army Reinforcement Unit (CARU) and a week later (December 3) became a member of the Royal Canadian Artillery, 2 Survey Regiment, with the rank of Gunner. In early December of 1943, parents Gordon and Harriet would receive a telegram from Kenneth informing them that he had arrived safely overseas in the U.K. Six months later, Kenneth Burr arrived in France on July 26, 1944.

The **Battle of Normandy** had begun for the Canadians with the June 6, 1944 D-Day landings at Juno Beach. After breaching the "Atlantic Wall" of "Fortress Europe", Allied armies began their break out from the narrow

Normandy bridgehead to carve out a foothold on the French mainland. It would take a whole summer of tenacious fighting, pushing against fierce and ruthless German forces to advance east across France. In a brutal campaign of attrition, the Canadians faced fierce battles and vicious counterattacks as they clawed their way forward liberating villages and towns including Bretteville, Carpiquet, Caen and Falaise. According to letters that his parents later received, Kenneth had gone to France only a short time after the June 1944 D-Day invasion, and he had most recently been in Germany with the Canadian Forces.

After the Allied breakout from Normandy in late August 1944, Canadian forces were assigned the “**Long Left Flank**”, the less glamorous but vital task of clearing coastal areas in the north of France and Belgium of German occupiers. In a series of stop-and-start advances against stiff resistance in fortified positions, the Canadians liberated ports and villages including Rouen, Dieppe, Dunkirk, Boulogne and Calais. In September 1944, Burr would advance to the rank of Bombardier, with the Royal Canadian Artillery, 2 Survey Regiment. In early October 1944, the Canadians were entrusted with liberating the 45-mile-long Scheldt estuary (the Belgian-Dutch border area). The **Battle of the Scheldt** was among the most difficult and grueling struggles in the war. The bitter fighting against a well-fortified and heavily entrenched enemy took place in a bleak environment made worse by the winter cold in a flooded and freezing muddy quagmire.

After the Battle of the Scheldt, over the winter of 1944-1945 most of the weary Canadians were given a rest, although the front was never quiet, with patrols and large-scale raids remaining constant. Canadian troops were stationed along the **Nijmegen sector** in the Netherlands. They were tasked to hold and defend the Nijmegen salient and a small piece of Allied-held territory north of the Maas River. This bridgehead would be used as a starting point for crossing the Rhine (in February 1945), and the Allies had to give the enemy the impression that an assault was imminent to force it to leave troops in that area. The Germans did their best to push the Canadians out of “the island” by flooding the area and constantly harassing them with mortar fire, artillery and aggressive patrols. Constantly vigilant, the men dug deep slit trenches, covered them with whatever was handy, and tried to keep warm from the snow and cold during one of the most frigid winters on record in northern Europe. During this supposedly quiet period, between November 9 and December 31, 1944, approximately 1,239 Canadians were killed or wounded.

Bombardier Kenneth Leslie Burr

Bombardier Kenneth Burr was one of them. On December 28, 1944, he would lose his life while fighting in the Nijmegen sector of Holland, during this early stage of the **Liberation of the Netherlands**. Kenneth remains were buried on December 29, 1944 at a location recorded on the Army Field Service Card as Canadian Cemetery Yonkerbosch E690595 Sh. 5. His remains would later be exhumed and reburied in Nijmegen Canadian Military Cemetery in Holland.

In early January of 1945, Gordon and Harriet Burr received a telegram from the Director of Records in Ottawa informing them that their son, BOMBARDIER KENNETH BURR HAS BEEN KILLED IN ACTION IN GERMANY. Kenneth Burr was later officially recorded as, *Overseas casualty, killed in action, in the field (Holland)*. In early February of 1945, a memorial service for Private Kenneth Burr was held in Trinity Anglican Church in Sarnia Township, conducted by the Rev. G.C. Stone.

Two years after her son died (in January 1946), his mother received a War Service Gratuity of \$342.90 for the loss of her son Kenneth. In November 1947, the Director, War Service Records, would send her a photograph of Kenneth's grave and marker over the burial place in Nijmegen, Holland. Twenty-one-year-old Kenneth Burr is buried in Groesbeek Canadian War Cemetery, Netherlands, Grave II.F.7. On his headstone are inscribed the words, AT REST.

CAMERON, William Donald Leslie (#R/116979)

Bill Cameron was only 22 when he died in a fiery crash on September 1, 1943. His legacy, however, lives on through his heroic actions that saved the lives of three fellow crew members that fateful night.

William "Bill" Cameron was born in Plympton Township on March 28, 1921, the only child of Donald Gordon and Ellen (nee Pollock) Cameron, of Thedford. Both of William's parents were born in Watford, Ontario. The Cameron family moved to Sarnia when Bill was young and resided at 206 Maria Street. Donald supported his family with his work as a Pipefitter in the Pumping Department at Sarnia Imperial Oil.

Bill was a well-rounded student and athlete. He attended London Road Public School from 1928-1935 and then was a student at Sarnia Collegiate from September 1935 until June 1941. In his youth, he participated extensively in hockey, softball and baseball. His academic standing and his character are best summarized in a reference letter the principal of Sarnia Collegiate wrote to the RCAF Commanding Officer in London, Ontario. The principal wrote that, *Cameron holds complete Pass Matriculation standing and Upper School or Honour Matriculation standing in English Literature, Trigonometry, Zoology, Chemistry and French Composition. He has shown himself to be a dependable and conscientious student and would, I believe, prove a very acceptable applicant for your Force.* After graduating, Bill worked as a labourer in the "asbestos gang" for several months with the Sarnia Imperial Oil Refinery.

At age 19, William Cameron enlisted in the Royal Canadian Air Force in London, Ontario on August 29, 1941. He stood five feet ten inches tall, had green eyes and brown hair, and was single. He was living at home with his parents on Maria Street at the time. Like many other young men, Bill knew what he wanted. He specifically requested flying duties and his plans for after the war were to return to school for engineering. His extensive year of training began at #1 Manning Depot in Toronto. From there, Bill received his air training at #6 Initial Training School (ITS) in Toronto; #20 Elementary Flying Training School (EFTS) in Oshawa; and #16 Service Flying Training School (SFTS) in Hagersville. On August 14, 1942, Cameron was awarded his Pilot's Flying Badge at Hagersville, and then had a two-week leave. Of his graduating class of 80 students, two graduates were chosen for immediate service overseas. One was William Cameron.

William would embark overseas from Halifax for the United Kingdom on October 27, 1942. After arriving, he was immediately transferred from #3 Personnel Reception Centre to #18 (Pilots) Advanced Flying Unit for further training. He would go on to serve with #23 Operational Training Unit, then #429 Squadron, and later #1659 Conversion Unit. On June 23, 1943, he became a member of RCAF #419 Moose Squadron "Moosa Aswayita" (written in Cree, not Latin, means Beware the moose-a ferocious fighter), part of **Bomber Command**, with the rank of Warrant Officer Class II-Pilot.

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

RCAF #419 Squadron was formed at RAF Mildenhall, England in December 1941, and named after its first commanding officer, Wing Commander John "Moose" Fulton. The unit moved to various bases throughout the war, including Leeming, Topcliffe, Croft and Middleton St. George. Initially operating Wellington bombers, in November 1942 the squadron converted to Handley Page Halifax bombers, and in March 1944 to Avro Lancasters.

In early August of 1943, the *Canadian (Sarnia) Observer* reported on an attack over Germany in which William Cameron was involved. In the heavy attacks made by the R.A.F. and the R.C.A.F. on Mannheim and Ludwigshafen on an August night, Cameron piloted a Halifax bomber with Sgt. Beverly Scharf, another Sarnian, a member of his crew. A month later Bill Cameron would be killed in action.

WOII-Pilot William Donald Leslie Cameron

On August 31, 1943, Cameron's Halifax II aircraft JD270 (markings VR-P) took off from Middleton St. George on a night operation targeting Berlin, one of 622 Halifax and Stirling bombers involved in the raid. Halifax bomber JD270 had completed its bombing run over their target Berlin and had escaped into the darkness past the ring of searchlights. It was in the early morning hours of September 1 that an enemy single-engine fighter aircraft, either on purpose or by accident, crashed into the port wing of Cameron's aircraft. The sequence of events in the next ten minutes came quickly and chaotically: the outer tip of the Halifax's port wing was sliced away, the port engine caught fire, and flight engineer J.T. 'Paddy' Mullany managed to extinguish it. Then the propeller refused to feather.

With the Halifax plummeting to 5,000 feet, WOII/Pilot Cameron gave the order to evacuate the aircraft. The plane was now completely out of control, vibrating badly with some of its sections falling off during the rapid descent. But Cameron tried to steady it to give his crew a chance to escape. Only a few of his crew would survive. The wireless operator Sgt. Les H. Duggan, who was dropping the radar jamming strips called "Window" when the crash occurred, was thrown off balance but still managed to make his way to the rear escape hatch. Sgt. R.E. 'Bert' Boos of Calgary and Sgt. Beverly W. Scharf of Sarnia followed him out. As they swung in their parachutes, they saw Halifax JD270 dive and crash. The other four crew members were not seen to leave the aircraft. Perishing with Warrant Officer II-Pilot William Donald Cameron, were FS. Victor Joseph August 'Windy' Wintzer, FS. George Ernest Percy Birtch, and Sgt. John Thomas Mullany (RAAF). Canadians Beverly Scharf and 'Bert' Boos, and Les H. Duggan (of the RAF) bailed out to safety and were taken as Prisoners of War--Sgt. Scharf and Sgt. Duggan were sent to Stalag Luft 6 Heydekrug; and Sgt. Boos was sent to Stalag Luft 3 Sagan and Belaria. Of the 47 aircraft lost in the operation, two other Halifaxes from Squadron 419 also failed to return that night.^{4Y, 6G, 10U}

Not long after, the Camerons on Maria Street would receive a telegram from the Director of Records in Ottawa, informing them that their son and only child, SERGEANT WILLIAM CAMERON WAS REPORTED MISSING IN ACTION AFTER HIS NINETEENTH OPERATIONAL FLIGHT OVER GERMANY. In February of 1944, Donald and Ellen would receive another telegram from Ottawa advising them that their son, SERGT WILLIAM CAMERON HAS BEEN PROMOTED TO FLIGHT-SERGEANT DATING FROM FEBRUARY 14. No further details were received by his parents. Mrs. Ellen Cameron hoped against hope that their only child would soon return. Her heart would leap every time she heard someone coming up her walk, only to sink when it was the postman or a visitor.

William Cameron was later officially recorded as, *Previously reported missing after air operations, now for official purposes, presumed dead, overseas (Germany)*. In October 1945, Ellen received a War Service Gratuity of \$323.62 for the loss of her only child William. Twenty-two-year-old William Cameron is buried in Berlin 1939-45 War Cemetery, Charlottenburg, Germany, Coll. grave 6.A.2-4. On his headstone are inscribed the words, PSALM XXIII.4. His name is also inscribed on the Sarnia Refinery Plaque. Unveiled in 1949, the plaque has the names of 24 Sarnia Imperial Oil employees who made the ultimate sacrifice in World War II.

Beverly Scharf's life took a different path from Donald Cameron's. He was born in 1925 in Wyoming, Ontario, the son of Mr. and Mrs. Tom Scharf. When Tom Scharf took a position with Imperial Oil, the family would move to 267 Cobden Street, Sarnia. At age sixteen, Beverly lied about his age in order to join the RCAF. The air force noticed his age and kept him in Canada until he could pass a high school equivalency exam.

On the fateful September night in 1943, the eighteen year-old, six-foot mid-upper gunner Beverly Scharf was able to bail out of the Halifax aircraft before it crashed. After parachuting from the doomed Halifax, Scharf landed safely. His problems were just beginning, however. Local villagers, who lived near where he landed, grabbed him, spat on him, threw things at him, and almost lynched him. The Sarnian was saved by the arrival of Luftwaffe soldiers who trained their machine guns on the crowd.

Scharf was brought to a German POW camp, the first of several, where he would remain a prisoner for the rest of the war. Life as a POW was difficult--the toughest part for him was the Death March of 1944-45. With the Russians advancing, the Nazi's marched stalag prisoners and concentration camp prisoners west during a bitterly cold winter. The SS soldiers were as brutal as the weather along the way. After the Germans surrendered in May 1945, Scharf and his fellow prisoners would remain in a POW camp, now held by the Russians. He was able to escape from the camp in August 1945, by jumping on a spare tire of an ambulance and riding it to the American lines. He would return to Sarnia in the fall of 1945.

Immediately after the war, Scharf, at the urging of his own mother, visited the Cameron family on Maria Street to give them some peace. He explained Bill's courageous attempt to keep the plane stable, thus allowing the three survivors to get out. He told them that as he was parachuting to the ground, he saw the Halifax dive and crash with Bill and three crew still aboard.

The following April 1946, Beverly Scharf got married and his wife, Marilyn, and he would have two children: Paul and Gregory. They resided on Cedar Crescent in a veteran's subdivision in Sarnia. Beverly would have a succession of jobs in Sarnia: on the railroad and as a bartender, a drycleaner, an ironworker, and an insurance salesman with Metropolitan Life. He would eventually move to Southern California to work in the aerospace business. Sometime in the 1960s, Beverly and Marilyn travelled to Berlin and visited the graves of his fallen airmen, including the grave of Bill Cameron. Beverly Scharf passed away in 2008, at the age of 84, leaving behind his wife, his two children and his four grandchildren.

The following is a portion of an article "Bill Cameron was a skilled pilot", written by Gregory Scharf and printed in the *Sarnia Observer* in November 2014. Each Remembrance Day, Gregory Scharf pays special honour to William Cameron because...

...without his courage or heroism, my family would not exist.

His name was Warrant Officer Bill Cameron. He was a pilot and my dad (a mid-upper gunner) flew with him from June '43 to when they were shot down two months later. They were members of the Moose Squadron, and flew missions as part of Bomber Command over targets like Cologne, Munich, Gelsenkirchen, Mannheim, Nuremburg, Milan, and ultimately Berlin, where they were shot down. Cameron was a skilled pilot. They were "coned" by searchlights on a raid over Pennemunde on Aug. 17 (usually a death sentence for aircrews), but he made their Halifax bomber bob and weave like a skilled boxer.

On the morning of Aug. 31, Cameron roused my dad from his bunk telling him they were going to Berlin that night. Dad protested, saying that they'd been told that they were going on leave. Cameron smiled and said, "Don't worry, Bev, it'll be our last one", knowing that my dad was about to be told that following the raid, Dad was slated to return to Canada to begin training as a pilot. His words were prophetic.

Dad said the flak was so thick it looked like you could walk across it. They dropped their bombs and as they left the target area, they were hit. Cameron tried to limp the shuddering warbird home, but after 10 minutes gave the order to bail out when they went into a shallow dive at around 3,000 feet. Cameron stayed at the helm; my dad (B. Scharf), F.S. Bert Boos, and Doug Duggan (RAF) made it out, and were taken prisoner. FS "Windy" Wintzer, Ernie Birtch (from Ontario), and Sgt. Paddy Mullaney (RAF) did not. While dad was under canopy, he saw the plane hit the ground and explode. There was an escape hatch in the cabin; I don't know why the others didn't make it out, but when dad bailed, Cameron was still fighting the controls to keep the craft stable enough for his crew to escape.

When dad came home, my grandmother insisted that Dad go over to Maria Street to talk to Bill's mother. She was still hoping against hope. Her son's civilian clothes were hanging up in the living room. His photos were

everywhere. And sadly she thought that the silhouette of the young man on her verandah was her son returning. She seemed almost relieved to hear the news. Over the next two years, she received reminders of her son from the RCAF, such as his medals, logbook, etc., and dad believes she ultimately died of a broken heart. He was her only child.

I don't know what Cameron's dreams were, his hopes, his aspirations. I don't know what happened to the two other surviving aircrew members. But the heroism of this man saved my father's life, and his story has been told over and over to my children and now my grandchildren. We are his legacy.

CAMPBELL, Allan William (#J/36786)

Allan Campbell, married less than two years and with a career, lost his life as a member of an RAF fighter squadron in support of the Allied advance on Normandy, which became a major turning point in the war.

Allan William Campbell was born in Strathroy, Ontario on July 12, 1918, the son of William Allan (a World War I veteran, who would become the Postmaster at Strathroy Post Office) and Christina ("Ena", nee MacNeill) Campbell, of Strathroy, Ontario. Parents William (born in London, Ontario) and Christina (born in Strathroy), were married in Strathroy, Ontario on January 12, 1915. Allan had one sister, Margaret Catherine (born 1933), and one brother, Kenneth Duncan Campbell (born 1923) who, at the time of Allan's death, was serving overseas as a Pilot Officer in the R.C.A.F.

Allan with his brother Ken (L)

With Ken (L) and their father William

Allan with his brother Ken (R)

Allan was educated at Strathroy Public School, 1924-1932, and then three years at Strathroy Collegiate Institute, graduating in 1935. His hobby was mechanics, and he was active in swimming, golf and tennis. In 1935, William began his employment with the Stratford branch of the Royal Bank of Canada, where he worked as a bank teller/accountant for six years until he enlisted. On November 22, 1940, Allan joined the Perth Regiment Militia, No. 10 N.P.A.M. in Kitchener, serving with them for thirty days.

Twenty-three-year-old Allan Campbell enlisted for service with the Royal Canadian Air Force on May 12, 1941 in London, Ontario. He stood five feet nine inches tall, had brown eyes and dark brown hair, was single, and requested flying duties, expressing his preference to be a pilot. His plan for after the war was to return to the Royal Bank, which had promised to employ him after his service. After being posted to #1 Manning Depot in Toronto, Allan would receive his air training at #1 Technical Training School (TTS) in St. Thomas; #1 Initial Training School (ITS) in Toronto; #7 Elementary Flying Training School (EFTS) in Windsor; and #14 Service Flying Training School (SFTS) in Aylmer.

His training was briefly interrupted when he was involved in a car accident that happened late on the night of November 29, 1941. Allan was a passenger in the back seat of a motor vehicle travelling on Highway #22 between London and Strathroy, when at approximately 23:59 hours, the car he was in struck a car that was parked partially on the highway without lights. William remained at home in Strathroy with a suspected twisted ankle for just over one week. After going to hospital, X-rays revealed he had broken his ankle. A cast was applied, and he remained out of

service until mid-December 1941. After recovering, he would continue his training, earning his Pilot's Flying Badge on April 10, 1942. Allan was then posted to 132 (F) Squadron in Rockcliffe, Ontario. He went with this squadron to British Columbia where he would spend over 1 ½ years on Pacific coastal duties, at locations such as Sea Island, Patricia Bay, Tofino and Boundary Bay.

Sept. 1942: Patricia Bay, B.C.. Allan and "Kitty"

F/O-Pilot Allan William Campbell

In May of 1942, Allan would marry Miss Hattie Viola Garside, a registered nurse and the daughter of George and Lilian Garside of Sarnia. George Garside (born Westminster, Middlesex County) and Lilian (born Walkerville, Ontario) resided in Sarnia, where George was employed at Imperial Oil. George and Lilian Garside had three children; oldest son Melvin (born London, Ontario) and two Sarnia-born daughters: Mildred Catherine and their youngest Hattie Viola, born December 2, 1916. It was on May 14, 1942, that twenty-three-year-old Allan Campbell and twenty-five-year-old Viola Garside were married. The wedding ceremony took place at St. Andrew's Presbyterian Church in Sarnia. Allan returned to service in British Columbia while Viola resided at 257 Nelson Street, Sarnia. Before going overseas, Allan returned home in June 1943, to visit his wife, his parents, his brother Ken and sister Margaret, and his in-laws George and Lilian Garside. As well, he visited brother-in-law Melvin and sister-in-law Mildred (who had married Frank Burwell in Sarnia). During the war, Viola remained in Sarnia, working at Sarnia General Hospital.

Viola and Allan Campbell

F/O-Pilot Allan William Campbell

On November 8, 1943, Allan Campbell was at RCAF #1 Y Depot in Halifax, Nova Scotia where he sent a postcard to his brother and sister-in law Frank and Mildred Burwell at 386 ½ Savoy Street in Sarnia. Following is a portion of his message; ... *Don't know how long I'll be here but it's a week today since I arrived. This is a poor looking town. Hope you are all well. I'll write you a letter later. Best of everything.* On November 16, 1943, Allan Campbell embarked overseas from Halifax for the United Kingdom.

After arriving in the U.K. and being posted to #3 Personnel Reception Centre, he was transferred to #57 Operational Training Unit, and later #3 Tactical Exercise Unit, and at RAF Stations Acklington and Honiley. Following are portions of three air letters that Allan Campbell wrote while in England to his brother and sister-in law Frank and Mildred Burwell on Savoy Street:

February 9, 1944

I believe I owe you two letters as I have received two from you (air letters) one today and the other on Sat. Truly I was so pleased to get them... I also got a carton of Camels on Sat which had gone out to the coast and then over here – but they did get here – and with many thanks. Vi (Viola) was telling me Mr. Burwell is quite sick again. I certainly hope he is well again soon. Listen now, you guys and your parcels. I do wish you wouldn't go to the trouble at all – even tho' I appreciate it more than you know. However I assure you when I do come back on that CNR some day soon I surely will make up for your father being so good to me... I wish Frank, you could see these 'Spits' – there really something; none of you have ever seen. In fact this whole experience is without doubt something. Here I am again forced to stop scribbling so for now and do write soon I love letters. The best of everything and every happiness.

Love and luck

[Note: Allan's brother-in-law Frank was the owner of Burwell Brothers Variety store at 514 Confederation Street and Shepherd Street, Sarnia. In 1944, Burwell Variety also became a post office].

May 24, 1944

Here it is the 24th of May and no holiday! And too its hard to believe that so much of this year is gone already. In fact time has been going so quickly that I see I'm really indebted to you both for letters and parcels. In the past three weeks or so I've received about three letters I believe and also two shipments of cigs mailed in Feb. & Mar. I think it was. Gosh, thanks so very much... Your mail always seems to be held up for awhile just after you move.

I'm sorry to hear you are having so much trouble with your teeth. May your trouble soon be ended. How are you coming along with your post office? I would imagine it entails quite a bit of extra work for you.... I got a box from Vi a short time ago in which was included olives and peanuts which I really enjoyed. Did Vi ever tell you about the 1000 cigs I left on the train and recovered about two weeks later. It was quite amazing to say the least.

I expect Frank has heard of the Typhoon. Well that's how I spend my time now. Pretty soon I will have flown them all. As a matter of fact I was checking up the other day and I have flown 11 different types including civilian aircraft... Vi tells me Mel expects he may come over here (Mel is Melvin Garside, his brother-in-law). Surely that won't be necessary! I can quite believe that he wouldn't like the army. I didn't like the month I spent in it either. I met a chap at the station I hadn't seen for about two years so we have been having quite a good time reminiscing past times. Well here I am out of space and it seems I have said little. However it's a hello and to let you know I'm thinking of you and hoping you are well...

June 21, 1944

Well it's due time I wrote you a few lines. I've been moving around so much lately my letter writing has gone to the dogs. Since I last wrote I received a shipment of cigarettes... and I got your parcel... and today I got your letter so you see I am quite indebted to you people, and believe me I certainly appreciate the fact. How I can thank you people at the present I don't know – only in words I guess so thanks so very much for your parcels. I really found it most welcome and again I say you people are too good to me. I feel as if I don't deserve such kindness. I expect Vi has told you I am flying that colossal aircraft called a Typhoon. I hope later to be on Tempests but that remains to be seen.

... I had to reduce my baggage to sixty pounds if you can imagine that – due to the fact that soon I'll be living in a tent and will be strictly mobile. I think when this is all over civy street will look like heaven. I only hope people there now appreciate that fact. It sounds like I'm complaining but I'm not – far from it. My mail has been having a time catching up to me but it eventually arrives....

Good nite. Best of everything and love

On June 26, 1944, Allan Campbell would become a member of RAF #263 Squadron “Ex Ungue Leonem” (By his claws one knows the lion), with the rank of Flying Officer-Pilot. No. 263 Squadron was a **fighter squadron**, that at that time was based at RAF Bolt Head and were flying the single-engine Hawker Typhoon fighter bomber. During fighter sweeps, the squadron would: attack communications and V-1 launch sites, enemy shipping in the channel, and radar sites in France; and provide close support duties for Allied armies; as well as fly ground attack missions.

The **Battle of Normandy** would begin for the Canadians with the June 6, 1944 D-Day landings at Juno Beach. After breaching the “Atlantic Wall” of “Fortress Europe”, Allied armies began their break out from the narrow Normandy bridgehead to carve out a foothold on the French mainland. It would take a whole summer of tenacious fighting, pushing against fierce and ruthless German forces to advance east across France. Fighter squadrons such as RAF #263, would be an integral part of this campaign. In a brutal campaign of attrition, the Canadians faced fierce battles and vicious counterattacks as they clawed their way forward liberating villages and towns including Bretteville, Carpiquet, Caen and Falaise.

Following are portions of two more air letters that Allan wrote to his brother and sister-in law Frank and Mildred Burwell in Sarnia:

July 16, 1944

Guess I'm a bit confused – moving around, etc.. Here I thought I had written you last week but find the last time I wrote was on the 21st of last month. Please accept my apologies. First of all so many thanks for your very nice birthday present which arrived yesterday. It came in an envelope with CNR on the outside of it. I couldn't imagine what on earth I was getting. And too my thanks for your thoughtful birthday greetings which I got on the 26th of last month. It took but thirteen days to come over which is pretty good. The day before yesterday was the first time I had received mail for about three weeks. I guess it's been delayed chasing me around.

I've been with a squadron now for some time as Vi probably told you. It really is the life – at first we were in a wonderful place but things are a bit more difficult now. I use my raincoat for a pillow at present – but I surely don't mind a few hardships when you know your finally doing something worthwhile. We have to censor all our sqd's mail and I've been getting quite a kick out of the job when I'm on it.

I finally got a look at France about a week ago. Quite a thrilling experience the first time I can tell you. But that's not very interesting talk. Oh say, I almost forgot to thank you (it seems all I'm ever doing is thanking you for something) for 300 sweet caps which arrived a couple of days ago. Incidentally, they were the first I'd got for over a month....

Speaking about mail how are you getting along with your post office. I imagine it gives you enough extra work. Vi tells me she is kept quite busy at S.G.H. (Sarnia General Hospital). But then I guess we are all busy these days... Hope you are all well. I'll say so long for now and keep writing.

The best and love.

August 22, 1944

I'm afraid as usual I am owing you a letter – but recently I've been kept quite busy – so I guess that is my only excuse this time. Life over here is rather primitive but of course that is to be expected. I think perhaps our greatest complaint is the dust which is pretty bad – or I should say was pretty bad until yesterday when we had some rain – and too I might add a bit of a rest. I was rather lucky and had a forty eight last weekend (a 48 hour leave). I was about the first one to go to England on one of course. I went to London tho' I don't know why. While I was there I noted something which might interest you. Vendors on the street were selling peaches from 3/6 to 6/ for one peach and a shilling at 22 cents – well it's a rather high price.

I suppose from the papers you have been able to follow our activities over here. One can be almost optimistic now – in fact I should say you could be. I just heard in a recent letter from home, Ken (my bro.) was posted to the 'Y' depot so perhaps one of these days I shall see him over here – at least in Eng. perhaps....

But in any case I hope you are all well and your P.O. is not keeping too busy. As you say one advantage it has it attracts a certain amount of additional business – which of course is a good thing. I'd like to be walking in and buying some stamps from you right about now. But I'm sure there will come a day – not too far in the future either I do believe – at least hope. For now then good nite, good luck and best of everything always. Love

Three days after writing the above air letter, on the night of August 25, 1944, Allan Campbell was on a mission flying in his Typhoon aircraft MN883 during the Battle of Normandy. He was number 2 of the leading pair in a standing patrol being carried out by four aircraft over the River Seine in France, when his aircraft was hit by

enemy flak and crashed about 800 yards from the village of Theillement at about 4 a.m. on August 26, 1944. His body was recovered the next morning, brought into the village, put into a coffin and buried in the Theillement churchyard on August 28. The grave was marked with a wooden cross, with no name. Years after, the remains were exhumed, and re-interred in the Bretteville-Sur-Laize Canadian War Cemetery, Calvados, France.

Bretteville, France

Soon after the crash, Viola Campbell on Nelson Street received a telegram from Ottawa informing her that her husband, FLYING OFFICER ALLAN W CAMPBELL WAS REPORTED MISSING ON AUGUST 25 AFTER AIR OPERATIONS OVERSEAS. In late August 1944, Viola received the following letter from the Squadron Leader, Commanding No. 263 Squadron, R.A.F., informing her of some details of her husband's last flight:

Dear Mrs. Campbell,

You will, by the time this letter reaches you, have received a telegram informing you that your husband, Flying Officer A.W. Campbell is missing from an operation on 25th August, 1944.

You will want to know exactly what happened, and these are all the facts as we know them. Your husband was Number 2 of a pair of aircraft carrying out a patrol over the River Seine on the evening of 25th August. They were flying at 8,000 feet when he said he thought he had been hit by flak and was returning to base. His leader told him to head south and followed him. Further calls on the radio telephone received no reply. Clouds of smoke began to pour from the aircraft, and the engine appeared to be missing, but it continued a controlled descent until about 4,000 feet, when it went into a steep dive. The aircraft exploded on hitting the ground. It is possible that your husband managed to bale out, and that it was only afterwards that the dive steepened. He was not seen to do so, but the light was beginning to fail and he might have managed it unobserved. Let us hope that he did so.

You will appreciate that the above information is strictly confidential and must not be disclosed to the Press. I appreciate fully how anxious you will be, and you may be sure that any news will be passed on to you immediately. Please let me know if there is anything else I can do.

In early October 1944, Allan's father William in Strathroy wrote the following letter to the RCAF Casualty Officer, for Chief of the Air Staff in Ottawa seeking more information about his missing son:

Dear Sir,

Reference to your letter of Sept 7th, file No. J36786 (R04). Would like some information regarding my son F/O AW Campbell, who has been missing since Aug 25th/44. His machine apparently came down in occupied territory along the Seine River. Four or five days after he was reported missing this territory was occupied by the Allies. As in last war the Air Force had a salvage branch whose duty it was to locate all machines they could and salvage them. They may have something the same this time, and I can't understand why this machine would not be located. They would be able to tell if my son was in the machine, or he bailed out. His machine was hit by heavy anti aircraft fire, and apparently began to pour smoke immediately. As he was several thousand feet in the air, I cannot see why he couldn't bale out. Although he was not said to do so, but he might have done so unobserved. As no word has come to us at all, regarding he being a prisoner of war, it makes us just wonder if he did get out of the machine.

My other son P/O Kenneth D. Campbell has arrived overseas, and together with Allan missing their mother is mostly confined to bed. We sure would appreciate word of some kind regarding Allan. The suspense is terrible. Thanking you for any information you may be able to give us.

In late October 1944, William Campbell wrote a letter to the Air Vice-Marshal, R.C.A.F. in Ottawa, again seeking information about his missing son. Following is a portion of that letter:

Dear Sir,

Mrs. Campbell and myself wish to convey to you our sincere thanks for your kind expressions of sympathy expressed to us in your letter of Oct. 19th.

It would be a great comfort to me if you could advise me just what happened to my boy J 36786 F/O Allan W. Campbell. Was his body found in the plane or was he able to bale out of it. The 8th Can. Rec. Reg't who found his body would be able to tell you just what happened to him.

We would also like to have all his belongings sent home If these things could be sent home we would appreciate it very much. Would deeply appreciate any information you may be able to give us.

In late October 1944, Viola in Sarnia received the following letter from the Air Vice-Marshal, Air Member for Personnel in Ottawa:

Dear Mrs. Campbell:

It is with deep regret that I must confirm our recent telegram informing you that your husband, Flying Officer Allan William Campbell, previously reported missing, is now reported killed on Active Service.

Advice has been received from the Royal Canadian Air Force Casualties Officer, Overseas, through the 8th Canadian Reconnaissance Regiment, that your husband's body was recovered and buried on August 28th, 1944, in a cemetery at Theillement, which is approximately nine miles west of Elbeuf, Department of Eure, France.

You may be assured that any further information received will be communicated to you immediately. I realize that this news has been a great shock to you, and I offer you my deepest sympathy. May the same spirit which prompted your husband to offer his life give you courage.

In early November 1944, William Campbell in Strathroy received a letter from the R.C.A.F. Casualty Officer, for Chief of the Air Staff. Following is a portion of that letter:

Dear Mr. Campbell,

Air Vice-Marshal J.A. Sully has asked me to reply to your letter of recent date concerning your son, Flying Officer Allan William Campbell.

As no further details are available at these Headquarters concerning your son's death, other than those conveyed to you in Air Vice-Marshal Sully's letter, an enquiry has been despatched Overseas for all possible information. Immediately a reply is received I will again communicate with you.

... I know full well how weak and fruitless are any words of mine which would try to divert you from your overwhelming sense of loss, but it is my hope that the cherished memory of your gallant son who made the supreme sacrifice to maintain the freedom of his country will be a source of great pride to you and the members of your family and sustain you in your sorrow.

Also in November 1944, William Campbell wrote another letter, this to the Deputy Minister for Air in Ottawa. In it, he expressed a concern that many parents likely had after losing a son to war:

Dear Sir;

I wish to express my thanks for your prompt reply to my letter of 2nd of Dec., and also to thank you for your words of sympathy in the loss of our son Allan.

As you say and as I stated to you, it is a very delicate situation to handle. If my son Kenneth, ever knew that I wrote about him he would sure not like it. My both boys went through this up to now on their merits, both wanting to do their part in winning this war. Allan was one of the best fliers you could ask for and went where ever he was asked to go. Ken is the same way, and I am sure there are many things that he could do, that would be of great assistance, without actually going into combat. But I am sure that is what he wants to do, but for his mothers sake I don't think he should. If anything happened to him I am sure that she would never get over it.

If Kenneth could be approached without him knowing anything about me writing, they would be able to get him to do other things. However I am just leaving this to you and I thank you very much for your promptness in looking after this for me. I may say that I was a Pilot in the last war, receiving my R.F.C. wings before the R.A.F. was formed.

In March 1945, the Missing Research and Enquiry Service (MRES) released the findings of their investigation into the crash of Typhoon aircraft MN883 to the Air Ministry. In early March 1945, investigators interviewed an eyewitness of the crash, Melle. Aufray, a School Teacher and Secretary to the Mayor of the village of Theillement, and visited the scene of the crash. The wreckage was still there with the engines deeply buried in the earth. Investigators removed three plates bearing reference numbers from the wreckage, which were used to identify the aircraft as that of Allan Campbell's Typhoon MN883. The grave at Theillement was initially marked with a wooden cross with no name. Upon learning the identity of the airman, Melle. Aufray advised the Air Ministry that a cross "was being purchased by the local people and would be erected shortly bearing the name F/O A.W. CAMPBELL J36786".

In mid-June 1945, Viola received the following letter from the R.C.A.F. Casualty Officer, for Chief of the Air Staff:

Dear Mrs. Campbell,

A report has been received from Overseas giving further particulars concerning the death and burial of your husband, Flying Officer Allan William Campbell.

This report which was received from Melle. Aufray, a School Teacher and Secretary to the Mayor of the village of Theillement, states that your husband's aircraft crashed near the village of Theillement at 4 A.M. on August 26th, 1944. Your husband's body was found the next morning about 200 yards from his wrecked aircraft. He was brought to the village, placed in a coffin and buried on August 28th.

This particular day was the day of liberation of that district and honours were rendered by Canadian troops who were then advancing.

Your husband's grave is situated in the churchyard at Theillement, the second on the left hand side of the main entrance. Melle. Aufray advised that the school children were taking the grave under their care. Information concerning the location of your husband's grave has been passed to the Imperial War Graves Commission and you may rest assured that it will be suitably marked and will receive every care. May I again extend to you and the members of your family my most sincere sympathy in the loss of your gallant husband.

In August 1946, Viola received the following letter from the R.C.A.F. Casualty Officer, for the Chief of the Air Staff:

Dear Mrs. Campbell,

Advice has now been received from our Overseas Headquarters which states that your husband, Flying Officer Allan William Campbell, has now been re-interred in Grave No. 7, Row C, Plot 26 in the Canadian Permanent Cemetery, at Bretteville-sur-Laize, France. Bretteville-sur-Laize is located near Falaise, France.

The reverent care of the burial places of all who served in the Forces of the British Empire is the task of the Imperial War Graves Commission. Eminent architects are planning the construction of beautiful cemeteries and each individual grave will be supported and sustained by the nations of the Empire. I hope that it may be of some consolation to you to know that the grave of your gallant husband is in sacred care and keeping.

May I again offer you my deepest sympathy. I can only hope that in days to come you may see the fulfillment of those ideals for which your husband laid down his life.

Allan Campbell was later officially recorded as, *Killed during air operations, Overseas (France)*. In March 1945, Viola Campbell received a War Service Gratuity of \$802.88 for the loss of her husband Allan. Allan Campbell left behind his parents William and Christina Campbell; his brother Ken and sister Margaret; his wife of just over two years, Viola; his in-law parents George and Lilian Garside; and in-law siblings Melvin Garside, and Mildred and Frank Burwell. Brother Ken Campbell (RCAF) would serve overseas during the war, as did brother-in-law Melvin Garside (Army). After the war, Melvin Garside would reside in Sarnia, employed with Union Gas.

Viola Campbell remained in Sarnia until approximately 1949. She would remarry, to Harry Philips, and they would reside out west and then Philadelphia for a time. When Harry died, Viola returned to Sarnia around 1955. Viola worked as a Registered Nurse, employed in Strathroy, then Sarnia for a time, then returned to Strathroy where she continued nursing at a retirement home there. She later moved out west, and remarried again, to Donald McEachern, and they would reside in Vancouver. Viola had no children and would outlive her third husband. On April 30, 1999, at the age of 82, Viola would pass away in Vancouver.

On November 11, 1996, W.C Anderson of London, Ontario, wrote the following story that was printed in a London, Ontario newspaper:

Remembering the sacrifice

I remember when I was a boy growing up on a quiet street in a small town. Across from my home lived Donnie. Three doors away lived Allan. These two teenagers loved to build model airplanes and fly them off the pavement. I, being younger, would sit on the curb and watch them. Sometimes, the delicate balsa wood and crepe paper models they had in those days would fly a short distance on their rubber-band, wind-up motors. Other times, they would veer away and crash. Donnie and Allan would pick up the pieces and off they would go to make repairs. They always had three or four models on the go.

I didn't have any siblings – therefore, I had secretly adopted Donnie and Allan as my big brothers. I stood in silent reverence and worshipped both of them. I'm sure they were not aware of this. I would be that little neighbor kid sitting on the curb. However, they were always kind to me.

Then, along came the Second World War. Donnie was the first in our town to join the service. Allan signed up soon after - both in the Air Force. Approximately three years went by when that dark day came. I overheard the woman next door tell my mother that "word had come" that Donnie would not be coming home. Mom hugged me gently for quite some time. I was to learn later that while flying a Lancaster bomber in Italy, Donnie had sacrificed his own life to save his aircrew. A year or so passed and the war in Europe was almost over. Allied forces had Hitler's Nazis on the run. Allan, flying a Spitfire on a mission over Holland, didn't make it back (in fact, Allan was in a Typhoon over France). I recall seeing Allan's father in tears as he spoke with my dad. I was 14. I cried too. Donnie was 21. Allan was 23 (in fact, he was 26).

In the 1950s my work took me away from that town. Over the years, I've brought my three children back to the old street, pointing out the house where my now deceased parents raised me. They know the house Donnie lived in, the house Allan lived in and what those boys meant to me. Among other things, on our periodic visits, I took them to the local cenotaph where Donnie and Allan's names are engraved, along with the names of other young men I had known who gave their lives so long ago for the freedom we enjoy today.

Be assured, when my new grandson is old enough I'll take him back as well. I'll tell him about Donnie and Allan. My Big Brothers. My Heroes. Lest We Forget it says on cenotaphs in towns and cities across this land. My offspring will grow to understand the reasons the little kid who sat on the curb of that small town street so long ago will never forget. This true story is dedicated to the memory of Donald Leitch and Allan Campbell of Strathroy.

Twenty-six-year-old Allan Campbell is buried in the Bretteville-Sur-Laize Canadian War Cemetery, Calvados, France, Grave XXVI.C.7. On his headstone are inscribed the words, TO LIVE IN THE HEARTS OF THOSE WE LOVE IS NOT TO DIE. Allan Campbell's name is inscribed on the Strathroy cenotaph and the Sarnia cenotaph. On the Sarnia cenotaph, his name is inscribed as A.J. Campbell.

CARLTON, William Frederick (#A/17216)

William Carlton enlisted only days after the declaration of war. Less than two weeks later, he married his fiancée. He would lose his life less than two years later in a tragic accident while he trained in England.

William Frederick Carlton was born in Sarnia on May 12, 1914, the eldest son of Major William Frederick Griffith Carlton and Edith Elizabeth Carlton of 250 Tecumseh Street, later 282 Confederation Street, Sarnia. His parents Major William and Edith Carlton were married on November 18, 1913 in Sarnia. William had one brother, Stanley Griffith (born 1920) and three sisters; Mary Rosa (later married becoming Mary Rosa Roberts, resided in Windsor), Dorothy Jean and Joy Edith (who died July 20, 1936 at age seven). William attended high school for only one year. He was a star catcher on several Sarnia baseball teams, as well as being active in most other sports, including hockey, football and softball. He not only played with local city baseball teams, but also graduated to intermediate teams and to the Strathroy seniors. Nicknamed "Farmer", William also played local hockey, city league football and softball. Prior to enlisting, William worked as a sailor, a wheelsman on a lake freighter.

On September 9th of 1939, William was the best man for his brother Stanley at his wedding. William's brother, Sgt. Stanley Griffith Carlton of the 26th Battery R.C.A., married Mary Isabel Curran, daughter of Mr. and Mrs. F.P. Curran, Campbell Street, at St. John's Anglican Church in Sarnia. The wedding took place one day before Canada officially declared war on Germany. The *Sarnia (Canadian) Observer* described it as the first military wedding held in Sarnia since the days of the Great War. Members of the 26th Battery provided an honour guard at the church steps.

On September 12, 1939, only days after his brother's wedding and Canada's declaration of war, William

Carlton enlisted in the Canadian Army in Sarnia. On September 23, 1939, only eleven days after enlisting and two weeks after his brother's marriage, William Carlton married Miss Mary Evelyn Willick, the eldest daughter of Mr. and Mrs. J.A. Willick of Richard Street, Sarnia at Devine Street United Church. At the ceremony, Miss Joan Willick, the sister of the bride, served as maid of honour, and Sergeant Stanley Carlton, brother of the groom, served as the best man. Following the autumn ceremony, forty guests attended a reception at the home of the bride's parents. After their wedding, William and Mary Carlton resided initially at 250 Tecumseh St.. Later, their home address changed to 166 Richard Street, then 290 Devine Street, Sarnia. After William's death, Mary Carlton lived at 534 Devine Street, Sarnia.

Twenty-five-year-old William stood five feet eight and a half inches tall, had hazel eyes and black hair, was single, and lived at home with his parents on Tecumseh Street when he enlisted in Sarnia. He became a member of the 26th Field Battery, Royal Canadian Artillery, with the rank of Gunner. He received "permission to marry" from the army on September 19, 1939, married on September 23, and then began his army training in Guelph and Camp Petawawa. He became a member of the 4th Field Battery Regiment, Royal Canadian Artillery, attaining the rank of Lance Bombardier. Eight months after enlisting, William would lose his father, Major William Frederick Griffith Carlton, who died at the age 57 on May 7, 1940. Three months later, in August 1940, William embarked overseas for the United Kingdom.

William left Halifax on August 21, 1940, disembarking in Glasgow, Scotland in early September. While training overseas, William was active in inter-unit sports and played baseball for his camp in the Canadian Army League. He progressed within the army, as a member of the 4th Field Regiment, Royal Canadian Artillery, and, having secured his two stripes as a Bombardier, was aspiring to become a Sergeant.

In mid-May of 1941 while in England, William Carlton was involved in a tragic accident that resulted in his death. William fell beneath a moving railway train and had both his legs crushed. The resulting shock caused his death in the early morning hours of May 19, 1941 at Cambridge Hospital, Aldershot. In Sarnia, William's young wife, Mary, was at the *Canadian Observer* the next day during the lunch hour, renewing her husband's subscription to the newspaper when a telegraph messenger was looking for her delivered the tragic news of her husband's death. A few days later, Mary Carlton of 290 Devine Street, received the following letter from the Lt.-Col., Officer i/c Records, for Adjutant-General:

Dear Madam:

It is my unhappy duty to inform you that an official report has been received by cable from overseas advising that your husband, the soldier marginally named, died on May 19th, 1941, from shock following crushing of legs by train. I am desired to express to you the sincere sympathy of the Minister and Members of Defence Council in your bereavement. Any further information which is received will be at once communicated to you.

In the days following, military investigators determined the following details about the accident:

William Carlton, on a pass at the time, had been in Reading with several friends during the afternoon of May 18. He left the people he was with in order to return to Aldershot by train. In order to reach Aldershot, it was necessary to change trains at Ash Junction. The station had no overhead or underground passageways for passengers, so they were forced to cross over two rail lines in order to reach the platform for the Aldershot train.

The accident occurred late in the evening, and while there was a blackout under effect. William was travelling alone at the time. It was while crossing these lines from one passenger train to another that an electric train struck William Carlton. Once the power was turned off, two or three soldiers were able to uncouple the train, move two cars away and extract him from the tracks. William was placed on the rail platform until a stretcher arrived.

Practically no medical treatment was given as none was available. Still conscious, an estimated three quarters of an hour passed before he was transported from the scene. A military vehicle took him to Cambridge Hospital, Aldershot, where he died shortly after admission, at approximately 0015 hours on May 19, 1941.

The cause of death was recorded as "Shock following crushing of legs by train". Military officials felt there might well be grounds for a damage action against the railway in this case on behalf of his wife.

An English newspaper, the *Aldershot News*, carried a story on the accident a few days later. Following is a portion of that story:

SOLDIER UNDER TRAIN

Sunday Night Tragedy At Ash

Difficulties experienced by a depleted railway staff in preventing large numbers of soldier passengers from

crossing the line at Ash Junction Station and rushing for seats in another train, when returning to Aldershot from leave late at night, were mentioned at an inquest held at Cambridge Hospital on Wednesday.

The Aldershot Coroner, Mr. H.M. Foster, was inquiring into the death of William Frederick Carlton (27), a Canadian soldier, who died at 12:55 a.m. on Monday from injuries received late on Sunday night. Apparently Carlton fell between the platform and an electric train, and was dragged some yards in the darkness before it was realized what had happened. The current had to be switched off before he could be extricated.

Lieutenant W.L. Lawson described the deceased as a quiet, well-behaved soldier, who was not in the habit of taking too much to drink. Gunner John Edmonds said that on Sunday night he was returning to Aldershot from Reading, where he caught the 10:35 train. On arrival at Ash Junction about 50 to 75 soldiers got out, and he followed the crowd across to the other platform. He did not see any railway employees before crossing the line. He said he heard the rattle of a steel helmet when the electric train came in, and described how the deceased was extricated after the current had been switched off...

A number of railway employees gave evidence, and it was stated that one man and a women porter were on platform duty at the time. Mr. C.G. Tanner, a traffic inspector, was asked by the Coroner if he thought this was sufficient staff in the circumstances. He replied that it was possible to keep ordinary passengers back, but not soldiers. They are the most difficult to control? – You cannot control them. My experience is that the only people who can control them are the Military Police... There were about 150 people on the platform.

In recording a verdict of accidental death the Coroner said there had been a good deal of contradictory evidence, which was not to be wondered at in the view of the crowds, confusion and darkness. He said he thought this station was a dangerous place, with people crossing in front of the engines of trains. He fully realized the Railway Company's difficulties in regard to shortage of staff, but felt it might be represented to them that one man and one girl were inadequate when crowds are expected... "I readily believe the Inspector when he says that soldiers are more difficult to control than ordinary passengers," said the Coroner, "and the idea of one man and one girl controlling a crowd like that is perfectly ridiculous."

Mr. J.H. Jones, who appeared for the Southern Railway Company, expressed their regret at the accident.

William Carlton was later officially recorded as, *Overseas casualty, death due to multiple injuries caused by being run over by a railway train in Aldershot, England*. He was survived by his wife Mary Evelyn Carlton, then residing at 534 Devine Street; his mother Edith; his two sisters Mary Rosa and Dorothy Jean; and his brother Sergeant Stanley Carlton, who was in the same military unit, the 4th Canadian Regiment as his brother.

In January 1945, Mary Carlton received a War Service Gratuity of \$251.92 for the loss of her husband. Twenty-seven-year-old William Carlton was buried in Brookwood Military Cemetery in Surrey, United Kingdom, Grave 31.E.10. On his headstone are inscribed the words, TILL THE DAY BREAK AND THE SHADOWS FLEE AWAY.

CARR, Stuart Allan (#R/209938)

Stuart Carr exhibited the qualities that the air force deemed would make him excellent at his job. He was still a teenager when, tragically, like many others, he lost his life while training for one of the most dangerous tasks of the war.

Stuart Allan Carr was born in Sarnia on January 18, 1925, the son of Norman McLeod and Florence May (nee Wellington) Carr, of R.R. #1 London Road, Sarnia. His parents Norman and Florence Carr were married in Camlachie on October 10, 1919. Norman Carr was a well-known Sarnia Township dairyman. Stuart had four brothers: James Cameron (born 1922, who was a Lieutenant with the Royal Canadian Artillery and overseas at the time of Stuart's death); David MacKinlay (born 1928); Donald Norman and Robert Douglas. The Carr family also included Stuart's four sisters: Catherine Mary (born 1920, died May 27, 1936); Dorothy May (born 1926); Myra Amelia and Barbara Jean (born 1933).

Stuart attended S.S. No. 5 Public School in Sarnia Township from 1931 to 1939. Since so many of the Carr family attended the school, it was known as the "Carr School" according to Myra. Stuart attended Sarnia Collegiate from September 1939 to 1943, specializing in woodworking in his final year. From the age of thirteen until he enlisted, Stuart was employed by his father doing dairy work and truck delivery, working mornings and nights after school. He was active in baseball, hockey, rugby and horseback riding, and his hobbies included woodworking and building model planes. He also joined the Young Usher's Club and the St. Andrew's Presbyterian Church Choir, where he also played and captained the hockey team.

Stuart Allan Carr

Eighteen year-old Stuart Carr enlisted in the Royal Canadian Air Force in London, Ontario on February 12, 1943. He stood six feet tall, had brown eyes and brown hair, was single, and stated that following the war his plan was to take up commercial flying. He was initially posted to No. 2 Manning Depot in Brandon, Manitoba, beginning his air training in Winnipeg, then at #23 Pre-Aircrew Education Detachment at the University of Toronto. He continued training at #2 Air Gunners Ground Training School in Trenton, and #3 Bombing and Gunnery School at MacDonald, Manitoba. His training involved flying in various aircraft including Battles, Ansons and Wellingtons, and using a variety of guns. One of his evaluations stated, "*Has shown great improvement, especially in the air, and has the qualities of an excellent air gunner.*" Stuart Carr was awarded his Air Gunner's Badge on September 17, 1943.

Stuart Carr left Halifax bound for the United Kingdom on October 8, 1943, only eight months after he enlisted. He was posted to RAF Bournemouth before being transferred to No. 23 Operational Training Unit (OTU), based at RAF Pershore, at the end of October 1943. In early November 1943, parents Norman and Florence would receive a telegram from Stuart, who let them know that he had arrived safely overseas. On assignment in Scotland, Stuart at one point became homesick. His officers did not know what to do with him, so he was sent to a family in Scotland on leave to get well.

In December 1943, Stuart Carr became a member of RAF #1666 Conversion Unit, later RAF #1679 Heavy Conversion Unit, part of **Bomber Command**, with the rank of Sergeant Air Gunner. With the introduction of new heavy bombers, the four-engine Stirling, Lancaster and Halifax, the Royal Air Force introduced heavy conversion units (HCU) in late 1941 to qualify crews trained on medium bombers to operate the heavy bombers before final

posting to operational squadrons. Along with training recruits, some of the heavy conversion units carried out roles that included planting mines, patrolling for submarines, and bombing operations.

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war. There was no easy way to learn how to fly the heavy bombers, and training crews suffered a litany of disasters, crashes and deaths. By the end of the war, Bomber Command lost over 8,000 Allied airmen who were killed in training or by accidents alone.

Sergeant-Air Gunner Stuart Allan Carr

RAF #1679 HCU was based at RAF Wombleton, North Yorkshire from December 13, 1943 to January 27, 1944, outfitted with Avro Lancasters, the British four-engined heavy bomber. Only three months after arriving overseas, on January 23, 1944, the Lancaster II aircraft DS839 of which Stuart Carr was a crew member, was engaged in a night cross country training exercise that took off from Wombleton. During the flight the aircraft crashed at Ridgemont, Bedfordshire, England. The crash occurred at approximately 20.00 hours, three miles from Cranfield Airfield, in the County of Bedfordshire, and all crew members were killed. Accident investigators could not establish the cause of the crash, mainly due to the level of destruction of the aircraft. Perishing with Stuart Carr were Nav. Fred Whitten MacDonald, W/O James Joseph Farrell, R/G Leonard Ignatius Hogan; B/A Roy William Grosser; F/E Leslie Thompson; and Pilot Robert M. Grove (U.S.A.A.C.).

In late January of 1944, Norman and Florence Carr of R.R. #1, Sarnia, received the following telegram from the R.C.A.F. Casualty Officer at Ottawa about their son: DEEPLY REGRET TO ADVISE THAT YOUR SON R209938 SERGT STUART ALLAN CARR WAS KILLED ON ACTIVE SERVICE OVERSEAS JANUARY 23. PLEASE ACCEPT MY PROFOUND SYMPATHY. LETTER FOLLOWS. They received a second telegram in late January from the R.C.A.F. Casualty Officer at Ottawa regarding the funeral of their son. The telegram read; FUNERAL OF SON SERGEANT STUART CARR TAKES PLACE AT 2:30 P.M. JANUARY 28 AT CAMBRIDGESHIRE ENGLAND. A LETTER WILL FOLLOW.

Also in late January 1944, his parents received the following letter from the Squadron Leader, RCAF Casualties Officer, for Chief of the Air Staff in Ottawa:

Dear Mr. Carr,

It is my painful duty to confirm the telegram recently received by you which informed you that your son, Sergeant Stuart Allan Carr, was killed on Active Service.

Advice has been received from the Royal Canadian Air Force Casualties Officer, Overseas, that your son, who was a member of the crew of an aircraft, lost his life at 8:00 P.M. on January 23rd, 1944, as a result of flying operations at Ridgemont, Bedfordshire, England. His funeral took place at 2:30 P.M. on January 28th at Cambridge Cemetery, Cambridgeshire, England.

You may be assured that any further information received will be communicated to you immediately. May I take this opportunity to offer you and the members of your family my deepest sympathy.

A second letter, dated January 29, 1944, came from the Air Marshall, Chief of the Air Staff:

Dear Mr. Carr,

I have learned with deep regret of the death of your son, Sergeant Stuart Allan Carr, on Active Service Overseas on January 23rd and I wish to offer you and the members of your family my sincere and heartfelt sympathy.

It is most lamentable that a promising career should be thus terminated and I would like you to know that his loss is greatly deplored by all those with whom your son was serving.

Losing his life only five days after his nineteenth birthday, Stuart Carr was later officially recorded as, *Killed in flying accident, overseas (England)*. Nineteen year-old Stuart Carr is buried in Cambridge City Cemetery, Cambridgeshire, United Kingdom, Grave 13551A. On his headstone are inscribed the words, HE DIED THAT OTHERS MIGHT LIVE.

CHURCH, Maurice Gordon (#R/I14615)

Maurice Church was a western farm boy with plans to attend university after the war. He would lose his life while serving in one of the most dangerous postings of the war.

Maurice Gordon Church was born in Dilke, Saskatchewan on May 4, 1919, the son of George and Annie Isabel (nee Hill) Church, of Chamberlain, Saskatchewan. His father George was born in Sundridge, Ontario and was a farmer and carpenter in Saskatchewan. His mother Annie was born in Rosedale, North Yorkshire, England. Maurice had two sisters and one brother. Maurice was born and raised in the prairies, receiving his education at Prairie Island Elementary School No 1135, Bethune High School and Luther High School in Regina, completing his grade twelve in 1937. He was active in baseball, hockey and tennis. From 1937 until he enlisted in 1941, he was employed by his father as a farmer in Chamberlain, Saskatchewan. Maurice would serve in the militia, with the King's Own Rifles of Canada in Dundurn, with the rank of Private, from mid-November to mid-December of 1940.

Twenty-two-year-old Maurice Church enlisted in the Royal Canadian Air Force on July 14, 1941 in Regina, Saskatchewan. He stood five feet eleven inches tall, had blue eyes and blonde hair, and was single. He stated that his preference was to be a Pilot or Observer, and his ambition for after the war was to enroll in an engineering course at university. Sometime after Maurice enlisted, his parents George and Annie Church moved to Sarnia, first residing at 114 North Vidal Street, and later at 141 Euphemia Street.

Maurice was initially posted to No. 2 Manning Depot in Brandon, Manitoba. He received air training at #2 Initial Training School and #3 Air Observers School, both in Regina; #2 Bombing and Gunnery School in Mossbank, Saskatchewan (where he was awarded his Air Observer Badge on February 28, 1942); and #1 Air Navigation School in Rivers, Manitoba. Maurice Church embarked overseas for the United Kingdom on April 30, 1942. From #3 Personnel Reception Centre, he was posted to #2 Advanced Flying Unit (AFU), and then #23 Operational Training Unit (OTU) for further training. In mid-September 1942, he was posted to RCAF #425 Squadron, and on October 3, 1942, he became a member of RCAF #408 Goose Squadron "For Freedom", part of **Bomber Command**, with the rank of Warrant Officer Class II Navigator.

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

RCAF #408 Goose Squadron was formed in June 1941 at RAF Lindholme, originally flying Handley Page Hampden aircraft. In September 1942, based at RAF Leeming, they would convert to Handley Page Halifax bombers. In October 1943, these were replaced by Avro Lancasters with the squadron based at Linton-on-Ouse. No. 408 Squadron took part in the first 1000 bomber raid on Germany, participated in may operations against naval and industrial targets, and was a notable force in various mine-laying missions.

Maurice Church would serve with #408 Squadron for almost six months. Maurice was last heard from on March 31, 1943, when he volunteered to take the place of another navigator on a bombing expedition. One year after arriving overseas, on April 3, 1943, he was part of a crew aboard Halifax II aircraft JB866 (markings EQ-T) that went missing in action from a night trip to Essen, Germany. The aircraft took off from RAF Leeming on April 3 at

19:52 hours, one of 348 aircraft involved in the raid. The weather was uncertain so Pathfinder Force had a plan to mark the target either using sky or ground markers. In the event the conditions were clear, both kinds of markings were used, causing confusion amongst the main force. Nevertheless, bombing was accurate making it the most successful attack on Essen yet.

WOII/N Maurice Church

Of the 21 aircraft lost in the raid, one was Halifax bomber JB866. It was attacked by a German night fighter, crashing at 22:45 hrs at Opheusden (Gelderland), six kilometres South East of Rhenen, Holland. The entire crew were killed. Perishing with Warrant Officer II-Navigator Maurice Church were P/O.s Ebenezer Alfred Sirett and Grant Alexander Fletcher; F/O. John Dugald McBride; and Sgt.s Gilbert Davies Boyer, Franklin Roy Burke, and Kenneth Oliver Brice (RAF).

Following are portions of a story told to a Canadian newspaper in 2003: *According to eyewitnesses living in and around the village of Opheusden, the Halifax aircraft was circling above the southern edge of their village heading west. The bomber was heavily engulfed in flames and prior to turning north, jettisoned several bombs. The plane was descending very rapidly as it veered to the east. Several of the witness's felt the pilot was attempting an emergency landing in a farmer's field located adjacent to the Rhine River that flowed north of the village. The plane crashed with a tremendous force disintegrating as it landed. Several articles were found within a short distance from the crash sight, including the aircraft's tail wheel, a dinghy, an airman's jacket and a parachute lodged in a tree. The crew of seven were all killed. The airmen were buried near the crash site. The German occupational troops conducted the burials in the parish priest garden near the Roman Catholic church located in the Dutch village of Uden, April 4, 1943. The bodies were exhumed in September 1946 and reunited with 697 of their fallen comrades in the Uden War Cemetery in Holland.*

George and Annie Church in Sarnia initially received word from German sources that their son Maurice had been killed in action. R.C.A.F. Headquarters in Ottawa was more cautious, reporting him as, *Missing after air operations*. In September of 1943, Maurice Gordon Church's name would appear on the air force casualty list, and officially recorded as, *Previously reported missing in action overseas, now for official purposes is presumed killed during air operations*. In September 1946, his parents received a War Service Gratuity of \$303.36 for the loss of their son. Twenty-three-year-old Maurice Church is buried in Uden War Cemetery, Netherlands, Grave 4.G.13. On his headstone are inscribed the words, I HAVE FOUGHT A GOOD FIGHT, I HAVE FINISHED MY COURSE, I HAVE KEPT THE FAITH.

CLARK, Ross Edgerton (#J/14771)

Ross Clark enlisted soon after graduating high school, and had plans to attend university after the war. He would lose his life while flying for the Allied cause in North Africa.

Ross Edgerton Clark was born in Point Edward, Ontario on March 4, 1923, the son of William Ernest Edgerton (born in Stroud, Ontario) and Margaret Elizabeth Rhona (nee Gilbank, born in Cameron, Ontario) Clark, of

208 Arthur Street, Point Edward. Father William Clark was an engineer. Parents William and Margaret Clark were married on May 6, 1908 in Midland, Ontario. Ross Clark had three brothers: Wilbert Elmore (born 1910, served as a Corporal at Centralia, Ontario); William Kenneth (born 1916, served as a Trooper in the Canadian Army overseas); and Allan Ernest (born 1921, died at 5 months of age). Ross also had two sisters: Marjory Irene (born 1911); and Velma Clark (born 1914, became Mrs. Stanley Church). When Ross was eleven years old, he lost his father William Clark, who died in October 1934 at the age of forty-nine. Ross received his education at Point Edward Public School, 1929-1936, then at Sarnia Collegiate from 1936, graduating in 1941. He was active in hockey, swimming and tennis. Prior to enlisting, Ross was employed as a clerk at Loblaw Groceteria in Sarnia for one year (1940-1941), and then as an assistant time-keeper at Canadian Bridge Company, Windsor, Ontario, from September to December 1941.

Eighteen year-old Ross Clark enlisted in the Royal Canadian Air Force two days before Christmas, on December 23, 1941 in Windsor, Ontario. He lived at 1384 Bruce Avenue, Windsor at the time. He stood five feet six and a half inches tall, had brown eyes and dark brown hair, and was single. He requested flying duties. His ambition for after the war was to enter the field of chemical engineering. Initially posted to #5 Manning Depot in Lachine, Quebec, he would receive air training at RCAF Station Rockcliffe, #5 Initial Training School (ITS) in Belleville, Ontario, and #1 Air Observers School (AOS) in Malton, Ontario. He was awarded his Air Observers Badge in Malton on October 9, 1942, after which he visited his home in Sarnia on graduation 14-day furlough.

Ross Clark embarked overseas from Halifax for the United Kingdom on October 28, 1942. Soon after, his widowed mother Margaret in Point Edward received a cable from her son announcing his safe arrival overseas. Initially posted to #3 Personnel Reception Centre, he was transferred to #10 Advanced Flying Unit (AFU) and then to #6, and then #22 Operational Training Unit (OTU) for further training, before being transferred to RCAF #429 Squadron on June 1, 1943. At the end of June, he was reposted to #22 OTU, and in mid-July 1943, was posted to #311 Ferry Training Unit (FTU). On July 19, 1943, Ross embarked from the U.K. to North Africa, where he became a member of the reinforcement pool of the Northwest African Air Force (NAAF). On July 20, 1943, Ross Clark would become a member of RCAF #425 Alouette Squadron "Je Te Plumerai" (I shall pluck you), NAAF (Northwest African Air Force), part of **Bomber Command**, with the rank of Flying Officer-Pilot.

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

No. 425 Squadron formed in June 1942 at RAF Dishforth in Yorkshire, England. It was designated the "First French Canadian Squadron", equipped with Vickers Wellingtons. Bomber Command combed other squadrons for French speaking air and ground crews to fill its ranks. On January 1, 1943 the squadron was transferred to No. 6 (RCAF) Group. In May 1943, RCAF #425 Squadron had moved their base of operations from RAF Dishforth to Kairouan in Tunisia (North Africa). From there, still flying Wellingtons, it would conduct operations against **Sicily** and **Italy**. In November 1943, the squadron returned to Dishforth resuming operations from there, and the following month were re-equipped with Handley Page Halifaxes. In December 1943, the squadron was transferred to RAF Tholthorpe, Yorkshire.

Less than three weeks after arriving in North Africa, Ross Clark would lose his life. On August 6, 1943, he was part of a crew aboard Wellington aircraft HE261 that crashed into the sea off Cap Bon, near the harbour at Haquarhe, Tunisia. Perishing with Flying Officer-Pilot Ross Clark were Sgt. Charles Andrew Reist; FS. Thomas John Driscoll; P/O Duncan Andrew Wood; and Sgt. R.B. Perry (RAF). Approximately one week later, his widowed mother Margaret received a telegram informing her that her son, PILOT OFFICER ROSS E CLARK WAS MISSING AFTER ACTIVE SERVICE OVERSEAS. No further details were provided.

Some time later, Margaret Clark received a letter from the Minister of National Defence for Air stating: *I have learned with deep regret that Pilot Officer Ross Edgerton Clark, R.C.A.F. has been reported missing, presumed drowned. The Government and people of Canada join me in expressing the hope that more favourable news will be forthcoming in the near future.* Ross Clark was later officially recorded as, *Previously reported missing after air operations, now for official purposes, presumed dead, fell into the sea, presumed drowned (N. Africa).*

In September 1952, Margaret received a letter from the Wing Commander, R.C.A.F. Casualties Officer, for Chief of the Air Staff. Following is a portion of that letter:

Dear Mrs. Clark,

It is with reluctance that after so long an interval, I must refer to the loss of your son, Flying Officer Ross Edgerton Clark, but due to the lack of any information concerning him since he was reported missing, it must be regretfully accepted and officially recorded that he does not have a "known" grave.

Due to the extreme hazards attending air operations there are, unhappily, many thousands of British aircrew boys who do not have "known" graves and all will be commemorated on General memorials that will be erected at a number of locations by the Imperial War Graves Commission (of which Canada is a member), each Memorial representative of a theatre of operations. One of these Memorials will be erected at Malta, and the name of your son will appear on that Memorial...

I realize that this is an extremely distressing letter and that there is no manner of conveying such information to you that would not add to your heartaches. I am fully aware that nothing I may say will lessen your great sorrow, but I would like to express to you and the members of your family my deepest sympathy.

Twenty year-old Ross Clark has no known grave. His name is inscribed on the Malta Memorial, Malta, Panel 10, Column 1. His family also erected a memorial stone at Lakeview Cemetery, Sarnia, Section M. Ross Clark's name is also inscribed on the Bell monument in Veterans Memorial Park in the village of Point Edward.

CLARK, William Brown (#R/68182)

If anyone had reasons not to enlist, it was William "Bill" Clark III. Bill could have easily chosen not to go overseas. He was the only son to his widowed mother. He had a secure job in Sarnia. And Bill was getting married. But enlist he did because he wanted to serve his country.

He was born in Sarnia on June 20, 1912, the youngest child and only son of William Brown II (born in Sarnia) and Agnes Jane (nee Steed) Clark (born in San Francisco), of 425 North Christina Street, Sarnia. Parents William Clark II and Agnes were married in November 1896 in Sarnia. After their marriage, the couple saw their family swell to seven with the birth of Bill and his four sisters: Janie Elizabeth Clark (born 1907, who resided with their mother on Lakeshore Road, Sarnia at the time of William's death); Margaret Caverley (born 1902 who became Mrs. Roy M. Smith, resided in Sarnia); Catherine Cuthbert (born 1897 who became Mrs. Charles Weir, resided in Sarnia); and Emily Bradley (born 1899 who became Mrs. L. Woolley, of Toronto).

Bill attended Lochiel and London Road elementary schools, 1920-1926, and while he was in grade six tragedy struck the Clark household. His father, who'd been a dry goods merchant in Sarnia, passed away in December 1924 at age 57 from prostrate cancer. At a young age, Bill was now the only male in the household. He was, however, a mature young man who accomplished much before he enlisted in 1940.

He attended Sarnia Collegiate in September 1926 and graduated in the spring of 1933. In his last year there, he had an interest in Special Commercial courses. Bill was involved in playing sports—rugby, baseball, track and field—and was a keen builder of model airplanes. He was also an expert yachtsman with the Sarnia Yacht Club. Bill was interested in the military as well. At age sixteen, he joined the Lambton Regiment, with which he served for three years, and as a Private he gained two years experience as a Lewis Gunner. After leaving high school, Bill became a well-known downtown businessman. He worked for W.B. Clark Company Limited (Dry Goods Store) on North Front Street, with which his family had been associated for many years. Despite his young age, he was assistant store manager from 1934-1938, then manager from 1938-1940.

William Brown Clark

At age 28, Bill Clark enlisted in the Royal Canadian Air Force on July 17, 1940 in London, Ontario. He stood five feet eight inches tall, had brown eyes and black hair, and resided with his mother on North Christina Street at the time. His training was thorough and he was seemingly always on the move. Bill departed to #1 Manning Depot in Toronto, along with fellow Sarnians John Murray and John Hallam (Hallam is also included in this Project). Bill then received air training at #2 Initial Training School in Regina, #1 Air Observers School in Malton, #1 Bombing and Gunnery School in Jarvis and #1 Air Navigation School in Rivers, Manitoba. On February 15, 1941, Bill Clark was awarded his Air Observer's Badge.

In mid-March of 1941, on the evening before his scheduled wedding, the then Sergeant Observer William Clark of the R.C.A.F., was honoured by a number of his friends at a stag party at the Sarnia Yacht Club. Among those who attended were Logan Mackenzie, Lorne and Lyle Watcher, Gordon Link, David Wright, Charles Weir, Roy Smith, James Harris, Jack Lewis, Mel Garside, Dr. Jack Garrett, Reginald Ewener, Stewart Austin, Patrick Butler, Gordon Ferguson and Arthur Wilkinson. William was presented with a purse of money as a gift.

On March 21, 1941, Bill married Marian Emily Leach (born 1913), the second daughter of Mr. and Mrs. Norwood A. Leach of Toronto, formerly residents of Sarnia. At the ceremony at St. George's Anglican Church in Sarnia, Miss Leach's attendants were her sisters Mrs. Allan Warwick of Detroit and Miss Ilean Leach of Toronto. Serving as best man was Norwood F. Leach. Nearly three months later, the bride's sister, Miss Ilean Leach, would also get married at St. George's Anglican Church to Donald Fraser of St. Thomas. Following William and Marian's wedding ceremony, a reception was held at the Sarnia Riding Club. After the reception, the newlywed couple left for a wedding trip to the Maritimes. Their residence was 110 Oriole Parkway, Apt. 303, Toronto.

On April 5, 1941, two weeks after getting married, Bill Clark embarked overseas from Nova Scotia to the United Kingdom. He arrived in England along with three other Sarnia airmen: Sergeants Lloyd Gallaway (also included in this project), John Bennett and J.D. Murray. From #3 Personnel Reception Centre at Uxbridge, Bill was transferred to #11 Operational Training Unit at RAF Bassingbourn for further training. On July 7, 1941, he became a member of RAF #12 Squadron "Leads the Field", part of **Bomber Command**, as a Sergeant-Air Observer flying Wellington bombers.

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

At the outbreak of war, RAF #12 Squadron moved to France outfitted with Fairey Battle aircraft. By June 1940, the squadron was back in England stationed at RAF Finningley, then RAF Binbrook. By November 1940, still at RAF Binbrook, the squadron had been re-equipped with twin-engine Vickers Wellington medium bombers. In 1942 the squadron moved to RAF Wickenby and soon converted to Avro Lancaster four-engine heavy bombers.

Sergeant-Observer William Brown Clark

Less than two months after becoming a member of RAF #12 Squadron, Bill Clark was killed in action. His death occurred on the evening of August 31, 1941 when he was a crew member aboard Wellington II aircraft W5577 (markings PH-U). The Wellington had taken off at approximately 2120 hours from a station at Binbrook for a night bombing mission targeting Boulogne-sur-Mer in France. According to German documents, the following is what happened to the aircraft and crew: Off the Dieppe coast, the Wellington aircraft was caught in the beam of six searchlights, was shot, then turned and finally came down into the sea about 700 metres from the beach in the channel off Dieppe (near Berneval le Grand). A fire was visible for three minutes after the crash.

Nearly twenty-four hours later, at 2130 hours, the body of one of the airmen wearing an RAF uniform and life jacket was carried in the wreckage of a rotating gun turret towards the shore near Berneval. On September 2, searchers recovered the body 4-5 km east of Dieppe among rocks about 40 m from the beach. A parachute pack found near the scene was labelled Sergeant Russell. The body was buried in the French Cemetery at Berneval le Grand. On September 9, the body of an English airman was washed ashore between Berneval le Grand and Biville Sur Mer. His identity discs bore the words: CAN. R.68182 AIRMAN W.B. CLARK, PRESS R.C.A.F. His body was also buried at Berneval le Grand. On September 20, the body of R.N. Dastur Zoroastrian was washed up on the Channel coast below Berneval le Grand. His body was also buried at Berneval le Grand. According to RAF investigators, the only result that differs with the German account is that the aircraft crashed on the side of a cliff. The three crew members whose bodies were not recovered were assumed to have washed out to sea with the aircraft wreckage.

Perishing with twenty-nine-year-old Sergeant-Observers Bill Clark were Pilot-Officers Rusttom Nariman Dastur and Chandra Prakash Khosla, members of the Royal Indian Air Force, and Sgt.'s Ronald Benjamin Russell (RAF), James Fitzgerald Wolff (RCAF) and Paul James Lewis (RAF). The three crew members whose bodies were not recovered are commemorated on the Runnymede Memorial. The remains of Bill Clark were buried at Berneval Le Grand in France. They would later be exhumed and reburied in the Dieppe Canadian War Cemetery.

In early September of 1941, Bill's widowed mother, Agnes Clark, received a telegram from the Director of Records in Ottawa informing her that her only son, SERGEANT WILLIAM B CLARK WAS REPORTED MISSING AS THE RESULT OF AN AIR OPERATION OVERSEAS ON AUGUST 31. There were no further particulars, so according to the *Canadian Observer*, "the fact that the flyer was designated as missing held out some hope that he might be a prisoner or had made an escape in some other way." In early November 1941, Agnes received the following telegram from Ottawa; SGT CLARK WHO WAS PREVIOUSLY REPORTED MISSING IS STILL MISSING, NOW BELIEVED KILLED IN ACTION. Agnes and her four daughters regarded this message as a customary notice sent to the relatives of men who are reported as missing and about whom no reliable information has been received within two months. Bill's family and friends still hoped that he might be safe, a probable prisoner of war in Nazi-occupied Europe.

In mid-September 1942, the Flying Officer, for Director of Personal Services at the Air Ministry in London, England issued a "Notification of Death" that read: *CERTIFIED that according to the records of this department CAN/R68182 Sergeant William Brown Clark, Royal Canadian Air Force, was reported missing and is presumed, for official purposes, to have lost his life on the thirty-first day of August, 1941, as the result of air operations. According to a report received from the International Red Cross Committee, this airman is buried in the Cemetery, at Berneval-le-Grand, near Dieppe, France.*

Bill Clark was later officially recorded as, *Previously reported missing after air operations overseas, now for official purposes, presumed to have died.* Marian, Bill's wife of only five months, was residing on Oriole Parkway in Toronto at the time of his death. In early February 1945, she received a War Service Gratuity of \$163.04 for the loss of her husband. In late February 1946, she received the following letter from the R.C.A.F. Records Officer in Ottawa: *Dear Mrs. Clark:*

It is a privilege to have the opportunity of sending you the Operational Wings and Certificate in recognition of the gallant services rendered by your husband Sergeant W.B. Clark. I realize there is little which may be said or done to lessen your sorrow, but it is my hope that these "Wings", indicative of operations against the enemy, will be a treasured memento of a young life offered on the altar of freedom in defence of his Home and Country.

Marian re-married years later, becoming Mrs. Marian Simpson, residing on Oriole Parkway in Toronto. In Sarnia, Bill left behind his widowed mother Agnes Clark and his four sisters. Twenty-nine-year-old Sergeant Bill Clark is buried in the Dieppe Canadian War Cemetery, Hautot-Ser-mer, Seine-Maritime, France, Grave H.7. SOURCES: A, B, C, D, E, F, G, J, L, M, N, 2C, 2D, 7C, 8X, 8Y, 10U, 2g

CLARKE, John Charles (#A/20130)

It was indeed a family affair. John “Jack” Clarke was part of a family known as the “Fighting Clarkes” which saw Jack, two younger brothers, his sister, and his father all serve in the war.

Jack Clarke was born in Windsor, Ontario on July 17, 1920, the eldest son of Cecil Charles Clarke (born March 31, 1898) and Phyllis Ann Edith (nee Ewener, born December 1900) Clarke, of 121 South Forsythe Street, later 306 George Street, and later 208 Harkness Street, Sarnia. Jack’s parents were both born in England—father Cecil Charles Clarke in Rotherham, Yorkshire; and mother “Edith” Ewener in Southwark, Middlesex. Edith Ewener immigrated to Canada in 1908, and Cecil Clarke, a mason at the time, in 1913. Phyllis Edith Ewener’s father, Walter George Ewener, would serve in World War I, and one of her brothers would serve in World War II.

Parents Cecil Charles Clarke and Edith (Ewener) Clarke were married on February 10, 1920 at St. John’s Rectory in Sarnia. Cecil Clarke, the son of Charles William (born 1868, Lincolnshire, England) and Amelia Annie (nee Hannant) Clarke, was residing in Windsor at the time, employed as a bricklayer; while Edith Ewener, the daughter of Walter George and Phyllis Elizabeth (nee Riley) Ewener of Campbell Street, Sarnia, was residing in Sarnia.

Cecil and Edith Clarke were blessed with four children: Jack; Reginald C. (born 1921); Cecil William (born 1926) and Marguerite Phyllis (born 1923 who became Mrs. Marguerite Guthrie). In mid-1921, parents Cecil and Phyllis Edith Clarke, and their less than year-old son Jack, were residing in Windsor, renting a home at 1062 Lillian Street. In 1925, the Clarke family moved from Windsor to Sarnia. Jack was educated in Sarnia schools and at Sarnia Collegiate. Two years before WWII broke out, Jack joined the Militia in Sarnia in February 1937, and was a member of the 11th Field Company, Royal Canadian Engineers. When Canada went to war in 1939, Jack and his brother Reginald volunteered for service overseas.

Perhaps the commitment of two men who served in WWI influenced Jack’s decision to enlist. Jack’s (maternal) grandfather, **Walter George Ewener**, enlisted in Sarnia on January 18, 1915 when he was 35 years old. He left behind his wife Phyllis and family at 300 Campbell Street and his job as a construction engineer to become a member of the 34th Battalion. Private Walter Ewener would arrive in England on November 1, 1915. He would advance to the rank of Corporal, and was a musketry instructor in England from March to September 1916. In September 1916, he would revert to the rank of Private, at his request, in order to proceed to France. In late-September 1916, Private Walter Ewener would arrive in France as a member of the 43rd Battalion. Soon after arriving, he was gassed slightly at the Somme, and was later blown up by a shell explosion, fracturing his left ankle. After two months in France, he was returned to England to be treated for his injuries. Walter Ewener would continue his service in England, and would survive the war, being discharged on demobilization in March 1919, when he returned to Campbell Street in Sarnia. Walter and Phyllis Ewener would later reside at 494 Wellington Street, Sarnia. Note: A letter written by Walter Ewener to his wife Phyllis is included in this Project on page 130.

Jack’s father, **Cecil Charles Clarke**, also served in the Great War. Seventeen year-old Cecil Clarke enlisted in London, Ontario on February 2, 1916. He recorded his birthdate as March 31, 1897 (he was born on that date, but in 1898), thereby making himself 18-years-old. He recorded his occupation as mason, and his next-of-kin as his mother Annie Clarke, of 92 Howard Avenue, later 101 Lillian Street, Windsor. As a Private with the 71st Battalion, he would arrive in England aboard the *SS Olympic* on April 11, 1916. Two months later, on June 11, 1916, he would arrive in France, a member of the 4th Canadian Mounted Rifles. In mid-September 1916, he was wounded in action when while repairing a small dugout, he was buried under dirt and rubble when of an enemy shell exploded near him. He was returned to England, treated for burns, a back contusion and “shell shock”. After convalescing, he would return to France in early May 1917, as a member of the Canadian Railway Troops. Cecil Clarke would survive the war, being discharged on demobilization in March 1919, when he returned to Windsor.

Cecil Clarke had not given up the fight, however. When his two sons, Jack and Reginald, decided to join the active service forces in WWII, Cecil, now 41 years old, decided to go along just to look after them if they got into a tight spot. So Cecil enlisted again, becoming a Sapper with the 11th Field Company of the Royal Canadian Engineers, the same unit as his two sons.

Jack Clarke, age 19, enlisted in the Canadian Army on September 5, 1939 in Sarnia. He was residing on East Wellington Street at the time, and was doing concrete work and carpentry for contractor W. Passmore. He stood five feet eight inches tall, had brown eyes and brown hair, was single, and stated that his plan was to stay in the Army following the war. Jack received his army training with the Royal Canadian Engineers in London and Petawawa,

Ontario. He would embark overseas from Halifax for the United Kingdom on August 22, 1940, first stationed at Aldershot, and later Seaford, Sussex, England. He would continue his training in the U.K., a member of the 11th Field Company, Royal Canadian Engineers, and just like his father Cecil and his brother Reginald, Jack would attain the rank of Sergeant. The RCE troops enabled the army to move—they repaired and built roads, airfields and bridges; cleared mines and road blocks; and filled in craters and anti-tank ditches, all while working alongside combat troops at the front and often under fire.

Jack and Reginald would get their stripes first, however, and took keen delight in issuing instructions to “the old man.” As it turned out, however, Sergeant Cecil Clarke proved he could take it as well as his sons and it wasn’t long before he was sporting three stripes and remarking, “I told you so, boys.” Jack and Reginald would both serve overseas in the Canadian Army and, like their father, would become members of the Royal Canadian Engineers.

While training in England, Jack met the girl of his dreams and, after a nine-month courtship, he married Lucille (nee Baitup) in Hailsham, Sussex, England on February 12, 1942. At 23, Lucille, the daughter of a Private Chauffeur, was already a widow, employed as a Shop Assistant & NAAFI Manageress, and was residing at 18 Hindover Road, Seaford, Sussex. Ironically, the military did not grant Jack’s “permission to marry” until October 1942. Jack and Lucille had a baby daughter together, Ann Lucille, born September 13, 1942 in Brighton, England, and they resided at 78 Stafford Road, later 8 Vale Road, Seaford, Sussex, England.

Cecil, Jack and Reginald were stationed overseas, but they were not the only family members getting involved. Their younger brother, Cecil William, joined the army, becoming a member of the 30th Reconnaissance Battalion in London, Ontario with the rank of Trooper. Cecil would also serve overseas. The only Clarke daughter, Marguerite, became a Sergeant of the Canadian Women’s Army Corps and served in the Recruiting Depot in London, Ontario. It is little wonder the family was nicknamed, “The Fighting Clarks” (of the army).

The Clarks were busy on the home front as well. Anne Clarke (Mrs. Charles William Clarke in above photo), was Cecil Clarke’s mother and Jack Clarke’s paternal grandmother. In 1942, at the age of 81 and residing on Howard Avenue in Windsor, was recognized in a local newspaper for her efforts in supporting the war effort. She had been made an honorary member of the Alpha Sigma B branch of the Women’s Auxiliary of All Saints’ Church in appreciation of her efforts in knitting socks for servicemen. Referred to as the “Grand Old Lady of Knitting of Windsor”, she had knitted, since the beginning of that year, 92 pairs of socks for the Red Cross and 72 pairs of socks for the Salvation Army Red Shield.

(L to R) Corporal Reginald Clarke, Mrs. C.W. Clarke (the mother of Sgt. Cecil Clarke, Windsor), Sergeant Cecil Charles Clarke and Corporal John ‘Jack’ Charles Clarke

Since the war began, Anne had knitted a grand total of 328 socks. Making the task more impressive was that she knitted the most difficult type of sock. Not the more simple to do service sock for Anne. She knitted the seaman’s long stocking which was made with heavier wool, was ribbed and almost three feet long. Making her feat more amazing, incredible actually, was that Anne was totally blind in one eye and had only ten percent vision with the other. The Windsor newspaper article also mentioned the “fighting trio” in Sarnia--her son Sgt. Cecil Clarke, and her two grandson’s Lance-Sergeant “Jack” and Corporal Reginald Clarke, all with the Royal Canadian Engineers.

[Footnote: Incredibly, another Clarke family in Sarnia was known as, “The Fighting Clarks” (of the navy). Living on Lakeshore Road, Lieutenant Roy Clarke and his wife had four sons who would all serve in the Royal

Canadian Navy. A fifth son was a decker on the *Harmonic*, too young to enlist in the R.C.N. Members of the "Fighting Clarkes" of the navy included father Lieutenant Roy Clarke, who had been in the Navy prior to going into the Army; sons and Petty Officers (Gunner's Mates) Douglas and David Tait; Petty Officers Gordon Stewart and Thomas; and the youngest son, Bruce, who planned to join the navy as soon as he was of age.]

August 19, 1942 was one of the darkest days in Canadian military history. On that day, 4,963 Canadian soldiers landed on the beaches of **Dieppe**, a small town on the coast of France. Called *Operation Jubilee*, the plan had soldiers arriving early in the morning under the cover of darkness; however, they were delayed and had inadequate supporting fire. The Canadians waded ashore, trying to cross the cobblestone beaches but were fully visible to the well-entrenched Germans who were waiting for them sitting atop the 75-foot high cliffs. By mid-morning, it was clear that the raid could not continue, and the retreat began. The Operation was a disaster and, of the 4,963 Canadians who landed, 907 were killed, 2,460 were wounded and 1,946 were captured.

A number of Sarnia and Lambton men took part in the Dieppe Raid, and according to the *Sarnia Observer*, that included the three members of the Clarke family who were members of the Royal Canadian Engineers--father Cecil Clarke, a Sergeant and veteran of the Great War; Lance-Sergeant Jack Clarke; and Corporal Reginald Clarke. Cecil had promised to look after his boys if they got into a "tight spot" and the Dieppe Raid had plenty of them. Miraculously, all three Clarkes would not only survive the disaster, but would escape unharmed.

Edith Clarke received a cable a week after the raid from her husband Cecil, which informed her that he and their two sons all took part in the raid and were now all safe and well in England. She also received news that her brother, Lieutenant William A. Ewener, of the Royal Canadian Engineers, who also took part in the Dieppe Raid, was seriously wounded, but would survive.

A little over a year after improbably surviving the Dieppe Raid, Jack Clarke was killed in a fluky accident far from the battlefield. On November 23, 1943, while on duty as an instructor with a demolition unit in Frimley, Surrey, Jack died when a bomb accidentally detonated. He died from burns and multiple fractures. The blast killed one other soldier and wounded ten more.

The next day, Edith Clarke, now living at 208 Harkness Street, received a telegram from the Director of Records at Ottawa informing her of her son's death. No information as to whether the accident occurred in England or with the Canadian troops in Italy was provided. The message said that further information would be transmitted later. It must have been a horrible time for Edith as she had received a letter from Jack only two weeks prior. Jack Clarke's remains were buried on November 27, 1943 in Brookwood Cemetery in Woking, Surrey, England. His twice-widowed wife Lucille and baby daughter Ann were witness to it.

In Sarnia, Edith received the following letter from the Major-General, Adjutant-General, about her son in early December 1943:

Dear Madam:

I deeply regret to inform you that your son, A.20130 Sergeant John Charles Clarke, gave his life in the Service of his Country in the United Kingdom on the 23rd day of November, 1943. You may be assured that any additional information received will be communicated to you without delay. The Minister of National Defence and the Members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

Two weeks later another letter arrived, this time from the Colonel, Director of Records, for Adjutant-General.

Dear Madam:

In confirmation of my telegram of the 23rd of November, I deeply regret to inform you that official information has been received from Canadian Military Headquarters, Overseas, advising that your son, A.20130 Sergeant John Charles Clarke, died on the 23rd day of November, 1943. The report is to the effect that he died as the result of accidental blast burns whilst on scheme in the line of duty.

You are further advised that at a Coroner's Inquest subsequently convened for the purpose of inquiring into the circumstances surrounding your son's death, the Coroner's Verdict was "death by misadventure". You may rest assured that any additional information received will be communicated to you without delay. May I express sincere sympathy in your bereavement.

Jack Clarke left behind his parents, his brothers and sister, his wife of less than two years, Lucille, and their fourteen month-old baby daughter, Ann Lucille. In February 1944, Lucille Clark wrote the following letter to the

Estates Officer, Canadian Military Headquarters. Following is a portion of that letter:

Dear Sir,

Re A.20130 Sgt Clarke J.C. (deceased). I received some of my husband's personal effects today, but I find you have not enclosed his wallet. It was handed to me at Aldershot on the day of my husband's funeral but my husband's father, Sgt CC Clarke A.20152 No 1 CERU came to me about a week after and said he had to take it back to Records Office and that I would receive it with his personal effects.

If you have not had it would you possibly trace it for me as it is of highly sentimental value to me. It contains photographs, a silver stamp case with one stamp, a horseshoe on a chain with my husband's name and number on it, also one ten shilling note, a florin and three threepenny pieces. It is not the value of the wallet, but it is the personal feeling attached to it. As I have already said, it has been in my possession once since his death so I know someone must have it...

Trusting you will be able to trace wallet for me.

Cecil Clarke thought he was given the wallet as a keepsake for Jack's mother and sister, so after learning that Lucille wanted it, he immediately forwarded it to her. In August 1944, Lucille received the following reply from the Captain for Officer i/c Estates, Canadian Military Headquarters:

Dear Madam,

With reference to your letter of 21st Feb 44 and this Headquarters letter of 30 Mar 44, it is regretted to inform you that the wallet of your late husband's, which was obtained from his father in Canada, was lost at sea as a result of enemy action, while being returned to England.

The details of the inquiry into the accident were released on December 29, 1943. Results included: *Sgt. Clarke and Sgt. Jodoin were carrying out a Course of Instruction and in charge of the party; the accident occurred in the course of training at the Demolition Area (Deer Rock Hill) at about 1315 hours 23 Nov 43; two soldiers - Sgt. J.C. Clarke and Sgt. G.E. Jodoin were killed in the accident, and ten other soldiers were injured; the evidence was that Sgt. Clarke and Sgt. Koenig were to blow up Mk. IV and Kv. V mines, to show the Sappers the effect from the explosion of a mine. Holes were augered and in the meantime, one of the instrs. proceeded to put the primers in the mines. They put one mine down in the hole and had a little difficulty in doing this. When they placed the second one in, the explosion occurred; evidence shows that a hole approx.. 7 feet deep was bored of similar size to the mine to be lowered into it. The first mine with little or no assistance was lowered to the bottom. The second mine became lodged and the manner of using the tamp stick either caused the second mine to explode or caused the second mine to drop onto the first mine which caused the explosion; it is believed from the evidence that one of the fuses was defective in that the shear wire damaged by a previous blow or pressure from previous use...*

The Court added these remarks: *1. From the evidence presented it would appear that these mines and fuses are used in trg of Sprs (training of Sappers) in laying and clearing mine fields. It is suggested that in the future all fuses which are taken out for demolition purposes should not have been used in any previous capacity. 2. It is further suggested that it be very carefully stressed to all Instrs whether Offrs or NCOs that where explosives or components thereof be known to be faulty or suspected to be faulty that these be reported and arrangement made for their destruction when a demonstration is not in progress.*

It was determined that the Sergeants improperly carried out an unauthorized demonstration, though improvisation was permissible. There was no evidence of any neglect, improper conduct or willful misconduct on their part. The Court, the Colonel in charge and the Major General in Command all felt that control and supervision of the Demolition Area was insufficient.

Jack Clarke's death was later officially recorded as, *Overseas casualty, misadventure, due to blast and burns (Scheme), multiple injuries and fracture of the skull (England)*. In mid-February 1944, a group of 94 area soldiers arrived from overseas duty at the London, Ontario train station into the arms of happy, laughing friends and relatives. According to the London media report, one of the happiest family groups at the station were the "Fighting Clarkes" of Sarnia. Sgt.-Major Cecil Charles Clarke, who had been overseas for almost four years, was greeted by his wife Edith, and their twenty-one-year-old daughter Cpl. Marguerite Guthrie of No. 6 Company, C.W.A.C.. Two of his sons, Lt-Cpl. Cecil Clarke and Sgt. Reginald Clarke, were both still serving overseas in the army. His son Jack never made it home.

In April 1945, Lucille Clarke of Vale Road in Sussex, England, received a War Service Gratuity of \$915.46 for the loss of her husband. In September 1946, the Colonel, Director of Records, for Adjutant-General, sent Edith Clarke a photograph of the grave and marker over the burial place in Surrey, England, of her late son. Twenty-three-

year-old John Charles "Jack" Clarke is buried in Brookwood Military Cemetery, Surrey, United Kingdom, Grave 47.H.2.

COLEMAN, Wesley Percival (#R/91480)

At 5'3", he was deemed too short to serve with the RCAF. Wesley Coleman, however, persevered and in 1941 enlisted successfully. When he died in action two years later, he left behind a young woman he was planning to marry.

Wesley Percival Coleman was born in Tisdale, Saskatchewan on March 3, 1922, the son of Rev. Stanley Harold (born in Plymouth, England) and Sophia Beatrice (nee Armstrong, born in Alice, Ontario) Coleman, of Midland, Ontario. Parents Stanley and Sophia Coleman were married in February 1919 in Caughnawana, Quebec. Wesley's siblings included brothers Kenneth Armstrong (served with the RCAF), Stanley Lynden, Harold R., and Lyman Russel Coleman; and sisters Winifred Frances and Joan Margaret.

Wesley resided in Saskatchewan until age four, after which the Colemans moved to Quebec for three years. When Wesley was seven, the family moved to Sarnia-Lambton. Wesley received a portion of his education at Courtright Public 1935-1937 and attended Sarnia Technical School 1937-1938. He was very active in gymnastics, hockey and baseball, and his hobby was collecting and drawing maps of the world. After graduating at age seventeen, Wesley was employed by Captain B.J. Zink in Toronto as a Seaman from 1938-1940, and then was employed at Canadian Scale Company Limited from 1940-1941 as a machinist apprentice.

Wesley Coleman, at age 18, enlisted for the second time with the Royal Canadian Air Force on February 4, 1941 in Toronto. Perhaps he was influenced to enlist by his father, an engineer by trade, but an Anglican minister by vocation. During WWII, Reverend Stanley Coleman served as a Navy Chaplain (R.C.E.) at the Royal Canadian Barracks in Halifax, Nova Scotia.

What distinguished young Wesley was his diminutive stature. Standing only 5'3", Wesley was turned down when he had previously applied to the RCAF in August 1940 in Toronto, because he was 1 and ½ inches too short to serve. He didn't give up and was accepted the following year. He was residing with his mother at the time, at 43 Mayfield Avenue, Toronto-Swansea. He had blue eyes and light brown hair, was single, and expressed a written preference for flying duties, specifically as an Air Gunner. The Recruiting Officer wrote of Wesley, *Very pleasant keen type; Obviously good home background; Should make good air-crew material*. The Recruiting Medical Officer wrote of him, *Minimum height but solidly built, alert & intelligent, and should be a very good man for observer or gunner*. A short time after enlisting, a Toronto newspaper featured this story on Wesley Coleman while he was stationed at Manning Depot in Toronto:

*SMALLEST MAN AT DEPOT ALSO NEATEST, BRIGHTEST
"Little Caesar," Air-Gunner Coleman, Comes of Fighting Family
FATHER IS IN NAVY*

"Little Caesar," smallest, shortest man in the R.C.A.F. at Manning depot, is proving that physical bulk is no yardstick to efficiency. The 18-year-old wireless air gunner, whose real name is Wesley Coleman, was chosen "stick" man of his squadron last week. That's air force lingo for the best-groomed, neatest man on parade, with the shiniest buttons and best conduct.

To the stick man, chosen weekly on the recommendation of the N.C.O.'s and men, go special privileges, including a weekend pass. His grandfather, now retired Lieutenant-Com. W.R. Coleman, was serving on a submarine when it was cut in two during the last war; his father, an Anglican clergyman, is now in the Canadian navy, and his brother Kenneth, 22, is in the R.C.A.F. Another brother, William is at the University of Toronto and planning enlistment in the R.C.A.F. A younger brother, Lynden, 17, has applied to the Royal Canadian Navy, and is awaiting call.

"Little Caesar" graduated from high school at the age of 17, was studying draughting as an apprentice to a west Toronto firm when he enlisted.

Wesley's training had him on the move. From #1 Manning Depot in Toronto, Wesley received air training at #1 Coast Artillery Co-operation (CAC) in St. John New Brunswick and #7 Bombing and Gunnery School (BGS) in Paulson, Manitoba. The BGS Chief Instructors comments on Wesley were, *Very capable. Intelligent and pleasing. Has made an exceptionally good class leader*. Wesley then continued his training at #1 Wireless School in Montreal, Quebec. He was awarded his Air Gunner's Badge on March 2, 1942 and embarked overseas from Halifax for the United Kingdom on April 1, 1942.

WAG Wesley Percival Coleman

Photos: Wesley, brother Ken & father Stanley

Much more training awaited him in England. From #3 Personnel Reception Centre in the U.K., Wesley received further training at #4 Signal School at RAF Madley; #9 and then #10 Advanced Flying Unit (AFU); and #3 Radio Direction Finding School. On September 10, 1942, he would be posted to #6 (Coastal) Operational Training Unit. In November 1942, he became part of the RAF #1402 (Meteorological) Flight Unit, No. 15 Group, **RAF Coastal Command**, based at RAF Aldergrove in Northern Ireland. Its role was to carry out daily flights into the North Atlantic to collect meteorological data. It also kept observations for U-boat activity. Wesley would attain the rank of Warrant Officer Class II, serving as a Wireless Operator-Air Gunner.

After all, or in spite of, his hours of intense training, Wesley was dead within a year. On September 8, 1943, Wesley Coleman was a crew member aboard Handley Page Hampden Mk. I aircraft P1265, a twin-engine medium bomber. The aircraft took off at 09.50 hours under favourable weather conditions on a day meteorological Sortie. The aircraft failed to return from its mission and the aircraft and crew were never located. All four crew members on board were lost: WOII Wesley Coleman, along with Sgt. H.K. Bartlett, F/O R. Woodford and Sgt. A.W. Bentley.

An enquiry was conducted into the flying accident afterwards by the Commanding Officers at R.A.F. Station Aldergrove. Concluding remarks in the report included: *Experienced crew took off under favourable weather conditions. Obtained M/F fix at 1.30 hrs after take off. Nothing further heard... Cause of accident unknown and no evidence. In consequence of this accident and engine trouble experienced on Hampdens recently, advised 15 Group to take Hampdens off long distance Met. Sorties, which has now been agreed by Higher Authority.*

Rev. Stanley Coleman, then residing in Ontario, soon after received a telegram informing him that his son was REPORTED MISSING AS THE RESULT OF AIR OPERATIONS ON SEPTEMBER 9TH 1943. On September 12, 1943, Rev. Coleman received the following letter from the RAF Commanding Officer of No. 1402 Flight, in Aldergrove, Belfast, Northern Ireland:

Dear Mr Coleman,

Before you receive this letter you will have had a telegram informing you that your son, Warrant Officer Wesley Percival Coleman has been reported missing as the result of air operations. It is therefore with very much regret that I write to you to express my sympathy with you in your bereavement.

Owing to service reasons I cannot give you full details of the flight that your son was undertaking at the time he was reported missing, but the following information may perhaps help somewhat.

Wesley took off at approximately 10.00 hours on the 8th September for a Meteorological flight over the Atlantic. He was due to return some seven hours later and, although equipped with wireless and other modern aids, no signals whatever were received from the aircraft.

On the non return at the expected time a search was begun, and is still being continued, in which Air Sea

Rescue and all modern life-saving devices are being employed, but unfortunately so far without success.

I would like personally to let you know that during the time Wesley has been with my Flight he has carried out his duties in a most efficient and outstanding manner, and his loss is sadly regretted by all members of the Flight. Please allow me to express on behalf of myself and his many friends here, the deepest sympathy we all feel with you in your loss.

In late September 1943, the grieving father was the recipient of another letter, this time from the Flight Lieutenant, R.C.A.F. Casualties Officer, for Chief of the Air Staff in Ottawa.

Dear Rev, Coleman:

It is my painful duty to confirm the telegram recently received by you which informed you that your son, Warrant Officer Second Class Wesley Percival Coleman, is reported missing on Active Service.

Advice has been received from the Royal Canadian Air Force Casualties Officer, Overseas, that the aircraft of which your son was a member of the crew failed to return to its base after air operations on September 8th, and not on September 9th as advised in my telegram.

This does not necessarily mean that your son has been killed or wounded. He may have landed in enemy territory and might be a Prisoner of War. Enquiries have been made through the International Red Cross Society and all other appropriate sources and you may be assured that any further information received will be communicated to you immediately.

Your son's name will not appear on the official casualty list for five weeks. You may, however, release to the Press or Radio the fact that he is reported missing, but not disclosing the date, place or his unit. May I join with you and Mrs. Coleman in the hope that better news will be forthcoming in the near future.

Later, Wesley Coleman's status was officially recorded as, *Previously reported missing after air operations, now for official purposes, presumed dead, overseas.*

Besides his grieving family, Wesley left behind a young woman he had planned to marry. While serving overseas, he met and fell in love with Ivy Jane McCann, a Sergeant in the Women's Auxiliary Air Force (WAAF), stationed at RAF Aldergrove, Crumlin, Northern Ireland. They made plans to marry. Unfortunately, Wesley Coleman would be lost, presumed dead before the planned wedding. After Wesley's death, Ivy wrote a letter to the Director of Estate, renouncing any right or claim to the estate of Wesley Coleman, ensuring that it went to his parents. In October 1944, she wrote a letter to her father. Following is a portion of that letter:

Dear Dad,

I got your letters when I came back to camp last night. I'm sorry I wasn't able to answer it sooner but they kept all mail for me in camp. This morning I sent you a cable and I hope it will help in settling Wesley's will. Actually I had no knowledge at all that he made a will in my favour. He never said anything to me about it. He always intended that any money he had should help with Lyman's education (his younger brother) as he wanted him to go to Ridley (College in St. Catharines, Ontario). I have been in contact this morning with the legal advisor on the station as I thought it should be quicker than waiting until I went home and he worded the cable for me. I myself would certainly not think his last will was valid and F.O. Jackson said the same. I definitely would not think of claiming any part of Wesley's estate. I had his love and all the lovely memories we had together – with that I am content. If there are any documents for me to sign or any certificates that I have to make, will you let me have them and I will do so. I know how you all must feel about it as you said Dad – it seemed so final – but then I suppose the authorities must clear all these things up. Wesley is still alive to me – he will never die. I still feel him so near to me at all times and in all places.

Tell Mum I will write to her to-night. I had four letters from her last night too and one from Marion. Then this morning I had one from Frances. It's quite a long time now since I heard from Harold. I do hope I see him before he goes back to Canada.

At the moment I am thinking of volunteering for Western Europe. Whether it will help when demobilization comes along – I don't know, but you can be assured when I am demobilized – my efforts to proceed to Canada will not be of a small nature. Since my own Father and Mother passed home – I have somehow naturally regarded you and Mum as my parents and have said when asked what I was doing after the war – that I was going home to Canada... Well Dad I will close for now.

All my love "Ivy"

In September 1945, Wesley's parents received a War Service Gratuity of \$494.80 for the loss of their son. In June 1952, Rev. Stanley Coleman in Midland, Ontario would receive the following letter from the Wing Commander, R.C.A.F. Casualties Officer, for Chief of the Air Staff:

Dear Reverend Coleman:

It is with reluctance that after so long an interval, I must refer to the loss of your son, Warrant Officer Class I Wesley Percival Coleman, but due to the lack of any information concerning him since he was reported missing, it must be regretfully accepted and officially recorded that he does not have a "known" grave.

Due to the extreme hazards attending air operations there are, unhappily, many thousands of British aircrew boys who do not have "known" graves and all will be commemorated on General Memorials that will be erected at a number of locations by the Imperial War Graves Commission (of which Canada is a member), each Memorial representative of a theatre of operations. One of these Memorials will be erected at Runnymede, England, and the name of your son will appear on that Memorial.

I realize that this is an extremely distressing letter and that there is no manner of conveying such information to you that would not add to your heartaches. I am fully aware that nothing I may say will lessen your great sorrow, but I would like to express to you and the members of your family my deepest sympathy.

Wesley Coleman has no known grave. Twenty-one-year-old Wesley Coleman's name is inscribed on the Runnymede War Memorial, Surrey, United Kingdom, Panel 179. In November 2019, his name along with 25 others was added to the Sarnia cenotaph, engraved in stone to be remembered always.

CONWAY, Adam Edward (#A/102217)

Less than three weeks after getting married, Sarnia's Adam Conway enlisted from a "sense of duty." He would die at 23 in the Liberation of Holland, a month and a half before the war ended officially in Europe.

Adam Edward Conway was born in Belfast, Ireland on April 25, 1921, the only child of Edward and Annie Brooks Conway, both of Northern Ireland. Parents Edward and Annie Conway were married in Belfast, Ireland on May 31, 1915. Adam was only 15 months old when his family immigrated to Canada, arriving aboard the *Metagama* at a port in Quebec on July 28, 1922. His family then travelled by train to Sarnia and would reside at 218 Confederation Street. They would later move to 342 Queen Street. When Adam was eight years old, he and his parents visited Ireland. They returned from Belfast aboard the passenger ship *Andania* to the port of Montreal on August 24, 1929. Edward Conway supported his family by working as a labourer at Imperial Oil while Annie managed the household duties.

Adam attended public school for eight years before he spent three years at Sarnia Collegiate. At high school, he specialized in auto mechanics and was active in swimming, bowling, and baseball. His hobbies were diverse: stamp collecting and playing harmonica. Prior to enlisting, Adam was employed at Imperial Oil Company in Sarnia for one year as labourer – doing all types of general work including electrical welding and corrosion testing; however two significant changes in Adam's life were about to happen.

The first was that he would no longer be single. On June 20, 1942, Adam married Gladys Margaret McKellar of London, the youngest daughter of the late Mr. and Mrs. Wesley McKellar. It was a smaller wedding, as most wartime ceremonies were. At the Devine Street United Church ceremony, Gladys' attendant was Miss Shirley Smith, while the bridegroom was attended by Arthur Fleck. Following the wedding, a reception was held at the Vendome Hotel. After a brief honeymoon to Toronto and points east, the newlyweds moved in with Edward and Annie at 342 Queen Street. The second event in Adam's life was as significant. In July 1942, less than three weeks after getting married, he would enlist to fight in the war, recording his reason for joining the army as "sense of duty."

Adam Conway, age 21, enlisted in the Canadian Army in Windsor, Ontario on July 9, 1942. He stood five feet eight inches tall, had blue eyes and brown auburn hair, and expressed his desire to be in the Royal Canadian Ordnance Corps (RCOC). His plan for after the war was to return to Imperial Oil for employment. He began his army training at #12 Basic Training Centre (#12 BTC) in Chatham, Ontario, completing it in August 1942. After training as a Non-Commissioned Officer (NCO), he stayed at #12 BTC to be an Assistant instructor. In late summer 1943, Adam received further training as an infantryman at #6 Basic Training Centre in Stratford before being transferred to #1 Transit Camp in Windsor, Nova Scotia waiting for embarkation.

Adam Conway may have seen Gladys and his parents during his army training in Chatham and Stratford, but when he left for the United Kingdom on September 13, 1943, he would never see them or Sarnia again. In early October 1943, Adam sent a cable to Gladys confirming that he had arrived safely with a detachment of the Canadian army after an "uneventful" crossing. He was initially posted to #3 Canadian Infantry Reinforcement Unit, with the rank of Private. He would continue his training in the U.K., and in October 1943, he became a member of the

Highland Light Infantry (HLI) of Canada, R.C.I.C., with the rank of Private. Adam's extra preparation in England finished in time for him to embark for France with the Highland Light Infantry. They would arrive in France on June 6, 1944 – **D-Day**.

The **Battle of Normandy** would begin for the Canadians with the June 6, 1944 D-Day landings at Juno Beach. After breaching the "Atlantic Wall" of "Fortress Europe", Allied armies began their break out from the narrow Normandy bridgehead to carve out a foothold on the French mainland. It would take a whole summer of tenacious fighting, pushing against fierce and ruthless German forces to advance east across France. In a brutal campaign of attrition, the Canadians faced fierce battles and vicious counterattacks as they clawed their way forward liberating villages and towns including Bretteville, Carpiquet, Caen and Falaise.

Corporal Adam Conway

Adam Conway would serve in France until he was wounded on August 15, 1944. He was returned to the U.K. where he was hospitalized, before joining the Canadian Infantry Training Regiment (CITR).

On November 9, 1944, Adam would again embark from the U.K., with the Highland Light Infantry (HLI), arriving in North West Europe. After the Battle of the Scheldt, over the winter of 1944-1945 most of the weary Canadians were given a rest, although the front was never quiet, with patrols and large-scale raids remaining constant. Canadian troops were stationed along the **Nijmegen sector** in the Netherlands. The Canadians were to hold and defend the Nijmegen salient and a small piece of Allied-held territory north of the Maas River.

This bridgehead would be used as a starting point for crossing the Rhine (in February 1945), and the Allies had to give the enemy the impression that an assault was imminent to force it to leave troops in that area. The Germans did their best to push the Canadians out of "the island" by flooding the area and constantly harassing them with mortar fire, artillery and aggressive patrols. Constantly vigilant, the men dug deep slit trenches, covered them with whatever was handy, and tried to keep warm from the snow and cold during one of the most frigid winters on record in northern Europe.

In the early months of 1945, Adam Conway attained the rank of Corporal with the HLI. In February 1945, the Allies launched a great offensive, the **Battle of the Rhineland** that was designed to drive the Germans eastward back over the Rhine River. There would be two formidable thrusts: one by the Ninth U.S. Army; and one by the First Canadian Army, strengthened by the addition of Allied formations. The resilient Germans had spent months improving their defences; winter rains and thaw had turned the ground into a thick, muddy quagmire and the enemy would fight fiercely to defend their home soil. During one month of fighting, the Canadians would succeed in clearing the Reichswald Forest, in breaking the Siegfried Line and in clearing the Hochwald Forest. But victory came at a high cost.

In May 1940, the Netherlands, despite its declaration of neutrality, had been invaded by the German blitzkrieg and put under Nazi control. It led to five years of suffering for the Dutch people. In March 1945, the 1st

Canadian Corps (who had been fighting in Italy) joined their comrades of the 2nd Canadian Corps (who had fought through France, Belgium, and Germany). For the first time in history, two Canadian Army corps would fight together. The two Canadian Corps were tasked with the **Liberation of the Netherlands**, on two fronts—northeastern Holland and northern Germany, and Western Holland. Grateful residents greeted the Canadians as heroes as they liberated towns and cities. It was never easy. The freedom fighters faced destroyed roads, bridges and dykes; experienced days of fierce clashes against a resilient, sometimes fanatical enemy; and engaged in house-to-house fighting. Many Canadians were killed in the Liberation. One was Sarnia's Adam Conway.

On March 24, 1945, Corporal Adam Conway would lose his life while fighting in northern Germany during the Liberation of the Netherlands. His remains were buried in Germany on March 30, 1945 at a location recorded on the Army Field Service Card as "Near Bienen, Germany 9th CIB Temp Cdn. Military cemetery MR. 048553 Rees Sh. 420, R.1 G.3". They would later be exhumed and reburied in Nijmegen Canadian Military Cemetery in Holland. Only one and a half months after his death, the war ended officially in Europe.

In early April 1945, Gladys Conway and his parents Edward and Annie would receive a telegram from the Director of Records in Ottawa informing them that, CPL ADAM EDWARD CONWAY HAS BEEN KILLED IN ACTION IN GERMANY. Later the same month, Gladys received the following letter from the Major-General, Adjutant-General:

Dear Mrs. Conway,

It was with deep regret that I learned of the death of your husband, A102217 Corporal Adam Edward Conway, who gave his life in the Service of his Country in the Western European Theatre of War on the 24th day of March, 1945.

From official information we have received, your husband was killed in action against the enemy. You may be assured that any additional information received will be communicated to you without delay.

The Minister of National Defence and the Members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

Adam Conway was later officially recorded as, *Overseas casualty, killed in action, in the field (Germany)*. In June 1945, Gladys received a War Service Gratuity of \$480.70 for the loss of her husband. In early July 1946, she also received a letter from the Colonel, Director of Records, for Adjutant-General. Following is a portion of that letter:

Dear Madam:

Information has just been received from overseas that the remains of your husband, A102217 Corporal Adam Edward Conway, have been carefully exhumed from the original place of internment and reverently reburied in grave 12, row A, plot 19, of Nijmegen, Holland. Marked map is enclosed. This is a recognized military burial ground and will receive care and maintenance in perpetuity.

The grave will have been marked with a temporary cross which will be replaced in due course by a permanent headstone suitably inscribed. While it cannot now be stated when this work of permanent commemoration will begin, before any action is taken you will be communicated with and an opportunity will be given you to submit a short personal inscription of your own choice for engraving on the headstone...

Corporal Adam Conway, age 23, left behind his parents Edward and Annie, who lost their only child, and his wife of less than three years, Gladys. Adam Conway is buried in Groesbeek Canadian War Cemetery, Netherlands, Grave XIX.A.12. On his headstone are inscribed the words, IN MEMORY OF A BRAVE SOLDIER WHO DIED THAT HIS COUNTRY MIGHT LIVE. His name is also inscribed on the Sarnia Refinery Plaque. Unveiled in 1949, the plaque has the names of 24 Sarnia Imperial Oil employees who made the ultimate sacrifice in World War II. CORE, Garnet Douglas (#A/106978)

In a letter he wrote to his aunt en route to what became known as The Battle of Italy, Garnet Core stated, *We had a swell trip coming over; spent my twenty-first birthday aboard ship*. He would never leave Italy and never live to see twenty-two.

Garnet Douglas Core was born in Forest, Ontario on March 28, 1923, the son of Wesley William and Myrtle Ruth (nee: West) Core. Parents Wesley (born January 1899 in Forest) and Myrtle Core (born July 1899 in Sarnia Township), were both age 21 when they married January 15, 1920 in Forest. Wesley farmed to support his household. Garnet had one brother, Raymond John Core, born four years after him, but unfortunately, Wesley and

Myrtle divorced. Myrtle later married James Bright, and they resided in Blackwell, Lambton County.

Before he enlisted in May 1943, Garnet had been working for the past fourteen months as machinist and valve tester at Muellers Limited, a job he wished to continue upon his return from the war. Sadly, he lost his mother Myrtle, who passed away in February 1943 at the age of forty-two. Garnet would join the army three months after his mother's death. His father was now residing in Windsor and his stepfather still lived in Blackwell. He also had an aunt, Mrs. Elba Smith, who resided at 244 Ontario Street, Sarnia.

Twenty year-old Garnet Core enlisted in the Canadian Army in London, Ontario on May 28, 1943. He stood five feet nine inches tall, had hazel eyes and brown hair, was single, recorded his address as R.R. #3, Sarnia, and his next of kin as his brother Raymond. In early June 1943, Garnet spent a few days at home on leave with his friends and grandparents, Mr. and Mrs. Henry West, Sr. of Blackwell. After leaving #1 District Depot in London, Garnet received his army training at #12 Basic Training Centre in Chatham, Canadian Infantry Training Centre at Camp Ipperwash and #1 Training Brigade in Debert, Nova Scotia.

Garnet's lifestyle was changing and it was about to do so again. While at Ipperwash in August 1943, he was given military permission to marry his girlfriend of two and a half years, Betty Vera Randall (born March 26, 1921 in London, Ontario), the eldest daughter of Mr. and Mrs. Arleigh Randall of Mooretown, Ontario. The wedding took place on October 1, 1943 at the United Church parsonage in Corunna. At the ceremony, Miss Freida Lapham of Sarnia served as bridesmaid, and Private Allan Nagorsen of Windsor, served as the best man. After the ceremony, the bridal party dined at the Cosy Café, and then the newlywed couple left for a wedding trip to Niagara Falls, New York. On their return, Betty Vera Core resided at R.R. #3 Sarnia, while Garnet returned to Camp Ipperwash after his 17-day furlough. Betty Core would later move to 206 Harkness Street, then Mooretown, and after the war, to 210 Confederation Street, Sarnia.

After completing his training at Ipperwash, then Debert, Garnet Core embarked overseas from Halifax for the United Kingdom on February 12, 1944. He was posted to #3 Canadian Infantry Reinforcement Unit (CIRU), where he would receive further training. Six weeks later, on March 27, 1944, he was bound for the Italian Theatre as a member of the Royal Canadian Regiment, with the rank of Private. He would spend his 21st birthday at sea, on his way to fight in Italy.

The **Italian Campaign**, the first sustained Canadian Army operation of the War, had begun with the invasion of Sicily in July 1943. The fierce fighting on the island would last more than four weeks, during which the Canadians would advance through difficult mountainous terrain, against an ever-stiffening German resistance. By August 17, the Germans had evacuated the island to the Italian mainland. In early September, Canadian and Allied forces would invade Italy. Though Italy surrendered shortly after, the occupying Germans made it clear their fight was not over. Liberating Italy would be a painstaking northward crawl, lasting 20 months, over a range of landscapes, through challenging weather, and against a series of well-protected defences held by some of the German army's best troops.

In the spring of 1944, while in Italy, Garnet wrote a letter to his aunt, Mrs. Victor Wellington, of 123 South Brock Street. In the letter, received in May 1944, Garnet described his life in Italy. The following are portions of his endearing letter written from "Somewhere in Italy":

I really covered a lot of miles since I left Canada... We had a swell trip coming over; spent my twenty-first birthday aboard ship. I really love the water; wish I had joined the navy. This country is beautiful and the climate is much like our own. The summer, they say, is really hot here. It is spring now; has been nice but is rather cool today. There are lots of fruits and nuts to be bought. Oranges cost about thirty cents a dozen. When it is orange season, you pick them off the trees.

The Italians are great for wine. It can be bought from thirty cents up for a quart most anywhere. They call it 'veno.' I had one taste of it. That's all I want. It's just like rotten cider. The people let their animals sleep in the house with them. It is not unusual to see a horse or a mule tied in a corner of the living quarters. I nearly died laughing the first time I saw a horse tied in a house. The buggy was inside also.

I went up to a monastery built on a mountain. It was really beautiful inside; sights which I had never seen before. The art work was lovely. The altars were great masterpieces which must have taken years to build. The food over here is really good, but I do miss fresh milk now and then. I had some Italian ice cream today. It was not too bad, but not as good as our Canadian ice cream. I have had the odd plate of spaghetti. Boy, it really is good, but darn dear. A plate alone, no bread, costs seventy cents.

Shortly after his aunt received his letter, Private Garnet Core was killed. On May 30, 1944, while fighting in

Italy, he was severely wounded—described in the Casualty Report Form as “multiple bomb (mine) wounds of extremities.” The next day, May 31, 1944, Garnet Core died from those wounds, at #5 Canadian Casualty Clearing Station in Italy. His remains were buried in Italy at a location recorded on the Army Field Service Card as “M.R. 798137 Sheet 160 – Italy”. They would later be exhumed and reburied in Cassino Military Cemetery, Italy.

Without the benefit of modern technology, a gap in time existed then between the occurrence of an event and news of it happening. Thus, in June 1944 when her husband was dead and buried, Betty received a telegram from Ottawa informing her that Garnet had been slightly wounded on May 30, 1944 while fighting with Canadian troops in Italy, during the battle of the Hitler Line and the advance to Rome. The nature of the wound was not revealed. Betty, naturally worried, told her family and friends that she hoped the wound was not serious and that he would be able to rejoin his unit soon. On an early June morning, Betty visited the *Canadian (Sarnia) Observer* office to advise them that her husband had been wounded in action in Italy on May 30.

A short time later, the Director of Records in Ottawa sent her the devastating news: her husband had died on May 31, 1944, as a result of wounds received during fighting. Later in June 1944, Betty Core received this letter from the Major-General, Adjutant-General:

Dear Mrs. Core;

It was with deep regret that I learned of the death of your husband, A.106978 Private Garnet Douglas Core, who gave his life in the Service of his Country in the Mediterranean Theatre of War on the 31st day of May, 1945.

From official information we have received, your husband died as the result of wounds received in action against the enemy. You may be assured that any additional information received will be communicated to you without delay.

The Minister of National Defence and the Members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

Private Garnet Core was later officially recorded as, *Overseas casualty, died of wounds received in action, in the field (Italy)*. In early July 1944, the minister and congregation at Blackwell United Church honoured Private Core at a Sunday morning memorial service. The church was filled to capacity and was beautifully decorated with flowers and flags for the service. During the service, an honour roll bearing the names of fourteen men who had enlisted from the Blackwell congregation and community was unveiled and dedicated. The unveiling ceremony was performed by Private James Somes, R.C.A., and the prayer of dedication was pronounced by the Rev. P.S. Banes, of Point Edward.

In March 1945, Betty Core received a War Service Gratuity of \$131.39 for the loss of her husband of less than a year. Five months later, in August 1945, with the war in Europe officially over, a letter arrived to Betty's Harkness Street home from the Colonel, Director of Records, for Adjutant-General. The letter, in part, reads as follows:

Dear Madam:

Information has just been received from overseas that the remains of your husband, A106978 Private Garnet Douglas Core, have now been carefully exhumed from the original place of internment and reverently reburied in grave 12, row B, plot 13, of Cassino Military Cemetery, Cassino, Italy. Marked map is enclosed. This is a recognized military burial ground and will receive care and maintenance in perpetuity.

The grave will have been marked with a temporary cross which will be replaced in due course by a permanent headstone suitably inscribed. While it cannot now be stated when this work of permanent commemoration will begin, before any action is taken you will be communicated with and an opportunity will be given you to submit a short personal inscription of your own choice for engraving on the headstone...

Twenty-one-year-old Private Garnet Core is buried in Cassino War Cemetery, Italy, Grave XIII.B.12. On Garnet's headstone are inscribed the words, THE PEACE OF JESUS FILLED HIS BREAST AND IN HIS ARMS HE SANK TO REST.

CRAWLEY, David (#R/183604)

David Crawley immigrated to Canada in his mid-teens with his widowed mother and two brothers, all seeking a new life after settling in Sarnia. David was active in the community, had a career, and was married less than two years when he signed up to serve. He would lose his life a year-and-a-half later in one of the most dangerous postings in the war.

He was born in Askam-in-Furness, Lancashire, England on November 14, 1912, the son of Thomas and Mary Ann (nee Mylray) Crawley. His parents, both born in Lancashire, England, were married in Lancashire on August 28, 1901. David had two brothers, Frank Mylrea (born 1909) and Edwin Thomas. When David was ten years old, he lost his father, a former miner, who died in June 1923 at age of thirty-eight of silicosis, a lung disease caused from his work. His mother, recording her occupation as housekeeper, and her sons Frank and David departed Liverpool, England aboard the *Montrose* and arrived in St. John, New Brunswick on December 3, 1927. Their intended destination was recorded as R.R. #1 Campbellford, Ontario, where Mary Ann's brother-in-law and sister, Mr. and Mrs. Bright, lived. David Crawley was fourteen years old when his family arrived in Canada.

David had received his education in England, at public school in Askam-in-Furness, 1918-1927, then Dalton Grammar School, 1927-1929. After living in Cumberland County for two years, the Crawley family moved to Lambton County in 1929. Years later, Mary Anne Mylray would re-marry, becoming Mrs. Tom Bright, and lived at 457 Cromwell Street, Sarnia. Tom and Mary Ann Bright would later reside in Campbellford, Ontario. Both of David's brothers would stay in Sarnia; Frank, at 457 Cromwell Street, and Edwin, at 133 S. Brock Street.

David was employed by W.B. Millholland as an inspector of cone's for V.8 Ford Castings from 1929-1940; then at Holmes Foundry in Sarnia doing laboratory work until he enlisted in 1942. In late 1940, at the age of 28, his life would change dramatically. On October 18, 1940, David Crawley married Blanche Doris (nee Maidment) in Forest, Ontario. The young couple resided at 255 ½ North Mitton Street. While David was overseas, Blanche Crawley lived at 254 North Front Street, Sarnia with her parents, Mr. and Mrs. Harry Maidment. While in Sarnia, David was a member of the 2nd 11th Field Company, Royal Canadian Engineers, as a Sapper from 1940-1942. David participated in bowling extensively, along with softball and tennis, and his hobby was shooting.

David Crawley had first applied to join the RCAF on September 15, 1939, five days after Canada had declared war on Germany. However his application was not completed. Three years later, the twenty-nine-year-old successfully enlisted in the Royal Canadian Air Force on August 5, 1942, in London, Ontario. He stood five feet four inches tall, had hazel eyes and dark brown hair, and he requested flying duties with a preference for Aircrew Air Gunner. Some of the Recruiting Officer's comments about David included, *Nature type, short, light build. Wiry and agile. Claims to have extensive experience with rifle on miniature ranges and won several prizes in Dominion Rifle competitions. Determined sort of chap... Should prove good Air Gunner.*

From #5 Manning Depot in Lachine, David received his air training at #16 Service Flying Training School (SFTS) in Hagersville, #23 PAE in Toronto, #2 Air Gunners Ground Training School (AGGTS) in Trenton and #3 Bombing and Gunnery School (B&GS) in MacDonald, Manitoba. The AGGTS Commanding Officer's comments about David included, *Shows initiative. Good average student... active worker, applies himself diligently, co-operates fully; displayed ample initiative in carrying out air exercises, reliable, should make a good crew member.* David was awarded his Air Gunner's Badge at MacDonald, Manitoba on June 25, 1943.

Sergeant-Air Gunner David Crawley

David Crawley left Halifax to go overseas to the United Kingdom on July 16, 1943. From #3 Personnel Reception Centre (PRC), he continued his training at #22 Operational Training Unit (OTU), #1659 Conversion Unit and then No. 61 Training Base in Yorkshire. On January 3, 1944, he became a member of RCAF #420 Snowy Owl Squadron "Pugnamus Finitum" (We fight to a finish), part of **Bomber Command**, with the rank of Sergeant Air Gunner.

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

RCAF #420 Squadron was formed on December 19, 1941 at RAF Waddington as part of No. 5 Group, outfitted with Handley Page Hampdens. The squadron converted to Vickers Wellingtons and moved its base to Skip-on-Swale, then Middleton St. George, and in May 1943 the unit was stationed in Algeria and Tunisia in North Africa (in support of the invasions of Sicily and Italy). In November 1943, the squadron returned to Britain, and was outfitted with Handley Page Halifax bombers based at Dalton and later at Tholthorpe. In April 1945, the squadron would convert to Lancasters. No. 420 was to be a predominantly Canadian squadron shortly after its formation, and in 1944 was adopted by the City of London, Ontario.

Only seven months after arriving overseas, David Crawley lost his life. On the night of February 24, 1944, he was part of a crew aboard Halifax III aircraft LW427 (markings PT-) on a night mission to Schweinfurt, Germany that took off at 1815 hours from its base at RAF Tholthorpe. There were 734 aircraft that took part in the operation, the first raid on this particular target, the centre of ball-bearing manufacture in Germany. A new tactic was introduced where the bomber force was split into two waves separated by two hours. The aircraft was shot down by an enemy night fighter, between 23.00-23.59 hours, crashing in enemy territory approximately 2 km south of Ostelheim, Germany. Perishing with Sergeant-Air Gunner David Crawley were F/O. Henry Maynard Long; P/O. Martin Allan Knight; FS. David Ballantine Richardson; Sgt.s Harvey Ellis Hirst and William Henry Botterill (RAF) and Tech/Sgt. Ray Jay Gile (USAAF). The bodies of the crew members were buried in one communal grave in the rear right hand corner of Ostelsheim Cemetery, (French section) in Germany.

In early March 1944, Blanche received a telegram from the Casualty Officer in Ottawa informing her that her husband, SGT DAVID CRAWLEY HAS BEEN REPORTED MISSING AFTER AIR OPERATIONS ON FEBRUARY 25. There were no other details provided and the message added that further information would be forwarded when received.

In mid-March, David's mother Mary Ann in Campbellford, Ontario, received a letter from the Squadron Leader, R.C.A.F. Casualties Officer, for Chief of the Air Staff. Following is a portion of that letter:

Dear Mrs. Bright:

It is my painful duty to confirm the telegram recently received by you which informed you that your son, Sergeant David Crawley, is reported missing on Active Service.

Advice has been received from the Royal Canadian Air Force Casualties Officer, Overseas, that your son was a member of the crew of an aircraft which failed to return to its base after a bombing raid over Schweinfurt, Germany, on the night of February 24th and the early morning of February 25th, 1944. There were four other members of the Royal Canadian Air Force in the crew and they also have been reported missing. Since you may wish to know their names and next-of-kin, we are listing them below...

This does not necessarily mean that your son has been killed or wounded. He may have landed in enemy territory and might be a Prisoner of War. Enquires have been made through the International Red Cross Society and all other appropriate sources and you may be assured that any further information received will be communicated to you immediately.

Your son's name will not appear on the official casualty list for five weeks. However, you may release to the Press or Radio the fact that he is reported missing, but not disclosing the date, place or his unit. May I join with you and the members of your family in the hope that better news will be forthcoming in the near future.

In late March 1944, Blanche received the following letter from the Squadron Leader:

Dear Mrs. Crawley,

On behalf of the Squadron and myself may I extend sympathy on the sad loss of your husband Sergeant David Crawley, who was missing from operations on the night of 24/25th February, 1944. Your husband was a very

popular member of our Squadron and carried out his duties as an Air Gunner very capably and willingly. His loss was keenly felt by all concerned.

Since take off nothing has been heard, however, it may be that he is a prisoner of war. Time alone can tell us this. May I explain that the request in the telegram notifying you of the casualty of your husband was included with the object of avoiding his chances of escape being prejudiced by undue publicity in case he is still at large. This is a precaution taken in the case of all personnel reported as missing. Please be assured that any information we may receive will be forwarded to you.

David Crawley was later officially recorded as, *Previously reported missing after air operations, now for official purposes, presumed dead, overseas (Germany)*. In September 1945, Blanche Crawley received a War Service Gratuity of \$239.44 for the loss of her husband. Three of the items returned to the Crawley family in May 1946 were David's mascot doll, a good luck horseshoe charm and a gold ring engraved with a Britannia. Blanche remarried years later, becoming Blanche Finn, residing at 254 North Front Street, Sarnia.

In May 1947, a Squadron Leader representing the Wing Commander, Officer Commanding No. 2 Missing Research & Enquiry Unit R.A.F., released his findings after visiting the cemetery at Ostelsheim, and the graves of the crew of Halifax LW427. Following is a portion of his report:

The grave is very well kept and is covered in flowers. On enquiring at the Burgonmaster's Office I found that this aircrew crashed on the night of 24th Feb. 1944 and the bodies of F/O Long and Sgt. Crawley were thrown clear out of the aircraft. Sgt. Crawley was alive but died in less than two hours. The rest of the crew were burnt beyond recognition... All papers and identity tags were taken from the Burgonmaster, on 29/4/46 by the U.S.A. Research Service and copies of the Burgonmaster's receipt are attached to the report, with photo of the burial in 1944 of the crew against the orders of the local Nazi leaders. On May 10th 1946 the American Graves Command exhumed, and transferred the body of T/Sgt Gile to the American Cemetery in St. Anold, in France, for reburial. On further enquiry I found that this aircrew was shot down by a night fighter.

The five airmen who were completely burnt, were all buried in one coffin and the bodies of F/O Long R21366 and of Sgt. CRAWLEY R183604 were buried in two separate coffins. The grave still contains three coffins. The remains of the aircraft, as usual, was removed to an unknown destination by the LUFTWAFFE Unit from ECHTERDINGH. All that remains is a few old pieces none of which bear a traceable Number...

In June 1949, David's mother Mary Ann Bright received the following letter from the Wing Commander, R.C.A.F. Casualties Officer, for Chief of the Air Staff:

Dear Mrs. Bright:

It is with regret that I refer to the loss of your son, Sergeant David Crawley, who lost his life on air operations against the enemy February 25th, 1944, and who with members of his crew was buried in the Civil Cemetery at Ostelsheim, Germany, but a report has been received from our Missing Research and Enquiry Service that your son and the five members of his crew buried with him have been moved to the permanent British Military Cemetery at Bad Tolz, Germany. The cemetery is known as the Bad Tolz (Durnbach) British Cemetery, and is located eight miles south southeast of Munich, Germany.

Your son is resting in Grave No. 23, Row C, Plot No. 4, and Flying Officer H.M. Long (R.C.A.F.), pilot of your son's crew, is beside him in Grave No. 22. Most unfortunately, individual identification could not be obtained of the four remaining members of the crew. They are: Pilot Officer M.A. Knight; Flight Sergeant D.B. Richardson; Sergeant H.E. Hirst (all R.C.A.F.); and Sergeant W.H. Botterill (R.A.F.), and they are resting in adjoining Multiple Graves, registered in their names, and numbered 24, 25 and 26, Row C, Plot No. 4.

Reinternment in a British Military Cemetery in Germany is in accordance with the agreed policy of the Nations of the British Commonwealth that all British aircrew buried in Germany would be moved to British Military Cemeteries located in Germany, where the graves and cemeteries will be reverently cared for and maintained in perpetuity by the Imperial War Graves Commission (of which Canada is a member). The Commission will also erect a permanent headstone at your son's resting place.

It is my earnest hope that you will be comforted with the knowledge that your son's resting place is known, and that it will be permanently maintained, and I would like to take this opportunity of expressing to you and the members of your family my deepest sympathy in the loss of your gallant son.

Thirty-one-year-old David Crawley is buried in Durnbach War Cemetery, Germany, Grave 4.C.23.

DAWDY, Cecil Blake

Cecil Dawdy, a married father of five, was so eager to serve in the army that he enlisted a couple of days before Canada had officially declared war on Germany. He rose steadily in the military ranks before a tragic accident cut short his life.

Cecil Blake Dawdy was born in Saskatoon, Saskatchewan on April 18, 1908, the son of Blake Laverne (born in the United States) and Frances Hasard (nee Graham, born in Ontario) Dawdy. His parents were married in Saskatoon, Saskatchewan on March 28, 1905. Cecil had two brothers, Carmen Wesley (born 1906) and Laverne (born 1914, would serve overseas). When Cecil was seven years old, his family moved to Medicine Hat, Alberta. He was educated at Central High School in Calgary, leaving school after completing grade eleven. His father Blake was a merchant-jeweller. Cecil lost his father who died on September 2, 1938 at the age fifty-one. His mother Frances lived in Calgary and later Edmonton, Alberta. Cecil resided in Alberta until about the age of twenty-six, then moved to British Columbia where he lived for four years.

Cecil married Miranda Leona Dawdy (of Spokane, Washington) on January 25, 1936 in Trail, British Columbia. They had five children together: four sons; Edward Blake, Francis Anthony, Gerald Michael (born September 21, 1942 in London, Ontario) and Joseph Cecil; and a daughter; Marina Rosemary. Cecil was active in golf, tennis and swimming, and his hobby was woodworking. In civilian life, he had various jobs, most in British Columbia as a salesman, including six years for a drug company; two years for a confectionary; and three years selling electrical appliances. He had his own electrical appliances business for two of those years until 1938. Cecil and family moved to Ontario in 1939.

Thirty-one-year-old Cecil Dawdy enlisted to serve on September 8, 1939, in Sarnia, with the 11th Field Company, Royal Canadian Engineers (R.C.E.). Canada declared war on Germany two days later, on September 10, 1939. He stood five feet five and a half inches tall, had blue eyes and light brown hair, and recorded his address as Morden Hotel, Sarnia, while his wife and children were residing at 18 Wolseley Avenue, London, Ontario. His desire was to serve in the infantry, and his ambition for after the war was to have an administrative army position. The Recruiting Officer's comments about Cecil included, *Ambitious, high learning ability... valuable administrative experience, high stability, fine personality – alert – clean cut. Excellent officer material.* Cecil was employed by the R.C.E. in Sarnia as pay clerk for about three months, with the rank of Acting Lance-Sergeant. He was transferred to Royal Canadian Regiment (RCR) Depot in London, Ontario on December 16, 1939.

Cecil served as a member of the Royal Canadian Regiment at #1 District Depot in London, Ontario until June 1942, doing clerical work, attaining the rank of Company Sergeant-Major, Superintending Clerk. In March 1942, the brigadier in command of #1 District Depot to the Secretary, Department of National Defence in Ottawa wrote a report on Cecil that included the following; *CSM Dawdy, C.B. – This warrant officer has been the mainstay of this Depot from the "other rank" angle since I assumed command. He is a most dependable, trustworthy and thoroughly efficient warrant officer and has an uncommon flair for administration....*

Cecil then attended Officers Training Course (OTC) at Gordon Head and Victoria, British Columbia until July 1942, qualifying as a Second Lieutenant; and then A10 Canadian Infantry Training Centre (CITC) at Camp Borden, attaining the rank of Lieutenant. In August 1942, he returned to #1 District Depot in London, Ontario, becoming Records Officer until August 1943. For three months in that period, he was employed as Adjutant of the sub-depot in Windsor, Ontario. In August 1943, he was attached to Headquarters, Military District #1, in London (HQ MD1), where he would be promoted to the rank of Captain in January 1944. He continued doing administrative duties there, working in the deputy assistant Adjutant-General's office, and was evaluated by senior officers as, *doing good work, shows good aptitude for administrative duties, is hard working and dependable.*

On July 21, 1945, Cecil Dawdy lost his life in a tragic accident, in Willow Lake, Kitchener, Ontario. He was officially recorded as, *Died as a result of a broken neck suffered in diving accident, Kitchener Waterloo Hospital.* Eyewitness and doctors' medical reports following the accident included the following information:

O the afternoon of 20 Jul 45, Capt Dawdy proceeded from HQ MD1 in London around 1:30 p.m., arriving at #1 CWAC TC in Kitchener; he was on duty, carrying out details in connection with personnel; he completed his work and had to wait for the completion of clerical work in connection with his duty before returning to MD1; he was in high spirits and was particularly anxious to go swimming after finishing his business and take any members of the Mess who cared to go; it was very hot day and he said it was the first chance he had had in some time to get away from his work and enjoy a little recreation; there were five military personnel in the group (Dawdy and four CWAC

Officers), that left #1 CWAC TC some time between 7:30-8:10 p.m., arriving at approximately 8:30 p.m.; the Willow Lake resort at Doon, located on farm property about 6 miles outside of Kitchener, charged a fee of 5 cents per person to swim; in the lake, there were two platforms supported each by four piles and upon which planks were erected as spring boards for diving purposes; the group had been swimming approximately 1/2 hour according to one witness, when the accident occurred; the accident occurred at approximately 8:45 p.m. on July 20; Capt Dawdy had performed a "backward jack-knife" dive from the lower of the two installed diving platforms; he was next seen in distress, floating on the surface below the diving board; he was removed from the water, still conscious; he could not use his legs, and said that he feared that he had broken his neck, also saying "I can't move. Please get a doctor."; he was massaged and covered with blankets while medical attention was requested; at approximately 9:20 p.m. he was taken to Kitchener-Waterloo Hospital by ambulance; he was diagnosed with a sustained compound fracture of the 5th cervical vertebrae with rotation of 4th, 5th and 6th and probable dislocation with partial transection of the cord; he died the following day as a result of his injuries at approximately 6:00 p.m.

Evidence revealed that Capt. Dawdy was an experienced diver and swimmer; the springboard was slightly "off-level", and the water was five feet deep; He was not to blame; cause of accident may have been the combination of the "off-level" diving board, and the depth of the water, not sufficient depth for diving; Legal action was going to be initiated against those operating the resort by Mrs. Dawdy, with the recommendation that the Military provide her with a competent legal officer and legal aid.

The war in Europe had ended on May 8, 1945, two months prior to his death, and the war in Japan would end less than one month after that. Cecil Dawdy left behind his wife Miranda and their five children ranging from age one to 8 1/2. Thirty-seven-year-old Cecil Dawdy is buried in Mount Pleasant Cemetery, London, Ontario, Military Plot Sec. X, Grave 69. On his headstone are inscribed the words, REST IN PEACE.

DAWS, Frederick John (#J/12472)

Frederick Daws was a musician, a talented athlete and a youth leader in the community with aspirations to enter the field of aviation. He also had a desire to serve his country. He lost his life two years after enlisting in the Allied push to liberate Italy.

Frederick John Daws was born in Sarnia on November 2, 1920, the only son of Frederick Daws Senior (born in Oldham, Lancashire, England) and Annie Elizabeth (nee Graham, born in Oldham, England) Daws. His parents were married in Hamilton, Ontario in 1914. Frederick had one sister, Doris (McKellar), born in 1917. The family would move to 333 Wellington Street, and later to Lakeshore Drive in Sarnia. Father Frederick Senior Daws supported the family as a milkman in Sarnia.

Frederick attended Lochiel Street public school from 1926-1934, and then Sarnia Collegiate Institute from September 1934 - April 1940. Frederick was a member of the Central Century Club, where he played basketball, hockey and softball. While at Sarnia Collegiate, he was active in the Cadets, becoming a cadet major in 1940, and was the master of ceremonies of the annual school show. For a time at SCITS, he was a member of gold medal winning bands. He also played high school basketball and would play on the Sarnia Collegiate WOSSA rugby team. Later as a halfback, he played both junior and senior O.R.F.U. for Sarnia. Frederick also was a member of the Sarnia Imperials football team. He was greatly interested in organized boys' work, acting as chairman of the Boys' Work Board for three years, and acted as a leader on several occasions at the Boys' Camps at Lamrecton. Frederick was a member of the 2-11th Field Company, Royal Canadian Engineers in Sarnia, as a Sapper, from September 1940-July 1941. After completing high school in April 1940, he was employed at Mueller's Limited, as a Lathe operator, until he enlisted.

Twenty year-old Frederick Daws enlisted in the Royal Canadian Air Force on July 19, 1941, in London, Ontario. He stood five feet ten inches tall, had hazel eyes and brown hair, was single, and lived at home with his parents at the time, recording their address as Lake Huron Beach, Sarnia. He was anxious for flying duties, expressing his preference as either a pilot or observer. The Recruitment Officer's comments about Frederick included, *Keen and intelligent, very anxious to fly, courteous and confident personality, co-operative, and initiative, responsibility and reliability good.* Frederick planned to enter commercial aviation after the war.

From No. 1 Manning Depot in Toronto, Frederick received his air training at a number of locations including #4 Bombing and Gunnery School (B&GS) in Fingal; #6 Initial Training School (ITS) in Toronto; #12 Elementary Flying Training School (EFTS) in Goderich; and #14 Service Flying Training School (SFTS) in Aylmer, where he

was awarded his Pilot's Wings on July 3, 1942. He obtained the highest marks of his class in flying and received a commission as pilot officer. He then continued his training at #1 General Reconnaissance School (GRS) in Summerside, Prince Edward Island and then #31 Operational Training Unit (OTU) in Debert, Nova Scotia. Frederick Daws sailed overseas for the United Kingdom in January 1943.

In early June 1943, his parents Frederick Sr. and Annie Daws in Sarnia received a cablegram from overseas stating that their son had been promoted to the rank of Flying Officer from Pilot Officer. Later that month, on June 17, 1943, Frederick Daws married twenty year-old Kathleen May Wilson, of Bournemouth, England, in the district of Swindon, Wiltshire, England. His British bride would reside at Howeth Road, Ensburry Park, Bournemouth, England.

F/O-Pilot Frederick John Daws

Flying Officer-Pilot Frederick John Daws with his wife Kathleen May

Not long after marrying, Frederick Daws found himself on his way to Algeria, to be part of **Mediterranean Air Command (MAC)** Reinforcement Unit, which was gearing up for the **Sicily/Italy Campaign**. In mid-February 1943, Allied air forces in Morocco, Algeria, Egypt and Libya were reorganized into the MAC in order to coordinate efforts in the North African Campaign. When that campaign ended in mid-May 1943, MAC was then directed to play a role in the Mediterranean and Italian theatres.

The **Italian Campaign**, the first sustained Canadian Army operation of the War, supported by the Navy and Air Force, began with the invasion of Sicily on July 10, 1943. The fierce fighting on the island would last more than four weeks, during which the Canadians would advance through difficult mountainous terrain, against an ever-stiffening German resistance. By August 17, the Germans had evacuated the island to the Italian mainland. In early September, Canadian and Allied forces would invade Italy. Though Italy surrendered shortly after, the occupying Germans made it clear their fight was not over. Liberating Italy would be a painstaking northward crawl, lasting 20 months.

On July 23, 1943, Frederick was aboard Hudson MK. V aircraft AM788 that departed from Portreath, Cornwall, England on its way to Ras el Ma, Algeria. The Lockheed Hudson aircraft was a twin-engine light bomber used for reconnaissance, transport and maritime patrol. The aircraft arrived that evening, and two days later, was ordered to proceed to Blida, Algeria. On take-off on July 25, the aircraft experienced difficulties, crashed and caught fire. Frederick Daws failed to escape from the burning aircraft, suffering multiple 4th degree burns, resulting in his death. Along with Flying Officer-Pilot Frederick Daws, also killed was Flight Sergeant R.H. Jarvis. Frederick Daws had only been married one month, and overseas for six months.

At the end of July 1943, Fred Sr. and Annie received a cablegram informing them that their son, **FLYING OFFICER FRED J DAWS HAS BEEN KILLED IN ACTION OVERSEAS**. No other details were made available, though his parents believed that he may have been in action over Sicily. In his last letter home, Frederick mentioned that he expected soon to be leaving for Africa. Frederick Daws was later officially recorded as, *Killed in a flying accident, overseas (Algeria)*.

An account of the crash was written by one of the surviving crew members, F/O R.A. Dawe, to the Commander, R.A.F. Station, Davidstow Moor, England. Following is his written account:
Sir,

I have the honour to be in a position to report on the crash at RAS EL MA in Hudson A.M. 788 on July 25th, 1943. On July 23rd we left Portreath for RAS EL MA arriving there late the same evening. We were then informed we should proceed on July 25th to Blida to join a squadron.

We taxied to the end of the runway at approx. 12.30 hours. There was one runway at the airfield and the wind was across the runway. As Observer my position in the aircraft was next to the pilot. One Wop/Ag was at the radio and the other was working the T.R. 9 just aft of the main spar.

As we went to take off, when the tail came off the ground the aircraft swung but we became airborne and the pilot retracted his wheels. Almost instantaneously the port wing dropped and the aircraft started to turn to port. The pilot corrected for this but the aircraft did not respond and still kept turning and as we had very little height a crash looked imminent. The pilot throttled back and cut his switches. We hit the ground on the port wing and then fell back on the fuselage, at which point both tanks exploded and caught fire. By the time we came to rest the aircraft was ablaze from end to end, but no one had been hurt in the crash.

As the whole thing had happened so fast the door had not been jettisoned and on trying to open we found we could not, nor could we remove the parachute exit. The rest of the crew went forward and I stayed struggling with the door. I could not see the rest of the crew for smoke in the aircraft and myself had given up hope of getting out.

Suddenly I thought of the side window from which the V.G.O. usually protrudes. I don't remember any more until I picked myself up from where I had fallen out of the window. I got up and ran around the other side and found that one Wop/AG had escaped through the similar window on the other side. The crash tender was there but it was obvious it didn't have a chance of getting near the aircraft. We were then pulled away from the crash and put in the ambulance. We were then flown to Casablanca and admitted to a U.S. Hospital and never at any time have I been approached for a statement.

In June 1945, newlywed Kathleen Daws in Bournemouth, England received a War Service Gratuity of \$284.26 for the loss of her husband. Twenty-two-year-old Frederick John Daws was buried in Fez, French Morocco, but later was re-interred at Le Petit Lac Cemetery, Oran, Algeria, Plot E, Row C, Grave 17. On his headstone are inscribed the words, WE MISS YOU SO, YOUR WONDERFUL SMILE BUT IT'S JUST GOODBYE FOR A LITTLE WHILE.

DICK, Daniel (#A/106954)

Daniel Dick was a First Nations man who had worked many jobs and was helping to support his mother at home when he settled into employment in Sarnia. He joined the military to serve his country but did not have the opportunity to serve overseas, his life was cut short by disease.

Daniel was born in Fort William, Ontario on December 24, 1913, the second youngest child of John and

Josephine (nee St. Germaine) Dick, of Fort William Mission Bay Indian Reserve. He had two brothers; older brother James and younger brother Matthew; and two older sisters, Lucy and Josie Jane. An Ojibway First Nation member, he only completed grade five at the age of fifteen after about four years of irregular school attendance. Yet he was fluent in both English and Ojibway. He had an outdoor scouting background and enjoyed fishing and hunting. He worked five years with his father's lake fishing fleet, and nine years of various construction jobs and types of labour including driving teams and caterpillar tractors, before eventually making his way to Sarnia.

Some time before he enlisted, Daniel's father John Dick passed away. Daniel Dick was employed at Polymer Corporation Rubber Plant for nine months until he enlisted. Along with a brother, Daniel was helping to financially support their widowed mother – he was sending her \$10-15 per month. Daniel's plan was to return to Sarnia and his job at Polymer after the war.

Twenty-nine-year-old Daniel Dick enlisted in the Canadian Army on May 25, 1943, in London, Ontario. He stood five feet ten inches tall, had brown eyes and black hair, and was single. He recorded his next of kin as his mother in Fort William, his home address as Polymer Corp., Sarnia, and his occupation as steel worker. The Recruiting Officer's comments about Daniel included, *Has had good health. Is a fairly tall well set up chap. He has lived away from home for some years; likes to get back for an occasional visit and writes an occasional letter... he is probably quite amenable, has a bit of outdoor scouting background which should help him in Infantry training.* Daniel became a member of the Royal Canadian Infantry Corps, with the rank of Private.

From #1 District Depot in London, Daniel attended #12 Basic Training Centre (BTC) in Chatham, Ontario. In the sixth week of his training at Chatham, he complained of chest pains and was concerned he would not be able to complete his advanced infantry training. He continued however, completing his eight-week basic training course. In mid-August 1943, Daniel went absent with leave from #12 BTC until the new year. On January 3, 1944, a sick Daniel Dick would be admitted to Mountain Sanatorium in Hamilton, Ontario. While a patient in the hospital, he would be transferred to "A" Wing Holding Company, #2 District Depot in Toronto.

Daniel Dick would not get the opportunity to serve overseas. On April 3, 1944, Daniel passed away at Mountain Sanatorium, Hamilton as a result of what was listed as "pulmonary tuberculosis, far advanced". In April 1946, his widowed mother Josephine of the Fort William Reserve, received a War Service Gratuity of \$22.50 for the loss of her son. Thirty year-old Daniel Dick is buried in Squaw Bay, Fort William First Nations Cemetery, Thunder Bay, Ontario, Canada. The Imperial War Graves Commission (Commonwealth War Graves Commission) erected a military headstone over his grave.

DIONNE, Raymond William (#A/20675)

Raymond William Dionne was a veteran of the Great War, where he had been gassed and wounded in action. Twenty-two years later, the father of eight children chose to serve his country again. Four of his children would also serve.

Raymond Dionne was born on a farm in Camlachie, Ontario on June 22, 1899, the son of Charles (born in Kamouraska, Quebec) and Mary Philomene Dionne (nee Lalonde, born in Sarnia Township), of 142, later 344 Durand Street, Sarnia. Raymond had five brothers: Joseph (born 1895), Charles (born 1897), Clarence (born 1900), Delmore (born 1905) and Kenneth (born 1916); along with seven sisters: Rose (born 1894), Lila (born 1903), Anna (born 1908), Mae Celestine (born 1909), Teresa Cecilia (born 1910), Clara (born 1914) and Daisy (born 1917). Raymond was a member of Our Lady of Mercy and St. Joseph's Catholic Parishes, Sarnia.

Raymond William Dionne served in the Great War. He enlisted in Sarnia with the Canadian Overseas Expeditionary Force on January 4, 1916, becoming a member of the 149th Battalion. Raymond was sixteen years old at the time, but recorded his birthdate as June 22, 1897, stating that he two years older than he actually was. He stood five feet seven inches tall, had brown eyes and black hair. He recorded his birthplace as Sarnia, his occupation as labourer, and his next of kin as his father Charles Dionne, of 142 Durand Street, Sarnia.

Private Raymond Dionne (#844258) left Halifax aboard the *SS Lapland* on March 28, 1917. He arrived in Liverpool, England on April 7, and became a member of the 25th Battalion at Bramshott. In early June 1917, he was transferred to the 161st Battalion at Camp Witley. Seven months later, in early January, he was awarded a Good Conduct Badge there. In late February 1918, he was transferred to the 4th Reserve Battalion, and two weeks later, to the 47th Infantry Battalion at Bramshott. On March 16, 1918, Private Raymond Dionne arrived in the field in France. On April 11, 1918, he was transferred to the 4th Battalion, Canadian Machine Gun Corps (CMGC).

The **Hundred Days Campaign** (August 8 – November 11, 1918 in France and Belgium) would be the “beginning of the end” of the Great War. Canadians were called on again and again over the three-month period to lead the offensives against the toughest German defences. The first offensive in Canada’s Hundred Days Campaign was the Battle of Amiens in France (August 8-14, 1918), truly an all-arms battle, one that all four Canadian divisions would be involved in. The second offensive in this Campaign was the **Battle of Arras and Breaking the DQ Line** in France (August 26-September 3, 1918), where Canadians were part of a spearhead force tasked with crashing one of the most heavily fortified positions, the Hindenburg Line – a series of strong defensive trenches and fortified villages. It was during this battle, on August 31, 1918, that Raymond Dionne was wounded in action by a mustard gas shell. He was admitted to #47 Casualty Clearing Station, then #41 Stationary Hospital at Amiens. He would be discharged seven days later.

One month later, still with the CMGC, he was recorded as “gun shot wound abdomen, fractured right knee, died of wounds - in the field - September 28, 1918 at #38 Casualty Clearing Station.” Days later, it was “cancelled” and changed to “Previously reported D of W #38 CCS, now admitted to #56 General Hospital Etaples September 29, 1918 – shell wound left wrist.” He would spend nine days at the Military Hospital in York, and on October 28, 1918, he was discharged from a convalescent hospital in Epsom. The Great War ended in November 1918, and in late December 1918, he returned to Canada. He was discharged on demobilization on January 29, 1919 in London, Ontario, and returned to 14 Durand Street in Sarnia. Shortly after returning home, Raymond would lose his mother Mary Dionne, who passed away in April 1919.

On August 21, 1919, twenty year-old Raymond Dionne married eighteen year-old Golda Marie Young (born in Freemont, Ohio), the daughter of Robert and Emma Young (nee Williams) in Sarnia. At the time of his marriage, Raymond recorded his occupation as a pipe fitter. From March 1920 until June 1923, Raymond was a member of the Army Reserve, the 2nd Machine Gun, Sarnia. In December 1923, the young Dionne couple lived at 343 Victoria Avenue, in Point Edward. Raymond and Golda would go on to have eight children together, including sons; Raymond James (born 1921), Robert Charles (born 1923, see below), Melvin Joseph, Ronald Norris (born 1925), Gerald Edward and Cecil Louis; and daughters Audrey June and Rose Marie. After the Great War, along with raising his family of eight children, Raymond worked in a garage as an auto mechanic for 12 or 13 years, and then was employed at Holmes Foundry as a coremaker for eight years.

In 1941, the forty-two-year-old World War I veteran would again enlist to serve his country. He enlisted in the Canadian Army on November 24, 1941 in London, Ontario. He stood five feet nine and a half inches tall, had brown eyes and graying dark brown hair, and recorded his occupation as coremaker, and that he and his family were residing at 343 Victoria Avenue, Point Edward. From #1 District Depot in London, Raymond received his army training at #10 Basic Training Centre (BTC) in Kitchener, and then Royal Canadian Engineers Training Centre (CETC) in Petawawa.

Army Sapper Raymond William Dionne

Raymond Dionne left for the United Kingdom on June 2, 1942. He would soon celebrate his 43rd birthday

there, far from his home and family. He served in England with the Canadian Army, as a member of the Royal Canadian Engineers with the rank of Sapper. Prior to arriving overseas, in December 1941 while still in Petawawa, Raymond had experienced some bouts of heartburn and nausea after eating, abdominal pains and ailments that were treated with baking soda and that had cleared up. The symptoms returned in February 1942, progressively becoming more severe.

Once he was in England, the symptoms continued. He was examined by medical officials in late September 1942 at Bramshott, England. He had lost about 35 pounds in 3-4 months, was suffering occasional bouts of heartburn, nausea and gastric discomfort, had no appetite, had marked weakness and was easily fatigued after strenuous exercise. Doctors recommended treatment by diet until further investigation, and surgical treatment as soon as possible. On October 7, 1942, Raymond left the U.K. to return to Canada due to his medical issues. On November 23, 1942, Sapper Raymond Dionne of the Royal Canadian Engineers was honourably discharged from service, being unable to meet the required military physical standards. He returned to Sarnia later that month.

Four of Raymond Dionne's sons would also serve in uniform during World War II. His eldest son Raymond James joined the army coming from the army reserves in 1939, and arrived in England in early 1940. He would attain the rank of Corporal with the Canadian Army, serving in North Africa, Sicily and Italy. Raymond returned home in 1945. His son Melvin served with the Canadian Army, Lincoln-Welland Regiment, in Belgium. His son Ronald Norris lied about his age to serve alongside his father and brothers. Ronald became a member of the Canadian Army, with the rank of Sapper, initially serving in Canada. He would be wounded on Juno Beach on D-Day, was returned to England and later returned to battle where he was wounded again on the drive into Germany. And Raymond's son, Robert Charles, also became a member of the Canadian Army, losing his life while serving on October 1, 1944 (see below).

Raymond Dionne was again employed at Holmes Foundry upon his return to Sarnia, and the family lived at 343 Victoria Street, Point Edward. The Great War veteran and father of eight passed away on May 23, 1943 at Sarnia General Hospital, officially recorded as, *The result of gastric haemorrhage due to carcinoma of stomach, death was related to military service*. In March 1945, Golda Dionne received a War Service Gratuity of \$146.58 for the loss of her husband. She later moved from Victoria Avenue, Point Edward to Cemetery Road, Oakwood Corners, Ontario. Less than a year and a half after losing her husband, Golda tragically lost a son to war, twenty year-old Robert Charles, who was killed in Belgium. Forty-three-year-old Raymond William Dionne is buried at Sarnia (Our Lady of Mercy) Catholic Cemetery, Sarnia, Ontario, Canada.

DIONNE, Robert Charles (#A/20654)

Robert Charles Dionne, 20, was one of the "fighting five" of the Dionne family to serve in the war. In a Netherlands war cemetery, the epitaph on his headstone was composed by his grieving mother: REST IN PEACE MY DARLING AND MAY YOU NOT HAVE GIVEN YOUR LIFE IN VAIN.

Parents Raymond William Dionne (see above) and Golda Marie (nee Young) Dionne were married on August 21, 1919 in Sarnia, and were blessed with eight children. Robert Charles was their second son, born in Sarnia on December 24, 1923. The sprawling family, which in wartime resided at 343 Victoria Avenue, Point Edward, included Robert's seven siblings: Raymond James (born 1921), Melvin Joseph, Ronald Norris (born 1925), Gerald Edward, Cecil Louis, and sisters Audrey June and Rose Marie.

Robert was raised in Sarnia and was a member of Our Lady of Mercy Catholic Parish. He attend Our Lady of Mercy School and then St. Patrick's Catholic High School for one year, but he admitted he disliked school. In a military interview in December 1942, he stated that he "used to play truant a good deal while going to school". He preferred playing action sports rather than sitting in dull classrooms. And play he did—whether it be boxing, swimming, and skating, or baseball and rugby. When not enjoying sports, he earned money by working at various times as a delivery boy and as a farm labourer. Prior to enlisting, Robert was employed for three months by Canadian Steamship Lines as a seaman on the *S.S. Noronic* in the Great Lakes.

Seventeen year-old Robert Dionne enlisted in the Canadian Army on August 19, 1941 in London, Ontario. He stood five feet seven inches tall, had brown eyes and black hair, was single, and recorded his occupation as a sailor. He wrote his reason for joining the Canadian Army was "patriotism." Like many other young men who enlisted, he had plans for his post-war life. Upon his return, Robert wanted to become a mechanic. First, he had to survive the war and to do that his training was essential to his survival. From #1 District Depot in London, Robert

received his military training at #12 Basic Training Centre (BTC) in Chatham and Royal Canadian Engineers Training Centre (CETC) in Petawawa. In January 1942 he proceeded to Valcartier, Quebec. Robert Dionne embarked overseas for the United Kingdom on January 25, 1942. He wasn't the only Dionne to take up the fight. Three of Robert's brothers, along with his father, Raymond William, a veteran of the Great War, also served in the Canadian Army during World War II. Raymond William, the Dionne patriarch, embarked for England four months after Robert.

Robert's older brother, Raymond James, was the first Dionne to serve in WWII, joining the army from the army reserves in 1939. Like Robert, Raymond was educated at Our Lady of Mercy school and found work locally—in this case, at Holmes Foundry; unlike Robert, he was married and his son was only a few weeks old when he went overseas on August 21, 1940. He attained the rank of Corporal with the Canadian Army and, after serving two years in England, he was among the first Canadians to go to North Africa. After North Africa, he was part of the intense Battle of Sicily and Italian Campaign. At the time of Robert's death, Raymond had served approximately four years overseas and had returned to Sarnia from Italy in late-August 1944. When interviewed about his Sicily/Italy experience, he described it as not so much fighting as chasing the enemy, with long, weary miles without rest. He said, *Messina and Reggio were not the beauty spots that appear in pictures when we got there after the bombardment. We had real hard fighting at Cassino. The Germans are tough fighters and do not give up while they have weapons or ammunition. One prisoner declared he was the last man in his unit and would have fought it out only his weapons were gone. After the fall of Rome most of us managed to get there on a visit. It was a fine sight after months spent in the fields.*

Three other members of the patriotic Dionnes went overseas. Younger brothers Melvin and Ronald were both Privates with the Canadian Army. Melvin served in Belgium whereas Ronald was one of the first infantry-men to step ashore on Juno Beach on June 6, 1944. Wounded on D-Day, Ronald was sent to England to recover from wounds received in France. He would later return to battle, where he was wounded again on the drive into Germany. Their father, Raymond William, who fought in England and France in the Great War, also served in World War II. He was in England with the Canadian Army, Royal Canadian Engineers, with the rank of Sapper, but returned to Canada in October 1942 because of an illness. Within six months, in May 1943, Raymond William Dionne, age 43, was dead, the result of gastric haemorrhage due to carcinoma of stomach which was attributed to his military service.

Robert Charles Dionne would arrive in England in late January 1942. He was originally posted with the Engineer Reinforcement Unit (ERU) to work on army equipment. By June, he had become a member of Royal Canadian Engineers, 11 Field Company with the rank of Sapper. It must have been a tense, exciting time for Robert, a time filled with anticipation as to what lay ahead. Also a difficult time, for in training, he received news that his father in Sarnia had passed away on May 23.

Just over one year later, on July 9, 1944, one month after D-Day, Robert Dionne landed on Juno Beach, France. The **Battle of Normandy** had begun for the Canadians with the June 6, 1944 D-Day landings at Juno Beach. After breaching the "Atlantic Wall" of "Fortress Europe", Allied armies began their break out from the narrow Normandy bridgehead to carve out a foothold on the French mainland. It would take a whole summer of tenacious fighting, pushing against fierce and ruthless German forces in order to advance east across France. In a brutal campaign of attrition, the Canadians faced fierce battles and vicious counterattacks as they clawed their way forward liberating villages and towns including Bretteville, Carpiquet, Caen and Falaise.

After the Allied breakout from Normandy, Canadian forces were assigned the "**Long Left Flank**", the less glamorous but vital tasks of clearing coastal areas in the north of France and Belgium of German occupiers; opening the English Channel ports for supplies essential to the Allied advance; and capturing the launching sites of German V-1 rockets. In a series of stop-and-start advances against stiff resistance in fortified positions, the Canadians liberated ports and villages including Rouen, Dieppe, Dunkirk, Boulogne and Calais.

In early September 1944, Allied forces had captured the inland port of Antwerp, Belgium, the second greatest port in Europe at the mouth of the Scheldt River. However, German forces still controlled the 45-mile-long Scheldt estuary (the Belgian-Dutch border area) that connected the port of Antwerp to the North Sea. The Canadians were entrusted with liberating the estuary. The **Battle of the Scheldt** was among the most difficult and grueling struggles in the war. The bitter fighting against a well-fortified and heavily entrenched enemy, took place in a bleak environment made worse by the winter cold in a flooded and freezing muddy quagmire.

As a member of the Royal Canadian Engineers (RCE), he was part of the troops that enabled the army to

move—they repaired and built roads, airfields and bridges; cleared mines and road blocks; and filled in craters and anti-tank ditches, all while working alongside combat troops at the front and often under fire. It was on October 1, 1944, in the early stages of the Battle of the Scheldt, that Sapper Robert Dionne was killed in action in Belgium. His remains were buried the same day at a location recorded on the Army Field Service Card as “R.C. Cemetery Westwall, Belgium. 24 & 34 MR 057877”.

Robert Charles Dionne would later be officially recorded as, *Overseas Casualty, Killed in action, in the field (Belgium)*. In mid-October 1944, the *Sarnia Observer* featured a photograph of three of the Dionne’s with the following description below it:

Sapper Robert Charles Dionne (centre), son of Mrs. R.W. Dionne, 343 Victoria avenue, Point Edward, was killed in action in Belgium on October 1. At left is Sapper Dionne’s father, Sapper R.W. Dionne, who served overseas in this war and who died last year after being invalided home. At the right is another son, Sapper Raymond Dionne, who recently returned from service in Italy.

Sapper Robert Charles Dionne

From the *Sarnia Observer*, Oct. 1944

Also in mid-October 1944, Golda Dionne in Point Edward who had lost her husband nearly a year and a half earlier, received a telegram from Ottawa informing her that her son, SAPPER ROBERT CHARLES DIONNE WAS KILLED IN ACTION IN BELGIUM ON OCTOBER 1. Approximately two weeks later she received another telegram, this one informing her that her third son, PTE MELVIN DIONNE HAS BEEN WOUNDED OVERSEAS. Golda must have had strength of character to weather such blows to her family and to herself.

The following month the grief-stricken Golda opened this letter from the Brigadier, Acting Adjutant-General:

Dear Mrs. Dionne:

It was with deep regret that I learned of the death of your son, A20654 Sapper Robert Charles Dionne, who gave his life in the Service of his Country in the Western European Theatre of War on the 1st day of October, 1944.

From official information we have received, your son was killed in action against the enemy. You may be assured that any additional information received will be communicated to you without delay.

The Minister of National Defence and the Members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

In July 1945, she received a War Service Gratuity of \$616.46 for the loss of her son Robert.

Sapper Robert Dionne was awarded a decoration posthumously in 1948 from the Belgian Government. In July 1948, Golda, then residing on Cemetery Road, Oakwood Corners (today the corner of Lakeshore Road and Colborne Road) received yet another letter from the Major-General, Adjutant-General in Ottawa:

Dear Mrs. Dionne,

It is with a feeling of pride that I write, on behalf of the Minister of National Defence and all ranks of the Canadian Army, to inform you that the Belgian Government has been pleased to confer the award of Croix de

Guerre 1940 avec Palme upon your son, the late A.20654 Sapper Robert Charles Dionne. This award was granted in recognition of his outstanding contribution towards the liberation of Belgium in the Second World War.

I regret exceedingly that your son did not survive to receive this well merited award himself. However I trust the knowledge that his services have been recognized in this manner by the Belgian Government will help to temper your very sad loss.

I am informed by the Belgian Embassy in Ottawa that the decoration which accompanies this award will be forwarded to you in the very near future.

The award "Croix de Guerre 1940 avec Paimé" was inscribed with the words, "*The King has been pleased to grant the following decoration in recognition of distinguished services in the cause of the Allies.*" In February 1946, the Colonel, Director of Records, for Adjutant-General wrote a letter to Golda. It reads in part as follows:

Dear Madam:

Information has just been received from overseas that the remains of your son, A20654 Sapper Robert Charles Dionne, have now been carefully exhumed from the original place of internment and reverently reburied in grave 10, row E, plot 5, of Bergen-op-Zoom Canadian Military Cemetery, four miles North-East of Bergen-op-Zoom, Holland. Marked map is enclosed. This is a recognized military burial ground and will receive care and maintenance in perpetuity.

The grave will have been marked with a temporary cross which will be replaced in due course by a permanent headstone suitably inscribed. While it cannot now be stated when this work of permanent commemoration will begin, before any action is taken you will be communicated with and an opportunity will be given you to submit a short personal inscription of your own choice for engraving on the headstone...

Twenty year-old Robert Dionne is buried in Bergen-Op-Zoom Canadian War Cemetery, Netherlands, Grave 5.E.10. On his headstone are inscribed the words, REST IN PEACE MY DARLING AND MAY YOU NOT HAVE GIVEN YOUR LIFE IN VAIN.

DOWDING, John (Jack) Frederick (#J/46041)

John Dowding was so anxious to follow his distinguished older brother into serving in WWII that he lied about his age and enlisted at age 16. When he died at 17, he became Sarnia's youngest fallen soldier of World War II.

John Frederick Dowding was born in Sarnia on October 26, 1926, the younger son of Ivan Louis and Rhea Jean (nee Krohn) Dowding, of 162 John Street, Sarnia. He had one brother, Harry James Dowding, born September 27, 1921. Parents Ivan and Rhea Dowding were married in Sarnia on December 8, 1920. To support his wife and two sons at their home at 162 John Street, Ivan (born in Kerwood, Ontario) was a Pipe Fitter with Canadian Synthetic Rubber Company in Sarnia.

John attended Devine Street Public School from 1932 to 1939 and, of note, distinguished himself in a writing competition. His top ranked essay for "Fire Prevention Week" gained him acclaim and recognition in the *Canadian Observer* newspaper. As a prize, John was presented with a suit of clothes from Walker Brothers Store on Mitton Street. John had a variety of interests beyond writing, however. He attended Sarnia Collegiate from September 1939 to February 1943, where he was active in football, hockey, basketball and swimming. He was also a member of the High School Cadets for three years (Sergeant), and a member of the Young Men's Usher Club of St. Andrew's Church. He left school part way through grade eleven in February 1943 and was employed for one month in the laboratory of the Imperial Oil Limited from February to March 1943. John didn't like the shift work, so he then worked for Piggott Construction Company, Rubber Plant in Sarnia as a welder's helper in June and July of 1943. In August 1943, at age 16, he lied about his age to enlist. Undoubtedly, John was emulating his older brother, Harry, in doing his part in the war. If so, John chose a distinguished and intrepid role model.

Harry James Dowding, born September 27, 1921, enlisted in the Royal Canadian Air Force in March 1941 in London, Ontario. He graduated from No. 1 Service Flying Training School and received his wings at Camp Borden in December 1941. The following month, Harry was posted overseas. By the time he returned home to Sarnia three years later, Flying Officer Harry Dowding had made headlines and won accolades for his skill and bravery as a pilot.

Harry first made a name for himself as a Pilot of a Canadian Spitfire wing--as a member of the famous RCAF 403 (Wolf) Squadron (June 1942-October 1943--and then with the 442 (Caribou) Squadron (March-October 1944). In December 1942, Harry was promoted while overseas from Sergeant-Pilot to the rank of Pilot Officer. In

April 1943, parents Ivan and Rhea in Sarnia received a clipping from an English newspaper telling of the part their son played in an air attack over France the previous month. The clipping stated that, *two Royal Canadian Air Force Spitfire pilots, attacked and banished a Nazi freight engine during a low level sweep across France the previous week. Pilot Officer Edward Gimbel of Chicago, and Pilot Officer H. Dowding of Sarnia, were the fliers. They made two runs over the engine. The engine was stopped at the first attack.*

In May 1943, Halifax and Wellington squadrons of the RCAF took part in a daylight bombing raid of Meaulte district in France. As escorts, Allied fighters provided diversions and battled enemy fighters in the air. As part of this fighter escort group, Harry of Wolf Squadron was credited with the destruction of a German Messerschmitt. In June 1943, a Canadian Press story from “somewhere in England” mentioned Harry. A portion of the story reads as follows:

*Canadian Flyers Demonstrate Chivalry in War is not Dead
Hard-Hitting Fighters Hold to Scruples in Tough Going*

Chivalry in war may be on the wane (this is a very tough war), but it has yet to disappear altogether from aerial combat. There are still some niceties observed in the air by fighter pilots of both sides in this war.

Tough As They Look – This statement, born in the tough league that is Fighter Command, should not by any means suggest the aerial glad-handing which featured so many movies based on First Great War fighting is the vogue now. Not at all. But the fact is that these clean-looking Canadian kids like Pilot Officer Paul Gray, of Toronto, or Pilot Officer Harry Dowding, of Sarnia, Ont., are just as hard-hitting as they look when they head off a fighter sweep. At the same time they have scruples. They'd shoot a man down in a scrap but if he bailed out of a damaged aircraft they'd leave him to get down in the comparative safety of his parachute. “There is still a little bit of chivalry left, I guess,” said Sqdn.-Ldr. Chuck Magwood, D.F.C., of Toronto. “We are not allowed to shoot down any one parachuting in distress—that’s an order.”....

The following is a portion of an August 20, 1943 Canadian Press Cable from London, England that also mentioned Harry:

Canadians Down Enemy Fighters in Air Tangles

Three German fighters were destroyed and one was badly damaged yesterday by the R.C.A.F. fighter wing in sweeps over France and Holland, it was announced today. The actions cost the wing one pilot, who had received his commission just two hours before going on the sweep.

The Canadians sighted 15 or more Nazi fighters over Holland. The Nazis dispersed, but four were brought to battle and the Canadians blew two of them from the sky. Flight-Lieut. Dean Dover of Toronto, member of Wolf squadron, destroyed one with a short burst from 100 yards, and F.O. Harry Dowding, of Sarnia, Ont. and Thomas Brannagan, of Windsor, Ont., shared another...

In September 1943, Harry destroyed his fourth enemy plane when he closed to within 200 feet of a German fighter and sent it down in flames with one short burst. He was one of three Canadian fighter pilots who each shot down a German plane while flying as escorts for medium bombers attacking the railway yards at Abbeville, France.

Flying Officer Harry James Dowding

In late October 1943, Flying Officer Harry Dowding was awarded the Distinguished Flying Cross (DFC) for his many exploits. The citation read, *This pilot has at all times displayed the utmost keenness to engage the enemy, and has destroyed three enemy aircraft, as well as sharing in the destruction of two others and damaging two more. On escort duty, in a period of five days, he recently succeeded in destroying two enemy aircraft and damaging another. His flying skill and fighting spirit have at all times been of the highest order.*

In early June 1944, Harry Dowding made headlines again, in a Canadian Press (CP) news release. He had made an emergency landing on the French invasion area on June 7, 1944, one day after D-Day. Following is a portion of the CP release:

Sarnia Airman Believed First To Land Plane in Invasion Area

With the R.C.A.F. in England – June 9, 1944 – Flt. Lt Harry Dowding of Sarnia, Ont., a Canadian Spitfire pilot, is believed to have been the first Allied airman to make a “both-wheels-down” landing on an emergency strip established on the French invasion area. Dowding did it yesterday, coming down after beachhead flak had punctured his gas tank and gas was spraying into his cockpit.

A companion, Flt. Lt. G. Keltie of Edmonton, “beat up” the strip a few times to warn persons on it that an aircraft was coming in. Every one cleared off but a French farmer who was pitching hay, and when Dowding landed he ran smack into the load of hay, escaping unhurt. Dowding returned to England by boat...

Harry had run smack into a full load of hay atop a horse-drawn wagon. Both the plane and wagon were wrecked, but Harry and his partner escaped unhurt. Officials later expressed their belief that the farmer had intentionally driven his hay wagon into the line of the landing plane, endangering the lives of both fliers, as the farmer and his whole family were found to have collaborated with the Germans.

On June 27, 1944, the words of P/O Stanley Helleur, from a Canadian airfield in France, were issued in a Canadian Press release. A portion of the CP release mentions Harry Dowding:

Sarnia, Winnipeg Aces Each Down Two Huns

Four more ME-109's fell today to sharpshooters of Sqdn. Ldr. Dal Russel's Canadian Spitfire squadron over France. F/L Harry Dowding, D.F.C., of Sarnia, and F/O Stan McClarty of Winnipeg each destroyed two. The squadron, one of the recently arrived units from Canada, now part of the Canadian wing led by Wing Cmdr. Johnny Johnson, spotted six Messerschmitts flying at low altitude and peeled to the attack from about 8,000 feet.

Both Dowding, who raised his own score to six destroyed, and McClarty were close on the tails of the victims when they made the kills. McClarty, for whom it was first blood, in fact, was so close he flew through the burning wreckage and scorched the propeller, starboard wing and elevator rudders of his Spit so badly the paint was peeled off...

Dowding's aircraft hadn't come to a full stop at its dispersal bay before his ground crew, led by LAC.

Maurice Smith of Ottawa, the armorer, were on the wings and asking Dowding all about it... It was a 'first' for McClarty's ground crew and one of their immediate problems was getting paint to inscribe two swastikas on the fuselage of the scorched aircraft...

With No. 442 Squadron, Harry was awarded the Bar to DFC. The award reads, *This officer continues to display the highest standard of skill, courage and devotion to duty. His example has greatly inspired the squadron which, within a period of a few weeks, has inflicted much loss on the enemy. More than 500 mechanical vehicles have been put out of action, many of them by Squadron Leader Dowding. In addition, this officer destroyed two of nineteen enemy aircraft which were shot down by the squadron during the period.*

Harry Dowding flew 220 operational sorties during his RCAF service, with victories that included at least six enemy Me109 aircraft destroyed and two enemy FW190 aircraft damaged. He was repatriated to Canada in late October 1944.

His younger brother's story would turn out completely different.

Wanting to follow in his older brother's footsteps, John Dowding enlisted in the Royal Canadian Air Force on August 4, 1943, when the Mobile Recruiting Unit from London visited Sarnia. On his RCAF attestation paper, John recorded his birthdate as October 26, 1925, making himself one year older than he actually was. Authorities assumed he was a seventeen and a half years old when, in fact, he was sixteen and a half. Consequently, all forms in his military Service File, including his Certificate of Registration of Death, record his birthdate as October 26, 1925. Only when his parents completed the mandatory Department of National Defence Estates Branch form after John's death did they record his actual birthdate of October 26, 1926.

Regardless of the lie, he would become Sarnia's youngest fallen soldier of World War II. John's interview with the recruiter is revealing. Fresh out of grade 11, the teenager made a favourable impression. He revealed he had made up his mind about eight months ago to enlist. When asked what factors drew him to applying in the air force, the interviewer recorded John's reasons: *Two of his friends are being enlisted. Three have been chums and want to go together.* The interviewer described John as *Alert, energetic young applicant. Brother a F.O. Spitfire pilot overseas. Anxious to follow in brother's footsteps.* A later fitness assessment sheet notes a score of 86 out of 100. Dowding scored high in *Staying power* and was *capable of prolonged and strenuous activity.* He also *puts all he's got into the workouts, energetic approach to all sports, attends sports parade with enthusiasm on all occasions.*

John Frederick Dowding

Sixteen year-old **John Dowding** stood five feet seven inches tall, had blue eyes and light brown hair, was single, and resided at home with his parents when he enlisted. He requested flying duties, preferably as an Air Gunner and his post-war ambition was to join the Air Force permanently. His preparation for the RCAF was extensive and his determination to be an air gunner never wavered. From #9 Recruiting Centre in London, he was transferred to #3 Manning Depot in Edmonton. John received his air training at #2 Initial Training School (ITS) in Regina, #4 Service Flying Training School (SFTS) in Saskatoon and #4 Initial Training School in Edmonton. While in Edmonton, John had no desire to complete the ITS course for pilots and observers, as he wanted to be an Air Gunner. The school's commanding officer removed Dowding from training and re-mustered him to air gunner at #3 Bombing and Gunnery School (B&GS) in MacDonald, Manitoba, with the comment; *very keen and interested in being an Air Gunner – Confident – Good type – Conscientious.*

At MacDonald, aerial gunnery was conducted on Bolingbrokes – obsolete aircraft used only for training purposes. Dowding learned to fire Browning .303 machine guns on the ground before advancing to firing them in the air. John earned his Air Gunners Badge at #3B&GS, awarded on June 2, 1944. His Commanding Officer at #3B&GS remarked that John was an *Above average student, clean-cut, enthusiastic, dependable, proficient at his trade.* He was then offered a commission as a pilot officer, which he accepted “for the duration of the present war and for the period of demobilization thereafter.” Later that month, he was posted to #5 Operational Training Unit (OTU) in Boundary Bay, British Columbia, and in July 1944, he was transferred to #1 Aircrew Graduates Training School (AGTS) in Maitland, Nova Scotia.

Now 17, John Dowding embarked overseas from Halifax on July 11, 1944. He arrived in Britain a week later for final training prior to undertaking bombing missions over Germany. From #3 Personnel Reception Centre, he would become a member of RAF #19 Operational Training Unit (OTU) on August 8, 1944, part of Bomber Command, with the rank of Pilot Officer Air Gunner.

In late July 1944, John Dowding was in England, and enjoyed a weekend leave together with his brother Harry, who was stationed in France. The meeting in England was the brothers' first meeting since John had arrived in England. Harry would relate this story and others when he addressed the St. Andrew's Presbyterian Men's Club in Sarnia in November 1944, one month after John's death.

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in **Bomber Command** operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel.

The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war. There was no easy way to learn how to fly the heavy bombers, and training crews suffered a litany of disasters, crashes and deaths. By the end of the war, Bomber Command lost over 8,000 Allied airmen who were killed in training or by accidents alone.

Pilot Officer-AG John Frederick Dowding

RAF #19 Operational Training Unit (OTU) was formed in May 1940 at RAF Kinloss in the north of Scotland. Instructors trained night bomber crews using Armstrong Whitworth Whitley, a British twin-engine medium sized bomber. In August 1944, the squadron would re-equip with the Vickers Wellington, a twin-engine, long-range medium bomber. After training in a Wellington Bomber, John Dowding's Commanding Officer remarked on John's Training Report: *Has shown a keen interest in his work at this Unit and has a good average knowledge of most ground subjects. His airwork was steady and confident.*

On the evening of October 17, 1944, just over one year after enlisting, John Dowding was a part of a crew aboard Armstrong Whitley V aircraft AD685 (markings XF-J). This was the crew's fourth night cross-country training flight and the solo mission would take five hours to complete. The aircraft took off from RAF Kinloss at 19.06 hours, and over two hours later (at 21.22 hrs), another Whitley (flying north at 19,000 feet in the same vicinity) spotted AD685 flying south at a height of 12,000 feet. To this day, the cause of the crash remains unsolved. Perhaps the weather played a part in the fate of the Whitley V.

Conditions in the area were described as clear to fair, with breaks in the cloud cover. Visibility stood at 14 miles. The tops of storm tops stood at 12,000 feet but variable, with isolated clouds extending up to 18,000 feet. The skies were punctuated with frequent flashes of lightning. Shortly after being spotted, at approximately 2130 hours, the aircraft broke up in the air prior to crashing inland about five kilometres from the North Sea at Slingby Hill Farm, East Murton, County Durham, England. Wreckage was dispersed over a wide area. Every crew member was killed instantly, the result of terrible injuries. The medical officer's report on Dowding noted "Multiple Injuries... Head completely pulped; multiple abrasions with extensive tissue loss, fracture right humerus, fractured ribs both sides, complete fracture right tibia and fibula." Perishing with John Dowding were P/O Alexander Lorne Sunstrum; F/O.s Kenneth Reed (pupil pilot) and Walter Douglas Wall; Sgt. Leslie John Olmstead (all RCAF) and Sgt. Ernest William Leivers (RAF).

A portion of the investigation into the cause of the flying accident written by F/Lt. B.S. Hunt reads as follows: *F/O Reed was detailed by me for a five hour solo cross-country. He took off at 1906 hours and at 2130 hours the aircraft crashed, all the crew being killed. Reason for crash not known. F/O Reed and crew were briefed by me for the cross country in the cause of which I paid particular attention to the weather they were likely to meet en route, gave a minimum height to fly as thirteen thousand feet, which from met. should have been above cloud but to aim at 15,000 or more. They were also told to avoid any cu-nim. The aircraft flown by F/O Reed, AD.685 Whitley V was one of our best machines. As a pilot and type he was of average ability and in my opinion should have been capable of dealing with any normal emergency. The Durham Royal Observer Corps reported a; violent localized electrical storm moving through the area from the west at 21.30 hrs.*

On October 20, 1944, parents Ivan and Rhea Dowding in Sarnia received the following telegram from the RCAF Casualties Officer in Ottawa: DEEPLY REGRET TO ADVISE THAT YOUR SON PILOT OFFICER JOHN FREDERICK DOWDING J FOUR SIX NOUGHT FOUR ONE WAS KILLED ON ACTIVE SERVICE OVERSEAS ON OCTOBER SEVENTEENTH STOP PLEASE ACCEPT MY PROFOUND SYMPATHY STOP LETTER FOLLOWS.

Two days later, Ivan and Rhea received a second telegram from the RCAF Casualties Officer: YOU WILL WISH TO KNOW THAT FUNERAL FOR YOUR SON PILOT OFFICER JOHN FREDERICK DOWDING TAKES PLACE 7:30 P.M. OCTOBER TWENTY THIRD AT HARROGATE REGIONAL CEMETERY HARROGATE YORKSHIRE ENGLAND STOP LETTER FOLLOWS.

John Dowding's remains, identified by his identity discs, were buried on October 23, 1944 in Harrogate R.A.F. Regional Cemetery in England. His funeral was held with full service honours and military officers present; however, his family could not attend. A memorial service, conducted by the Rev. J.M. Macgillivray for Pilot Officer John Dowding was held on October 23, 1944 in St. Andrew's Church, Sarnia at the same hour as the burial service was taking place in Harrogate, England. John "Jack" Dowding would later be officially recorded as, *Killed in flying accident, overseas (England)*. As a courtesy, the British Air Ministry informed Harry Dowding in England of his younger brother's death two days after it occurred.

In late October 1944, J.A. Sully, Air Vice-Marshal, Air Member for Personnel in Ottawa sent this letter to the Dowdings on John Street:

Dear Mr. Dowding:

It is with deep regret that I must confirm our recent telegram informing you that your son, Pilot Officer John Frederick Dowding, was killed on Active Service.

Advice has been received from the Royal Canadian Air Force Casualties Officer, Overseas, that your son lost his life during flying operations at 9:25 P.M. on October 17th, 1944, at Slingby Hill Farm, East Murton, Durham County, England. The aircraft, of which he was a member of the crew, fell to the ground. His funeral took place at 7:30 P.M. on October 23rd, at Harrogate Regional Cemetery, Harrogate, Yorkshire, England.

You may be assured that any further information received will be communicated to you immediately. I realize that this news has been a great shock to you, and I offer you my deepest sympathy. May the same spirit which prompted your son to offer his life give you courage.

They received at the same time another letter, this one from R.G.G. Cole, Group Captain, Commanding R.A.F. Station, Kinloss:

Dear Mr. Dowding,

I find it my unfortunate task to confirm the telegram which you will have received informing you that your son was killed whilst flying on active service on the 17th October, 1944.

As air gunner of his aircraft, he took off in the evening of Tuesday, 17th October to carry out a cross-country detail. Contact was maintained with the aircraft until 21.22 hours, which was the last contact made. Information was received later that the aircraft had crashed at approximately 21.30 hours, a few miles inland west of Seaham Harbour, near Durham. It may be of some consolation to you to know that death must have been instantaneous. The cause of the accident has not yet been established.

Your son's Flight Commander spoke very highly of him and his loss is a great blow to his fellow members of this unit. Your son's fellow officers, the N.C.Os. of this station and I wish to convey to you our deep sympathy in your bereavement.

I have delayed writing to you in order to give you the details of your son's funeral which took place on Monday the 23rd October at R.A.F. Regional Cemetery, Harrogate, the service being conducted by the Revd. McLean of the Royal Canadian Air Force. Full service honours were accorded and officers from this station attended the funeral as representatives of the Unit. Wreathes were sent from the officers, N.C.Os. and myself.

You will wish to know that all war graves are taken care of by the Imperial War Graves Commission who will erect a temporary wooden cross pending the provision of a permanent memorial by them.

Your son's effects have been gathered together and sent to the Royal Air Force Central Depository, from where they will be forwarded to the Administrator of Estates, Ottawa, who will be writing to you in this regard in due course.

The names of all who lose their lives or are wounded or reported missing whilst serving in the R.C.A.F. will appear in the official casualty lists published from time to time in the press. Publication of the date, place and station

of a casualty and, particularly, any reference to the unit concerned, might give valuable information to the enemy and for this reason only the name, rank and service number are included in the official lists. Relatives are particularly requested to ensure that any notices published privately do not disclose the date, place and circumstances of the casualty or the unit.

Please do not hesitate to ask for any assistance that I or my staff may be able to give you to relieve your sorrow in any way.

In late October 1944, Ivan and Rhea received a second letter from J.A. Sully, Air Vice-Marshal, Air Member for Personnel in Ottawa:

Dear Mr. Dowding:

I have learned with deep regret of the death of your son, Pilot Officer John Frederick Dowding, on Active Service Overseas on October 17th and I wish to offer you and the members of your family my sincere and heartfelt sympathy. It is most lamentable that a promising career should be thus terminated and I would like you to know that his loss is greatly deplored by all those with whom your son was serving.

In early November 1944, the Dowding's received mementoes of their son's funeral along with this accompanying letter from R.G.G. Cole, Group Captain, Commanding R.A.F. Station, Kinloss:

Dear Mr. Dowding:

I am enclosing a set of photographs taken at the funeral of your son at the R.A.F. Regional Cemetery, Harrogate on the 23rd of October, 1944. Although these may prove to be a painful reminder of your sad loss, I feel sure you would wish to have them. May I once more express my deepest sympathy in your bereavement.

In early November 1944, brother Harry came home to Sarnia to spend a 30-day leave with his grieving parents. Later that same month, the Group Captain for Chief of the Air Staff in Ottawa sent a letter to Ivan. In part it read as follows:

Dear Mr. Dowding:

I have the honour to forward, herewith, the Royal Canadian Air Force Officer's Commission Script for your son, Pilot Officer John F. Dowding. This Script, which is being forwarded to you for safekeeping, represents the authority vested in Pilot Officer Dowding, as well as the trust placed in him by His Majesty, the King...

When John Dowding enlisted, he completed his Will as a requirement of his service. Like most single males, he left all his estate to his mother in the event of his death. In late April 1945, Rhea received the following letter from the Director of Estates in Ottawa:

Dear Mrs. Dowding:

Your son's personal belongings which could be located at his unit Overseas immediately after he lost his life have reached this Branch, and will be forwarded to you within the next few days in a carton and a Gladstone bag by prepaid express. We trust that they will reach you in good order, and would ask you to complete the enclosed receipt form and return it to this Branch after the carton and Gladstone bag have reached you. The key to the Gladstone bag is enclosed herewith.

John Dowding's worldly effects arrived shortly afterwards in the Gladstone bag and cardboard box. Among the items were articles of clothing--pants, shirts, vests, socks, ties, shoes--and non-issue items including a Kaschi lighter, brushes in a case, a pocket wallet with snaps and press cuttings, thirteen letters, Kodak box camera, a pocket wallet with snaps, a gold signet ring, a brooch, a cheque book, some cash amounting to three pounds, four shillings and a certificate for a one-hundred dollar Victory Loan Bond.

One year later, in November 1945, his parents received a War Service Gratuity of \$155.61 for the loss of their son. Three years after his death, a memorial service was held on Sunday, December 1, 1947 at St. Andrew's Church in Sarnia, conducted by Reverend J.M. Margillivray. Seventeen year-old John Dowding is buried in Harrogate (Stonefall) Cemetery, Yorkshire, United Kingdom, Section G. Row A. Grave 8. On his headstone are inscribed the words, HE CHALLENGED THOSE WHO WOULD DESTROY THE INNOCENT AND THE WAY OF LIFE HE LOVED SO WELL.

DRINKWATER, John Willard (#R/99962)

Despite his age, John ("Bill") Drinkwater, 18, was described by a training instructor as "Good, quick, clear thinking, steady and reliable. Above average ability." Barely more than a year later, the Devine Street teenager was killed on his fourth flying mission.

John ("Bill") Drinkwater was born in Sarnia on June 13, 1923, the only son of Edward William and Florence May (nee Martin) Drinkwater, of 223 Devine Street, Sarnia. Edward and Florence Drinkwater (both born in Evesham, England) had immigrated to Sarnia, and Edward, a former bricklayer, was employed in Sarnia at Imperial Oil. John had an older sister, Marjorie Lorraine, who was born June 21, 1921. Bill was educated at Devine Street and Wellington Street public schools from 1928 to 1936. He then spent four years at Sarnia Collegiate (1936 to 1940) and participated in a variety of activities. He loved sports, from swimming, hiking and rugby extensively (on the junior rugby team, he was the first string flying wing) to playing tennis, golf, badminton, and hockey. Sports was only one way he spent his spare time. Bill was also a member of the School Cadets and his hobby was building model aircraft. Prior to enlisting, he was employed at an Imperial Oil Gas Station on RR#3 Blue Water Highway (Lakeshore Road) as an attendant from April to September 1940. Bill then worked as a labourer/truck driver at King Milling Flour Company from September 1940 to June 1941. He also found time to be a member of the Sarnia Server's Guild.

Eighteen year-old Bill Drinkwater enlisted in the Royal Canadian Air Force on June 23, 1941 in London, Ontario. He stood five feet seven and a half inches tall, had hazel eyes and dark brown hair, was single, and resided at home with his parents on Devine Street at the time. He requested flying duties with hopes to become a pilot. He began his air training in St. Hubert, Quebec, and continued at #3 Initial Training School (ITS) in Victoriaville, Quebec, #20 Elementary Flying Training School in Oshawa, Composite Training School (KTS) in Trenton and #7 Bombing and Gunnery School (B&GS) in Paulson, Manitoba. The Chief Instructor at #7B&GS wrote of Bill Drinkwater: *Good, quick, clear thinking, steady and reliable. Above average ability.* He was awarded his Air Gunner's Badge at Paulson, Manitoba on November 24, 1941.

Bill was anxious to get overseas and he finally got his wish when he embarked from Halifax for the United Kingdom on December 12, 1941. From #3 Personnel Reception Centre he continued his training in the U.K. at #1 Air Armament School (AAS), #7 Air Gunners School (AGS) and #14 Operational Training Unit (OTU) at RAF Cottesmore. Bill had just turned 19 when, on July 19, 1942, he became a member of the RAF #44 Rhodesia Squadron "Fulmina Regis iusta" (The King's thunderbolts are righteous), part of **Bomber Command**, as Flight Sergeant-Air Gunner.

At the outbreak of the war, the squadron was part of RAF No. 5 Group bomber unit, equipped with Handley Page Hampden aircraft. In 1941, the squadron was renamed No. 44 Rhodesia Squadron in honour of that colony's contribution to Britain's war effort. In December 1941, it became the first squadron to receive the Avro Lancaster. The squadron spent the rest of the war as part of Bomber Command's main bombing force. It was based at RAF Waddington until May 1943, and then relocated to RAF Dunholme Lodge and later to RAF Spilsby.

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

RAF #44 Squadron Lancaster

Bill Drinkwater was killed nine months after arriving overseas. On September 18, 1942, he was part of a crew aboard Lancaster I aircraft W4177 (markings KM-W), when it crashed, due to enemy action, in the North Sea off Hunstanton, England. The aircraft had taken off at RAF Waddington and had been engaged in mine-laying operations at the time. Perishing with Flight Sergeant-Air Gunner Bill Drinkwater were RAF Sgt.'s John Beattie, Jack Cliffe, John Richard Locke, Frederick Walters, and Arthur Kenneth Wrigley, and RAF F/S Alan Frank Bentley.

One month later, in mid-October 1942, his parents in Sarnia received a notification from R.C.A.F. Headquarters informing them not of Bill's death, but that their son had been promoted to Flight Sergeant.

Only weeks later, in November 1942, they received the dreaded letter from the Casualty Officer in Ottawa informing them that, *the body of their son John Drinkwater, reported missing since September 18th, had now been recovered*. Seven weeks after the crash, on November 7, 1942, Bill's body had been recovered from the sea at Hunstanton, Norfolk. The letter also advised them that the body had been claimed by James Drinkwater, an uncle of the deceased flier, and had been conveyed to the hometown of his father, in Evesham, Worcestershire, England, where burial was made alongside his grandfather.

In mid-November 1942, a memorial service for the late Flight-Sergeant John "Bill" Drinkwater was held in St. John's Anglican Church, Sarnia. Bill Drinkwater was later officially recorded as, *Previously reported missing, now reported killed during air operations, overseas*. In August 1945, Edward and Florence received a War Service Gratuity of \$227.68 for the loss of their only son. Nineteen year-old John "Bill" Drinkwater is buried, alongside his grandfather, in the Evesham Cemetery, Worcestershire, England, Grave 2104. On his headstone are inscribed the words, ETERNAL REST.

DUNCAN, John William (#R/170586)

That John William Duncan wanted to serve is evident. He left behind a baby daughter and his wife to enlist in the RCAF. That he was an asset to the military is undeniable. One instructor assessed him as being "most co-operative and willing to help others at any time, which makes him well-liked by his fellow instructors." Unfortunately, the truth about John's death in late May 1945 remains a mystery.

John Duncan was born in Toronto on October 9, 1915, the son of William and Sarah (nee Holmes) Duncan, of 45 Glendale Avenue, Toronto, Ontario. Parents William (an engineer) and Sarah Duncan were married in 1901 in Hamilton, Ontario. John had four siblings who lived in the family home in Toronto: brothers George David (born 1905) and Gordon Munro (born 1912); and sisters Muriel May (born 1901, married becoming Muriel Collins) and Jean Margaret (born 1918, married becoming Jean Harvey). John was educated at Toronto's Fern Avenue Public Elementary, 1921-1929, and then Parkdale Collegiate, 1930-1935. He enjoyed hunting and fishing, was active in rugby, hockey, basketball and swimming. John's life appeared to be very normal. To support himself prior to enlisting, John worked doing odd jobs from 1935-37, and then was employed from 1937-1942 by the Imperial Tobacco Company in advertising and as a travelling salesman. His hobby was building model airplanes and when he was in his early 20s, he acted in his interest in aviation and took some flying instruction in Hamilton, Ontario. He ended up logging over 16 hours of flying, through the Air Transport and Training Company.

On April 10, 1941, John Duncan married Olive Elizabeth (nee Braiden) in Toronto. The young couple moved to Sarnia and resided for a time at 191 ½ North Mitton Street. Later they were living at Kingston Apt #3 at the corner of George and Mitton Streets.

Twenty-six-year-old John Duncan enlisted in the Royal Canadian Air Force on May 26, 1942. Two of his references on his RCAF Attestation Paper were Sarnians; C. Storey, Manager, Front Street; and Mr. W. Gesham, Manager, Plank Road. At his RCAF interview, the Interviewing Officer noted that John Duncan was *quite keen to fly but application motivated by prospect of Army call – if he can't make the Air Force will enlist in Army*. John's ambition for after the war was to be involved in sales with some aircraft manufacturing firm.

He stood six feet one inch tall, had brown eyes and dark brown hair, was married and recorded his address as Kingston Apt. #3, Sarnia. John Duncan became an official member of the Royal Canadian Air Force, when he signed his Attestation Papers in Toronto on June 6, 1942. Approximately three months later, John and his wife Olive would have a baby daughter--Glenda Jean Duncan, born on September 14, 1942 in Toronto.

Like other recruits in the RCAF, John had extensive training which took him across Canada. He started at #1 Manning Depot in Toronto before heading to #1 "M" Depot in Quebec City. John received his air training at #3 Initial Training School (ITS) in Victoriaville, Quebec; #20 Elementary Flying Training School (EFTS) in Oshawa; and at #36 Service Flying Training School (SFTS) in Penhold, Alberta where he would be awarded his Pilot's Flying Badge on August 6, 1943. He continued training at #3 Flying Instructor School (FIS) in Arnprior and at #10 Elementary Flying Training School (EFTS) in Pendleton, Ontario. At Penhold, he was appointed to the rank of Temporary Flight Sergeant on May 6, 1944. His Commanding Officer at #10 EFTS wrote that *Sgt. Duncan is a very*

steady, hard worker who always produces more superior results than the average. He has always been most co-operative and willing to help others at any time, which makes him well-liked by his fellow instructors. If given more opportunity to display his reliability, he would rank high among the men at this unit. He is definitely of high calibre.

The spring and summer of 1944 saw upheaval in the Duncan family. On May 21, weeks after John received his rank promotion, William, John's father, died at the age of sixty-nine. In August, John left for overseas, and while gone, Olive and infant daughter Glenda moved to Toronto to live with her parents at 94 Sorauren Avenue.

John Duncan embarked overseas for the United Kingdom on August 3, 1944. From #3 Personnel Reception Centre (PRC), John continued his training at #6 (Pilot) Advanced Flying Unit (AFU). On May 1, 1945, a week before the war officially ended in Europe, he became a member of RAF #22 Operational Training Unit (OTU), with the rank of Warrant Officer Class I-Pilot. No. 22 OTU was formed in April 1941 at RAF Wellesbourne Mountford as part of No. 6 Group RAF Bomber Command and trained night bomber crews with the Vickers Wellington twin-engine, long-range medium bomber.

Warrant Officer I-Pilot John William Duncan

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in **Bomber Command** operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war. There was no easy way to learn how to fly the heavy bombers, and training crews suffered a litany of disasters, crashes and deaths. By the end of the war, Bomber Command lost over 8,000 Allied airmen who were killed in training or by accidents alone.

The war in Europe ended on May 8, 1945, however the war with Japan continued (it would end in mid-August of 1945) and it was on a training mission for the Japanese theatre that John Duncan was killed. On May 28, 1945, John was the pilot and captain of a crew which comprised four pupils aboard Wellington X aircraft HE871, based at Wellesbourne, Mountford. This was John's first solo cross-country flight.

At 07.30 hours, crews were briefed on the operation and meteorological conditions of the day. The conditions were not ideal. The crews were warned that clouds would start to form rapidly by 1100 hours and that heavy shower activity was predicted mainly in the south west of the route with a possibility of thunderstorms on the return. The day cross-country exercise over St. George's Channel had an expected four-hour duration. Air crews were instructed to fly at 15,000 feet or higher if necessary to avoid the cumulus nimbus clouds (because of the heavy icing and turbulence in these clouds). The crews were warned not to fly through any cloud due to the heavy icing, freezing level at 4000' to 5000'.

John's Wellington HE871 aircraft took off at 10.05 hours from Gaydon aerodrome. Approximately two hours after take-off, the aircraft sent a message, but no further contact was heard after that. No one knew at that time

that the Wellington HE871 would never be seen again. When it failed to return to base after four hours, authorities waited another hour before sending out a search party. The plane was believed to have crashed into the sea, believed to be due to severe icing. The air sea rescue search instituted the following morning located an oil patch on the sea, but saw no sign of any wreckage or a dinghy. The entire crew was lost. Perishing with the Captain of the aircraft, Warrant Officer I-Pilot John Duncan were pupils F/O Albert Harry Handley, Sgt. Joseph Rene Isabelle (Morin), Sgt. Fred Theodore Gidilevich and Sgt. William Edwin Algar.

In the inquiry following the accident, the following facts were determined: the aircraft was believed to have crashed into the sea between position 50° 20'N 05° 50'W and the Cornish coast; the weather conditions at the time of the accident were reported as heavy cumulus cloud across route with tops to 18000' or above, violent bumpiness and frequent heavy rain showers; last contact from the aircraft was at 12.05 hours; from the reports of other pupil pilots over the route, there was a large bank of cloud extending well inland and it was necessary to climb to 19000 feet to clear the tops of the cloud; and W/O John Duncan was an experienced ex staff pilot and was considered to be a good average pilot and captain. It was the opinion of the Investigating Officer and Commanding Officer that the aircraft flew into cloud after turning from its sea position towards land, and control was lost due to turbulence or icing.

In early June 1945, Olive Duncan in Toronto received a letter from the Group Captain, Commanding, R.A.F. Station, Wellesbourne, Mountford, Warwickshire. Following is a portion of that letter:

Dear Mrs. Duncan,

As you know, your husband Warrant Officer John William Duncan, has been missing since the 28th May 1945; he was engaged on a cross-country training flight, and except for one message received, nothing was heard from the aircraft after it took off. Everything possible was done both by this unit, and the Royal Air Force organization to locate the aircraft, but all efforts, I regret to say, were unavailing.

As several days have now passed without bringing any news, I am writing to you to express my own very real sympathy, together with that of all the officers and airmen at Wellesbourne Mountford in the very anxious time through which you must be passing. I am afraid that owing to the lapse of time since your husband was reported missing, there is now very little hope that he is alive.

Your husband is of the very finest type of young man upon whom we are relying to win the war, and I need hardly tell you that he was extremely popular with everyone here. His keenness on the job and his enthusiasm for everything he took in hand were most marked...

Should any information of your husband come to hand, you will, of course, be notified immediately by cable. Again please accept my deepest sympathy in your great anxiety.

Later in June 1945, the R.C.A.F. Casualty Officer, for Chief of the Air Staff in Ottawa sent this letter to Olive:

Dear Mrs. Duncan,

Further to my letter of June 2nd, advice has been received from the Royal Canadian Air Force Casualties Officer, Overseas, that the last wireless message received from your husband's aircraft was at 12:05 P.M. on May 28th, 1945. At that time the aircraft was slightly north of the point, twenty miles north, north west of Land's End, Cornwall, England, from which they were to begin the last leg of their flight back to their base.

Please be assured that any further information received at these Headquarters will be communicated to you immediately.

In December 1945, the Air Vice-Marshal, Acting Chief of the Air Staff wrote to Olive:

Dear Mrs. Duncan:

I have learned with deep regret that your husband, Warrant Officer John William Duncan, is now for official purposes presumed to have died on Active Service Overseas on May 28th, 1945. I wish to offer you and the members of your family my sincere and heartfelt sympathy.

It is most lamentable that a promising career should be thus terminated and I would like you to know that his loss is greatly deplored by all those with whom he was serving.

On John Duncan's Death Registration, which records his address as George and Mitton Streets, Sarnia, he was officially recorded as, *Previously reported missing after air operations, now for official purposes, presumed dead. Death was the result of an accident, during a cross country training flight, overseas.*

In January 1952, almost seven years after John's death, Olive received the following letter from the Wing Commander, R.C.A.F. Casualties Officer, for the Chief of the Air Staff:

Dear Mrs. Duncan:

It is with reluctance that after so long an interval, I must refer to the loss of your husband, Warrant Officer Class II John William Duncan, but due to the lack of any information concerning him since he was reported missing, it must be regretfully accepted and officially recorded that he does not have a "known" grave.

Due to the extreme hazards attending air operations there are, unhappily, many thousands of British aircrew boys who do not have "known" graves and all will be commemorated on General Memorials that will be erected at a number of locations by the Imperial War Graves Commission (of which Canada is a member), each Memorial representative of a theatre of operations. One of these Memorials will be erected at Runnymede, England and the name of your husband will appear on that Memorial.

I realize that this is an extremely distressing letter and that there is no manner of conveying such information to you that would not add to your heartaches. I am fully aware that nothing I may say will lessen your great sorrow, but I would like to express to you and the members of your family my deepest sympathy.

John Duncan left behind his wife Olive and their 2 ½ year-old daughter Glenda. In February 1946, Olive Duncan received a War Service Gratuity of \$428.38 for the loss of her husband. Later, Olive remarried and returned to Sarnia as Olive Delderfield, residing at 239 Harkness Street. Twenty-nine-year-old John Duncan has no known grave. John Duncan's name is inscribed on the Runnymede War Memorial, Surrey, United Kingdom, Panel 281.

On a wall in St. Peter's Church in Wellesbourne, England, there is a brass plaque that was dedicated in 1986, to the members of RAF #22 Operational Training Unit who lost their lives in the war. The inscription reads, DEDICATED TO THE MEMORY OF THE 315 AIRMEN AND AIRWOMEN KILLED WHILE SERVING WITH NO. 22 OTU WELLESBOURNE MOUNTFORD AIRFIELD DURING WORLD WAR TWO. Two Sarnians were among the 315 names: John Duncan and Rex Gammon (included in this Project).

DUROCHER, Wilfred Albert (#A/110275)

Wilfred Albert "Frenchy" Durocher enlisted at age 28, when he was a married father of two infants, and died on German soil in the late stages of the war. The epitaph on his headstone reflects his commitment to serving his country: GREATER LOVE HATH NO MAN THAN THIS, THAT A MAN LAY DOWN HIS LIFE FOR HIS FRIENDS.

Wilfred Durocher was born in Casselman (Village), Russell, Ontario on July 24, 1915, the son of Eli Francis (born in Buckingham, Quebec) and Marie Almanda Alexandrine (nee Thibault, born in Hawkesbury, Quebec) Durocher. Parents Eli and Marie Durocher were married on February 24, 1907, and the family became larger with each passing year. They were blessed with thirteen children. Wilfred's siblings included seven brothers--Elie Remie (born 1908); Jean Baptiste Emile (born 1910); Oliver Joseph (born 1917); Joseph (born 1921, died April 1939); Omar Homer (born 1923, died two years later); Frederick Joseph (born 1927); and Raymond Albert (born 1928, died at birth)—and five sisters: Marie Rose Viola (born 1914, later to become Mrs. Lester Schram); Dora (born 1918, died in 1931 at age 19); an unknown female (born 1922, died a few months later); a female stillborn (1928); and Freida (born 1931, later to become Mrs. Gill Gaynes).

When Wilfred was six years old, the Durocher family was residing at 230 Shamrock Street, Sarnia. They would later reside at 239 Chippewa Street, Sarnia. He kept himself busy and enjoyed playing rugby, baseball and swimming, as well as singing. However, after completing grade eight at age fifteen, Wilfred left school to help his mother by going to work. He would spend seven years employed as a helper on a truck and then four years as a lumber shipper with Laidlaw Lumber Company in Sarnia. His pay was 55 cents per hour.

At age 24, Wilfred Durocher married Sarnia-born Florence Agnes (nee Hamilton) in Point Edward on August 17, 1939. The young couple had two children together: Helen Theresa (born March 14, 1940) and Joseph Edgar Albert (born July 21, 1944). The young Durocher family lived at 103 Alfred Street, Sarnia, and Wilfred was employed by the Laidlaw Belton Lumber Company. In January 1943, Wilfred would lose his father when Elie, an employee of the section gang of the Pere Marquette Railway, died at sixty-four.

Twenty-eight-year-old Wilfred Durocher enlisted in the Canadian Army on April 12, 1944, in London, Ontario. He stood five feet seven inches tall, had brown eyes and black hair, and was married with one child at the time, residing at 103 Alfred Street at the time. His post-war plan for after the war was to continue his employment with Laidlaw Lumber, who had promised him his job on his return. From #1 District Depot in London, Ontario, Wilfred received his army training at #12 Canadian Infantry Basic Training Centre (CIBTC) in Chatham and

advanced training at A29 Canadian Infantry Training Centre (CITC) at Camp Ipperwash. In mid-September 1944, he was granted eleven days leave prior to going overseas, giving him an opportunity to visit his loved ones at home in Sarnia.

Private Wilfred Albert Durocher

Wilfred Durocher with his wife Florence Agnes & their son

Wilfred Durocher embarked overseas for the United Kingdom on October 5, 1944. Upon arrival, he became a member of the Canadian Infantry Reinforcement Unit (CIRU). In early November 1944, Wilfred became a member of the Algonquin Regiment, R.C.I.C., with the rank of Private. One month after arriving overseas, he left the U.K. and disembark in the Northwest Europe theatre on November 4, 1944.

Durocher arrived with the Algonquin Regiment during the final stages of the **Battle of the Scheldt**, a grueling struggle to liberate the estuary, with bitter fighting against a well-fortified and heavily entrenched enemy. After that battle, over the winter of 1944-1945, most of the weary Canadians were given a rest, although the front was never quiet, with patrols and large-scale raids remaining constant. Canadian troops were stationed along the **Nijmegen sector** in the Netherlands. They were tasked to hold and defend the Nijmegen salient and a small piece of Allied-held territory north of the Maas River. This bridgehead would be used as a starting point for crossing the Rhine (in February 1945), and the Allies had to give the enemy the impression that an assault was imminent to force it to leave troops in that area. The Germans did their best to push the Canadians out of “the island” by flooding the area and constantly harassing them with mortar fire, artillery and aggressive patrols. Constantly vigilant, the men dug deep slit trenches, covered them with whatever was handy, and tried to keep warm from the snow and cold during one of the most frigid winters on record in northern Europe.

In February 1945, the Allies launched a great offensive, the **Battle of the Rhineland** that was designed to drive the Germans eastward back over the Rhine River. There would be two formidable thrusts: one by the Ninth U.S Army; and one by the First Canadian Army, strengthened by the addition of Allied formations. The resilient Germans had spent months improving their defences; winter rains and thaw had turned the ground into a thick, muddy quagmire and the enemy would fight fiercely to defend their home soil. During one month of fighting, the Canadians would succeed in clearing the Reichswald Forest, in breaking the Siegfried Line and in clearing the Hochwald Forest. But victory came at a high cost.

Less than four months after arriving in the northwest Europe, on February 26, 1945, while fighting in the mud and rain in Germany, Wilfred Durocher was wounded in action during the Battle of the Rhineland. He died later that day, as a result of those wounds. Wilfred Durocher’s remains were buried on February 27, 1945 at a location recorded on the Army Field Service Card as “Germany 2 Canadian Corps Cemetery, Bedburg 932527 Sh 6 P1 R9 Grave 22”.

In late March 1945, Florence Durocher on Alfred Street received the following letter from the Major-General, Adjutant-General:

Dear Mrs. Durocher:

It was with deep regret that I learned of the death of your husband, A110275 Private Wilfred Albert Durocher, who gave his life in the Service of his Country in the Western European Theatre of War on the 26th day of February, 1945.

From official information we have received, your husband died as the result of wounds received in action against the enemy. You may be assured that any additional information received will be communicated to you without delay.

The Minister of National Defence and the Members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

The Colonel, Director of Records, for Adjutant-General wrote Florence the following letter in late May 1945:
Dear Madam:

Information has now been received from the overseas military authorities that your husband, A110275 Private Wilfred Albert Durocher, was buried with religious rites in a temporary grave located in Bedburg, Germany.

The grave will have been temporarily marked with a wooden cross for identification purposes and in due course the remains will be reverently exhumed and removed to a recognized military burial ground when the concentration of graves in the area takes place. On this being completed the new location will be advised to you, but for obvious reasons it will likely take approximately one year before this information is received.

Wilfred Durocher was later officially recorded as, *Overseas casualty, died of wounds received in action, in the field (Germany)*. At the time of Wilfred's death, two of his brothers, both Privates, were also overseas. Brother Emile was in a hospital in England after being wounded a few weeks earlier and Oliver was believed to still be somewhere in England.

Wilfred Durocher left behind his wife Florence and their two young children: Helen, age four; and Joseph, age seven months. In June 1945, Florence received a War Service Gratuity of \$132.90 for the loss of her husband. Almost a year after Wilfred lost his life while serving, Florence was still searching for answers. Following is a portion of a letter she wrote to the Director of Estates Branch, Headquarters in Ottawa in January 1946:

Dear Sir:

I am the widow of the above mentioned. He died of wounds while on active service in Germany on Feb 26, 1945. Up to this time, I have had no word as to the nature of his wounds of which he died. Nor have I had any of his personal belongings returned to me. Would you please advise me if you could supply any information regarding these matters or to whom I could write regarding same.

In February 1946 she received the following response letter from the Colonel, Director of Records, for Adjutant-General:

Dear Mrs. Durocher:

... With deep regret I wish to inform you your late husband died of wounds received in action on the 26th day of February, 1945, when his Unit, the Algonquin Regiment, participated in active operations against the enemy in the vicinity of Bedburg, Germany. As stated in this Headquarters' letter of the 25th May, your husband's remains were reverently buried in a temporary grave located in Bedburg, Germany, and in close proximity to the area in which he so gallantly laid down his life in the Service of his Country. Bedburg is a small hamlet approximately 1 ½ miles South East of Cleve, Germany.

Now living at 239 Chippewa Street in Sarnia, Florence received a letter from the Colonel, Director of Records, for Adjutant-General in July 1946. Following is a portion of that letter:

Dear Madam:

Information has just been received from overseas that the remains of your husband, A110275 Private Wilfred Albert Durocher, have been carefully exhumed from the original place of internment and reverently reburied in grave 6, row B, plot 9, of Nijmegen Canadian Military Cemetery four miles South-East of Nijmegen, Holland. Marked map is enclosed. This is a recognized military burial ground and will receive care and maintenance in perpetuity.

The grave will have been marked with a temporary cross which will be replaced in due course by a permanent headstone suitably inscribed. While it cannot now be stated when this work of permanent commemoration will begin, before any action is taken you will be communicated with and an opportunity will be given you to submit a short personal inscription of your own choice for engraving on the headstone...

Florence would eventually remarry, becoming Florence James and residing at 619 Cherry Drive, Sarnia. Twenty-nine-year-old Wilfred Durocher, father of two young children, is buried in Groesbeek Canadian War Cemetery, Netherlands, Grave IX.B.6. On his headstone are inscribed the words, GREATER LOVE HATH NO MAN THAN THIS, THAT A MAN LAY DOWN HIS LIFE FOR HIS FRIENDS.

ELLIOTT, Ralph Leslie (#J/45090)

Ralph Elliott was so popular among the Bombing Command members of his station, that after his death in a tragic accident, the Commanding Officer received many requests from his fellow officers wanting to be one of his pallbearers.

Ralph Elliott was born in Corunna on October 26, 1924, the son of Thomas Fleming (a farmer) and Mary Christina (nee Miller) Elliott, of R.R. #1, Corunna, later R.R. #3, Woodrowe Road, Sarnia. His parents Thomas (born in Moore Township) and Mary (born in Mandaumin, Ontario) Elliott were married on March 5, 1919 in Sarnia. Ralph had only one sibling, an older brother, Douglas Arthur Elliott, who at the time of Ralph's death, lived in Moore Township. When Ralph was fourteen years old, he lost his mother Mary, who died of a heart attack at age forty-eight on March 18, 1939.

Ralph attended S.S. #13 Sarnia and Moore School from 1931 to 1939, then Sarnia Collegiate from September 1938 to June 1942. He was part of the school cadets with the rank of sergeant from 1938 to 1942. He was active in football, baseball and hockey. For three months in early 1943, he took a correspondence course in mechanical engineering from the International Corps School in the U.S.A. He was employed as a junior draftsman with the Canadian Kellogg Construction Company in Sarnia "making progress reports" from September 1942 to July 1943, until he left to join the R.C.A.F.

Eighteen year-old Ralph Elliott enlisted in the Royal Canadian Air Force in London, Ontario on July 26, 1943. He stood five feet seven inches tall, had hazel eyes and black hair, was single, and lived at home with his parents in Corunna at the time. He had several friends in the R.C.A.F. and requested flying duties. He was keen to be a pilot but willing to serve wherever he was best suited. From #3 Manning Depot in Edmonton, Ralph received his air training at #4 Initial Training School (ITS) in Edmonton; #8 Bombing and Gunnery School (B&GS) in Lethbridge, Alberta; #1 Central Navigation School (CNS) in Rivers, Manitoba; and #1 Aircrew Graduates Training School (AGTS) in Maitland, Nova Scotia. He was awarded his Air Bombers Badge at AGTS in Maitland on May 5, 1944.

Ralph embarked overseas for the United Kingdom in June 1944. From #3 Personnel Reception Centre, he became a member of RAF #1 (Observer) Advanced Flying Unit (AFU) on September 27, 1944, part of **Bomber Command**, with the rank of Flying Officer-Bomb Aimer. Based out of RAF Wigtown, the training units were equipped with Avro Ansons.

Elliott family

Flying Officer Ralph Elliott

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

Less than six months after arriving, on December 6, 1944, Ralph was involved in a tragic accident at RAF Station, Wigtown, Wigtownshire, Scotland. The accident occurred at approximately 18.15 hours. He and another Flying Officer, P/O Farrell Robert Scarlett, were walking along a main camp road on their way to the air crew dressing room prior to reporting for duty in the briefing room. It was dark when they were accidentally struck by an R.A.F. vehicle, a signals van that was being driven by a soldier unauthorized to drive that type of vehicle. The R.A.F. vehicle struck P/O Farrell Scarlett with a glancing blow that threw him off the road, but Ralph was struck directly in the back. He was immediately transferred to E.M.S. Section of Galloway Hospital with multiple injuries including the fracture of his skull and both legs; the dislocation of his knee; shock; and multiple lacerations and abrasions. His general condition improved somewhat through the night, but suddenly at 05.00 hours on December 7, his condition deteriorated, and he succumbed to his injuries.

In the investigation that followed, Pilot Officer Farrell Robert Scarlett provided his account of the accident. Following is a portion of his testimony:

I am a pupil on No. 307 Air Bomber Course at R.A.F. Station, Wigtown. On the evening of the 6th December 1944, at about 18.00 hours, I was walking, accompanied by P/O Elliott from the Domestic Camp along the camp road to the Air Crew Dressing Room prior to reporting for duty to the Briefing Room. We were walking on the left hand side of the road. At a point a few yards short of the Training Wing Armoury a vehicle suddenly appeared behind me, the left mud guard caught me on my hip and threw me clear to the left. P/O Elliott was on my right, the vehicle struck him in the back and carried him for some distance and then passed over him. The vehicle finally stopped about two or three yards past him.

F/O Evans who was just approaching at the time went for medical assistance while I remained with P/O Elliott. I heard no warning from the approaching vehicle and at the time of the accident it was almost dark... Later I stepped out the distance from the point of impact to the point where the vehicle had pulled up and found it to be 22 paces.

The body of Ralph Elliott was buried in Newton Stewart Cemetery in Wigtownshire, on December 11, 1944. On that same day, Thomas Elliott in Sarnia received a telegram from the R.C.A.F. Casualty Officer in Ottawa informing him that his son, PILOT OFFICER RALPH LESLIE ELLIOTT HAS DIED OF INJURIES RECEIVED WHILE ON ACTIVE SERVICE OVERSEAS ON DECEMBER 7. The telegram also informed him that, HIS BURIAL WAS TAKING PLACE AT NEWTON STEWART CEMETERY WIGTOWNSHIRE SCOTLAND TODAY. There were no details of the injuries, but the telegram did state that a letter would follow.

In late October 1944, Thomas received a letter from the Group Captain, R.C.A.F. Records Officer in Ottawa. Following is a portion of that letter:

Dear Mr. Elliott:

I have the honour to forward, herewith, the Royal Canadian Air Force Officer's Commission Script for your son, Pilot Officer Ralph L. Elliott. This Script, which is being forwarded to you for safekeeping, represents the authority vested in Pilot Officer Elliott as well as the trust placed in him by His Majesty, The King...

In mid-December 1944, Thomas received the following letter from the Air Vice-Marshal, Air Member for Personnel in Ottawa:

Dear Mr. Elliott:

It is with deep regret that I must confirm our recent telegram informing you that your son, Pilot Officer Ralph Leslie Elliott, died on Active Service.

Advice has been received from the Royal Canadian Air Force Casualties Officer, Overseas, that your son was injured while on duty, when he was accidentally knocked down by a Royal Air Force motor transport on the main camp road at Wigtown, Wigtownshire, Scotland, on December 6th, 1944. He was admitted to the EMS Hospital, Galloway House, near Garliestown, Wigtownshire, suffering from shock, a fractured skull, and fractures to both legs. He died as a result of his injuries on December 7th. His funeral took place at 11:00 A.M. on December 11th, at the Newton Street Cemetery, Wigtownshire, Scotland.

You may be assured that any further information received will be communicated to you immediately. I realize that this news has been a great shock to you, and I offer you my deepest sympathy. May the same spirit which prompted your son to offer his life give you courage.

In late December 1944, Thomas received the following letter from the Group Captain Commanding R.A.F. Station, Wigtown, Scotland:

Dear Mr. Elliott,

I was terribly sorry to have to notify you through the Royal Canadian Headquarters of the death of your son. It was a very tragic affair and I hope you will accept my profound sympathy also that of my officers and men in your great loss.

Your son was walking along the main camp road on his way to fly, in the dark, at about 6 p.m., when he was knocked down by an R.A.F. vehicle. Your son was immediately taken to the nearest hospital, the E.M.S. Hospital, Galloway House, Garlieston, where after a very gallant fight, which we had great hopes might prove successful he died on the following morning.

A full enquiry was carried out and an airman is being charged as a result of the accident. I have not written before as I was awaiting copies of the photographs which were taken at the funeral so that I could send them to you with this letter. I attended the funeral which took place at 11 o'clock on 11th December, 1944 at the Cemetery Newton Stewart. There was a double funeral at which an Australian Sergeant who was killed in an aircraft crash was also buried.

Your son was extremely popular on the Station, so much so that his brother officers requested me for permission to act as bearers for his coffin, a most unusual request. I gave them permission, and I have never seen a smarter turn out than they made. The service was conducted by Squadron Leader Sinclair my other Denominations Padre as the Canadian Chaplain was unable to be present. It was a cold but fine day, and the sun was shining whilst we were at the cemetery. My Station Band played the funeral march whilst we slow marched through the camp, and again at the cemetery.

It was so sad that your son was killed in such a manner, so far from home and not in actual operations against the enemy, but he certainly made his mark before his death, and carried out his duties in an exemplary manner. You can justly be proud of him. His death will not only be a great loss to you, but the Station, to the Royal Canadian Air Force, and to the Service as a whole. Again in conclusion I would ask you to accept my deepest sympathy.

Ralph Elliott was later officially recorded as, *Died of injuries sustained when knocked down accidentally by RAF motor vehicle. Fracture to skull, both legs, and shock, overseas (England).* In November 1945, Thomas Elliott received a War Service Gratuity of \$216.74 for the loss of his son. Twenty year-old Ralph Elliott is buried at Newton Stewart Cemetery, Wigtownshire, United Kingdom, Section M, Grave 2. In November 2019, his name along with 25 others was added to the Sarnia cenotaph, engraved in stone to be remembered always.

ELLIOTT, Thomas Harold (#J/90281)

Thomas Elliott was so eager to be part of an aircrew that he visited recruitment centres almost a dozen times. He became, according to his RAF station commander, part of a crew that proved themselves as keen and courageous. Thomas lost his life while on a mission to gather research crucial to the success of Allied bombers.

Thomas Harold Elliott was born in Sarnia on May 29, 1918, the son of Thomas Herman and Ethel (nee Holt) Elliott, of 212 Cromwell Street, Sarnia. Parents Thomas Herman (born in Exeter, Ontario) and Ethel (born in Kiva, Ontario) Elliott were married in Sarnia on January 12, 1915. Thomas' father, Thomas Herman, was employed as a pipefitter in the pumping department at Sarnia Imperial Oil Refinery. Thomas Harold had one brother, Elmer Bruce, born 1915, who would become a member of the Reserve Army.

Thomas was educated at George Street Public School in Sarnia from 1924 to 1931, then Sarnia Collegiate Institute from 1931 to 1937. While at Sarnia Collegiate, he played WOSSA rugby, was a member of the gymnastic team, and participated in basketball, hockey, swimming, and tennis. He was on the executive of the Boys' Athletic Committee and was a member of the editorial staff of the Collegiate magazine. In his last year at school he was Quartermaster Cadet Lieutenant of the high school cadets. After graduating from Sarnia Collegiate in 1937, he worked several jobs for two years, including the construction of the Blue Water Bridge. In 1939, he was employed as a machinist in the machine shoe department with the Sarnia Imperial Oil Refinery, where he would work for three years. In August 1939, Thomas enlisted with the 2nd-26th Battery of Sarnia, and served with them until February 1942, attaining the rank of Corporal.

Twenty-three-year-old Thomas Elliott enlisted in the Royal Canadian Air Force on February 7, 1942, in

London, Ontario. He had been very eager to join an air crew, having travelled to the London Recruitment Centre from Sarnia eight times, and visited the London mobile recruiting centre in Sarnia three times. He stood five feet six inches tall, had brown eyes and dark brown hair, was single and lived at home with his parents on Cromwell Street in Sarnia at the time. He expressed his desire to be a pilot or observer. He planned to return to Imperial Oil after the war. From #9 Recruitment Centre in London, he moved to #1 Manning Depot in Toronto. Thomas received his air training at #6 Initial Training School (ITS) in Toronto; #9 Elementary Flying Training School (EFTS) in St. Catharines; Composite Training School (KTS) in Trenton; #4 Bombing and Gunnery School (B&GS) in Fingal, Ontario; and #4 Air Observers School (AOS) in London, Ontario. He was awarded his Air Bomber's Badge on June 25, 1943. After graduating, he spent a short leave at home in Sarnia with his friends and family until July 9, 1943.

Pilot Officer Thomas Harold Elliott

Thomas embarked overseas from Halifax for the United Kingdom on July 15, 1943. From #3 Personnel Reception Centre, he continued his training in the U.K. at #6 Advanced Flying Unit (AFU), #24 Operational Training Unit (OTU), and #1664 Conversion Unit. His Commanding Officer's remarks about him included; ... *air work above average, showed keenness and intelligence, rather quiet individual but not lacking in drive*. On February 21, 1944, Thomas Elliott became a member of RAF #192 Squadron "Dare to Discover", which worked with **Bomber Command**. He was promoted to Flight-Sergeant in March 1944.

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

No. 192 Squadron was formed on January 4, 1943 as a radar counter-measures squadron at RAF Gransden Lodge. It was essentially a research unit, involved in identifying the types of radar, radar patterns and wavelengths used by the Germans. This was by no means a safe role, for the research flights had to take place over Germany and occupied Europe where the German radar was operating against them. They also carried out similar missions over the Bay of Biscay. During bomber raids, the aircraft would provide countermeasures to German radars. Originally outfitted with Vickers Wellingtons, they later converted to de Havilland Mosquitoes and Handley Page Halifaxes. Their base changed to RAF Feltwell in April 1943, then RAF Foulsham in November 1943.

Less than one year after arriving overseas, Thomas Elliott lost his life while on a night mission in April 1944. On the night of April 24, 1944, he was a member of the crew aboard Halifax MKIII bomber aircraft LW622 (markings DT-R). The aircraft took off from R.A.F. Station, Foulsham, on the night of April 24, detailed to accompany the Bomber Command attack on Karlsruhe, Baden, Germany. The aircraft did not return, and the crew members were not heard from again. The aircraft was later discovered to have crashed at Haesdonk, east of Sint-Niklaas, Belgium. Perishing with Thomas Elliott were FS. Peter Horace Gordon Vincent; F/O.s Charles William Cyril Crowdy and Leslie Lloyd Mortimer; P/O Frederick William Morris; Sgt.s Francis Etienne and Donald Parkin (RAF); and FS. Maurice Charles Wilmer (RAF).

Several days later, Thomas and Ethel Elliott in Sarnia received a telegram from the R.C.A.F. Casualty Officer in Ottawa that read, DEEPLY REGRET TO ADVISE YOU THAT YOUR SON J90281 SERGEANT THOMAS HAROLD ELLIOTT IS REPORTED MISSING AFTER AIR OPERATIONS APRIL 25. LETTER FOLLOWS. The message was a shock to his parents, since he had never once mentioned taking part in any raid in his letters home. They had heard, however, from friends overseas that he had been flying. On checking Canadian Press dispatches, the Elliott parents suspected that he may have been lost on an attack launched on Karlsruhe on April 24-25, in which 30 British aircraft were lost, including eight Canadian planes.

In late April 1944, Thomas and Ethel received a letter from R.A.F. Station, Foulsham, Norfolk. Following is a portion of that letter:

Dear Mr. Elliott,

It is with very deep regret that I have to confirm that your son, Sergeant Thomas Harold Elliott is missing from operations. There is very little I can tell you about this tragic incident at the present moment.

Your son was flying as Air Bomber with his usual crew in a Halifax aircraft which was detailed to accompany the Bomber Command attack on Karlsruhe on the night of the 24th/25th April, 1944. The aircraft took off from here at 22.45 hours and was due to return at 03.15 hours. Nothing at all has been heard since of the crew or the aircraft.

Your son's crew had been with the Squadron since the middle of February and they had proved themselves to be a keen and courageous crew. They worked together very well and always appeared cheerful and happy. Their loss will be felt very keenly by the Squadron. I will, of course, send to you immediately any further news that I receive.

I must ask you not to pass any information to the Press as this might prejudice his chances of escape should he have survived without being captured. This is not to say that any information about him is available other than that I have already given, but it is a precaution adopted in the case of all personal reported missing.

If there is any way in which I can be of assistance to you, or if you have any queries, do let me know as I shall be only too ready to help you. I am attaching a list of the crew and their next of kin, should you wish to get into touch with any of them. May I send to you the deepest sympathy of myself and everybody in the Squadron.

In August 1944, the Elliotts received the following letter from the R.C.A.F. Casualty Officer, for the Chief of the Air Staff in Ottawa:

Dear Mr. Elliott:

I have been directed to inform you that your son, Thomas Harold Elliott, has been promoted to the rank of Flight Sergeant with effect from March 25th, 1944.

It is regretted that no further information has been received regarding your son since he was reported missing on April 25th and I wish to extend to you and the members of your family my sincere sympathy in this trying time.

In early February 1945, they received a telegram from R.C.A.F. authorities informing them that their son, FLIGHT SERGEANT THOMAS ELLIOTT MISSING SINCE APRIL 25 1944 IS NOW FOR OFFICIAL PURPOSES PRESUMED DEAD. In October 1945, Thomas and Ethel received a War Service Gratuity of \$331.47 for the loss of their son Thomas.

More than two years after the crash, Air Ministry investigators were still trying to determine the identity of the crew members involved. In a report dated September 1946, which was based on German burial cards, it was recorded that Halifax LW622 crashed at Haesdonk, Belgium (12 kms SW of Antwerp), and eight members of the crew were killed and buried in graves at Antwerpen-Deurne Cemetery. Of the eight crew members identified by the Germans, Thomas Elliott was not one of them, but they did identify a Pilot Officer J. Wells, who was buried in Grave No. 121.

R.C.A.F. casualty officer officials had no doubt that Sergeant Thomas Elliott was buried with the remainder of his crew from LW622, but no positive identification of his body had been made. They sought to understand how he came to be identified as "Pilot Officer J. Wells". In May 1946, R.C.A.F. officials wrote a letter to Mr. John Roland Wells (P/O J. Wells), explaining their findings thus far, including that the eighth member of the downed crew, whose name was Sergeant T.H. Elliott was identified by the Germans as "Pilot Officer J. Wells". R.C.A.F. officials were hoping that John Wells may be able to explain how T.H. Elliott came to be identified as "Pilot Officer J. Wells".

In June 1946, John R. Wells, in the Montreal Military Hospital, sent a reply letter to the R.C.A.F. Casualty

Officer, for Chief of the Air Staff. The letter helped clarify the situation: J.R. Wells was aboard another aircraft that was part of the same mission. His aircraft was hit and he baled out of the wounded aircraft. He was captured by the Germans and sent to a POW camp. Following is a portion of the June 1946 letter written by J.R. Wells to R.C.A.F. Casualty Officer investigators:

... there is very little information I can give you regarding Sergeant T.H. Elliott except that it clarifies in my mind as to what happened to my aircraft.

I was under the impression until I met my crew members back in England that my aircraft had gone into the water, but other members of my crew state they saw an A-C crash and burn and they thought it was ours. This may have been the A-C of which Sergeant Elliott was a crew member and not ours as I was fairly positive that my aircraft had landed in the water.

Also, some hours after my landing, I found that one of my identity discs were missing which I believe I lost when I bailed out and this might have landed somewhere near where Elliott was found. Otherwise I can see no reason for Sergeant Elliott being identified as myself, except as a mistake in names or identity by the Germans themselves. I was taken to Dulagluft as Flying Officer J.R. Wells. I trust that the information I have given here will help clarify the situation somewhat.

On August 12, 1946, the R.C.A.F. Casualty Officer, for the Chief of the Air Staff in Ottawa, sent a letter to Thomas and Ethel. Following is a portion of that letter:

Dear Mrs. Elliott:

... a report which has now been received from a Missing Research and Enquiry Unit on the Continent advises that the graves in the Antwerpen-Deurne Cemetery have been exhumed and the entire crew laid to rest in the Schoonselhof Cemetery.

Pilot Officer Wells was contacted by Air Ministry and he advised that office that when he baled out of his aircraft which crashed near the aircraft of which your son was a member of the crew, he lost his identification discs, and it is therefore assumed that your son was identified as Pilot Officer J.R. Wells, as his identification disc was probably found near your son's body. Grave No. 121 in the Schoonselhof Cemetery has therefore, been accepted as the grave of your son, Pilot Officer Thomas Harold Elliott.

The reverent care of the burial places of all who served in the Forces of the British Empire is the task of the Imperial War Graves Commission. Already eminent architects are at work, planning the construction of beautiful cemeteries and each individual grave will be supported and sustained by the Nations of the Empire. I hope that it may be of some consolation to you to know that your gallant son's grave is in sacred care and keeping. May I again at this time extend my most sincere sympathy.

In a follow-up letter sent in August 1946 to the parents, the R.C.A.F. Casualty Officer informed them that:

... a report which has now been received from a Missing Research and Enquiry Unit on the Continent advises that the graves in the Antwerpen-Deurne Cemetery have now been exhumed and the entire crew laid to rest in the Schoonselhof Cemetery. Pilot Officer Wells was contacted by Air Ministry and he advised that office that when he baled out of his aircraft which crashed near the aircraft of which your son was a member of the crew and he lost his identification discs.

Thomas Elliott was later officially recorded as, *Previously reported missing after air operations, now for official purposes, presumed dead, overseas (Germany)*. More than four years after Thomas was killed, his mother was still searching for answers. In late October 1948, she wrote the following letter to the Wing Commander of the R.C.A.F. in Ottawa:

Dear Sir,

Have received the snap shot of my son's grave Pilot Officer Thos. Harold Elliott which I was very glad to receive. As this is the 1st word we have received that they had found his body as all the word we received was he was missing. I would appreciate it very much if I could find out in what country he is buried also the name of Cemetery.

The Wing Commander, R.C.A.F. Casualties Officer in Ottawa wrote a reply soon after. In it, he acknowledged receiving her letter, and he stated the name of the cemetery and the country that her son was buried in. He also wrote, *I have noted your remarks that this is the first word you had received that your son's body had been recovered, and his grave located, and it would appear that you did not receive our letter of August 12th, 1946, which conveyed the information that your son's grave was No. 121 in this cemetery.... May I again express to you and the members of your family my deepest sympathy in the loss of your gallant son.*

Twenty-six-year-old Pilot Officer-Bomb Aimer Thomas Elliott is buried in Schoonselhof Cemetery, Belgium, Grave IVa.D.39. On his headstone are inscribed the words, BELOVED SON OF MR. AND MRS. T.H. ELLIOTT, SARNIA, ONT., CANADA. His name is also inscribed on the Sarnia Refinery Plaque. Unveiled in 1949, the plaque has the names of 24 Sarnia Imperial Oil employees who made the ultimate sacrifice in World War II. ELLIS, Norman George (#A/61791)

Norman George "Pinky" Ellis, was married for less than two years and had a young son at home when he enlisted. He gave his life for his country in a critical battle during a major Canadian offensive in France.

Norman was born in Sarnia on May 13, 1922, the eldest son of Herman Manford (a carpenter, born in Lambton, Ontario) and Annie Maria (nee Dunn, born in Courtright, Ontario) Ellis of 294 South Mitton Street, later 171 North College Street, Sarnia. Parents Herman and Annie Ellis were married on August 12, 1921 in Devine Street Church, Sarnia. Norman had six sisters and four brothers which included: Agnes (born 1923); Donna Jean (born 1926); Wilfred Henry (born 1930); Edith and Edward Carl (twins born 1935, though Edward died at birth); Eva May (died 1926); Gerald; Kenneth; Barbara; and Norma. Norman Ellis left school after grade seven at the age of fourteen, eager to learn a trade. He attended night school for several months taking a welding course. He was active in sports including boxing, softball and baseball, and he enjoyed hunting. He worked at several jobs in Sarnia, including a grocery store delivering and clerking, and at a bakery for three years. Following that, Norman was a driver (chauffeur) for three years with the Morris Taxi firm and a truck driver for Kist Beverages.

Norman married Gladys Louise Copeland of Inwood, the only daughter of Mr. & Mrs. Alvin Copeland at the United Church in Inwood on June 4, 1941. At the wedding ceremony, Miss Winnie Maidment of Sarnia served as bridesmaid, and serving as best man was "Bus" Nesbitt of Sarnia. Following the ceremony, a reception was held at the Masonic Hall in Inwood. A buffet luncheon was served on the lawn to approximately 150 guests. Afterwards, the newlywed couple left for a trip to eastern points. Upon their return, the young couple lived in Sarnia, at 294 South Mitton Street. The young couple would have one child together, a son, Norman Douglas Carl Ellis, born March 3, 1942.

Norman stood five feet seven and a half inches tall, had blue eyes and red-brown hair when he completed his National Resources Mobilization Act (NRMA) Enrolment Form on September 24, 1942 in London, Ontario. He was initially posted to the Lorne Scots Unit in London. On October 26, 1942, he was attached to #6 Defence and Employment Platoon, headquartered at 6th Canadian Division, Infantry, in Prince George, British Columbia. He trained and served with the No. 6 Defence and Employment Platoon into March 1943. The twenty year-old enlisted in the Canadian Army on March 10, 1943 in Victoria, British Columbia. Married less than two years, and with a one-year-old child at home, Norman recorded his address as 294 South Mitton Street, Sarnia. He expressed an interest in poultry farming following the war.

Private Norman George Ellis

In April 1943, Norman returned to Sarnia on an 18-day furlough from his base on Vancouver Island to visit his friends and family, which included his young wife Gladys and their son Douglas. On returning out west, Norman continued his army training, including taking a mountain warfare course, in Esquimalt, Prince George, Terrace and Vernon, British Columbia. In early May 1944, Norman returned to Sarnia on his embarkation furlough to be with his wife Gladys and their two year-old son. Norman Ellis embarked overseas from Debert, Nova Scotia on May 26, 1944, arriving in England on June 2, 1944.

Norman continued his training in the U.K., attached to the Winnipeg Grenadiers. Approximately two months after arriving, he arrived in France on July 30, 1944, a member of the Essex Scottish Regiment, R.C.I.C. with the rank of Private.

The **Battle of Normandy** had begun for the Canadians with the June 6, 1944 D-Day landings at Juno Beach. After breaching the “Atlantic Wall” of “Fortress Europe”, Allied armies began their break out from the narrow Normandy bridgehead to carve out a foothold on the French mainland. It would take a whole summer of tenacious fighting, pushing against fierce and ruthless German forces to advance east across France. In a brutal campaign of attrition, the Canadians faced fierce battles and vicious counterattacks as they clawed their way forward liberating villages and towns including Bretteville, Carpiquet, Caen and Falaise.

A little over one week after her husband arrived in France, Gladys received a letter from Norman on August 8, 1944 in which he stated that he was well. He also enclosed a piece of French currency. On that same day Norman Ellis lost his life in the Battle of Normandy during **Operation Totalize** of the **Battle of Verrières Ridge**, south of Caen.

The Battle of Verrières Ridge was a Canadian offensive that had the objectives of capturing the eastern section of Caen and securing the western bank of the Orne River and Verrières Ridge, with the goal of driving on to Falaise. The Canadian push towards Falaise was completed in several phases: *Operations Spring*, *Totalize* and *Tractable*. The second part, *Operation Totalize*, began before midnight on August 7 with Allied heavy bombers pounding the German defences. Columns of Sherman tanks moved out into the night with supporting infantry behind a rolling artillery barrage. Improvised armoured troop carrier vehicles, known as “defrocked” Priests or “Holy Rollers”, and later as “Kangaroos”, proved effective in transporting Canadian infantrymen rapidly on their targets. It was the first time ever that armoured personnel carriers were used to carry infantry into battle. The attack achieved initial success, as the first defensive lines were overrun including the ridge at Verrières. However, in spite of the heavy bombing, the German artillery, mortar, 88mm anti-tank guns, infantry and tanks (including the murderous 12th Panzer Division), put up a grim resistance during numerous counter-attacks. Fighting continued until August 10. The Canadians had advanced some 13 kilometres, had some 600 killed, but failed to break through the German “ring of steel” defence line.

Norman Ellis’ remains were buried in a shallow grave in a large orchard on August 10, 1944, at a location recorded on the Army Field Service Card as “Normandy NTC 7F/3 056587 Roquancourt.”

In late August 1944, Gladys was visiting her parents in Inwood when she received a telegram informing her that her husband, PRIVATE NORMAN G ELLIS WAS REPORTED MISSING ON AUGUST 8. In early December 1944, she received a telegram from the Department of National Defence informing her that her husband, PRIVATE NORMAN GEORGE ELLIS HAS BEEN REPORTED KILLED IN ACTION. In mid-December 1944, Gladys received the following letter from the Major-General, Adjutant-General:

Dear Mrs. Ellis

It was with deep regret that I learned of the death of your husband, A61791 Private Norman George Ellis, who gave his life in the Service of his Country in the Western European Theatre of War on the 8th day of August, 1944.

From official information we have received, your husband was killed in action against the enemy. You may be assured that any additional information received will be communicated to you without delay.

The Minister of National Defence and the Members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

Norman George Ellis was later officially recorded as, *Overseas casualty, previously reported missing in action, now killed in action, in the field (France)*. In early December of 1944, a short memorial tribute was held in St. Paul’s United Church, Sarnia at a morning service to pay tribute to Private Ellis. In May 1945, Gladys Ellis received a War Service Gratuity of \$157.02 for the loss of her husband Norman.

In late August 1946, Gladys Ellis of 294 S. Mitton Street received a letter from the Colonel, Director of Records, for Adjutant-General. Following is a portion of that letter:

Dear Madam:

Information has just been received from overseas that the remains of your husband, A.61791, Private Norman George Ellis, have now been carefully exhumed from the original place of internment and reverently reburied in grave 14, row D, plot 8, of Bretteville-sur-Laize Canadian Military Cemetery, Bretteville-sur-Laize, France. Marked map is enclosed. This is a recognized military burial ground and will receive care and maintenance in perpetuity.

The grave will have been marked with a temporary cross which will be replaced in due course by a permanent headstone suitably inscribed. While it cannot now be stated when this work of permanent commemoration will begin, before any action is taken you will be communicated with and an opportunity will be given you to submit a short personal inscription of your own choice for engraving on the headstone...

Gladys Ellis would later remarry, becoming Gladys Glass, residing at 600 Maple Street, Sarnia. Twenty-two-year-old Norman Ellis is buried in the Bretteville-Sur-Laize Canadian War Cemetery, Calvados, France, Grave VIII.D.14. On his headstone are inscribed the words, HE GAVE HIS LIFE SO THAT HIS WIFE GLADYS, AND SON DOUGLAS, MIGHT LIVE IN PEACE.

ESSELMONT, John Clarence (#A/115857)

John Clarence “Jack” Esselment was married with two young children at home when he departed for overseas. He would give his life fighting for the Allied cause during a major Canadian-led offensive in Belgium, one of the most difficult and grueling struggles during the war in a bleak, frigid environment.

John Esselment was born in Wainwright, Alberta, on December 6, 1915, the middle son of James Edward and Alma L. (nee Luckins) Esselment, of Alvinston, Ontario. James (born in Sombra, a labourer) and Alma (born in Sarnia) were married in Sarnia on January 12, 1909. James Esselment had served in World War I. John, also known as Jack, had two brothers, older brother William (Walter) and younger brother Alton. The Esselment family moved to Ontario when John was a young boy, approximately eight years old.

John received his education in Sarnia, attending Johnston Memorial Elementary School and Sarnia Collegiate High School. He was active in swimming and hockey and would graduate with three years of technical studies and one year of drafting. He worked on numerous local farms over four years, and with Scott Misner Line freighters on the Great Lakes for two seasons, as a deck hand and watchman. Later, John was employed as a bartender at the Columbia Hotel in Alvinston (employed by Charles Binder), a job that he held for four years, until he enlisted.

On January 7, 1941, John married Annetta Gregory, of Brooke Township, in Kerwood, Ontario. John and Annetta Esselment lived in Alvinston, and later on Frank Street in Strathroy. John and Annetta would have two children together, Carole Eloise (became Mrs. Zavitz) and George Gregory (who passed away at a young age).

John stood five feet ten and a half inches tall, had blue eyes and brown hair, when he completed his National Resources Mobilization Act (N.R.M.A.) Enrolment Form on May 21, 1942 in London, Ontario. He was married and living in Alvinston at the time, employed as a bartender. He had served with the Middlesex and Huron Army Reserve since August 1940 until his enrolment. He planned to enter drafting and technical work after the war. He began his training in London, Ontario, attached to the Army Temporary Training Centre (TTC). On September 21, 1942 he was transferred to Prince George, British Columbia, becoming a member of the Oxford Rifles, Canadian Army. He continued his infantry training in British Columbia, which included taking a weapons course in Nanaimo (Jan-Feb 1944), and advancing to the rank of Acting Corporal. On June 12, 1944, the twenty-eight-year-old N.R.M.A. soldier completed his Canadian Army Attestation Papers in Prince George, British Columbia, becoming a rifleman with the Oxford Rifles.

John Esselment embarked overseas from Debert, Nova Scotia to the United Kingdom on August 1, 1944, becoming a member of the 2 Canadian Infantry Reinforcement Unit (CIRU). Only weeks later, he arrived in France on August 26, 1944, becoming a member of the Highland Light Infantry of Canada, R.C.I.C. Through the rest of that summer and into the fall, John moved with this unit through France and into Belgium.

After the Allied breakout from Normandy, in late August 1944 the Canadian forces were assigned the “**Long**

Left Flank", the less glamorous but vital tasks of clearing coastal areas in the north of France and Belgium of German occupiers; opening the English Channel ports for supplies essential to the Allied advance; and capturing the launching sites of German V-1 rockets. In a series of stop-and-start advances against stiff resistance in fortified positions, the Canadians liberated ports and villages including Rouen, Dieppe, Dunkirk, Boulogne and Calais.

In early September 1944, Allied forces captured the inland port of Antwerp, Belgium, the second greatest port in Europe at the mouth of the Scheldt River. However, German forces still controlled the 45-mile-long Scheldt estuary (the Belgian-Dutch border area) that connected the port of Antwerp to the North Sea. Beginning in early October 1944, the Canadians were entrusted with liberating the estuary. The **Battle of the Scheldt** was among the most difficult and grueling struggles in the war. The bitter fighting against a well-fortified and heavily entrenched enemy, took place in a bleak environment made worse by the winter cold in a flooded and freezing muddy quagmire.

A little over two months after arriving in France, on October 31, 1944, Private John Esselment lost his life while fighting in Belgium, during the Battle of the Scheldt. He and his fellow soldiers were hiding in a barn that was bombed by German air strikes. John Esselment's remains were buried on November 4 at a location recorded on the Army Field Service Card as "about 2 miles SW of Knocke, in the front yard of a big red house, sheet 21 NW 927135, Belgium."

At the time of John's death, brother William was with the Canadian Forces in Kingston. In mid-November 1944, James and Alma Esselment in Alvinston received a telegram from Ottawa informing them that their son, PTE JOHN ESSELMENT HAS BEEN KILLED IN ACTION. No other details were provided. In late November 1944, Annetta Esselment in Strathroy received the following letter from the Major-General, Adjutant-General:

Dear Mrs. Esselment:

It was with deep regret that I learned of the death of your husband, A115857 Private John Clarence Esselment, who gave his life in the Service of his Country in the Western European Theatre of War on the 31st day of October, 1944.

From official information we have received, your husband was killed in action against the enemy. You may be assured that any additional information received will be communicated to you without delay.

The Minister of National Defence and the Members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

John Esselment was later officially recorded as, *Overseas casualty, killed in action, in the field (Belgium)*. In early January 1946, Annetta Esselment received a letter from the Colonel, Director of Records, for Adjutant-General. Following is a portion of that letter:

Dear Madam:

Information has just been received from overseas that the remains of your husband, A115857 Private John Clarence Esselment, have been carefully exhumed from the original place of internment and reverently reburied in grave 2, row E, plot 4, of Adegem Canadian Military Cemetery, Adegem, Belgium. Marked map is enclosed. This is a recognized military burial ground and will receive care and maintenance in perpetuity.

The grave will have been marked with a temporary cross which will be replaced in due course by a permanent headstone suitably inscribed. While it cannot now be stated when this work of permanent commemoration will begin, before any action is taken you will be communicated with and an opportunity will be given you to submit a short personal inscription of your own choice for engraving on the headstone...

Twenty-eight-year-old John Esselment is buried in Adegem Canadian War Cemetery, Belgium, Grave IV.E.2. On his headstone are inscribed the words, THERE WAS A MAN SENT FROM GOD, WHOSE NAME WAS JOHN. ST. JOHN I.6. John Esselment's name is also inscribed on the Village of Alvinston's Memorial. Annetta Esselment would later re-marry, becoming Annetta McLachlan, residing in Alvinston.

ESSER, George (#A/105444)

George Esser had just turned eighteen when he enlisted to serve his country. He was still a teenager when he gave his life in the land of his birth during a major Canadian-led offensive to save a population who were suffering from years of Nazi oppression.

George Esser was born in Scherpenzeel, Holland on November 28, 1924, the son of Issac Lambertus and Anna Sophia (nee Van Dijk) Esser, of R.R. #2, Plank Road, Sarnia. His parents Issac and Anna were originally from the Netherlands, and were married on December 28, 1921 in Ede, Holland. George came to Canada with his parents

and three sisters in May 1926. The family arrived in Petrolia when George was not quite two years old, and they would later move to London Road in Sarnia. George came from a family of ten children that included brothers William (born 1932), John (born 1934), and Peter; and six sisters: Jennie, Lena, Cotje, Catherine (Kay, born 1922), Anna Sophia (born 1926) and Betty. George's sister, Kay Chivers (nee Esser), would join the RCAF in 1942 when she was nineteen years old. She would serve as a bookkeeper at Camp Borden for three years. The children attended London Road School and then Sarnia Collegiate. George attended school in Sarnia through grade nine, then worked as a labourer on a farm for one year while taking a night school course in woodwork. He then worked for a year and a half at a sash and door factory in Sarnia, mainly as a machine operator. For six months prior to enlisting, George was employed as a labourer in the C.N.R. car shops in Sarnia.

L to R: Father Issac Esser holding George, Catherine, Anna, mother Anna Esser holding Lena

Eighteen year-old George Esser enlisted on December 1, 1942 in London, Ontario. He stood five feet nine inches tall, had blue eyes and brown hair, was single, and recorded his occupation as a woodworker. He planned to continue with woodworking after the war. At his interview, he stated that he had a number of relatives in Holland, and that his family had heard from his father's brother only once since the Nazi occupation.

Private George Esser

Esser family July 1942 – Last photo before going to war
Back: Anna, Betty, Lena, George, Kay, Cotje
Front: Ann (mom), John, Jennie, Bill, Issac (dad)

From No. 1 District Depot in London, George received his army training at #6 Basic Training Centre (BTC) in Stratford; the Advance Training Centre in Petawawa and the Canadian Army Trade School (CATS) in Hamilton,

where he obtained qualifications in carpentry and bricklaying. A humorous incident occurred on July 2, 1943, while at the trade school in Hamilton. George was involved in organized sports in the drill hall when he fractured a bone (1st metacarpel) in his right hand. He had to have X-rays and a cast had to be applied at the military hospital. In George's own words, "I was boxing and hit my opponent on the head."

On July 12, 1944, George Esser embarked overseas to the United Kingdom, where he became a member of the Canadian Engineer Reinforcement Unit (CERU). In mid-August 1944, he was transferred to the Winnipeg Grenadiers. On September 23, 1944, he arrived in France, as a member of the Queen's Own Cameron Highlanders of Canada, R.C.I.C., with the rank of Private.

When he arrived, Canadian forces were nearing completion of their fighting along the "**Long Left Flank**", the vital tasks of clearing coastal areas in the north of France and Belgium of German occupiers; opening the English Channel ports for supplies; and capturing the launching sites of German V-1 rockets. In early September 1944, Allied forces had captured the inland port of Antwerp, Belgium, the second greatest port in Europe at the mouth of the Scheldt River. However, German forces still controlled the 45-mile-long Scheldt estuary (the northern Belgian-Netherlands border area) that connected the port of Antwerp to the North Sea. So in early October 1944, the Canadians were entrusted with liberating the estuary. The **Battle of the Scheldt** was among the most difficult and grueling struggles in the war. The bitter fighting against a well-fortified and heavily entrenched enemy, took place in a bleak environment made worse by the winter cold in a flooded and freezing muddy quagmire.

One month after arriving in France, on October 23, 1944, Private George Esser lost his life while fighting in his native Holland, during the Battle of the Scheldt. George's remains were buried on October 25 at a location recorded on the Army Field Service Card as "Newchurch Cemetery MR 626193, Huijbergen, Holland." His remains would later be carefully exhumed from the original place of internment and reverently reburied in Bergen-op-Zoom, Holland.

In early November 1944, Isaac and Anna Esser in Sarnia received a telegram from the Director of Records in Ottawa informing them that their son, PRIVATE GEORGE ESSER WAS KILLED IN ACTION OCTOBER 23 IN BELGIUM. Anna was not at home when the news arrived. It was a shock to the family because it was near war's end, and they thought that George was still training in Canada, not knowing that he had been shipped overseas. In late November 1944, Anna received the following letter from the Major-General, Adjutant-General:

Dear Mrs. Esser:

It was with deep regret that I learned of the death of your son, A105444 Private George Esser, who gave his life in the Service of his Country in the Western European Theatre of War on the 23rd day of October, 1944.

From official information we have received, your son was killed in action against the enemy. You may be assured that any additional information received will be communicated to you without delay.

The Minister of National Defence and the Members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

George Esser was later officially recorded as, *Overseas casualty, killed in action, in the field (Holland)*. In February 1946, Anna Esser received a War Service Gratuity of \$208.69 for the loss of her son. Almost one and a half years after George's death, she received a letter in March 1946 from the Colonel, Director of Records, for Adjutant-General. Following is a portion of that letter:

Dear Madam:

Information has just been received from overseas that the remains of your son, A103444 Private George Esser, have been carefully exhumed from the original place of internment and reverently reburied in grave 1, row D, plot 4, of Bergen-op-Zoom Canadian Military Cemetery, four miles North-East of Bergen-op-Zoom, Holland. Marked map is enclosed. This is a recognized military burial ground and will receive care and maintenance in perpetuity.

The grave will have been marked with a temporary cross which will be replaced in due course by a permanent headstone suitably inscribed. While it cannot now be stated when this work of permanent commemoration will begin, before any action is taken you will be communicated with and an opportunity will be given you to submit a short personal inscription of your own choice for engraving on the headstone...

Nineteen year-old George Esser is buried in Bergen-Op-Zoom Canadian War Cemetery, Netherlands, Grave 4.D.1. On his headstone are inscribed the words, A SOLDIER OF THE CROSS WHO DID NOT LOSE THE BATTLE. In 1983, five of George's sisters visited their brother's grave in Holland for the first time.

EVERINGHAM, Arthur Charles (#A/117782)

Even when the fighting was brutal and intense, Arthur Charles Everingham, 20, never forgot his parents in Sarnia. Two months before he died in action in the Battle of the Rhineland, he arranged for his parents to receive flowers for Christmas.

He was born in Sarnia on September 22, 1924, the younger son of Earl Wesley and Beatrice Minnie (nee Archer) Everingham, and brother to Earl Clare, four years his senior. Parents Earl and Beatrice Everingham were married on April 12, 1918 in Sarnia. The Everinghams lived at 123 Capel Street and to support his family, Earl was a labourer at Polymer Rubber Plant (now ARLANXEO). Little is known about Arthur before he enlisted, but he was not afraid to work. He received his education at the Durand Street and London Road Public Schools and he played Juvenile baseball. On finishing school at age 15, he worked a variety of jobs in Sarnia: as a drug store deliveryman for 1 ½ years; as a Meat Market deliveryman for 6 months; as a labourer at the Polymer Corporation Synthetic Rubber Plant for 5 ½ months; and as a labourer at Auto Lite Company for 3 months until he enlisted.

Eighteen year-old Arthur Everingham enlisted in the Canadian Army on April 7, 1943 in Windsor, Ontario. He stood five feet seven inches tall, had grey-brown eyes and black hair, was single, and stated he planned to be a truck driver after the war. He expressed an interest in “getting into the Commandos” and stated that he had a cousin in a prison camp in Germany, which was one of the reasons he was enlisting. Arthur was accepted and his year long training in Canada began. From #1 District Depot in Windsor, Arthur received training at #12 Basic Training Centre (BTC) in Chatham and at A-29 Canadian Infantry Training Centre (CITC) at Camp Ipperwash. He was transferred in late August 1943 to the 1st Battalion Princess of Wales Own Regiment in Debert, Nova Scotia. In October 1943, he would be transferred to the Brockville Rifles at Camp Borden and then to #2 Canadian Armoured Corps Training Regiment (CACTR).

Arthur embarked overseas for the United Kingdom on May 4, 1944, becoming a member of the Canadian Armoured Corps Reinforcement Unit (CACRU). On July 26, 1944, Arthur arrived in France as a member of the Royal Canadian Armoured Corps (RCAC) att'd. H.Q. 4th Canadian Armoured Brigade, with the rank of Trooper. In Sarnia, Beatrice received a letter from her son assuring her that he had arrived safely in France with the Canadian Forces.

Arriving in Normandy in July 1944, the RCAC, 4th Canadian Armoured Brigade saw service in the **Battle of Normandy**. The Battle of Normandy had begun for the Canadians with the June 6, 1944 D-Day landings at Juno Beach. It would take a whole summer of tenacious fighting, pushing against fierce and ruthless German forces to advance east liberating villages and towns across France. After the Allied breakout from Normandy, Canadian forces were assigned the “**Long Left Flank**”, the less glamorous but vital tasks of clearing coastal areas in the north of France and Belgium of German occupiers, opening the English Channel ports and capturing the launching sites of German V-1 rockets (late August-early October 1944).

In early October 1944, the Canadians were entrusted with grueling task of liberating the Belgian-Dutch border estuary connecting Antwerp to the North Sea. The **Battle of the Scheldt** (early October-early November 1944) was among the most difficult and grueling struggles in the war. The bitter fighting against a well-fortified and heavily entrenched enemy took place in a bleak environment made worse by the winter cold in a flooded and freezing muddy quagmire.

After that Battle, over the winter of 1944-1945 most of the weary Canadians were given a rest, although the front was never quiet, with patrols and large-scale raids remaining constant. Canadian troops were stationed along the **Nijmegen sector** in the Netherlands. The Canadians were to hold and defend the Nijmegen salient and a small piece of Allied-held territory north of the Maas River. The Germans did their best to push the Canadians out of “the island” by flooding the area and constantly harassing them with mortar fire, artillery and aggressive patrols. Constantly vigilant, the men dug deep slit trenches, covered them with whatever was handy, and tried to keep warm from the snow and cold during one of the most frigid winters on record in northern Europe.

Arthur Everingham served in France and continued with the 4th Canadian Armoured Brigade (CAB) through Belgium and into Holland. In December 1944, Arthur, now serving with the Canadian Army in Holland, sent his parents flowers for Christmas. It would be the last thing they'd receive from Arthur for he had only two months to live.

In February 1945, the Allies launched a great offensive, the **Battle of the Rhineland** that was designed to drive the Germans eastward back over the Rhine River. There would be two formidable thrusts: one by the Ninth

U.S. Army; and one by the First Canadian Army, strengthened by the addition of Allied formations. The resilient Germans had spent months improving their defences; winter rains and thaw had turned the ground into a thick, muddy quagmire and the enemy would fight fiercely to defend their home soil. During one month of fighting, the Canadians would succeed in clearing the Reichswald Forest, in breaking the Siegfried Line and in clearing the Hochwald Forest. But victory came at a high cost.

On February 21, 1945, seven months after arriving in France, Trooper Arthur Everingham would lose his life while fighting in Holland, during the Battle of the Rhineland. His remains were buried on February 21 at a location recorded on the Army Field Service Card as “Holland Canadian Division Cemetery 320480 Hertogenbosch sheet 11 SW”.

At the end of February 1945, Earl and Beatrice received a telegram from Ottawa informing them that their son, TRP ARTHUR CHARLES EVERINGHAM HAS BEEN KILLED IN HOLLAND WHILE WITH THE 4TH CABHQ SQUADRON. The official communiqué did not state how he was killed nor where.

In March 1945, Beatrice received the following letter from the Brigadier, Acting Adjutant-General:
Dear Mrs. Everingham:

It was with deep regret that I learned of the death of your son, A117782 Trooper Arthur Charles Everingham, who gave his life in the Service of his Country in the Western European Theatre of War on the 21st day of February, 1945.

From official information we have received, your son was killed in action against the enemy. You may be assured that any additional information received will be communicated to you without delay.

The Minister of National Defence and the Members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

Arthur Everingham was later officially recorded as, *Overseas casualty, killed in action, in the field (Holland)*. Just over two months after Arthur Everingham’s death, the war in Europe would come to an end. In October 1945, Earl and Beatrice received a War Service Gratuity of \$262.57 for the loss of Arthur.

The Colonel, Director of Records, for Adjutant-General wrote a letter to Beatrice in July 1946. Following is a portion of that letter:

Dear Madam:

Information has just been received from overseas that the remains of your son, A117782 Trooper Arthur Charles Everingham, have been carefully exhumed from the original place of internment and reverently reburied in grave 15, row C, plot 16, of Nijmegen Canadian Military Cemetery, four miles South-East of Nijmegen, Holland. Marked map is enclosed. This is a recognized military burial ground and will receive care and maintenance in perpetuity.

The grave will have been marked with a temporary cross which will be replaced in due course by a permanent headstone suitably inscribed. While it cannot now be stated when this work of permanent commemoration will begin, before any action is taken you will be communicated with and an opportunity will be given you to submit a short personal inscription of your own choice for engraving on the headstone...

Arthur Everingham, 20, is buried in Groesbeek Canadian War Cemetery, Netherlands, Grave XVI.C.15. On Arthur’s headstone are inscribed the words, UNTIL THE DAY BREAK AND THE SHADOWS FLEE AWAY.

EVERS, Orval Clare (#J/95536)

In Europe, the war was officially over but not for everyone. Sarnian Orval Clare Evers was nineteen years old when he was killed during a rescue operation one day after the war had ended. Perhaps this is why his headstone reads WE CANNOT, LORD, THY PURPOSE SEE BUT ALL IS WELL THAT’S DONE BY THEE.

He born in Kitchener, Ontario on September 8, 1925, the only son of Charles Neil and Susan (nee Caesar) Evers, of Lakeshore Road (Oakwood Corners), Camlachie, Ontario. Parents Charles (born Williamsford, Ontario) and Susan (born Bruce Peninsula) were married on December 31, 1906 in Wiarton, Ontario. Charles and Susan knew the joys and heartaches of raising a family. They had three daughters—Ruby (Snyder), Florence and Lorraine, and three sons. Unfortunately, only Orval survived—two died at a young age, one from diphtheria and the other died in infancy. Their children were all raised and educated in Kitchener, before the Evers family moved from Kitchener when the Polymer rubber plant (now ARLANXEO) was built in Sarnia in 1942. In his years at Kitchener Public

School (1931 to 1939), Orval was an avid swimmer. Immediately after completing school, he worked as a press operator for three years from 1939 to 1941. In Sarnia, the Evers family lived on Oakwood Corners (Lakeshore Road and Colborne Road area) and Orval worked odd jobs between 1941 and 1942 before he found work as a press operator at Electric Auto-Lite Limited from 1942 to 1943.

Eighteen year-old Orval Evers enlisted in the Royal Canadian Air Force on September 27, 1943 in London, Ontario and requested flying duties. He stood five feet four inches tall, had blue eyes and brown hair, was single, and stated that his reasons for joining varied from wanting “more excitement” and “having relatives in the Air Force” to wanting “to go along with his friends.” He was residing at Oakwood Corner at the time, but recorded his permanent address as 507 Victoria Street, Kitchener. Nine months later Orval left for overseas, but not before he received intensive training.

From No. 1 Manning Depot in Toronto, Orval received his air training at RCAF Station Mountain View (Ontario), Debert, Nova Scotia; No. 10 Bombing and Gunnery School in Mount Pleasant (P.E.I.); No. 4 Aircrew Graduate Training School (AGTS) in Valleyfield, Quebec; and Lachine, Quebec. He was awarded his Air Gunners Badge on April 21, 1944 and in late April-early May 1944, he spent a two-week furlough in Sarnia with his parents, family and friends. At the back of people’s minds must have been the thought of whether they would ever see Orval again. On June 16, 1944, Orval embarked overseas from Halifax.

Pilot Officer-AG Orval Clare Evers

Evers was initially be posted to #3 Personnel Reception Centre in Bournemouth, England and then to #28 Operational Training Unit at RAF Wymeswold. In September 1944, parents Charles and Susan placed an announcement in the *Canadian (Sarnia) Observer* stating that their son, Sgt. Orval Evers, who had been overseas for three months, was celebrating his 19th birthday in England. In late December 1944, Orval Evers would become a member of RAF #514 Squadron “Nil Obstat Potest” (Nothing can Withstand), part of **Bomber Command**, with the rank of Pilot Officer-Air Gunner.

During the course of the war, one of this country’s most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

No. 514 Squadron was a Lancaster bomber squadron that was formed at RAF Foulsham, Norfolk on September 1, 1943. In November of 1943 the squadron moved to RAF Waterbeach, Cambridgeshire. Flying Avro Lancasters for course of its two-year operational life, the squadron took part in 218 bombing raids and four mine laying missions. At war’s end, the squadron took part in Operation Manna, the dropping of desperately needed food parcels for the Dutch, and a long series of flights to collect prisoners of war from France and Italy.

The war in Europe officially ended on May 8, 1945. A time of rejoicing and relief for everyone, but work still remained. Only one day after VE Day had been declared, Orval Evers was part of a 6-man crew aboard a

Lancaster Mark III aircraft RF230 (markings JI-B). As part of Operation Exodus, the Lancaster aircraft took off at approximately 12.15 hours from the airfield at Juvincourt, Belgium en route to England with 24 British Army personnel who were ex-prisoners of war. The pilot reported problems with the controls soon after takeoff and intended to return to Juvincourt. Approximately ten minutes into its flight, at 12.26 hours, the aircraft crashed in a forest near Roye Ami, France. Everyone on board was killed. Orval Evers had 11 flights to complete his tour of operations when VE Day was declared.

In Sarnia, mere days before the fatal crash, Charles and Susan received a letter on May 3 from Orval. In it, he stated that he was flying food from England to Holland. The next war-related correspondence they received was from Ottawa, one week after VE Day, a telegram informing them that their son, FLIGHT SERGEANT ORVAL CLARE EVERS HAS BEEN REPORTED MISSING BELIEVED KILLED AS A RESULT OF FLYING OPERATIONS ON MAY 9. The message gave no further information.

At the end of May 1945, Air Vice Marshal H.L. Campbell confirmed the report that their son was killed on active service in this letter to the grieving parents:

Advice has been received from the Royal Canadian Air Force Casualties Officer, Overseas, that your son lost his life during flying operations on May 9, 1945. His body has been recovered together with five other members of the crew and twenty-five passengers. Among the crew members were two others as well as your son, who belonged to the Royal Canadian Air Force. They were Flying Officer Ray Bertram Hilchey, whose next-of-kin is his father, S.B. Hitchey, of 108 Lawrence Street, Halifax, Nova Scotia, and Flt. Sgt. Robert MacPherson Toms, whose next-of-kin is his father, Edward Toms of 77 Botwood Road, Grand Falls, Newfoundland.

Eyewitness accounts and investigators' reports provided key information in the inquiry into the accident. A few facts were determined. First, the aircraft had flown for 43 nautical miles from Juvincourt before it crashed; next, the weather was good; and thirdly, the aircraft was seen to circle the Roye Ami airfield twice without losing height and with all engines functioning. As the plane made its approach, the undercarriage was lowered on the first circuit and the aircraft fired its red Verey lights. Then the undercarriage was raised and the controller on the airfield gave permission to land. No reply was received, however. Green Verey lights were fired to indicate that the pilot had permission to land. Eyewitnesses observed that the undercarriage was lowered again and the aircraft headed S.E. from the airfield flying slowly on its final turn to its approach. Then, inexplicably and tragically, the aircraft dipped into a vertical bank to port with nose up before going into a flat spiral leveling out just above some trees. It then dropped in a very flat attitude to the ground and caught fire.

The interpretation of the evidence included several observations and speculations: that for some undiscovered reason, the pilot decided something was wrong and prepared to make an emergency forced landing at the nearest airfield; that a number of the passengers had moved to the rear of the fuselage (nearest the door) while the aircraft was in flight; that the pilot immediately found the aircraft to be dangerously tail heavy and decided there was something wrong; that it was presumed the pilot prepared to make a forced landing at the nearest airfield; that the pilot was on his final turn in to his approach and, when he put the flaps fully down, that it was physically impossible for him to hold down the nose of the aircraft; that this action resulted in a stall and subsequent spiral; that none of the engines were under power when it hit the ground, crashing into the middle of a wood E.S.E. of the runway.

The Base Commander (R.A.F. No. 33 Base) concurred that the accident was caused by some of the passengers proceeding to the rear of the aircraft, but considered it doubtful whether this was the initial reason for the decision to make a forced landing. He believed that if the pilot, an experienced Lancaster pilot, had found the aircraft dangerously tail heavy, he would have had time to instruct the passengers to move forward. He believed that it was more likely that there was some other undiscovered reason for the decision to make a forced landing, and when the passengers – who up to that time may have been properly positioned – realizing that there was something wrong had reacted naturally by gathering farther to the rear of the aircraft and nearer the door.

Orval Clare Evers was later officially recorded as, *Previously reported missing as a result of a flying accident, now reported killed, overseas (France)*. Perishing with Pilot Officer-Air Gunner Orval Evers, were air crew members: Pilot Donald Beaton (RAF); P/O Robert Macpherson Toms (Newfoundland); F/Os Ray Bertram Hilchey (Nova Scotia); WOP John Goodworth Brittain; and FS. Alfred McMurrugh (RAF). The 24 British Army passengers killed were Sgt. Ronald Arthur Adams, Pte. Thomas Anderson, Pte. William Leonard Ball, Pte. Samuel James Bayston, Cpl. Emanuel L. Belshaw, Pte. Roland Albert Betton, Lt. Patrick Archibald Tomlin W.B. Campbell, Pte. Ronald Ernest Clark, Pte. Walter Croston, Gnr. Alfred James Spencer Crowe, Fus. Harold Cummings, Pte. Richard

Danson, Rfn. Thomas James Edwards, L.Cpl. George William Franks, Gnr. A.N. Labotske (South African Army), Pnr. W.L. Lindheimer, Pnr. Mordhai Maschit, Fus. Owen Parkin, Gdsmn. James Arthur Roe, Lt. Eric Thomas Theodore Snowdon, Cpl. Albert George Thompson, Pte. Ralph Turnbull, Capt. Robert Worsley Wheeler, and Pte. Patrick Yates.

In late May 1945, a Pentecostal Church in Kitchener was the site of a memorial service to honour Flt. Sgt. Orval Evers. In September 1945, his parents Charles and Susan in Camlachie received a War Service Gratuity of \$278.85 for the loss of their only son. Nineteen year-old Orval Evers is buried in Clichy Northern Cemetery, France, Plot 16, Row 12, Coll. Grave 7-18. On his headstone are inscribed the words, WE CANNOT, LORD, THY PURPOSE SEE BUT ALL IS WELL THAT'S DONE BY THEE.

FARNER, Hugo Oscar (#J/20564)

Hugo Oscar Farner had everything going for him. His wife of nearly two years was expecting their first child in months and he was a competent flying instructor with the RCAF in the Ottawa area. Everything changed on a sunny afternoon in September 1943.

He was born in Sarnia on July 15, 1922, the son of Frank Charles (born in Dresden, Germany) and Florence (nee Mitchell, born in Newcastle, England) Farner of 412 Davis Street, later 106 McGibbon Street, Sarnia. Parents Frank and Florence Farner were married on February 25, 1914 at St. George's Rectory in Sarnia. Frank was a locomotive engineer with the Canadian National Railways. Hugo had two brothers: Richard Herbert, born 1914 who would serve with the Canadian Army overseas, and Vernon Charles, born 1918 (would later move to Cleveland, Ohio). When Hugo was three years old, he and his brother Vernon visited England with their mother. They returned via Liverpool to Quebec on board the passenger ship *Megantic*, arriving on September 12, 1925.

Hugo attended Devine Street School from 1927 to 1937 and then Sarnia Collegiate from 1937 to 1940. During his time at Sarnia Collegiate, he was prominent in junior athletics. He won a medal for life saving and the Jack Newton championship trophy for swimming. As well, he was on the junior rugby team and participated in football, baseball and hockey. Besides athletics, he was part of the High School Cadets for two years and found time for stamp collecting, his main hobby. For a year after high school, Hugo worked as an assembler at Electric Auto-Lite, 1940 to 1941. Two events shaped his life in 1941: he lost his mother Florence to cancer and he joined Active Service.

Nineteen years old and single, Hugo Farner enlisted in the Royal Canadian Air Force on July 28, 1941. The recruiting officer described Hugo as, *Clean cut, well built, bright, steady, intelligent, courteous, sincere... Is very anxious to fly. Should prove good Air Crew material.* He stood five feet eight inches tall, had brown eyes and dark brown hair, and requested flying duties wanting to be a pilot. On October 10, 1941, Hugo left #1 Manning Depot in Toronto for training at #6 Initial Training School (ITS) in Toronto. He continued his training at #3 Elementary Flying Training School (EFTS) in London (Ontario), and #6 Service Flying Training School (SFTS) in Dunnville, Ontario.

On November 6, 1942, sixteen months after enlisting, Hugo graduated and was awarded his Pilot's Flying Badge in Dunnville, with the commission of Pilot Officer-Pilot. The following month his brother Richard Herbert Farner, who had enlisted in June 1942, embarked overseas arriving in Italy with the Canadian Signal Corps.

Before Richard left for overseas, however, he had an obligation to fulfill. On November 7, the day after being awarded his Pilot's Flying Badge, Hugo married Betty Shirley Ash, the daughter of Mr. and Mrs. R.F. Ash, of 355 ½ Maxwell Street, Sarnia. Witnesses to the marriage in Sarnia were Dorothy Ann McNeil and Hugo's brother, Richard. The newlyweds enjoyed a two-week leave together before Hugo returned to service. In Sarnia, Betty resided at her parents' Maxwell Street home for the time being.

On November 25, 1942, Hugo attended #1 Flying Instructor School (FIS) in Trenton, where he flew Fleet and Moth aircraft and received his qualifications to be a flying instructor on January 7, 1943. In January 1943, he was made instructor at RCAF #2 Service Flying Training School (SFTS), Uplands, Ontario. Trainees at #2 SFTS Uplands attended the school for between 10 to 16 weeks with flying time varying from 75 to 100 hours. Potential pilots trained in single-engine North American Harvard and Yale advanced trainer aircraft with the goal of becoming fighter pilots. Training was dangerous and demanding in the crowded sky above the Ottawa Valley. Successful trainees graduated as Sergeant Pilot and received their Pilot's Wings.

When Hugo was transferred to Ottawa, Betty joined her husband in late January 1943 where they resided in

Hogsback, near Ottawa. In late summer 1943, the young couple was expecting to have their first child. Then tragedy struck the father-to-be on home soil.

In the mid-afternoon of September 24, 1943, Pilot Officer-Pilot Hugo Farner was killed when his single-engine Harvard aircraft #3293, on which he was the instructor, crashed at approximately 14.20 hours during an instruction flight at St. Andrews, East Quebec. Mercifully, he was killed instantly, with injuries described as multiple fractures and third degree burns. The weather at the time was ideal and the cause of the flying accident was listed as obscure. Along with instructor Hugo, Warrant Officer Alfred Edwin Frazer, a student pilot from Edmonton, Alberta, died in the crash.

In late September, Betty received the following letter at her residence in Hogsback from the Air Vice-Marshall, Deputy Chief of the Air Staff:

Dear Mrs. Farner:

I have learned with deep regret of the death of your husband, Pilot Officer Hugo Oscar Farner, on Active Service on September 24th, and I wish to offer you my sincere and heartfelt sympathy.

It is so unfortunate that a promising career should be thus terminated and I would like you to know that his loss is greatly deplored by all those with whom your husband was serving.

Hugo Farner was later officially recorded as, *Killed 24-Sept-43 as a result of a flying accident (at St. Andrews East Quebec).*

Hugo Farner and another Sarnian, Leading Aircraftman-Pilot Leonard Meere (who had died September 23 in a crash in Western Canada, and is included in this Project), were buried barely a wingspan apart in Sarnia's first double military funeral on September 28, 1943. Hundreds of relatives and friends attended both services, which drew thousands to the streets, around the churches, and along the walking routes to Lakeview Cemetery. Pallbearers, honorary pallbearers and a firing party came from R.C.A.F. flying school at Centralia. The Sarnia Air Cadet No. 44 Squadron band played at both funerals and they also provided an escort party.

The service for both began at the Robb Funeral Home. The funeral for Hugo continued at St. Andrew's Presbyterian Church with Rev. J.M. Macgillivray officiating, while Rev. F.G. Hardy led the service for Leonard Meere at St. George's Anglican Church. Led by the firing party, the band and the escort party, the funeral corteges left their respective churches and marched slowly to the cemetery. At Lakeview, they again slow-marched to the gravesides, with the band playing the "Dead March in Saul". After the ministers conducted graveside services, the firing party delivered three volleys, with the band playing "Abide With Me" between them. Two buglers who accompanied the firing party from Centralia then stepped to the end of the graves and sounded the "Last Post". The pallbearers for both funerals were LACS L. Renaud, W. Cline, J. Young, R. McDermott, J. Smuk and R. Hill. Honourary pallbearers for Pilot Officer Farner were Flying Officers R.H. Fleming, M.A. L. Hicks, J.W. McGorman, D. Snelgrove, W.H. Dunbar and L.G. Polden.

Eight months after Hugo's death, Betty gave birth to their baby daughter, Connie Lea Farner, born May 13, 1944. Connie would never know her father. The following February, Betty, now living on Maxwell Street, received a War Service Gratuity of \$165.00 for the loss of her husband. Twenty-one-year-old Pilot Officer Hugo Farner is buried at the Sarnia (Lakeview) Cemetery, Sarnia, Ontario, Section E. Lot 137. On his headstone are inscribed the words, THE LORD BLESS THEE AND KEEP THEE. BELOVED HUSBAND OF BETTY ASH.

FERGUSON, William Lorne (#B/8354)

His postwar ambitions ranged from farming to accounting and, at 26, university graduate William Lorne Ferguson had much to live for. In an instant, a freak accident changed everything.

William Ferguson was born in Sarnia on November 28, 1915, the youngest son of William D. Ferguson Sr. and Anne Ferguson. Parents William D. Sr. and Anne Ferguson were married on September 11, 1907 in Sarnia. Besides William, the Fergusons had four other children: two sons, Burton A. and Gordon W. (both would later reside on London Road, Sarnia), and two daughters, Lois A. and Ruby W. (later Mrs. C.R. Black of Washington, D.C.). The family resided at 150 Watson Road and, to support his family, William Sr. was an executive of the Mac-Craft Corporation of Sarnia. He was also the former secretary-manager of the Sarnia Chamber of Commerce and the Blue Water Highway Association.

His parents were able to afford university educations and William Jr. made the most of it. After attending

Sarnia Collegiate for six years, William studied at the University of Western. In 1939, he graduated with a four-year Bachelor of Arts degree, majoring in business administration. He then joined the sales staff of the Hobbs Glass Manufacturing Limited in London, Ontario and was later transferred to Toronto, where he worked as a salesman. When he enlisted, William was residing at 107 St. George Street, Toronto. While in Toronto, he served in the University of Toronto C.O.T.C. Non-Permanent Active Militia from October 1940 to February 1941 and September 1941 to December 1941.

Twenty-six-year-old William Ferguson enlisted in the Royal Canadian Army on February 23, 1942 in Toronto. He stood five feet eight and three quarter inches tall, had blue eyes and black hair, was single, and stated that his postwar ambition was to farm or to enter the field of accounting. He became a member of the No. 2 Detachment, Royal Canadian Ordnance Corps (RCOC), serving as a clerk in Toronto until June 1, 1942, when he was transferred to National Defence Headquarters (NDHQ) in Ottawa. Only five days prior to his accidental death, William was promoted to the rank of Corporal.

In the late afternoon of Saturday July 18, 1942, William and other members of his unit had gone on a picnic party to the Hull, Quebec resort at Fairy Lake. William had only been in the water a few moments when he sank from view and tragically drowned. The Medical Examiner reported that William, *Suffered a broken neck while diving from end of pier into river*. After the body was returned to Sarnia, more than 300 relatives and friends of the family attended the July 22, 1942 funeral at D.J. Robb's Funeral Home.

In February 1946, William Sr. and Anne Ferguson on Watson Road in Sarnia received a War Service Gratuity of \$30.00 for the loss of their son. They also received his awarded Canadian Volunteer Service War Medal 1939-45. Twenty-six-year-old William Ferguson was buried on July 22 at the Sarnia (Lakeview) Cemetery, Sarnia, Ontario, Section I. Lot 140. On his headstone are inscribed the words, REST IN PEACE.

FISHER, Joseph Gerald (#A/116104)

A commanding officer assessed the life and death of Sarnia-Lambton's Joseph Fisher with a poignancy that resonates many decades later: *I considered him one of my bravest men and he was always there when duty called, regardless of the personal risk involved. He brought relief to many of his wounded comrades and I feel sure that save for his work and skill more Canadian lives would have been lost. He died as he lived, unselfishly, bravely and a good soldier.*

He was born in Petrolia (Enniskellen Township, 10th Line) on March 24, 1920, the son of Walter Frederick and Margaret Rosabelle (nee McLean) Fisher, of R.R. #2, Sarnia (4th Concession, Sarnia Township). Parents Walter and Margaret Fisher were married in September 1909 in Wyoming, Ontario. Walter and Margaret were blessed with a large family: three daughters--Dolores (born 1910, later Mrs. Fred Evoy, of Norwich); Beulah Sarah (born 1913, later Mrs. H.G. MacColl, of Petrolia); and Gwendolyn (born 1924) and five sons. Joseph's brothers were Andrew Clayton (born 1915, who at the time of Joseph's death was a Sergeant serving with the RCAF overseas); Donald Cleone (born 1919); Arlie Eugene (born 1926); and Wayne George (born 1931).

The centre of Joseph's life was farming, although he was active in softball and hockey. After completing grade 7 at age 14, he left school and worked on his father's farm. He did this for eight years and, after he enlisted, intended to resume farming when the war was over.

Twenty-two-year-old Joseph Gerald Fisher enlisted in the Canadian Army on September 18, 1942, in Windsor, Ontario. He stood five feet five and a half inches tall, had blue eyes and light brown hair, and was single at the time. From No. 1 District Depot in Windsor, he received training at #12 Basic Training Centre in Chatham. From there, he was transferred to the Canadian Army Training Centre at Camp Borden, where he received qualifications to be a stretcher-bearer.

Joseph Fisher embarked overseas for England on March 9, 1943. Six weeks after arriving, in late April, he would be transferred from the Canadian General Reinforcement Unit (CGRU) to the Royal Canadian Army Medical Corps (RCAMC) 22 Field Ambulance. Nearly a year later, in late March 1944, Joseph cabled his parents that he was "fine and hopes to soon be home again." It was the last communication they had with their son.

On June 5, Joseph Fisher departed from the U.K., arriving in France on June 6, 1944--**D-Day**. The **Battle of Normandy** would begin for the Canadians with the June 6, 1944 D-Day landings at Juno Beach. After breaching the "Atlantic Wall" of "Fortress Europe", Allied armies began their break out from the narrow Normandy bridgehead to

carve out a foothold on the French mainland. It would take a whole summer of tenacious fighting, pushing against fierce and ruthless German forces to advance east across France. In a brutal campaign of attrition, the Canadians faced fierce battles and vicious counterattacks as they clawed their way forward liberating villages and towns including Bretteville, Carpiquet, Caen and Falaise.

After the Allied breakout from Normandy, Canadian forces were assigned the **“Long Left Flank”**, the less glamorous but vital tasks of clearing coastal areas in the north of France and Belgium of German occupiers; opening the English Channel ports for supplies essential to the Allied advance; and capturing the launching sites of German V-1 rockets. In a series of stop-and-start advances against stiff resistance in fortified positions, the Canadians liberated ports and villages including Rouen, Dieppe, Dunkirk, Boulogne and Calais.

For three months, Private Joseph Gerald Fisher moved with the Canadians as they fought through the Battle of Normandy and into the “Long Left Flank”. On September 5, 1944, he was severely wounded in the back of his chest by enemy shellfire during the “Long Left Flank” fighting in northern France. He was admitted to #5 Canadian Field Dressing Station and later to #11 Canadian Field Dressing Station (CFDS). He was then moved to #22 Canadian Field Ambulance (CFA). The medical teams had to know how serious Joseph’s injuries were.

They operated on the stricken Sarnian, but they could not save him. Ten hours after the operation, Joseph Fisher died in a hospital in France as a result of his wounds. His remains were buried on September 6, the day he died, at a location recorded on the Army Field Service Card as “Ramburelles MR 686686 Sheet 9D/6, France”.

On September 13, 1944, Margaret Fisher at R.R. #2, Sarnia received the following telegram from the Director of Records: MINISTER OF NATIONAL DEFENCE SINCERELY REGRETS TO INFORM YOU A116104 PRIVATE JOSEPH GERALD FISHER HAS BEEN OFFICIALLY REPORTED WOUNDED IN ACTION FIFTH SEPTEMBER 1944 NATURE AND EXTENT OF WOUNDS NOT YET AVAILABLE STOP WHEN ADDRESSING MAIL ADD WORDS IN HOSPITAL IN BOLD LETTERS AFTER NAME OF UNIT FOR QUICK DELIVERY STOP WHEN FURTHER INFORMATION BECOMES AVAILABLE IT WILL BE FORWARDED AS SOON AS RECEIVED.

It was an understandably tense time for the entire Fisher family. Five days later, on September 18, another telegram arrived from the Director of Records. Any hope that it contained good news was extinguished quickly: MINISTER OF NATIONAL DEFENCE DEEPLY REGRETS TO INFORM YOU A116104 PRIVATE JOSEPH GERALD FISHER HAS NOW BEEN OFFICIALLY REPORTED DIED OF WOUNDS SIXTH SEPTEMBER 1944 STOP IF ANY FURTHER INFORMATION BECOMES AVAILABLE IT WILL BE FORWARDED AS SOON AS RECEIVED.

In late September 1944, the Colonel, Director of Records, for Adjutant-General mailed the following letter to Margaret:

Dear Mrs. Fisher:

Further to this Headquarters’ telegram of the 18th September, 1944, informing you of the regretted death of your son, A-116104 Private Joseph Gerald Fisher, in keeping with the policy of the Canadian Army of informing the next-of-kin of all details of battle casualties, the following paragraph informs you of the wounds sustained by Private Fisher. According to information obtained by this Headquarters from Canadian Army Medical Authorities, your late son died as a result of a shell fragment wound to the back. Please accept my sincere and heartfelt sympathy for the irreparable loss you have suffered.

Another letter, this one from the Brigadier, Acting Adjutant-General, arrived in early October 1944:

Dear Mrs. Fisher:

It was with deep regret that I learned of the death of your son, A116104 Private Joseph Gerald Fisher, who gave his life in the Service of his Country in the Western European Theatre of War on the 6th day of September, 1944.

From official information we have received, your son died as the result of wounds received in action against the enemy. You may be assured that any additional information received will be communicated to you without delay.

The Minister of National Defence and the Members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

Private Joseph Fisher was gone, but was not forgotten by many. On October 22, 1944, an Honour Roll in Sarnia, bearing the names of the men and women of the London Road West United Church congregation serving in the forces was unveiled and dedicated at a service there. At the same ceremony, a special memorial service was held

for Private Joseph Gerald Fisher, R.C.A.M.C. who had been killed in action in France the previous month.

A few days later, the Fishers received two messages of condolence in the death of their son from Joseph's officers. The first, dated September 11, was from the Commander of his section, Captain J.W. Latimer:

By this short note I wish not only to convey to you my deepest sympathies but those of this entire unit and particularly of those members of my section in the loss of your son, Gerald Joseph. I will try also to give you a few details of the incidents which led up to his being wounded.

Gerald had been a member of my section for many months in England. He was held in high esteem by all the men and I was proud to have him under my command, not only because he was efficient at his work but also because he was an example to others. I was pleased to put him in charge of a squad long before the invasion. We crossed the channel together, landed on the beach together in France on D-Day and he has been with me ever since.

On September 5 we were travelling in a convoy along a highway when suddenly enemy shelling broke loose among our vehicles. I was riding in the rear of the convoy and saw the shells landing a short distance ahead. I immediately got out of my vehicle and ran up to where the shells had landed. The other members of my section had already managed to get Gerald and several others who were wounded into a ditch. I immediately dressed his wounds and gave him morphine to relieve his pain. We carried him to a nearby house where I administered "Plasma transfusion" to him. He was immediately sent back by ambulance to the hospital.

The wound he received was caused by a shell fragment which struck him in the back of the chest. On reaching hospital he was given blood transfusions and was operated on by a surgical specialist. Everything that could possibly be done for him was done and he was never allowed to have pain after he received his wound. He passed away about 10 hours after the operation.

Your son and I were very good friends, Mr. Fisher, and I feel your loss very deeply myself. We had been through many actions together in the past three months. I considered him one of my bravest men and he was always there when duty called, regardless of the personal risk involved. He brought relief to many of his wounded comrades and I feel sure that save for his work and skill more Canadian lives would have been lost. He died as he lived, unselfishly, bravely and a good soldier.

Lieut. Col. M.R. Caverhill, the officer commanding the 22nd Canadian Field Ambulance unit, added this shorter testimonial:

Your son was an excellent soldier, well liked by his companions and the officers of the unit, and had carried out his duties with the utmost faithfulness since landing in France on D-Day.

The war in Europe was officially over, but in late May 1945, Margaret Fisher in Sarnia received another letter from the Colonel, Director of Records, for Adjutant-General:

Dear Madam:

Information has now been received from the overseas military authorities that your son, A116104 Private Joseph Gerald Fisher, was buried with religious rites in a temporary grave located at a point approximately eleven miles South-West of Abbeville, France.

The grave will have been temporarily marked with a wooden cross for identification purposes and in due course the remains will be reverently exhumed and removed to a recognized military burial ground when the concentration of graves in the area takes place. On this being completed the new location will be advised to you, but for obvious reasons it will likely take approximately one year before this information is received.

That December, the Colonel, Director of Records, for Adjutant-General wrote to Margaret Fisher again. Following is a portion of that letter:

Dear Madam:

Information has just been received from overseas that the remains of your son, A116104 Private Joseph Gerald Fisher, have been carefully exhumed from the original place of internment and reverently reburied in grave 12, row B, plot 1, of Calais Canadian Military Cemetery, St. Inglevert, France. Marked map is enclosed. This is a recognized military burial ground and will receive care and maintenance in perpetuity.

The grave will have been marked with a temporary cross which will be replaced in due course by a permanent headstone suitably inscribed. While it cannot now be stated when this work of permanent commemoration will begin, before any action is taken you will be communicated with and an opportunity will be given you to submit a short personal inscription of your own choice for engraving on the headstone...

Joseph Gerald Fisher was later officially recorded as, *Overseas casualty, died of wounds received in action, in the field (France)*. More than a year after their son's death, in May 1946, the Fishers received a War Service

Gratuity of \$374.64 as compensation for their loss. In April 1948, Margaret received the following letter from the Director, War Service Records in Ottawa:

Dear Mrs. Fisher:

I am directed to forward the enclosed photograph showing a plaque which was erected by the citizens of La Capelle, France, in commemoration of a number of Canadian soldiers who lost their lives in the liberation of that community. This tablet bears your son's name and, no doubt, the photo will be of interest to you. La Capelle is a village in the Department of the Pas de Calais, a short distance East of Boulogne.

Twenty-four-year-old Joseph Gerald Fisher is buried in Calais Canadian War Cemetery, Leubringhen, France, Grave 1.B.12. On his headstone are inscribed the words, OUR DARLING IS SHELTERED BY THE ROCK OF AGES ANCHORED ON GOD'S GOLDEN SHORE.

FISHER, Melvin Kenneth (#A/106345)

When Melvin Kenneth Fisher departed overseas to serve his country, he left behind his career, his young daughter and his wife who was six months pregnant. Ten months later, he sacrificed his life for the Allied cause during the prolonged and brutal campaign to drive the Germans from Italy.

He was born in Inwood, Brooke Township on February 3, 1922, the eldest son of Archibald A. and Flora Fisher, of 118 Cameron Street, later 157 North Brock Street, Sarnia. Archibald (in Real Estate and Insurance, Lochiel Street) and Flora were married in Alvinston on April 7, 1920. Melvin came to Sarnia with his family at the age of seven. He attended Lochiel Street Public School, completing grade six at age fifteen, and then spent two years in special industrial class at Johnson Moriel Industrial College, 1937 to 1939. He attended both Sunday School and church at Central United Church. He was active in softball, hockey, basketball, swimming and bowling. Melvin had two brothers, Joseph and Keith; and one sister, Doris.

Prior to enlisting, Melvin Fisher was employed by Thomas Irwin as a carpenter's helper from July 1939 to September 1940; then at Sarnia Auto-Wreckers from September 1940 to July 1941; and finally at Electric Auto-Lite Limited in Sarnia from July 1941 to March 1943, where he was a generator tester. Melvin married Bernice Evelyn Dorothy (nee Coulter) Fisher (of Port Elgin) in Sarnia on April 10, 1942. Melvin and Bernice Fisher had two daughters together: Patricia Ann (born January 18, 1943 at Sarnia General Hospital); and Shirley Dianne (born May 22, 1944 in Goderich – Melvin was in Italy at this time). The Fisher family lived for a time at 117 Collingwood Street, Sarnia. While Melvin was overseas, a pregnant Bernice and their one-year old daughter, Patricia, lived with her parents, Mr. and Mrs. George Coulter at 470 Maple Street in Goderich, Ontario.

Twenty-one-year-old Melvin Fisher enlisted in the Canadian Army on March 17, 1943, in London, Ontario. He stood five feet ten inches tall, had blue eyes and brown hair, and was married and living on Collingwood Street at the time. His plan was to return to Electric Auto-Lite following the war. From #1 District Depot in London, Melvin

received his army training at #12 Basic Training Centre in Chatham until mid-September 1943; then at A29 Canadian Infantry Training Centre (CITC) at Camp Ipperwash.

In mid-April 1943, Melvin's brother Keith, made headlines in Sarnia for rescuing three men trapped in the debris of a collapsed and burning building. He was home in Sarnia on furlough from an East Coast station. He was visiting friends in Port Huron when an early morning fire broke out in the White Block, opposite the post office on Water Street in the business section. As the blaze grew worse, everyone in uniform including state troopers, civilian defence volunteers, members of the U.S. coast guard, city police and Keith Fisher, who was in uniform as a member of the R.C.N.V.R. were pressed into service. As the walls of the burning Webb Building collapsed, the second and ground floors were carried into the basement, trapping people inside. Keith led the way toward cries coming from beneath the debris, working to pull rubble aside, extricating three Michigan State Troopers trapped in the building, one of whom was unconscious as Keith carried him out. Aside from the property damage, the fire caused the death of one Michigan State trooper, three were critically injured and seventeen others were injured. Keith returned to Port Huron the next morning to see if there was any more work to be done, and to pick up his naval uniform which had been soaked through and was covered with plaster, dust and grime. The three men that Keith rescued would survive.

Melvin Fisher embarked overseas from Debert, Nova Scotia to the United Kingdom on February 13, 1944. His wife Bernice received word of his safe arrival in early March 1944. He was initially posted with the #3 Canadian Infantry Reinforcement Unit (CIRU), where he spent approximately one and a half months continuing his training.

Pte. Melvin Kenneth Fisher

On March 27, 1944, Melvin travelled from the U.K. to the Italian Theatre, as a member of the Perth Regiment, Royal Canadian Infantry Corps (RCIC), British 8th Army, in the Central Mediterranean Forces. Evelyn received a telegram from him in late April 1944, informing her of his safe arrival in Italy.

The **Italian Campaign**, the first sustained Canadian Army operation of the War, had begun with the invasion of Sicily in July 1943. The fierce fighting on the island would last more than four weeks, during which the Canadians would advance through difficult mountainous terrain, against an ever-stiffening German resistance. By August 17, the Germans had evacuated the island to the Italian mainland. In early September 1943, Canadian and Allied forces invaded Italy. Though Italy surrendered shortly after, the occupying Germans made it clear their fight was not over. Liberating Italy would be a painstaking northward crawl, lasting 20 months, over a range of landscapes, through challenging weather, and against a series of well-protected defences held by some of the German army's best troops.

As part of the Italian Campaign, Melvin took part in the horrific battle at Cassino. In a letter received by his parents in Sarnia not long before his death, he told them of his being on the front lines in Italy. On December 20, 1944, only days before Christmas, Private Melvin Fisher lost his life during a battle on the Lamone River in Italy. His remains were buried on December 21 at a location recorded on the Army Field Service Card as, "5th Canadian Armoured Division CEM No. 11 Villanova sh 89/III NW MR 451420 Row A Grave 3".

In late December 1944, Archibald and Flora in Sarnia received a telegram from the Department of National Defence informing them that their son, PTE MELVIN KENNETH FISHER HAS BEEN KILLED IN ACTION IN ITALY. No further details were provided. Melvin was later officially recorded as, *Overseas casualty, killed in action, in the field (Italy)*.

Melvin Fisher left behind his wife Bernice Evelyn and daughters Patricia Ann and Shirley, who at the time of his death, were residing with Mrs. Fisher's mother on Maple Street in Goderich. In early January 1945, a memorial was held at a morning service in Central United Church, Sarnia, to honour the memory of Private Melvin Fisher, killed in action in Italy in December 1944, along with Coder Joseph Griffith Bell, lost at sea in September 1943 (included in this Project). Both men were members of the congregation. The Rev. E.W. Jewitt extended the sympathy of all the congregation to the bereaved parents and voiced the hope for a just and enduring peace.

In mid-January 1945, Bernice in Goderich received the following letter from the Major-General, Adjutant-General:

Dear Mrs. Fisher:

It was with deep regret that I learned of the death of your husband, A106345 Private Melvin Kenneth Fisher, who gave his life in the Service of his Country in the Mediterranean Theatre of War on the 20th day of December, 1944.

From official information we have received, your husband was killed in action against the enemy. You may be assured that any additional information received will be communicated to you without delay.

The Minister of National Defence and the Members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

In mid-April 1945, Flora Fisher on Brock Street in Sarnia wrote the following letter to the Minister of National Defence:

Dear Sir:

In answer to your letter of Jan. 11th, 1945 I would like to say that I have heard no particulars concerning my son's death in Italy around Dec. 20th, 1944, and if you have any further word I would appreciate it very much if you would write and let me know. I would like to know how he was killed, where he was buried and any other particulars which you might have.

I wrote the Captain of the Perth Regiment, of which my son was a member but that was two months ago but I have had no reply. I have had a letter from no one and I do not know any of the particulars except that he was killed in action. Please advise me if it would be possible to have his body removed to Canada after the war and what it would cost. I would like very much to hear from you.

In late April 1945, Flora received the following reply letter from the Colonel, Director of Records, for Adjutant-General:

Dear Mrs. Fisher:

Further to Colonel Cameron's letter of the 19th instant, I regret to inform you that the only information received from Overseas advises that your son, A.106345 Private Melvin Kenneth Fisher, was killed in action against the enemy in Italy on the 20th day of December, 1944.

No further particulars are received in this Office concerning the actual circumstances surrounding the death of an officer or soldier reported killed in action. In this connection, it is a custom of the Service when a member of the Canadian Army dies Overseas, for a letter to be written, by or for the Officer Commanding the Unit in the Field, direct to the next-of-kin giving all available details.

As your son's official next-of-kin is his wife, Mrs. Bernice Fisher, such a letter would be despatched to her and I hope that she will advise you of the contents.

According to information recently received from Canadian Military Headquarters, England, the remains of Private Fisher were buried on the 21st day of December, 1944, in grave 3, row A of a temporary military burial ground located at Villanova which is seven miles West-North-West of Ravenna, Italy.

The grave will have been temporarily marked with a wooden cross for identification purposes and in due course the remains will be carefully exhumed and removed to a recognized military burial ground when the concentration of graves in the area takes place. It should be borne in mind, however, that for obvious reasons, it may be some considerable time before this can be carried out. Please accept my sincere and heart-felt sympathy for the irreparable loss you have suffered.

In June 1945, Bernice Fisher received a War Service Gratuity of \$291.13 for the loss of her husband. In

August 1945, she received a letter from the Colonel, Director of Records, for Adjutant-General. Following is a portion of that letter:

Dear Madam:

Information has just been received from overseas that the remains of your husband, A106345 Private Melvin Kenneth Fisher, have been buried in grave 3, row A, plot 4, of the 5th Canadian Armoured Division Cemetery, Villanova, seven miles West of Ravenna, Italy. Marked map is enclosed. This is a recognized military burial ground and will receive care and maintenance in perpetuity.

The grave will have been marked with a temporary cross which will be replaced in due course by a permanent headstone suitably inscribed. While it cannot now be stated when this work of permanent commemoration will begin, before any action is taken you will be communicated with and an opportunity will be given you to submit a short personal inscription of your own choice for engraving on the headstone...

In May 1946, Melvin's sister, Doris Gunter of 129 James Street, Sarnia, wrote a letter to the Imperial War Graves Commission in Ottawa. She had become frustrated after reading an article that appeared in the London Free Press earlier that month about the cemetery where her brother was buried. Following is her letter:

Dear Sir;

In a letter to my mother of April 23, 1945 you instructed her that my brother Private M.K. Fisher #106345 was buried at Villanova near Ravenna in Italy. You also advised her that the Cemetery where he was buried would be well taken care of. In an article which appeared in the London Free Press of May 2, 1946 there was a piece written by William Ross saying this cemetery was in terrible condition. The Cemetery being in some places under an inch of water and weeds growing all around. I think this is a disgrace to Canada. My Mother asked permission to bring his body to Canada, but was refused. I now ask permission to have his body taken out of that terrible hole and brought to Canada.

The Army Deputy Minister, on behalf of the Imperial War Graves Commission, was quick to respond. Following is a portion of the letter Doris Gunter received from the Deputy Minister of the Army: *The press article you refer to in connection with the Villa Nova Cemetery at Ravenna has previously come to my attention. This matter has been referred to the Overseas authorities for careful investigation and if the situation described in this article does in fact exist, immediate action will be taken to see that this cemetery is properly maintained. May I assure you that the proper care and maintenance of the graves of deceased Army personnel is a matter of the utmost importance to this Department and every effort will be taken to insure that this will be properly cared for.*

Melvin Fisher left behind his parents Archibald and Flora, his wife Bernice Evelyn, and their two daughters Patricia Ann, age 23 months and Shirley Dianne, age 7 months. He also left behind his two brothers and sister: Joseph, at home in Sarnia; and Keith, a Leading Seaman on active service with the RCN; and his sister Mrs. Doris Gunter of 322 Wellington Street, later 129 James Street, Sarnia.

Sometime before 1950, Bernice Fisher re-married, becoming Mrs. Bernice Evelyn D. Levi, living at 137 Collingwood Street, Sarnia. In February 1950, she wrote to the Director of War Service Records in Ottawa requesting Melvin's war medals. In a portion of her letter she wrote, *I am enclosing this card to you in return of medals for which I feel I should receive on the behalf of his children & myself for which we hold memories very dear to us.*

Twenty-two-year-old Melvin Fisher is buried in Villanova Canadian War Cemetery, Italy, Grave IV.A.3. On his headstone are inscribed the words, IN LOVING MEMORY OF A BELOVED HUSBAND, WIFE EVELYN B. AND DAUGHTERS PATRICIA ANN AND SHIRLEY.

FORDYCE, Gordon William (#R/116865)

Gordon William Fordyce was 21 when he enlisted, and he became a member of an elite squadron of airmen, a critical part of bomber command. He lost his life in defence of freedom during one of the major operations of the war.

He was born in Sarnia on June 13, 1920, the youngest child of Gordon William Fordyce Sr. (born Mimico, Ontario) and Janet "Jennie" Wright (nee Marshall, born in Stenhousemuir, Scotland) Fordyce, of 115 Proctor Street, Sarnia. Gordon Sr. and Janet Fordyce had four children together; daughter Margaret Isobel (born 1913); and sons George Fordyce (born 1916), John Fordyce (born 1918), and Gordon Jr. Gordon Fordyce Sr. supported his family working as a railroad fireman. By the time Gordon Jr. enlisted, his parents had separated. At the time of Gordon's

death, his mother lived at 159 ½ North Front Street, Sarnia and his father worked with C.P.R. Railway in Belleville and lived at the Morden Hotel on Front Street in Sarnia.

His brother George also served in the war, initially as a member of the 26th Battery in Sarnia which went overseas in 1940. In September of 1944, George, who was a bombardier serving with the Royal Canadian Artillery in France, sent his mother Janet three souvenirs from his travels. The souvenirs included: a piece of paper money issued to Nazi troops when they occupied the Netherlands in 1940, which was dated October 1, 1938 (a year before the war began); a sample of propaganda which the Germans dropped in an attempt to induce the Allied soldiers to surrender (with purported excerpts from letters written home by British and American prisoners of war, telling of what fine treatment they received at the hands of the Nazis); and a “safe conduct pass” which was used by Germans who surrender to the Allies.

Gordon Fordyce Jr. attended Johnston Memorial public school from 1926 to 1934, then Sarnia Collegiate Institute from September 1934 to June 1938, taking courses in woodwork, machine shop, auto mechanics and electricity. He was active in sports, participating in swimming, softball and basketball, and he was a member of the school cadets. After completing high school, he was unemployed for one year. He then found work at Howard and Mundy as a clerk from August 1939 to August 1940. After, he was then employed at Kingston Brothers Service Station, North Vidal Street, as a service station attendant, from September 1940 until August 1941 when he enlisted.

Twenty-one-year-old Gordon Fordyce enlisted in the Royal Canadian Air Force in London, Ontario on August 12, 1941. He stood five feet eight and a half inches tall, had brown eyes and dark brown hair, and was single. He lived at 309 Maxwell Street in Sarnia at the time. He requested flying duties as an Observer. At his enlistment, the recruiter recorded that Gordon was a, *Fine, stable, type of boy. Knows what he wants and goes after it. Should make excellent Pilot or Observer. Keen to fly... a hard worker.*

From London, Gordon was sent to #4 Manning Depot in Valcartier, Quebec. He received his air training at #13 Service Flying Training School (SFTS) in St. Hubert, Quebec, moving to #3 Initial Training School (ITS) in Victoriaville, Quebec; then #4 Elementary Flying Training School (EFTS) in Windsor Mills, Quebec and finally #11 Service Flying Training School (SFTS) in Yorkton, Saskatchewan. In late August 1942, as a student pilot at Yorkton, he experienced a crash landing. It happened at around midnight, when while landing his Crane aircraft at Sturdee Runway; the landing gear collapsed, causing the aircraft to come down hard. The propeller and wing were damaged but he was uninjured in the crash. On September 11, 1942, he was awarded his Pilot's Flying Badge in Yorkton.

Gordon embarked overseas from Halifax on October 27, 1942 bound for the United Kingdom. Initially posted to #3 Personnel Reception Centre, he would serve with #18 (Pilots) Advanced Flying Unit (AFU); the #30 Operational Training Unit (OTU); and the #1662 Conversion Unit. On June 10, 1943, he was a member of #12 Squadron and on October 17, 1943, was transferred to #156 Squadron, part of **Bomber Command**, with the rank of Warrant Officer Class II-Pilot.

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

Beginning in mid-June 1943, Gordon would go on to fly twenty-four operational sorties with RAF Bomber Command, twenty-one with the #12 RAF Squadron based at RAF Wickenby, Lincolnshire and three sorties with #156 RAF Pathfinder Force based at RAF Warboys, Cambridgeshire at the time. No. 156 Squadron was a bomber squadron that became one of the four founding members of the Pathfinder Force, No. 8 Group, serving with that group from August 1942 until the end of the war. Operating with Vickers Wellington bombers, the squadron converted to Avro Lancasters in January 1943.

As a member of #156 Squadron, Gordon and his crew were part of the prestigious **Pathfinder Force**. The Pathfinder Force was made up of experienced, hand-picked crews from bomber squadrons with elite navigational abilities. These aerial rangers, equipped with the latest target-finding technologies were the spearhead of the bomber stream, arriving first over the target and dropping coloured flares to pinpoint and highlight the area to be bombed by the follow-on force.

As part of RAF #156 Squadron “We Light the Way”, Pathfinder Force, Warrant Officer Class II-Pilot Gordon Fordyce's Lancaster Bomber crew members included Sergeants Lawrence J. Collins (N), Albert Edward

Egan (WAG), R. Harris (BA), George Johnson (F/E), Ronald Horace Hodges (AG) and James Steel Minogue (AG, of Cumberland, Ontario). This crew, as part of #12 Squadron and of #156 Squadron participated in raids targeting cities such as Modane, France; Genoa and Milan in Italy, and Cologne, Hamburg, Nuremburg, Hanover, Munich and Berlin, in Germany. These raids dropped both bombs and “nickels” (propaganda leaflets).

The **Battle of Berlin** was the British air bombing campaign on Berlin (and other German cities) beginning in mid-November 1943, lasting until March 1944. On the night of November 23, 1943, a total of 383 aircraft including 365 Lancasters, ten Halifaxes and eight Mosquitos, left England targeting Berlin. Gordon Fordyce and his crew aboard #156 Squadron, Lancaster Mark III aircraft JB293 (markings GT-) took off from RAF Warboys as part of the 383 aircraft that night. The bomber stream used the same route as the previous night and the Germans had predicted Berlin as the target and had gathered their night-fighters in the target area. The target was obscured by clouds, but the Pathfinders arrived on time and marked the target accurately. Also helping the bombers mark their targets through the clouds was the glow of major fires still burning from the previous night when 764 aircraft attacked the city, the heaviest bombardment against Berlin to date. On the night of November 23, the time over the target was 7:58 – 8:15 p.m. and 1,377 tons of bombs were dropped, 734 high explosives, and 643 incendiaries. Though the raid was classified as a success, twenty RAF aircraft were lost, all Lancasters, including Gordon Fordyce’s Lancaster bomber.

WOII-Pilot Gordon William Fordyce

On its return from bombing Berlin, Gordon Fordyce’s Lancaster JB293 crashed into High Acre House, near Manor Farm, Harpley, Norfolk, England. A local lorry driver/Home Guard Sergeant heard the crash and rushed to the scene only 200 yards away. He entered the burning building and broke the plane’s cabin with bricks and rescued an airman trapped in the burning nose, another stuck under the wing, the rear-gunner trapped in the broken tail and a fourth member who had been flung from the plane. Three of the seven Lancaster crew members died in the crash. Gordon Fordyce was dead on the scene; his body had multiple injuries and was badly burned. His body was identified by his identity discs. Along with RCAF Flight-Sergeant Gordon Fordyce, also killed were Sgt. Ronald Horace Hodges, mid-upper gunner, (RAF), and Sgt. George Johnson, flight engineer, (RAF). Surviving the crash were: Sgt’s L.J. Collins, R. Harris, A.E. Egan (RAF) and James Steel Minogue (RCAF). Gordon Fordyce’s remains were buried on November 29, 1943 in R.A.F. Regional Cemetery in Cambridge.

In late November 1943, Janet Fordyce in Sarnia received a telegram from Ottawa informing her that her son, GORDON WILLIAM FORDYCE HAS BEEN REPORTED KILLED ON TUESDAY NOVEMBER 23 WHILE ON ACTIVE SERVICE OVERSEAS AND FURTHER INFORMATION WILL BE FORWARDED WHEN RECEIVED. No further details of the action that cost the life of her son were given. On November 30th, 1943, Janet received a cable informing her that her son, FLIGHT-SERGEANT GORDON WILLIAM FORDYCE KILLED IN ACTION WITH THE RCAF ON ACTIVE DUTY ON NOVEMBER 23 WAS BURIED AT CAMBRIDGE ENGLAND YESTERDAY AFTERNOON (NOV 29) AT TWO O’CLOCK. Gordon Fordyce was later officially recorded as, *Killed during air operations, overseas (England)*.

In late March 1945, Janet Fordyce received a War Service Gratuity of \$382.94 for the loss of her son. In April 1945, she received a photograph of the grave of her son who was buried in the Royal Air Force plot at Cambridge Borough Cemetery, Cambridge, England. The photograph and details of the plot were sent by R.A.F. Flt. Lieut. J.F. Flynn, Regional Burials Officer in England. Officer Flynn explained that the plot was a gift from the Borough of Cambridge to the Royal Air Force, which now contained many airmen of all ranks from all parts of the Dominion, together with French, Belgian and Polish comrades. In the photograph, Gordon Fordyce's grave was marked with a wooden cross, which would be replaced by a stone memorial after the war. There was also a wreath there, which was a tribute to him by his friends. Officer Flynn explained that the area was in the care of the Imperial War Graves Commission, which was responsible for its maintenance for all time. He added: *The principal architect to the Imperial War Graves Commission was here some months ago and he showed me the design for the final layout of the plot. I can assure you it will be very beautiful. The Royal Air Force desires to help the families of those lads who rest so far from their homeland and we are always ready to give whatever information we can.*

Gordon's three siblings at the time of his death were Mrs. Kenneth Buxton (Margaret) in Sarnia; John Fordyce in Sarnia; and Sergeant George Fordyce who was serving overseas. Twenty-three-year-old Gordon Fordyce, who had been overseas only one year prior to his death, is buried in Cambridge City Cemetery, Cambridgeshire, United Kingdom, Grave 14518. Gordon's service awards included the 1939-45 Star, Europe Star, Defence Medal, War Medal and the C.V.S.M.

FOSTER, Charles St. Clair (#R/70200)

Charles Foster sacrificed his life in the battle to drive the Nazi's from occupied France. Fifty-seven years later, in a small French village, he was among fourteen Canadian and British airmen who were honoured by the eternally grateful citizens by the unveiling a monument to those who had lost their lives there.

Charles was born in Sarnia on August 14, 1916, the son of Cecil Horatio (employed at Imperial Oil Limited, Sarnia) and Matilda Isabella Maude Blanche (nee Bartlett, born in Blackwell, Ontario) Foster, of 221 North Mackenzie Street, Sarnia. Charles attended Central United Sunday School, later becoming an active member of the church, and served as an usher. He would also be a carrier for the *Canadian Observer* in Sarnia for a time. He received his education at George Street (high school entrance) from 1928 to 1929, then at Sarnia Technical from September 1929 to November 1934, specializing in drafting. He was a member of the Lambton Regiment, as a Signaller, from 1930 to 1934 when the regiment disbanded. He was active in sports, including golf, softball, swimming and hockey. His hobby was the construction of glider planes with some of his pals, known as the "Pee Wee Glider Club."

Sgt. Charles St. Clair Foster

After completing high school, Charles was employed at Walker Brothers Retail Department store on Mitton Street in Sarnia as a stock manager and sales clerk from 1935 to 1940. In a reference letter written on behalf of Charles by his boss at Walker Brothers, J.A. McKean wrote of Charles, *His work was completely satisfactory. His thoroughness, honesty, and ingenuity enabled him to do his work with a minimum of supervision. His ability to mix*

well with others and his willingness to co-operate brought him the high esteem of his fellow workmen. Charles Foster later left Walker Brothers to work at Galt Aircraft School as an airframe mechanic.

Twenty-four-year-old Charles Foster stood five feet eleven and a half inches tall, had blue eyes and blonde hair, and was single when he enlisted in the Royal Canadian Air Force in Hamilton on August 28, 1940. He recorded his current address as 89 Glenmorris Street, Galt, Ontario, and his permanent address as 221 N. MacKenzie Street, Sarnia. He requested ground duties as an airframe mechanic. From #1 Manning Depot in Toronto, Charles received his training in Trenton and #3 Bombing and Gunnery School in MacDonald, Manitoba. In mid-November 1941, Charles spent a 10-day furlough at his home in Sarnia with his family and friends. Not long after returning to his unit, he embarked overseas from Halifax for the United Kingdom on Christmas Day, December 25, 1941.

Initially posted to #3 Personnel Reception Centre, he became a member of RCAF #406 Squadron on January 22, 1942. In September 1942, he attended #4 School of Technical Training (S of TT) in St. Athan, South Wales. On January 9, 1943, he was posted with #1659 Conversion Unit, serving there for almost two months. On February 27, 1943, he became a member of RCAF #419 Moose Squadron “Moosa Aswayita” (written in Cree, not Latin, meaning “beware the moose-a ferocious fighter”), part of **Bomber Command**. By then, he had attained the rank of Sergeant Flight-Engineer.

During the course of the war, one of this country’s most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

RCAF #419 Squadron was formed at RAF Mildenhall, England in December 1941, and named after its first commanding officer, Wing Commander John “Moose” Fulton. The unit moved to various bases throughout the war, including Leeming, Topcliffe, Croft and Middleton St. George. Initially operating Wellington bombers, in November 1942 the squadron converted to Handley Page Halifax bombers, and in March 1944 to Avro Lancasters.

On the night of March 28, 1943, three hundred twenty-three aircraft (179 Wellingtons, 52 Halifaxes, 50 Lancasters, 35 Stirlings and 7 Mosquitos) set off from bases in England to bomb the German submarine base at St. Nazaire, France. Charles Foster was part of a crew aboard Halifax II Bomber BB283 (markings VR-O) as part of this mission, that took off from their base at RAF Middleton St. George. This was this particular crews first operation together, and Charles’ first flight operation.

As the planes headed across the English Channel, the weather conditions were reasonably good with 4/10 to 6/10 cloud cover at 18,000 feet over the target. Crews reported the German flak was intensive, but mainly inaccurate. However, the German ground searchlights were able to spot the Halifax Bomber BB283 and successfully “coned” it in the lights. Despite of the aircraft’s twisting and turning, it could not escape the lights and was hit by heavy German anti-aircraft fire. Halifax Bomber BB283 went down near Escoublac-La-Baule in the yard of a steel factory, Trignac Ironworks. Perishing with Sergeant-Flight Engineer Charles Foster were FS.s Gerald McGrath, Roderick Murray McLeod, Robert Francis Beckett; Sgt. Joseph John Goldspink; and Sgt.s Dennis Ansley (RAF) and William James Stonard Boyd (RAF). Overall, the operation was successful in scoring 18 direct hits, but the aircraft caused minimal damage, failing to penetrate six meters of reinforced concrete that shielded the submarines.

Sgt. Charles St. Clair Foster

In mid-April of 1943, Cecil and Matilda Foster on MacKenzie Street in Sarnia received a telegram from Ottawa signed by the R.C.A.F. Casualty Officer, informing them that their son Charles Foster, who had been previously reported missing, was now believed to have been killed in the course of a raid on a Nazi submarine base. Charles Foster was later officially recorded as, *Previously reported missing after air operations, now for official purposes, presumed dead, overseas*. In August 1945, Cecil and Matilda received a War Service Gratuity of \$430.91 for the loss of their son. Twenty-six-year-old Sergeant Flight Engineer Charles Foster is buried in Escoublac-La-Baule War Cemetery, Loire-Atlantique, France, Grave 2.G.2. On his headstone are inscribed the words, IN THE GARDEN OF MEMORY WE MEET EVERY DAY. HIS SPIRIT IS ETERNAL.

In May 2000, Farrell McCarthy of Miramichi, New Brunswick travelled to the small town of Trignac, in France for the unveiling of a monument. That monument is located at the exact location where the Halifax Bomber was brought down on March 28, 1943, and is dedicated to the memory of the crew members who lost their lives in that crash, along with the crew of an RAF Lancaster lost on the same mission. Farrell McCarthy's uncle was Gerald McGrath, one of the seven members that included Charles Foster of Sarnia, from RCAF #419 Halifax Bomber BB283. The ceremony was especially touching for the McGrath family because for 56 years the family thought that the plane had crashed into the English Channel. It was only when members of the Memoire et Savoir Nazairien Committee had contacted them, did they also learn that Gerald McGrath had a grave in France. At the age of 92, Gerald McGrath's sister learned for the first time that her brother had a grave near Saint Nazaire, France.

Members of this committee had also contacted the City of Sarnia/Mayor Bradley in 1996 requesting assistance in locating family members and information on Charles Foster, one of the seven "heroes", as they called them, who helped drive the Germans out of France and free the world from Nazism. Following is a portion of a letter received by Mayor Bradley from the Memoire et Savoir Committee:

In order to honor and perpetuate the memory of those men's sacrifice and also that of the crew of another plane, a Lancaster, lost in the seas on the way back from that mission, in the same night and after a request for both our Associations, the Trignac Town Corporation has decided to have a monument erected on the very place of the dramatic crash. The monument was to be unveiled on May 8, 2000, with a great official ceremony, which were invited the victims' families and those who helped the village in their quest to identify the airmen. Jack Western, of the Sarnia Bomber Command Association, was able to provide the committee with information on Charles Foster.

When Gerald McGrath's family went to France, they learned further details of that fatal night of March 28, 1943. When the Halifax Bomber came down in the steel factory yard, there were many eyewitnesses who saw the bodies. The following are portions of three of those eyewitness accounts:

Mrs. Lamballe: *That evening, as soon as they saw the plane fall from the sky, my father, Francois LeFeuvre and our neighbor, Desire Dubois, immediately set out saying, 'It came down in the factory.' They went through the 'Trignac Door' – my father had the key – taking the shortest route. They were the first on the scene of the crash. They told us they saw three dead Canadians, with a cage containing two live carrier pigeons. Their first thoughts were to free the pigeons, but German soldiers arrived and prevented them from doing so. They had to step back as the German soldiers were armed.*

Raymond Gandon: *I left work at 7 a.m. on 29th March, and on passing in front of the company Serrurerie Nazairienne, I saw the cockpit of a plane. When I got closer, I saw the pilot sitting in his seat with his hands on the controls. He was a handsome, blonde man. He must have been fairly tall, and what particularly marked my attention was the fineness of his hands. At four or five meters from him were two other crew members. One on his back, and the other laid on his side. They were both tall and strong, and were wearing smart leather jackets. Near to these men was a cage on the ground which contained live pigeons. I intended to liberate the birds, but when I heard the sound of the boots of the German soldiers arriving, I was afraid for my own safety.*

Yves Thoby: *At that time, I was employed by the locksmiths Noel in Trignac doing maintenance work in the factory. After a horrific night's bombing, I went at 7:30 a.m. to the factory. At the base of the water tower, on the railway line, I saw an air crew member lied out, face to the ground. He was warmly dressed in a white roll neck sweater. However, he had neither shoes nor jacket. These had no doubt been stolen. A German soldier was standing at his side. A bit further to the left, in the iron ore pit, I saw the body of the aircraft with three members, a cage with two dead pigeons, and a wing of the plane on a conveyor belt. I saw this tragic sight very briefly as the German soldiers quickly pushed away all civilian presence.*

On May 8, 2000, more than 3,000 French citizens from the local area of Trignac turned out for the unveiling

of the monument to honour the 14 Canadian and British airmen who lost their lives that March night in 1943. A 70-member children's choir stood beside the monument and sang songs in English and French. Yves Thoby, the president of the "Memoire et Savoir Nazairiens Committee" stated, *We saw the Halifax fall to bits in the factory grounds; and above all, we saw the crew members – all of them dead. They appeared to us as tall, handsome, strong, young men, as we described in the memorial book. Twenty years old is far too young to die... Tell them (Canadians) that the French people have not forgotten such sacrifices. It is when times are difficult that you can come to know your friends. In our scanty shelters, during the bombing raids, and frightened out of our lives, we never doubted... We kneel with respect in front of such heroes.*

Shortly after the speeches, the flags of Canada, Britain and France that covered the monument were removed to show a large stone monument with metal plaques honouring the names of 14 airmen; seven from RCAF #419 Halifax Bomber BB283, and seven from RAF #97 Lancaster Bomber 754. The monument is on the site where the Halifax Bomber crashed. In the background can be seen the concrete remains of the vacant steel factory. There are two other metal plaques on the monument below those with the names of the fallen airmen. One plaque has inscribed in French (translated): *Lives of great men all remind us we can make our lives sublime, and, departing, leave behind us footprints on the sands of time. Henry Wadsworth Longfellow.* The other plaque has inscribed in French (translated): *Honour to these men who gave their life to liberate the soil of France from the Nazi yoke. Trignac May 8, 2000.*

After the Trignac monument was unveiled, family members of the fallen were taken to Escoublac-La-Baule War Cemetery, 13 km west of St. Nazaire, and for some, they were able to see the graves of their loved ones for the first time. At the graveyard, family members met a local French women of 85 who showed them pictures of the graveyard taken soon after the burial of many of the men during the war. With money collected secretly from the generous local people, she provided a cross for every grave, had hedges planted, and employed a permanent gardener to tend to the cemetery. She had dedicated all her time and energy to maintain the graves. Later, the graveyard came under the control of the Commonwealth War Graves Commission. The seven airmen of Halifax Bomber BB283, including Charles Foster of Sarnia, are buried side by side.

FOWLIE, John (Jack) Mackintosh (#J/13989)

John Fowlie had begun his dream of teaching children when he made the decision to postpone his career in order to serve his country. He would lose his life during the dangerous training of flying heavy bombers.

He was born in Collingwood, Ontario on May 3, 1920, the only son of Melville Mackay (a watchmaker) and Margaret Rose (nee Mackintosh) Fowlie. Melville (born in Erin, Wellington County, Ontario) and Margaret (born in Collingwood, Ontario) Fowlie were married in Toronto on January 1, 1918. Margaret passed away on May 4, 1920, the day after a difficult childbirth delivering John. From the age six on John was raised by his father Melville and his second wife Catharine Clark (nee Ferguson) Fowlie. Melville and Catharine Fowlie had two children together of their own, Janet Catharine (born 1931) and Donald MacKay Fowlie (born 1933). The family resided in Collingwood for a time, then in 1930, moved to Elm Grove, West Virginia. Around 1936, the family moved to Sarnia, living at 144 South Forsythe Street. They opened a store in Sarnia, on Front and Cromwell Streets--Fowlie's Fine English China, Pottery and Crystal.

In his everyday life, John Fowlie went by the name Jack. Jack attended King George Public School in Collingwood (1924-1932), then Elmgrove Junior High in Elmgrove, West Virginia (1932-1934); Appleby High School in Oakville (1934-1937) and then Sarnia Collegiate in Sarnia in 1937, graduating in 1938. He was active in student life, particularly basketball and badminton; he also enjoyed football, hockey, soccer, softball and cricket, and he was a member of the debate team. His hobbies included reading and stamp collecting, and he was a member of the Odd Fellows and St. Andrew's Ushers Club. In the summer months of July and August from 1937 through to 1939, he worked as a farm labourer in Kerwood, Sarnia, Forest and Warwick.

In 1938-1939, he attended London Normal School, acquiring his Interim Teacher's Certificate. Jack's dream was to teach at a high school. He was part way toward his dream as before enlisting--he was a teacher in a one-room rural Sarnia Public schoolhouse at Bickford, on the Moore and Sombra town line from September 1939 to June 1940. Teaching all grades 1 through 8, and living with the Nichol's family while there, he earned between \$700-\$800 a year. In July 1939 and August 1940, he attended University of Western Ontario taking summer general arts courses. From August 1940 to September 1941, he worked as a farm labourer again, for John Day in Watford, until he

enlisted. During the war, Jack Fowlie put his dream of teaching on hold.

A young Jack Fowlie

Teenager Jack Fowlie

Twenty-one-year-old Jack Fowlie stood five feet ten inches tall, had blue eyes and brown hair, and was single when enlisted with the Royal Canadian Air Force in London, Ontario on September 13, 1941. He lived on Forsythe Street with his family at the time. He wanted to continue his education after the war, with the goal of teaching in mind. Jack requested flying duties, and his interviewing officer wrote of Jack, *Likes Mathematics and prefers to be an Observer. Keen to serve. Alert, stable. Should make good Observer.* From #1 Manning Depot in Toronto, he received training at #6 Initial Training School (ITS) in Toronto; then continued at #6 Air Observer School (AOS) in Prince Albert, Saskatchewan; followed by #5 Bombing and Gunnery School (B&GS) in Dafoe, Saskatchewan and #1 Central Navigation School (CNS) in Rivers, Manitoba. His initial training was in single engine, two-seater planes such as Anson and Battle aircraft, first learning to fly, then learning to drop bombs accurately.

Jack Fowlie was awarded his Air Observers Badge on September 5, 1942, where he was recommended for commission as an officer. That same month, Jack visited his parents in Sarnia, before leaving for a posting at #1 General Reconnaissance School (GRS) in Summerside, Prince Edward Island. Jack Fowlie embarked overseas for the United Kingdom on February 2, 1943.

From #3 Personnel Reception Centre (PRC), Jack continued his training in Hudson and Wellington twin-engine bombers, serving at various postings including #5 Operational Training Unit (OTU); #6 Operational Training Unit (OTU); #407 Squadron; #9 Advanced Flying Unit (AFU); and #22 Operational Training Unit (OTU). In February 1945, Jack became a member of RAF #1664 Heavy Conversion Unit (HCU), part of **Bomber Command**, with the rank of Flight Lieutenant-Bomb Aimer. RCAF #1664 HCU formed at RAF Croft in May 1943 to train Canadian crews on the Handley Page Halifax. It moved to RAF Dishforth in April 1944. The unit received some Avro Lancasters from November 1944, and had the Canadian name "Caribou".

With the introduction of new heavy bombers, the four-engine Stirling, Lancaster and Halifax, the Royal Air Force introduced heavy conversion units (HCU) in late 1941 to qualify crews trained on medium bombers to operate the heavy bombers before final posting to operational squadrons. Along with training recruits, some of the heavy conversion units carried out roles that included planting mines, patrolling for submarines, and bombing operations.

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war. There was no easy way to learn how to fly the heavy bombers, and training crews suffered a litany of disasters, crashes and deaths. By the end of the war, Bomber Command lost over 8,000 Allied airmen who were killed in training or by accidents alone.

F/L-BA John (Jack) MacKintosh Fowlie

On the evening of March 15/16, 1945, Fowlie's RCAF Halifax III aircraft MZ481 took off at 19:10 hrs from an RAF base in Dishforth, Yorkshire, on a night cross-country and bombing training exercise, bound for a base near Sheffield, England. At some point during the flight, the aircraft crashed into the North Sea. At 03:30 hrs a search began for the aircraft, but no trace could be found. The crew had not transmitted any message indicating that they had a problem. The plane and the bodies of all seven on board were never found. One of the theories was that the crew may have been incapacitated due to carbon dioxide entering their oxygen supply; however, the aircraft or crew were never found to confirm the reason for disappearance.

Approximately one week later, Melville and Catharine Fowlie in Sarnia received a telegram from Ottawa informing them that their son, FLIGHT-LIEUTENANT JOHN MACKINTOSH FOWLIE IS MISSING AFTER FLYING OPERATIONS OVERSEAS. Less than two months after receiving the above telegram, the war in Europe would end. In late April 1945, only weeks before VE Day, Melville Fowlie received the following letter:

Dear Mr. Fowlie,

Before you receive this letter you will have been informed by the Air Minister that your son, Flight Lieutenant John Mackintosh Fowlie, is missing. It is with deep regret that I have to inform you that no further information has been received regarding your son.

Your son was a member of a crew detailed for flying training on the night of 15/16th March. The plane took off at 19.00 hours, and nothing further has been heard of this aircraft. Every rescue effort has been made to trace this aircraft and its occupants, but without success.

You will be contacted immediately any news received. May I now express the deep sympathy which all of us feel with you during this sad time of waiting.

It was not until seven months after he was reported missing that Jack's parents were notified that their son was now officially recorded as, *Previously reported missing after air operations, now for official purposes, presumed dead, overseas*. Perishing with Flight Lieutenant-Bomb Aimer John (Jack) Fowlie were F/O. James Charles Pearson; F/L. Frank Earl Connors; and FS.s James Graham, John Howard James Grahame, Arthur Henry Jones, and Sgt. Kenneth James Parrish (RAF).

In late March 1946, Jack's parents received a War Service Gratuity of \$798.23 for the loss of their son. Over four years later, in early October 1950, Melville Fowlie wrote the following letter to the Department of National Defence in Ottawa:

Dear Sir;

My son, F/L John M. Fowlie J13989 was lost overseas on March 16/45. So far we have never received the parents medal. We did receive his regular service medals but are very anxious to have the other one. Would you kindly let us know why this one has never been sent.

Melville received a reply from the Director of War Service Records in Ottawa only weeks later. Following is a portion of that letter:

Dear Mr. Fowlie:

... Your letter has been referred to this Directorate inasmuch as the issue of the Memorial Cross is now under the jurisdiction of this office. In reply you are advised that the regulations governing the issue of this Cross provides that it is given by the Canadian Government as a memento of personal loss and sacrifice on the part of the mothers and widows of ex-service personnel. As the mother of your boy predeceased him it is regretted to inform you that the Memorial Cross, as a token of sacrifice, in this case is not issuable.

In late May 1952, Melville received the following letter from the Wing Commander, R.C.A.F. Casualties Officer, for Chief of the Air Staff:

Dear Mr. Fowlie:

It is with reluctance that after so long an interval, I must refer to the loss of your son, Flight Lieutenant John Mackintosh Fowlie, but due to the lack of any information concerning him since he was reported missing, it must be regretfully accepted and officially recorded that he does not have a "known" grave.

Due to the extreme hazards attending air operations there are, unhappily, many thousands of British aircrew boys who do not have "known" graves and all will be commemorated on General Memorials that will be erected at a number of locations by the Imperial War Graves Commission (of which Canada is a member), each Memorial representative of a theatre of operations. One of these Memorials will be erected at Runnymede, England, and the name of your son will appear on that Memorial.

I realize that this is an extremely distressing letter and that there is no manner of conveying such information to you that would not add to your heartaches. I am fully aware that nothing I may say will lessen your great sorrow, but I would like to express to you and the members of your family my deepest sympathy.

John (Jack) Fowlie's name, along with nineteen others, is inscribed on a tablet on the Memorial School building at Appleby College. The building was constructed as a memorial to the members of the Appleby community killed in World War II. Twenty-four-year-old Flight Lieutenant John (Jack) Fowlie has no known grave. His name is inscribed on the Runnymede War Memorial, Surrey, United Kingdom, Panel 278. Jack Fowlie's family also had a stone laid in tribute to him at Lakeview Cemetery, Sarnia.

GALLAWAY, Lloyd George (#J/16499)

Lloyd Gallaway was an honour student, an excellent local athlete, and had started a successful career in sales. One of his air force application references referred to him as loyal, reliable and having a character beyond reproach. Overseas, he earned a reputation as one of the top-ranking Canadian fliers. He would lose his life in one of the most difficult placements of the Allied cause.

He was born in Sarnia on February 16, 1917, the son of Edgar E. and Gertrude Effie (nee Hoare) Gallaway, of 130 Bright Street, Sarnia. Edgar (born in Creemore, Simcoe County, Ontario) and Gertrude (born in Georgetown, Halton County, Ontario) Gallaway were married on September 29, 1910 in Georgetown, Ontario. Edgar Gallaway was a barber in Sarnia. Edgar and Gertrude had eight children together: sons Raymond William Thomas (born 1912); Edgar Dar (born 1914, would serve in the Army); Lloyd; and Jack Kenneth, and four daughters: Jean Marjorie (born 1911, married to become Newman); Dorothy (born 1915, married to become Coate); Irma Gertrude (born 1920); and Helen Eileen. Brother Edgar Gallaway would also serve--in September 1942, Edgar would celebrate his 20th birthday in England, a member of the 11th Field Company, Royal Canadian Engineers as a Sapper.

Young Lloyd was a member of St. John's Anglican Church, and worked as a carrier boy for the *Canadian Observer* in Sarnia from 1926 to 1936. He was educated in Sarnia: at Lochiel Street Elementary School from 1923 to 1931, then Sarnia Collegiate Institute from 1931 to December 1937, graduating as an honour student. While in high school, Lloyd was on the business staff of the magazine in 1936 and was part of Cadet Corps for six years. He was proficient in many sports including rugby and tennis extensively, gymnastics, golf and shooting. Of note, he was a member of the senior rugby team that won the W.O.S.S.A. football championship in 1937, and following graduation, he played junior football with the Canon Davis Memorial Church Team.

In July 1937, Lloyd began employment as a clerk with Walker Stores Limited in Sarnia, advancing to store-manager, a position he kept for two years until being transferred. In July 1939, he was given a promotion to merchandise manager, and transferred to the company's store in Barrie. In November 1939, he was transferred to

Gordon, MacKay and Company Limited in Toronto (the parent company), working as a salesman.

In his air force application, a May 1940 reference letter written on his behalf by his manager at Walker Stores, the manager wrote of Lloyd, *He is a thoroughly loyal, reliable, young man, and his character is beyond reproach.* Another reference letter was written in June 1940 by W. Haney of Robinson and Haines Barristers and Solicitors. W. Haney wrote of Lloyd, *I have known this young man all his life... He was an excellent student at Sarnia Collegiate Institute and Technical School from which he matriculated in 1937. While attending such Collegiate he was one of its outstanding athletic stars being particularly proficient in Gymnastics work and on the football field, having played in the First Team. Following his graduation he played Junior Football with the Canon Davis Memorial Church Team. He has always been noted as being a particularly clean type of sportsman. He is thoroughly reliable and honest and his habits of life are beyond reproach. One cannot speak too highly of this type of young man... I have no hesitancy in suggesting that this young man would do credit to himself and the Service if he is fortunate enough to secure an appointment.*

P/O-WAG Lloyd George Gallaway

Lloyd Gallaway with his brother Eddie

Twenty-three-year-old Lloyd Gallaway enlisted in the Royal Canadian Air Force on July 2, 1940 in Toronto. He lived at 21 Atlas Avenue in Toronto at the time, employed as a salesman. He stood five feet four and a half inches tall, had grey eyes and brown hair, and was single. He requested flying duties with a preference for being an air gunner. From the moment he enlisted, Lloyd loved the air force. From #1 Manning Depot in Toronto, Lloyd received air training at #1 Initial Training School (ITS) in Toronto; then at #2 Wireless School (WS) in Calgary and #4 Bombing and Gunnery School (B&GS) in Fingal, Ontario. On February 17, 1941, he was awarded his Air Gunners Badge.

On April 5, 1941, Lloyd Gallaway embarked overseas from Debert, Nova Scotia bound for the United Kingdom. He arrived in England along with three other Sarnia airmen: Sergeants William B. Clark (included in this Project), John Bennett and J.D. Murray. Lloyd Gallaway became a member of RCAF #61 Squadron "Per Puram Tunantes" (Thundering through the clear air), attaining the rank of Pilot Officer, and Wireless Operator/Air Gunner. From #3 Personnel Reception Centre, Lloyd attended #2 Signal School for three months, then was posted to #16 Operational Training Unit in mid-August 1941. By September 1941, Lloyd was taking part in bombing operations over German-occupied Europe. He was transferred to #97 Squadron on October 5, and ten days later, became a member of RAF #61 Squadron, based at RAF North Luffenham at the time, with the rank of Flight Sergeant-Wireless Operator/Air Gunner.

RAF #61 Squadron went to war equipped with Handley Page Hampden aircraft. The squadron spent most of the war operating as a night bomber squadron. For a time, the squadron also used the troubled Avro Manchester aircraft. By June 1942, the squadron converted to the Avro Lancaster.

During the course of the war, one of this country's most significant contributions was the approximately

50,000 Canadians who served with the RCAF and RAF in **Bomber Command** operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

There was no easy way to learn how to fly the heavy bombers, and training crews suffered a litany of disasters, crashes and deaths. By the end of the war, Bomber Command lost over 8,000 Allied airmen who were killed in training or by accidents alone.

Eight months after arriving with #61 Squadron, Lloyd experienced one of those accidents. On June 19, 1942, Flight Sergeant Lloyd Gallaway was aboard a Wellington aircraft at Central Gunnery School (in Cambridgeshire) along with four others. The aircraft was involved in a low flying gunnery exercise and when flying a little lower than it should have been, the aircraft struck an obstruction that damaged the aircraft. There were no injuries in the incident, and the pilot was disciplined.

In July of 1942, Lloyd completed the Gunnery leaders course in England. Following that, he was posted to Coastal Command, which he described as, "Not very exciting" after being in all the recent "big shows" including bombing operations on "Cologne, Essen and Bremen in three or four nights." With Coastal Command, rear gunner Gallaway would sit in his rear turret hour after hour on the long Atlantic patrols. He described it as:

Not very exciting, but it was often quiet back where I was on the bombing jobs. We just sat, first leaning on one side and then on the other to keep from getting cramped up and tired. All the time we kept looking out trying to spot night fighters, if it was a night raid. On some trips we didn't see a thing and never opened up on anything unless we were pretty certain it was an enemy taking a bead on us. The best thing to do was just sit tight keeping our guns quiet unless we could plainly see a Jerry swinging about taking aim. In that case, according to Lloyd, there was only one thing to do – smack him.

P/O-WAG Lloyd George Gallaway

During seventeen months of service Lloyd Gallaway took his place as one of the top-ranking Canadian fliers, and served with Australian and English crews. He was selected for many dangerous jobs and was frequently mentioned in news stories sent by *Canadian Press* writers from England. In the British motion picture "Target For Tonight" Lloyd was seen as an active airman. Many Sarnian's saw him when the movie was shown in Sarnia.

On October 1, 1942, Lloyd was part of a crew aboard Lancaster Mk. 1 R5703 (markings QR-) that crashed one mile north-east of Gunthorpe, Nottinghamshire in a flying accident. Shortly after clearing the runway after take-off from RAF Syerston, the Lancaster went into a shallow dive and hit the ground. Along with Pilot Officer-Wireless Operator/Air Gunner Lloyd Gallaway, also killed were Sgt. Frederick George Bellchambers (RAF), and RAF members of the crew: Pilot George Ernest Weston, P/O Nav George Alan Hawes, F/O W.Op Joseph Edward Hanson, W.Op/AG Jack Machin Robinson and Sgt. John McFadyen Ramsay.

Lloyd Gallaway's remains were buried on October 6, 1942 at Newark Cemetery in the U.K. Several days after the crash, parents Edgar and Gertrude Gallaway in Sarnia were advised by Air Force Headquarters that their son Lloyd was killed in action. No other details were given in the message. Lloyd Gallaway was later officially recorded as, *Killed during air operations, overseas.*

Lloyd Gallaway was posthumously awarded the rank of Pilot Officer, his third promotion since enlisting (he was listed as Flight-Sergeant at the time of his death). In a list of promotions prior to his death, the RCAF had mistakenly awarded the promotion to a "L.G. Hallaway", of Sarnia in February of 1942. It was not until after Lloyd's death that RCAF headquarters discovered its mistake. On October 6, 1942, the same day that his remains were interred in the English cemetery, a funeral service was held in Sarnia's St. John's Anglican Church, which was attended by members of the Gallaway family, relatives and friends.

In January 1943, Gertrude Gallaway received a letter from the Wing Commander, Royal Air Force, Syerston, England. Following is a portion of that letter:

Dear Mrs. Gallaway,

... Sapper Gallaway (his brother Edgar) called upon us some while ago and I feel sure that he has given you all the information available, but as I now find I can send letters by a special route I am repeating in confidence the information for you. I rather feel that it might not have been allowed out of the country from your son.

I felt that when I sat down to write to you I wanted to have available the findings of the Officers detailed to enquire in to the cause of the accident, so will you please forgive me for the delay.

It has now been ascertained beyond reasonable doubt that the accident was in no way due to human error, whether on the part of the aircrew themselves or of the ground staff. The evidence shows that an electrical fault caused the release of the dingy when in mid-air. The dingy fouled the tail of the aircraft and caused the Pilot to lose control. This is the first time that this kind of electrical failure has been known in some thousands of hours of flying done by this particular kind of aircraft. Of course steps were immediately taken to insert a device in all aircraft to avoid a recurrence of this failure. So again we have learned by bitter experience that it is next to impossible to foresee everything all the time.

It is a certainty that the Pilot almost the most experienced Officer in the Royal Air Force on this type of aircraft did all he could to minimize the effect of the fouling, but it was physically impossible for him to do more – and so we lost an absolutely outstanding crew.

Squadron Leader Weston, already a holder of the Distinguished Flying Cross was an 'ace' pilot, there is no doubt about that. And yet he could not of his own instill that utter confidence that he did unless he had with him airmen outstanding each at his own particular job.

F/Sgt. Gallaway was one of my ablest gunners and had just been recommended for a commission when this unfortunate disaster robbed us of his services. We enjoyed having him with us – he was so full of energy and so keen on his job.

On behalf of all ranks I offer you our deepest sympathy in the loss you have suffered and we trust that this war will soon be over so that these great sacrifices will not be necessary, and so that your other son may rejoin you.

Twenty-five-year-old Lloyd Gallaway is buried in Newark-Upon-Trent Cemetery, Nottinghamshire, United Kingdom, Section P, Grave 305. On his headstone are inscribed the words, SO HE PASSED OVER AND ALL THE TRUMPETS SOUNDED FOR HIM ON THE OTHER SIDE.

GAMMON, Rex Thomas (#R/90157)

The second week of October 1945 must have been a disturbing and tumultuous time for James and Rhoda Gammon of Lochiel Street. The first letter that arrived informed them that their son, Rex, had been killed when his aircraft was shot down over Germany. A second letter a few days later confirmed that another son, William, was now a prisoner of war.

Rex Gammon was born in Sarnia on December 11, 1916, the eldest son of James (born in Bosanquet, Lambton County) and Rhoda Mae (nee Longley, born in Sarnia) Gammon, of 253 Lochiel Street, Sarnia. To support Rhoda and their four children—Drena (later Mrs. Edward Cockerham), Barbara, Rex and William aka "Bud" — James was a grocer and later a school attendance officer.

Prior to enlisting, Rex spent his entire life in Sarnia. He was educated at Lochiel Street School from 1923 to 1931 and then Sarnia Collegiate from September 1931 until the spring of 1936. Rex was also a member of the

Presbyterian Church and a carrier for the *Canadian Observer* for a while. He was a well-known athlete in the local sporting community; he enjoyed playing tennis as a member of the Sarnia Tennis Club and also was proficient at basketball, badminton, and curling. After high school, Rex entered the work force earning money as a local clerk from 1936 to 1939. He then was a coremaker at Mueller Limited in 1939-1940 and later worked at Ferguson and Brodie, a shoe store, from 1940 to 1941 until he decided to enlist.

Following are portions of two reference letters written in August 1940 on behalf of Rex as part of his application for the RCAF. A.T. Crockard, the VP of The King Milling Company wrote, *I have known Rex Gammon for the past ten years and believe he would be a suitable person for enlistment in the Air Force. He has shown great interest in sports and is a tennis player of much more than average ability.* Gordon Callum, foundry foreman at Mueller Limited wrote, *I have known the bearer of this letter Rex Gammon for two years. He has always been reliable, thorough and willing at all times, to do what he was asked to do. His work at present is in the core room of Mueller Ltd. Sarnia plumbing and waterworks m.f.s. Quite a lot of his work at the present time is on war orders.*

He was twenty-four when he enlisted in the Royal Canadian Air Force in London, Ontario on February 7, 1941. Rex stood five feet ten inches tall, had brown eyes and dark brown hair, was single, and recorded his occupation as coremaker. His post-war ambition was to be a newspaper reporter. Rex requested flying duties, with a preference to be an Air Gunner. Certainly, he made a good impression. A Recruiting Officer wrote this of Rex: *Smart boy, intelligent, good appearance, mentally alert, keen and enthusiastic, will readily absorb training and should develop into first class material for air crew. Recommended for Air Gunner.* Rex left shortly after for the R.C.A.F. #2 Manning Pool at Brandon, Manitoba. Before he left for out west, employees of Mueller Limited waited on Rex at his home and presented him with a set of military hair brushes.

Gammon's military training was very extensive at each camp as he criss-crossed the country. Following Brandon, Gammon was posted to #1 Manning Depot in Toronto and #4 Manning Depot in Quebec City. He received air training at #8 Service Flying Training School (SFTS) in Moncton, #4 Wireless School (WS) in Guelph and #1 Bombing and Gunnery School (B&GS) in Jarvis, Ontario. While Rex was at #1 B&GS, his younger brother William, who had also enlisted in the RCAF in May 1941, was a student pilot at an Eastern Canada air command training school. In late December 1941, William Gammon was awarded his Pilots wings at Moncton, New Brunswick, graduating with the 11th class at No. 8 Service Flying Training School. On January 3, 1942, Rex Gammon was awarded his Air Gunner's Badge, graduating as a Wireless Air Gunner at #1 B&GS in Jarvis, with his proud parents attending the graduation.

Flight Sergeant-WAG Rex Thomas Gammon

Both Rex and William Gammon embarked overseas together from Halifax to the United Kingdom on January 23, 1942. From #3 Personnel Reception Centre, Rex continued his training at #1 Signals School and #2 (Observers) Advanced Flying Unit (AFU). On May 26, 1942, he became a member of RAF #22 Operational Training Unit (OTU) as a Wireless Operator/Air Gunner in **Bomber Command** with the rank of Flight Sergeant. RAF #22 OTU was formed in April 1941 at RAF Wellesbourne Mountford as part of No. 6 Group RAF Bomber Command to train night bomber crews with the Vickers Wellington twin-engine, long-range medium bomber.

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, comprising more than a third of the entire Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

Unfortunately, Rex didn't beat the odds and was killed just over two months after he became a member of RAF #22 OTU. On the night of July 28/29, 1942, Flight Sergeant-Wireless Operator/Air Gunner Rex Gammon was a member of a crew aboard Wellington IC aircraft X9696 (markings XN-Z) that took off from RAF Wellesbourne Mountford. It was one of two Wellington bombers from #22 OTU sent on a night operation targeting Hamburg, Germany. Both bombers were recalled but neither responded. Both were shot down over their target. Perishing with F/S Rex Gammon were F/Ss Richard Butcher Ayers and James Spencer Evans. Four airmen in the other #22 OTU Wellington bomber X3201 were also lost: F/Ss Patrick Cluney Noel, Frank Edward Johnson, Elmer Leroy Wagner and Ernest Griffith White. A number of the Wellington airmen, including Canadian Sgts E.W. Bell, W.C. Warren and J. Pierce, were taken prisoners of war.

It was not until several weeks after the crash that Rex Gammon was listed as, *Missing after air operations*. At the same time, three members of the same crew were reported as, *Prisoners of war in Germany*.

Less than three months later, in October of 1942, James and Rhoda Gammon heard more news about Rex. They were advised by R.C.A.F. Headquarters at Ottawa that their son's body had been recovered and buried by the Germans in a cemetery at Neumunster, near Kiel, Germany two days after he was shot down.

It must have been a tumultuous week for James and Rhoda in Sarnia. Earlier that same week, they had received news informing them officially that their other son, William, of the R.C.A.F., was a prisoner of war in Germany. By early December 1942, Rex Gammon was officially recorded as, *Previously reported missing after air operations, now for official purposes presumed dead, overseas*. In September 1945, the Gammons on Lochiel Street received a War Service Gratuity of \$195.73 for the loss of their son Rex. In mid-April 1946, Rhoda received the following letter from the R.C.A.F. Records Officer in Ottawa:

Dear Mrs. Gammon:

It is a privilege to have the opportunity of sending you the Operational Wings and Certificate in recognition of the gallant services rendered by your son Flight Sergeant R.T. Gammon. I realize there is little which may be said or done to lessen your sorrows, but it is my hope that these "Wings", indicative of operations against the enemy, will be a treasured memento of a young life offered on the altar of freedom in defence of his Home and Country.

On a wall in St. Peter's Church in Wellesbourne, England, hangs a brass plaque that was dedicated in 1986 to the members of RAF #22 Operational Training Unit who lost their lives in the war. The inscription reads, DEDICATED TO THE MEMORY OF THE 315 AIRMEN AND AIRWOMEN KILLED WHILE SERVING WITH NO. 22 OTU WELLESBOURNE MOUNTFORD AIRFIELD DURING WORLD WAR TWO. Two Sarnians were among the 315 names: Rex Gammon and John Duncan (included in this Project).

Twenty-five-year-old Rex Gammon is buried in Ohlsdorf Cemetery, Hamburg, Germany, Grave 4A.E.14. On his headstone are inscribed the words, SON OF JAMES AND RHODA GAMMON SARNIA, ONTARIO, CANADA.

The Gammons had lost one son and were anxious about William. They had learned on October 8, 1942, that Rex's younger brother, RCAF Warrant Officer William "Bud" Gammon, was reported as, *Missing after air operations, believed to have been rescued after having been shot down at sea*. Three weeks later, they had received a message from the International Red Cross Society that German sources had reported that their son William was a prisoner of war in Germany, confined to Stalag 344.

In May 1944, the Gammons received a letter from William. Dated February 2, 1944 and posted at Stalag 344, he praised Canadian organizations that had been sending supplies to those interned by the Nazis and announced the transfer of some of the Sarnia prisoners. He wrote: *You certainly have to hand it to the different organizations in Canada in regard to looking after us. All Canadians received about two pounds of chocolate and the other day a shipment of plates, cups, forks and spoons, etc., came in. The Dieppe prisoners left for a new camp last week, including Ward, Date, Demary and the rest of the fellows from Sarnia. I was sorry to see them go, however, it will be a change for them.*

In mid-February 1945, the Gammons received the a telegram from Ottawa informing them that their son, WILLIAM ARTHUR GAMMON WARRANT OFFICER SECOND CLASS RCAF WHO IS A PRISONER OF WAR IN GERMANY HAS BEEN PROMOTED TO WARRANT OFFICER FIRST CLASS. William wrote his parents another letter, dated April 23, 1945, that they received in early May. His news was exciting to say the least.

In it, he provided details of his escape from the Germans and subsequent treatment at No. 4 Canadian General Hospital after meeting up with American troops. William revealed that five other prisoners and he had escaped while the camp's personnel were being marched to another area. His friends and he fled into the woods, where they remained for several days until they ran across units of an American Army. Eventually they returned to the Canadian forces and were hospitalized. William Gammon was able to return to Sarnia after the war. The patriarch of the family, James Gammon, didn't outlive his son Rex by much, passing away from a heart seizure on November 7, 1945, at the age of 56.

GANDER, Arthur Frederic (#R/169746)

For seventeen consecutive weeks, a cheerful and energetic Arthur Gander had written a letter home to his parents on Mitton Street. When the eighteenth week had passed and no letter arrived, Arthur Sr. and Gladys knew something drastic had happened to their twenty year-old son.

Arthur Gander was born in Sarnia on August 15, 1923, the son of Arthur Edward Sr. and Gladys Genevieve Edith (nee Browne) Gander. During World War I, twenty-nine-year-old Arthur Edward Gander (born October 23, 1888 in Tunbridge Wells, Kent, England) was drafted under the Military Service Act of 1917, Class One. After undergoing his medical examination in Sarnia on October 4, 1917, Arthur Edward was called to service on April 16, 1918, reporting to the 1st Depot Battalion, Western Ontario Regiment in London, Ontario. He stood five feet seven and a half inches tall, had grey eyes and brown hair, was single and residing at 350 Confederation Street, Sarnia at the time. He recorded his occupation as machinist/munition worker and his next-of-kin as his mother, Mrs. Ada Jane Gander of Stonehan Road, Hove, Sussex, England (at enlistment, he did not know if his father was alive). Two weeks later, Private Arthur Gander was transferred to the 1st Battalion Canadian Garrison Regiment.

Arthur Edward Gander did not see any overseas service, and was discharged on June 6, 1918 in London, Ontario, less than two months after reporting to duty. Despite being assessed "very good" in both conduct and character, he was discharged deemed "being medically unfit not due to service" because of some heart irregularities. The Great War would end five months later. On April 5, 1920, Arthur Edward Gander married Gladys Genevieve Browne (born in Brighton, Sussex, England) in Brighton, Sussex, England. The young couple would return to Sarnia where Arthur supported his wife as a labourer at Imperial Oil.

Soon, they would have more mouths to feed at their home at 405 South Mitton Street for they were blessed with six children: four sons Arthur Jr.; Victor (born 1928, and would serve in the Korean War); Douglas (born 1934); and Norman (born 1936)--and daughters Margaret Edith (born 1921) and Esme. Arthur was educated in Sarnia at Devine Street Public School from 1929 to 1935, and then at Sarnia Collegiate from 1935 to 1940. His interests ranged from playing sports such as hockey, basketball and baseball to stamp collecting. After graduating from SCITS at the age of 17, Arthur found work as a machinist at Goodisons Company in Sarnia from 1940 until he enlisted in 1942.

Perhaps his father's experiences in the Great War influenced eighteen year-old Arthur Gander to enlist in the Royal Canadian Air Force on June 30, 1942 in London, Ontario. He stood five feet ten inches tall, had blue eyes and light brown hair, was single, and requested flying duties with a preference to be a pilot. Before he left for overseas, Arthur had extensive training. From #1 Manning Depot in Toronto, then #4 Manning Depot in Quebec City, he received air training at #5 Initial Training School (ITS) in Belleville, followed by a stint at #10 Elementary Flying Training School (EFTS) in Pendleton, Ontario. Arthur then headed east to #1 Air Gunners Ground Training School (AGGTS) in Quebec City, and then to #9 Bombing and Gunnery School (B&GS) in Mont Joli, Quebec. He graduated from #9 B&GS in Mont Joli, receiving his Air Gunner's Badge on July 9, 1943. One month later, on August 3, 1943, Arthur Gander embarked overseas departing from New York bound for Scotland.

From #3 Personnel Reception Centre in the U.K., Arthur was first posted to #1664 Conversion Unit. On September 5, 1943, Arthur became a member of the RCAF #427 Lion Squadron whose motto was "Ferte Manus Certas" (Strike Sure). #427 Squadron was part of **Bomber Command** and Arthur Gander held the rank of Sergeant-Air Gunner.

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

Sergeant-Air Gunner
Arthur Frederic Gander

No. 427 Squadron was formed in November 1942 as the eighth of fifteen RCAF Bomber Squadrons formed overseas, becoming a part of No. 6 (RCAF) Group. The squadron initially flew twin-engine Wellington aircraft out of RAF Croft, Yorkshire, and in May 1943, relocated to RAF Leeming and converted to four-engine Handley Page Halifax bombers and used them for the majority of the war.

On May 24, 1943, Metro-Goldwyn-Mayer (MGM) adopted the Squadron and allowed the names of such stars as Judy Garland, Lana Turner, Greer Garson, Joan Crawford, Heddy Lamarr, and others to be displayed on the aircraft. Legend has it that MGM went so far as to provide all members with a lifetime pass to its theatres across North America. In addition, MGM presented a bronze lion to the squadron. This gift and the affiliation with the MGM lion mascot strengthened the squadron's nickname. Another highlight was the presentation of a lion cub, named Mareth, by British Prime Minister Winston Churchill.

While overseas, Arthur Gander wrote a letter home every week to his family. Following are portions of several of those letters:

August 20, 1943 (Letter #1);

Well I finally got here safe and sound. I have strict orders not to say anything concerning the trip so about all I can say is it was very dull and uneventful. The weather was very calm and hardly anybody got seasick including me. The first couple of nights we nearly roasted to death as the port holes all have to be kept closed on account of the blackout... When we landed they had a small Scottish band out for us. Coming through Scotland the country seemed very hilly and much the same as Englands except for the heather which was very plentiful. The country over here is very nice and some of the fields are so green and short that they just look like lawns. One thing that struck me as very picturesque is the miles and miles of stone fence in certain sections of the country. The weather over here is very cool and it seems just like autumn to me instead of the middle of summer.

At present I am living like a king or at least as good as anybody is. We are billeted in former hotels which are the flashiest barracks I have slept in yet and the food we get is not a great deal different from back home except there is not so much variety and not so much of it... So far nothing much has met with my distaste in this country. I imagine I would have liked to spend a vacation at this place in peacetime.... Things in general are very modern around here especially the uptown section. The shows here get some of the semi-latest American pictures although most of them are British films. They are quite expensive according to our standard of prices... At first I found the English money quite complicated and I got rooked once but I have got it figured out fairly well now.

The night before I got here this place had an air-raid but since I have been here all has been quiet... I will

write once every week to let you know how things are going. They tell me if you move around fast enough in this country your mail never catches you. Well I guess that's about all I have to say right now especially since I have about a mile to walk for my supper and not much time to do it in. Nobody ever eats breakfast here as they don't get up early enough to walk that mile there and a mile back.

September 16, 1943 (Letter #8);

... At present it is raining outside as it does at least half of every day. Even the Englishmen here say the weather around this section is as bad as you'll find anywhere in England. Its plain to see why the English were so kind about letting all the Canadian squadrons situate around here.... Last night I made my first trip over enemy territory. I don't remember the name of the place but it is in France near Germany. Our target was a rubber plant about ten times the size of the one at home. It was a fairly long trip about 7 ½ to 8 hrs but considered a fairly easy one. The jerries had quite a few search lights out and quite a bit of light flak but our kite didn't encounter any night fighters which are far the more dangerous. On the whole things ran fairly smooth and I think a good job was done by the look of the fires and by the cloud of smoke.

On leaving the target our kite got caught in the smoke at 9000 ft and for awhile we were tossed all over the sky. Sitting in a cramped up position for 7 ½ to 8 hrs is no cinch especially when you can hardly move for clothes and yet you still feel cold. Coming back I went to take a bite out of a chocolate bar and nearly broke my teeth. It was frozen solid. Tomorrow I think I will go over to stores and draw a electrically heated flying suit. I think most of the planes got back safely although one of ours was forced down at another station. Fellows who have flown over places like Munich or Berlin considered that trip a "piece of cake". Well I'm afraid that's all for tonight as I'm pretty tired. I only had five hrs sleep this morning.

September 25, 1943 (Letter #9);

... Since I last wrote you I haven't been on any more "ops" as the runways on this station are sinking and all this week we have been moving to a nearby station until they are repaired which I expect will be a couple of months. If everything had gone according to schedule we should have been bombing Jerry tonight but for some unknown reason take off was either postponed for a couple of hours or put off entirely. I don't know which yet as I am sitting in the crew room with half my flying clothes on waiting to get the latest "gin"... I still haven't wrote to Uncle Vic yet but I suppose I'll have to soon as I get leave from Oct 9 to the 15th and I might drop in and see him for a couple of days if the rest of the crew don't try too hard to convince me to spend it in London with them....

September 28, 1943 (Letter #10);

I've just finished my supper or maybe I'd be more correct to say my only meal today. It seems to me I just haven't been around when the eats were passed out today the reason being I was on "ops" last night and I just haven't been on any station at meal hours. Last night we raided Hanover. It was a pretty hot target and with the weather against us before we started it made things even tougher. When we left base it was completely clouded over and farther out we ran into an electrical storm which put our radio on the blink. After awhile we found we were off track and when we crossed the coast we ran into a heavily defended area. There were hundreds of searchlights wandering around and all of a sudden the "master" beam caught us and then all the rest of them turned on us. Immediately the skipper began throwing the plane all over the sky and after about five minutes of dodging heavy flak we escaped with only a couple of holes in the side of the fuselage and a memory of what a close shave we had.

Farther on we bombed the target which was already in flames. We were lucky we never got coned by the searchlights for long over the target but we saw several kites that were really caught badly by searchlights and we saw one plane explode in mid-air. Coming home we ran into the electrical storm again and a call came threw from base that the weather was too bad to land there so we were to land at another station. By this time some of our instruments were unserviceable and we weren't able to find the station they had instructed us to land at so we came down through the clouds assisted by two search lights and asked permission to land at a strange station. When we got down we found about six other planes that had got lost and had landed there. By this time it was about four A.M. and after having several cups of tea and a sandwich I found myself a chair and went to sleep in front of the fire place as there were no beds available. Next morning just after it got light we took off and flew back to base in rain and fog. About ten minutes ago a news report said that the bombing of the target was very concentrated and successful. We lost 38 bombers. Well I'm afraid I haven't got room for much more. So long.

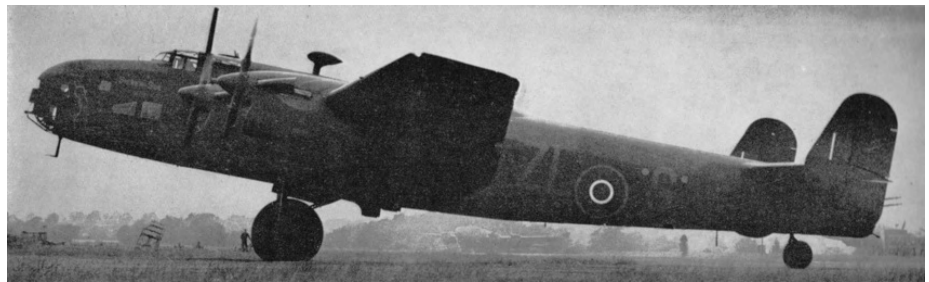

November 12, 1943 (Letter #17);

Today I received my second letter from Uncle Vic. He seemed rather anxious to know if I was all right as I haven't answered his first letter yet so I guess I'll have to drop him a few lines in the near future. There's not much

news this week. I haven't been on any more ops lately. Its gradually getting colder over here, this afternoon it hailed fairly hard and the meteorologist forecast snow for tonight. I suppose by this time you have had a couple of nice snowfalls... I expect another leave at the end of this month and I shall try to look up Daddy's mother. This week our squadron held a big party at which everybody had a good time and the next day some of the big shots from M.G.M. studios were here to look the place over and present us with a squadron crest. I read a piece in the paper about our crew the other day but I can't enclose it as they won't allow it in this type of letter. There are two other fellows besides myself from Sarnia on this station but I never knew them. They are both ground crew. I was glad to hear that Norman was such a good boy when he had his teeth out and was proud to hear that Esme did so well in the quiz contest. Well I'm afraid I'll have to quit before I freeze to death. At present I am sitting on the edge of the bed with no fire going as we left the ashes in the fireplace this morning and have no wood to start the fire. As you know most rooms over here are heated by fireplaces and it seems to me one of the biggest comforts is to draw a nice chair up close to the fire and sit and drink hot tea. Don't get the idea I'm getting like these cherrpers as I'm not its just that it's the only way to get warm. So long for now.

Sergeant-AG Arthur Frederic Gander

427 Squadron Halifax

Arthur Gander had made seven successful trips with his squadron over Germany. On the night of November 18, 1943 six days after writing the above letter, Arthur and his crew were aboard their Halifax V aircraft LK976 (markings ZL-Z) for their eighth mission. They took off from the Leeming aerodrome at approximately 16.30 hours, to carry out a night bombing mission on Mannheim Germany. They were due back the next morning, but when they didn't return, base knew something drastic had happened, especially since no wireless communication was received from the missing Halifax. It was presumed that their aircraft had crashed in the English Channel. Along with Sergeant Arthur Gander, also killed, on the given date of November 19, 1943, were WO. Percy George Jolliffe; FS. Robert Dixon; F/O.s Francis William Winter, Patrick J. Kennedy and Sgt. Walter Riddell (RAF); and FS. Geoffrey Cyril Harper (RAF). The body of F/O Francis William Winter was washed ashore and buried in Cayeux Sur Mer Parish Cemetery, Somme, France. The remaining six crew members were never located.

There were 395 aircraft involved in the Mannheim operation, one of the larger diversionary raids, and 23 aircraft were lost (5.8%). By comparison, the main raid on Berlin registered 2.0% losses.

While overseas, Arthur Gander had written home once a week for 17 weeks. When his family did not receive an 18th letter, his parents knew that something was wrong. Initially, they had received a telegram from the RCAF Casualties Officer in Ottawa informing them that their son, SERGEANT ARTHUR FREDERIC GANDER IS REPORTED MISSING IN ACTION AFTER AIR OPERATIONS OVERSEAS AFTER A RAID OVER GERMANY. In late November 1943, #427 Wing Commander R.S. Turnbull wrote this letter to Arthur Sr. in Sarnia:

It is with deep regret that I write to you this date to convey to you the feelings of my entire Squadron. We lost an excellent crew when this aircraft did not return from this operation and we count its loss a most severe blow to this Squadron. Although Arthur and the other members of his crew had not been long members of this particular Squadron, in the short period of time that he was with us he carried out his duties in cheerful and energetic manner.

Arthur was popular with all ranks of this Squadron's personnel and it is indeed a pity that his career with us should be terminated so abruptly by this tragic event. There is always the possibility that Arthur may be a prisoner-of-war, in which case, you will either hear from him direct, or through the Air Ministry, who will receive advice from the International Red Cross Society. Your son's effects have been gathered together and forwarded to the Royal Air Force Central Depository, where they will be held until better news is received, or in any event for a period of at least six months before being forwarded on to you through the Administrator of Estates, Ottawa. May I now express the great sympathy which all of us here share with you in your grievous anxiety, and I would like to assure you also how greatly we all honour the noble sacrifice your son has made, so far from home, in the Cause of Freedom, in the Service of the British Commonwealth of Nations.

Nine months later, in August 1944, the Ganders received another letter from the R.C.A.F. Casualty Officer:

It is with deep regret that, in view of the lapse of time and the absence of any further information concerning your son, Sergeant Arthur Frederic Gander, since he was reported missing, the Air Ministry Overseas now proposes to take action to presume his death for official purposes.

Arthur Gander was later officially recorded as, *Previously reported missing on active service with the R.C.A.F., now for official purposes, presumed dead.* After her son Arthur was declared dead, Gladys Gander wrote the following poem:

*Sometimes the note of his favourite song.
Brings a thought of him.
Of times the sound of a passing plane.
Is a temptation to speak his name.
A token of love and remembrance.
Of a son we shall never forget.
His memory is a treasure.
His loss a lifetime regret.*

In July 1945, Arthur Sr. and Gladys received a War Service Gratuity of \$162.30 for the loss of their son Arthur. In November 1946, Gladys received the following letter from the R.C.A.F. Wing Commander for Chief of the Air Staff in Ottawa:

Dear Mrs. Gander:

It is a privilege to have the opportunity of sending you the Operational Wings and Certificate in recognition of the gallant services rendered by your son, Sergeant A.F. Gander. I realize there is little which may be said or done to lessen your sorrow, but it is my hope that these "Wings", indicative of operations against the enemy, will be a treasured memento of a young life offered on the altar of freedom in defence of his Home and Country.

In October 1950, the Ganders received the following letter from the Wing Commander, RCAF Casualties Officer:

Dear Mr. Gander:

It is with regret that I refer to the loss of your son, Sergeant Arthur Frederic Gander. A report has, however, been received from our Missing Research and Enquiry Service concerning your son and members of his crew.

This Service has located the grave of Flying Officer Winter, your son's Navigator, in the Parish Cemetery at Cayeux-Sur-Mer in the Department of Somme, France. It was ascertained that his body had been recovered from the sea near Brighton, Department of Somme. Although this area has now been swept by search teams, unhappily, no information could be secured on any other member of the crew. In view of the above, therefore, it must be regretfully accepted that all members of the crew with the exception of Flying Officer Winter lost their lives at sea and have no known grave.

Due to the extreme hazards attending air operations there are, unhappily, many thousands of British aircrew boys who, like your son, do not have a known grave, and their names will be commemorated on General Memorials that will be erected at a number of locations by the Imperial War Graves Commission (of which Canada is a member), each Memorial representative of a theatre of operations. One of these Memorials will be erected at Runnymede, England and the names of your son and the other members of his crew will appear on that Memorial. A detailed announcement concerning these General Memorials will be made at a future date.

I realize that this is an extremely distressing letter and that there is no manner of conveying such news to you that would not add to your heartaches, and I am fully aware that nothing I may say will lessen your great sorrow, but I would like to take this opportunity of expressing to you and the members of your family my deepest sympathy in the

loss of your gallant son.

Twenty year-old Arthur Gander has no known grave. His name is inscribed on the Runnymede War Memorial, Surrey, United Kingdom, Panel 186.

GLASS, William James (#J/95300)

Courtright resident William James “Billy” Glass had been married just two years when his aircraft was shot down during a bombing mission over Germany. His brother, also in the RCAF, honoured him with these lines: *To me he bides right by my side. As he did in days gone by; But the end has come, such a bitter end. Of my brother and truest friend.*

Billy Glass was born in Courtright, Ontario on January 31, 1923, the son of William Orison (born in Mooretown, Ontario) and Emma Viola (nee Campbell, born in Glencoe) Glass, of Courtright, Ontario. Parents William Sr. and Emma were married in Courtright on December 22, 1920. William and Emma were blessed with five children: four sons--John George (born 1925), Edward Bruce, Clifford Harold and Billy—and their daughter, Helen Virginia. To support his family, William Sr. was a bricklayer and stonemason.

Billy attended Courtright Public School from 1928 to 1937 and then Sarnia Collegiate from 1937 to 1939. He was a very active young man in and out of school. Billy participated in hockey and softball, was a member of St. Stephen’s Anglican Church, and was very active in the work of the local Anglican Young People’s Association. After completing grade school, he left school at the age of sixteen and found work as a deckhand and lookout with Colonial Steamships Limited in Port Colborne (1939-1941). Billy returned to Sarnia Collegiate for one year (1941-1942) for precision lathe operation. It paid off for he proceeded to work as a lathe operator with Electric Auto-Lite. He then worked as a bricklayer’s helper with Piggot Construction Company in Sarnia and later as a Pipefitter with Canadian Kellogg Company for several months until he enlisted.

Nineteen year-old Billy Glass enlisted in the Royal Canadian Air Force on November 12, 1942 in Sarnia. He stood five feet four inches tall, had blue eyes and brown hair, was single, and was living at home with his parents in Courtright at the time. He requested flying duties and wanted to be part of an aircrew. From #2 Manning Depot in Brandon, Manitoba, he began his training in April 1943 at #4 Initial Training School (ITS) in Edmonton, Alberta, and then #7 Bombing and Gunnery School (B&GS) in Paulson, Manitoba until mid-January 1944.

Before completing his stint at #7 B&GS, on December 31, 1943, Billy Glass married Frances Mabel Webb in her hometown of Fort Saskatchewan, Alberta. In mid-January 1944, newly-married William Glass continued his training at #5 Air Observers School (AOS) in Winnipeg, where he was awarded his Air Bombers Badge on February 25, 1944. In March, he continued his training at #4 Air Gunners Ground Training School (AGGTS) in Valleyfield. Billy had been married a little more than three months before he kissed Frances good-bye and embarked overseas from Halifax for the United Kingdom on April 10, 1944.

Pilot Officer-BA William James “Billy” Glass

From #3 Personnel Reception Centre in England, he continued training with #7 (Observers) Advanced Flying Unit (AFU) before being posted to #83 Operational Training Unit (OTU) in July 1944. On November 23, 1944, Pilot Officer-Bomb Aimer Billy Glass became a member of RAF #12 Squadron "Leads the Field", as part of **Bomber Command**.

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

At the outbreak of war, RAF #12 Squadron moved to France outfitted with Fairey Battle aircraft. By June 1940, the squadron was back in England stationed at RAF Finningley and then RAF Binbrook. By November 1940, still at RAF Binbrook, the squadron had been re-equipped with twin-engine Vickers Wellington medium bombers. In 1942 the squadron moved to RAF Wickenby and soon converted to Avro Lancaster four-engine heavy bombers.

On January 16, 1945, approximately nine months after arriving overseas, Billy Glass was part of a crew aboard Lancaster Mk. 1 aircraft LM213 (markings PH-G). The aircraft took off from RAF Wickenby on a night mission to bomb the huge synthetic oil plant at Zeitz, Germany. All but one crew member perished when enemy fire shot down the Lancaster over Bentheim, Germany. Perishing with Pilot Officer-Bomb Aimer Billy Glass were P/O. Donald Erwin Linington; F/O.s William Kerluk and Douglas James Bailey; and RAF Sgt.s Gilbert John Harris and Francis Joseph Tate. One Canadian, Sgt. A.F. Hyrnes, the rear gunner, was taken prisoner of war.

Billy's parents in Courtright received two telegrams from the RCAF Casualties Officer in the coming months. On January 20, 1945, the first telegram informed them that their son, FLIGHT SERGEANT BOMBARDIER WILLIAM (BILLY) GLASS JR WAS REPORTED MISSING IN ACTION OVERSEAS. One and a half months later, on March 9, 1945, a second telegram read REGRET TO ADVISE THAT INTERNATIONAL RED CROSS QUOTING GERMAN INFORMATION STATES YOUR SON FLIGHT SERGEANT WILLIAM JAMES GLASS LOST HIS LIFE JANUARY SIXTEENTH BUT DOES NOT GIVE ADDITIONAL PARTICULARS STOP PENDING FURTHER CONFIRMATION YOUR SON IS TO BE CONSIDERED MISSING BELIEVED KILLED STOP PLEASE ACCEPT MY SINCERE SYMPATHY STOP LETTER FOLLOWS.

Billy Glass was later officially recorded as, *Previously reported missing after air operations, now for official purposes, presumed dead, overseas (Germany)*. His brother, John, was serving in the RCAF as a Leading Aircraftman with the No. 5 Equipment Depot at Moncton, New Brunswick at the time of Billy's death. In a letter to his parents afterwards, John penned a few words of remembrance:

*They say he is gone to the land beyond, To a better world, I know;
But it does not seem right he should end his flight. When so young and so far away.
To me he bides right by my side. As he did in days gone by;
But the end has come, such a bitter end. Of my brother and truest friend.
He will always live on, he can never die, For his memories are always here -
Of his hurried walk, and his quiet talk: Oh my brother, so very dear.
So now you see why he will never die. My brother and truest friend -
He has left to me these memories. I shall cherish to my life's end.*

William "Billy" Glass left behind his parents William Sr. and Viola Glass in Courtright, and his wife of just over two years, Frances Mabel Glass. At the time of Williams' death, Frances was a Private with the Canadian Women's Army Corps (C.W.A.C.), residing at Argyle Barracks in Ottawa. In February 1946, Frances received a War Service Gratuity of \$344.19 for the loss of her husband.

Frances would later reside at 94th Street, Edmonton, Alberta, and re-marry. In January 1947, William Sr. and Viola Glass received a certificate from the Air Marshal, Chief of the Air Staff in Ottawa, informing them that their son, Pilot Officer W.J. Glass, "has been posthumously awarded the Operational Wings of the Royal Canadian Air Force in recognition of gallant service in action against the enemy."

Twenty-one-year-old William (Billy) Glass was buried at Bentheim, Germany, but was later exhumed and reburied in the Reichswald Forest War Cemetery, Germany, Grave 13.E.11. On his headstone are inscribed the words, WHOSOEVER BELIEVETH IN HIM SHOULD NOT PERISH, BUT HAVE EVERLASTING LIFE.

William "Billy" Glass' name is also inscribed on a memorial plaque on the interior wall of St. Stephen's Anglican Church in the Village of Courtright. In November 2019, his name along with 25 others was added to the Sarnia cenotaph, engraved in stone to be remembered always.

The following is an account from William Glass's Gunner, Al Hynes, the only survivor from the last mission:

My hometown is Winnipeg and that's where I joined the RCAF when I turned eighteen. At the time I joined they were not taking aircrew so I wound up ground crew and it took a few years before I finally got to re-muster. I tried out for a pilot but didn't make it. The war was getting on towards the end and I had to get into it so I volunteered to be a gunner. I went to Mont-Joli, Quebec where I took my gunnery training. We flew Fairey Battles with Bristol turrets. I went overseas and eventually wound up on an RAF squadron, No. 12, who were flying Lancasters which was fine with me. The Lancaster was the bird that everybody wanted to fly.

Our first trip was to Essen in the Ruhr Valley. That first trip - the flak and the searchlights and the bombs going down. It was absolutely beautiful - better than any fireworks display I've ever seen. As the trips progressed you began to realize that we were killing them and they're trying to kill you and the fear sets in. You don't really let that bother you because it's a short duration thing, eight to ten hours and you're back home. You go to the pub, get drunk, and have a good night's sleep in a bed with sheets. The food is fair and then away you go the next night to another hair-raising experience.

On my tenth trip we went to a German city called Zeitz - very deep into Germany. It was an oil refinery. We had a bad feeling about this trip - a premonition. We all had it. We discussed amongst ourselves whether we'd put the aircraft unserviceable. We decided, no, we'd go ahead and fly it. Who believes in premonitions? Anyway, we were over the target. We'd bombed it and it was quite different there. There was a layer of thin cloud over the target and the fires below and the searchlights, there were hundreds of them playing on the cloud layer, made a glowing screen and every plane in the bomber stream was clearly visible from above. We knew there were fighters around because they were dropping fighter flares and the photoflashes were going off. It was quite spectacular.

Anyway, I had a nasty feeling we were being hunted. I was desperately looking around. I swung my turret around and looked down and there was the hunter, a Messerschmitt 410. He was tilted up about 25 yards away. I directed my guns down immediately and opened fire. At the same time I yelled for the skipper (F/O William Kerluk RCAF) to corkscrew. This all happened within a heartbeat. The fighter opened fire. I could see his four cannons blink once. One cannon shell took the two guns out of my turret on the left side. One hit under my feet and blew out the pipelines (the hydraulic lines that powered the turret) and the intercom. One hit the tail and one I'm sure went up the fuselage and killed the navigator. All this happened just like that. I opened fire. I yelled for the skipper to corkscrew starboard. All he heard was, "Corkscrew," before the cannon shell cut off the intercom. He's yelling, "Which way? Which Way?" I could hear him but he couldn't hear me.

It was all over in seconds. I opened fire when this happened and I could see my tracers bouncing off him. Then he broke away down and it was all quiet. I used the hand crank to turn my turret and my intercom came back on. So I told the skipper the enemy fighter was directly below us and we had about ten seconds to live. I told him to corkscrew or dive to the clouds or do something. The last words he said were, "I'm afraid to move it. The controls are shot up." I said, "Here he comes!" and he tilted up and opened fire. He hit us in the gas tanks and we started to burn. The flame was coming down the fuselage and out through my turret.

Luckily I was wearing the new seat pack - I was sitting on my parachute (Previously the rear gunner's parachute was stowed on a hook in the fuselage and the gunner had to reach behind into the fuselage and clip the parachute pack on). Now when you parachute out of a gun turret you unplug your intercom, your oxygen mask, your oxygen mask heater, and your heated suit. The flames were hitting me in the face. I tried to get my face out of the flames so that I could unplug. I leaned out the doors while I was doing this. The wind caught my parachute harness and I couldn't get back in to unplug anything. So I let go and everything pulled loose which was something of a miracle because they told you if you didn't unplug it usually breaks your neck.

Anyway there I am. It's about 15,000 feet at eleven o'clock at night and 50 below zero. I'm falling on my back. I could see the Lancaster going away. I could see the Messerschmitt 410 coming back. I reached for the ripcord with my right hand but I couldn't reach it because my Mae West had inflated. So I reached with my left hand and got my thumb in the D-ring, pulled it, and after a long pause the parachute opened. I looked down and there's my boots disappearing into the clouds. It seemed like a long, long time that I came down. As soon as I got below the

clouds I realized that it was snowing quite heavily.

I couldn't see the ground but I kept looking down and all of a sudden there I was, "Bang." I landed in my stocking feet in a foot of snow. My Mae West had inflated so I couldn't reach the risers to deflate my chute and it was blowing me across the field. So I dug my hands in to think about what I was going to do next. I thought I'd get up and I'd run around the chute but the snow was too deep and in my stocking feet I couldn't do it.

So I was lying there and I saw a light coming. I knew I was in the middle of Germany so I thought, 'Well, I'll dig by hands into the snow and wait until this guy walks by and hope he doesn't see me in the falling snow.' He got behind me but a gust of wind blew me right into him and it turned out to be my wireless operator (F/S G.J. Harris). He was very badly burned. I grabbed him and I said hang on. I turned the quick release on my parachute. You bang it with your fist to release everything except that it was jammed. I kept banging it and banging it but it wouldn't open. So I got him to sit on my legs while I got my knife out and I cut away the parachute harness.

I looked at him. He was pretty bad. So I decided to give him a shot of morphine. I got my first aid kit out and I got the needle. I said, "Come on. I'll give you a shot of this and you'll feel a little easier." He'd have nothing to do with it. He was wild with pain and whatever. He was fighting me off. Finally I gave up and threw the thing away. He said, "There's a farm house over there. I'll give myself up and get some first aid." So I said, "Ok, I'll see you back in England." He disappeared into the snow. A while later I heard shots.

I knew I was in Germany but I didn't know where in Germany. I must have looked pretty damn conspicuous. I had cut off the legs of my electric suit and wound them around my feet. The sleeve of my electric suit had been burned off and so had my battle dress so everything was hanging by a thread here and a bunch of strings there. My face was burned so I got out the first aid kit. The first aid for burns was a dope called Gentian Violet. It was bright purple. So I got this purple ointment and smeared it on my face. I now had raggedy clothes and a purple face so I must have looked just a little suspicious.

GORING, Curtis Albert (#R/90290)

Curtis Albert Goring had planned to return to his job at St. Clair Motors after the war. Unfortunately, he never got the chance to do so. On September 1, 1943, he perished when his Halifax aircraft was shot down in a raid over Berlin.

Curtis was born in Sarnia on September 16, 1914, the eldest son of William Curtis (born in Petrolia, Enniskillen Township, a farmer) and Amanda Flora (nee McLean, born in Alvinston) Goring, of 133 Richard Street, Sarnia. He was also the nephew of Sarnians Mr. and Mrs. O.E. Mannen of Richard Street and Mr. and Mrs. Moses Hallam of 359 Wellington Street, later 162 Richard Street. The Gorings were blessed with seven children: sons Curtis, Ralph Archibald (born in Detroit, 1917); Keith Emerson (born 1918); Francis Carlyle (born September 1921, see below); and Scotty Ross (born September 1924); as well as two daughters Marion (born 1919) and Blanche (born 1927). Four of the Goring boys served in the Armed Forces, two of them made the supreme sacrifice.

Curtis was educated at Point Edward Public School from 1921 to 1928 and then attended Petrolia High School from September 1928 to mid-February 1930. He had a balanced education in high school where in his final year he studied English, French and Latin as well as algebra, art, agriculture, geography and history. Curtis kept himself active outside the classroom participating in baseball, rugby, golf, bowling, hockey, swimming, sail boating and rifle shooting. He was also involved in High School Cadet training.

In 1930, tragedy struck the Goring family when their mother, Amanda, passed away. After her death, Curtis, 16, was unable to attend school. Instead, he moved from Petrolia to live with his uncle and aunt, the Mannens, on Richard Street. From 1930 to 1936, Curtis worked for George Bell in Sarnia as a delivery truck driver. He was looking to get ahead, however. Between 1937 and 1940, Curtis resumed his education at Sarnia Collegiate where he took night courses in auto mechanics, typing and business. From 1936 until he enlisted in 1941, Curtis worked with St. Clair Motors of Sarnia Limited, first as a registered mechanic for two years and then as the manager of the Parts Department. His postwar plan was to return to St. Clair Motors.

Twenty-six-year-old Curtis Goring enlisted with the Royal Canadian Air Force on February 20, 1941 in London, Ontario. Perhaps he was influenced by his brother Francis (see below), seven years his junior, who had enlisted in the RCAF the previous month. Curtis stood five feet seven and a half inches tall, had brown eyes and dark brown hair, and was single at the time. He was living at home with his father on Richard Street, Sarnia. Curtis

requested flying duties, with a preference for the position of Air Gunner.

Ralph Archibald

Francis Carlyle

Scotty Ross

F/Sgt. Curtis Albert Goring

To be an Air Gunner required extensive training at a series of training centres throughout Canada. From #2 Manning Depot in Brandon, Manitoba, Curtis received his training at #4 Service Flying Training School (SFTS) in Saskatoon; at #2 Wireless School (WS) in Calgary; at Composite Training School (KTS) in Trenton, Ontario; and at #5 Bombing and Gunnery School (B&GS) in Dafoe, Saskatchewan. Nearly a year after he enlisted, Curtis was awarded his Air Gunners Badge on December 8, 1941 in Dafoe. Four days later, he was posted to #1 Y Depot in Halifax, where his brother Francis had been posted six days earlier.

The two Goring brothers embarked overseas for the United Kingdom on January 7, 1942. From #3 Personnel Reception Centre, Curtis continued his training in the U.K. at #7 Air Gunners School (AGS) and then #22 Operational Training Unit (OTU). In late July 1942, he became a member of #115 Squadron and later RCAF #419 Squadron, part of **Bomber Command**.

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

On October 12, 1942, Curtis Goring became a member of RCAF #405 City of Vancouver Squadron, **Pathfinder Force**. The squadron's motto was "Ducimus" (We lead) and Goring earned the rank of Warrant Officer Class II-Air Gunner. RCAF #405 Squadron was formed at RAF Driffild in April 1941. Outfitted with Vickers Wellingtons, they soon after completed their first bombing operation in Germany. Converting to Handley Page Halifax bombers in 1942, from October 1942 to March 1943, the squadron assisted Coastal Command in North Africa. In March 1943, the squadron returned to Bomber Command, and in April 1943, was selected to join the elite No. 8 (Pathfinder) Group with which it served until the end of the war, based at Gransden Lodge Airfield. It was the only Royal Canadian Air Force squadron that was a part of the Pathfinder Group.

The Pathfinder Force was made up of experienced, hand-picked crews from bomber squadrons with elite navigational abilities. These aerial rangers, equipped with the latest target-finding technologies, were the spearhead of the bomber stream. They arrived first over the target and dropped coloured flares to pinpoint and to highlight the area to be bombed by the follow-on force.

During his time overseas, Curtis experienced and survived two mishaps. First, he was injured in a crash landing in England and spent some time in hospital; and another time, his warplane was forced down in the North Sea where he and other members of the crew were rescued after drifting for some time on a rubber raft.

405 Squadron Halifax

Just over two years after enlisting, on September 1, 1943, Curtis Goring was aboard Halifax aircraft HR915 (markings LQ-O) that took off from RAF Gransden Lodge on a night operation targeting Berlin. The Halifax bomber failed to return from the operation and the cold truth emerged later--HR915 had been shot down by a night-fighter and crashed near Berlin. Canadian Squadron Leader Pearson and four other non-Canadian crew members were captured and became prisoners of war; sadly, Gunner Curtis Goring and WO1 Edwin Matthew McArthur were killed.

On September 3rd, 1943, William Goring on Richard Street received a telegram from Ottawa informing him that his son, FLIGHT SERGEANT CURTIS ALBERT GORING WAS MISSING AFTER AIR OPERATIONS OVERSEAS. The telegram did not indicate the date on which his son was reported missing. His aunt, Mrs. Mannen had not heard from Curtis for a number of few weeks.

In early October 1943, William received another telegram which confirmed that his son Curtis was now listed as, PREVIOUSLY REPORTED MISSING AFTER AIR OPERATIONS NOW FOR OFFICIAL PURPOSES PRESUMED DEAD OVERSEAS (GERMANY). No details of the action in which Curtis had lost his life were given. Reports were later received that on September 1st, of the 622 aircraft involved in the operation, eight Canadian bombers were included in the total of 47 Allied planes lost in a 45-minute raid on Berlin. The RCAF incurred some of its heaviest losses of the war in this September raid on Berlin.

At the time of Curtis' death, three of his brothers were in the aerial division of the armed forces: Sergeant Ralph A. Goring was overseas with the U.S. glider infantry; RCAF Flight-Lieutenant Francis Carlyle, who went overseas with Curtis, was in England; and brother LAC Scotty Ross Goring, was stationed at an RCAF base in Quebec.

In October 1945, William Goring received a War Service Gratuity of \$518.52 for the loss of his son Curtis. Twenty-eight-year-old Curtis Goring has no known grave. His name is inscribed on the Runnymede War Memorial, Surrey, United Kingdom, Panel 179. For widowed father William Goring in Sarnia, he would lose a second son in the war, Francis Carlyle of the RCAF, less than one year later.

GORING, Francis Carlyle (#J/16344)

Francis Carlyle ("Lyle") Goring was one of four Goring boys who served in the Armed Forces. Lyle's daughter had been born only two months earlier when his aircraft was shot down in a reconnaissance mission during the Battle of Normandy.

Lyle was born in Brigden, Ontario on September 19, 1921, the son of William Curtis (born in Petrolia, Enniskillen Township, a farmer) and Amanda Flora (nee McLean, born in Alvinston, Brooke, Lambton County) Goring, of 133 Richard Street, Sarnia. He was also the nephew of Sarnians Mr. and Mrs. O.E. Mannen of Richard Street and Mr. and Mrs. Moses Hallam of 359 Wellington Street, later 162 Richard Street. The Gorings were blessed with seven children: sons Curtis Albert (born September 1914, see above), Ralph Archibald (born in Detroit, 1917); Keith Emerson (born 1918); Francis Carlyle; and Scotty Ross (born September 1924); as well as two daughters Marion (born 1919) and Blanche (born 1927). Four of the Goring boys served in the Armed Forces, two of them made the supreme sacrifice.

Curtis Albert

Ralph Archibald

Scotty Ross

When Lyle was only nine years old, he lost his mother, Amanda, who passed away in 1930. Lyle's education included attending Johnston Memorial Public Elementary from 1930 to 1935 and then Sarnia Collegiate from September 1935 to June 1940. Lyle was interested in the military at a young age. While attending Sarnia Collegiate, Lyle was a member of the Cadet Corps for five years, and his hobbies included building model aircraft and revolver and rifle shooting. He was one of the leading marksmen there, in revolver and rifle shooting. He was very active in sports, particularly hockey, football, swimming and baseball, along with softball, tennis, golf, lacrosse and basketball. After leaving Sarnia Collegiate, Lyle worked as a clerk at a drug store owned by A.E. Sole from July through September 1937. Later, he was employed as a clerk with Howard & Mundy Sheet Metal Works at 130 Ontario Street. He worked at this job for approximately six months until he enlisted.

Nineteen year-old Francis Lyle Goring enlisted in the Royal Canadian Air Force on January 4, 1941 in London, Ontario. One month later, his twenty-six-year-old brother Curtis (see above) would also enlist in the RCAF. Lyle stood five feet seven inches tall, had brown eyes and dark brown hair, was single, and recorded his occupation as student. He was residing with his aunt and uncle at the time, Mr. and Mrs. Moses Hallam of 359 Wellington Street. Lyle recorded his next-of-kin as his father William, and his address as, William Goring in care of J. Youngblood, R.R. #1 Woodstock, Ontario (farmer). Lyle requested flying duties, with a preference to be a Pilot or Air Gunner. After the war, Lyle planned to return to school towards the goal of working as a pilot, or administrator of an airline, or doing aeronautical research work.

His training in the RCAF was extensive. From #1 Manning Depot in Toronto, he was transferred to #1 Auxillary Manning Depot in Picton. Lyle received his training at #6 Bombing and Gunnery School (B&GS) in Mountain View, Ontario and then #1 Initial Training School (ITS) in Toronto. Later, he attended #3 Elementary Flying Training School (EFTS) in London and #6 Service Flying Training School (SFTS) in Dunnville, Ontario. He was awarded his Pilot's Flying Badge on December 5, 1941 at Dunnville, where he graduated as a Sergeant Pilot. On

December 6, 1941, Lyle was posted to #1 Y Depot in Halifax. Six days later, his brother Curtis would also arrive at Y Depot, Halifax. Not long afterwards, on January 7, 1942, Francis Lyle Goring and his brother Curtis embarked overseas for the United Kingdom.

From #3 Personnel Reception Centre in England, Lyle continued his training at #1 Service Flying Training School (SFTS) until early March 1942 when he became a member of #296 Squadron. Approximately four months after arriving overseas, Lyle experienced the thrill of being introduced to Their Royal Majesties. While stationed in England, Lyle shook hands with King George VI and Queen Elizabeth when they paid a surprise visit to the squadron. In August 1942, Lyle was discharged from the Royal Canadian Air Force on appointment to Commissioned Rank in the R.A.F. In January 1943, he was posted to RAF Chilbolton.

F/O-Pilot Officer Francis Carlyle "Lyle" Goring
(Left photo: June 10, 1943 at RAF Station Netheravon)

In March 1943, Lyle was promoted to Flight Lieutenant and made a Flight Commander in the R.C.A.F. In September of 1943, he celebrated his 22nd birthday "somewhere in England," as a member of #41 Operational Training Unit (OTU). During that same month, he would learn that his brother Flight Sergeant Curtis Goring was missing after air operations, and a month later, that his brother Curtis was now for official purposes, presumed dead in Germany.

This devastating news was followed by happier news. On November 29, 1943, Lyle Goring married Joyce Pamela Jones in Reigate, Surrey, England. Joyce was a member of the Women's Auxiliary Air Force (WAAF). The couple had one daughter together, Christine Mary, born June 15, 1944. They resided first at Wray Park Road, Reigate, Surrey, and later Meadvale, Redhill, Surrey, England. After the war, in March 1950, Joyce Goring's address was recorded as 588 Cromwell Street, Sarnia.

On March 21, 1944, Flying Officer-Pilot Lyle Goring became a member of RCAF #430 City of Sudbury Squadron whose motto was "Celeriter certoque" (Swiftly and surely). No. 430 Squadron was initially created in January 1943 as an army co-operation squadron, and in June of that year was re-designated as a **fighter reconnaissance unit**, originally equipped with Curtiss Tomahawks, and later with North American Mustangs and Spitfires.

In March 1944, Francis Lyle Goring was part of a group of eight members of the Royal Canadian Air Force that were given the opportunity to visit a coal mine in North Wales. Arrangements had been made by the British Council, a national organization devoted to fostering goodwill. The eight members of the RCAF were outfitted with overalls, helmets and lanterns and descended the half-mile to the pit bottom so quickly that ear-drums clicked. Lyle Goring expressed the common thought: "Whoeee, just like a power dive." As the RCAF fliers debarked from the cage, they were met by the "onsetter," Freddie Edwards and shouted a cheery "Ullo chaps."

His 16-year-old assistant grinned through a layer of coal. The assistant had chosen this job when he became

eligible for compulsory employment in one of several industries. In the muffled darkness of the mine the fliers met muscular Britons toiling at the coal face. The Canadians and the miners were soon engaged in a friendly discussion as to the merits of working “above” versus “below” the earth’s surface, and each opined his job was the easiest. The fliers walked up slants and down steep grades, churning the dust and puffing audibly, surrounded by the deafening clatter, screeching and rumbling sounds inside the mine. One RCAF flier stated, “We’ll take a nice quiet war anytime.”

The **Battle of Normandy** would begin for the Canadians with the June 6, 1944 D-Day landings at Juno Beach. After breaching the “Atlantic Wall” of “Fortress Europe”, Allied armies, with the support of the navy and air force, began their break out from the narrow Normandy bridgehead to carve out a foothold on the French mainland. It would take a whole summer of tenacious fighting, pushing against fierce and ruthless German forces to advance east across France. In a brutal campaign of attrition, the Canadians faced fierce battles and vicious counterattacks as they clawed their way forward liberating villages and towns including Bretteville, Carpiquet, Caen and Falaise. RCAF #430 Squadron, then operating as a fighter reconnaissance unit, would carry out photo reconnaissance missions in support of planning for the Normandy landings. On D-Day, it provided support for the 2nd British Army, and after D-Day, missions included support for ground forces during the Battle of Normandy, and before-and-after photography of attacks on V-1 flying bomb launch sites.

On August 12, 1944, two months after the birth of his daughter, Francis Lyle Goring was aboard his Mustang aircraft AG455 that was engaged on a reconnaissance mission with one other plane. His aircraft was shot down over Culey Le Patry, between Falaise and Vire, France, during the Battle of Normandy and Lyle was killed in the incident. Local residents were able to extract his body from the wreckage for burial.

Approximately one week after the crash, William Goring in Sarnia received a telegram from R.C.A.F. Headquarters in Ottawa informing him that his son, FLIGHT LIEUTENANT F C GORING WAS REPORTED MISSING AFTER AIR OPERATIONS OVERSEAS ON AUGUST 12. The telegram also stated that a letter would follow. Not long before receiving this telegram, William had received a letter from his son Lyle stating that he expected to be returned to Canada soon.

At the time of Lyle’s death, three of his brothers were in the aerial division of the armed forces: Sergeant Ralph A. Goring was overseas with the U.S. glider infantry; RCAF Flight-Sergeant Curtis Albert Goring, who went overseas with Lyle, had been killed in action one year earlier; and brother LAC Scotty Ross Goring, was stationed at an RCAF base in Quebec.

In late August 1944, Lyle’s wife Joyce in Reigate, Surrey, England, received the following letter from the Wing Commander, for Air Officer Commanding-in-Chief, RCAF, Overseas:

Dear Mrs. Goring,

It is with deep regret that I must confirm the communication you have recently received which stated that your husband, Flying Officer Francis Carlyle Goring was reported missing as a result of air operations on the 12th August, 1944.

Your husband, piloting an aircraft took off for a tactical reconnaissance flight over France, and failed to return. This does not necessarily mean that he has been killed or wounded as it is possible he may be a prisoner of war or even free which I hope may prove to be the case.

The request that no information be given to the press is made in order that your husband’s chances of escape will not be jeopardized by undue publicity if he is still at large. This does not mean that information is available concerning him but is a precaution adopted in the case of all personnel reported missing.

I can assure you that enquiries are being made through every available source and any information which may be forthcoming will be communicated to you at once. Please accept my sympathy with you in your great anxiety.

In mid-June 1945, William received the following letter from the Air Vice-Marshal, Air Member for Personnel in Ottawa:

Dear Mr. Goring:

It is with deep regret that I must inform you that advice received from the Royal Canadian Air Force Casualties Officer, Overseas, states that your son, Flying Officer Francis Carlyle Goring, is now for official purposes presumed to have died on Active Service on August 12th, 1944.

I realize that this letter will be a blow to the hopes you have entertained for so long, and in your sorrow I offer you my deepest sympathy. May the same spirit which prompted your son to offer his life give you renewed courage.

Date Reported Missing: 12th August, 1944

Crew: One unidentified Pilot

... I proceeded to the village of Neron l'Abbaye where I contacted M. Georges Martin a resident of the village and mentioned in the file as one of the "Temoins a consulter". M. Martin accompanied us to the scene of the crash approx. 1 kilometre to the west of the village. Here we found the wreckage of a single engine fighter aircraft. It was badly smashed and we were unable to find the engine but found 5 machine guns, two of .5 calibre and 3 of .303 calibre. The numbers of these were as follows... Also on a part of the fuselage there could be discerned in large black lettering a number finishing with 55.

We saw the grave which had been dug at the side of the crash and which had housed the remains up till some 2 months ago when it was removed by English Army personnel... the body had been exhumed (on October 10, 1945) and reburied at Banneville British Cemetery where it is in plot 4, grave 3, row C, and is marked as an "Unknown British Airman". The concentration report disclosed that the coffin contained only a few bones, that it was buried beside a small aircraft which bore the number 6579 on a strut of the undercarriage. No other means of identification were found.

In January 1947, Joyce in Meadvale, Redhill, Surrey, England received the following letter from the Wing Commander for Chief of the Air Staff in Ottawa:

Dear Mrs. Goring:

It is a privilege to have the opportunity of sending you the Operational Wings and Certificate in recognition of the gallant services rendered by your husband, Flying Officer F.C. Goring. I realize there is little which may be said or done to lessen your sorrows, but it is my hope that these "Wings", indicative of operations against the enemy, will be a treasured memento of a young life offered on the altar of freedom in defence of his Home and Country.

In April 1947, Joyce Goring, then at 133 Richard Street, Sarnia, received a letter from the R.C.A.F. Casualty Officer, for Chief of the Air Staff in Ottawa. Following is a portion of that letter:

Dear Mrs. Goring:

After a great deal of investigation it has been decided that the evidence found proves conclusively that your husband, Flying Officer Francis Carlyle Goring, is buried in Banneville British Cemetery, Calvados, France. The Missing Research and Enquiry Service, on visiting the scene of the crash at Noron L'Abbaye, stated that on a part of the fuselage there could be discerned a number finishing with 55. The only other fighter aircraft missing the same date as your husband has been accounted for and as the registration number of your husband's aircraft was AG455 it is quite evident that this was his aircraft.

The Dominion Marksman gold ring which your father-in-law stated that your husband owned was similar to the one found at the scene of the crash. The Dominion Marksman Headquarters in Montreal have confirmed this... I am enclosing the ring in question for your retention. It will be noted that the ring has the name "J.R. Gaunt" inscribed inside. This of course, is the name of the manufacturer.

... The reverent care of the burial places of all who served in the Royal Canadian Air Force is the task of the Imperial War Graves Commission and these graves will be supported and sustained by the Dominion of Canada. I hope that it may be of some consolation for you to know that your gallant husband's grave is in sacred care and keeping. May I again, at this time, offer you my deepest sympathy in your great loss.

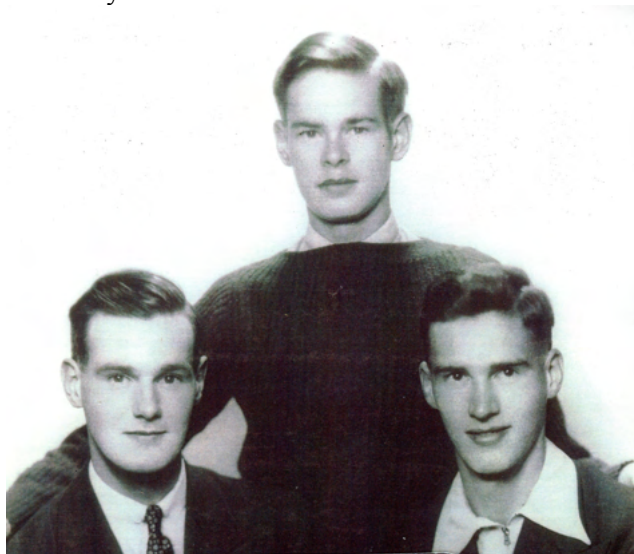

Francis Carlyle “Lyle” Goring was later officially recorded listed as, *Previously reported missing after air operations, now for official purposes, presumed dead, overseas (France)*. Twenty-two-year-old Francis Lyle Goring is buried in Banneville-La-Campagne War Cemetery, Calvados, France, Grave IV.C.3. He left behind his newlywed wife Joyce Goring, and their 2-month old daughter Christine. On his headstone are inscribed the words, IN BELOVED MEMORY NEVER FORGOTTEN. For widowed father William Goring back in Sarnia, this was the second son he lost in the war, losing his oldest son Curtis of the RCAF, less than one year prior. The wreckage of Francis Lyle Goring’s plane was rediscovered in 2005.

GRAHAM, Lloyd, Jack and William (3 brothers)

All three Graham brothers served and fought in the war. Theirs are remarkable stories of honour and sacrifice on behalf of Canada, as the Graham family would lose two of their three sons to the war effort.

The boys' parents were Arthur Howard and Florence (nee Burfield) Graham. Arthur was born in Bruce County, Ontario and Florence was born in Wellingborough, England. They married in Windsor, Ontario on September 26, 1917. The Graham family lived in Windsor for a time, then Chatham briefly, before moving to Sarnia by 1938, residing at 144 N. Vidal Street. Arthur Graham was employed with the CNR as a fireman and engineer. A couple of years after the war, the Graham's moved to 1084 London Road, R.R. #1 Sarnia. Arthur and Florence had three children together, all boys: William Richard (born July 26, 1918 in Windsor); Jack Howard (born June 30, 1920 in Windsor); and Lloyd Thomas (born March 1, 1923 in Chatham). The oldest boy, William, enlisted along with his brother Jack, in September 1939 in Windsor, both becoming members of the Essex Scottish Regiment. After training at Camp Borden, they were sent to England for training on the Isle of Wight. In October 1942, the youngest Graham boy, Lloyd, became a member of the Royal Canadian Air Force.

The Graham brothers - William (left), Lloyd (back), Jack (right)

Lloyd Thomas GRAHAM (#J/92095) was born in Chatham, Ontario on March 1, 1923, the youngest of the Graham sons. He was educated in Sarnia, attending a Sarnia Public Elementary school from 1931 to 1938. At the age of sixteen, he served as a Private in the Essex Scottish Regiment Army Reserve in Windsor, Ontario from June to September 1939. He attended Sarnia Collegiate Institute from 1939 to 1941, acquiring a machine shop diploma. He was very active in sports, participating in hockey, soccer, football, basketball, softball, tennis, golf, boxing, horseback riding and swimming. His hobby was model aircraft building. In 1941, he was employed with Colonial Tool Company in Windsor, as a cutter, grinder, and inspector until October 1942 when he enlisted.

Prior to enlisting, Lloyd's two older brothers Jack and William were already in the Canadian Army, both serving overseas with the Essex Scottish Regiment. In August 1942, only days after the August 19 Dieppe Raid (where the Essex Regiment played a central role), parents Arthur and Florence in Sarnia received word that their middle son Jack was listed as missing in the Raid, and no word was received regarding eldest son William's fate in the Raid. In that same week, determined to get into the thick of things, nineteen year-old Lloyd decided he would enlist. Just days before enlisting, Lloyd said, "I applied for the R.C.A.F. two weeks ago. I want to be an air gunner, but mother would prefer to see me in the navy. I'll make up my mind in a day or so."

Lloyd stood six feet tall, had hazel eyes and light brown hair, and was single when he completed his Royal Canadian Air Force Attestation Paper on August 10, 1942, in Windsor, Ontario. He recorded his next of kin as his mother, Mrs. Florrie Graham of 144 N. Vidal Street, and his occupation as a tool and dye apprentice. He requested flying duties with a preference to be a wireless air gunner. He underwent his RCAF medical on August 17, 1942 and became an active enlistee on October 15, 1942. The recruitment officer who interviewed Lloyd recorded of him, *Good type, alert, cooperative, sincere, enthusiastic, keen to fly and be of service, has 2 brothers in the army – one of whom is reported missing after Dieppe action, should make good material for aircrew (A.G.).*

From #1 Manning Depot in Toronto, Lloyd received training at #4 Wireless School (WS) in Guelph and #4 Bombing and Gunnery School (B&GS) in Fingal, graduating as a Wireless Operator/Air Gunner (WAG) from Fingal on September 20, 1943. His parents were there at the graduation to witness Lloyd receive his newly won wings. Lloyd continued his training at #4 Air Observer School (AOS) in London, Ontario and #3 Aircrew Graduate Training

School (AGTS) in Three Rivers, Quebec. On March 15, 1944, Lloyd was posted to #1 Y Depot in Lachine, Quebec. Lloyd Graham embarked overseas for the United Kingdom from Halifax on March 25, 1944.

Pilot Officer-WAG Lloyd Thomas Graham

Sarnia Observer – August 25, 1942 (6 days after Dieppe)

Lloyd arrived in the United Kingdom on April 2, 1944. From #3 Personnel Reception Centre, he initially served with #6 (Observer) Advanced Flying Unit (AFU) and then #22 Operational Training Unit (OTU). On November 7, 1944, Lloyd became a member of RCAF #419 Moose Squadron “Moosa aswayita” (written in Cree, not Latin, means “Beware the moose—a ferocious fighter”), part of **Bomber Command**.

During the course of the war, one of this country’s most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

RCAF #419 Squadron was formed at RAF Mildenhall, England in December 1941, and named after its first commanding officer, Wing Commander John “Moose” Fulton. The unit moved to various bases throughout the war, including Leeming, Topcliffe, Croft and Middleton St. George. Initially operating Wellington bombers, in November 1942 the squadron converted to Handley Page Halifax bombers, and in March 1944 to Avro Lancasters.

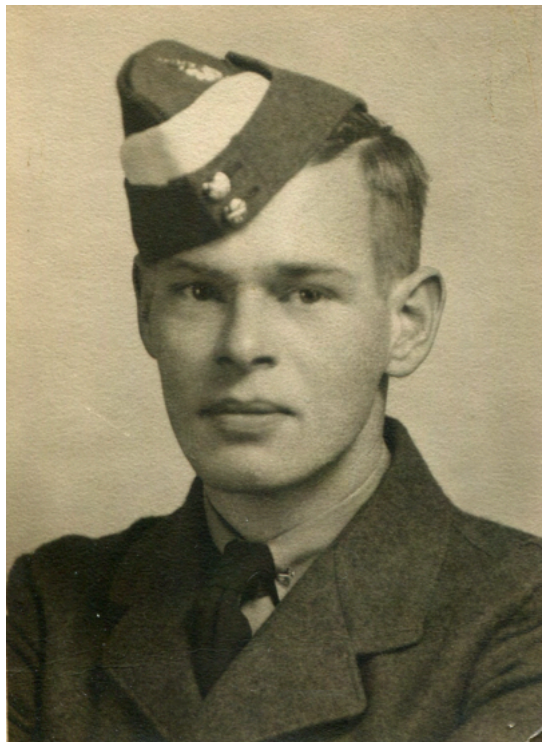

Only one month after becoming a member of #419 Squadron, Lloyd Graham lost his life. On December 6, 1944, he was aboard Lancaster X aircraft KB779 (markings VR-B) that left Middleton St. George, England at approximately 16.40 hours for a night attack against Osnabruck, Germany. Its estimated time of return was 22.40 hours; however, nothing further was heard from the aircraft after it left the base. A total of 453 aircraft took part in the operation, the first major raid on this target in more than two years. Sixteen Lancasters from Moose Squadron took part in the night operation in horrible weather. It was recorded that 18 bombs remained hung up in the bomb bays of various Moose aircraft because of the cold (a dangerous situation for the crews carrying them—aircraft had been lost when they attempted landings with bombs still hung up in the racks). The cold weather would have caused electrical contacts to contract, resulting in loose connections to the fusing circuits and release mechanisms. Therefore, the crews would not know if they had properly set them back to SAFE mode. What exactly happened to Lancaster KB779 and its crew on that night may never be known.^{6G}

The Lancaster aircraft may have encountered severe icing conditions or may have been shot down during the night attack against Osnabruck. Perishing with Pilot Officer-Wireless Operator/Air Gunner Lloyd Graham were F/O.s Bruce Douglas Hyndman, and Gordon Roy Cheesman; P/O.s George Edward Smith, Ezra Mulloy Hansen, and Douglas Lloyd Marcellus; and Sgt. Ronald Dennis Ovis (RAF). In mid-December 1944, Arthur and Florence received a telegram informing them that their son, FLIGHT SERGT LLOYD THOMAS GRAHAM RCAF IS MISSING OVERSEAS AFTER AN OPERATIONAL FLIGHT FROM ENGLAND. They received the telegram

almost simultaneously with a letter from their son Corporal Jack Graham, a veteran of Dieppe, who was then a prisoner of war in Germany.

Lloyd Graham at Wing Ceremony
#4 B&GS, Fingal, Ontario – September 1943
with Sarnia friend LAW Jessie Riddoch
(who was serving at Hagersville, S.F.T.S.)

Sergeant Lloyd T. Graham

In mid-December 1944, Florence on N. Vidal Street, also received a letter from the Wing Commander, Commanding 419 (RCAF) Squadron, “Moose Squadron”. Following is a portion of that letter:

Dear Mrs. Graham:

I regret to confirm the telegram you have already received notifying you that your son F. Sergeant Lloyd Thomas Graham, is missing from an attack on Western Germany on the night of December 6th. This was a very heavy and concentrated attack which has since proved very successful but unfortunately, nothing has been heard of your son's aircraft or crew since they took off and their loss can only be attributed to enemy action. There is still quite a possibility that all or part of the crew may be prisoners of war, but news of this could not be expected for some considerable time yet.

During the month your son was with us, he took part in seven attacks on the enemy. All of these were directed against the main German industrial regions and in each attack Lloyd proved himself worthy of his position. He set a very high standard of excellence as a Wireless Operator and that, combined with his friendly nature made him a very popular lad whom we can ill afford to lose....

May I convey my sincere sympathy to you in this trying time of waiting and hope with you that better news may follow.

Also in mid-December 1944, Arthur received a letter from the R.C.A.F. Casualty Officer, for Chief of the Air Staff in Ottawa. Following is a portion of that letter:

Dear Mr. Graham:

It is with deep regret that I must confirm the information conveyed to you by the Royal Canadian Air Force Chaplain, informing you that your son, Flight Sergeant Lloyd Thomas Graham, is reported missing on Active Service.

Advice has been received from the Royal Canadian Air Force Casualties Officer, Overseas, that your son and the entire crew of his aircraft failed to return to their base after taking off at 4:40 P.M. on December 6th, 1944, to carry out air operations over Osnabruck, Germany.

The term "missing" is used only to indicate that his whereabouts is not immediately known and does not necessarily mean that your son has been killed or wounded. He may have landed in enemy territory and might be a Prisoner of War; and should you receive any card or letter from him please forward it at once to the Royal Canadian Air Force Casualties Officer, Air Force Headquarters, Ottawa. Enquiries have been made through the International Red Cross Society and all other appropriate sources and I wish to assure you that any further information received will be communicated to you immediately.

... Your son's name will not appear on the official casualty list for five weeks. You may, however, release to the Press or Radio the fact that he is reported missing, but not disclosing the date, place or his unit. Permit me to extend to you my heartfelt sympathy during this period of uncertainty and I join with you and the members of your family in the hope that better news will be forthcoming in the near future.

In June 1945, Florence received a letter from the Group Captain for Chief of the Air Staff in Ottawa. Following is a portion of that letter:

Dear Mrs. Graham;

I have the honour to forward, herewith, the Royal Canadian Air Force Officer's Commission Script for your son, Pilot Officer Lloyd T. Graham. This script, which is being forwarded to you for safekeeping, represents the authority vested in Pilot Officer Graham, as well as the trust placed in him by His Majesty, The King.

Also in June 1945, Arthur received the following letter from the R.C.A.F. Casualty Officer, for Chief of the Air Staff in Ottawa:

Dear Mr. Graham:

I greatly regret that since my letter of December 22nd, 1944 no further information has been received concerning your son, Pilot Officer Lloyd Thomas Graham. Every effort is still being made to trace your son although due to the lapse of time it is now felt there is less hope of locating him. May I again assure you and the members of your family of my earnest sympathy.

In early August 1945, Arthur received another letter from the R.C.A.F. Casualty Officer, for Chief of the Air Staff in Ottawa. Following is that letter:

Dear Mr. Graham:

It is with deep regret that, in view of the lapse of time and the absence of any further information concerning your son, Pilot Officer Lloyd Thomas Graham, since he was reported missing the Air Ministry Overseas now proposes to take action to presume his death for official purposes.

Will you please confirm by letter that you have not received any further evidence or news concerning him. The presumption of death will proceed on hearing from you, and on completion you will receive official notification by registered letter from the Chief of the Air Staff.

May I extend to you and the members of your family my sincere sympathy in this time of great anxiety.

In August 1945, Arthur and Florence, then at R.R. #1, Sarnia, still held out hope about the fate of their son Lloyd. Following is a portion of their reply to the RCAF Casualty Officer, written by Florence:

Dear Sir,

On behalf of Mr Graham and myself... we have received no word, other than what has come from your office, concerning our dear son Pilot Officer Lloyd Thomas Graham. We could only wish that we had heard something. We lost our oldest son, Lt. William Graham, in action on March 2nd of this year. So our hopes were pretty high that perhaps Lloyd would be found for us. But it isn't to be that way I guess. Thank you for your kind expression of sympathy.

Though Lloyd had been reported missing in early December 1944, it was not until October of 1945, two months after the war had ended, that his parents were notified that their son, Pilot Officer Lloyd T. Graham, was officially recorded as, *Previously reported missing after air operations, now for official purposes, presumed dead, overseas (Germany)*. Following is the letter received by the Grahams in October 1945, from the Air Marshal, Chief of the Air Staff:

Dear Mr. Graham:

I have learned with deep regret that your son, Pilot Officer Lloyd Thomas Graham, is now for official purposes presumed to have died on Active Service Overseas on December 6th, 1944. I wish to offer you and the members of your family my sincere and heartfelt sympathy. It is most lamentable that a promising career should be thus terminated and I would like you to know that his loss is greatly deplored by all those with whom he was serving.

In January 1946, Arthur and Florence received a War Service Gratuity of \$325.65 for the loss of their youngest son Lloyd. In mid-February 1947, Florence received the following letter from the Wing Commander for Chief of the Air Staff in Ottawa:

Dear Mrs. Graham:

It is a privilege to have the opportunity of sending you the Operational Wings and Certificate in recognition of the gallant services rendered by your son, Pilot Officer, L.T. Graham. I realize there is little which may be said or done to lessen your sorrows, but it is my hope that these "Wings", indicative of operations against the enemy, will be a treasured memento of a young life offered on the altar of freedom in defence of his Home and Country.

It was not until August 1951 that Arthur and Florence received another letter from the Wing Commander, R.C.A.F. Casualties Officer, for Chief of the Air Staff. Following is a portion of that letter:

Dear Mrs. Graham:

It is with regret that I refer to the loss of your son, Pilot Officer Lloyd Thomas Graham, who lost his life on air operations against the enemy, December 6, 1944, but owing to the lapse of time and the lack of any information concerning your son, his aircraft or any member of his crew since they left their base in England, it must be regretfully accepted and officially recorded that your son and his crew lost their lives and do not have a "known" grave.

Due to the extreme hazards attending air operations there are, unhappily, many thousands of British aircrew boys who, like your son, do not have a "known" grave and all will be commemorated on General Memorials that will be erected at a number of locations by the Imperial War Graves Commission (of which Canada is a member), each Memorial representative of a theatre of operations. One of these Memorials will be erected at Runnymede, England, and the names of your son, Pilot Officer Lloyd Thomas Graham and the members of his crew will appear on that Memorial....

I realize that this is an extremely distressing letter and that there is no manner of conveying such information to you that would not add to your heartaches, and I am fully aware that nothing I may say will lessen your great sorrow, but I would like to take this opportunity of expressing to you and the members of your family my deepest sympathy in the loss of your gallant son.

Lloyd Graham was posthumously awarded the 1939-45 Star, the France and German Star, the Defence Medal, the General Service Medal and the C.V.S.M. Award and Clasp. Twenty-one-year-old Lloyd Graham has no known grave. He is memorialized at Runnymede Memorial in Surrey, United Kingdom, Panel 250.

Jack Howard GRAHAM (#A/21433) was born in Windsor, Ontario on June 30, 1920, the middle son of Arthur and Florence Graham. Jack grew up in Windsor and was a member of the local militia for two years prior to enlisting. Nineteen year-old Jack enlisted on September 19, 1939 in Windsor, Ontario, along with his older brother, twenty-one-year-old William (see below). The two brothers joined the Canadian Army, becoming members of the Essex Scottish Regiment, R.C.I.C. In early June 1942, Jack celebrated his 22nd birthday "somewhere in England" with a Western Ontario unit.

Two months later, on August 19, 1942, Jack Graham, along with his brother William, took part in **The Dieppe Raid**. On that day, 4,963 Canadian soldiers landed on the beaches of Dieppe, a small town on the coast of France. Called *Operation Jubilee*, the goals included: to destroy radar and other military installations; damage enemy shipping and port facilities; to seize a neighbouring airfield; to capture a German divisional naval headquarters in order to acquire intelligence documents; gather information from prisoners; it would serve as a test run for the future invasion of Europe; and would take some pressure off the Eastern Front. Recently declassified documents have shown that at its heart was a "pinch" (British slang for "steal") operation designed to capture cryptographic material for code breakers in Bletchley Park in England. The main goal of the raid was to capture German documents, code books and a four-rotor Enigma encryption machine.

The raiding soldiers were intended to arrive early in the morning under the cover of darkness, but they were delayed, and there was inadequate supporting fire. They had to approach the cliffs of Dieppe fully visible to the German troops waiting for them atop the 75 foot-high cliffs. The operation was a disaster, and of the 4,963 Canadians that landed, 907 were killed, 2,460 were wounded and 1,946 were captured.

One of those captured at Dieppe, by the middle of the day on August 19, 1942, was twenty-two-year-old Corporal Jack Graham. Days after the Dieppe raid, his parents in Sarnia received news that their son Jack was reported as missing in the raid, but no word was received on the fate of their other son William. Two days after

learning that Jack was missing, Arthur and Florence received a letter from him that had been mailed in the weeks prior to the raid. In the letter, Jack told of the strenuous training that the chosen Canadian troops had undergone over a protracted period in preparation for a “big scale raid on the French coast.” He also mentioned that there was a certain somebody in England whom he liked very much, but he had not got around to the point of asking about their future plans because of the uncertainties of the future (the “certain somebody” was an English girl by the name of Doris Tennessee Vera Dorrel). Jack also gave details regarding the commando course, and of how the troops had worked in close cooperation with the air force and the navy while making practice landings. He wrote, *The first month was the hardest, we worked in mud up to our necks. We were so tired during this time we seldom left the camp figuring sleep was more important. The men were up every day at 5 o’clock and lights were out at 9:30 o’clock.*

The days and weeks following the Dieppe raid was a very anxious time for the Graham family and for thousands of others, as news of the fateful outcome and the mounting casualties continued to be reported back in Canada. It was not until Thanksgiving of October 1942 that Jack’s parents received the “happy” news that their son Jack, previously reported missing at Dieppe, was a prisoner of the Nazi’s, confined at Camp Stalag 8B, Germany. Two other local families received the same news about their sons on that Thanksgiving Day. John Brown, of 281 Wellington Street learned that his son, Sapper Albert William Thomas Brown, who was with the 11th Field Company, was in the same Camp Stalag 8B; and Mr. and Mrs. Dunn of 405 Michigan Avenue, Point Edward learned that their son, Sapper Douglas Albert Dunn, also of the 11th Field Company was in the hands of the Germans.

Corporal Jack Graham

Jack Graham after the war

In February 1943, Arthur and Florence received a letter from Jack, dated December 6, 1942. In the letter, he wrote that he was well, but still looking for letters from his home in Canada, although he had received four letters from England. He also mentioned that he had met a boy from Sarnia in the camp, named Demeray [it was Norris Demeray, also captured at Dieppe]. Jack said that he would like his parents to send him a pair of shoes and a pack of cards. On a postcard dated November 29, 1942, he wrote that he had made himself a pair of warm mitts from the sleeve of a tunic. In April of 1943, Florence received another letter from Jack in the German prison camp. In that letter, he acknowledged the receipt of a parcel of dainties sent to him, along with the cigarettes from the Sarnia branch of the Red Cross. He was particularly pleased with several family snapshots that were included, stating that he enjoyed them more than “a whole parcel of chocolate.”

In mid-December 1944, Arthur and Florence received another letter from Jack, which arrived almost simultaneously as a telegram that they received informing them that their son Flight Sergeant Lloyd Thomas Graham was missing overseas. In Jack’s letter, he referred to others from the Sarnia district whom he had met in captivity, including Cecil Fowler, Don (Bunt) Murray, Joe Barr of Point Edward and another Essex Scottish man named Zink.

Jack Graham spent the remainder of the war as a prisoner of war. Approximately three years after the Dieppe Raid, Jack and his fellow prisoners were liberated by the British 'Desert Rats' in 1945, just prior to the end of the war. In late April 1945, Arthur and Florence received a cable from Jack stating that he had been liberated from German prison camp, Stalag 357 (Stalag II-B) by the advancing troops of the United Nations. In early May 1945, Arthur and Florence received the following letter from the Deputy Minister, Department of National War Services in Ottawa:

Dear Mrs. Graham,

Honourable J.J. McCann, Minister of National War Services, has requested me to express to you his great pleasure at learning that your son, Cpl. Jack Howard Graham, A-21433, is no longer a prisoner of war and is now in safe hands.

It has been a privilege of the Prisoners of War, Next of Kin Division of this Department to serve you during the long period of anxiety through which you have passed and the Minister is anxious that you should know how much your cooperation and consideration have been appreciated. It is our earnest hope that your son will soon be restored to you to resume his place in civilian life.

Following their liberation, Jack and his fellow POW's returned to England. Jack Graham, who stood six feet two inches tall, had his weight drop to approximately 100 pounds. Doris Dorrel, the "certain somebody in England" whom Jack liked very much, would travel by train to Brighton to be reunited with him on a train platform there. During the war, Doris had served with the Royal Air Force. Jack and Doris dated for a time, and were married on June 16, 1945 in Brighton, England. Jack would have to return to Canada without his new bride. His new wife Doris Graham, a "war bride", would follow him to Canada on the troopship *Mauretania*, arriving in Halifax on January 21, 1946.

Jack and Doris Graham

Jack and Doris Graham lived on London Road in Sarnia for a time, then moved to Ripley, Ontario for a couple of years before returning to Sarnia, where they lived on Superior Street for many years. They later moved to Point Edward. Jack and Doris had three children together; Lynne, Lloyd Richard and their youngest Marsha. [Note – Jack and Doris' only son was named in honour of Jack's two fallen brothers – Lloyd and (William) Richard].

By the time their kids were in high school, Doris had been employed over the years at several Sarnia hotels, including the Village Inn, Drawbridge Inn and Canterbury Hotel. Jack worked for, and eventually retired from, Dow Chemical Limited in Sarnia. Their daughter Marsha (Guthrie) gave Jack and Doris two grandchildren: Lisa and Melissa Guthrie. After marrying, Lisa (Melanson) went on to have two boys; Jeff and Garrett Melanson, and Melissa (Stebbins) had two girls; Alexandra and Lauren Stebbins (four great grandchildren for Jack and Doris).

Jack Graham never spoke of the war. His children knew very little of his experiences, except that he did not like turnips, or even the smell of them (he ate plenty of them as a POW). Even after his young children Lloyd and Marsha found an old keepsake tin box of his in their attic containing some of his war memorabilia, Jack did not want

to talk about it—he would get too emotional. Two of Jack’s other keepsakes included a scrapbook and the diary he kept as a POW. He (and other POW’s) received the scrapbook (referred to as a War-time log) on July 31, 1943 in Stalag VIIIB, part of War Prisoners Aid, from the World’s Alliance of Young Men’s Christian Associations based in Geneve, Suisse. Following is a portion of the instructions that came with the War-time log:

Dear Friend,

.... These blank pages offer many possibilities. Not everyone will want to keep a diary or even a journal – occasional notes on the story of his war-time experiences. If you are a writer, here is space for a short story. If you are an artist (some people are) you may want to cover these pages with sketches of your camp, caricatures of its important personalities, whether residents or authorities. If you are a poet, major or minor, confide your lyrics to these pages. If you feel that circumstances cramp your style in correspondence you might write here letters unmailable now, but safely kept to be carried with you on your return. This book might serve to list the most striking concoctions of the camp kitchen, the records of a camp olympic, or a selection of the best jokes cracked in camp....

You might want to do something altogether different with this book. Whatever you do, let it be a visible link between yourself and folks at home, one more reminder that their thoughts are with you constantly. If it brings you this assurance, the Log will have served its purpose.

War Prisoners’ Aid of the YMCA

Jack filled many of the pages of the scrapbook with drawings, sketches of the camp and with poetry, including the following two poems that he wrote about his parents:

My Mother

*No finer heart could be found,
Tho search the whole world you may;
No sweeter smile could greet the morn
And drive dull cares away.*

*No lovelier face could be my own
To hold within my humble heart;
A pulse that beats for me alone,
Tho some day we must part.*

*Once golden hair; now silver grey,
Adorns that head sublime;
No patience strong could ere be found
Or brought within an ace of time*

*I shall not need; I shall not have;
I’ll never find another
To take the place of one so kind
GODS MASTERPIECE – MY MOTHER*

My Dad

*So many years he’s toiled away,
A sacred pledge he’s kept each day;
He’s provided a home and comfort too:
For him – MY DAD – had lots to do.*

*A loving husband; father too
To wife and family; he’s been true;
And now his hair is silvering grey,
Too soon – MY DAD – must go away.*

*To you who’s kindly words and ways,
Have helped me through so many days;
There’ll never be another one,
I’m proud – MY DAD – to be your son.*

*So when you’ve left this toil and strife
To live in peace: the other life;
May I, your son, have strength to be,
The man – MY DAD – you were to me.*

Following is a poem that Jack wrote in his personal POW diary:

*On the waves of sweetest music
Comes the lovely thought of you
In the whisper of the breezes
And the sparkle of the dew
With the beauty of the morning
And the quiet of the night
Comes the breath of memory
That stirs old dreams of past delight
In the horror of the black moments
When the heart is gripped with fear
When the soul seems gripped in darkness
Groping blindly you are near
Giving me fresh faith and courage
Through sunshine and shadows
Comes the lovely thought of you*

One of Jack Graham's great grandchildren would have a profound effect on him. A young Garrett Melanson grew up knowing his great grandfather fought in a war and saw him wearing his formal wear and medals each Remembrance Day. In late 2004, ten year-old Garrett (at St. Joseph's in Corunna) was given a school assignment to write a story about his hero. He chose his great grandfather Jack Graham. Garrett interviewed Jack about his war experiences, wrote his story and presented it to his classmates. Following that, the classroom teacher contacted Garrett's mother, and asked if Jack would be interested in speaking to the class. Jack accepted and began to open up about his war experiences. Over several years, Jack spoke in other schools, at churches and to various interested groups. His mission was to make sure that people always remembered those who fought and lost their lives for our freedoms. He always ended his speech talking about his heroes--his parents--who worried and suffered at home during the war with three sons serving, and after the war having lost two sons.

Jack Graham's memories of that fateful Dieppe Raid morning included details such as his coming off the boat and being fired upon immediately; men getting killed, with many of his comrades dead around him; and the colour of the water--red with blood. He also recalled, *We had plenty of training under our belt and that training took over. We had practiced landing; however, the ramp went down and I found myself crawling over bodies, no training could prepare us for what lay ahead. I can clearly remember Pappy Beck shouting, 'Keep your head down!' I was carrying an E.Y. Rifle with a grenade on the end of the barrel. It was new to me and a bit top heavy. I recall getting it stuck in the stones once I reached the beach. Carnage was everywhere. It was a massacre.*

Jack Graham was to be held as a prisoner of war in Germany for 34 months, spending time in four different POW camps: Stalag 8-B Lamsdorf (Germany); Stalag 2-D Stargard (Poland); Stalag 20-A Thorn (Poland); and Stalag 11-B Fallingbomel (in NW Germany). He recalled his wrists being tied in ropes, then with shackles for many months; subsiding on turnips, often rotten; and being in forced marches. Some of his memories of the prisoner of war camps are given in the following: *If you behaved yourself, you would survive. I was scared and I followed the rules. There was an occasion when I cleared my throat and spat. Unfortunately, two German officers thought I was being disrespectful to them. I spent seven days in the 'cooler' for my actions. As the war progressed, we were aware of the Allied Forces' successes. Crystal radio receivers kept us posted and after 34 months I heard the bombs in the distance. That morning we climbed to the roof tops and could see the British 8th Army coming. The dogs and guards were gone and for the first time in nearly three years, we were free!*

Following is a portion of Jack's talk given to his great grandson Garrett's class and to others:

I had two years militia before I went active on September 9, 1939... The Essex Scottish were a kilted regiment. During World War I, kilted regiments were nicknamed "The ladies from hell". In 1942, the 2nd Division, including the Essex Scots were considered the best trained troops in Britain at that time, after nearly 2 years of extensive training with lots of commando training on the Isle of Wight.

We expected to raid Dieppe on July 4, 1942 but the weather and tides were against us so we returned to the mainland hoping no one would "shoot off their mouth" about our activities. On the night of August 18th, 1942, we embarked on the mother ships in a huge convoy leaving a few guys behind, thinking we were going on another scheme. But half way across the English Channel, we were told THIS IS IT – on our way to Dieppe! It was a little scary for a while until I realized – "What the heck, this is what I trained for all these years." So I settled down to try to remember my training.

We landed on August 19, 1942, in assault landing crafts later than expected, due to a part of the convoy coming across some German patrol crafts. NOW THEY KNEW WE WERE COMING. By the time we got near enough to shore they threw everything they had at us – many of our men were lost before they had a chance to land, many were drowned. A regiment of Churchill tanks tried to land but they still had old tracks on – not ready for battle.

It was 8 hours of HELL on the beach, machine guns hiding in the cliffs on three sides, artillery shells from inland, mortars too and German aircraft overhead – ALL in broad daylight. At last, we were told by our General Roberts that the ships in the channel could not, after many attempts, get us off the beach, that "all was lost". We took the bolts from our rifles, threw them as far as possible.

When we were captured, the Germans made us pile our helmets on the promenade. The Germans then marched us into town to a churchyard, surrounded by a high spike fence. After awhile, we were marched approximately 6 miles inland to an abandoned factory for the night. It was dark, I slept in a bed of stinging nettles. The next day we marched to a railroad station and were put on railroad box cars – 40 men to a car, much smaller than ours. There was a huge bucket for a toilet and a small pail of water and a cup in each car. They gave us each a ration of black bread. We could see through the cracks and had a window about 5" X 18" for air. There were guards on top of each car.

The next day we arrived at a holding camp in central France for interrogation, etc. and to gather our wits and see who was still alive. Three of four days later we were put back on a train for a long ride to a POW camp in (the) southeast corner of Germany. Camp #8B was our new home. We stayed the longest time here – it was the biggest camp in Germany. This is where we “Dieppers” had our wrists tied together with twine... for about 6 months. The Red Cross found out about it and made them put us in manacles – chains 18” apart, for approximately 6 months. All this for reprisals of treatment of their prisoners on the beach.

We did get parcels and mail from home. One Red Cross parcel each for awhile, then 2-1, then 4-1 and 8-1 – this was after D-Day. They had no way to get them to us. German rations were very small – turnip soup, black bread. We were supposed to get the same food as their troops. We were then moved to northeast Germany, Camp 2D. We saw lots of RAF bombing flights. There was a Russian POW camp near us – we watched them cart out the many, many dead.

We were moved again after a few months to the Polish Corridor, Camp 357 Thorun. We didn’t stay too long here because the Russian army was getting close. We could hear the battle noises from Krakow. So we moved again to 357 Fallingbostal in central Germany. Again lots of RAF bombing action. It was from here they force marched most of (the) allied troops away from any action. I did not have to go – the German doctor told me I was too sick to force march. I had a bad case of croupe.

I was left in charge of the compound. Food was getting scarce. We finally heard shells overhead all night. Next morning, (we) saw 8th Army troops and tanks coming across the fields and down the roads. Words cannot tell you how we felt at that time. They took over the camp and arranged our trip by plane to England. Remember, this was 34 months after the Raid on Dieppe!!... My Heroes of WWII were my parents – besides losing many pals, I also lost my older and younger brothers.

Jack Graham

Jack Graham never returned to Europe. The war did not sour his outlook on life though. He was always happy and enjoyed life. He was a board member with the New Hope School in Sarnia, was active in ballroom and square dancing, and loved spending time with his children, grandchildren and great grandchildren. Every November was a somber and melancholy time for Jack. He always carried several poppies with him, and if he ever saw someone not wearing one, he would pin a poppy on his or her chest. He himself always wore a poppy, all 365 days of the year. Every November he would have signs printed that read, “Remember Dieppe”, which he posted around Corunna and Sarnia. He walked each year in the Sarnia Remembrance Day parade, carrying a “Remember Dieppe” sign. He attended Remembrance Day ceremonies every year, no matter the weather, often accompanied by his daughter Marsha and granddaughter. The ceremonies themselves were deeply emotional experiences for Jack. In February 2011, Jack Graham passed away at the age of ninety.

William Richard GRAHAM (#A/21931) was born in Windsor, Ontario on July 26, 1918, the eldest son of Arthur Howard and Florence Graham. William attended three years of high school, and was active in sports including rugby, baseball, basketball, skating, swimming and hunting. When he enlisted, William was living with his parents who resided at 438 Aylmer Avenue, Windsor, Ontario. Not long after, his parents moved to 144 North Vidal Street, Sarnia.

Twenty-one year-old William Graham enlisted in the Canadian Army on September 19, 1939 in Windsor, Ontario, becoming a member of the Essex Scottish Regiment, R.C.I.C. His nineteen year-old brother Jack (see above) also enlisted with him in Windsor, also becoming a member of the Essex Scottish. William stood six feet three inches tall, had hazel eyes and light brown hair, and was single when he enlisted. He had been employed as a milk salesman/truck driver with Borden's Milk Products in Windsor since November 1938. Prior to 1938, William recorded his occupational history as "odds jobs as salesman, office clerk, etc". William was promised his job at Borden's following his service, but he also expressed a desire to start in fruit wholesale.

William received his army training in Windsor, as a member of the Essex Scottish, until late May 1940. In early June 1940, William along with his brother Jack, embarked overseas for the United Kingdom. William continued his training in the U.K., as a member of the Essex Scottish, at the Canadian General Base Depot, training that included taking courses in London and Aldershot. His U.K. preparations continued until August 1942.

On August 18, 1942, William Graham, along with his brother Jack, as part of the Essex Scottish Regiment, and 5,000 other Canadians, embarked for France, part of *Operation Jubilee*. They arrived as dawn was breaking early the next morning at Dieppe, France. **The Dieppe Raid** was one of the darkest chapters in Canada's military history. By mid-day, 907 Canadians were killed, 2,460 were wounded and 1,946 were captured. William Graham took part in the Dieppe Raid as a Sergeant-Major on that fateful August 19. Only days after the Raid, his parents received the news that son Jack was reported as missing, and no word was given on the fate of their other son, William. Jack Graham spent three years as a prisoner of war. William would survive Dieppe to fight another day.

In February 1943, Arthur and Florence in Sarnia received a letter from their oldest son William, dated January 1943. In the letter, he informed his parents that he had been in the Dieppe Raid and that he had returned to England unwounded. He also stated that he had been recommended for a commission. And he enclosed a souvenir memorial card that had been produced in England, to the memory of those who did not come back from Dieppe. He wrote that he had difficulty trying to erase Dieppe from his memory and that he had lived the raid over again repeatedly in his dreams.

Lieutenant William Richard Graham

William Graham

By March 1943, William was a Company Sergeant-Major, part of the #3 Canadian Reinforcement Unit (CIRU), and attended the Officers Cadet Training Unit (OCTU) School. In April, he transferred from 3CIRU to Non-Effective Transit Depot (NETD). In early May 1943, William was one of a large party of Canadian soldiers who returned to Canada from England. In mid-May of 1943, he made his way to Windsor to report to Essex Scottish headquarters. His mother Florence drove from Sarnia to Windsor to meet him.

On May 21, 1943 William Graham married Dorothy Joan (nee Davies), the daughter of Capt. and Mrs. A. Davies of Newmarket, Ontario, in London, Ontario. William nicknamed his new bride "Doodie" and the couple lived at 20 River View Gardens, Toronto. By the end of May, he was transferred to Officers Training Centre (OTC) in Brockville, Ontario. While in Brockville, he received further infantry training in tactics and small arms, and universal carriers. In mid-September of 1943, while at the Officers' Training School at Brockville, William and Doodie

returned to Sarnia for a weekend to visit his parents. In mid-October 1944, he was transferred to the Canadian School of Infantry in Vernon, British Columbia where he was to receive further training.

From January 3 to February 5, 1944, William continued training at No. 3 (Carrier) Wing of the Canadian School of Infantry in Vernon. The evaluator wrote of William, *An excellent knowledge of all subjects, sound tactical sense and a superior knowledge of all P1 weapons. A good Instructor, reliable and inspires confidence.* William returned to Brockville in March.

On September 3, 1944, William and Doodie had baby girl, Susan Anne Graham, born in Toronto. The young family then resided at 38 Prospect Street, Newmarket, Ontario. In the fall of 1944, William returned to his training. He was able to spend some time visiting his family, which included posing for a photograph on October 15, 1944, holding his one-month old baby daughter Susan.

William Graham with his wife Dorothy (Doodie)

William Graham with daughter Susan

In late October into November 1944, William returned to the Canadian School of Infantry in Vernon, for an Officer's refresher training course. The evaluator wrote of William, *This Officer's physical condition was good throughout the course and he was keen, alert and very enthusiastic. His tactics were sound and he displayed excellent qualities of leadership. He was quiet, not easily excited and confident while in command. His pleasant personality and humor made him well liked in the platoon. Recommendation: This Officer is capable of leading an infantry platoon in the field.* After obtaining his commission as Lieutenant, William was recalled overseas, leaving for the United Kingdom on December 25, 1944. He arrived in England on January 9, 1945 and was initially posted with the Canadian Infantry Training Regiment (CITR).

While sailing for and after arriving in England, William wrote letters home often, sometimes every evening, to tell Doodie how much he loved her, and to beg for news from back home, especially about their baby girl whom he barely knew. Following are excerpts from a number of his letters to Dorothy (Doodie):

Dec. 26, 1944: *Well we are on our way darling. And the sea is really rough... The ship is really heaving, and from all indications my stomach is going to be doing the same soon.*

Dec. 31: *I could write and tell you what a wonderful year this has been darling and all the happiness you have given me. But I am trying to think of other things. If I don't I'll be weeping all over the place.*

Jan. 1, 1945: *Happy New Year darling... I didn't even stay up for the celebrations... There is only one woman on board (the ship's nurse...) and the fellows got her pretty high. She tried to dance with some of them but the rolling and the drinks only made it a comedy.*

Jan. 4: *Great excitement to-day. A baby whale was spotted. Unfortunately I didn't see it. But we have something to talk about now.*

Jan. 9: *We land in a very few minutes. It has been a very interesting day. We saw two robombs exploded in the air. They were an awful long way away so we didn't see the bombs themselves. But it was quite a reception.*

Jan. 10 [Telegram]: *DARLING ARRIVED SAFE ADDRESS LATER LOVE BILL GRAHAM*

Jan 22: *Your description of Susan's first Christmas made me feel I could see all these things she received – and her Mummy got 'tanked up'. And so did Granny! Shocking! I wish I could have been with you darling. But we were on the ship that day. I couldn't let you know. We are under a security guard that was real.*

Jan. 24: *We have completed our move... we have a good bunch of fellows in the hut... We have started the S.P.C.E.L. – Society for the Prevention of Cruelty to the English Language. There is a fine of three pence for every cuss word.*

Jan. 25: *We just moved to another camp... It was two months yesterday that we left Vernon and we hadn't done any thing in the meantime... Our quarters are better. No warmer I'm afraid, but at least there is a place to write and a shower... One thing I am happy to say – the food is good and plentiful.*

Jan. 26: *Everyone seems to think the war in Europe will be over by late Spring or early Summer. I hope so... (I just thought of something you can include in my parcels darling. Toilet-paper! This stuff is cruel, and not too plentiful.)...*

Jan. 30: *Oh happy day! I received two very wonderful letters from you my darling... Gosh – imagine our daughter 17 ¼ lbs!... There is no fun being so far away and depending on snaps to watch your daughter growing up.*

Feb. 5: *I don't know what is happening to my mail darling... all the Toronto fellows got a stack except me. But I know it isn't your fault darling. You are using the right address too. I don't understand it.*

Feb. 6: *Oh happy day! I received a letter his evening... Believe me darling, I wish I was home too... Please godam war finish soon.*

Lt. William Graham cradles his 3-month infant daughter Susan

Following is a complete letter written by William, written on February 4, posted February 6, 1945 from Abergavenny, Wales, and addressed to his five-month old baby daughter:

My dear little Susan,

I wonder is this the first letter you receive. Anyway I hope I shall be able to write you when you are older. Your father is very proud of you. He and your grandfather were fortunate enough to have a few days together here. Your uncle Jackie was here at the same time.

I must thank you very much for the beautifully looking package we have just received from you sent by your grandpa. Your little ladyship showed wonderful discrimination in the choice of your gift to your aged ancestor.

In photographs we have received of your bonny self quite justify your fathers pride in you. Your g g ma will probably write you herself. She is laid up today with a severe headache.

Your uncle Jackie surprised us yesterday evening by paying us another visit on short leave before arriving from Greenwich to Cumberland.

Give your love to your mother Mrs. Graham & your aunt Marie & of course to your grandma and love to Susan.

*Your affectionately,
G.G.Pa*

Following are more excerpts from several of William's letters to his wife Dorothy ("Doodie"):

Feb. 11: *(I think) The pay-off battle has started in Europe. I hope to get over to the unit soon – very soon... I dreamed of you all last night. I hated waking up this morning. The terrible part of it was, we both knew it was a dream and we kept saying it was too bad that I'd be waking up in England.*

Feb. 14: *Valentines Day – but I don't have to ask you to be my valentine, darling. I know you are mine... I am afraid you'll have a break in your mail for a couple of days. But it is entirely out of my hands dearest... Please don't worry about me. And I'm not out for any medals or promotions. I love you and Susan too much to take any unnecessary risks.*

In mid-February 1945, Lieutenant William Graham returned to his unit, the Essex Scottish Regiment, flying into Northwestern Europe on February 17, 1945.

Feb. 19 [Datelined Belgium]: *The people have made a very quick recovery. I expected to find the children, in particular, showing signs of the years under the Nazis. But everyone is very healthy looking. The women are not at all shapely by our standards. But their morals are shockingly and disgustingly low... Say – I just re-read the statements... don't misinterpret them... I know you love me darling and it isn't necessary for me to ask you to trust me... The day was spent censoring mail. That is a very distasteful job. I hate reading mail other than yours my darling... The hateful part of leaving England was the destroying of your letters. I couldn't even put them in my trunk.*

Post marked Feb. 27 [Letter's date was blacked out by a censor. Datelined Germany]: *At this moment I am in very dramatic circumstances. It is from such positions that wars are won. At least the movies lead one to believe it. I am in a ruined house with a candle in a bottle, artillery is roaring overhead and machine guns chattering in the distance. But don't worry darling, it is quite safe. We are some distance back. I have my own platoon and they are a great bunch of fellows... I'll be glad when this mess is finally finished and we can settle down as human beings. It will not be long now.*

In February 1945, the Allies launched a great offensive, the **Battle of the Rhineland**, that was designed to drive the Germans eastward back over the Rhine River. There would be two formidable thrusts: one by the Ninth U.S Army; and one by the First Canadian Army, strengthened by the addition of Allied formations. The resilient Germans had spent months improving their defences; winter rains and thaw had turned the ground into a thick, muddy quagmire and the enemy would fight fiercely to defend their home soil. During one month of fighting, the Canadians succeeded in clearing the Reichswald Forest, in breaking the Siegfried Line and in clearing the Hochwald Forest. But victory came at a high cost.

Following is another complete letter written by William, mailed February 24, 1945 from "location unknown" [he was in Germany], addressed to Dorothy (Doodie). Their daughter Susan was then 5 1/2 months old:

My Darling:

I am afraid my letters are going to be few and far between dearest. I am kept pretty busy. But you can bet I'll do my best. I love you Doodie. And my letters will of necessity, be short. I can't tell you anything about what is going on. Besides you know more about the war than I do. We look for newspapers to tell us about it, and they are a day or so late.

If this is hard to read darling, please excuse it. It is a little on the difficult side to write here. We are in a ruined house and the writing facilities have disappeared. I'm struggling along on a rickety table, by candle light and sitting on a box. But I have to tell you I love you my dearest. So you must put up with this.

How is our Susan? She is quite a young lady now, I'll bet. Sitting in her high chair and eating grown up food. I'd sure like to see her. Does she miss her Daddy? The little devil probably gurgles and chuckles away to herself and is completely ignorant of my existence. But I love her just the same. I certainly miss her too, darling.

Have I told you that I love you yet my own Doodie? Well I do darling. More than you'll ever know. I'll certainly be glad when this is over. And I say that with more fervour that I ever thought possible. It will be so nice to settle down and live peaceful, normal lives again. I adore you my own dear wife.

So long for now sweetheart. Take care of yourself and Susan. We'll all be together soon. Kiss Susan for me darling. Give love to mom and the Burg's. I love you my Doodie. Forever & ever.

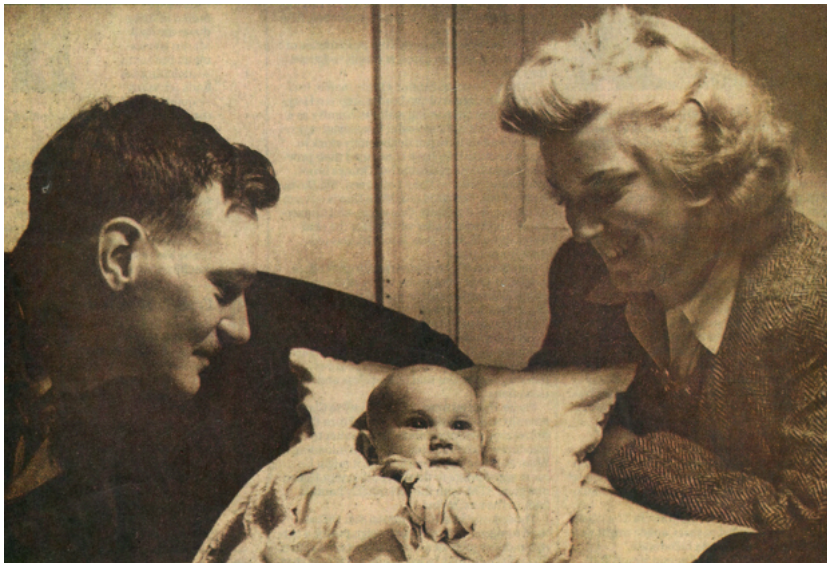

You're my own adoring

Bill XXXX

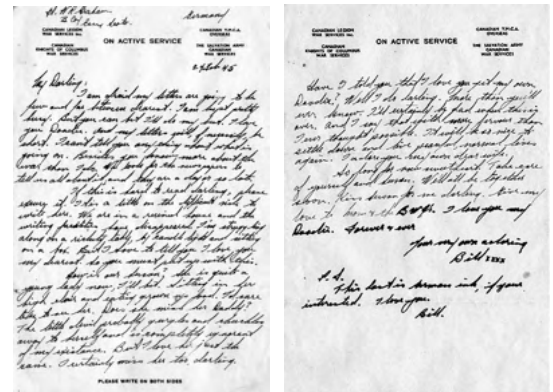

P.S. This last is German ink, if your interested. I love you.

Bill

*Note: from the word Burg's on, the letter is clearly written with a different kind of ink.

Lt. William Graham, daughter Susan and wife "Doodie"

William's letter home – February 24, 1945

Six days after the above letter was mailed, on March 2, 1945, Lieutenant William Graham of "B" Company, Essex Scottish Regiment, lost his life in a mortar bomb attack in the Hochwald Forest, Germany, during the Battle of the Rhineland. His remains were buried at a location recorded on the Army Field Service Card as "Germany Unit plot 1/25,000 sheet Xanten Xanten M.R. 0325/4330 Plot 1 row 1 Gr. 7". His remains were later carefully exhumed and reverently reburied in Nijmegen Canadian Military Cemetery.

Four days after William was killed, a letter from his wife Doodie arrived for him bearing two small snapshots--one of a Christmas tree, the other of baby Susan – and news that the "Pablum Eater", as he called her, had learned to roll over in her playpen. *I love you with all my heart and Susan and I will be waiting right here for you*, she wrote. The letter was returned to Mrs. Graham stamped "Reported Deceased" with a Return to Sender label that read: "The Postmaster General deeply regrets the circumstances which make this necessary."

In mid-March 1945, Dorothy, who was living in Newmarket, along with his parents Arthur and Florence in Sarnia, received word that Lieutenant William Graham had been killed in action, presumably on the Western Front. Arthur and Florence had received a letter from William only two weeks prior to his death and were unaware that he was in NW Europe. Approximately two months after William's death, the war in Europe ended. William Graham was later officially recorded as, *Killed in action, in the field (Germany)*.

In 1950 (and again in February 1995), the *Windsor Star* printed an article written by Colonel A.J. Hodges, MC, of the Essex Scottish Regiment. In the article he gave his eyewitness account of the regiment's battle at Hochwald Forest. Following is a portion of that article:

Fighting for a toehold in a German forest

A week after the battle at Louisendorf, the Essex Scottish were in it again. And again, the price would be high

This is the Hochwald story. The Hochwald story is the story of Fred Tilston and the winning of a Victoria Cross. It is the story of some 400 Essex Scots, 138 of whom became casualties, who fought a bloody and successful battle 50 years ago March 1 for a bridgehead in the Hochwald Forest, a strongly defended section protecting the fortified town of Xanten, guardian of the Wesel Bridge escape route across the Rhine.

It is very difficult, even for one who was a participant, to picture to his readers, without becoming too theatrical, the small groups of men walking slowly and deliberately, not running (for men geared for battle cannot run very far), across 500 yards of flat, open ground.

At the other end are other groups of men, enemies, protected by obstacles of wire and mines, concealed in trenches, camouflaged to blend into the forest that formed their background, using with terrible effect the deadly weapons of modern war, with so much effect that many of the advancing men fall and lie still. Some fall and jerk convulsively in pain. One clutches his stomach with both hands, turns, stumbles, falls, but the group does not stop, it keeps going. Tennyson best described it, when writing of another such battle: "Stormed at with shot and shell, Into the mouth of Hell."

continued over...

The story of the battle actually begins on the night of Feb. 28, 1945, when the Essex Scottish, under Lt.-Col. J.E.C. Pangman, spearheaded a Canadian drive toward the Hochwald Forest, advancing on a two company front. On the right, A Company, commanded by Maj. Ken MacIntyre; on the left, B Company, under Capt. Alf Hodges.

Both companies took their objectives, which were just short of the Hochwald, with comparative ease. When the companies were settled, B was instructed to move a platoon forward into the woods... They quickly ran into opposition, and, impeded by wire defences, pinned down by merciless machine-gun fire, were forced to withdraw, leaving most of their equipment behind. On the right, an A Company patrol had a similar experience. During the night, the battle plan was drawn up. C and D companies were to attack, assisted by artillery and tanks. D Company's objective was a group of buildings on the edge of the forest; C Company, on the left, was to gain a foothold on the outskirts of the Hochwald.

In the early morning hours of March 1, C and D Company's advanced forward to their objectives, supported by the 25-pounders of the Fourth Field Regiment, who boomed out a creeping barrage, the mortars of the Toronto Scottish and Essex Scottish Platoon, and the tanks of the Sherbrooke Fusiliers. They were met with German machine gun fire, enemy shells, mortars and grenades as they moved over knee-high wire and the threat of anti-personnel mines. The companies successfully cleared two lines of defended trenches that included hand-to-hand fighting with bayonets and grenades. During the battle there were many casualties and many individual acts of bravery that went unnoticed.

Both companies were now on their objectives and still in contact with the enemy. Lt.-Col. Pangman at this point decided to throw another company into the forest, to take some of the pressure from C and D. B Company was instructed to pass through C and occupy some 300 to 400 yards of the woods in front of C and D Company. The plan this time was slightly different. Instead of a creeping barrage, the artillery and mortars were to lay down fire on likely enemy gun and mortar positions picked from the map. Tanks were not considered, as owing to the softness of the ground they had not been able to be of much assistance thus far.

*B Company moved off, led by No. 12 Platoon on the right under **Lieut. Bill Graham** of Windsor; 10 Platoon left under Lieut. Harold Boer of Edmonton... Intense machine-gun fire was experienced from the German right flank and 25 men were hit before the woods were reached. Maj. Tilston greeted B Company, on the edge of the Hochwald, with the classic remark, "Keep going fellows, they've only a few rifles and grenades." A moment later, a shell landed beside this intrepid officer and he became a casualty. Lieut. Charles Gatton, the only remaining officer took over command of C Company and for his bravery and display of leadership that day was awarded the Military Cross.*

*B Company, after considerable mopping up, during the course of which many prisoners were taken, dug in on its objective... The attack was over and the Essex Scottish had their toehold on the Hochwald. A weary night was spent under fire, repelling counter attacks. An intense enemy artillery bombardment the following morning claimed the lives of three more of B Company – Capt. Leslie Bond, second-in-command; **Lieut. Bill Graham**, who had done a wonderful job during the attack; and Pte. Hutchings, a recruit signaler, who had performed miracles in maintaining communications during the night.*

Another 24 hours were spent in the forest holding. Then relieving battalions arrived and the Essex Scottish moved back to prepare for the attack on Xanten. More than 100 prisoners, numerous German casualties, three captured heavy guns as well as numerous mortars and automatic weapons, attested to the value the enemy placed on this stronghold and the desperate tenacity with which he defended it.

Maj. Fred Tilston won the Victoria Cross, then the military's highest award for bravery, as commander of C Company during the Hochwald battle. Despite being wounded three times during the fighting, he continued to direct his troops and helped to carry grenades and ammunition forward when supplies ran low. He lost his legs below the knees as a result of his wounds...

Many years after the war, Colonel Alfred J. Hodges of the Essex Scottish Regiment, who had witnessed William Graham's death, wrote a letter to William's cousin (Mrs. Branch) after visiting William's grave. Following is a portion of that letter:

Dear Mrs. Branch,

Thank you for your very kind letter, referring to Bill Graham's grave. I had a particular interest in visiting it and also that of Capt. Les Bond. They were killed by the same mortar bomb at the Hochwald Forest on the morning of Mar. 2, 1945.

I had first met Bill in Sept. 1942, when I joined the Regiment as a young lieutenant after Dieppe. Bill at that time was Sgt. Major of Support Company, and I was much impressed by him. He left the regiment to return to

Canada for his commission. Les Bond and I had gone thru OCTU together and he joined the regiment sometime later.

In late Feb. 1945, Bill reported to "B" Company, which I was commanding, shortly after the Louisenberg battle and was placed in command of a platoon. Les Bond was company second-in-command. He had been wounded in Normandy.

The Regiment proceeded towards the Hochwald, A & B Coys leading, followed by C & D. We all had objectives just short of the forest. I lost Bill's platoon in the dark, after taking our objective, and eventually found him forward, on C Coy's objective. So here we stayed while C Coy under Fred Tilston, remained on ours. Because of this Fred's coy was first into the Hochwald, where Fred won the V.C. (I used to tell him it was because of Bill's fine leadership).

Anyway, we followed C Coy into the forest, had a very rough time, Bill and I spent the night together in a slit trench. In the morning, (we) were moved back to part of the Siegfried Line, where a mortar bomb dropped between Bill and Les. Both were fine and brave officers. I am mentioning this to you, because when Bill's wife visited me after the war, I believe she thought I was embellishing things. Not so – he was killed instantly and suffered no pain...

William Graham left behind his parents, who at the time had already lost one son while another was a POW in Germany. William also left behind his wife Dorothy ("Doodie") and their six-month old baby daughter Susan. Twenty-six-year-old William Graham is buried in Groesbeek Canadian War Cemetery, Netherlands, Grave XXI.E.4.

On May 3, 2005, *The Globe and Mail* printed a story to mark the 60th anniversary of V-E Day that featured William Graham's moving tale and his final letters (story by journalist Jill Mahoney). In Sarnia, Jack Graham "pretty near fell over" when he saw that on the front page of the newspaper was a photograph of his older brother William, who had died 60 years earlier. He stated that the photograph "really brought back good memories, and bad memories along with them. But I was so pleased and so proud to see that picture there, that somebody is remembering him besides me."

He learned that members of Doodie's side of the family had recently discovered William's steamer trunk, which contained his wartime personal effects. He also learned that Doodie had died in the late-1990s. Jack Graham and his family, with the support of The Globes Jill Mahoney, then launched a mission to connect the Grahams with Todd Taylor in Toronto (William's great-nephew who had the trunk), and to locate Susan.

Though the family members had somehow lost contact over the years, they were successfully reconnected. In June 2005, Jill Mahoney was able to track down and to interview William Graham's daughter Susan, then named Susan Davies, in Fredericton, New Brunswick. Susan had been married, had two children, and took her mother's maiden name after being divorced. Following are portions of Jill Mahoney's story on Susan Davis:

Susan Davies knows her father only through stories. As a child, when the power would go out, she would sit on the floor with her mother and listen to candlelight accounts of her daddy who died when she was just six months old. He desperately wanted a baby girl and was so excited when her mother became pregnant that he paraded her up and down the streets of Newmarket, Ont. When the baby was born with a nose so squished it seemed to be missing, her mother cried but her father couldn't have been more proud. And in letters that Ms. Davies learned about just

weeks ago, she discovered that her father, a soldier during the Second World War, referred to his baby girl as the *Pabulum Eater* and was desperately homesick.

Susan holding a photo of herself as a baby with her father William

As a child, Remembrance Day was the most difficult time for Ms. Davies. "I'd always bust into tears at Remembrance Day because the other kids, most of them, their fathers had come home and mine hadn't." But she had a largely ordinary childhood, full of stories about her father. It was just like he was sort of still part of the family." She and her mother moved in with her grandparents and uncle, who she worshipped; she was told her uncle was much like her dad, funny and mischievous. Her mother worked as a telephone operator and eventually became an assistant hospital administrator. Doodie, who once visited her husband's gravesite in Holland when Ms. Davies was little, deeply missed her Bill but didn't dwell on her loss.

After her husband's death, her mother had no interest in dating. But when she and Susan moved to Oakville, she started to see a man across the street. Susan and his children got along well and helped orchestrate the marriage of their parents, both avid ballroom dancers. On their wedding day, her mother presented Susan, then 14, with the gold wedding band Bill had given her. Ms. Davies said that while her mother was "terribly fond" of her second husband, it was "never in the same sort of passionate way" as with Lt. Graham, whom Doodie had only known two or three years before he died. "It's because they had so little time together that that first kind of passionate love had never settled down into the sort of comfortable old-married type love."

During a visit a few years before her mother died, she noticed Ms. Davies wearing her old wedding band. "She said, 'Oh my God, I remember the day that was put on my finger.' And then she burst into tears and rushed out into the garden to have a little private cry, and I thought she's still just as in love with him as she ever was even though she remarried." Ms. Davies mother (Doodie) died of lung cancer in the late 1990s, and her stepfather passed away in 2000. And when she dies, Ms. Davies has told her children she wants her ashes scattered on her dad's grave, "so that my father and I will be together."^{8S}

GRAINGER, Roy James (#V/17877)

Roy James Grainger was born in Kingston and, at some time, moved to Sarnia where he was employed at Loblaw's. He was the father of a young daughter when in 1941, he enlisted with the Royal Canadian Volunteer Reserve. By February 1943, he was a Supply Petty Officer aboard the *HMCS Athabaskan*. In late April 1944, *HMCS Athabaskan* on a mission to clear the English Channel in preparation for the Normandy landings was sunk off the coast of Brittany. Roy, 24, perished at sea, his body never recovered.

Roy Grainger was born in Kingston, Ontario on December 4, 1916, the youngest son of James Francis and Edith Mary (nee Ford) Grainger, of 24 Walton Street, Port Hope, Ontario. James and Edith were married in January 1906 in Toronto and their union produced three sons--Francis Raymond (born November 7, 1907); James Norman (born February 9, 1911, but died August 15, 1911 a result of chronic indigestion); and Roy—and four daughters: Dorothy (born 1909, later Mrs. Melville McCall); Eileen Edith (born June 7, 1912, later Mrs. John Donald Hogg); Marie (born 1918, later Mrs. L. Wilson); and adopted daughter Rose Marie (born around 1941, later Mrs. R. Austin). In 1921, the Grainger family residing in Kingston included parents James (37) and Edith (34), and their children Francis (13), Dorothy (12), Eileen (9), Roy (4) and Marie (3). James Grainger supported his family working as a machinist at a foundry.

Roy completed two years of high school at Peterborough High School. At some point, he moved to Sarnia. When he enlisted at age twenty-four with the Royal Canadian Naval Volunteer Reserve on November 27, 1941 in London, Ontario, he was residing at 145 Davis Street and was employed as a meat manager at Loblaw's Groceteria. Roy stood five feet seven and one-quarter inches tall, had blue eyes and auburn hair, and was single at the time. He served on several ships, including the *Prevost* (December 27, 1941 - January 4, 1942); *York* (January 5 - March 2, 1942); *Stadacona* (March 3 - December 11, 1942); and *Niobe* (December 12, 1942 - February 3, 1943). On February 4, 1943, Roy Grainger became a member of the *HMCS Athabaskan*, attaining the rank of Supply Petty Officer.

Beginning on the opening day of the Second World War, the **Battle of the Atlantic** would be the longest continuous campaign of the war, and one in which Canada played a central role. The Royal Canadian Navy, along with the Royal Canadian Air Force (RCAF) and Canada's Merchant Navy, played a vital role in defending the country's eastern coast and escorting convoys of ships carrying men and essential machinery, arms, fuel and basic resources between North America and Europe.

Supply Petty Officer Roy Grainger

Tribal Class Destroyer *HMCS Athabaskan* G07

The *HMCS Athabaskan* (G07) was a destroyer of the Tribal class, built in 1940-41 and commissioned by the Royal Canadian Navy in February of 1943. She was plagued by mishaps during her very short service life. She had to be repaired due to weather-induced stress and was involved in two minor collisions that required repairs. The *Athabaskan* drew some good luck in its early days. On August 27, 1943, she was heavily damaged by a German Henschel glider bomb during an anti-submarine chase in the Bay of Biscay. During that incident, a "Chase me Charlie," as the gliders were known, had struck and passed through it, luckily without exploding. The *HMS Egret* was sunk in the same incident.

During English Channel operations in early 1944, RCN Tribal class destroyers *Haida*, *Huron*, *Iroquois*, and *Athabaskan* were involved in a series of battles along the French coast. In February 1944, the destroyers were engaged in *Operation Tunnel*--anti-shipping sweeps which the Canadian sailors described as "fooling around the French coast." After about twenty operations, in the early morning hours of April 26, the Tribals *Huron*, *Haida*, and *Athabaskan* intercepted three German torpedo boats near St. Malo. A running gun battle ensued. The Tribals illuminated the sea with starshells while the Germans laid a smokescreen and fired their torpedoes. As the Tribals closed the distance, they launched a salvo of shells, hammering the enemy vessel *T-29*. The other enemy vessels barely survived their full-tilt flight from destruction. The victory was a boost to morale, and *T-29* was the RCN's first enemy surface vessel sunk.⁴¹

Three nights later, in the early hours of April 29, 1944, the *HMCS Athabaskan* and her sister ship the *HMCS Haida*, were ordered to intercept a German force steaming towards Morlaix River, off the coast of Brittany in the English Channel. Just before 4:00 a.m., the *Athabaskan* made radar contact with two German Elbing destroyers, *T-24* and *T-27*, and an E-boat. Closing range to 4300 yards, the *Athabaskan* fired a volley of 4-inch star shells. Upon being illuminated in the darkness, the enemy created a smokescreen, fired their own starshells and their big guns. A fierce clash ensued, with the enemy firing shells and torpedoes while the two Tribals blasted away with their guns. As both

Canadian ships opened fire, they turned their bows directly towards the German destroyers, to present as little silhouette as possible and to avoid torpedoes fired at them. Unfortunately, an enemy torpedo from German boat *T-24* hit the *Athabaskan* at 4:17 a.m., causing catastrophic damage, with flames soaring ten meters high and ammunition exploding below deck.

The *Haida* laid a smokescreen to cover the wounded *Athabaskan* and continued to pursue the enemy. Within ten minutes of the first torpedo strike, *Athabaskan*'s magazine exploded, shooting 200-metre-high flames that were witnessed from over 40 kilometres away. Fires were raging fiercely above and below decks. Slowly, *Athabaskan* upended and slid under the surface, as steam and escaping air hissed her death knell. Survivors were scattered, some in boats, others clinging to floats and still others supported only by their life jackets in the freezing water, many of them barely alive. As the ship went down, darkness shrouded the last resting place of the destroyer, with only the red blinking lights on the life jackets providing some indication of the sailors' location in the water. Dozens of crew members died in the burning oil that polluted the surface water or succumbed to the freezing cold.

Haida had continued the chase and was able to punish *T-27* with accurate gunfire until she was run aground by her crew, with the other T-boat fleeing. *Haida* then returned to assist *Athabaskan*, even though the destroyer was vulnerable, as U-boats were likely converging on any possible rescue ships. When *Haida* arrived, it came across life jacket lights bobbing and blinking in the dark, many of the men barely conscious, located within five miles of the German-held French coast. The *Haida* dropped all of her life rafts and floats, scramble-nets were lowered over the side and her own men went down them to drag up dazed and exhausted survivors. Her motor cutter (power launch) also went over the side, manned by a party of three volunteers. With the tide pulling at the destroyer and dawn raising the probabilities for an imminent air attack, the *Haida* had limited time to rescue survivors.

After being stopped for ten minutes, word was passed along that the ship would have to go ahead in five minutes. The warning was repeated at one-minute intervals to the rescue parties labouring along the side and on the quarter-deck. Sixty seconds after the last warning, the order "slow ahead" was given. After fifteen minutes, and after rescuing as many as she could, the *Haida* was forced to make a run for it. The *Athabaskan* captain, Lieutenant Commander John Stubbs, in the water with the other survivors, declined rescue by *Haida* to swim back for more crew members.

Following is a portion of an account of the events from William Sclater's 1947 book *Haida*:

Just then there came a cry, "Athabaskan's been hit," which made every head on *Haida*'s bridge turn around. They could see her plainly... From somewhere aft of the bridge, a great column of flame was shooting up, outlining her foresection in bold relief. Even as they looked her B gun fired. From the enemy ships there came a frenzied burst of gunfire as they sighted the burning destroyer and turned all their guns on her in an endeavor to give her a knockout blow... In *Athabaskan*, after the crash and explosion aft there was no panic. That the propellers had ceased to function was evident and the ship was being carried forward only by her own impetus... There was fever activity now on the crippled ship's decks...

(Early damage reports included heavy damage aft, Y gun collapsed, after pump was gone, after steering position was out of action and ship was settling by the stern). The young Captain nodded. "All hands stand by their Abandon Ship stations," he said. "I'll let *Haida* know." Obedient to the order the crew started to file off the bridge... The Captain remained on the bridge, watching them go.... down there on the maindeck the men still worked desperately to bring the pump into action (to deal with the rising flames behind them). It was almost ready. The Chief Engineer turned to put the feedline overboard and the Gunner T was fixing up the fairleads to the starter when a sudden rumble in the fire presaged disaster.

A great roar of flame went blasting skywards and the after part of the ship became a holocaust. The deck on which they stood tilted crazily and then collapsed as internal explosions blew it out... Great blobs of burning oil were falling everywhere, over the forward section of the maindeck and the bridge. Men standing by the boats...covered their heads with their arms and dashed blindly forward, trying to find shelter under the boats, away from the burning oil. Many plunged headlong into the sea... The ship lurched violently and most of those who were left went tumbling over the side... "Abandon Ship!" came a shout...

The *Athabaskan* was going. She had righted and now the bow was rising. Up, up it came until it was nearly perpendicular and the ship was clear of the surface almost back to the first funnel. She seemed to poise there a moment and then slipped swiftly backwards, down into the engulfing waters. The brightness disappeared and darkness came down over the sea...

(After pursuing and punishing *T-27*, *Haida* turned back to where the *Athabaskan* had been). B gun fired and

a starshell burst over the spot where the *Athabaskan* had been. Under it the black clusters of survivors could be seen. There were three or four groups and numbers of small, separated figures... As *Haida* closed, the flashing lights of the survivors' lifejackets could be seen more than three miles away. Heading for the largest clusters, the Captain let the ship glide to a stop among them... It was an eerie scene in the dim, predawn gloom. Lifejacket lights were flashing and survivors were shouting and blowing their whistles in the adjacent waters as the rafts and boats were dropped and lowered away... The sea was heavy with fuel oil and those who reached the ship's side were covered with it from head to foot. Few had the strength left to climb up the scramble nets or the ladders, and *Haida*'s people went over the side and helped them in... Soon rescuers and rescued alike were filthy with the thick, slippery oil. Spreading on the decks it made men flounder and fall...

The minutes were going fast. The allotted quarter of an hour passed, by a long margin, when the call went out for the men to man their stations to get the ship under way again. From the bridge came telephone warnings at five, four, three, two and one minutes to go now, and then the ship started slowly ahead... Daylight was imminent and attack from land and air could be looked for at any moment here. It was time to go.^{9G}

Fourty-four oil-soaked *Athabaskan* crew members were picked up out of the water by her sister ship *HMCS Haida*. Eight *Athabaskan* crew members were able to climb into a lowered *Haida* motor cutter, and slowly made their way to safety. Three German torpedo boats picked up 83 survivors in the water, and sent to prisoner-of-war camps. A total of 129 of the crew were lost in the sinking of the *Athabaskan* that April 29 night, among them, the *Athabaskan* Commander John Stubbs and Petty Officer Supply Roy Grainger of Sarnia.

On May 2, 1944, Edith Grainger in Port Hope received the following letter from the Secretary, Naval Board; *Dear Mrs. Grainger:*

It is with deepest regret that I must confirm the telegram of the 1st of May, 1944, from the Minister of National Defence for Naval Services, informing you that your son, Roy James Grainger, Leading Supply Assistant, Royal Canadian Naval Volunteer Reserve, Official Number V-17877, is missing from H.M.C.S. "ATHABASKAN".

According to the report received from overseas, your son's loss occurred when H.M.C.S. "Athabaskan" was torpedoed and sunk by enemy action on the 29th of April, 1944, in the English Channel. Further particulars of this Naval disaster are being published in the newspapers.

While Leading Supply Assistant Grainger is reported as "missing", there is a possibility of his survival. It is understood that a number of the crew have been taken prisoners of war by the enemy. The Red Cross have been informed and are attempting to obtain from the German Government a list of those taken. Please be assured that as soon as any further information respecting your son has been received you will be informed.

Please allow me to express the sincere sympathy of the Minister of National Defence for Naval Services, the Chief of the Naval Staff and the Officers and men of the Royal Canadian Navy, the high traditions of which your son has helped to maintain.

Five months later, in October 1944, Edith received another letter from the Secretary, Naval Board. Following is that letter;

Dear Mrs. Grainger:

I must regretfully inform you that since your son was reported missing no further information has been received of his survival or that he is a prisoner of war. I wish to assure you, however, that the Department makes every endeavor to discover the fate of missing men and draws upon all likely sources of information about them.

In the case of men who are believed to be prisoners of war continuous efforts are made to speed up the machinery whereby their names and camp addresses can reach this country. The official means is by lists of names prepared by the enemy government. These lists take some time to compile, especially if there is a long journey from the place of capture to a prisoner of war camp. Consequently "capture cards", filled in by the prisoners themselves soon after capture and sent home to their relatives, are often the first news received in this country that a man is a prisoner of war.

Very slight hope is now held, however, that your son is a prisoner of war as the total number of names of men who are known to be prisoners from H.M.C.S. "ATHABASKAN" coincides with the number which the Germans claim to have captured from this ship. Even if no news is received that a missing man is a prisoner of war, endeavours to trace him do not cease. Enquiries are pursued, not only among those who were serving with him, but also through diplomatic channels and the International Red Cross Committee in Geneva. The moment reliable news is obtained from any of these sources it is sent to the Department and is immediately passed on to the next of kin.

Should no information be received to the contrary your son will be presumed dead by the Canadian Naval Authorities at a later date. May I extend my sincere sympathy in this time of anxiety.

Three months later, in mid-January 1945, Edith received a final letter from the Secretary, Naval Board. Following is that letter;

Dear Mrs. Grainger,

Further to my letter of the 10th of October, 1944 I regret to inform you that in view of the length of time which has elapsed since your son, Roy James Grainger, Supply Petty Officer, Official Number V-17877, Royal Canadian Naval Volunteer Reserve, was reported missing from H.M.C.S. "ATHABASKAN", and as no news has since been received to the contrary, the Canadian Naval Authorities have now presumed his death to have occurred on the 29th of April, 1944.

May I again express sincere sympathy with you in your bereavement on behalf of the Minister of National Defence for Naval Services, the Chief of the Naval Staff, and the Officers and men of the Royal Canadian Navy.

Roy Grainger would later be officially recorded as, *Missing, presumed dead, when H.M.C.S. 'ATHABASKAN' was torpedoed and sunk by enemy action in the English Channel.* Roy left behind his mother and father, his brother and sisters, and his four year-old daughter, Rose Marie Diana Grainger. Before he went to war, Roy had what was then termed "an illegitimate daughter" with a married woman. Roy financially supported his daughter Rose, and had the normal fatherly anxieties over her well-being—he cherished and loved her. Rose was adopted by his parents James and Edith Grainger in Kingston in late October 1943, while Roy was aboard the *Athabaskan*. In July 1945, James and Edith received a War Service Gratuity of \$403.98 for the loss of their son. Years later, on June 2, 1962, Rose Marie Grainger married RCAF Flying Officer R.R. Austin at RMC in Port Hope, Ontario. They later made their home in California. Twenty-seven-year-old Roy Grainger has no known grave. His name is inscribed on the Halifax Memorial, Nova Scotia, Canada, Panel 12.

Years later, there was speculation that the *Athabaskan* may have, in fact, been lost to a friendly fire incident after being torpedoed by a British motor torpedo boat, or that she had suffered some sort of catastrophic internal explosion in number one boiler room. Due to the poor condition of the wreck, and the poor record keeping and incomplete logs of other ships in the area at the time, neither of these theories has yet to be confirmed.

GREEN, Harold Cecil (#A/606494)

Harold Cecil Green was the son of a World War I veteran who never had the opportunity to serve overseas. More than two decades later, like his father, Harold never had the opportunity to serve overseas, losing his life in a tragic accident in western Canada.

Harold Green was born in Sarnia on April 23, 1921, the youngest son of George Seymour and Annie (nee Lee) Green. George (born April 14, 1876 in Oxfordshire, England) and Annie (born in Watlington, Oxfordshire, England) were married in Watlington, Oxfordshire, England. George Seymour Green was a World War I veteran. On February 2, 1916, at the age of 39, George enlisted in the Canadian Over-Seas Expeditionary Force in Forest, Ontario. He stood five feet six and a half inches tall, had brown eyes and black-grey hair, and lived at R.R. #1 Camlachie, Ontario with his wife (and next-of-kin) Annie. He recorded his trade or calling as blacksmith and bandsman. He became a member of the 149th Battalion.

George Green only saw service in Canada, due to his persistent health issues. In mid-August 1916, he was admitted to Kapuskasing Hospital diagnosed with chronic appendicitis. He was discharged from hospital ten months later, in mid-June 1917. One month later, he was admitted to Base Hospital in Toronto, diagnosed with mucous colitis, where he remained for three weeks. In mid-April 1918, he was admitted to London Military Hospital, still suffering from colitis. He was later transferred to Guelph Military Convalescent Hospital, and in late June 1918, was released from hospital. Despite undergoing two operations in Toronto and continual treatment, he still suffered from mucous colitis. Though his conduct and character while in service were graded as "very good", on July 2, 1918, he was discharged from the military in London, declared "medically unfit due to service, although fit for employment in civil life."

After George was discharged, the Green family lived at 398 George St., and later 259 Elgin St., Sarnia. George and Annie Green had two children: Harold and George Edwin Green, born in 1909 (he later lived at Manor Apartments, Christina Street). George Green supported his family working as a blacksmith. Approximately three years after the loss of his youngest son, George Green passed away at Sarnia General Hospital on November 10, 1947, the result of enteritis. He is buried in Lakeview Cemetery.

Harold Green was educated in Sarnia, and was a member of Canon Davis Memorial Church. Prior to his enlisting under the National Resources Mobilization Act (NRMA), Harold was employed at the Sarnia Elevator Company as a labour foreman.

Twenty-one-year-old Harold Green enlisted in the Canadian Army on June 29, 1942 in London, Ontario. He stood five feet eight and a half inches tall, had brown eyes and brown hair, was single, and lived at home with his parents at the time. He was initially posted to #1 District Depot, attached the 30th Reconnaissance Battalion (Essex Regiment) in Windsor, Ontario. In October 1942, he continued training as part of Canadian Armoured Corps (CAC), with the rank of Trooper, in Dundurn, Saskatchewan. He continued training in New Westminster, British Columbia in May 1943; then Vernon, B.C. in September 1943; and then Courtenay, British Columbia in November 1943. While in B.C., Harold was a member of the 31st (Alberta) Reconnaissance Regiment, the Royal Canadian Armored Corps Division. Just prior to his death, Harold had been expecting to come home to Sarnia on a furlough. Harold Green did not have the opportunity to serve overseas.

On April 24, 1944, while serving in British Columbia, Harold Green and three other men were riding in a Bren gun carrier that overturned, pinning the occupants beneath it. Trooper Harold Green and the three other men were seriously injured. On the same day as the accident, Harold's mother received the following telegram: FOLLOWING MESSAGE ADDRESSED MRS ANNIE GREEN 259 ELGIN ST SARNIA ONT DESPATCHED 1750 HRS 24/4/44 "SINCERELY REGRET INFORM YOU A606494 TPR GREEN HC REPORTED DANGEROUSLY ILL AS A RESULT OF FRACTURED SKULL IN MOTOR ACCIDENT STOP ADMITTED NORTH VANCOUVER GENERAL HOSP NORTH VANCOUVER BC STOP FURTHER INFORMATION FOLLOWS WHEN RECEIVED".

Harold Green was transferred to Shaughnessy Military Hospital, Vancouver, where on May 2, 1944, at 0200 hours, he died as a result of the fractured skull and injuries he had received in the motor accident. The coroner's report stated that the injuries he accidentally received during military maneuvers caused the death of Trooper Green. Harold Green was later officially recorded as, *Universal carrier accident while on training, New Westminster, British Columbia*. Harold Green's body arrived in Sarnia by C.N.R. not long after his death. His funeral was held at the Robb Funeral Home, followed by a public service at Canon Davis Memorial Church, followed by his internment. Twenty-three-year-old Harold Green is buried in Sarnia (Lakeview) Cemetery, Sarnia, Ontario, Section E, Lot 106. SOURCES: A, B, C, D, E, F, L, N, 2C, 2D, 7C, 8Y

GREEN, Russell Raymond (#A/17184)

When Russell Raymond Green, 21, enlisted in the Canadian Army in Sarnia, he had been married only two months. He joined the army out of a "sense of duty" and left for overseas months later. Russell never got to see his infant daughter grow up—he was killed in action during the Battle of Normandy.

He was born in Hamilton, Ontario on August 24, 1918, the son of John Archibald and Gertrude Beatrice Green. John and Gertrude were married in Midland, Ontario on July 5, 1917. When Russell was only four months old, his parents moved to Sarnia. The Green family lived at 244 Christina Street, later 106 North Brock Street, and later 254 Davis Street, Sarnia (Russell's father would be estranged from the family). Russell was of North American Indian descent, a member of the Iroquois. Russell was a year older than his half brother, Louis Currotte. Louis also served in the Canadian Army, a member of the Winnipeg Grenadiers.

Russell was always active, although he seemed to do much more outside the confines of a classroom. He received his education in a Sarnia Public school but left school after grade seven at age 14. He participated in sports such as baseball, hockey, and lacrosse, and spent many hours hunting and riding. He was never afraid of work. From 1934 to 1939, he worked part time as a grain elevator helper at Sarnia Grain Company. During winters from 1936 to 1938, he was a Foundry worker in Windsor and Walkerville. Every summer from 1936 to 1939, he was a tobacco farm labourer in Langton, Ontario.

The years 1939 and 1940 were pivotal in Russell's life. Still a young man in his early 20s, Russell married Eileen Marie, a young lady from Port Huron, Michigan, in her hometown on July 27, 1939. The young couple had one child together, Gail Patricia Green, born March 16, 1940.

Before Gail was born, however, Russell, 21, enlisted in the Canadian Army on September 9, 1939 in Sarnia, the day before Canada and Newfoundland declared war on Germany. He had been a member of the 26th Lambton Field Battery in Sarnia before that and joined the army out of a "sense of duty." His ambition for after the war was to

do mechanical factory work. Still, it must have been a tumultuous time for Russell. He stood five feet eight and a half inches tall, had brown eyes and dark brown hair, and when he enlisted, Russell and Eileen were residing at 244 North Christina Street. Before departing for overseas, however, Russell and Eileen separated, and Eileen resided at 111 Penrose Street and later in Port Huron.

In Canada, Russell received his gunner/battery training in Sarnia, Guelph and Petawawa. On August 21, 1940, he embarked overseas from Halifax for the United Kingdom, a member of the Royal Canadian Artillery, 4th Field Regiment, with the rank of Gunner. He continued his training in the U.K., and in August of 1942, he celebrated his 24th birthday "somewhere in England."

Lance Bombardier Russell Raymond Green

Almost four years after arriving in England, Russell Green embarked for front line action. He arrived in France on July 6, 1944, one month after D-Day. The **Battle of Normandy** had begun for the Canadians with the June 6, 1944 D-Day landings at Juno Beach. After breaching the "Atlantic Wall" of "Fortress Europe", Allied armies began their break out from the narrow Normandy bridgehead to carve out a foothold on the French mainland. It took a whole summer of tenacious fighting against fierce and ruthless German forces to advance east across France. In a brutal campaign of attrition, the Canadians faced fierce battles and vicious counterattacks as they clawed their way forward liberating villages and towns including Bretteville, Carpiquet, Caen and Falaise.

As Russell advanced with the 4th Field Regiment, he rose to the rank of Lance Bombardier. On August 13, 1944, a little over one month after arriving in France, Russell Green was killed in action while fighting during the Battle of Normandy. His body was buried three days later at a location recorded on the Army Field Service Card as "France Brayen anglais E side Main Rd north of forks 100 yds M.R. 7F/3 073461." His remains were later exhumed and reverently reburied in Bretteville-Sur-Laize Canadian War Cemetery.

In mid-August 1944, Gertrude Green in Sarnia received word that her younger son, Private Louis Currotte of the Winnipeg Grenadiers, had been wounded in his ankle while on active service in France (he was wounded only a few days prior to Russell's death). Only a few days later, she received a telegram from the Director of Records in Ottawa informing her that her other son, LANCE-BOMBARDIER RUSSELL RAYMOND GREEN HAS BEEN REPORTED MISSING IN ACTION IN FRANCE ON AUGUST 13. The message also stated that when further information became available, it would be forwarded to her.

In late September 1944, the Major-General, Adjutant-General wrote Gertrude, now living on Brock Street:
Dear Mrs. Green:

It was with deep regret that I learned of the death of your son, A17184 Lance Bombardier Russell Raymond Green, who gave his life in the Service of his Country in The Western European Theatre of War on the 13th day of August, 1944.

From official information we have received, your son was killed in action against the enemy. You may be assured that any additional information received will be communicated to you without delay.

The Minister of National Defence and the members of the Army Council have asked me to express to you and

your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

Russell Green was later officially recorded as, *Overseas casualty, killed in action, in the field (France)*. In September 1945, the Children's Aid Society in Sarnia received a War Service Gratuity of \$972.86 for the care of Gail Patricia Green, on the loss of her father Russell Green. In early April 1946, Gertrude, now residing at 254 Davis Street, received a letter from the Colonel, Director of Records, for Adjutant-General. Following is a portion of that letter:

Dear Madam:

Information has just been received from overseas that the remains of your son, A.17184 Lance Bombardier Russell Raymond Green, have now been carefully exhumed from the original place of internment and reverently reburied in grave 9, row G, plot 12, of Bretteville-sur-Laize Canadian Military Cemetery, Bretteville-sur-Laize, France. Marked map is enclosed. This is a recognized military burial ground and will receive care and maintenance in perpetuity.

The grave will have been marked with a temporary cross which will be replaced in due course by a permanent headstone suitably inscribed. While it cannot now be stated when this work of permanent commemoration will begin, before any action is taken you will be communicated with and an opportunity will be given you to submit a short personal inscription of your own choice for engraving on the headstone...

Twenty-five-year-old Russell Green is buried in Bretteville-Sur-Laize Canadian War Cemetery, Calvados, France, Grave XII.G.9. On his headstone are inscribed the words, A BEAUTIFUL MEMORY DEARER THAN GOLD OF A SON WHOSE WORTH CAN NE'ER BE TOLD. MOTHER.

HALLAM, John Norman (#R/68193)

John "Jack" Norman Hallam was a popular and determined young man. He was finally accepted into the Royal Canadian Air Force when he was 22 and a year later was flying combat missions in Europe. On July 12, 1941, Sergeant-Pilot Hallam was killed when his plane crashed into the North Sea on a training mission.

John (Jack) Hallam was born in London, England on June 8, 1918, the only son of Cyril Francis (born in Marston, England) and Marjorie Laura (nee Park, born in London, England) Hallam. John had an older sister, Betty W. (born 1917) and a younger sister Nancy M. (born 1921). Between June 1912 and August 1914, Cyril Hallam stayed in Canada before returning to England. In 1928, Cyril and Marjorie brought their young family to Canada for good. John was nine years old when the Hallam family arrived aboard the passenger ship *Aurania* that had left Southampton, England and arrived in the port of Quebec on April 22, 1928. At that time, father Cyril recorded his occupation as a farmer, although he eventually became the manager of the Sarnia Riding Club.

John Hallam was an active and popular young man. He received his education at West Lorne Public School from 1927 to 1933, and then attended Sarnia Collegiate Institute from 1934 to 1938 when the Hallam family moved to Sarnia. At SCITS he took courses in woodworking, electricity, auto mechanics and specialized in draughting. He was exceptionally popular among the young people of Sarnia. John was active in such sports as swimming, golf, riding, football, hockey and baseball and his hobbies included building model airplanes, rifle shooting and sailing. While in high school, he was a member of the Air Cadets for five years.

And he was a determined young man who knew what he wanted. After graduating Sarnia Collegiate, he was employed at Sarnia Bridge Company as an assistant draughtsman from 1939 to 1940. He left the Sarnia Bridge Company in July 1940, determined to join the air force. He was refused initially. When war was declared in September 1939, he was no less determined and went on his own initiative to Camp Borden with the idea that it might be possible to enlist there; however he was told at Camp Borden, as he had been told earlier at London, that there were 25,000 men already on the waiting list, and all that could be done was to take an examination and await a future call. He took the exam, passed it, and returned home. A year later he received a call.

Now 22, John Hallam enlisted in the Canadian Air Force on July 18, 1940 in London, Ontario. He stood five feet seven inches tall, had blue eyes and light brown hair, was single, and was residing with his parents at Sarnia Riding Club at the time. Days later he departed enroute to #1 Manning Pool in Toronto of the Royal Canadian Air Force, along with fellow Sarnians John Murray and William Clark (William Clark is included in this Project).

In mid-August, John was posted to #1 Manning Depot in Trenton. He began his air training at #2 Initial Training School (ITS) in Regina in September 1940. In a letter to his parents from Regina, John mentioned Fred

Houston, “Bunt” Murray, Gordon Bracken, Harry Turnbull and Doug Wilder, all Sarnia boys who were in the same air school with him. John Hallam continued his training at #12 Elementary Flying Training School (EFTS) in Goderich and #4 Service Flying Training School (SFTS) in Saskatoon. He was awarded his Flying Badge in February 1941 in Saskatoon. His intensive study and a natural talent for flying enabled him to attain exceptional proficiency in the air. In mid-March, he was posted to #3 Manning Depot in Debert, Nova Scotia.

On March 25, 1941, John Hallam embarked overseas from Nova Scotia for the United Kingdom. From #3 Personnel Reception Centre in Uxbridge, he was first posted with #13 Operational Training Unit (OTU) based in Bicester. Only weeks after arriving overseas from Sarnia, he was flying over the English Channel where he was engaged in active aerial warfare. On July 1, 1941, John became a member of RAF #82 Squadron “Super Omnia Ubique” (Over all things everywhere), with the rank of Sergeant-Pilot.

No. 82 Squadron was a **light-bomber squadron** equipped with twin-engine Bristol Blenheim aircraft, and later Vengeance dive-bombers and de Havilland Mosquitos. The squadrons performed a variety of tasks over the course of the war: anti-shipping missions over the North Sea; anti-submarine patrols; attacking German forces; and supporting ground forces and targeted bombing.

During the course of the war, one of this country’s most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in **Bomber Command** operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war. There was no easy way to learn how to fly the heavy bombers, and training crews suffered a litany of disasters, crashes and deaths. By the end of the war, Bomber Command lost over 8,000 Allied airmen who were killed in training or by accidents alone.

On July 12, 1941, less than four months after arriving overseas, John Hallam was part of a crew aboard Blenheim IV aircraft V6524 (markings UX-) that took off from RAF Watton on a day training mission. Their aircraft went out of control in sea fog and crashed into the North Sea. Perishing with Sergeant-Pilot John Hallam were RAF Sgt.s Herbert Hastings and Wilfred Leonard Hiscock. On July 15th, John’s parents in Sarnia received an official cable informing them that their son John WAS REPORTED MISSING OVERSEAS, and that a letter would be following. In the newspaper story of John Hallam’s missing status, the *Canadian Observer* reported that, “In the case of a missing flyer, there is the possibility that he might be a prisoner or that he escaped in some other way and had not been able to report to headquarters.”

In late August 1941, Cyril and Marjorie received another letter, this one from the R.C.A.F. Records Office, giving some details relating to the previous official report that their son was “missing”. According to the letter, his squadron reported that “Jack’s” plane, the last time they had seen it, was flying “inverted” or upside down over the North Sea. The letter included a ray of hope when it noted that this did not rule out the possibility that the flyers had not perished even if the plane fell into the sea.

It was probable that the squadron had been over Germany and was returning. Whether John’s plane was damaged before it began the trip, or whether it was damaged in the attack over Germany or the Low Countries, or it had been assailed by fighter-planes at sea, was not disclosed. Both Britain and Germany maintained floating first aid posts in the North Sea and many fliers, first presumed lost, had reached one of these floats and were rescued.

In early September of 1941, Sarnia Collegiate teacher Miss Mae Burriss received a letter that awaited her when she returned from her summer vacation. It was from John Hallam, the former student of Sarnia Collegiate, who at that time in September, was still reported as missing overseas. The letter was dated July 10, 1941 (two days before he was shot down). The letter was in acknowledgment of the receipt of copies of “School Daze,” the Sarnia Collegiate periodical, concerning which John wrote:

They seemed to bring back many pleasant memories of the times I had at the Sarnia Collegiate.... I am very comfortable here. Our squadron is living in a country mansion. Our hours are not as when I was training in Canada. The food is very good and we get plenty to eat. We have a garden here and we grow lettuce, carrots, beans, etc., which we use in the officers’ and sergeants’ messes. The garden is worked by us, in some of our spare time, so you see that flying is not our only task. I am not flying fighters as I had hoped to, but then someone has to fly the bombers, don’t they?

On September 17, 1941, Cyril and Marjorie Hallam received a letter from the Officer in Charge of records at the Royal Air Force headquarters in England. The letter stated that no further word had been received concerning

their son who was first reported missing in mid-July and whose plane might have fallen into the North Sea. There had been a report recently that a resident in the Sarnia district had heard a German short-wave broadcast in which a name that sounded like “Halsam” was mentioned as a prisoner in Germany and Sarnia, Ontario was given as the place of origin of the prisoner. Enquiries at Ottawa only elicited a response that this broadcast was not transcribed by the intelligence service there.

Any hopes that John Hallam had survived were dashed when he was later officially recorded as, *Previously reported missing during air operations overseas, now for official purposes presumed to have died, overseas*. In May 1942, the Air Ministry in London, England, received information through the International Red Cross that stated airman John Hallam was buried in the Cemetery at Westerland, Sylt, Germany. In April 1946, Marjorie Hallam, then at Mallat Park, Sarnia, received a War Service Gratuity of \$136.64 for the loss of her son John. Twenty-three-year-old Sergeant Pilot John Hallam is buried in the Kiel War Cemetery, Schleswig-Holstein, Germany, Grave 3.B.3. On his headstone are inscribed the words, “GREATER LOVE HATH NO MAN”.

HAMILTON, Thomas (#A/18184)

Sarnia born Thomas Hamilton was married and a father to a young daughter when he became one of the first men to enlist in Sarnia after Britain declared war on Germany in September 1939. One month after arriving in France, Sapper Hamilton was killed by a mine explosion in the Battle of Normandy.

Thomas Hamilton was born in Sarnia on July 24, 1916, the son of Alexander and Selena Hamilton, of R.R. #2, Sarnia. Alexander and Selena Hamilton were married in Belfast, Ireland on February 13, 1907. The Hamiltons had five sons: Thomas, Charles Jackson, Robert Alexander, James Henry and Herbert Jackson, the latter a Private serving at Camp Borden at the time of Thomas’ death. Thomas attended public schools in Sarnia and Sarnia Collegiate Institute. Prior to enlisting, he worked as a machinist/core maker at Holmes Foundry. His life changed dramatically when, on July 21, 1934, days before his eighteenth birthday, Thomas married Blanche Tryphena Billard in Sarnia. Thomas and Blanche later resided at 386 Savoy Street and had one child together, Ann Hamilton, born August 20, 1937.

When a recruiting station was opened in Sarnia shortly after Britain declared war on Germany on September 3, 1939, Thomas was among the first to enlist. Now 32, Thomas Hamilton joined the Canadian Army on September 9, 1939 in Sarnia. The next day, Canada declared war on Germany. Thomas stood five feet ten and three quarter inches tall, had hazel eyes and dark brown hair, and he, his wife and their two-year old daughter were residing on Cemetery Road (now Colborne Road) at the time.

Thomas Hamilton embarked overseas from St. John, New Brunswick for the United Kingdom on December 1, 1940, as a member of the Royal Canadian Engineers, 1 Field Park Company, with the rank of Sapper. He continued his army training in the U.K., rising to the rank of Corporal with the 1 Field Park Company. Three and a half years after arriving in England, Thomas embarked for front line action.

On July 8, 1944, one month after D-Day, Thomas Hamilton disembarked in Northwest Europe. The **Battle of Normandy** had begun for the Canadians with the June 6, 1944 D-Day landings at Juno Beach. After breaching the “Atlantic Wall” of “Fortress Europe”, Allied armies began their break out from the narrow Normandy bridgehead to carve out a foothold on the French mainland. It would take a whole summer of tenacious fighting, pushing against fierce and ruthless German forces to advance east across France. In a brutal campaign of attrition, the Canadians faced fierce battles and vicious counterattacks as they clawed their way forward liberating villages and towns including Bretteville, Carpiquet, Caen and Falaise.

As a member of the Royal Canadian Engineers (RCE), Thomas was part of the troops that enabled the army to move—they repaired and built roads, airfields and bridges; cleared mines and road blocks; and filled in craters and anti-tank ditches, all while working alongside combat troops at the front, and often while under fire.

Shortly before his death, Corporal Thomas Hamilton had sent a letter home to his relatives in which he said that he was in France, was getting along well, and told his family not to worry about him. One month after arriving in France, on August 9, 1944, Thomas Hamilton was killed in action while fighting during the Battle of Normandy, the result of a mine explosion. His body was buried the day after his death on August 10, at a location recorded on the Army Field Service Card as “Field Near St. Sur Orne 1/25000 – 05526012 Sheet 40/16 S.W. France”. His remains were later exhumed and reverently reburied in Bretteville-Sur-Laize Canadian War Cemetery.

In mid-August 1944, several hours after Blanche and their daughter Ann left for a vacation with friends in Royal Oak, Michigan, word from the Department of National Defence was received in Sarnia that CORPORAL THOMAS HAMILTON HAS BEEN KILLED IN FRANCE ON AUGUST 9 BY A MINE EXPLOSION. Members of his family communicated the news to Blanche and her daughter and she returned home to Sarnia immediately. In late September 1944, Blanche, then residing at 386 Savoy Street, received the following letter from the Major-General, Adjutant-General:

Dear Mrs. Hamilton:

It was with deep regret that I learned of the death of your husband, A18184 Corporal Thomas Hamilton, who gave his life in the Service of his Country in The Western European Theatre of War on the 9th day of August, 1944.

From official information we have received, your husband was killed in action against the enemy. You may be assured that any additional information received will be communicated to you without delay.

The Minister of National Defence and the members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

(Note: the date of death was August 8, 1944)

Thomas Hamilton was later officially recorded as, *Overseas casualty, killed in action, in the field (France)*. In December 1944, Thomas Hamilton was awarded posthumously the decoration C-in-C Certificate, for Good Service. In April 1945, Blanche received a War Service Gratuity of \$1051.23 for the loss of her husband. Thomas left behind his parents, his four brothers, his wife of almost ten years, and his seven year-old daughter Ann.

In late March 1946, Blanche received a letter from the Colonel, Director of Records, for Adjutant-General. Following is a portion of that letter:

Dear Madam:

Information has just been received from overseas that the remains of your husband, A18184 Corporal Thomas Hamilton, have been carefully exhumed from the original place of internment and reverently reburied in grave 14, row E, plot 13, of Bretteville-sur-Laize Canadian Military Cemetery, Bretteville-sur-Laize, France. Marked map is enclosed. This is a recognized military burial ground and will receive care and maintenance in perpetuity.

The grave will have been marked with a temporary cross which will be replaced in due course by a permanent headstone suitably inscribed. While it cannot now be stated when this work of permanent commemoration will begin, before any action is taken you will be communicated with and an opportunity will be given you to submit a short personal inscription of your own choice for engraving on the headstone...

Twenty-eight-year-old Thomas Hamilton is buried in Bretteville-Sur-Laize Canadian War Cemetery, Calvados, France, Grave XIII.E.14. On his headstone are inscribed the words, LOVINGLY REMEMBERED BY HIS WIFE, DAUGHTER, PARENTS AND BROTHERS.

HARRIS, John Michael (#R/63612)

John Michael (Jack) Harris, a pilot with the RCAF, was scheduled to be flying aircraft in action overseas in the summer of 1941. Unfortunately, when his aircraft crashed in a training exercise near Montreal in April 1941, the 28 year-old Sarnian was killed. Of the many local men who served with the RCAF in WWII, John was the first to fall.

He was born at Sarnia General Hospital on January 8, 1913, the youngest son of Michael George (born in Arahova, Sparta, Greece, immigrated to Canada in 1904) and Rosamond (nee Moore, born in Chatham, Ontario) Harris of 264 North Brock Street, Sarnia. Michael, a merchant at the time, married Rosamond on January 11, 1909 in Chatham. Michael and Rosamond Harris had three sons: George Michael (born 1910), James (born December 1911), and John. A few years prior to his death, John and James had become partners in the operation of Sarnia's National Club. When John was born, the family resided at 182 ½ Front Street and Michael supported his family by working as a theatre owner and manager.

To say that John Harris was active would be an understatement. He attended local public elementary schools and then Sarnia Collegiate from September 1925 until May 19, 1930. In high school, John participated in many sports including sailing, shooting, baseball, hockey, tennis, golf, riding and swimming. His hobbies—which ranged from model aircraft building, designing, and drafting to photography and sailing—kept him busy. John later learned to fly in London, Ontario and he earned a civilian pilot's license. He also had some military training in the U.S., as a member of the U.S. Army Air Force when he was a young teen in Honolulu from 1928-1930. Before leaving to join

the war, John was employed at Harris Brothers, as a clerk-bookkeeper from 1933 to 1940.

Twenty-seven-year-old John Harris enlisted in the Royal Canadian Air Force on May 10, 1940 in London, Ontario. He stood five feet eleven inches tall, had hazel eyes and light brown hair, was single, and was residing with his parents on Brock Street at the time. He recorded his occupation as tobacconist, and he requested flying duties, with a preference to be a pilot. One of the references John Harris obtained for his application into the Air Force was from Ross W. Gray, Member of Parliament for Lambton West. Mr. Gray's reference letter on behalf of John read, *This is to certify that I have known Mr. J. Harris all his life and I am very pleased to give him a very high character reference. I feel sure that this young man will make a very capable flying officer.*

From #1 Manning Pool in Toronto, John was posted to #1 Initial Training School in Toronto for one month before being transferred to #1 Wireless School (WS) in Montreal. In November 1940, he continued his training at #1 Bombing and Gunnery School (BGS) in Jarvis, Ontario, where he was awarded his Air Gunners Badge on December 15, 1940.

On December 17, 1940, John Harris married Stella Matilda Logan, the eldest daughter of Mr. and Mrs. Robert E. Logan of South Mitton Street, at St. Andrew's Presbyterian Church. At the ceremony, Mrs. George Harris served as the maid of honour, and John's brother George served as the best man. After the ceremony, an informal reception for immediate relatives was held at the home of the bride's parents. Then the newlywed couple left on a short wedding trip. John and Stella Harris initially resided at 116 South Mitton Street and then later at 166 Queen Street, Sarnia.

On December 27, 1940, John Harris was posted to RCAF Station Rockcliffe where, because of his civilian pilot experience of 32 hours of solo flying, he was given a flying test at Rockcliffe Airdrome. On January 6, 1941, John returned to Sarnia on a 9-day leave. While at home, he referred to his love for the air force and his work.

Upon returning to duty, he took a special course at Picton Air Base where he received his wings and graduated as a Sergeant-Pilot. In mid-January 1941, John returned to duty at #1 Auxiliary Manning Depot in Picton. He was awarded his Pilots Flying Badge on February 22, 1941 and on March 6, 1941 John returned to RCAF #1 Wireless Training School in Montreal where he was stationed as staff pilot flying out of St. Hubert's airport. One of his duties there was to fly new American built airplanes from Windsor, Ontario to Montreal, Quebec. Stella Harris went to Montreal with him and resided at 1921 Boyle Street.

WAG John Michael Harris

John Harris did not have the opportunity to go overseas and served less than one year before losing his life. On April 7, 1941, John was piloting his Menasco Moth aircraft #4824 while engaged in a two-hour wireless exercise. Eyewitnesses reported that the plane had been stunting for about 20 minutes at 1000 feet when its engine stopped. The engine faltered twice and then stopped again at about 700 feet before the plane side-slipped towards the ground. Between Caughnawaga and suburban Chateauguay, near Montreal, his aircraft crashed and struck a 10-foot high bush.

His flying companion, LAC R.L.W. Orchard, a New Zealander, escaped with bruises and was shaken up. Their aircraft was gliding down quite slowly and Harris tried to start the engine again; however, it stopped a few moments later before it crashed into the thick bush with its nose driving into the wet earth. A truckload of soldiers was first to the scene. LAC Orchard was able to walk away after soldiers removed him from the ship, but Sergeant Harris was pinned between the engine and the pilot seat. He was rushed to Notre-Dame Hospital in Montreal, but the prognosis was bleak. He was seriously injured, including a fractured skull and a few hours later died as a result of his injuries.

John's death was the first to occur in the ranks of Sarnians who were serving in World War II with the RCAF. His death was later officially recorded as, *Died in Notre-Dame Hospital, Montreal, as result of flying accident*. John Harris had been scheduled to be overseas flying aircraft only weeks after the crash.

One day after the crash, John's body was transported by train from Montreal for burial in Sarnia. Stella, his bride of not even four months, who had gone to Montreal to be with her husband only a short time prior to his death, also arrived in Sarnia accompanied by her mother. Recorded in the *Sarnia Observer* under the headline, "First Military Funeral of War Hero Held Here," a funeral with full military auspices was held at the Stewart Funeral Home. More than a thousand friends of Pilot John Harris and his well-known family paid their respects. At the crowded Stewart Funeral Home, Rev. Captain J.M. Macgillivray, minister of St. Andrew's Presbyterian Church, stated in his sermon that, *Jack Harris was a clean living boy, a keen sportsman and a general favorite with all who knew him. He was among the first in this community to answer the call. He was an experienced airman and had flown planes before the war broke out, and he offered his services in the capacity in which he could be of most use. He thought not of the danger – he was eager only to serve the cause of liberty. He shall be missed by a large circle of friends, but our deepest sympathy goes out to his young wife, so recently a bride, and his father and mother and brothers in their bereavement.*

After the service, John's casket, draped with a Union Jack upon which rested a wreath of Flanders poppies was brought out of the funeral home. The casket was carried past an honor guard and a aircraft's motor roared in the western sky. The Lambton Garrison Band, with muffled drums, played a funeral march as the procession moved along College Avenue. The casket in a flower-filled hearse was escorted by pallbearers along with officers of the 11th Field Company, the 26th Battery, members of the Royal Canadian Air Force and Royal Canadian Naval Volunteer Reserve, and veterans of the last war represented by Sarnia Branch 62 of the Canadian Legion and the American Legion, Port Huron. At the cemetery, a large throng gathered at the flower-banked graveside. As the ceremony concluded, the firing party's three volleys rang out over the grave and "The Last Post" was sounded.

In May 1945, Stella Harris on Queen Street received a War Service Gratuity of \$82.50 for the loss of her husband. Twenty-eight-year-old John Harris is buried in Sarnia (Lakeview) Cemetery, Sarnia, Ontario, Section E., Lot 176. On his memorial stone are inscribed the words, SGT. PILOT JOHN M. HARRIS BELOVED HUSBAND OF STELLA M. LOGAN KILLED IN SERVICE OF R.C.A.F. 1913-1941 "PER ARDVA AD ASTRA".

HARRIS, Victor Henry (#J/9742)

Everyone who knew Victor Henry Harris had wonderful things to say about him. His father called his youngest child "a splendid boy" and a commanding officer assessed him as a "smooth flier" with excellent "conduct and deportment." Victor was only 24 when the aircraft he was piloting disappeared during a bombing mission over Nuremberg, Germany in February 1945.

He was born in Lambton County, Ontario on December 5, 1918, the youngest child of John William Henry and Hannah Beatrice (nee Chappell) Harris, of Shadynook, Exmouth Street, R.R.#1 Sarnia. Both John William (born Dec 5, 1918) and Hannah Beatrice were born in England but had immigrated to Canada and were married in Sarnia on May 10, 1912. To support his wife and his family, John worked as a Pipefitter/Pumpman at Imperial Oil. The Harris children included two sons--Victor and Bertrum John (born May 30, 1917, later resided in Fort Erie, Ontario) and two daughters: Vera Louise (born February 15, 1913, later married becoming Vera Archer, and resided in Fort Erie); and Beatrice Lillian (born December 25, 1915, later married becoming Beatrice Want, and resided at 113 Violet Street, Sarnia, later in Windsor). When Victor was three years old, the Harris family visited relatives in England, returning to Canada in July 1922 aboard the passenger ship *Montrose*. 254 Queen Street in Sarnia was their home when Victor was a child.

Victor attended SS #15 Public School from 1924 to 1932 and later Sarnia Collegiate from 1932 to 1937. Like

many youths his age, he found time to do many things. He delivered papers for five years to help support the family. Besides that, he was active in sports such as hockey, badminton, boxing, skiing, softball, and rugby—which he played extensively. He had eclectic hobbies which continued to occupy him after he graduated from SCITS. These included stamp collecting, rock study, first aid, flying and photography. He also was part of St. John's Ambulance Corps for four years. The Harris family suffered a great loss when Hannah, 46, passed away from heart problems on October 25, 1934. Victor was only fifteen years old when his mother died.

After finishing high school, Victor attended Haileybury School of Mines, in Haileybury, Ontario and completed courses in March 1938 in mineralogy, surveying, mapping, drafting, mining and geology. Harris was part of a government-sponsored program in which tuition, books and living allowances were supplied. The arrangement was part of the government's plan to alleviate the shortage of qualified miners. His education and work experience, however, did not end there. In April 1938, Victor began work with Moneta Porcupine Gold Mines Limited in Timmins, Ontario. He worked both in the assay office and underground where he was a machine helper, a load operator, and a drill runner. In September 1939, he attended Michigan College of Mining and Technology in Houghton, Michigan, in the Mining Engineering course and Plane Surveying course. He resided there until August 1940. When he had completed his studies there, he had taken courses in surveying, mapping, topographical drawing, chemistry, trigonometry, engineering, geometry, physics, calculus and analytical mechanics—all the while maintaining average grades in the high 80s and low 90s. In August, he returned to Timmins and Moneta Porcupine Gold Mines Limited and worked as a mucker underground and later as an engineer's assistant in his office. He was also a member of the American Institute of Mining and Metallurgical Engineers, and resided at 67 Birch Street in Timmins.

On May 14, 1941, Victor Harris, now 22, travelled over 225 miles to enlist in the Royal Canadian Air Force in North Bay. He stated that his reasons for joining the air force were, "To receive the training offered and to do my part in the war effort." Victor stood five feet eleven and a half inches tall, had brown eyes and light brown hair, was single, and requested flying duties with a preference to be a pilot. At 11:15 that night, the RCAF had him board a train in North Bay bound for Toronto, where he arrived at 7:15 the next morning.

From #1 Manning Depot in Toronto, then RCAF Station in Trenton, Victor began his training at #1 Initial Training School (ITS) in Toronto. His Commanding Officer wrote of Victor, *A bright and enthusiastic student. Determined and has applied himself diligently to his studies. Is very willing and co-operative. Should make good aircrew material.* Victor continued his training at #20 Elementary Flying Training School (EFTS) in Oshawa, where his Commanding Officer assessed the young Sarnian: *He is a smooth flier and learns quickly... He is a very good and willing worker. Conduct and deportment excellent. Ability above average. Possesses definite leadership ability.* Victor then continued his training at #16 Service Flying Training School (SFTS) in Hagersville, graduating on January 10, 1942 and earning his Pilot's Flying Badge.

On February 8, 1942, Victor Harris embarked overseas from Halifax for the United Kingdom. From #3 Personnel Reception Centre, he was first posted to #12 Advanced Flying Unit (AFU) in April 1942. He later served with several other units including #26 Operational Training Unit (OTU), #218 Conversion Flight, #218 Squadron and #1657 Conversion Unit. On December 13, 1942, Victor became a member of RAF #15 Squadron "Aim Sure", with the rank of Flight Lieutenant-Pilot.

No. 15 Squadron began the war as part of the Advanced Air Striking Force, a mission that made it one of the first squadrons to be sent to France. Initially the squadron flew Bristol Blenheim aircraft, but it was later re-equipped with Short Stirling aircraft. The Short Stirling aircraft was a British four-engine heavy bomber. For a short time, the bombers were used in RAF's efforts to "lean over the channel", as bait for German fighters. After too many Stirlings were lost to anti-aircraft fire, the squadron turned to night bombing and mine laying.

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in **Bomber Command** operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

Even though he'd seen action for only two months with #15 Squadron, Victor was an experienced pilot who was a veteran of many flights over Germany and other enemy occupied territories. He was the "skipper" of his ship, a Stirling Bomber R9279, stationed out of Mildenhall, Lincolnshire, England.

On February 26, 1943, Harris and his crew were aboard their Stirling I R9279 (markings LS-J) bomber

detailed to attack a target in Cologne, Germany. After take-off, no news of the crew or their Stirling aircraft surfaced and it failed to return from operations. Of the 427 aircraft involved in the night operation, there were 10 losses, including Stirling R9279. Perishing with RCAF Flight-Lieutenant-Pilot Victor Harris were RAF crew members F.S. Richard Ashdown, and Sgt's Peter Rogers, Wilfred Shaw, Howell Rees Jones, Sidney Phillips, Jack Wratten and William Roy Matthews (AUS).

A day later, John, now living on Exmouth Street received a telegram informing them that his son, Victor Henry Harris, WAS REPORTED MISSING AFTER OPERATIONS OVER ENEMY TERRITORY. Days later, John received the following letter from the Wing Commander, RAF, Bourn, Cambs.:

Dear Mr. Harris

You will by now have been informed that your son, J9742 Flight Lieutenant Victor Henry Harris, failed to return from an operational flight on the night of 26/27th February, 1943. I am writing to express my deepest sympathy with you in your anxiety, but also to encourage you to hope that he is safe.

He was the Captain of an aircraft engaged on an important bombing mission over enemy territory, and after take-off nothing further was heard. It appears likely that the aircraft was forced down, and if this is the case, there is some chance that he may be safe and a prisoner of war. In this event it may be two or three months before any certain information is obtained through the International Red Cross, but I hope the news will soon come through.

Your son had done excellent work in the Squadron and had successfully completed sixteen operational flights. He will be very much missed by his many friends in the Squadron. His personal effects have been safeguarded and will be dealt with by the Committee of Adjustment as soon as possible who will write to you in the near future.

May I on behalf of the whole Squadron express to you our most sincere sympathy, and the hope that you will soon receive good news.

John Harris hoped desperately that his son was possibly a prisoner of war, knowing that many months could elapse before authorities could definitely determine the fate of one listed as missing. In late August 1943, he received the following letter from the Flight Lieutenant, RCAF Casualties Officer, for Chief of the Air Staff:

Dear Mr. Harris:

It is with deep regret that, in view of the lapse of time and the absence of any further information concerning your son, Flight Lieutenant Victor Henry Harris, since he was reported missing, the Air Ministry Overseas now proposes to take action to presume his death for official purposes.

Will you please confirm by letter that you have not received any further evidence or news concerning him. The presumption of death action will proceed after hearing from you, and on completion you will receive official notification by registered letter. May I extend to you my earnest sympathy in this time of great anxiety.

John Harris' letter of response to the Flight Lieutenant was as follows:

Dear Sir

Thank you for your kind message of sympathy. Victor was a splendid boy. As regards other information we have had no other evidence or news but we still keep hoping. Thanking you

Yours Sincerely JW Harris

Some time later, John Harris received the telegram informing him that his son Victor was now officially listed as, PREVIOUSLY REPORTED MISSING AFTER AIR OPERATIONS NOW FOR OFFICIAL PURPOSES PRESUMED DEAD OVERSEAS. In September 1945, John received a War Service Gratuity of \$406.93 for the loss of his youngest child. In July 1946, Victor's sister, Beatrice Want in Windsor, received the following letter from the R.C.A.F. Records Officer:

Dear Mrs. Want:

It is a privilege to have the opportunity of sending you the Operational Wings and Certificate in recognition of the gallant services rendered by your brother Flight Lieutenant V.H. Harris. I realize there is little which may be said or done to lessen your sorrow, but it is my hope that these "Wings", indicative of operations against the enemy, will be a treasured memento of a young life offered on the altar of freedom in defence of his Home and Country.

In May 1952, the Wing Commander, R.C.A.F. Casualties Officer, for Chief of the Air Staff sent a final letter to John.

Dear Mr. Harris:

It is with reluctance that after so long an interval, I must refer to the loss of your son, Flight Lieutenant Victor Henry Harris, but due to the lack of any information concerning him since he was reported missing, it must be regretfully accepted and officially recorded that he does not have a "known" grave.

Due to the extreme hazards attending air operations there are, unhappily many thousands of British aircrew boys who do not have "known" graves and all will be commemorated on General Memorials that will be erected at a number of locations by the Imperial War Graves Commission (of which Canada is a member), each Memorial representative of a theatre of operations. One of these Memorials will be erected at Runnymede, England and the name of your son will appear on that Memorial.

I realize that this is an extremely distressing letter and that there is no manner of conveying such information to you that would not add to your heartaches. I am fully aware that nothing I may say will lessen your great sorrow, but I would like to express to you and the members of your family my deepest sympathy.

Twenty-four-year-old Flight Lieutenant-Pilot Victor Harris has no known grave. His name is inscribed on the Runnymede War Memorial, Surrey, United Kingdom, Panel 172. In November 2019, his name along with 25 others was added to the Sarnia cenotaph, engraved in stone to be remembered always.

HEBNER, Clifford Vernon (#A/19360)

Only months after getting married, Clifford Hebner departed overseas. His first action against the enemy was in a disastrous Canadian raid in France. He survived that event and was later devastated to learn that his younger brother was killed in action at Normandy. More than two years after the disastrous raid, Clifford gave his life for Canada during the prolonged and brutal assault on German fortifications in Belgium.

He was born in Gilbert Plains, Manitoba on May 11, 1913, the son of Frank (a farmer) and Minnie May (nee Burroughs) Hebner, of Riding Park, Manitoba. Frank (born in Huntsville, Ontario) and Minnie (born Neepawa, Manitoba) were married in Gilbert Plains, Manitoba in 1907. A family farmed in Dauphin District, Manitoba, and Frank and Minnie had eleven children together: sons Arnold Stewart (born 1904); Wilford Laurance (born 1905, died 14 months later); Clifford, Mervin Chester (born July 17, 1915); Frank Earl (born 1925); Ivan Gerald (born 1928); and daughters: Violet Pearl (born 1908); Mabel Ruby (born 1911); Winnifred Blanche (born 1918); Verna Hazel (born 1919); and Alice Ivy May (born 1921).

Clifford was educated in Manitoba and completed one year of high school in 1926-27 in Dauphin, Manitoba. When he was twenty-three years old, he lost his father Frank who passed away in February 1936. Clifford lived in Manitoba for the first eighteen years of his life, then moved to Trail, British Columbia for five years, and finally to Ontario. Clifford was employed as a furnace man while in Trail, B.C., and then a service station operator with Imperial Oil for eighteen months beginning in 1937 in Sarnia.

Twenty-six-year-old Clifford Hebner enlisted in the Canadian Army on November 29, 1939 in London, Ontario. He stood five feet eight and a half inches tall, had blue eyes and light brown hair, was single, and lived in Sarnia at the time. He recorded his place of residence as c/o W. McEwen, R.R.#2, Sarnia, Ontario, and his trade as service station operator, stoker. Clifford began his army training in London, as a member of the Royal Canadian Engineers (RCE), 7th Field Company, originally with the rank of Sapper. He eventually rose to the rank of Sergeant.

On March 16, 1940, Clifford married Vera Mantle in London, Ontario. Clifford and Vera Hebner lived on Piccadilly Street, and later 322 Princess Avenue in London. Five months after getting married, on August 23, 1940, Clifford embarked overseas for the United Kingdom.

Clifford continued his army training overseas in the U.K., where he was able to obtain his carpenter qualifications. As part of the 7th Field Company, RCE, Lance Corporal Clifford Hebner and close to 5,000 other Canadians, sailed for France on August 18, 1942, part of *Operation Jubilee*. They arrived as dawn was breaking early the next morning on August 19, at Dieppe. The **Dieppe Raid** was one of the darkest chapters in Canada's military history. By mid-day, 907 Canadians were killed, 2,460 were wounded and 1,946 were captured. Clifford Hebner survived Dieppe, and returned to the United Kingdom to fight another day.

Clifford's younger brother by two years, Mervin Chester Hebner, also enlisted to serve in the army, completing his Attestation Paper in Winnipeg, Manitoba on February 7, 1942, a little over two years after Clifford had enlisted. Known by his middle name, Chester, he was twenty-six years old and single. He was a farm labourer living at home with his family at the time. He recorded his next-of-kin as his mother Minnie, in Riding Park, Manitoba. After a brief training period in Brandon, he arrived in the United Kingdom in June 1942. There he continued his army training, becoming a Gunner with the Royal Canadian Artillery, 3rd Anti-tank Regiment.

After almost two years of training in the U.K., Chester Hebner sailed for France. He arrived on Juno Beach at

Normandy on June 6, 1944--D-Day. One month later, on July 11, 1944, twenty-nine-year-old Gunner Chester Hebner was killed in action in Caen, France, during the Battle of Normandy. His remains were buried at a location recorded on the Army Field Service Card as "MR 995661 sheet M of 37/16 S.E. Cheux, Near Lemesnil, France." His remains would later be reburied in Beny-Sur-Mer Cemetery, Normandy, France, Grave X.E.10. On his headstone are inscribed the words, HE HAS GONE ACROSS THE RIVER WHOSE SHORES ARE EVERGREEN. REMEMBERED BY MOTHER AND FAMILY RIDING PARK, MANITOBA, CANADA. Minnie Hebner received a letter from her son soon after his death--the letter was dated July 7, four days before his death.

Sergeant Clifford Vernon Hebner

Gunner Mervin Chester Hebner

Lance Sergeant Clifford Hebner left the U.K. in early July 1944, arriving in France on July 6, 1944. He arrived in France one month after his brother Chester did, and only days before Chester was killed in action. The **Battle of Normandy** had begun for the Canadians with the June 6, 1944 D-Day landings at Juno Beach. After breaching the "Atlantic Wall" of "Fortress Europe", Allied armies began their break out from the narrow Normandy bridgehead to carve out a foothold on the French mainland. It would take a whole summer of tenacious fighting, pushing against fierce and ruthless German forces to advance east across France. After the Allied breakout from Normandy, Canadian forces were assigned the "**Long Left Flank**", the less glamorous but vital tasks of clearing coastal areas in the north of France and Belgium of German occupiers. In a series of stop-and-start advances against stiff resistance in fortified positions, the Canadians liberated ports and villages including Rouen, Dieppe, Dunkirk, Boulogne and Calais.

In early October 1944, Canadian forces were entrusted with liberating the Scheldt estuary, a 45-mile-long enemy-held area in the Belgian-Dutch border area that connected the port of Antwerp to the North Sea. The **Battle of the Scheldt** was among the most difficult and grueling struggles in the war. The bitter fighting against a well-fortified and heavily entrenched enemy, took place in a bleak environment made worse by the winter cold in a flooded and freezing muddy quagmire.

Clifford Hebner of the 7th Field Company, RCE, moved with the Canadian troops as they advanced through Normandy and the north of France and into Belgium. He was a member of the Royal Canadian Engineers, who enabled the army to move forward: they repaired and built roads, airfields and bridges; cleared mines and road blocks; and filled in craters and anti-tank ditches, all while working alongside combat troops at the front and often while under fire.

Only three months after arriving in France, on October 5, 1944, Sergeant Clifford Hebner was killed in action in Belgium, during the early stages of the Battle of the Scheldt. His body was buried at a location recorded on the Army Field Service Card as "In hospital grounds, Belgium MR701990 Sheet 24434 1/50,000 GSGS 4040". His body would later be reburied in Schoonselhof Cemetery, Belgium.

For Clifford's widowed mother Minnie in Riding Park, Manitoba, this was her second son lost in the war.

Only two months prior to receiving the news of Clifford's death, she had received the following letter from the Major General, Adjutant-General:

Dear Mrs. Hebner:

It is with deep regret that I learned of the death of your son, H-95535 Gunner Chester Hebner, who gave his life in the Service of his Country in France, on the 11th day of July, 1944.

From official information we have received, your son was killed in action against the enemy. You may be assured that any additional information received will be communicated to you without delay.

The Minister of National Defence and the Members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

In October 1944, Minnie wrote a letter to the Chief Treasury Officer about her dependant's allowance. Following is a portion of that letter:

... My son (Chester) left home Feb. 4 – 42. In June of the same year he went overseas where he served until the time of his death 11th July 1944. I suffered a great loss when he was taken. A loss that nothing can ever fill... On Oct. 5th 1944 another married son Sgt. Clifford Hebner was killed in action so this is the second great loss I have suffered. I am a widow and have had a great struggle to bring up my children....

In early November 1944, Clifford's wife of four years Vera, then living at 175 ½ Dundas Street, London, received the following letter from the Brigadier, Acting Adjutant-General:

Dear Mrs. Hebner:

It was with deep regret that I learned of the death of your husband, A19360 Sergeant Clifford Vernon Hebner, who gave his life in the Service of his Country in the Western European Theatre of War, on the 5th day of October, 1944.

From official information we have received, your husband was killed in action against the enemy. You may be assured that any additional information received will be communicated to you without delay.

The Minister of National Defence and the Members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

Clifford Hebner's death was later officially recorded as, *Overseas casualty, killed in action, in the field (Belgium)*. In late-January 1945, Vera received a letter from the Major, for Director of Records, for Adjutant-General. Following is a portion of that letter:

Dear Mrs. Hebner:

I am directed to inform you that your husband was awarded the Military Medal, authority Canada Gazette No. 52 dated 23rd December 1944, under the following heading:

The KING has been graciously pleased to approve the award of the Military Medal in recognition of gallant and distinguished services in the field: A.19360, L/Sgt. HEBNER, C.V.

The Minister of National Defence expresses his sincere regret that your husband did not live to receive this award, the presentation of which will be arranged in due course.

Thirty-two-year-old Clifford Hebner is buried in Schoonselhof Cemetery, Belgium, Grave IV.B.15. On his headstone are inscribed the words, CLIFF AND I LIVED A GLORIOUS LIFETIME TOGETHER IN FIVE SHORT MONTHS. VERA. On December 23, 1944, Clifford Hebner was awarded posthumously the Military Medal. The award reads: *The King has been graciously pleased to approve the following award in recognition of gallant and distinguished services in the field.*

HEGARTY, Hugh Francis (#J/4536)

The nickname that Hugh Francis (Frank) Hegarty lovingly adopted from his nephews was far from the truth. Hugh was the only one in the family to graduate high school and he worked a series of jobs, mostly as a mechanic, prior to enlisting. In his air force training, he graduated with top marks and gained high praise from his superior officers. Hugh made the supreme sacrifice for the Allied cause while flying in Bomber Command, one of the most dangerous but vital operations of the war.

He was born in Culdaff, Donegal County, Ireland on August 23, 1917. He was the son of Hugh Hegarty Senior (a farmer, later gardener) and Catherine (nee Green) Hegarty. Hugh Sr. (born in Carndonagh, Donegal, Ireland) and Catherine (born Culdaff, Ireland) were married in Donegal, Ireland in 1903. Hugh Jr. came to Canada when he was just seven years old. He arrived in Quebec in 1924 with his mother aboard the passenger ship *Saturnia*.

Hugh Jr. had four sisters: Kathleen (born 1900, became Kathleen Gallagher, lived in New Jersey); Mary Bridget (born 1906, became Mary Hubbard); Cecilia (born 1915, became Cecilia Bullock); and Margaret (became Margaret Mahoney). Hugh also had three brothers: Michael (would live in Wallaceburg for a time, then return to Sarnia); Bernard (died 1924); and James (Jimmy). Hugh's brother Jimmy later lived in the Philadelphia area of the United States. He married, had children, and served with the United States Army during the Second World War. When their mother Catherine Hegarty passed away, Jimmy returned to Canada for her funeral. Ironically, when he went to return to the U.S.A., border officials would not allow him to enter the country because he was not a citizen of the United States. He stayed with his sister Margaret (Mahoney) in Sarnia for almost a year while things were sorted out.

The Hegarty family lived at 417 Confederation Street, and later 279 Rose Street, Sarnia during the war years. Hugh was a member of St. Joseph's Catholic Parish, Sarnia, Youth Organization. Hugh attended S.S. #2 Plympton School, 1924-1928; and then St. Joseph's Catholic Elementary School, 1928-1931, before going on to high school at Sarnia Collegiate. He was the only one of the Hegarty children to go on to secondary school, and he was often asked about exams by his family members. His reply was always, "I'll likely flunk'er", and so he became known as "Uncle Flunker" to all his nephews. Hugh attended Sarnia Collegiate Institute in 1931, graduating in 1935. He was active in hockey, rugby, softball, tennis, soccer and swimming. Hugh was also referred to as "Francie" by his family members, an Irish habit of adding "ie" to everyone's name.

After graduating, Hugh was employed as a mechanic for Howard Alward at Sarnia Motors from June 1935-September 1935. He left that job to become a truck driver for James Wynn of Vidal Street from September 1935-April 1936. He then went to work for W.H. Keelan Sports Store on Brock Street from April 1936 until he enlisted. At Keelan Sports Store, Hugh did general repair work as a mechanic on bicycles, outboard motors, marine service, acetylene welding and sales.

One of Hugh Hegarty's reference letters used in his application to the R.C.A.F. came from Rev. H.B. McManus, of St. Joseph's Catholic Church in Sarnia. Following is that April 1940 reference letter to the R.C.A.F in London, Ontario:

Dear Sirs-

The purpose of this letter is to certify to the righteous character of Francis Hegarty who is anxious to join His Majesty's Service in the R.C.A.F. I have known Francis for the past four years, and know him to be all that could be desired for one seeking service in the R.C.A.F. He has been steadily employed, and I know has been appreciated by his employer. He has no bad habits of which I am aware, but has always been a steady young man, doing the right thing at all times. Hoping you will find it possible to let him join the R.C.A.F.

With a lure for adventure, twenty-two-year-old Hugh Hegarty enlisted in the Royal Canadian Air Force on July 19, 1940, in London, Ontario. He stood five feet eight and three quarter inches tall, had hazel eyes and dark brown hair, was single, and lived with his sister Margaret at 417 Confederation Street, Sarnia at the time. He requested flying duties, with a preference to be an Air Gunner. From #1 Manning Depot in Toronto, then R.C.A.F. Station Camp Borden, Hugh began his air training at #2 Initial Training School (ITS) in Regina during the month of September 1940; and then continued at #2 Elementary Flying Training School (EFTS) in Fort William, Ontario in November and December 1940 (flying Tiger Moth's). The EFTS Commanding Officer's remarks on Hugh included: *Ability as a Pilot – Above Average... Flying test was very satisfactory. Is very keen and works hard. Should develop into an outstanding pilot. Conduct on the ground was very good.*

In mid-November 1940, Hugh wrote a letter from EFTS in Fort William to his sister Cecilia in Sarnia. Following is a portion of that letter. [Note: In his letter he refers to Leo (Bullock)--his brother-in-law who married Hughs' sister Cecilia, and his two nephews Billy (age 6) and Calvin (age 3) Bullock]:

Dear Sister,

"Hello Our Celia" – I sure was glad to hear from you, and I should have written you long ago but every time I thought about it, I didn't know your address. But I guess its better late than never so here I am scribbling you a few lines to let you know that I received your kind and ever welcome letter glad to see by it that you are all well and hope you will always be the same... I really am glad to hear that you, Leo, Billy and Calvin are all fine.

I'm also glad to hear your sort of looking after Helen for me, I knew there must be at least one of the Hegarty clan that would protect my interests. How is Leo getting along, I hope he's getting along fine and I'm sure he will if he keeps on studying. I have six subjects to study myself, besides our regular classes we have to study after six o'clock for eight hours a week. That's what I'm supposed to be doing right now but I spend most of my study

periods writing letters, it passes the time far quicker. The trouble is we have to write examinations in Armaments, Airframes, Airmanship, Aero Engines, Theory of Flight, Navigation and Signals every week. But I haven't been doing so badly so far as a matter of fact I managed to put the old Hegarty name at the top of the list on the last set of examinations. I had an average of 99% in everything put together.

I haven't been doing much flying on account of bad weather etc, but even if they can't make a flyer out of me, I at least showed them I could do the ground subjects. Boy if I ever start navigating one of these contraptions over Sarnia you better climb under something real solid and stay there until I'm well out of the way, besides I'd be afraid to fly over Sarnia, those shotgun guards at the Imperial would probably shoot the wings off me, are they still parked around the plant? You talk about driving a car, these cursed contrivances do the goofiest things you ever seen or heard tell of, they have a bad habit of trying to go in three or four directions all at once, it sure is funny...

One of the instructors took me up the other day and showed me how to do a spin, it's the cat's pyjamas, the ground and sky all start to go around in circles and its hard to tell whether you're going or coming for a while, but I really enjoyed it. If there wasn't so many things to watch and handle it really would be fun, by the time you have both feet on the rudders, one hand on the control column, the other on the throttle, and another one on the trimming gear if you have an extra one, you don't have much time to enjoy yourself.

Is Leo still thinking of joining the navy? Well just between you, me and the gate post I wouldn't encourage him too much most of these services look a lot better from the outside than they do from the inside. I'm satisfied myself, ... I haven't got anyone depending on me but if I had a wife and kids I'd be keeping myself right where the parachute hangs if I had.

Is Calvin's hand completely all better, I sure hope it is, how is Billy getting along at school, he hasn't started to play hookey yet has he. How's old "Will" by the way also Leo's mother I hope they are well. I guess I'd better stop before I make an essay out of this, give my regards to all the folks and write me again sometime. Well "So Long" for now and be good to Leo and the boys and don't let them beat up on old Will too much. Save me the left hind leg of your Christmas turkey, if I don't get home for Christmas. I'll wrap one of these old crates around a telephone pole then they can send me home for keeps. Incidentally I saw them testing a "Hawker Hurricane" being tested up here, if I could climb aboard it, I could be home in a whiff. Love to you, Leo and Billy and Cal

Flunker

Hugh continued his training at #7 Service Flying Training School (SFTS) in MacLeod, Alberta from mid-December 1940 until early March 1941, flying Avro Ansons. In mid-January 1941, he wrote another letter to his sister Cecilia. Following is a portion of that letter:

Dear Sister,

Hello our Celia. Thanks a lot for the Christmas gifts how did you know I needed galloshes, these old ones I got from the service were a disaster with a white shirt. I'm glad to hear you, Leo, Billy and Calvin are all fine, tell Billy I didn't happen to be flying that plane in the picture but I fly ones just like it, as a matter of fact I had one of them up by myself for the first time last Sunday... This place is just a few miles East of the Rocky Mountains and the wind really whistles through the Crow's Nest Pass, we have gales quite often here of 50 or 60 miles per hour. All you have to do is point these old crates into the wind, pull up the anchor and away you go, one of the lads was chasing a pig up wind the other day, he said he had the motors wide open but the pig was gaining on him so you see its quite drafty out here. Otherwise the weather is swell, there isn't any snow and its quite mild. I wish I had the patience to study like Leo has, the navigation we get here is slowly driving me bughouse, I dream about maps and charts etc.

But I'm going to do my damndest to get me a pair of wings even if I have to kill a prairie chicken to get them, will you sew them on for me. Thanks I knew you would... I've been feeling just the same as ever, once in a while I get sick of the whole business but I usually get over it, when I heard that I was being sent out here I felt like kicking the wings off one of the old Tiger Moths but I don't mind it so much now that I'm here. Well Celia I've got to get over to the mess hall before the rush starts, give my best regards to Leo, Billy, Calvin and all the rest of the folks. Write me again soon I sure like to hear from you, but don't think I'm stuck up if I don't write back right away this is the toughest part of the whole course and if I manage to sneak through here I'll finally get my wings in a month or so.

Good Bye with Love, Flunker

Hugh graduated on March 1, 1941 from #7 SFTS in MacLeod, where he was awarded his Pilot's Flying Badge and Wings. He then attended #31 General Navigation Reconnaissance School, Charlottetown, P.E.I. from mid-March through to late May 1941. It was here that pilots and air observers were trained in the techniques required for ocean patrol, the last stop before aircrews were assigned to operations. Hugh graduated #31 General Recon.

School with the top marks in his class. His Commanding Officer's remarks about him included: *Above the average. This officer has proved himself an intelligent and reliable navigator... has worked hard, and produced excellent results... has displayed great keenness and application... a sound reliable Officer and has the makings of a good G.R. Pilot.*

P/O-Pilot Hugh Hegarty

October 15, 1940 in Regina

Hugh Hegarty embarked overseas on June 20, 1941. Sarnia's Bill Bullock, who was seven years old at the time, remembers saying goodbye to his uncle on the crowded train platform. "Uncle Francie was a great guy, a terrific uncle," he said. "He always made a fuss over the kids."

Hugh arrived in the United Kingdom on July 2, 1941 and was attached to #3 Personnel Reception Centre. On July 15, 1941, he was assigned to RCAF #407 Demon Squadron "To Hold On High", part of **RAF Coastal Command**, with the rank of Pilot Officer-Pilot.

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

RCAF No. 407 Squadron's wartime history is divided into two parts. From mid-1941 to January 1943, it operated as a "strike" (bombing) squadron attacking enemy shipping. Hugh served with the squadron during this time. In late January 1943, it would be re-designated 407 General Reconnaissance Squadron, protecting friendly shipping from the U-boat threat operating Vickers Wellington aircraft.

No. 407 was one of seven RCAF units serving with RAF Coastal Command. It was based at RAF North Coates, then RAF Thorney Island, a North Sea Coast bombing post. Flying Lockheed Hudson twin-engine light bombers, they attacked enemy shipping and German motor torpedo boats. While Hugh Hegarty was a member, #407 Squadron had gone six weeks without a loss, while taking part in 104 operational sorties raiding German positions in the Netherlands and eleven shipping attacks. It was as a strike squadron that it won its reputation and its nickname "The Demon Squadron", due to its tenacity in carrying out attacks.

On October 10, 1941, during a blustery, rainy night, Hugh Hegarty and his crew flew Hudson Bomber AN586, "T for Tommy" on anti-shipping patrol off the Dutch coast, carrying 4 X 250 lb. bombs. On that night, the aircraft failed to return, and the crew were presumed killed during the flying operation. Their aircraft and crew were the first loss sustained by the #407 Demon Squadron Coastal Command, and the first aircraft reported missing from an R.C.A.F. Coastal Command in Britain. Also on board the aircraft was another Sarnian. Flight-Sergeant **Charles John Frederick McCrum** was the son of Mr. and Mrs. H.U. McCrum of Ottawa. The family, including Charles McCrum, lived in Sarnia for several years, where Charles attended Sarnia Collegiate. Charles' father was the former chief inspector for the Canadian Immigration Service in Sarnia, and the family moved to Ottawa only a few years prior to the war when Mr. McCrum was transferred to the capital.

Shortly after the aircraft's disappearance, the *Globe and Mail* printed a story with the headline, "*They Didn't Come Back*" that included the photographs of Sergeant C.J. McCrum, Ottawa; Pilot Officer Frank Hegarty, Sarnia; and Sergeant Don Mather of North Gower, Ontario. A portion of the story read: *RCAF Coastal Squadron Loses First Plane, Crew – On a cold, blustery night an R.C.A.F. coastal squadron plane took off from its airfield on the British North Sea coast and failed to return. The three Canadians pictured above were lost with their craft somewhere in the North Sea.*

The Hudson Bomber with Hugh Hegarty and its crew was never found. It was not until June 1942 that Pilot Officer Hugh Hegarty's death was officially recorded as, *Previously reported missing after flying operations, now for official purposes, presumed dead, overseas.* Perishing with Pilot Officer-Pilot Hugh Hegarty were FS. Don Stuart Mather; Sgt. Charles John McCrum; Flying Officer J.W. Renwick (RAF); and Sgt. Billy Smith (RAF).

On June 8th of 1942, a requiem high mass was celebrated at St. Joseph's Catholic Church in Sarnia for Hugh Hegarty. In mid-July 1942, Catherine of 279 Rose Street, received the following letter from the Air Marshal, Chief of the Air Staff:

Dear Mrs. Hegarty:

I have learned with deep regret that your son, Pilot Officer Hugh Francis Hegarty, previously reported missing on Active Service Overseas is now presumed to have died on October 10th, 1941. I wish to offer both you and Mr. Hegarty my sincere and heartfelt sympathy.

It is so unfortunate that a promising career should be thus terminated and I would like you to know that his loss is greatly deplored by all those whom your son was serving.

The following is a newspaper account of the night on which Hugh Hegarty's aircraft went missing (*Hamilton Spectator*, October 31, 1941 by Douglas Amaron, Canadian Press):

*RAID BY CANADIAN SQUADRON ENDS WITH ONE PLANE LOST
"T For Tommy" Does Not Return After Attack on French Coast
Is Awaited in Vain*

Darkness settled down over the air field as the last plane took off for the Netherlands coast. It was a cold night, with the salty rain blowing in from the North Sea, and Flight-Lieut. C.M. Warren, of Toronto, medical officer of the Royal Canadian Air Force coastal command squadron at the station, was bundled up like an Eskimo in a fur-lined flying jacket. "You can't keep too warm on a job like this," he said. "I have to be here until after midnight and it can get mighty cold at that time of night."

The Canadians, grounded all the previous week because of even worse flying conditions, were out almost in full force. Some were over the Netherlands coast looking for Nazi shipping, some were on cross-country training flights, and some were practicing night landings.

In the distance searchlights played against the low-hanging clouds and the sound of a gun brought the station defence crew to their sand-bagged posts. Flashes of anti-aircraft fire several miles away light the sky.

There were German planes in the area, but no one paid much attention to them. Raids in that district are almost a nightly affair and only a handful of people stayed out in the cold to watch the fireworks display which lasted less than 20 minutes. P.O. Bill Cameron, of Vancouver, brought his plane down for the night after a half dozen landings and muttered a few unkindly words about ground defences. He had flown through the barrage area and almost caught some of the shells meant for Nazi raiders.

"Damned indecent of them," he said as he landed. "They told me there was an enemy craft about so I followed him in. Then what did they do but fire at me. A fellow isn't safe anywhere these days." More planes came back – P.O. Bill Shankland, of Vancouver, from a landing practice, P.O. John McCulloch, of Point Pleasant, West Va., from a cross country flight, and P.O. Bob Wadds, of Toronto, from a flight over the North Sea.

"T for Tommy," with P.O. Frank Hegarty, of Sarnia, Ont., at the controls, and Sergts. Don Mather, of North Gower, Ont., and C.J.F. McCrum, of Ottawa, and an R.A.F. pilot officer in his crew, was the next plane due back. An hour went by and there was no word from it. Sgt. Pilots Bob Mullen, of Ganora, Sask., and J.K. Abbott, of Montreal, arrived almost together. They too had seen nothing but the night, and had heard nothing of "T for Tommy." P.O. Dale Cowperwaite, of Toronto, came in next after being reported several miles off course. "T for Tommy" was two hours overdue.

"A lousy night," Cowperwaite said. "The wireless went haywire, my lights went out, 'George' the automatic

pilot wasn't working, the compass went off. In fact the only thing that worked was the engines. And we didn't see anything either."

The crews huddled around a big kitchen stove, drinking hot tea, eating meat pies and cursing the blackness of the night – one of the few on which they had returned with nothing to report. Outside, Flight-Lieut. Warren stood on the edge of the darkened field beside his ambulance. The rain still beat down and the cold wind whistled around the low-lying buildings beside the sea.

There was still no word from "T for Tommy."

They waited another hour – Cameron, Shankland, McCulloch, Wadda, Mullen, Abbott, Cowperwaite and the crews, and Warren. Then, wearily and saying few words, they piled into their transport and drove slowly through the blackout to the operations room to turn in their reports.

These were brief and to the point and the briefest was in the space reserved for three young Canadians and an Englishman. There, for the first time since the squadron was formed, went down the one word – "missing." "T for Tommy" didn't come home.

In August 1945, Hugh Sr. and Catherine Hegarty received a War Service Gratuity of \$160.92 for the loss of their son Hugh. In late-March 1946, Catherine (then at 412 Confederation Street) received the following letter from an R.C.A.F. Records Officer in Ottawa:

Dear Mrs. Hegarty:

It is a privilege to have the opportunity of sending you the Operational Wings and Certificate in recognition of the gallant services rendered by your son Pilot Officer H.F. Hegarty. I realize there is little which may be said or done to lessen your sorrow, but it is my hope that these "Wings", indicative of operations against the enemy, will be a treasured memento of a young life offered on the altar of freedom in defence of his Home and Country.

Twenty-four-year-old Pilot Officer-Pilot Hugh Hegarty has no known grave. His name inscribed on the Runnymede War Memorial, United Kingdom, Panel 59. On the Sarnia cenotaph, his name is inscribed as H.F. Haggerty.

HORLEY, Wallace Carman (#V/31090)

Wallace Horley planned to return to his career at Imperial Oil after the war ended. He never got the chance. In the summer of 1944, he was aboard one of the "backbone" warships of the Canadian navy when he lost his life during an escort operation during the longest continuous campaign of the war to what British Prime Minister Winston Churchill said was "... the only thing that ever really frightened me during the war..."

Wallace was born in Dewar Lake, Saskatchewan on September 10, 1921, the son of Carman Walter and Rachel (nee Muirhead, born in Dumbarton, Scotland) Horley. Rachel Muirhead, along with her mother and six siblings emigrated from Scotland to Canada in 1911, and initially settled in Saskatchewan. Carman Horley, born 1896 in Becher, Lambton the son of Joseph and Jane Horley, was the fifth of eight children. Their 50-acre family farm was hardly big enough for the size of the family. At a young age, Carman and an older brother travelled west to work on the farms in Saskatchewan. When World War I broke out, Carman enlisted in the army; however he received a discharge in order to continue working on the farms. He started work with the Canadian National (CN) Railway in 1917 and as the rail-line was built westward, he moved with the company.

Carman Horley and Rachel Muirhead were married in Greene, Saskatchewan on November 29, 1917. The Horley's later moved to Cochrane, Ontario and in 1931 settled on a farm south of Port Lambton. In 1935, the Horley family moved a couple of miles north of Port Lambton where Carman supported his family working road construction during the warm weather months and cutting wood in the bush during the winter months. In 1939, the Horley family moved to Sarnia, living at 114 John Street, and Carman supported his large family working in the processing department of Sarnia Refinery.

Carman and Rachel Horley had four daughters and five sons together: Evelyn Mary (born 1918 in Loverna, Sask., became Evelyn Dellow); Alistair James (born September 17, 1919 in Greene); Wallace Carman; Floyd Arthur (born July 26, 1923 in Cochrane), Frances Rachel (born 1929, became Frances Godley); Joseph Robert (born 1931); Jane Isabelle (born 1933); Ruth Agnes (born 1935, became Ruth Sainsbury); and William Donald (born 1937).

Three of the Horley boys served with the Royal Canadian Navy during the war. The Royal Canadian Navy consisted of three organizations that were frequently lumped together with little distinction under the title of Royal

Canadian Navy: the professional force, the Royal Canadian Navy (RCN), were sailors that had made naval warfare their profession and had been trained at the naval college and on Royal Navy ships; the Royal Canadian Naval Reserve (RCNR), drew upon the merchant navy and the pool of men who made their living as fishers; and the Royal Canadian Naval Volunteer Reserve (RCNVR), the ordinary sailors from across the country who would form the bulk of the navy. The three categories of sailor were distinguished by the distinctive stripes on the cuffs of their uniforms: the RCN had broad straight stripes; the RCNR had criss-crossed stripes; and the RCNVR had wavy stripes, which led them to calling themselves the “Wavy Navy”.

Port Lambton 1937

Floyd (14), Alistair (18), Carman (41), Wallace (16) and Joseph (6)

The first to join was Floyd in January 1941, becoming a Wireless Operator with the Royal Canadian Navy (RCN) serving off the west coast aboard the corvette *HMCS Moncton* and the River Class frigate *HMCS Buckingham*. Alistair was the second to join in the fall of 1941, becoming a Chief Petty Officer with the Royal Canadian Naval Reserve (RCNR) serving aboard the armed merchant cruiser *HMCS Prince Henry* in the Pacific and the “E” Class destroyer *HMCS Gatineau*. Wallace was the third Horley boy to join the navy, becoming a member of the RCNVR. The eldest Horley daughter, Evelyn, married William “Bill” Dellow. He also served in the war, with the Canadian Army, Elgin Regiment. Corporal Bill Dellow served with the Canadian Corps in Italy, was wounded there, and survived the war.

Growing up in Port Lambton, the Horley children spent a lot of their time on or in the water; sailing and swimming. Floyd, Alistair and Wallace all worked for a time on Canada Steamship Lines (CSL) ships on the Great Lakes. For them, that familiarity and comfort in the water no doubt impacted their decision to join the Navy. Wallace attended school in Port Lambton, leaving school after completing grade eight in order to work to help support the family. Wallace enjoyed playing baseball and sailing, he had a girlfriend, and his family members described him as the “strong, silent type”.

Canada and Newfoundland declared war on Germany on September 10, 1939. Three days earlier, on September 7, 1939, Wallace Horley joined the Canadian Active Service Force (CASF), the 11th Field Company, Royal Canadian Engineers in Sarnia. It was also three days before his eighteenth birthday. Wallace was a cement worker at the time, living in Port Lambton. Two months later, Sapper Wallace was discharged from the CASF when “his services were no longer required”. He then went to work at Imperial Oil Company in Sarnia, as a pipe fitter, living with his parents who were then residing at 114 John Street, Sarnia.

On March 19, 1942, twenty year-old Wallace Horley enlisted in the Royal Canadian Naval Volunteer Reserve in Windsor, Ontario. He stood six feet tall, had blue eyes and light brown hair and was single. He stated that he planned to return to Imperial Oil after the war. His initial training was in Windsor on the *HMCS Hunter* until mid-May 1942. He would serve on the *HMCS Cornwallis* (May 18-July 21, 1942), and the *HMCS Venture* (July 22, 1942-January 13, 1944). On January 14, 1944, then Stoker Horley was assigned to the crew of the *HMCS Alberni (K103)*, a corvette of the Flower class. The *Alberni* was based out of Stadacona (Halifax) until April 21, 1944, then based out of Niobe (Scotland).

Alistair J. Horley

Wallace C. Horley

Floyd A. Horley

Beginning on the opening day of the Second World War, the **Battle of the Atlantic** would be the longest continuous campaign of the war, and one in which Canada played a central role. The Royal Canadian Navy, along with the Royal Canadian Air Force (RCAF) and Canada's Merchant Navy, played a vital role in defending the country's eastern coast and escorting convoys of ships carrying men and essential machinery, arms, fuel and basic resources between North America and Europe.

Built at the Yarrows Limited shipyard in Esquimalt, British Columbia, and named to honour the town of Alberni on Vancouver Island, the *Alberni* had been commissioned for service by the Royal Canadian Navy on February 4, 1941. She arrived at Halifax in mid-April 1941, and just over a month later, departed for St. John's to join the recently formed Newfoundland Escort Force (NEF). She was the first western Canadian corvette assigned as a convoy escort and played a prominent role in the Battle of the Atlantic when the depredations of German U-boats were at their peak. In her illustrious career, the *Alberni* was credited with one probable sinking of a Nazi submarine; it assisted in several other kills; had shot down a Junkers 88 bomber; took part in the British invasion of North Africa; and had rescued countless numbers of men from the sea after Allied ships were attacked. In April of 1944, she was one of seventeen RCN corvettes sent to the UK in support of *Operation Neptune*, the landings at Normandy in June 1944. Wallace wrote a letter to his parents saying that he had participated in the invasion of Normandy, France while aboard the *Alberni*.

Flower Class Corvette *HMCS Alberni K103*

In August 1944, *HMCS Alberni* was on patrol for U-boats to the eastward of the swept channel leading to the Normandy beaches. On August 21, 1944, she was steaming south along the Isle of Wight at 14 knots in tough weather escorting a convoy in the English Channel southeast of the Isle of Wight. At 11:37 a.m. the “hands to dinner” pipe was sounded, calling many of the hungry sailors to the mess halls below deck. Four minutes later, with no asdic warning whatsoever, the *Alberni* was struck by a torpedo fired by German submarine *U-480*. The torpedo struck the ship on her port side immediately aft of the engine room. Within moments of the attack the ship was awash from the funnel aft, listing to port. The stern sank first. The ship rolled to port, and then the bow went under. The *Alberni* disappeared in less than one minute.

There was a strong wind and heavy seas at the time, and with the speed of the disaster, there was no time to release the ship’s boats and Carley floats and many of the men didn’t have time to put on life belts. The surviving crew members were those positioned farther forward, but even many of them never reached the upper deck. Four officers and 55 members of the crew, representing 2/3 of the *Alberni*’s crew, were lost in the attack. For those dazed in the water, after forty-five minutes of struggling in the heavy seas, thirty-one crew members were rescued by Royal Navy motor torpedo boats 469 and 470 and taken to Portsmouth. Wallace Horley was one of the crew members who lost his life in the attack. At the time, no cause was given for the loss of the warship. The *Alberni* was the 8th corvette and 18th Canadian fighting ship to be lost in World War II.

Stoker 1st Class Wallace Horley

U-480 was an experimental vessel, considered by many to be the first stealth submarine due to its special synthetic rubber coating technology called “Alberich”. The rubber contained a series of holes that helped break up sound waves. This is why the *Alberni*, despite sweeping with asdic radar and sonar, had no indication the submarine was in the area. The *Alberni* was determined to be the first allied vessel to be sunk by “Alberich” technology. Between August 21-25, 1944, *U-480* sank two warships; *HMCS Alberni* and *HMS Loyalty*, and two merchant ships; *Fort Yale* and *Orminster*. Five months after sinking the *Alberni*, sometime between late January and mid-February 1945, *U-480* struck a mine southwest of the Isle of Wight, sending it to the bottom and the entire crew of 48 was lost.

On August 23, his parents on John Street in Sarnia received a telegram that read; THE MINISTER OF NATIONAL DEFENCE FOR NAVAL SERVICES DEEPLY REGRETS TO INFORM YOU THAT YOUR SON WALLACE CARMAN HORLEY STOKER FIRST CLASS OFFICIAL NO V-31090 IS MISSING AT SEA LETTER FOLLOWS. No other details were provided. In late August 1944, Carman received the following letter from the Secretary, Naval Board:

Dear Mr. Horley:

It is with deepest regret that I must confirm the telegram of the 23rd of August, 1944, from the Minister of National Defence for Naval Services, informing you that your son, Wallace Carman Horley, Stoker First Class, Official Number V-31090, Royal Canadian Naval Volunteer Reserve, is missing at sea.

The only information that can be given at this time is that your son is missing at sea when the ship in which he was serving was lost by enemy action in the English Channel. As soon as further particulars can be released, you will be informed.

Should you know the name of the ship in which he was serving, it is requested that, for security reasons, you will regard this information as confidential until such time as an official announcement is made. Please accept the sincere sympathy of the Department in your anxiety.

In mid-September 1944, Ottawa released the casualty list in connection with the sinking of the *Alberni*, and Stoker First Class Wallace Carman Horley was among those listed as missing from the lost warship. Information released from Ottawa included that two-thirds of the crew were either dead or missing after the sinking and that the attack occurred while the vessel was pursuing “invasion duties”. No cause was given for the loss of the ship.

In December of 1944, Wallace Horley’s death was later officially recorded as, *Missing, presumed dead. He was serving in H.M.C.S. ‘Alberni’ which was sunk in the English Channel.* In early March 1945, Stoker First Class Wallace Horley, along with Army Private Russell Jolly (included in this Project), were honoured at a memorial service at Devine Street United Church. Both men were members of the congregation and both had died recently while on active service. In mid-June 1945, Carman and Rachel Horley received a War Service Gratuity of \$311.59 for the loss of their son Wallace.

Many years later, Frances Godley (nee: Horley) recalled the day that the military men came to the John Street home to break the news. Then fifteen years old, Frances remembered what was on everyone’s mind was, “which of them is it?” because three boys were serving at the time. Frances also recalled the time the Commanding Officer (CO) of the *Alberni*, Ian H. Bell, came to visit Carman and Rachel months after the sinking. “He cried”, Frances remembered, because she had not seen a man cry before.

His death was a devastating blow to the Horleys—one that his siblings later described as “the saddest day in our family’s history”. Father Carman Horley seemed to be the most impacted by the tragedy—Wallace was named after his father, and like his father, had the strong, silent and stoic personality. For all the family members, little was said about Wallace after his death, the emotions were too agonizing. Years later, Carman and Rachel did visit the Halifax Memorial.

Twenty-two-year-old Wallace Horley has no known grave. His name is inscribed on the Halifax Memorial, Nova Scotia, Panel 12. His name is also inscribed on the Sarnia Refinery Plaque. Unveiled in 1949, the plaque has the names of 24 Sarnia Imperial Oil employees who made the ultimate sacrifice in World War II. Wallace’s parents are both buried in Lakeview Cemetery in Sarnia. On their gravemarker are inscribed the words, HORLEY CARMAN WALTER 1896-1968 HIS WIFE RACHEL MUIRHEAD 1899-1974 THEIR BELOVED SON WALLACE CARMAN 1921-1944 LOST AT SEA H.M.C.S. ALBERNI. HUMBLE, George Horace (#A/50455)

George Humble, a dairy farmer, was married and had a four-month-old daughter at home when he made the decision to serve his country. He gave his life for Canada fighting in one of the most brutal and longest campaigns of the war.

He was born in Ridgetown, Ontario on August 14, 1912, the son of John (a farmer) and Beatrice Florence Humble, of Ridgetown, Ontario. John and Beatrice were married on May 6, 1897 in London, England, and they had ten children together. Their six sons were; George, John Thomas, Leonard Arthur, Albert Edward, Frank and William (John, Leonard and Albert would serve in the U.S. Army); and their four daughters were; Beatrice, Lillian May, Isabel Ellen and Francis Jean (would serve in the C.W.A.C.). George attended public school in Ridgetown until 1924, when at the age of twelve and in grade eight, he left school because he wanted to go to work. He was active in baseball, skating and swimming.

George’s pre-war employment included five years on dairy farm in the United States, three years working a tiling machine (drainage), two years driving as a chauffeur, and five years on a dairy farm--employed by Murray Smith of R.R. #1, Sarnia. At the age of twenty, George Humble married Mabel Ellen Humble on September 12, 1932 in Chatham, Ontario. George and Mabel had one daughter together, Maxine Dianne Humble, born in July 1940. Prior to enlisting, George served three months with the 2nd-11th Field Company, Lambton.

Twenty-eight-year-old George Humble enlisted on November 18, 1940 in Chatham, Ontario with the First Kent Regiment, Canadian Army. He stood five feet five and three quarter inches tall, had blue eyes and brown hair, and recorded his occupation as dairy farmer. He recorded his residence at the time as 163 Selkirk Street, Chatham, and his next of kin as his wife, Mabel Humble, c/o Mrs. Don Robertson, London Road, R.R.#1, Sarnia, Ontario.

George had plans to be a welder after the war.

George received his army training in Chatham, London, New Westminster and Terrace, British Columbia. He embarked overseas for the United Kingdom on March 22, 1943, where he became a member of #3 Canadian Infantry Reinforcement Unit (CIRU). On April 1, 1943, he was posted as a reinforcement to the Essex Scottish Regiment, with whom he continued his training. On June 2, 1943, he was transferred to the West Nova Scotia Regiment, Royal Canadian Infantry Corps (RCIC) with the rank of Private.

George Humble sailed from the U.K. on December 25, 1943, arriving the next day in the Italian Theatre, as a member of the West Nova Scotia's. The **Italian Campaign**, the first sustained Canadian Army operation of the War, had begun with the invasion of Sicily in July 1943. The fierce fighting on the island lasted more than four weeks, during which the Canadians would advance through difficult mountainous terrain, against an ever-stiffening German resistance. By August 17, the Germans had evacuated from the island to the Italian mainland. In early September, Canadian and Allied forces would invade Italy. Though Italy surrendered shortly after, the occupying Germans made it clear their fight was not over. Liberating Italy would be a painstaking northward crawl, lasting 20 months, over a range of landscapes, through challenging weather, and against a series of well-protected defences held by some of the German army's best troops.

George Humble served a little less than one year in the Italian theatre and was admitted to the Canadian General Hospital (CGH) at least two times. On December 10, 1944, Private George Humble was killed in action during operations in Italy. George's remains were buried on December 11 at a location recorded on the Army Field Service Card as "Russi WNSR Cemetery Sh 89/III SW Italy 1/25,000 MR 440325".

In mid-June 1945, Mabel Humble, c/o Don Robertson R.R.#1, Sarnia, received the following letter from the Colonel, Director of Records, for Adjutant-General:

Dear Madam:

Information has now been received from the overseas military authorities that your husband, A50455 Private Horace George Humble, was buried with religious rites in a temporary cemetery located at Russi, approximately nine miles South-West of Ravenna, Italy.

The grave will have been temporarily marked with a wooden cross for identification purposes and in due course the remains will be reverently exhumed and removed to a recognized military burial ground when the concentration of graves in the area takes place. On this being completed the new location will be advised to you, but for obvious reasons it will likely take approximately one year before this information is received.

In late December 1944, Mabel received the following letter from the Major-General, Adjutant-General:

Dear Mrs. Humble:

It was with deep regret that I learned of the death of your husband, A50455 Private Horace George Humble, who gave his life in the Service of his Country in the Mediterranean Theatre of War on the 10th day of December, 1944.

From official information we have received, your husband was killed in action against the enemy. You may be assured that any additional information received will be communicated to you without delay.

The Minister of National Defence and the Members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

George Humble's death was later officially recorded as, *Overseas casualty, killed in action, in the field (Italy)*. On a Sunday afternoon in early February of 1945, London Road West United Church in Sarnia held a memorial ceremony for two members of the church who had lost their lives recently in the war. Rev. P.S. Banes presided over a ceremony honouring Private Horace Humble, who had lost his life December 10, 1944 in Italy and Lance Corporal Robert John Wade, who had lost his life January 4, 1945 in Italy (included in this Project).

In August 1946, Mabel Humble received a letter from the Colonel, Director of Records, for Adjutant-General. Following is a portion of that letter:

Dear Madam:

Information has just been received from overseas that the remains of your husband, A50455 Private Horace George Humble, have been carefully exhumed from the original place of internment and reverently reburied in grave 16, row F, plot 5, of Ravenna British Empire Cemetery, five miles West of Ravenna, Italy. Marked map is enclosed. This is a recognized military burial ground and will receive care and maintenance in perpetuity.

The grave will have been marked with a temporary cross which will be replaced in due course by a

permanent headstone suitably inscribed. While it cannot now be stated when this work of permanent commemoration will begin, before any action is taken you will be communicated with and an opportunity will be given you to submit a short personal inscription of your own choice for engraving on the headstone...

Thirty-two-year-old George Humble is buried in Ravenna War Cemetery, Italy, Grave V.F.16. George Horace Humble left behind his parents John and Beatrice Humble in Ridgetown, his wife of twelve years Mabel at R.R. #1, Sarnia, and their four-year old daughter, Maxine Dianne. On George Humble's headstone are inscribed the words, SOMEDAY WE SHALL MEET YOU WHERE THERE WILL BE NO MORE GOODBYES. LOVING WIFE AND DAUGHTER. Mabel later remarried, becoming Mabel Smith, residing on Mornington Avenue in London, Ontario.

IRWIN, Frederick Hansell (#J/40904)

Frederick Irwin was born in Baltimore, Maryland, was educated in Alberta, and was working at Imperial Oil when he enlisted in the RCAF in 1943 at age 24. One month before the war ended, he was a navigator aboard Halifax MZ482 when it was on a bombing mission over Witten, Germany. The Halifax was hit by flak and, on its return flight, collided with an RAF Mosquito. Frederick Irwin, 25, was killed in the crash and was survived by his parents and his wife of under two years.

Frederick Hansell Irwin was born April 23, 1919 in Baltimore, Maryland, USA, the son of Leslie Henry (born in Calgary) and Zua Marie Irwin (nee Honens, born Iowa, USA). Leslie Irwin and Marie Honens were married on May 10, 1918 in San Francisco, California, and eventually resided in Edmonton, Alberta.

Frederick attended Earl Grey elementary school in Calgary (1925-33), and then Scona High School in Edmonton, Alberta (1933-37). From 1937 to 1941, he attended the University of Alberta (U of A) in Edmonton where he obtained his Bachelor of Science degree in Chemistry. In 1937-38, as an eighteen year-old student at U of A, he completed his COTC program, obtaining the rank of Corporal. In 1940-41, still a U of A student, he served as a Private in an Auxiliary Battalion. In 1941-42, he resided in Pasadena, California, where he completed post-graduate studies at the California Institute of Technology.

While in California, Frederick met and fell in love with his future wife, Anne Elizabeth Gillespie. She had just graduated from the University of California (U of C) in Los Angeles. Mrs. Helen Laughlin, the Dean of Women at U of C stated that Anne Gillespie, "was one of the most outstanding and thoroughly fine students that the university has ever had." After graduating U of C, Anne Gillespie was granted a two-year graduate scholarship at Syracuse University. After a year in California, Frederick returned to Canada. In 1942, he was employed as a chemist at D.I.L. (Explosive Division) in Nobel, Ontario. In 1942-43, he was employed as a chemist at Imperial Oil Limited in Sarnia.

On May 17, 1943, Frederick Irwin, 24, enlisted with the Royal Canadian Air Force at RCAF No.9 Recruiting Centre in London, Ontario. He stood five feet six inches tall, had blue eyes and brown hair, was single, and was residing at 186 Maria Street in Sarnia at the time. He recorded his permanent address as 8804-101st Street, Edmonton, Alberta; his next-of-kin as his mother Zua Marie at that same address; his father's occupation as merchant; and his own occupation as a chemist. Frederick was active in skating, swimming and tennis and enjoyed photography as a hobby. Three of his references were Sarnians: H.B. Galpin, Public School Inspector (Frederick had joined the Galpin family at home and at church while in Sarnia); Fred P. Irwin, Chairman of Imperial Oil Limited in Sarnia; and L.F. Whitfield, St. Clair Proc. Corp., Chief Chemist.

From #5 Manning Depot in Lachine, Quebec, Frederick received his training at #3 Initial Training School (ITS) in Victoriaville (June-September 1943); and #4 Air Observer School (AOS) in London, Ontario (September 1943); and at #2 Air Graduate Training School (AGTS) in Quebec (February 1944). On August 7, 1943, mid-way through his training, Frederick Irwin married Anne Elizabeth Gillespie in Ottawa, Ontario. She would go by the name Anne Gillespie Irwin. Eight months later, on April 29, 1944, Frederick embarked overseas from Halifax bound for the United Kingdom. He arrived in England on May 7, 1944.

Once overseas, from #3 Personnel Reception Centre, Frederick continued his training in the U.K. with an Advance Flying Unit (AFU) at Bishop's Court; and then #86 Operational Training Unit (OTU) at Gamston; and then #1664 Conversion Unit (CU) at Tholthorpe. On January 19, 1945, Flying Officer (F/O) Frederick Irwin became a member of RCAF #425 (Alouette) Squadron, part on **Bomber Command**.

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

No. 425 Squadron had formed in June 1942 at RAF Dishforth in Yorkshire, England. It was designated the "First French Canadian Squadron" and was equipped with Vickers Wellingtons. Bomber Command combed other squadrons for French speaking air and ground crews to fill its ranks. On January 1, 1943 the squadron was transferred to No. 6 (RCAF) Group. In May 1943, RCAF #425 Squadron had moved their base of operations from RAF Dishforth to Kairouan in Tunisia (North Africa). From there, still flying Wellingtons, it conducted operations against Sicily and Italy. In November 1943, the squadron returned to Dishforth and resumed its operations from there, and the following month was re-equipped with Handley Page Halifaxes. In December 1943, the squadron was transferred to RAF Tholthorpe, Yorkshire.

Frederick Irwin completed five operational missions over enemy territory. On the night of March 18, 1945, F/O Frederick Irwin was the Navigator aboard Halifax III MZ482 (markings KW-G) that took off from RAF Tholthorpe at 2355 hours. The aircraft was detailed to carry out a night bombing operation over Witten, Germany, one of 324 aircraft involved. While over the target, the Halifax was hit and damaged by flak. The aircraft then began its return to base, proceeding at 3,800 feet at 190 m.p.h.

In the early morning hours of March 19, between 0500 and 0530 hours, Halifax MZ482 was in a collision with another Allied aircraft, an RAF Mosquito Bomber from #515 Squadron. Both aircraft crashed to the ground near Laroche, Belgium. Of the seven crew members aboard the Halifax, six of them, including Frederick Irwin, did not have time to bale out. One survivor from the Halifax, the Rear Gunner, F/S B.A. Balyx, was thrown out of his turret when the aircraft turned over suddenly and was able to parachute to safety. He landed among trees and was picked up by villagers and conveyed in British Transport to Ciney Hospital.

F/O Frederick Hansell Irwin

The crew of Halifax MZ482

Perishing with F/O Frederick Irwin were W/O Arthur John Guy Temple; F/O Joseph Gilbert Newton Lejambe; F/S's John Shaw Wilson and Alexander Banks; and Sgt. Lloyd George Hinch. The two RAF crew members aboard the Mosquito aircraft also perished: F/L Arthur Walter Hiron (DFC) and F/S Peter Charles Williams. The bodies of the eight airmen were left overnight in the care of the villagers, and an R.A.F. burial party had arranged to arrive the next morning to carry out burial arrangements; however during the night, a party from one of the American Cemetery Organizations arrived and removed the bodies for burial to the American Cemetery at Neuville-en-Condor, Belgium. The eight bodies were so badly mutilated that only three of them--Temple, Banks and Wilson could be identified. The eight bodies were later exhumed and reinterred in the Hotton British Military Cemetery in Belgium.

On March 27, 1945, parents Leslie and Marie Irwin in Edmonton, and wife Anne Gillespie Irwin in New York, received an air mail letter from the Air Commodore in Ottawa informing them that Frederick Irwin was, PREVIOUSLY REPORTED MISSING 19-MARCH-45 AFTER AIR OPERATIONS OVERSEAS, IS NOW REPORTED KILLED ON ACTIVE SERVICE, BODY RECOVERED. During the war, Anne Gillespie Irwin

resided in New York City and later moved to Beverley Hills, California. Years later she remarried, becoming Anne Allen residing in Beverley Hills. Frederick Hansell Irwin, 25, is buried in Hotton War Cemetery, Belgium, Grave I.C.1-7. On his headstone are inscribed the words, THE LORD WATCH BETWEEN US AND THEE, WHILE WE ARE ABSENT ONE FROM THE OTHER. His name is also inscribed on the Sarnia Refinery Plaque. Unveiled in 1949, the plaque has the names of 24 Sarnia Imperial Oil employees who made the ultimate sacrifice in World War II.

JAMIESON, Rowland Craig (#V/22037)

Rowland Jamieson was married and had two young daughters at home when he made the decision to serve his country. It was during the longest continuous campaign of the war that he lost his life aboard a ship that was torpedoed by an enemy submarine.

He was born in Forest, Ontario on January 15, 1905, the son of David Craig and Nellie (nee Wiseman) Jamieson, of 111 Wellington Street, Sarnia. David Jamieson married Nellie Wiseman in Granton, Ontario on August 3, 1893. David and Nellie Jamieson had six children together: sons David Park (born March 1903, who later lived in Ottawa); Rowland, and James (who later lived in Indianapolis, Indiana, and died 1934); and daughters (who at the time of Rowland's death were all living in Sarnia) Annie Jamieson (111 Wellington St.); Mrs. Gordon Logan (273 George St.); and Mrs. Edwin McCracken (334 ½ Wellington St.). When Rowland was born, the Jamieson's were living in Forest, Ontario and David was employed as a baker.

At the age of twenty-seven, Rowland Jamieson married Laura Frances Jane Lindsay (of Toronto) on May 16, 1932 in Detroit, Michigan. Rowland and Laura Jamieson had two daughters together: Frances Craig (born July 14, 1933), and Mary Rachel (born September 30, 1938). Three years later, when Rowland was thirty years old, he lost his father David who passed away at the age of 75 on April 13, 1935.

Less than two years after the birth of his second daughter, thirty-five-year-old Rowland Jamieson joined the Royal Canadian Naval Volunteer Reserve (RCNVR) on July 15, 1940 in Toronto. He stood five feet nine inches tall, had brown eyes and brown hair, and was employed as a radio test engineer, with Burlec Limited, Scarboro Junction at the time. Rowland, his wife Laura and their two daughters were living at 198 Westminster Avenue, Toronto.

Rowland served at Division Headquarters in Toronto as an Ordinary Telegrapher until late November 1940, and then Nova Scotia Headquarters in the same capacity, and then as Leading Seaman until mid-February 1941. He then transferred to Ottawa Headquarters as a Warrant Officer, Special Branch until May 1941. He then embarked overseas, assigned to *HMS Victory*.

During World War II, the *HMS Victory* was a shore base barracks in Portsmouth, England where the famous ship of that name sat in drydock. The *HMS Victory* was the Royal Navy ship launched in 1765, made famous as Lord Nelson's flagship at the Battle of Trafalgar. Men stationed at *HMS Victory* during the Second World War were there either attending a training course or waiting for assignment to another ship. Rowland was stationed there until December 1941. In early January 1942, Rowland was re-assigned to Ottawa (*HMCS Bytown*).

On January 7, 1942, Warrant Officer (Special Branch) Rowland Jamieson began his voyage from the United Kingdom back to Canada. He travelled aboard the *Ringstad*, a Norwegian motor merchant ship of approximately 4,800 tons. The ship was originally constructed in April 1923 and named the *Talisman*, but in 1940, it was renamed the *Ringstad*.

Ringstad (when named *Talisman*)

After the sinking of the British passenger liner *SS Athenia* on September 3, 1939, merchant ships would be grouped in “convoys” and protected by escorting warships to save them from being destroyed by U-boats one at a time. The Royal Canadian Navy, along with the Royal Canadian Air Force (RCAF) and Canada’s Merchant Navy, would play a vital role in escorting convoys of ships carrying men and essential machinery, arms, fuel and basic resources between North America and Europe (and in defending the country’s eastern coast). The **Battle of the Atlantic** would be the longest continuous campaign of the war. Even with the protection of armed escorts it was always a treacherous voyage for the dozens of merchant ships travelling in a zig-zag fashion across enormous tracts of ocean. They manoeuvred in crowded ranks, without lights, wireless or navigational aids and used haphazard communication. The risks included the constant threat of fierce attacks by German U-boats or air attack, the danger of collision, underwater mines, rough water and the hazardous weather, fog, gales and ice conditions in the North Atlantic.

On this January 1942 voyage, the *Ringstad* was on its way to St. John, New Brunswick, having left the United Kingdom ports of Cardiff and Belfast on January 13, joining the Convoy ON 56 (approximately 40 ships), with a cargo of 2600 tons of china clay. As the convoy sailed westward across the Atlantic, it ran into several days of stormy weather. As a result, the *Ringstad* lost touch with the convoy. The ship received a radio message on January 23 that one of the ships in the convoy had been torpedoed along their intended route, so the *Ringstad* altered her course. She was alone on January 24, 1942 when at 4:25 pm, approximately 85 miles southeast from Cape Race, Newfoundland, the *Ringstad* was hit on the starboard side in the foreship by one torpedo from German U-boat *U-333*. Following a powerful explosion, in the words of the U-boat captain, “shortly afterwards she slid stem-first into the depths” as all on board abandoned ship in three lifeboats. The *Ringstad* went down in about 20 minutes. The German U-boat came up and from the conning tower offered food and water, and then someone pointed in the direction of the nearest land, before the U-boat disappeared. The weather worsened and the boats were unable to stay together in the stormy and cold conditions.

After five days, one lifeboat containing the captain, twelve men, and the captain’s dog was spotted by an escorting aircraft. The American destroyer *USS Swanson* was sent to assist. The lifeboat was covered in ice and the men had been constantly bailing as it had been continually taking on water in the heavy seas. The exhausted and frostbitten men landed at Reykjavik, Iceland on February 5, 1942. The two other lifeboats containing 27 crew members and three passengers were never seen again. The captain assumed, based on his own experiences, that the 30 missing men in the other two boats had frozen to death. All were declared missing and presumed killed. Rowland Jamieson was part of the group that was never found.

In late February 1942, Laura Jamieson in Toronto received the following letter from the Secretary, Naval Board:

Dear Madam:

It is with deepest regret that I must confirm the telegram of the 20th February from the Minister of National Defence for Naval Services informing you that your husband, Rowland Craig Jamieson, Warrant Officer, R.C.N.V.R., is missing on war service.

Your husband was borne for passage to Canada in a British Merchant ship which sailed from a United Kingdom port about the 7th of January, and has been missing since the 24th of January. There are no details available at this time.

It is not possible to estimate the probability of his having been rescued, but to date no word has been received and very little hope is held out for his survival. You will be informed immediately should any further information be received.

I wish to express the sincere sympathy of the Chief of the Naval Staff, Officers and men of the Royal Canadian Navy, the high traditions of which your husband has helped to maintain.

Rowland Jamieson’s death was later officially recorded as, *Missing and presumed dead by Naval Authority. He was bound for passage to Canada in a British Merchant ship which sailed from a United Kingdom port about the 7th January, and has been missing since the 24th January, 1942.*

Five years after the sinking of the *Ringstad*, Laura was still searching for answers about the death of her husband. In late May 1947, she received the following letter from the Naval Secretary:

Dear Mrs. Jamieson:

Further to my letter of the 15th of April, 1947, in reply to your request for further information regarding the loss of your husband, the late Mr. Rowland Craig Jamieson, Warrant Officer (S.B.), Royal Canadian Naval

Volunteer Reserve, 0-36215, it is regretted that very few particulars concerning his death have come to light.

As you know, he was returning to Canada from the United Kingdom and was taking passage in the Norwegian cargo vessel, S.S. "RINGSTAD". This ship had departed from Cardiff, England, on the 14th of January, 1942, and was scheduled to dock at St. John, New Brunswick, on or about the 28th of January, 1942. The ship "RINGSTAD" was in Convoy ONS 56 which was made up of 37 ships when she was torpedoed by a German submarine about 90 miles South East of Cape Race, Newfoundland. The sinking occurred at about 4:30 p.m. on the 24th of January.

Rowland Jamieson left behind his widowed mother, his three sisters (all residing in Sarnia), his brother, his wife Laura and their two daughters, Frances (age 8) and Mary (age 3). After Rowland's death, Laura lived at 200 Merton Street, then 103 Castlefield Avenue in Toronto. In February 1946, Laura Jamieson received a War Service Gratuity of \$158.80 for the loss of her husband. Thirty-seven-year-old Warrant Officer Rowland Jamieson has no known grave. His name is inscribed on Halifax Memorial, Nova Scotia, Canada, Panel 8.

JARVO, Francis Alexander (#A/108262)

Francis Alexander Jarvo found work in Sarnia that suited him before he enlisted at age 19. His post-war plans to get his electrician's ticket ended in 1944 when Francis was killed in the brutal fighting of the Battle of the Scheldt.

He was born in Cornwall, Ontario on October 1, 1924 the son of Robert Edward and Jeanette Mary (nee Morin) Jarvo, of 737 York Street, later 761 York Street, Cornwall, Ontario. Robert (born St. Andrew's, Ontario and employed in a paper mill) and Jeanette (born Cornwall, Ontario) were married in Cornwall, Ontario on November 3, 1915. It was a crowded household for the Jarvos had ten children together: daughters Vivian (Mrs. Lawrence Tessier), Elaine, Melva, Theresa, Camilla and Betty; and sons Basil Robert, Joseph Anthony, Bernard William and Francis. Basil and Francis both served with the Canadian Army during World War II.

Francis graduated from grade eight in a Separate Elementary School in Cornwall but attended only two years of high school and left before he complete grade 10. He felt he should stop and help finance the large family budget. To that end, he had several jobs after leaving school—as a labourer at a Beach Furniture Company; as a general helper at Floyd's Meat Market; as a labourer and storeman's helper at Pigott Construction Company; and as an electrician's helper at Carter Hall Contracting Company in Sarnia. Sometime before he enlisted, Francis had moved to Sarnia.

Nineteen year-old Francis Jarvo enlisted in the Canadian Army on September 22, 1943 in London, Ontario. On his enlistment papers, he wrote that he had worked in Sarnia for seven months as an electrician's helper and recorded his address as Polymer Corporation, Sarnia. He stood five feet four and a half inches tall, had blue eyes and brown hair, and was single at the time. He must have enjoyed his time as an electrician's apprentice because his post-war plans were to get his journeyman's ticket as an electrician. He volunteered for the Paratroops, but his superiors had other ideas and recommended him for infantry. From #1 District Depot in London, Francis received his army training at #12 Basic Training Centre (BTC) in Chatham; at A-29 Canadian Infantry Training Centre (CITC) in Ipperwash; and at Canadian Driving and Maintenance School (CD&MS) in Woodstock. Seven months after enlisting, Francis completed his training in mid-April 1944.

On April 29, 1944, Francis Jarvo embarked overseas for the United Kingdom, where he was posted with the #2 Canadian Infantry Reinforcement Unit (CIRU). On July 18, 1944, Francis arrived in France as a member of the Essex Scottish Regiment, R.C.I.C., with the rank of Private. He would serve with the Essex Scottish for three months as they advanced through France and into Belgium.

The **Battle of Normandy** had begun for the Canadians with the June 6, 1944 D-Day landings at Juno Beach. After breaching the "Atlantic Wall" of "Fortress Europe", Allied armies began their break out from the narrow Normandy bridgehead to carve out a foothold on the French mainland. It would take a whole summer of tenacious fighting, pushing against fierce and ruthless German forces to advance east across France. In a brutal campaign of attrition, the Canadians faced fierce battles and vicious counterattacks as they clawed their way forward liberating villages and towns including Bretteville, Carpiquet, Caen and Falaise.

After the Allied breakout from Normandy, Canadian forces were assigned the "**Long Left Flank**", the less glamorous but vital tasks of clearing coastal areas in the north of France and Belgium of German occupiers; opening

the English Channel ports for supplies essential to the Allied advance; and capturing the launching sites of German V-1 rockets. In a series of stop-and-start advances against stiff resistance in fortified positions, the Canadians liberated ports and villages including Rouen, Dieppe, Dunkirk, Boulogne and Calais.

In early October 1944, the Canadians were entrusted with liberating the Scheldt estuary--the 45-mile-long estuary (the Belgian-Dutch border area) that connected the port of Antwerp to the North Sea. The **Battle of the Scheldt** was among the most difficult and grueling struggles in the war. The bitter fighting against a well-fortified and heavily entrenched enemy took place in a bleak environment made worse by the winter cold in a flooded and freezing muddy quagmire.

It was during the Battle of the Scheldt, on October 18, 1944, that Francis Jarvo of the Essex Scottish was severely wounded in Belgium. The following day, he lost his life as a result of his wounds. Francis Jarvo's remains were initially buried on October 20, 1944 at a location recorded as "Military Cem of Antwerp Belgium MR.67095 Plot No. Brit, Row T, Grave 19".

A few days later, Jeanette Jarvo received the following telegram in Cornwall from the Director of Records about her son: MINISTER OF NATIONAL DEFENCE SINCERELY REGRETS TO INFORM YOU A108262 PRIVATE FRANCIS ALEXANDER JARVO HAS BEEN OFFICIALLY REPORTED WOUNDED IN ACTION EIGHTEENTH OCTOBER 1944 NATURE AND EXTENT OF WOUNDS NOT YET AVAILABLE STOP WHEN ADDRESSING MAIL ADD WORDS IN HOSPITAL IN BOLD LETTERS AFTER NAME OF UNIT FOR QUICK DELIVERY STOP WHEN FURTHER INFORMATION BECOMES AVAILABLE IT WILL BE FORWARDED AS SOON AS RECEIVED.

Jeanette did not have to wait long and the news was devastating. The very next day, Jeanette received this telegram from the Director of Records: MINISTER OF NATIONAL DEFENCE DEEPLY REGRETS TO INFORM YOU THAT A108262 PRIVATE FRANCIS ALEXANDER JARVO HAS NOW BEEN OFFICIALLY REPORTED DIED OF WOUNDS NINETEENTH OCTOBER 1944 STOP IF ANY FURTHER INFORMATION BECOMES AVAILABLE IT WILL BE FORWARDED AS SOON AS RECEIVED.

In November 1944, the Major-General, Adjutant-General wrote this letter to Jeanette:

Dear Mrs. Jarvo:

It was with deep regret that I learned of the death of your son, A108262 Private Francis Alexander Jarvo, who gave his life in the Service of his Country in the Western European Theatre of War on the 19th day of October, 1944.

From official information we have received, your son died as the result of wounds received in action against the enemy. You may be assured that any additional information received will be communicated to you without delay.

The Minister of National Defence and the Members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

Francis Jarvo was later officially recorded as, *Overseas casualty, died of wounds received in action, in the field (Belgium)*. In November 1945, Robert and Jeanette Jarvo received a War Service Gratuity of \$157.95 for the loss of their son. In November 1948, the Director of War Service Records sent the Jarvos a photograph of the grave and temporary marker over the burial place of their late son, with its location. Twenty year-old Francis Jarvo is buried in Schoonselhof Cemetery, Belgium, Grave III.K.19. On his headstone are inscribed the words, OF CORNWALL, ONTARIO, CANADA. R.I.P.

SOURCES: A, B, C, D, E, F, L, 2C, 2D, 7C, 8X, 8Y

JENSEN, Jens Carlo (#C/31217)

Born in Denmark, Jens Carlo Jensen made a new life in Canada and in Sarnia before he enlisted in 1941. A little more than three years later, Jens, 24, died in action in Belgium. He left behind his parents, a sister, and his wife of two years.

He was born in Aunslev, Denmark on April 17, 1920, the adopted son of Anders Christian and Emilie Anna Jensen of Aunslev, Denmark. When Jens' birth father died in 1921, Anders adopted Jens. Anders and Emilie were married on May 23, 1920 in Orte Kirke, Orte Sogn, Denmark. The Jensens also had one daughter, who became Mrs. L. Jorgensen, and she resided in Aunslev, Denmark. The circumstances have not been revealed, but in May 1931, Jens Jensen, age 11, departed from Copenhagen, Denmark and arrived in Halifax, Nova Scotia aboard the passenger ship *United States*. He ended up in Peterborough where he was active in sports including tennis, swimming, hockey,

softball and rugby. Fishing and stamp collecting were two of Jens' favourite hobbies. After completing high school, he took a 2-month course in drafting and was employed in 1940-41 as a draughtsman apprentice with Canadian General Electric in Peterborough.

Twenty-one-year-old Jens Jensen enlisted in the Canadian Army in Ottawa on June 16, 1941. At his enlistment, he recorded his occupation as a truck driver and his place of residence as 197 Brock Street, Peterborough. He stood a strapping six feet and one half inch tall, had blue eyes and sandy hair, and was single. Jens expressed his preference was to enlist in the Danish Army in England. His next choice was to join the RCAF, as a Wireless Operator. After the war, he planned to continue in his chosen field of draughting. The next two years were life changing for the young Dane.

From #3 Manning Depot in Ottawa, he was transferred in June 1941 to the Governor General's Foot Guards (GGFG) in Dartmouth, Nova Scotia where he continued his training. He attained the rank of Guardsman, GGFG – 21st Armoured Regiment.

Jens, now 22, also said goodbye to bachelorhood when, on April 7, 1942, he married Anna Mary Mallotte (of Ottawa) at Arnprior, Ontario. Newlywed Anna Jensen resided in Arnprior for a time until January 1943 when she moved to 141 Euphemia Street, Sarnia. Later she moved to 138 North Forsythe Street and a year later Jens' parents, Anders and Emilie Jensen, were also residing at 138 North Forsythe Street, Sarnia.

One month after getting married, on May 2, 1942, Jens Jensen embarked overseas from Debert Camp in Nova Scotia for the United Kingdom. He was initially posted with the #3 Canadian Armoured Corps Reinforcement Unit (CACRU). In mid-October 1942, he was again a member of the Governor General's Foot Guards, 21st Armoured Regiment, with the rank of Guardsman. He continued his advanced training in the U.K. until mid-July 1944. On July 22, 1944, Jens Jensen arrived in France, six weeks after D-Day; in fact, Anders, Jen's adoptive father, had mistakenly thought that Jens had participated in the D-Day invasion because he had received a letter from his son Jens that was written in France.

The **Battle of Normandy** had begun for the Canadians with the June 6, 1944 D-Day landings at Juno Beach. After breaching the "Atlantic Wall" of "Fortress Europe", Allied armies began their break out from the narrow Normandy bridgehead to carve out a foothold on the French mainland. It would take a whole summer of tenacious fighting, pushing against fierce and ruthless German forces to advance east across France. In a brutal campaign of attrition, the Canadians faced fierce battles and vicious counterattacks as they clawed their way forward liberating villages and towns including Bretteville, Carpiquet, Caen and Falaise.

After the Allied breakout from Normandy, Canadian forces were assigned the "**Long Left Flank**", the less glamorous but vital tasks of clearing coastal areas in the north of France and Belgium of German occupiers; opening the English Channel ports for supplies essential to the Allied advance; and capturing the launching sites of German V-1 rockets. In a series of stop-and-start advances against stiff resistance in fortified positions, the Canadians liberated ports and villages including Rouen, Dieppe, Dunkirk, Boulogne and Calais.

Guardsman Jens Jensen was part of the GGFG, 21st Canadian Armoured Regiment, as it advanced through France and into Belgium. On September 18, 1944, two months after arriving in France, Jens Jensen was killed in action while fighting along the "Long Left Flank" in Belgium. Jen Jensen's remains were buried at a location recorded on the Army Field Service Card as "MR.106005 Sh.22.32 (E. Flanders), Belgium". On October 2, 1944, Anna Jensen at her Forsythe Street home received the following telegram from the Director of Records about her husband: MINISTER OF NATIONAL DEFENCE DEEPLY REGRETS TO INFORM YOU THAT C31217 TROOPER JENS CARLO JENSEN HAS BEEN OFFICIALLY REPORTED KILLED IN ACTION EIGHTEENTH SEPTEMBER 1944 STOP IF ANY FURTHER INFORMATION BECOMES AVAILABLE IT WILL BE FORWARDED AS SOON AS RECEIVED. There was no indication of where or how her husband met his death. The week before being informed of Jens' death, Anders and Emilie Jensen in Sarnia had received a letter from their son in which he had written that, "he was in Belgium, and that he was getting along well".

The Brigadier, Acting Adjutant-General wrote this letter to Anna in late October 1944:

Dear Mrs. Jensen:

It was with deep regret that I learned of the death of your husband, C31217 Trooper Jens Carlo Jensen, who gave his life in the Service of his Country in the Western European Theatre of War, on the 18th day of September, 1944.

From official information we have received, your husband was killed in action against the enemy. You may

be assured that any additional information received will be communicated to you without delay.

The Minister of National Defence and the Members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

Jens Jensen was later officially recorded as, *Overseas casualty, killed in action, in the field (Belgium)*. In September 1945, Anna Jensen received a War Service Gratuity of \$645.85 for the loss of her husband. The following January, the grieving widow received a letter from the Colonel, Director of Records, for Adjutant-General. Following is a portion of that letter:

Dear Madam:

Information has just been received from overseas that the remains of your husband, C31217 Trooper Jens Carlo Jensen, have been carefully exhumed from the original place of internment and reverently reburied in grave 12, row B, plot 4, of Adegem Canadian Military Cemetery, Adegem, Belgium. Marked map is enclosed. This is a recognized military burial ground and will receive care and maintenance in perpetuity.

The grave will have been marked with a temporary cross which will be replaced in due course by a permanent headstone suitably inscribed. While it cannot now be stated when this work of permanent commemoration will begin, before any action is taken you will be communicated with and an opportunity will be given you to submit a short personal inscription of your own choice for engraving on the headstone...

In late May 1946, Jens' mother on North Forsythe Street received the following letter forwarded to her by the Director of Records. The letter was originally from Betty Braeckman, Evergem, Bij Gent, Belgium, East Flanders. If nothing else, the kind words of the sender offered some consolation to Emile over the loss of her son.

Dear Mrs. Jensen:

I daresay that you will be surprised at hearing from me but as I knew your son and have been in his company I thought you would like to hear from me. When I heard the sad news that he had fallen for his country I sought after his grave and I have found it. It is in the Military Cemetery where nearly a thousand other poor men lay. I have promised to look after his grave as long as I live, I have paid for the cross. The war graves Committee asked all who could afford it to take over a grave so of course I asked for your son. Now I will close my letter to you. Sending you my best respects and if at any time you would like to visit your son's grave you will be welcome to come and stay with me. I am English. I remain your true friend, Betty

Mrs. Braeckman, 34 Eindeken, Evergem, Bij Gent, Belgium, East Flanders

In July 1948, the Major-General, Adjutant-General wrote to Anna regarding a posthumous medal her husband had earned for his efforts to protect others' freedom.

Dear Mrs. Jensen,

It is with a feeling of pride that I write, on behalf of the Minister of National Defence and all ranks of the Canadian Army, to inform you that the Belgian Government has been pleased to confer the award of Croix de Guerre 1940 avec Palme upon your husband, the late C-31217 Guardsman Jens Carlo Jensen. This award was granted in recognition of his outstanding contribution towards the liberation of Belgium in the Second World War.

I regret exceedingly that your husband did not survive to receive this well merited award himself. However I trust the knowledge that his services have been recognized in this manner by the Belgian Government will help temper your very sad loss.

I am informed by the Belgian Embassy in Ottawa that the decoration which accompanies this award will be forwarded to you in the very near future.

The Belgian Government's "Croix de Guerre 1940 avec Palme" awarded to Jens Jensen states: *The King has been pleased to grant unrestricted permission for the wearing of the following decoration which has been conferred upon the undermentioned in recognition of distinguished services in the cause of the Allies.* Twenty-four-year-old Jens Jensen is buried in Adegem Canadian War Cemetery, Belgium, Grave IV.B.12.

JOHNSTON, Jay Syver (#J/7987)

Jay Johnston, 21, was on his way home to Sarnia on leave aboard a Liberator aircraft when it crashed in poor weather, a tragic mishap that would be the largest single-crash loss of life in RCAF history.

He was born in London, Ontario on May 30, 1922, the youngest son of John Eugene and Florence (nee Goulder) Johnston. John Eugene (born Granby, Quebec) and Florence (born Laurence Station, Ontario) Johnston were married in Toronto on July 18, 1913. John Johnston's work as a janitor with a local school board supported

Florence and their three children: Robert Eugene, who was eight years older than Jay; and one daughter, Victoria Eloise. When Jay was two years old, he and his family moved from London, Ontario to Sarnia. They lived initially at 115 South Vidal Street and later 332 Confederation Street.

All three Johnston children attended Sarnia schools. From 1928 to 1935, Jay was at Durand-Lochiel Street and George Street Elementary Schools. He then attended Sarnia Collegiate Institute in 1935 and graduated in June 1940. Jay was very active young man in a few areas. He loved playing sports, especially rugby, hockey, baseball and swimming and his hobbies included stamp collecting and electricity. Jay was also a member of the Sarnia Cadet Corps for five years with whom he attained the rank of Sergeant and where he completed a technical electrical course. As a student he worked at Devine Street School as a caretaker's helper from 1934 to 1940, and for Mr. Ede at a Sarnia Meat Market as a parcel boy on weekends during 1939. The latter may have been to support his family, for the Johnston household was forever changed when their mother, Florence, passed away in 1937 (Jay was fifteen years old at the time).

At age seventeen years and eight months, Jay Johnston first applied to join the Royal Canadian Air Force in London, Ontario in January 1940. He was refused and told to return when he was 18. He did so on October 8th, 1940 when he was four months past his 18th birthday. He stood five feet eight inches tall, had blue eyes and dark brown hair, was single, had just graduated from high school, and was residing with his parents at 115 Vidal Street at the time. He requested flying duties, with a preference to be an Air Gunner. His plan for after the war was to go to Radio College.

In October 1940, Jay moved from the Recruiting Centre in London, to #1 Manning Depot in Toronto, then to RCAF Station in Rockcliffe. He received his air training at #1 Initial Training School (ITS) in Toronto; at #12 Elementary Flying Training School (EFTS) in Goderich; at #3 Wireless School (WS) in Winnipeg; at #2 Bombing and Gunnery School (B&GS) in Mossbank Saskatchewan (where he was awarded his Air Gunners Badge on September 29, 1941); and at #31 Operational Training Unit (OTU) in Debert, Nova Scotia. In December 1941, he became a member of the RCAF #10 Squadron, part of **Eastern Air Command**, stationed on the east coast of Canada (at Halifax, Dartmouth and Gander, Newfoundland).

RCAF #10 Squadron, nicknamed the "North Atlantic Squadron", was primarily used in a bomber reconnaissance and anti-submarine role on the Atlantic coast of Canada and Newfoundland. The squadron flew Westland Wapiti, Douglas Digby and Consolidated B-24 Liberator aircraft. In November of 1942, his widowed father John in Sarnia received the news that Jay had been promoted from the rank of Pilot Officer to Flying Officer. Jay later attained the rank of Flying Officer, Wireless Operator/Air Gunner with RCAF #10 North Atlantic Squadron.

War affected other members of the Johnston family. Robert, Jay's older brother, had enlisted in the army at the outset of war in September of 1939 and became a Sapper with a Western Ontario infantry unit of the Royal Canadian Engineers. One year after Jay's enlistment, in early December of 1941, Robert had been overseas for more than a year, while Jay was stationed at an eastern command. Robert survived the war, but his life was never the same after his wartime experiences.

In November 1943, Jay's sister, Eloise, married Michael Paithowski who served in the Royal Canadian Naval Volunteer Reserve, as a Petty Officer Stoker. Michael Paithowski and the entire crew of 89 other men lost their lives when a U-boat torpedoed the *HMCS Shawinigan* in November of 1944. Michael Paithowski's story is included in this Project.

In early October of 1943, John Johnston learned from R.C.A.F. Headquarters that his son Jay was part of a flying-boat crew that had emerged the victor in a running battle with a surfaced U-boat in the mid-Atlantic. The R.C.A.F. reported that the submarine battle was one of a series of six running fights with subs in which the famous North Atlantic Squadron had recently engaged in. The flying-boat on which Flying Officer Jay Johnston was deployed went into the attack at a low level and dropped six charges in what one member of the crew described as a "perfect straddle". The bow of the sub was tossed clear of the sea and smothered in depth-charge "blossoms". Four more charges were dropped as the sub started sinking, with no further forward motion. Shortly after, air bubbles rose for some time and a large oil slick appeared on the surface several hundred yards wide. Some debris was also seen. Aboard the successful flying-boat besides Jay were Flt. Lt. Robert Fisher; WO2s James Lamont and J.A. Barabanoff; and Sgt. E.M. Finn. Weeks later, all five men were passengers on a Liberator bomber that would crash, killing 24 members of the R.C.A.F.

In mid-October of 1943, Jay Johnston had advised his father back home that he was to start a leave on

October 19th, and that he would be back home in Sarnia a few days after that.

On October 19, 1943, B-24 Liberator aircraft #3701H (“Harry”) took flight en-route from Gander, Newfoundland to Mont Joli, Quebec. One of the passengers was Jay Johnston, as well as six RCAF crew members and seventeen other passengers, all members of the RCAF, returning to an Eastern Canada base from Newfoundland on leaves. After being grounded for most of the day by bad weather, the aircraft took off from Gander at 22:16 hours (on the 19th). The flight plan set the plane on a direct path for Mont-Joli. Based on records available, the plane was tracked as being directly on its flight path up to 00:20 hours (12:20 a.m.) on October 20—nearly three hours after take-off.

But the weather over Mont-Joli was not ideal for landing. At 01:45 hours, the crew requested permission to land at Mont Joli but were denied as the runways were closed due to the poor weather. They were told to proceed to Rockcliffe, Ontario or Dorval, Quebec. At 02:00 hours, the crew of “Harry” contacted the tower at the Mont-Joli airfield, and advised them they were proceeding to the alternate landing field at Dorval. Besides a call for help radioed to another aircraft flying near Grand-Mere some 250 miles west of Mont Joli, nothing further was heard from the aircraft. At 03:45 hours, an hour and a half after its scheduled arrival time at Mont-Joli and around its scheduled arrival time at Dorval, efforts were made to contact “Harry” on radio, and to listen for signals from the aircraft, but nothing was heard.

With the Liberator being reported overdue and missing, the RCAF launched a massive air search along the planned flight path; however, despite over 700 sorties between October 20 and November 26, no trace of the aircraft was found. Even though villagers in St. Donat reported hearing an aircraft and the sound of a crash that night, it was dismissed by the military authorities who had already concluded that the Liberator was lying somewhere on the bottom of the St. Lawrence. In fact, at some time in the early morning hours of October 20, the Liberator crashed and burned on the west side of a 2,500 foot high foothill of Black Mountain, near St. Donat, Quebec. The crash site remained a mystery until June 1946.

In Sarnia, beginning on October 20 and for a few days after, the Johnston family anxiously awaited Jay’s arrival home for his scheduled leave. Several days later, father John received a telegram from air force headquarters in Ottawa informing him that his son, FLYING OFFICER JAY S JOHNSTON WAS MISSING AFTER AIR OPERATIONS. The message gave no details of the operations in which his son was engaged when reported missing, but it said that further information would be forthcoming.

John considered that his son might have been one of the 24 personnel on board the four-engine Liberator which had been reported missing—and possibly had crashed in the St. Lawrence River. He clung to the hope that Air Force Headquarters would send him encouraging news. It was not to be. After ten days of anxious waiting and personal turmoil, John’s hopes were shattered by an announcement from air force headquarters in Ottawa on October 30th. It was the worst news possible. Jay Johnston was on the list of 24 RCAF members who were, *Officially reported missing somewhere in Canada*. All twenty-four RCAF members who were aboard the Liberator lost their lives in crash.

On August 2, 1944, John Johnston on Confederation Street, received the following letter from the Air Marshall, Chief of the Air Staff:

Dear Mr. Johnston:

I have learned with deep regret that your son, Flying Officer Jay Syver Johnston, is now for official purposes presumed to have died on Active Service on October 20th, 1943. I wish to offer you and the members of your family my sincere and heartfelt sympathy.

It is most lamentable that a promising career should thus be terminated and I would like you to know that his loss is greatly deplored by all those with whom your son was serving.

The whereabouts of the doomed Liberator remained a mystery until almost three years had passed. On June 26, 1946, a plane which was making an aerial search for another lost aircraft, spotted the wreckage near the top of Black Mountain, Quebec. That same day, a search party blazed a trail up through the rugged terrain and discovered the burnt out wreckage and the bodies of the 24 airmen. Owing to the harsh and remote mountainside as well as the fact that only three of the bodies could be positively identified, the authorities decided to bury the remains of the 24 men at the crash site. On July 3, 1946, a funeral and burial were held near the crash site on Black Mountain, with religious services conducted in the Catholic, Protestant and Jewish faiths. A simple white cross was erected for each airman. There they remained until 1985 when the Commonwealth War Graves Commission ordered that the men’s

remains be moved to the cemetery in the village of St. Donat, Quebec. There is a Memorial Cairn on Black Mountain at the crash site that was erected in memory of the crew. To this day, the pieces of the Liberator remain where they fell. The tragic mishap was the worst accident in Canadian military aviation history due to the number of lives lost.

Perishing with Flying Officer-Wireless Operator/Air Gunner Jay Johnston were crew members F/O. Stephen Andrew Sanderson; F/L Joseph Alfred Poirier; Sgt. William Gordon MacNaughton; WO.s Joseph Alexander Barabonoff; Jacob Silverstein; and P/O Robert William MacDonald; and passengers WO.s Wilfred Howlett; Franklin Elwood Jenkins; Cpl.s Harold David Beattie; Ronald Douglas Marr; Howard Kenneth Hambly; Alec Clare Johnston; P/O. James Lamont; LAC.s Charles Laurie Dynes; Guy Ridgewood Patterson; Albert James Radcliffe; Edwin William Read; Sgt.s Franklin Hicks Elliot; Eric Morgan Finn; Joseph Achille Veilleux; FS. Raymond Frank Ware; F/L. Robert F. Fisher; and Sgt. Stanley Albert Wood.

In June of 1944, Flying Officer Jay S. Johnston who, at the time, was still reported as “missing”, was mentioned in dispatches in connection with the King’s birthday honors list. A press release by the R.C.A.F. said that Flying Officer Johnston earned the award while a Wireless Operator-Air Gunner in the Eastern Air Command. He was the only Sarnian in the list of several hundred Canadian servicemen. Two former Sarnia residents were also on the list. The first was Windsor born Sergeant Major Charles Webb who was living on College Avenue. Webb, an employee at Sarnia General Hospital and an active member of the local Canadian Legion, was made a member of the Most Excellent Order of the British Empire; also recognized was Brigadier A.C. Spencer, of London, formerly with the engineering department of Imperial Oil Company in Sarnia. He was made a Commander of the Most Excellent Order of the British Empire.

The fate of Jay Johnston was later officially recorded as, *Previously reported missing in flying accident, now for official purposes, presumed dead, overseas (Newfoundland)*. In April 1946, his widowed father John received a War Service Gratuity of \$651.13 for the loss of his youngest son. Twenty-one-year-old Jay Johnston is buried in St. Donat Catholic Cemetery, Quebec, Coll. Grave Lot GE 34. He received an award: Mentioned in Dispatches. On the Sarnia cenotaph, his name is inscribed as J.S. Johnson.

JOLLY, Russell Earl (#A/107229)

Russell Earl Jolly was only 18 when he enlisted and a year later got his first taste of real action on the beaches of Normandy on June 6, 1944. Two days later, the young Sarnian was killed in action.

Russell Jolly was born in Sarnia on January 5, 1925, the son of Stuart Thomas and Jane “Jennie” (nee Chaytor) Jolly, of 436 South Russell Street, Sarnia. In 1921, twenty year-old Stuart Jolly (born Oct. 1, 1900 in Plympton Township) was living with his parents and seven siblings at 261 Tecumseh St., Sarnia, and was working as a baker. In 1921, seventeen year-old Jane Chaytor (born January 1903 in Lynedoch, England) was living with her parents and four siblings at 115 Shepherd St., Sarnia, and was working as a saleslady at a bakery. The Chaytor family had immigrated from England to Canada in 1907. On November 12, 1923, twenty-three-year-old baker Stuart Jolly married twenty year-old Jane Chaytor in Sarnia. Stuart and Jane Jolly had four children together: James Albert (born 1924), Russell, Orville Ralph (born 1928), and Lois Maud (born 1941). Orville Jolly would become a career soldier who also served in the Korean War.

Russell Jolly attended Sarnia public schools and, in 1942, was a student at Sarnia Collegiate for one year, leaving school at the age of 17. Before enlisting, he worked as a baker for one year at the Canadian Bread Company. His brother James Jolly also enlisted at some point and became a Leading Aircraftman with the Royal Canadian Air Force.

Eighteen year-old Russell Jolly enlisted in the Canadian Army at London, Ontario on July 2, 1943. He stood five feet nine and a half inches tall, had brown eyes and brown hair, was single, and was living at home with his parents at the time. His plan for after the war was to return to Sarnia and the Canadian Bread Company, who had assured him of a job on his return. From #1 District Depot in London, Russell received his army training at #13 Basic Training Centre (BTC) in Listowel and at A-29 Canadian Infantry Training Centre (CICTC) in Ipperwash (where he obtained qualifications in a 3” mortars course). He was then transferred to #1 Training Brigade in Debert, Nova Scotia in January 1944.

Private Russell Jolly embarked overseas for the United Kingdom on March 6, 1944 where, he immediately continued his training with the #2 Canadian Infantry Reinforcement Unit (CIRU). On June 1, 1944, he embarked

from the U.K. as a member of the Highland Light Infantry Rifles. Only days later, he arrived with the Royal Winnipeg Rifles, Royal Canadian Infantry Corps (RCIC), with the rank of Private-Rifleman. Russell Jolly's first taste of real action was on Normandy Beach on June 6, 1944 – **D-Day**.

The **Battle of Normandy** began for the Canadians with the June 6, 1944 D-Day landings at Juno Beach. After breaching the "Atlantic Wall" of "Fortress Europe", Allied armies began their break out from the narrow Normandy bridgehead to carve out a foothold on the French mainland. It would take a whole summer of tenacious fighting, pushing against fierce and ruthless German forces to advance east across France. In a brutal campaign of attrition, the Canadians faced fierce battles and vicious counterattacks as they clawed their way forward liberating villages and towns including Bretteville, Carpiquet, Caen and Falaise.

Russell Jolly's war overseas against the enemy would be a short one. He would lose his life only two days after D-Day, on June 8, 1944 during the early invasion stage of the Battle of Normandy. Russell Jolly's remains were buried on June 16, 1944 at a location recorded on the Army Field Service Card as "MR 904727 Putot-En-Bessin North East Side of road, Graves number from South West to North East Thaon, France".

On June 24, 1944, Jane Jolly received the following telegram from the Director of Records about her son: MINISTER OF NATIONAL DEFENCE DEEPLY REGRETS TO INFORM YOU THAT A107229 PRIVATE RUSSELL EARL JOLLY HAS BEEN OFFICIALLY REPORTED KILLED IN ACTION EIGHTH JUNE 1944 STOP IF ANY FURTHER INFORMATION BECOMES AVAILABLE IT WILL BE FORWARDED AS SOON AS RECEIVED.

In early July 1944, Jane received the following letter from the Major-General, Adjutant-General:
Dear Mrs. Jolly:

It is with deep regret that I learned of the death of your son, A107229 Private Russell Earl Jolly, who gave his life in the Service of his Country in France, on the 8th day of June, 1944.

From official information we have received, your son was killed in action against the enemy. You may be assured that any additional information received will be communicated to you without delay.

The Minister of National Defence and the Members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

Russell Jolly was later officially recorded as, *Overseas casualty, killed in action, in the field (France)*. In early March 1945, Private Russell Jolly along with First Class Stoker Wallace Horley (included in this Project), were honoured at a memorial service at Devine Street United Church. Both men were members of the congregation and both had died recently while on active service. In July 1945, Russell's parents received a War Service Gratuity of \$112.64 for their loss.

The Director of Records, for Adjutant-General, wrote the following letter to Jane Jolly in early September 1947: *I am forwarding herewith a photograph of the grave and marker over the burial place of your late son, A107229 Private Russell Earl Jolly, the location of which is grave 15, row C, plot 5, Bretteville-sur-Laize, France. Any errors appearing in the inscription will be corrected when the permanent headstone is placed.*

Nineteen year-old Russell Jolly is buried in Bretteville-Sur-Laize Canadian War Cemetery, Calvados, France, Grave V.C.15. On his headstone are inscribed the words, IN THE GARDEN OF MEMORY WE MEET EVERY DAY. SLEEP ON, DEAR SON, TILL WE MEET AGAIN. Russell's parents Stuart (died December 1989) and Jane (died September 1963) Jolly are buried together at Lakeview Cemetery in Sarnia.

JONES, Glyndwr (#A/18156)

Glyndwr "Glyn" Jones was a member of a large Welsh family whose central figure was his widowed mother Annie, affectionately known as "Mam" to her eleven children. The entire family, both in Sarnia and abroad, was affected by the war, especially when Glyn, 19, was killed in August 1942 in the disastrous Dieppe Raid.

Glyndwr "Glyn" Jones was born in Bargoed, Glamorgan, South Wales on June 1, 1921, the youngest son of David John and Annie Jones, of 224 Cromwell Street, later 114 ½ North Christina Street, Sarnia. David and Annie Jones were married in Merthyr, South Wales on August 20, 1901. The Jones were blessed with eleven children: eight sons--Thomas, David, James, John, William Benjamin, Oliver, Edward, and Glyn; and three daughters--Mary Ann, Ester and Nancy. The children referred to their indomitable mother as "Mam". They were a tightly-knit family that knew heartache.

Mam had lost another child, her twelfth, at birth. Then in 1911, William, aged two, died. Fifteen years later, in March 1926, tragedy struck again when David, a coal miner in South Wales, was killed in a mining accident. He was only 49 and the family had lost its patriarch and principal source of revenue. Glyn, the second youngest, was only five years old when his father died, but the five eldest Jones boys worked for a time in the same coal mines in South Wales as their father had. "Mam" was left to raise eleven children on her own, becoming the central figure of the family for the rest of her life.

By 1929, the Jones family had a strong interest in emigrating either to Australia or to Canada. Both countries offered inducements to prospective immigrants; for example, Canada (touted as "the country flowing with milk and honey"), offered assisted passage and free land (160 acres) per family. The land was located in the Peace River area of Alberta, an area that the Government was interested in opening up. In the final analysis, "Mam" Jones decided on Canada, after discovering that it typically took six weeks by ship to Australia. The trip to Canada was just one week. On the advice of their travel agent, the large family moved in two groups. More significantly, it was also pointed out that their background was hardly suitable to pioneering in northern Alberta, so they were urged to change their plans and to settle in Ontario.

In April 1929, the first family group, comprising of David, William and Mary Ann, along with the latter's husband David and their son, immigrated to Canada. They arrived in Halifax aboard the *Ansonia*, before boarding a train to Toronto. They made their way to Forest, where a Government agent arranged their placements on farms in the area. William was the exception. He went to Guelph to work on a government farm. Before long, the whole initial group had relocated to Thedford, where they resided and worked on farms. The rest of the Jones family, including eight year-old Glyn, came to Canada in November 1929, also aboard the *Ansonia*. They arrived in Quebec, then took a train to Toronto, before having to take a taxi to Thedford (all eleven of them).

The entire Jones family was reunited in Thedford, where they resided for four years. While working on farms in and around Thedford, they became involved in singing, performing at churches, social events and in competitions. Most of the family moved to Sarnia in 1933, and the rest followed by 1936. "Mam" Jones and many of her children resided on Cromwell Street and later 114 ½ N. Christina Street. By 1938, a few of the Jones family had returned to Wales and England. Among them were oldest brothers Thomas (and wife Mary Ann); David (and wife Catherine); and oldest sister Mary Ann (and husband David and their two children). Mary Ann and her family returned years later to Sarnia. As did Thomas in 1978, now a widower, with his daughter and son-in-law.

The Jones family kept growing because all of Glyn's siblings married and had children, including: Thomas to Mary Ann (nee Davies, in England); David to Catherine (nee Davies, in 1932, sister of Mary Ann); James to Beatrice (nee Bailey, in 1932); John to Margaret (nee Bridger); William to Ada (nee Brown, in 1935); Oliver to Ilene (nee Kearney); Edward to Josephine (nee Blondin-later divorced, and then to Marjory, nee Willick); and sisters: Mary Ann to David John Jones (in England); Ester to George Andrew (in 1941-later deceased, and then John Sygrove, 1947); and Nancy to Walter Irvine (in 1945). Glyn had many nieces and nephews and after the war, his brother, John who was married to Margaret, had five children. They named one of their two sons Glyn, in his honour.

Glyn was not the only family member affected by World War II. Glyn's brother-in-law, George Varnum Andrew, who was married to his sister, Ester, became a Pilot Officer in the Royal Canadian Air Force. In December 1943, on his 22nd mission, George Andrew's Lancaster bomber was lost during night operations over Germany. [Note: George Andrew's story is included in this Project]. Ester later remarried, to John Sygrove, who had served in the navy. After the war, Glyn's sister Nancy married Walter Irvine, who had served in the Air Force. Glyn's brothers Oliver and Edward both served during the war-- Oliver in the navy and Edward in the army.

After leaving farm life behind, Glyn's brother **Oliver Jones** got a job sailing the Great Lakes on a passenger ship, the *SS Noronic*, where he worked until the outbreak of war. Oliver enlisted early in 1940 and served in the Royal Canadian Naval Volunteer Reserve (RCNVR), as an Able Seaman. Twice while on convoy duty in the North Atlantic, he was aboard ships that were torpedoed by German U-boats. Oliver was in the local news just over a year prior to Glyn's death. He had given an interview to the *Sarnia Observer* in May of 1941 describing some of his experiences. The young sailor, who had worked for some time in the Sarnia General Hospital before signing up with the RCN, was home on "survivors' leave" at that time, visiting his mother, Annie.

In March 1941, Oliver was assigned to an ocean boat to take charge of an anti-aircraft gun crew. The ship on which he was serving, part of a convoy heading to England, had been sunk in the North Atlantic by a German submarine. He described how on a calm, moonless, starless night, with a moderate snow falling, several of the ships

in the convoy were attacked, with one bursting into flames. His ship was hit and sinking when the captain and men took to the lifeboats. They could see the burning ships, but the rest of the convoy had scattered as the attack started. They drifted for three hours before being picked up by a British destroyer. Not long after, they located the position of the “sub”, dropped depth charges and the sub rose to the surface to surrender. Seaman Oliver Jones described the crew members as, *Decent young fellows, the captain was about 22 and the men were all much younger, about 15 or 16.*

Oliver also described how prior to returning to Canada, he was on duty on the anti-aircraft gun at a barracks in Glasgow during the heaviest German air raid staged on the Clyde River port up to that time. *It was a terrible sight*, he recalled, describing a falling German plane as a *ball of flame* and telling of watching bombs bursting along the docks on the Clyde. *But the people in the shelters were marvelous, singing while the raid progressed, from about 10:30 at night till 5:30 next morning, and the damage was heavy.*

One of Oliver Jones closest friends during the war was fellow Sarnian Hector Le Gare. Hector also served in the RCNVR as an Able Seaman and became a member of the destroyer *HMCS Saguenay*. Oliver Jones was in the same convoy escort group when in the early morning hours of December 1, 1940, the *Saguenay* was torpedoed by an Italian submarine. Though the destroyer was able to limp to shore, twenty-one of its crew were killed in the attack, including Hector Le Gare. After the war, Oliver Jones married Ilene (nee Kearney), and they would have two children together, a boy and a girl. They named their son Ronald Hector Jones. [Note: Hector Le Gare’s story is included in this Project].

Glyn Jones attended public school in Thedford for a time and, after moving to Sarnia, attended Lochiel Street Public School and then spent two years at Sarnia Collegiate. Glyn also attended Central United Church. To make money, Glyn Jones and older brother Edward delivered newspapers for a couple of years. For a short time prior to enlisting, Glyn worked at a local Sarnia service station as a mechanic.

When war broke out, both Glyn and Edward joined the Army together. Eighteen year-old Glyn Jones joined the Canadian Army in Sarnia on September 6, 1939. Glyn stood five feet seven and a half inches tall, had blue eyes and light brown hair, was single, and was residing at home on Cromwell Street with his mother at the time. He did not have to wait long for action after enlisting. Four days after doing so, Canada and Newfoundland declared war on Germany on September 10, 1939.

Glyn received the first part of his three months of military training in Sarnia and Bright’s Grove, as a member of the First (Lambton) Field Company, Royal Canadian Engineers (RCE). In December 1939, he was transferred to #1 District Depot in London, Ontario. By June 1940, he was transferred to Petawawa (along with brother Edward), where he underwent advanced training with the Royal Canadian Engineers. Major Payne of Sarnia, who was Glyn’s Commanding Officer, had been one of his teachers at Sarnia Collegiate. He related that Glyn was very popular with the men of his company.

Sapper Glyn Jones

On December 1, 1940, Sapper Glyn Jones of the First Field Company, RCE, embarked overseas for the United Kingdom, arriving in Scotland on December 9, 1940. In late November 1941, both Glyn and his brother Edward, also with the Royal Canadian Engineers, had been overseas for almost a year, while brother Oliver, who had joined the Navy in early 1940, had been to England and back several times. Glyn and Edward both trained in England for more than one and a half years. While in Great Britain, the families of their siblings, brothers Thomas and David, and sister Mary Ann in Wales, provided a home away from home for Glyn, Edward and Oliver. When on leave, they usually spent their time with one another, getting into mischief and enjoying their time together after a long separation. After all these years and despite being separated by thousands of kilometres, the Jones siblings were still very close.

More than a year and a half after arriving in the U.K., Glyn Jones saw his first action against the enemy. Sapper Glyn Jones, as part of the Canadian First Field Park Company, RCE, embarked from the United Kingdom on August 18, 1942. They arrived in France in the early morning hours of August 19, 1942, on the beaches of **Dieppe**.

Code-named *Operation Rutter*, later *Operation Jubilee*, the **Dieppe Raid** was one of the darkest chapters in Canada's military history. On that day, 4,963 Canadian soldiers landed on the beaches of Dieppe, a small town on the coast of France. The Allies wanted to accomplish much in the raid: to destroy radar and other military installations; to damage enemy shipping and port facilities; to seize a neighbouring airfield; to capture a German divisional naval headquarters in order to acquire intelligence documents; and to gather information from prisoners. The Dieppe raid also served as a test run for the future invasion of Europe and would take some pressure off the Eastern Front. Recently declassified documents, however, have revealed that the focal point of the doomed raid was to capture cryptographic material for code breakers in Bletchley Park in England. The Allied code-breakers desperately needed to capture German documents, codebooks and a four-rotor Enigma encryption machine. At its essence, then, the Dieppe raid was a "pinch" operation (British slang for "steal").

Of the almost 5,000 Canadians who took part in the mission, more than 3,360 became casualties, including approximately 1,950 taken as Prisoners of War. Approximately 910 Canadians died on the beaches, in German captivity, or of their wounds after returning to England.

It was during the Dieppe Raid that Sapper Glyn Jones lost his life on August 19, 1944, the day he landed in France. His remains were buried at a location recorded on the Army Field Service Card as "Des Vertus Hautot-Sur-Mer, France. Grave 160." Glyn's brother Edward would have been on the same fateful raid, but instead was ill in a hospital in England.

For a time after the Raid, Annie "Mam" Jones on Christina Street in Sarnia only received news that her son Glyn was listed as, *reported missing* in the Dieppe Raid. In mid-December 1942, she received the following letter from the Major-General, Adjutant-General:

Dear Madam:

I deeply regret to inform you that your son, A.18156 Sapper Glyn Jones, gave his life in the Service of his Country at Dieppe, France, on the 19th day of August, 1942. From information we have received, your son was killed in action against the enemy.

You may be assured that any additional information received will be communicated to you without delay.

The Minister of National Defence and the Members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

Glyn Jones was later officially recorded as: *Overseas casualty, Previously reported missing in action, now reported killed in action, in the field (France).*

In late June 1943, Annie "Mam" Jones received the following letter from the Colonel, Director of Records, for Adjutant-General:

Dear Madam:

Further to this Department's letter of December 16th last concerning the regretted death of your son, the marginally named, I am to advise that information has now come to hand through the overseas military authorities that the remains of Sapper Jones have been interred in grave 160, Des Vertus Cemetery, Hautot-Sur-Mer, France.

In March 1945, "Mam" Jones received a War Service Gratuity of \$488.64 for the loss of her son Glyn. Twenty-one-year-old Glyn Jones is buried in Dieppe Canadian War Cemetery, Hautot-Sur-Mer, Seine-Maritime, France, Grave E.57. On his headstone are inscribed the words, "COME, YE BOUGHT BUT NOT WITH GOLD WELCOME TO THE SACRED FOLD." WITH LOVE, MAM.

The Dieppe Canadian War Cemetery is unique among Commonwealth cemeteries as it was originally constructed by the occupying Germans to bury Allied soldiers killed in the Dieppe Raid. As such, it was laid out in the traditional German way, with headstones placed back to back in long double rows. After the Canadian army captured Dieppe in 1944, it was decided not to disturb the graves, so this unusual arrangement remains today.

At the end of January 1945, Glyn's brother Edward Jones returned home to Sarnia on leave after five years' service overseas. It was a reception typical of the sprawling Jones' family. He was welcomed at the Sarnia station by Mam; his wife Josephine (who resided at 375 Cameron Street); and other family members, including his brother and sister and a niece and two nephews; a long time friend of the family; a Red Cross member representing the Canadian Legion Br. 62; and Harbourmaster George Andrew, who had lost two sons in the service (both included in this Project). He was also greeted by his small daughter, Sandra, whom he had never seen. In addition, Pipe Major James Stewart, a First World War veteran, who was approaching his 80th year, moved up and down the platform, in the full regalia of the kilts, playing the music of the bagpipes, as he did for all trains returning with veterans.

Many years later on June 22, 1974, to celebrate "Mam" Jones 92nd birthday, all of the members of the Jones family came together under one roof for the first time since 1938. The gathering included the seven brothers and three sisters and all of their families, making up five generations, along with many close family friends. At one point during the celebration, the family paused to remember the youngest Jones son, Glyn, and also George Andrew (Ester Jones first husband), who both lost their lives in the war. Annie "Mam" Jones, the rock of her family, passed away in October 1975.

KEE, Ross James (#J/23901)

When Ross James Kee decided to serve his country, he planned to return to his career at Holmes Foundry after the war ended. According to his RCAF squadron commander, Ross "was popular with this Squadron, and fast becoming an 'Ace' Air Bomb Aimer." Ross Kee sacrificed his life during a catastrophic raid over enemy territory.

He was born on January 18, 1921 in Sarnia, Ontario, the son of John Blake and Gladys Irene (nee Ross) Kee, of 112 James Street, Sarnia. John (born in Ramsey, on the Isle of Man) and Gladys (born in Forest, Ontario) Kee were married in Forest, Ontario. John and Gladys Kee had five children together: sons Ross and John Murray (later lived in London), and daughters Irene, Edna (who later lived in Ottawa), and Jean (who lived in Sarnia). John Kee supported his family working as a salesman in Sarnia. John and Gladys Kee later moved to 52 Dundas Street, London.

Ross Kee attended Lochiel Street Public School in Sarnia from 1927 to 1935, then Sarnia Collegiate Institute from September 1935 to June 1940. He was very active in the athletics at SCITS, participating in rugby, baseball and hockey. He also played basketball with the Young Men's Ushers Club of St. Andrew's Church of which he was a member. His hobby was stamp collecting. Prior to enlisting, Ross was employed as a machine operator at Canadian Cannery in Forest in 1940, and then as an inspector at Holmes Foundry in 1940 to 1941. From January 5, 1941 to March 7, 1942, Ross continued his education taking the pre-entry aircrew educational course at the Ontario Training College in Hamilton (under the Dominion Provincial Youth Training Programme-DPYTP). He completed courses in mathematics (mark 92), science (mark 84) and English (mark 75) as a part of R.C.A.F. entry education.

Twenty-one-year-old Ross Kee enlisted in the Royal Canadian Air Force on March 7, 1942 in Hamilton, Ontario. He stood five feet ten inches tall, had blue eyes and brown hair, was single, and lived with his parents on James Street in Sarnia at the time. He requested flying duties with a preference to be a pilot. He planned to return to Holmes Foundry following the war.

From #1 Manning Depot in Toronto, Ross received his air training at #14 Service Flying Training School (SFTS) in Aylmer; followed by training at #5 Initial Training School (ITS) in Belleville; then at #10 Elementary Flying Training School (EFTS) in Pendleton; continuing with Composite Training School (KTS) in Trenton and #4 Bombing and Gunnery School (B&GS) in Fingal; and finishing at #4 Air Observer School (AOS) in Crumlin. He was awarded his Air Bomber's Badge at Crumlin on February 19, 1943. In early March 1943, Ross was posted to #1 Y Depot in Halifax, in preparation for embarkation. Ross arrived overseas in England in mid-April 1943 and became a member of RCAF #431 Iroquois Squadron "The Hatitén Ronteriiios" (Warriors of the Air), part of **Bomber Command**, with the rank of Flying Officer-Bomb Aimer.

During the the war, one of Canada's most significant contributions was to Bomber Command, as

approximately 50,000 Canadians served with the RCAF and RAF in Bomber Command operations. Next to Britain itself, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

RCAF #431 Squadron had formed in Britain in November 1942, based at RAF Burn and was equipped with Vickers Wellington aircraft. In July 1943, it moved to RAF Tholthorpe and converted to Handley Page Halifax aircraft. In December 1943, the squadron moved again, to RAF Croft. The squadron remained at Croft for the remainder of the war, and in October 1944 would be equipped with Lancasters.

Ten months after arriving overseas, on February 19, 1944, Ross Kee was aboard Halifax Mk. V aircraft LK905 (markings SE-D) that took off at 23:21 hours from the Squadron 431 base at RAF Croft. The aircraft was part of an armada of 823 bombers on a night mission targeting Leipzig, Germany. The town was being attacked to destroy the Messerschmitt factory where the famous and deadly Bf 109 fighters were being built. The bomber stream flew into what appeared to be a trap. It seemed that the Luftwaffe and anti-aircraft guns were aware of the intended target and waiting to pounce as soon as the bombers crossed the Dutch coast. As a consequence, the bombers were subjected to constant attack by night fighters and intense flak. The winds were stronger than had been predicted and many bombers arrived early and had to orbit the target awaiting the Pathfinders, further increasing the likelihood of being picked off. The attack was by far the RAF's most costly raid of the war to date--seventy-nine heavy bombers failed to return from the catastrophic raid. The Halifax loss rate was 14.9% and as a result, Halifax Mk. II and V were permanently withdrawn from service over Germany.

Nothing more was heard from Halifax LK905 after taking off--it failed to return and was reported missing on February 20. It was learned later that the aircraft went down halfway between Berlin and Hanover, near Ziepel, Germany. Along with Flying Officer-Bomb Aimer Ross Kee, also killed were F/O.s John Alan Houston and Murray Sonshine; P/O.s David Anthony Gregory McKerry and Robert Edward Gillanders; and Sgt. Arnold Charles Twitchett (RAF). One of the crew, a Canadian, F/S A.G. Harvey (Navigator), managed to bail out of the aircraft and was taken prisoner of war.

In late February of 1944, John and Gladys Kee, then living in London, received a telegram from Ottawa informing them that their son, FLYING OFFICER ROSS KEE WAS REPORTED MISSING IN ACTION OVERSEAS. Days later, Gladys received the following letter from the Wing Commander, RCAF No. 431 Squadron:

Dear Mrs. Kee,

Before you receive this letter, you will have had a signal informing you that your son J23901 Flying Officer Ross James Kee is missing as a result of air operations.

At approximately 11:30 P.M. on the night of 19th February, Ross, and members of his crew took off from this aerodrome to carry out operations over LEIPZIG, but unfortunately failed to return. He, and his crew were due back at this aerodrome on completion of the sortie, but no news has been received from either the crew or aircraft since the time of take-off.

It is with regret that I write you this date to convey the feelings of my entire Squadron. Your son was popular with this Squadron, and fast becoming an "Ace" Air Bomb Aimer. He is greatly missed by his comrades, and his loss is regretted by all.

We lost one of our best air crews, when this aircraft did not return, for it had already been mapped out for a great future with my Squadron. Your son had 1 trip to his credit, and a total of 4 operational hours over enemy territory.

There is always the possibility that your son may be a prisoner of war, in which case, you will either hear from him direct, or through Air Ministry, who will receive advice from the International Red Cross Society. To be a prisoner of war is not the happiest thought in one's mind, particularly for you who are so fond of your son, but on the other hand, I hope you will bear with me that it carries a certain gratifying thought in knowing that our loved ones are alive, and well, and will some day return home safely.

This war has caused grief to millions of people all over the world, and it is a sorrowful state to know that so many fine young men must make supreme sacrifices in order to crush and erase from the face of the earth an infuriated enemy whose jealousy, and hatred of our spirit, and strength will eventually crush him, and his members.

I do not wish to grieve you further in your deep anxiety, but trust that you will bear with me until such time as definite word is received one way or other concerning the welfare of your son.

Your son's effects have been gathered together, and forwarded to the Royal Air Force Depository, where

they will be held until further news is received, or in any event for a period of at least six weeks, before being forwarded to you through the Administrator of Estates, Ottawa. The Commanding Officer, Central Depository will communicate with you in the near future.

May I offer my most sincere sympathies, as well as those of my Officers, and men in your anxiety.

In August 1945, John Kee received the following letter from the R.C.A.F. Casualty Officer, for Chief of the Air Staff:

Dear Mr. Kee:

Our Overseas Headquarters have forwarded to this office a statement made by Flying Officer Harvey, a member of the crew with your son, Flying Officer Ross James Kee. Flying Officer Harvey was previously a Prisoner of War.

He states that their aircraft crashed half way between Berlin and Hanover, Germany. It is regretted that he has no information whatever as to what happened to your son. I realize that this information is very slight and can be of little help to you but I thought you would wish to be advised of Flying Officer Harvey's statement.

There are several Services set up in an endeavor to find all particulars possible of crashed aircraft. Some information is available concerning a great many aircraft which crashed or were shot down by the enemy and every possible effort on an organized basis is being put forth to secure all information available. It is the duty of the Graves Registration Units, which are under the control of the Military Authorities to enquire for and locate the graves of all personnel known or believed to have crashed and to have been buried in occupied areas.

A Royal Air Force and Dominion Air Force Missing Research and Enquiry Service has been organized for the purpose of research and enquiry in liberated territories into the circumstances of aircrews reported as casualties. This service endeavours to obtain additional information to supplement that already received. The civilian population of these areas is being contacted by Radio, Press, and Proclamations through the various civic authorities to centralize through this Service any information or concrete evidence they may have about Air Force personnel or crashed aircraft. Similar instructions have been issued to all Service personnel in these areas.

I wish again to assure you that when any additional information is received concerning your son, it will be forwarded to you. However, I am sure you will realize that owing to the conditions existing in Europe at the present time and the great number of enquiries confronting these enquiry services, some time may pass before more information is received. May I again offer you and the members of your family my deep sympathy in your great sorrow.

In July 1947, the R.A.F. Missing Research and Enquiry Service, Berlin Detachment, released the results of its investigation and findings. Following is a portion those results:

The following details concerning this crash were supplied by the Burgomaster of ZIEPEL who also provided the writer with two photographs of the crashed aircraft...

On 20th Feb 1944 between 01.00 and 02.00 hrs the four engine aircraft which can now be identified as Halifax LK905 approached the village flying in westerly direction and trailing flames. Bombs were dropped at BREITEICHE approximately 10 km away from the village. Soon after the aircraft fell apart in the air; wings and engines crashed at a northern end of ZIEPEL and the fuselage fell about one km N.E. of the village.

The Burgermeister could not tell whether anybody baled out of the aircraft as it was returning from LEIPZIG. It is quite possible, he stated, that some of the crew managed to bale out. From the Casualty Enquiry it is clear that F/S HARVEY baled out and it is also possible that some other member of the crew baled out, but was either wounded or was injured in the fall and may be buried elsewhere as according to German records only five bodies were found.

This aircraft was most certainly shot down by night fighters as the witness heard machine gun fire in the air, moreover, when the place of crash was visited, there were bullet holes on two small bits all that was found of this aircraft. The wing part of the aircraft burnt for some considerable time and no bodies were found near this part of the wreckage. Four to five bodies were found near the fuselage which also burnt for a short while, three of them were badly smashed and it may be possible that they were remains of more than three airmen as they were in addition badly burnt. The two others were only slightly burnt, one was identified as Sgt. GILLANDERS.

These bodies were buried without coffins and without military honours or religious rites two days after the crash in the village cemetery. This communal grave is kept in good order and flowers were planted on the mounds. At the time of inspection there was no cross and instructions were given to the Burgermeister to erect one over the grave. The wreckage was removed by the Luftwaffe a few weeks later and apart from one or two small bits nothing remained of the aircraft when the place of crash was visited.

The identity disc belonging to Sgt. GILLANDERS was buried with the body, another identity disc was found at the place of crash a few days after the burial and was handed over to the police. The Burgermeister does not remember the name on the disc but promised he would try and trace it. And if found, it will be handed to the Exhumation Team at the disinternment. The exhumation will be carried out in the near future...

CONCLUSION: On the night of 20th Feb. 1944 at about 01.00 or 01.30 hrs Halifax LK905 was attacked by German night fighters whilst proceeding to the target and was set on fire. F/Sgt. HARVEY baled out and was captured, it is possible that another member of the crew tried to bale out but was either killed or fatally injured and may have been buried elsewhere. The remainder of the crew crashed with the aircraft and were killed. They were buried at ZIEPEL Cemetery two days after the crash.

Ross Kee's death was later officially recorded as, *Previously reported missing after air operations, now for official purposes, presumed dead, overseas (Germany)*. In June 1945, John and Gladys Kee received a War Service Gratuity of \$359.49 for the loss of their son Ross. In November 1946, Gladys received the following letter from the Wing Commander for Chief of the Air Staff:

Dear Mrs. Kee:

It is a privilege to have the opportunity of sending you the Operational Wings and Certificate in recognition of the gallant services rendered by your son, Flying Officer R.J. Kee.

I realize there is little which may be said or done to lessen your sorrow, but it is my hope that these "Wings", indicative of operations against the enemy, will be a treasured memento of a young life offered on the altar of freedom in defence of his Home and Country.

Twenty-three-year-old Ross Kee is buried in Berlin 1939-1945 War Cemetery, Germany, Coll.grave 6. D.12-17.

KELLY, Gerald Reginald (#A/106785)

Gerald Kelly, 18, joined the army against his parents wishes, perhaps eager to follow in his two brothers footsteps. He definitely wanted to join his chums and do his part to end the war. He lost his life during a difficult but crucial battle in Belgium while heroically trying to save the life of a comrade.

He was born in Sarnia September 13, 1924, the youngest son of John Allan (born in Wyoming, Ontario), a Holmes Foundry employee, and Alice Marguerite (nee Webster, born in Oil Springs, Ontario) Kelly, of 258 Queen Street, Sarnia. Gerald had three brothers: Harold John (born 1914); William Henry (born 1921, later married Gwenna Estelle Scott); and Walter Allan (born 1923)--as well as five sisters: Alice Annabelle (born 1916, died at age 6); baby Kelly (born and died October 1, 1920); Marion Cecilia (born 1928, later Marion Codling), Dorothy Maxine (born 1929, later Dorothy MacKinnon), and Jean Edith (born 1935, later Jean Olney). At the time of Gerald's death, brother William was a trooper in the army, and had returned from overseas about one year prior; and Gerald's other brother Walter was a private stationed at a Canadian mechanized depot in London, Ontario.

Gerald Kelly attended Devine Street and Wellington Street schools before attending Sarnia Collegiate. He was also a former carrier boy for the *Canadian Observer* newspaper. He was active in basketball and bowling; he collected coins and enjoyed reading, and preferred machine shop at school. He left school at Christmas in grade eleven at age seventeen to go to work. He was employed at Loblaw's Grocery Store from April 1941 to October 1942 as a delivery boy and clerk, then went to work at Imperial Oil Limited from October 1942 to April 1943. He worked in the inspection laboratory at the oil refinery before leaving to enlist. Gerald joined the army "because of his chums and to get the war over sooner". His parents and brother William were opposed because of his William's loss of health while in the army.

Eighteen year-old Gerald Kelly enlisted in the Canadian Army on May 4th, 1943, in London, Ontario. He stood five feet seven inches tall, had brown eyes and brown hair, and was single. He lived at home on Queen Street with his parents at the time, and recorded his occupation as "machine shop practices". From #1 District Depot in London, Gerald began his army training at #13 Basic Training Centre (BTC) in Listowel. Some of the comments written by the Army Examiner at BTC of Gerald included; ... *Healthy, lots of energy, very cheerful and vigorous... A forthright lad with a high degree of self-confidence and an assertive personality. He has a vigorous attitude and appears quite inclined to take the initiative.... A bright, pleasant lad of fair appearance – learns readily – thinks clearly and quickly – should be watched for evidence of leadership ability.* Gerald continued his training at A29 Canadian Infantry Training Centre (CITC) at Camp Ipperwash. On February 15, 1944, he embarked overseas for the

United Kingdom, where he became a member of #3 Canadian Infantry Reinforcement Unit (CIRU). One month later, on March 13, 1944, Gerald Kelly became a member of the Algonquin Regiment Infantry Battalion, Royal Canadian Infantry Corps (RCIC), with the rank of Private.

On April 21, 1944, Gerald wrote a letter home to his mother Alice. Following is a portion of that letter:

Dear Mother,

Received your most welcome letter yesterday and was certainly glad to hear from you. I never had a chance to answer it last night as I was at a regimental dance last night. They had a good hall for the dance and an army orchestra. The eats and tea were free and there was a fairly big crowd. As yet I have not received any cigarettes from home but I expect them any day now...

Mother as I told you before I don't want you to save any money for me. If you want to bank it (as you said in your letter for a rainy day) you can put it in, in your name but don't save it for me. My fifth Victory bond will be paid up at the end of this month and when you get it would you put it in the bank also in your name.

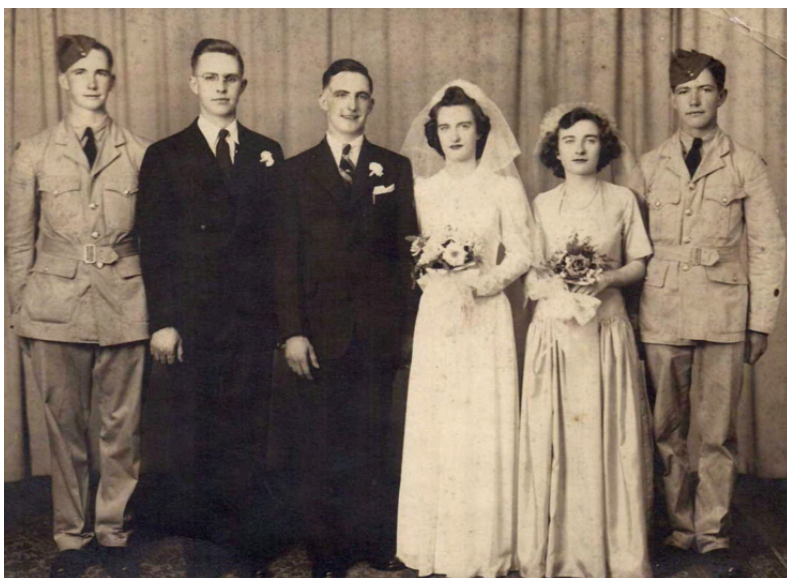

On June 10, 1944, Gerald wrote a letter to his sister Dorothy. Following is a portion of that letter:

Dear Dot,

Received your most welcome letter and seeing as I was writing quite a few letters I thought I'd answer yours at the same time... I like it over here alright Dorothy but its not the same as being back home... We have a horseshoe pitch set up in our lines and we put in most of our spare time playing horseshoes. They hold bingos about once a week here in camp. They have something on nearly every night so you're never without something to do. I do my own washing, ironing and sewing and if you could see me doing it I know you would get a great laugh out of it. I have not as yet met anyone that I knew back home so you can see just how much I would like to get Cliffs and Vernes address... I have been feeling fine and I hope everyone at home is the same.

Private Gerald Reginald Kelly

L-R: brothers Walter, Harold, William + Gwenna & her sister, Gerald

On July 20, 1944, Private Gerald Kelly and the Algonquin Regiment embarked from the U.K., arriving in France two days later at the shell-torn seaside town of Courseulles-sur-mer, along the western edge of Juno Beach. The **Battle of Normandy** had begun for the Canadians with the June 6, 1944 D-Day landings at Juno Beach. After breaching the "Atlantic Wall" of "Fortress Europe", Allied armies began their break out from the narrow Normandy bridgehead to carve out a foothold on the French mainland. It would take a whole summer of tenacious fighting, pushing against fierce and ruthless German forces to advance east across France. In a brutal campaign of attrition, the Canadians faced fierce battles and vicious counterattacks as they clawed their way forward liberating villages and towns including Bretteville, Carpiquet, Caen and Falaise.

After the Allied breakout from Normandy, Canadian forces were assigned the "**Long Left Flank**". Their jobs included the less glamorous but vital tasks of clearing coastal areas in the north of France and Belgium of German occupiers; opening the English Channel ports for supplies essential to the Allied advance; and capturing the launching sites of German V-1 rockets. In a series of stop-and-start advances against stiff resistance in fortified positions, the Canadians liberated ports and villages including Rouen, Dieppe, Dunkirk, Boulogne and Calais.

Gerald Kelly served with the Algonquin Regiment as they advanced through France in the Battle of Normandy and the Long Left Flank, and then into Belgium. On August 11, 1944 (one month before he was killed), Gerald wrote the following letter home:

Dear Mom and Dad,

Have received several letters from you but this is the first chance I've had to answer them. As I said in my last letter, I received a thousand cigs from you a couple of weeks ago and they certainly came in handy. I have smoked more cigarettes these last couple of weeks than I've ever smoked before so you see they certainly come in handy.

As I've said in my other letters, mother, I can't write as often as I used to but I will write just as often as I can. I borrowed the pen here from one fellow, the ink from another one and the envelopes were given to me by still a different person. I am writing this letter in my slit trench so you can see mother, the writing facilities aren't any too good.

I have written to both Cliff Bendall and Bert Pask but as yet have received no answer. Will you say hello to Marion, Dorothy and Jeannie for me? Thank Marion for helping with the parcel and tell Dot that I haven't any pictures right now.

By the way, I don't know if I ever mentioned it before but when I was back in England I met Nelson Archer and he said to be sure to say hello to Dad. Well Mom, I am going to try and write quite a few letters today so I had better say so long for now.

In early September 1944, Allied forces had captured the inland port of Antwerp, Belgium, the second greatest port in Europe at the mouth of the Scheldt River. However, German forces still controlled the 45-mile-long Scheldt estuary (located in the Belgian-Dutch border area) that connected the port of Antwerp to the North Sea. The Canadians would be entrusted with liberating the estuary—the **Battle of the Scheldt** would be among the most difficult and grueling struggles in the war.

In early September 1944, Gerald's Algonquin Regiment, part of the First Canadian Army, were in the Scheldt estuary area. The German army had begun an organized retreat and took up defensive positions behind a series of canals along the Belgian and Dutch border. Allied command believed that every opportunity had to be made to pressure the retreating German army. A pause by Allied forces for a few days may have given the enemy time to reinforce its positions.

As part of the preliminary battles leading up to the Battle of the Scheldt, the Algonquin Regiment was selected to cross the Canal de Derivation de la Lys and the Leopold Canal and establish a bridgehead crossing near the hamlet of Molentje, north of the village of Moerkerke in Belgium. The motto of the regiment, Ne-Kah-Ne-Tah (We lead, others follow) would be put to the test. The Germans had destroyed the bridges across the canal and were well-entrenched on the north side of the Leopold Canal. The two ninety-foot canals ran side by side, separated by a sixty-foot-wide dyke. Once across these and on the northern side of the Leopold Canal, the plan was for the four companies to advance roughly 200 to 400 metres north, then dig in and form a defensive perimeter around an old bridge site. After establishing the defensive perimeter, engineers were to build a new bridge.

The first **Battle of the Leopold Canal** would take place on September 13-14, 1944. The plan was doomed from the start; a diversion failed to draw the German forces away, the boat launch was late, and the artillery support ended too quickly. Many of the paddlers from other regiments assigned to assist the Algonquin Regiment never arrived, forcing the Algonquin troops to move the heavy wood and canvas assault boats across the canal and over the island where many German soldiers fired at them from hidden slit trenches.

At approximately 11:00 p.m. on the night of September 13, under the cover of darkness, and after supporting Canadian artillery units laid down a barrage of fire, the infantry crossed the two separate canals using assault boats and special ladders with grappling hooks to assist in scaling the steep banks, all while under enemy small arms, mortar and shellfire. All four companies, each at a strength of 90 men, managed to cross the canals and dig in on the far bank, succeeding in securing a bridgehead, though much smaller than originally planned. During the rest of the night, they repelled all attempts to dislodge them, while engineers began to build a bridge. Throughout the night, German soldiers utilized numerous gaps to infiltrate the Algonquins' positions and by the morning of the 14th, all four companies were running low in ammunition while coming under fire from every direction from an enemy who outnumbered them by at least two to one.

Also, early in the morning, German command ordered their troops to eliminate the bridgehead 'at all costs'.

A “storm of fire,” mortars and artillery, rained upon the Algonquins in the bridgehead, on their headquarters and on the engineers bridging the canal. Work on the bridge had to stop, many of the assault boats had been destroyed, and attempts to ferry ammunition across to replace the dwindling supplies was halted by intense and accurate enemy fire. By noon, it was realized that holding and exploiting the bridgehead was impossible. Orders were dispatched for the immediate withdrawal of the regiment. Heavy artillery and mortar barrages and thick smoke screens were fired to cover the retreat, as soldiers fought their way through pockets of enemy troops. There were insufficient boats and many of the survivors had to swim the two canals. The last of the regiment were out of the bridgehead at approximately 2:00 p.m.

Following is a portion of an eyewitness account of the battle by Captain Herbert of the Algonquin Regiment: *After crossing the canal the two remaining platoons of “B” Coy ran through the town and dug in fifty yds from the crossroads. They were always under fire from every direction as the enemy had not been cleared out of the town. The position became isolated and enemy infiltrated on every side. The Coy with the help of two sections from “A” Coy fought the Germans less than 20 yards away. They broke up all attempts of enemy reinforcements reaching the town and had to leave their weapon slits every once in a while to clear the buildings behind them from which snipers were picking the men off. Ammunition ran out and under this extreme fire several men ran around and picked ammunition from the wounded and dead. Even the mortar was fired at point blank low angle until ammunition was finished. The order was a German for every round of ammunition. Lt. Roberts was killed by shrapnel while sitting in the same slit trench as myself. The Germans had then our positions and were dropping shells right into our lines. Fifty percent of the men were wounded and this information was passed back to Comd Post. An order arrived to withdraw fighting from house to house. This was done until we fought our way back into the central perimeter of town. A new perimeter was formed and then the order came to withdraw. All wounded from the forward areas were taken out.*

For the Algonquin Regiment, the attempted crossing of the Leopold Canal was a disaster, costing the regiment 158 casualties (approximately 32 killed and 60 taken as prisoners) in fourteen hours. It was to be their largest single day loss of the war. The failure of the operation had not been because of a lack of training, fighting ability or bravery of the Algonquins, but rather the problems resulted from the use of too few men for too big an operation. The attack was renewed within a month. This time, the Algonquins participated with three divisions in a well-planned attack code-named *Operation Switchback*. The laneway from where the Algonquin Regiment launched its September assault across the Leopold Canal now bears the name Algonquinstraat.

Gerald Kelly, overseas for only seven months, lost his life on September 14, 1944 in the Battle of the Leopold Canal, one day after his 20th birthday. He was killed while re-crossing the Leopold Canal trying to rescue his wounded sergeant. Gerald Kelly’s remains were buried at a location recorded on the Army Field Service Card as “Cemetery France & Belgium 1/50,000 Zebrugge Brugge sh 21 & 31 934039 75 yards N of ruined bridge on canal W side of road.”

On September 30, 1944, Alice Kelly on Queen Street in Sarnia, received the following telegram from the Director of Records: MINISTER OF NATIONAL DEFENCE DEEPLY REGRETS TO INFORM YOU THAT A106785 PRIVATE GERALD REGINALD KELLY HAS BEEN OFFICIALLY REPORTED KILLED IN ACTION FOURTEENTH SEPTEMBER 1944 STOP IF ANY FURTHER INFORMATION BECOMES AVAILABLE IT WILL BE FORWARDED AS SOON AS RECEIVED.

Also, in September 1944, Alice received the following letter from Major G.L. Cassidy of Gerald’s Algonquin Regiment:

Dear Mrs. Kelly,

It is a most difficult task for me to write this letter, containing, as you will already have been officially informed, the news of Gerald’s death in action. Ever since he has been in my company he was everybody’s favorite – the perfect soldier and gentleman and his loss is a grievous one to you as well as to us. It may help you to know he died a hero’s death. After 24 hours of the hardest fighting this unit has ever seen or known, during which time Gerald distinguished himself on several occasions for bravery, the unit was ordered to withdraw - across a water obstacle.

Gerald was already at the obstacle and about ready to enter a boat, when it became known that a wounded sergeant, who was supposed to have been carried by another party, could not be found. Gerald and another sergeant, without being ordered or asked, at once returned through heavy shell and machine gun fire to bring back the wounded party. He was on his return with the sergeant on his back when a shell struck close by, killing him instantly. The other rescuer was wounded, but managed to get back, and he told me this story.

I am arranging to have Gerald's actions mentioned in despatches. May we all unite our deep sorrow with yours, Mrs. Kelly, remembering always that God is with him, and that we were all fortunate to have known him even for so short a space.

Shortly after receiving the above letter, Alice received another letter from Major G.L. Cassidy, informing her of the approximate location of her son's body:

Dear Mrs. Kelly,

I must apologize for my delay in replying to your letter, but it is only very recently that a representative of the battalion was able to revisit the scene of Gerald's heroic death. You see, the occasion was our attempt to cross the Leopold Canal, the first one to be made, and one which, unfortunately, was not successful. We were forced to withdraw, and for the next six weeks the ground remained in enemy hands. But we do know now that the Germans buried all our dead there, although not all the graves are marked. I will attach a little diagram to show you the approximate location.

Please accept our grateful admiration for the superb courage you and other Canadian mothers have shown in adversity. You are our inspiration throughout.

In mid-October 1944, Alice received the following letter from the Brigadier, Acting Adjutant-General:

Dear Mrs. Kelly,

It was with deep regret that I learned of the death of your son, A106785 Private Gerald Reginald Kelly, who gave his life in the Service of his Country in the Western European Theatre of War on the 14th day of September, 1944.

From official information we have received, your son was killed in action against the enemy. You may be assured that any additional information received will be communicated to you without delay. The Minister of national Defence and the Members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

After being Mentioned in Despatches, Gerald was posthumously awarded a certificate of recommendation in January 1945, a certificate his mother received in recognition of her son's bravery and devotion to duty. The Ministry of National Defense also expressed its sincere regret "that your son did not live to receive this award." The Commander-in-Chief's Certificate for Good Service reads:

It has been brought to my notice that you have performed outstanding good service, and shown great devotion to duty, during the campaign in North West Europe. I award you this certificate as a token of my appreciation, and I have given instructions that this shall be noted in your Record of Service.

The award is signed by Bernard L. Montgomery, Field Marshal, Commander-in-Chief, 21st Army Group.

Gerald Kelly's death was later officially recorded as, *Overseas casualty, killed in action, in the field (Belgium)*. In July 1945, Alice Kelly received a letter from the Department of National Defence, Army, Estates Branch. Based on her son's length of qualifying service, she was to be paid a sum of \$190.30 as a War Service Gratuity. The letter also stated that, *We regret to inform you that none of your son's Personal Effects were recovered at the time of his death.*

In December 1945, Alice received another letter from the Colonel, Director of Records. Following is a portion of that letter:

Dear Madam,

Information has just been received from overseas that the remains of your son, A106785 Private Gerald Reginald Kelly, have been carefully exhumed from the original place of internment and reverently reburied in grave 4, row A, plot 3, of Adegem Canadian Military Cemetery, Adegem, Belgium. Marked map is enclosed. This is a recognized military burial ground and will receive care and maintenance in perpetuity.

The grave will have been marked with a temporary cross which will be replaced in due course by a permanent headstone suitably inscribed. While it cannot now be stated when this work of permanent commemoration will begin, before any action is taken you will be communicated with and an opportunity will be given you to submit a short personal inscription of your own choice for engraving on the headstone....

In January 1946, John and Alice Kelly in Sarnia received a War Service Gratuity of \$190.30 for the loss of their son Gerald. In October 1947, the Director of War Service Records sent Alice a photograph of the grave and marker over the burial place of her late son, along with the location of the cemetery and grave. Twenty year-old Gerald Kelly is buried in Adegem Canadian War Cemetery, Belgium, Grave III.A.4. On his headstone are inscribed

the words, HE IS GONE BUT NOT FORGOTTEN. THOUGHTS OF HIM ARE ALWAYS NEAR. His name is also inscribed on the Sarnia Refinery Plaque. Unveiled in 1949, the plaque has the names of 24 Sarnia Imperial Oil employees who made the ultimate sacrifice in World War II.

KETTLE, Alfred Smedley (#A/2382)

Alfred Smedley Kettle was 31 years old, much older than the average soldier's age, and had a 10-year-old son at home when he made the decision to serve his country. In February 1942, he was aboard one of the "backbone" warships of the Canadian navy when he lost his life during an escort operation during the longest continuous campaign of the war to what British Prime Minister Winston Churchill said was "... the only thing that ever really frightened me during the war..."

He was born in Petrolia, Ontario on May 14, 1909, the son of Alfred Smedley Sr. and Edith May (nee Collier) Kettle, of R.R. #2 Mandaumin, Plympton Township, Lambton County, Ontario. Alfred Sr. (born in Blackpool, England) and Edith May (born in Oxford, Ontario) Kettle were married on October 19, 1896 in Petrolia, Ontario. At the time of Alfred Jr.'s birth, his father worked as a horse buyer. Alfred Jr. had numerous brothers and two sisters. His brothers included: twins Earl and Harold (born 1900, although Harold died ten days after birth); Richard Selvenia (born 1910, who would serve in Canadian Army); Harold Alexander (born 1912); James Ernest (born 1905); Malcolm Benjamin (born 1914); Robert Gerald (born 1927, who would serve in WWII and Korea); William Henry (born 1903, deceased 1926); and Thomas Harrison (born 1908, deceased at age 9 months). His sisters were Annie May (born 1897, deceased 1918), and Verna Maude (born 1904).

Alfred served in the Lambton Regiment, with the rank of corporal from November 1934 to November 1935. Alfred was married for a time to Louise Kettle in Sarnia, but she left him approximately eight years before he enlisted. They had one child together, Alfred Wayne Kettle, born July 31, 1930, who lived with Alfred and his parents at R.R. #2 Mandaumin, Ontario. Prior to enlisting, Alfred was employed as a quartermaster for Canadian Steamship Lines (he had sailed on the lakes since 1927).

Thirty-one-year-old Alfred Kettle enlisted in the Royal Canadian Naval Reserve on July 29, 1940 in London, Ontario. He stood five feet eight and a half inches tall, had hazel eyes and dark hair, and was single. He recorded his marital status as "widower". From London Division Headquarters, Able Seaman Alfred Kettle was posted to the *HMCS Stadacona* from August 8 to June 27, 1940, where he rose in rank to Leading Seaman, then Petty Officer. Beginning on June 28, 1941, Alfred was posted to the *HMCS Spikenard*, where he attained the rank of Chief Petty Officer.

Chief Petty Officer Alfred Smedley Kettle

Flower Class Corvette *HMCS Spikenard K198*

Beginning on the opening day of the Second World War, the **Battle of the Atlantic** would be the longest continuous campaign of the war, and one in which Canada played a central role. The Royal Canadian Navy, along

with the Royal Canadian Air Force (RCAF) and Canada's Merchant Navy, played a vital role in defending the country's eastern coast and escorting convoys of ships carrying men and essential machinery, arms, fuel and basic resources between North America and Europe.

The *HMCS Spikenard* (K 198) was a corvette of the Flower Class, commissioned by the Royal Canadian Navy in December of 1940. In early February of 1942, the *Spikenard* was part of convoy SC-67, sailing for the British Isles, part of an RCN escort to make the first "Newfie-to-Derry" run that would continue for the next four years (St. John's, Newfoundland and Londonderry, Northern Ireland).

At about 9:30 pm on the night of February 10, 1942, the *Spikenard* was approximately 465 nautical miles west of Malin Head Ireland, following a zigzag pattern ahead of the convoy in rough seas. Two torpedoes fired by German U-boat *U-136* struck the port side in the bow near the bridge. Almost simultaneously, a torpedo smashed into the nearby tanker *Heina*. A nearby corvette, *Dauphin*, saw one explosion and moved toward the position where the *Heina* was on fire. It took two hours to rescue the *Heina* survivors from the oily water.

Aboard the *Spikenard*, fire had broken out, destroying the bridge, the wireless room and one of her lifeboats. Flames then spread to fuel drums aft of the mast, and fire raced up the superstructure and down into the belly of the ship. Men on the mess decks had to fight their way to the forecastle through a curtain of flames. Many of them, groping forward, stumbled into the gaping hole blasted in the deck plates. After a second explosion, with the ship's whistle set off by the blast, blowing constantly with an eerie shriek, waves engulfed the vessel. The *Spikenard* sank within five minutes. As the men struggled in the water on the black, windy night, they shouted in vain and had no flares to attract attention. The other escorts in the group had been caught up chasing contacts and had not known the *Spikenard* was gone until she had not answered repeated radio calls. By dawn, there was no sign of the missing *Spikenard*. The commander, four officers and fifty-two of the crew were lost.

Incredibly, eight survivors were picked up clinging to a raft by *HMS Gentian* about 19 hours after the sinking. The eight survivors, many suffering burns, had picked up two other survivors after the second explosion, but both were so badly injured that they died shortly after being taken aboard. Alfred Kettle was one of the 57 crew members who were lost in the sinking of the *HMCS Spikenard*.

On February 18, 1942, Edith Kettle of R.R.#2 Mandaumin, received a telegram from the Minister of National Defence informing her that her son, Chief Petty Officer Alfred Smedley Kettle, was missing and presumed lost at sea. In late February 1942, Edith received the following letter from the Secretary, Naval Board:

Dear Madam:

It is with deep regret that I must confirm the telegram of the 18th February 1942 from the Minister of National Defence for Naval Services informing you that your son, Alfred Smedley Kettle, Chief Petty Officer, R.C.N.R., O.N. A.2382, is missing and must be presumed lost on Active Service.

Your son was serving in H.M.C.S. "SPIKENARD" which was torpedoed and sunk by enemy action on the 10th February 1942. Details of the action are not, however, available at this time. The possibility of your son having been rescued by other ships cannot be estimated but it has been established that he was not among the survivors landed at a United Kingdom port and very little hope is held out for the survival of the remainder. You will be informed immediately should any further information be received.

I wish to express the sincere sympathy of the Chief of the Naval Staff, Officers and men of the Royal Canadian Navy the high traditions of which your son has helped to maintain.

Alfred Kettle's death certificate simply states the cause of death as, *Loss of H.M.C.S. Spikenard, at sea*. In April 1947, Edith Kettle received a War Service Gratuity of \$237.54 for the loss of her son Alfred. Thirty-one-year-old Alfred Smedley Kettle has no known grave. His name is inscribed on the Halifax Memorial, Nova Scotia, Canada, Panel 6. Alfred Kettle's name is also inscribed on the Petrolia cenotaph in the Town of Petrolia. SOURCES: A, B, C, D, E, F, L, P, T, U, X, Z, 2A, 2C, 2D, 6F, 7C, 8X, 8Y

KIRK, Leslie Gordon (#A/104549)

Leslie Kirk gave his life for Canada while fighting in the Italian Campaign, in a battle against the last major German defensive line in Italy, and the most fortified position the German army had yet thrown into the Allied Forces' path.

He was born in Kemble, Ontario (north of Owen Sound) on July 6, 1921, the only son of Thomas Edward and Annie Josephine Kirk, of East Linton, Ontario. Thomas (a farmer) and Annie Kirk were married in Owen Sound

on November 10, 1915. Thomas and Annie Kirk had four children together: son Leslie and three daughters; Evelyn Alma, Aleda Margaret and Gwendolyn. Leslie did not attend high school, leaving school at the age of thirteen. He participated in baseball and hockey, and his hobbies included playing guitar and tinkering with automobile engines. Leslie worked on his father's farm in East Linton from 1934 to 1937. Then from 1938 to 1942, he alternated between working as a sailor in the summer and doing bush work for his father in the winter.

Twenty-one-year-old Leslie Kirk enlisted in the Canadian Army in London, Ontario on September 17, 1942. He stood five feet five and a half inches tall, had blue eyes and fair hair, and was single. He recorded his occupation as sailor with Canadian Steamship, and lived at 152 Dundas Street, Sarnia at the time. He expressed his desire to serve as a motorcycle driver.

From #1 District Depot in London, Leslie Kirk began his army training at #10 Basic Training Centre (BTC) in Kitchener. In mid-October 1942, he was transferred to A29 Canadian Infantry Training Centre (CITC) at Camp Ipperwash. In mid-March 1943, he became a member of the Essex Scottish Regiment with the rank of Acting Lance Corporal. Leslie embarked overseas for the United Kingdom on March 27, 1943, where he became part of #3 Canadian Infantry Reinforcement Unit (CIRU). He continued his training in the U.K., became a qualified motorcycle driver, and in mid-May 1943, returned to the rank of Private at his own request.

Private Leslie Gordon Kirk

On March 27, 1944, Private Leslie Kirk embarked from the U.K., arriving in Italy on April 9, 1944, as a member of the Perth Regiment, Royal Canadian Infantry Corps (RCIC). He arrived nine months into the Italian Campaign. The **Italian Campaign**, the first sustained Canadian Army operation of the War, had begun with the invasion of Sicily on July 10, 1943. The fierce fighting on the island would last more than four weeks, during which the Canadians would advance through difficult mountainous terrain, against an ever-stiffening German resistance. By August 17, the Germans had evacuated from the island, retreating to the Italian mainland. In early September, Canadian and Allied forces would invade Italy. Though Italy surrendered shortly after, the occupying Germans made it clear their fight was not over. Liberating Italy would be a painstaking northward crawl, lasting 20 months, over a range of landscapes, through challenging weather, and against a series of well-protected defences held by some of the German army's best troops.

In late August 1944, the Canadians began their attack on the **Gothic Line** with the objective of capturing Rimini. The Gothic Line was the last major German defence line separating the Allies from the Po Valley. Since northern Italy contained many factories producing vital supplies, the Germans made the line formidable and would fight hard to prevent a breakthrough. The Gothic Line was meant to be impregnable, a series of strong-points, exploiting the natural terrain features, composed of machine-gun posts, anti-tank guns, mortar- and assault-gun positions and tank turrets set in concrete, as well as anti-tank mines, anti-personnel mine fields, bunkers, barbed wire obstacles, snipers, and anti-tank ditches, all arranged in depth. Six rivers also lay across the path of the advance to Rimini.

For twenty-eight days, the Canadians relentlessly battered their way forward through a rugged killing

ground, in a maze of fortified ridges and towns, hills and deep valleys, over blown-out bridges and roads blocked with debris from toppled buildings, and across rivers. Bitter fighting resulted in gruesome losses on both sides, but the Canadians kept grinding forward in step-by-step progress, often engaging in close-quarters and hand-to-hand combat. On September 21, the Allies entered a deserted Rimini. The breaking of the Gothic Line was one of the most important offensives won by Canadian forces in the Second World War, and the most difficult in the entire Italian campaign.

Approximately five months after arriving in Italy, on September 13, 1944, Leslie Kirk lost his life while fighting during the Italian Campaign. He was killed in action during the attack on the Gothic Line on the road to Rimini. Leslie's remains were buried on September 14 at a location recorded on the Army Field Service Card as "Roadside sheet 109/IV MR 892866 Grave 2, Italy". Only days before he was killed, his mother Annie had received a telegram informing her that her son Leslie had been wounded in action on August 31, 1944.

In mid-October 1944, Annie Kirk in East Linton received the following letter from the Brigadier, Acting Adjutant-General:

Dear Mrs. Kirk:

It was with deep regret that I learned of the death of your son, A104549 Private Leslie Gordon Kirk, who gave his life in the Service of his Country in the Mediterranean Theatre on the 13th day of September, 1944.

From official information we have received, your son was killed in action against the enemy. You may be assured that any additional information received will be communicated to you without delay.

The Minister of National Defence and the Members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

In December 1944, Annie received the following letter from the Colonel, Director of Records, for Adjutant-General:

Dear Mrs. Kirk:

I am directed to inform you that official information has now been received from Canadian Military Headquarters Overseas advising that it has been ascertained that your son, A-104549 Private Leslie Gordon Kirk, was not wounded in action on the 31st August 1944, as previously reported.

It was his first battle casualty when he was killed in action on the 13th September 1944. You may be assured that any additional particulars received regarding his regretted death will be communicated to you. Please accept my deepest sympathy in your bereavement.

Leslie Kirk's death was later officially recorded as, *Overseas casualty, killed in action, in the field (Italy)*. In July 1945, Annie Kirk received a War Service Gratuity of \$367.65 for the loss of her only son. In late-January 1946, she received another letter from the Colonel, Director of Records, for Adjutant-General. Following is a portion of that letter:

Dear Madam:

Information has just been received from overseas that the remains of your son, A104549 Private Leslie Gordon Kirk, have been carefully exhumed from the original place of internment and reverently reburied in grave 3, row C, plot 2, of Coriano Ridge British Empire Cemetery, two miles North of Coriano, Italy. Marked map is enclosed. This is a recognized military burial ground and will receive care and maintenance in perpetuity.

The grave will have been marked with a temporary cross which will be replaced in due course by a permanent headstone suitably inscribed. While it cannot now be stated when this work of permanent commemoration will begin, before any action is taken you will be communicated with and an opportunity will be given you to submit a short personal inscription of your own choice for engraving on the headstone...

Twenty-three-year-old Leslie Kirk is buried in Coriano Ridge War Cemetery, Italy, Grave II, C 3. On his headstone are inscribed the words, GREATER LOVE HATH NO MAN THAN THIS, THAT A MAN LAY DOWN HIS LIFE FOR HIS FRIENDS.

SOURCES: A, B, C, D, E, F, L, 2C, 2D, 7C, 8X, 8Y

KNIGHT, Wilfred Leslie (J/47880)

Wilfred Knight was only eighteen when he chose to serve his country, and had plans to return to his job at CN Rail when the war ended. He was still a teenager when he gave his life for Canada while serving against the Japanese after the war in Europe had ended.

He was born in Sarnia on September 1, 1925, the son of Charles Wesley and Lucy Ann (nee Corrigan)

Knight, of 107 Alfred Street, later R.R. #2, Sarnia. Charles (a yard foreman, C.N.R.) and Lucy Ann Knight, both born in Sarnia, were married on April 9, 1917 in Detroit Michigan. Charles and Lucy had four children together: daughters Norinne (later Norinne O'Hagan) and Shirley; and sons Wilfred and Thomas Patrick. Thomas also joined the RCAF, enlisting in September 1942, one year before Wilfred enlisted. Thomas became a Leading Aircraftman who was stationed in Nova Scotia at the time of Wilfred's death. Wilfred had two other brothers; however, they both died in infancy.

After completing public elementary school, Wilfred was unemployed for one year, 1939-1940. Wilfred then attended Sarnia Collegiate for two years (1940-1942), leaving school at age sixteen. He was very active in baseball, hockey and rugby. He was employed as a car checker at Canadian National Railways from 1942 to September 1943, when he left to enlist. After the war, he planned to return to Sarnia and his job at Canadian National Railways.

Eighteen year-old Wilfred Knight enlisted in the Royal Canadian Air Force on September 10, 1943 in London, Ontario. He stood five feet two inches tall, had blue eyes and dark brown hair, and was single. He lived at home with his parents on Alfred Street at the time. He requested flying duties, wanting to be part of an aircrew. From #9 Recruiting Centre in London, then #1 Manning Depot in Toronto, Wilfred received his air training at Air Force Headquarters (AFHQ)--Pre-Aircrew Education at Ottawa Technical School; he continued at #2 Wireless School (WS) in Calgary and #5 Bombing and Gunnery School (B&GS) in Dafoe Saskatchewan. He was awarded his Air Gunners Badge in Dafoe on August 11, 1944. In September 1944, he was posted to #1 Y Depot in Lachine Quebec, before being posted to #111 Operational Training Unit (OTU) at Nassau, Bahama Islands. He spent five months in Nassau with #111 OTU before returning to Dorval, Quebec in early February 1945.

On February 16, 1945, Wilfred Knight embarked overseas from Dorval bound for the United Kingdom. From #3 Personnel Reception Centre (PRC), then #9 Personnel Dispersal Centre (PDC), Wilfred became a member of RAF #354 Squadron on April 3, 1945. RAF #354 was an anti-submarine and anti-shipping squadron that served in the Far East and was equipped with Consolidated Liberator aircraft. One month after becoming a member of RAF #354, on May 7, Germany surrendered ending the war in Europe (VE Day). However, the war with Japan continued. On June 1, 1945, Wilfred became a member of RAF #160 Burma Squadron "Api Soya Paragasamu" (We seek and strike), with the rank of Wireless Operator-Air Gunner.

WAG Wilfred Leslie Knight

In early January 1942, RAF #160 Burma Squadron had been a heavy bomber/reconnaissance unit equipped with Consolidated B-24 Liberator aircraft based in Bedfordshire, England. It was later moved to the Middle East, carrying out night raids on enemy targets in Libya and Crete. In early 1943 the squadron moved to India, and then to bases in Ceylon (Sri Lanka), part of **South East Asia Command** (later renamed RAF Air Command Far East). In early February 1945, the squadron was based at RAF Minneriya (in Ceylon). It was involved in photo-reconnaissance missions, shipping protection, and minelaying. By June 1945, the squadron was transferred to Special Duties, dropping agents and supplies to resistance groups in Malaya and Sumatra.

Approximately one month after VE Day, Wilfred Knight was aboard Liberator aircraft BZ950 that took off at 0632 hours on June 9, 1945 for a secret destination. The aircraft was heading to the Cocos Islands on a photo recon detachment. Seven minutes after takeoff, the aircraft reported the failure of #1 engine and requested an emergency landing. Approximately three to four miles out, at 1000 to 1500 feet altitude, the port wing was observed to drop. The aircraft turned to port almost at right angles to its line of approach, and plunged steeply into the dense jungle. Nine minutes after take-off, the aircraft crashed at Minneriya, Ceylon as it attempted to return to the airfield. Along with Flying Officer-Wireless Operator/Air Gunner Wilfred Knight, also killed were Sgt.s Andrew Robin Thomson and Matthew Muirhead Smith (both RCAF); F/O John Patrick Hynes (RAAF), Sgt.s D. Davenport, D. Lumley, E.B. Wood, P.J. Taylor and F/O H.W. Daniels (all RAF) and ten RAF personnel passengers. Wilfred Knight's remains were buried two days later in Liveramentu Cemetery, Ceylon.

In mid-June 1945, Charles and Lucy Ann Knight in Sarnia received a telegram from Ottawa informing them that their son, FLYING OFFICER WILFRED KNIGHT HAS BEEN REPORTED KILLED IN ACTION OVERSEAS. Wilfred had been overseas for just under four months. He was reported to be the first Sarnian or district casualty in the continuing war against the Japanese since VE-Day in Europe. Wilfred Knight's death was later officially recorded as, *Killed as a result of a flying accident, overseas (Ceylon)*. The war with Japan ended on August 15, 1945, two months after Wilfred Knight was killed.

In January 1946, Charles and Lucy received a War Service Gratuity of \$308.03 for the loss of their son Wilfred. In January 1947, Lucy, then at R.R. #2, Sarnia, received the following letter from the Wing Commander for Chief of the Air Staff in Ottawa:

Dear Mrs. Knight:

It is a privilege to have the opportunity of sending you the Operational Wings and Certificate in recognition of the gallant services rendered by your son, Flying Officer W.L. Knight. I realize there is little which may be said or done to lessen your sorrows, but it is my hope that these "Wings", indicative of operations against the enemy, will be a treasured memento of a young life offered on the altar of freedom in defence of his Home and Country

Nineteen year-old Wilfred Knight is buried in Colombo (Liveramentu) Cemetery, Sir Lanka, Grave 3.G.5. On his headstone are inscribed the words, THE LAST PRIVILEGE OF LOVE IS MEMORY.

KNOWLES, George William (#J/12998)

George "Ducky" Knowles led an active life in Sarnia before he enlisted with the RCAF in 1941. Described by his superiors as *Cheerful and hard working in his studies [and] ... a most conscientious and good class leader*, George, 22, was killed in a training exercise over the Bay of Fundy. No trace of the crew or its Hudson aircraft has ever been found.

He was born in Kincardine-on-Forth, Scotland on November 30, 1918, the eldest son of Gordon Allen and Catherine Young (nee Thompson) Knowles. Gordon (born in Clifton, New Brunswick) and Catherine (born in Lecropt, Scotland) Knowles were married in Kincardine-on-Forth, Scotland on September 25, 1917. The Knowles family immigrated to Canada in mid-1919, when George was only eight months old, and they resided in New Brunswick for five years. The family moved to Iroquois Falls for six months, and then to Sarnia when George was a little over six years old. George had one sister, Catherine Rebecca, and one brother, Robert Edward. To support his family, Gordon Knowles worked as a Still Runner at Imperial Oil Limited.

The family lived at 117 North Forsyth Street, a short walk for George to George Street Public School which he attended from 1926 to 1933. He then attended Sarnia Collegiate Institute from 1933 to 1939 where he was very active. He loved sports and played basketball and football at SCITS and belonged to the Central Century Club where he played softball, basketball and hockey. He also played City League softball and baseball.

At SCITS he was a member of the signalling team and was manager of the senior rugby team for one year. Away from school, George was also a member of St. Andrew's Presbyterian Church. In his teens, George showed an interest in the military—he served as a member of the 2nd-26th Battery, Royal Canadian Artillery (RCA) in Sarnia with the rank of Signaller from August 1940 to February 1941. George worked as a grocery clerk at A & P Limited from September 1939 to April 1940 and then was employed as a machinist/drill press operator with Muellers Brass Limited, a job he held from April 1940 until he enlisted nearly a year later.

Twenty-two-year-old George Knowles enlisted with the Royal Canadian Air Force on March 6, 1941 in London, Ontario. He stood five feet four inches tall, had blue eyes and medium brown hair, and was single. He was

residing at home with his parents on Forsythe Street at the time and he requested flying duties. From the Recruiting Centre in London, then #1 Manning Depot in Toronto, Knowles received his air training at #1 Service Flying Training School (SFTS) at Camp Borden; at #1 Wireless School (WS) in Montreal; and at #1 Bombing and Gunnery School (B&GS) in Jarvis, Ontario.

At Montreal WS, he won a silver medal for proficiency by finishing second in a class of 58 candidates. At Jarvis B&GS, he finished third in the class. Little wonder his Squadron Leader and Commanding Officers' remarks about George were complimentary: *Cheerful and hard working in his studies, has practical ability as well. Has been a most conscientious and good class leader – accepts responsibility cheerfully and is most thorough in carrying out his duties. Suitable for Commissioned Rank.* George was awarded his Air Gunners Badge on July 20, 1942 and received his commission as a Pilot Officer. On August 8, 1942, George was posted to RAF #36 Operational Training Unit (OTU), based at Greenwood, Nova Scotia.

P/O-Pilot George William Knowles

No. 36 Operational Training Unit prepared crews to be part of **Bomber Command**. They used Lockheed Hudson aircraft—a twin-engine light bomber. There was no easy way to learn how to fly the heavy bombers, and training crews suffered a litany of disasters, crashes and deaths. By the end of the war, Bomber Command lost over 8,000 Allied airmen who were killed in training or by accidents alone.

Two months after being posted to #36 OTU, on October 8, 1942, George Knowles was part of a crew of seven in Hudson aircraft BW700 that was engaged in air exercises over the Bay of Fundy. During the training session on that day, the aircraft crashed four miles north of Point George, Nova Scotia. Eyewitnesses later reported that the plane had just circled close to the fishing community Port George shore and was turning to retrace its course, when the roar of its engines ceased, and the aircraft, already flying at a low altitude, slid off to one side and smacked into the water. Reports were that the plane sank almost immediately. "It seemed to go right under," according to one eyewitness. "There was the sound of the crash, a cloud of smoke, and that was all." Rescue attempts from shore could not be made as boats had been hauled hard aground in preparation for winter storage.

The next day, Gordon and Catherine in Sarnia received a telegram from headquarters advising them that their son, PILOT OFFICER KNOWLES IS MISSING BELIEVED KILLED WHILE ENGAGED IN AIR EXERCISES OVER THE SEA. No details of the crash were made available. Along with Pilot Officer-Pilot George Knowles, also killed were Sgt.s Robert Oliver Barrett, Douglas Wilson Armstrong, and Benoit Desmarais; P/O. Henry Raymond Woodman; F/O. Jack Campbell McFarlane; and FS. D. Shackell (RAF). No trace of any crew members was ever found. The waters at that point were reported to be deep and the current very strong when the tide was going out to sea.

The following is a portion of the *Winnipeg Evening Tribune* report published shortly after the crash:

Names of six of the seven airmen killed Thursday when an aircraft from the R.A.F. base at Greenwood, N.S., plummeted into the Bay of Fundy were released Friday by eastern air command officials. The name of the seventh airman was withheld pending notification of next-of-kin.

Pilot of the plane that crashed into the waters of the bay a scant two miles from the fishing village of St.

George, N.S., was FO. J.G. McFarlane, son of Mrs. R.W. McFarlane, 2111 14A st., west, Calgary. With FO. McFarlane on the training flight were two other officer-instructors, PO. G.W. Knowles, Sarnia, Ont., and PO. H.R. Woodman, Diby Co., N.C.

Student airmen in the plane at the time of the fatal plunge included Sgt. B. Desmarias, son of L. Desmarias, 130 Berry st. St. Boniface, Man.; Sgt. D.W. Armstrong, Montreal; and Sgt. R.O. Barrett, Kings Co. N.S....

In January 1943, St. Andrew's Church in Sarnia held a memorial service for three parishioners, all members of the Royal Canadian Air Force, who had paid the supreme sacrifice in the previous year—George William Knowles, Donald Cameron MacGregor and Howard Fraser Thompson. The service was arranged at the request of family members with Rev. Dr. J.M. Macgillivray officiating. In his brief address, Dr. Macgillivray's words expressed the sentiment of many at the time:

These men, as well as others like them, went forth possessed, perhaps, of a spirit of adventure not unnatural in young men. But it was not only the call of adventure that led them to the King's service in the clouds. There was a deeper motive than that. They had a vision of a new and better world; a world free of tyranny, oppression, injustice and fear. They knew that the only way to secure such a world was by overthrowing forever the forces of evil now threatening mankind; and to that holy task they dedicated their lives. They have entered into the larger life; and to God's keeping we commend them in the Easter hope of a final resurrection to eternal life.

It is my personal conviction that they are not now far away from us, and I read to you as suggestive and appropriate some words written by a French soldier killed in 1915 during the First Great War: 'I believe the dead live close to the living, invisible but present; and perhaps it is they whom God sends to us in answer to our prayers, so that their spirit, which is His, may continue to guide us and inspire us.'

In late May 1943, Gordon and Catherine Knowles received a telegram from the R.C.A.F. Casualties Officer stating, DEEPLY REGRET TO ADVISE YOU THAT YOUR SON PILOT OFFICER GEORGE WILLIAM KNOWLES REPORTED MISSING BELIEVED KILLED IS FOR OFFICIAL PURPOSES PRESUMED TO HAVE DIED OCTOBER 8 1942 PLEASE ACCEPT MY PROFOUND SYMPATHY. The following month, George's name appeared on the published R.C.A.F. casualty list, and he was officially recorded as *Previously reported 'missing and believed killed' on active service in Canada, approximately four miles north Port George N.S., Bay of Fundy. Now 'presumed dead' for official purposes.* In October 1948, Gordon and Catherine Knowles received a War Service Gratuity of \$112.50 for the loss of their son. George Knowles, 23, has no known grave. His name is inscribed on the Ottawa War Memorial, Ottawa, Canada, Panel 1, Column 5.

KROHN, Charles Henry (#A/107660)

Charles Henry Krohn, at 20, was hoping to get married, but four days before he was to do so, he was shipped overseas. Within five months he was killed in action in The Italian Campaign.

He was born in Sarnia on April 20, 1924, the only son of Roy and Lettie Krohn. Roy (born in Brigden) and Lettie (born in Wallaceburg) Krohn were married in Sarnia on June 28, 1919. Unfortunately, Roy and Lettie separated when Charles and his two sisters, Dorothy and Thelma, were young. Roy lived at R.R. #1 Corunna and Lettie lived at 112 Cromwell Street, later 293 Shamrock Street, Sarnia. Years later, after marrying, Charles' sisters were Mrs. Dorothy Thompson and Mrs. Thelma Hamilton, both residing on Shamrock Street.

Charles lived with his father in Corunna where he attended Corunna Rural Public School until the end of grade seven, leaving school at age fifteen. He was interested in sports and liked hunting. Instead of school, Charles preferred work and he had a number of jobs in Sarnia prior to enlisting. They ranged from being a waiter at the Windsor Hotel in Sarnia (3 weeks), a labourer at Imperial Oil (3 months), and a pipe-fitter's helper at Carter Hall Rubber Co. (1 month), to being a labourer at Holmes Foundry (2 months), a seaman with Canadian Steamship Lines (5 months), and a labourer at Sarnia Grain Elevator (3 years).

Nineteen year-old Charles Krohn enlisted in the Canadian Army on August 9, 1943, in London, Ontario. He stood six feet tall, had blue eyes and brown hair, was single, and was residing with his father at R.R. #1 Corunna at the time. His ambition for after the war was to get into the field of motor mechanics. Charles volunteered for duty in the paratroops, but was recommended for basic infantry. From #1 District Depot in London, Charles received his army training at #12 Basic Training Centre in Chatham and, beginning in early November 1943, at A29 Canadian Infantry Training Centre (CITC) at Ipperwash. On March 26, 1944, he was transferred to #1 Training Brigade in Debert, Nova Scotia.

Besides his job, Charles also wanted to change his marital status before he went overseas. On April 3, 1944, Charles completed an "Application for Permission to Marry" form. On it, he applied for permission to marry Mary Louise Prenott of Cemetery Road (now Colborne Road), Sarnia, on or about April 11, 1944. He had known Mary Louise, born April 20, 1922 in Sarnia, for three years and wanted to get married before going overseas. The Battalion Chaplain recommended granting permission, which Charles received on April 8 from his Commanding Officer. Charles, however, did not get the opportunity to marry his future wife. Four days later, on April 12, 1944, after being granted permission to marry, Private Charles Krohn embarked overseas from Debert, Nova Scotia for the United Kingdom. He would never see Mary Louise again.

Charles Krohn arrived in the U.K. six days later and became a member of #3 Canadian Infantry Reinforcement Unit (CIRU). Approximately two weeks later, on May 4, 1944, Charles Krohn departed the U.K. bound for Italy. There he became a member of the 4th Princess Louise Dragoon Guards, Royal Canadian Armoured Corps (RCAC).

The **Italian Campaign**, the first sustained Canadian Army operation of the War, had begun approximately ten months earlier with the invasion of Sicily on July 10, 1943. The fierce fighting on the island would last more than four weeks, during which the Canadians would advance through difficult mountainous terrain, against an ever-stiffening German resistance. By August 17, the Germans had evacuated the island to the Italian mainland. In early September, Canadian and Allied forces would invade Italy. Though Italy surrendered shortly after, the occupying Germans made it clear their fight was not over. Liberating Italy would be a painstaking northward crawl, lasting 20 months, over a range of landscapes, through challenging weather, and against a series of well-protected defences held by some of the German army's best troops.

Private Charles Krohn joined in the advance northward, but for only four months. On September 23, 1944, he was killed in action while fighting in Italy. Charles' remains were buried on September 24 at a location recorded on the Army Field Service Card as "Italy 5 CDN ARM'D DIV CE GOTHIC LINE - Sh. 101/III MR.785985 Row "H" Grave 8".

Not long after her son was killed, Lettie Krohn on Shamrock Street in Sarnia received a letter that Charles had written on September 21, 1944, two days before he was killed. In the letter, Charles wrote that, *we are really giving it to them now*, and that he expected to be home for Christmas.

On October 2, 1944, Lettie Krohn received the following telegram from the Director of Records in Ottawa: MINISTER OF NATIONAL DEFENCE DEEPLY REGRETS TO INFORM YOU A107660 PRIVATE CHARLES HENRY KROHN HAS BEEN OFFICIALLY REPORTED KILLED IN ACTION TWENTYTHIRD SEPTEMBER 1944 STOP IF ANY FURTHER INFORMATION BECOMES AVAILABLE IT WILL BE FORWARDED AS SOON AS RECEIVED.

In late October 1944, the Brigadier, Acting Adjutant-General wrote Lettie:

Dear Mrs. Krohn:

It was with deep regret that I learned of the death of your son, A107660 Private Charles Henry Krohn, who gave his life in the Service of his Country in the Mediterranean Theatre of War, on the 23rd day of September, 1944.

From official information we have received, your son was killed in action against the enemy. You may be assured that any additional information received will be communicated to you without delay.

The Minister of National Defence and the Members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

Charles Krohn was later officially recorded as, *Overseas casualty, killed in action, in the field (Italy)*. In July 1945, Lettie Krohn received a War Service Gratuity of \$152.86 for the loss of her only son. In March 1946, she received a letter from the Colonel, Director of Records, for Adjutant-General. Following is a portion of that letter:

Dear Madam:

Information has just been received from overseas that the remains of your son, A107660 Private Charles Henry Krohn, have been carefully exhumed from the original place of internment and reverently reburied in grave 4, row G, plot 5, of Cesena British Empire Cemetery, Cesena, Italy. Marked map is enclosed. This is a recognized military burial ground and will receive care and maintenance in perpetuity.

The grave will have been marked with a temporary cross which will be replaced in due course by a permanent headstone suitably inscribed. While it cannot now be stated when this work of permanent commemoration will begin, before any action is taken you will be communicated with and an opportunity will be given you to submit a short personal inscription of your own choice for engraving on the headstone...

Charles Krohn, 20, is buried in Cesena War Cemetery, Italy, Grave V, G, 4. On his headstone are inscribed the words, OUR ONLY SON. SADLY MISSED BY MOM AND DAD, SISTERS DOROTHY AND THELMA. SOURCES: A, B, C, D, E, F, L, N, 2C, 2D, 7C, 8X, 8Y

LANG, Wallace Ewing (#J/43946)

Wallace "Wally" Lang had always been a responsible young man while growing up in Sarnia. That sense of responsibility was evident when Wally, now a 22 year old pilot with the RCAF, decided to continue occupational flying after the war ended. On November 3, 1945, he was killed instantly in a flying accident during a training exercise.

He was born in Sarnia on March 4, 1923, the eldest child of John R. and Mae Elizabeth (nee Wallace) Lang, of Sarnia. John (born in Sarnia, the son of Scottish parents) and Mae (born in Buffalo, New York) Lang were married in Sarnia on October 2, 1920. John and Mae's oldest child was named after his mother's maiden name, but he later became known as "Wally". Wally had one brother, Donald; and one sister, Virginia Helen (born in Michigan, later to become Virginia Wray). At the time of Wallace's death, Virginia was in training as a cadet nurse at Lansing, Michigan.

Wally received his education at Johnston Memorial public school in Sarnia from 1929 to 1937 and then later at Sarnia Collegiate from September 1937 to October 1941 where he completed grade eleven. During his youth, he was involved in a variety of activities. In terms of sports, Wally participated in tennis and baseball and was active in promoting boys' sports in Sarnia. He was also involved in several groups; for instance, he was a Scout for one year and a member of the Cadets for three years. Wally was president of the Sarnia Boys' Work Board for two years and he also gave of his talents to activities at St. Paul's United Church. A few months before enlisting, he joined the Central Century Club.

Wally was a *Canadian Observer* carrier boy for a while, and in 1941, was employed as a news reporter for a short time. In mid-November of 1939, he had been elected local member for the Ontario Older Boys' Parliament. The election took place during a youth rally that was attended by approximately 100 young men from Sarnia, Point Edward and Wyoming, held at Devine Street United Church and St. John's Anglican Church. His first duty was to attend the parliament for a week in late December in Toronto.

After leaving high school, Wally worked as a paint brander in the shipping department at Imperial Oil Limited from 1941 to 1942. He was helping to financially support his mother, Mae, who was living at 270 South Mitton Street at the time. His father, John, was employed as a switchman with the Grand Trunk Western Railway and was residing at the Fritch Hotel in Detroit. At the time of Wally's death in 1945, his parents were still living apart.

John, a veteran of World War I who had been gassed at the Somme, might have influenced his son to enlist. Before Wally turned 18, he left Imperial Oil and applied to the RCAF, but was rejected. On November 4, 1942, at the age of nineteen and a half, he re-applied and was accepted in the Royal Canadian Air Force in Toronto. He stood five feet seven and a quarter inches tall, had brown eyes and brown hair, and was single. He was residing with his mother at 270 Mitton Street at the time, and he requested flying duties. He got his wish and Wally began months of extensive training.

From the #11 Recruiting Centre in Toronto and then #5 Manning Depot in Lachine, Quebec, he was transferred to RCAF 16 X Depot in Debert, Nova Scotia. In early July 1943, he continued his training at #6 Initial Training School (ITS) in Toronto and in November 1943 was at #5 Bombing and Gunnery School (B&GS) at Dafoe, Saskatchewan. After completing B&GS at Dafoe, he took a six-week course in navigation at the #5 Air Observer School (AOS) at Winnipeg, Manitoba. He was awarded his Air Bomber's Badge and commission as a Pilot Officer, on April 7, 1944 in Winnipeg. In late April 1944, Wally began four weeks of Commando training at #1 Aircrew Graduates Training School (AGTS) at Maitland, Nova Scotia.

Wally Lang embarked overseas from Halifax on May 25, 1944, arriving in the United Kingdom one week later. Originally stationed at #3 Personnel Reception Centre (PRC), Wally was transferred in mid-August to #8 (Observer) Advanced Flying Unit (AFU). Two months later, in early October 1944, he was training at #24 Operational Training Unit (OTU) in Vickers Wellington aircraft. During Christmas 1944, Wallace Lang was promoted to Flying Officer (and Air Bomber).

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in **Bomber Command** operations. Next to Britain, Canada

was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

In mid-March 1945, Wally was transferred to #76 Base, and two weeks later attached to RAF Dalton, an airfield used by Bomber Command, as a member of #1666 'Mohawk' Heavy Conversion Unit, RCAF. There he trained in Lancaster bombers. He had almost completed a tour of operations when the war in Europe ended on May 8th of 1945. On that day, he became a member of RCAF #433 Porcupine Squadron "Quis'y frotte s'y pique" (Who opposes it gets hurt), then operating Lancaster bombers, based at RAF Skipton-on-Swale, Yorkshire. One of the tasks of #433 Squadron were flights from Germany and Italy bringing back troops and POWs to the U.K.

F/O-BA Wallace Ewing Lang

Though the war in Europe was over, Wallace made the decision to continue on occupational flying duty. (Japan would surrender in mid-August 1945). In early October 1945, #433 Squadron disbanded. On October 2, 1945, Wally Lang became a member of RCAF #429 Bison Squadron "Fortunae nihil" (Nothing to chance), part of Bomber Command, No. 6 Group.

No. 429 Squadron had been formed in November 1942 as a night bomber squadron, based at East Moor and equipped with Vickers Wellington aircraft. In August 1943 the squadron moved to RAF Leeming, Yorkshire and converted to Handley Page Halifax aircraft. In March 1945, the squadron converted to Avro Lancasters. At the end of the war, the squadron was used to transport troops and liberated POWs back to the U.K.

Lancaster RA571

Wally was settling into post-war life in England. At the end of October 1945, he purchased a car for himself and stored it at his base. Only weeks later, on November 5, 1945, nearly three months after VJ-Day, Wally Lang was killed in a Lancaster flying accident at Boulton Bridge in Yorkshire, England.

On the morning of November 5, the crew of Lancaster I aircraft RA571 was tasked with flying an hour-long local flying exercise which involved a "George" test. On board were six of the regular aircrew, including Wallace Lang, and two ground crew. In all probability they would only have been in England for a few more weeks before returning home to Canada. After take-off from RAF Leeming, Yorkshire at 11:04 hours the flight took them south and on their return north they were met with poor weather. The conditions in the Pennines in the mid-morning of this day were described as poor, with mist and low cloud covering the areas of high ground. As the aircraft flew into these conditions it descended below the clouds to get a visual fix on the ground. Unknown to them, high ground lay in front of them.

At 12:05 hours, the aircraft struck the southern side of Beamsley Beacon some fifty feet from the summit. It disintegrated on impact and burst into flames. Four of the eight airmen were killed in the impact, and of the four survivors, one, Sgt. Joseph Belanger, was less seriously injured and was the one to go for help. The aircraft was heard to fly over the area by people on the ground and upon hearing the crash, many made their way up to the crash site which took some time locating in thick mist. The other three survivors—F/O Alan Coleman, F/Sgt. Francis Moran and LAC Reginald Henderson--were taken down to waiting ambulances and then to hospital where they recovered. The four airmen killed were F/O Wallace Ewing Lang, F/O Walter Fred Conley, Cpl. William John Ellis and F/S Arnold Emerson Stinson.

Several days later, Mae, still living on Mitton Street, received a telegram informing her that her son, FLYING OFFICER WALLACE E LANG HAS BEEN REPORTED KILLED IN A FLYING ACCIDENT AT BOULTON BRIDGE YORKSHIRE ENGLAND ON NOVEMBER 5. No other details were given, but the message said that a letter would follow.

In mid-November 1945, Mae received the following letter from No. 429 Squadron, R.C.A.F.:

Dear Mrs. Lang,

Prior to the arrival of this letter you will have received a telegram informing you that your son, Flying Officer Wallace Ewing Lang, was killed in a flying accident on 5th November, 1945. I am very sorry to have to confirm this.

Wally and his crew were engaged in a flight during the morning of November 5th, and toward the end of the exercise the aircraft became enveloped by cloud. The aircraft was lowered in an attempt to find clear sky but crashed into a hill whose summit was covered by the low cloud. Your son and three other members of his crew were instantly killed and four members were seriously injured as a result of this accident which occurred near Ilkley, Yorkshire.

Unfortunately, owing to the time taken to communicate under present conditions, it was not possible to ascertain your wishes regarding the funeral and I had therefore to arrange for your son's burial without reference to you. You will, I am sure, understand the necessity for this action and I sincerely trust that the arrangements we were able to make were what you would have wished.

Your son's funeral took place at Harrogate on the 12th of November at 10.30 a.m. The service was conducted by Squadron Leader A.S. Roblin and Squadron Leader T.D. Jones, the Protestant Chaplains of this Station, in the chapel attached to the cemetery, after which his body was interred in the R.A.F. Regional Cemetery, together with the three of his comrades who died with him. Full Service Honours were accorded, the casket being carried by men of his own Squadron. It was covered with the Union Jack and the Last Post was sounded at the end of the service. A firing party was also provided.

I am enclosing herewith photographs taken of the funeral and of the graves, the number of your son's grave is K.2. You will wish to know that all war graves are taken care of by the Imperial War Graves Commission, Wooburn House, Wooburn Green,, Bucks., whose duty it is to arrange both for the temporary marking of the grave by a wooden cross and ultimately for the erection of a permanent headstone. I am instructed to explain also that the question of re-interment, if this were desired, could only be considered at a later date.

Wally's personal effects have been gathered together and sent to the Royal Air Force Depository from where they will be forwarded to the Administrator of Estates, Ottawa, who will be writing to you in this respect in due course.

I should like to assure you how much we all honour the unselfish sacrifice your son has made so far from his home in the service of his country and the Empire. It may also give you some satisfaction to know that Wally was regarded as a very good air bomber and that his loss is a severe blow, not only to ourselves as his colleagues, but to the Squadron as an operational Unit. May I now express the great sympathy which all of us feel with you in the sad loss which you have sustained.

Also in mid-November 1945, Mae received another letter, this from the Air Marshal, Chief of the Air Staff.
Dear Mrs. Lang:

I have learned with deep regret of the death of your son, Flying Officer Wallace Ewing Lang, on Active Service Overseas on November 5th, 1945, and I wish to offer you and the members of your family my sincere and heartfelt sympathy.

It is most lamentable that a promising career should be thus terminated and I would like you to know that his loss is greatly deplored by all those with whom he was serving.

Wallace Lang was later officially recorded as, *Killed as a result of a flying accident at Boulton Bridge, Yorkshire, England (Air Test Flight)*. In mid-June 1946, John and Mae received a War Service Gratuity of \$545.62 for the loss of their son Wallace. In mid-February 1947, Mae received the following letter from the Wing Commander for Chief of the Air Staff:

Dear Mrs. Lang:

It is a privilege to have the opportunity of sending you the Operational Wings and Certificate in recognition of the gallant services rendered by your son, Flying Officer W.E. Lang. I realize there is little which may be said or done to lessen your sorrow, but it is my hope that these "Wings", indicative of operations against the enemy, will be a treasured memento of a young life offered on the altar of freedom in defence of his Home and Country.

Wallace "Wally" Lang, 22, is buried in Harrogate (Stonefall) Cemetery, Yorkshire, United Kingdom, Section G, Row K, Grave 2. On the summit of Beamsley Beacon, there is a memorial plaque commemorating the crash that includes the names of the survivors and those lost in the crash. On his Wallace Lang's grave are inscribed the words, FATHER IN THY GRACIOUS KEEPING LEAVE WE NOW OUR DEAR ONE SLEEPING. His name is also inscribed on the Sarnia Refinery Plaque. Unveiled in 1949, the plaque has the names of 24 Sarnia Imperial Oil employees who made the ultimate sacrifice in World War II.

LARSON, Paul Adolph (#M/50876)

Paul Adolph Larson was so determined to get overseas that he reverted from Acting Corporal to Private to do so. He was killed in the later stages of the Italian Campaign, ironically on the day his daughter in Sarnia, whom he never met, celebrated her first birthday.

Paul Larson was born in Provost, Alberta on May 10, 1921, the son of Henry and Gunhild Larson, of Provost, Alberta. Henry and Gunhild Larson were married on May 30, 1918 in Rosenheim, Alberta. The Larsons were blessed with seven children: six sons--Lewis, Clarence, Norman, Henry, Paul and Alvin (would serve in the RCAF)--and one daughter, Thelma. Sadly, when Paul was seventeen, the patriarch of the family, Henry, passed away at the age of 48 on August 25, 1938.

At age fourteen, Paul, who could also speak Norwegian, left school after grade eight and worked on the family farm for six years. We know little about Paul's life before he enlisted other than he was a member of the 19th Alberta Dragoons, Royal Canadian Artillery from September 1940 to June 1941 and that he worked as a truck driver, and was residing with his mother in Provost, Alberta.

Twenty year-old Paul Larson enlisted in the Canadian Army on June 3, 1941 in Calgary, Alberta. One of his reasons for joining the army was to "get out and see the world." He stood five feet nine and a half inches tall, had grey eyes and light brown hair, was single, and was residing at home with his mother at the time.

From #13 District Depot in Calgary, Paul received his army training at the Canadian Army Training School (CATS) in Hamilton; at #12 Basic Training Centre (BTC) in Chatham; and at A-29 Advanced Infantry Training Centre (AITC) in Listowel. In mid-November 1942, he continued his training at A29 Canadian Infantry Training Centre (CITC) at Camp Ipperwash and also took a 3-week Motor Mechanics course in Windsor. During his training, he became qualified as a driver of wheeled and track carriers and worked as a driver instructor on universal carriers. His Commanding Officer wrote that Paul, *gave a very good report on his ability and co-operation as an instructor... Worthy of promotion.*

Paul Larson advanced to the rank of Acting Corporal and remained at Ipperwash until mid-August 1943. This wasn't the only change in his life, however. From August 11 to August 16, Paul was granted six days special leave to get married. Acting Corporal Paul Larson married Mary Louise (nee Baikie) on August 14, 1943 in St. George's Church, Sarnia. Mary Louise was a Private in the Canadian Women's Army Corps (CWAC) based at #2

Vocational Training School (VTS) in Toronto. She was the daughter of Mr. and Mrs. F.W. Baikie of Sarnia. In the wedding party were Cpl. Harry Keen and Kay Baikie.

After his leave, Paul was transferred temporarily to #6 Basic Training Centre in Stratford and then in early September 1943, to #1 Transit Camp in Windsor, Nova Scotia. Paul was, according to his Commanding Officer, *anxious to go overseas*, and would revert to Private to do so. He left for the United Kingdom on September 14, 1943, and would never meet his daughter, Patricia Ann Larson, born February 24, 1944 at Sarnia General Hospital.

Corporal Paul Adolph Larson

After arriving in the United Kingdom on September 20, 1943, Paul continued his training there as a member of #1 Canadian Infantry Reinforcement Unit (CIRU), with the rank of Private. Four months later, on January 13, 1944, Paul embarked from the U.K, arriving in Italy on January 27, 1944, as a member of the Seaforth Highlanders of Canada, Royal Canadian Infantry Corps (RCIC).

The **Italian Campaign**, the first sustained Canadian Army operation of the War, had begun with the invasion of Sicily on July 10, 1943. The fierce fighting on the island would last more than four weeks, during which the Canadians would advance through difficult mountainous terrain, against an ever-stiffening German resistance. By August 17, the Germans had evacuated the island to the Italian mainland. In early September, Canadian and Allied forces would invade Italy. Though Italy surrendered shortly after, the occupying Germans made it clear their fight was not over. Liberating Italy would be a painstaking northward crawl, lasting 20 months, over a range of landscapes, through challenging weather, and against a series of well-protected defences held by some of the German army's best troops. The campaign came at a cost of more than 26,000 Canadian casualties including nearly 6,000 Canadians killed.

Paul Larson advanced northward through Italy with the Seaforth Highlanders and rose in rank to Acting Sergeant (the day his daughter was born in Sarnia), and later to the rank of Acting Corporal. At the very end of the Italian Campaign, on February 24, 1945, Corporal Paul Larson was killed while fighting in Italy. Ironically, it was the day his daughter, Patricia, celebrated her first birthday in Sarnia. His remains were buried on February 24 at a location recorded on the Army Field Service Card as "Italy, 2 CIB Cemetery Sh 89/III Ravenna W. MR 435395".

In early March of 1945, Mary Louise, now residing with her parents at 120 Cobden Street, received a telegram from Ottawa informing her that her husband, CORPORAL PAUL LARSON HAS BEEN KILLED IN ACTION OVERSEAS. Shortly after, his death was confirmed when Captain (the Reverend) H. Durnford, the chaplain of the unit, sent a letter telling Mary of the high esteem in which her husband Corporal Paul Larson was regarded by his officers and fellow soldiers in the regiment.

Also in early March 1945, Mary received the following letter from the Brigadier, Acting Adjutant-General: *Dear Mrs. Larson:*

It was with deep regret that I learned of the death of your husband, M50876 Corporal Paul Adolph Larson, who gave his life in the Service of his Country in the Mediterranean Theatre of War on the 24th day of February, 1945.

From official information we have received, your husband was killed in action against the enemy. You may be assured that any additional information received will be communicated to you without delay.

The Minister of National Defence and the Members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

In mid-May of 1945, a short memorial service for Corporal Paul Larson was held during the morning service at St. George's Church, Sarnia. In June 1945, Mary received a War Service Gratuity of \$566.09 for the loss of her husband Paul.

The Colonel, Director of Records, for Adjutant-General wrote Mary in mid-August, 1946.

Dear Madam:

Information has just been received from overseas that the remains of your husband, M50876, Corporal Paul Adolph Larson, have been carefully exhumed from the original place of internment and reverently reburied in grave 22, row F, plot 5, of Ravenna British Empire Cemetery, five miles West of Ravenna, Italy. Marked map is enclosed. This is a recognized military burial ground and will receive care and maintenance in perpetuity.

The grave will have been marked with a temporary cross which will be replaced in due course by a permanent headstone suitably inscribed. While it cannot now be stated when this work of permanent commemoration will begin, before any action is taken you will be communicated with and an opportunity will be given you to submit a short personal inscription of your own choice for engraving on the headstone...

Paul Larson left behind his widowed mother, his brothers and sister, his bride of one and a half years Mary Louise, and their one year-old daughter Patricia. Paul Larson, 23, is buried in Ravenna War Cemetery, Italy, Grave V.F.22.

LAVERS, William Wilfred Henry (#R/83468)

William Henry Lavers spent ten months training with the RCAF and was assessed as "cheerful, confident, enthusiastic, and keen." Six months after William, 23, arrived in England, his Wellington bomber was shot down in a mission over Germany. To this day no trace of the aircraft or any of its crew has been recovered.

William Lavers was born in Grand Mere, Quebec on August 27, 1919, the only child of Robert Henry and Maria Theresa (nee Kennedy) Lavers. Robert and Maria Lavers were both born in Montreal, and were married on June 5, 1918 in Montreal. On September 5, 1919, William was baptized at his parents' home parish in Granby, Quebec. His godparents were Wilfred Kennedy (represented by Elmer Cleary) and Lucy Kennedy.

In March 1925, when William was six, the Lavers family moved to Windsor, Ontario, where Robert supported his family by working as an accountant. William attended St. Anne's (1927-1931) and Victoria (1931-1934) Elementary Schools in Windsor, Ontario. He then attended Kennedy Collegiate in Windsor from 1934 to 1939. While at high school, William was very active in sports including football, hockey and softball extensively, as well as bowling and baseball. His hobbies included model aircraft and mechanical drafting. William had just graduated from high school when his mother, Maria Theresa, passed away at the age of 42 in February 1939.

Following his mother's death, from June to August 1939, William worked as a clerk at Parkdale Wine Store in Windsor, until the store moved to Toronto. He then returned to Assumption High School in 1939-1940 and took night school courses in mechanical drafting in 1940-1941. Beginning in October 1940, William worked as a Pipefitter's Helper with Brunner Mond. in Amherstburg until he enlisted.

Twenty-one-year-old William Lavers enlisted in the Royal Canadian Air Force on March 10, 1941 in Windsor. He stood five feet eleven inches tall, had hazel eyes and black hair, was single, and was residing at 1363 Benjamin Avenue in Windsor with his father Robert at the time. From the Recruiting Centre in Windsor and then #1 Manning Depot in Toronto, William began his air training at #1 Wireless School (WS) in Montreal and then #3 Initial Training School (ITS) in Victoriaville, Quebec beginning in June 1941.

Four months after enlisting, from July 16 to July 30, 1941, William had a 14-day leave. It was during his leave, on July 28, 1941, that he married Marie Delia Cloutier, 21, of Windsor in St. Alphonse Roman Catholic Church in Windsor. Marie was the daughter of Theophile Cloutier and Mary Jane Langis. Witnesses to the marriage were Wilfred Cloutier and Gertrude Menard. The newlywed couple resided at 1363 Benjamin Avenue, Windsor. Marie and "Wilf" as his wife called him, had one child together, a daughter, Carolyn "Lyn" Theresa Lavers.

William completed his training at #3 ITS in August 1941. His Commanding Officer described William as *Very bright. Cheerful. Good personality. Good appearance. Extremely enthusiastic about the Force. Confident. Keen.* William then continued his training at #9 Air Observer School (AOS) in St. John's, where he was awarded his Air Observer's Badge on December 6, 1941. William then continued training at #6 Bombing and Gunnery School (B&GS) in Mountain View, Ontario, and was then transferred to #2 Air Navigation School (ANS) in Pennfield Ridge, New Brunswick. On January 13, 1942, he was stationed at #1Y Depot in Halifax.

FS-O William W.H. Lavers (front center)

On February 8, 1942, William Lavers embarked overseas from Halifax for the United Kingdom. Initially posted to #3 Personnel Reception Centre, on April 8, 1942 he became a member of #2 (Observer) Advance Flying Unit (AFU). One month later, on May 12, 1942, he became a member of #22 Operational Training Unit (OTU). On July 30, 1942, he became a member of #101 Squadron, and on August 15, 1942, he became a member of RAF #75 New Zealand Squadron "Ake Ake Kia Kaha" (For ever and ever be strong), part of **Bomber Command**, with the rank of Flight Sergeant-Observer.

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

No. 75 New Zealand Squadron was the only Commonwealth Squadron to include its country name in its official title. Over the course of the war, it operated first with Vickers Wellington, later with the Short Stirling, and finally the Avro Lancaster bomber. During William's time with the squadron, it was based out of RAF Mildenhall. Over the course of the war, the RAF #75 carried out the fourth highest number of raids of any Bomber Command heavy squadron, but it also suffered the second highest casualty rate.

William served with #75 Squadron for less than one month. On the night of September 10, 1942, William and his crew were aboard their Wellington III bomber BJ968 (markings AA-W) that took off from RAF Mildenhall on a night operation targeting Dusseldorf. On that fateful night, their plane was shot down and its remnants and crew never located or recovered. Along with Flight Sergeant-Observer William Lavers, also killed were FS.s Frank Burrill, Ralph Ernest Gorman, Michael Bertram St. Louis and Randolph Cruickshank Smart (RNZAK). Of the 479 aircraft that took part in the operation there were 33 losses.

A few days following the aircraft's disappearance, Marie, residing at 461 Vera Place, Windsor, received a telegram from the Director of Records in Ottawa informing her that her husband, SERGEANT WILFRED WILLIAM HENRY LAVERS IS REPORTED MISSING ON ACTIVE SERVICE. No other details were provided.

In late September 1942, Marie received a letter from a Flying Officer, R.C.A.F. Casualties Officer, for Chief of the Air Staff. Following is a portion of that letter:

Dear Mrs. Lavers:

It is my painful duty to confirm the telegram recently received by you which informed you that your husband, Sergeant Wilfred William Henry Lavers, is reported missing on Active Service.

Advice has been received from the Royal Canadian Air Force Casualties Officer, Overseas, that your husband was a member of the crew of an aircraft which failed to return to its base after air operations, due to enemy action, on September 10th, 1942. There were three other members of the Royal Canadian Air Force in the crew and they also have been reported missing. Since you may wish to know their names and next-of-kin we are listing them below...

I desire to point out that this does not necessarily mean that your husband has been killed or wounded. It might be that he is a prisoner of war and inquiries have been made through the International Red Cross Society and all other appropriate sources. Official announcement that your husband has been reported missing will not be made through the Press for at least five weeks and, until then, you are requested not to give any information to the Press or Radio. It is possible that he has landed in enemy territory and in that event publicity at this time might imperil his chance to escape.

This is all the information that we have at these Headquarters but your husband's Commanding Officer is writing you a letter which you should receive shortly and which will give you all available details. Please be assured that any further information received will be communicated to you immediately.

May I join with you in the hope that better news will be forthcoming in the near future.

In early November 1942, Robert Lavers, then residing in Amherstburg, received a letter from the Royal Canadian Air Force Casualties Officer, for Air Officer Commanding-in-Chief R.C.A.F. Overseas. Following is a portion of that letter:

Dear Sir,

This will acknowledge receipt of your letter of the 30th September 1942 concerning your son Can/R.83468 Sergeant William Wilfred Henry LAVERS, Royal Canadian Air Force.

The Wellington aircraft of which your son was the navigator and air bomber took off on the night of the 11th September 1942, detailed to carry out an operational sortie against the enemy. From the time of the take-off nothing further has been heard. All members of the crew are reported missing.

I have forwarded a copy of your letter to the Commanding Officer of your son's Unit with a request that he write to you giving the particulars you require... In the event of his being reported a prisoner of war you will be notified immediately and instructions will be sent to you regarding communication.

Your name has been added to my records and you may rest assured that you will be notified, as soon as any further information is received, concerning your son. May I assure you of the sincere sympathy of the Department with you in your great anxiety.

William Lavers was later officially recorded as, *Previously reported missing after air operations, now for official purposes, presumed dead, overseas.* In late October 1944, Marie received the following letter from R.C.A.F. Records Officer, for Chief of the Air Staff in Ottawa:

Dear Mrs. Lavers:

I am directed to advise you that your husband, Wilfred William Henry Lavers, has been promoted to the rank of Flight Sergeant with effect from June 6th, 1942.

This promotion follows a procedure adopted by the Royal Canadian Air Force, that all aircrew members of the service if recommended by their Commanding Officer should at the end of the required lapse of time from their last promotion be promoted to higher rank. This promotion procedure has been made retroactive in order to extend the same recognition to those who lost their lives.

It is my sincere hope that you may find sustaining comfort in the knowledge that the qualities of your gallant son are thus recognized, and it is regretted that this information could not be passed to you at an earlier date but the delay in notifying you was unavoidable. May I express to you and the members of your family my profound sympathy.

In mid-June 1946, Robert Lavers in Amherstburg received the following letter from the R.C.A.F. Records Officer in Ottawa:

Dear Mr. Lavers:

It is a privilege to have the opportunity of sending you the Operational Wings and Certificate in recognition of the gallant services rendered by your son Flight Sergeant W.W.H. Lavers. I realize there is little which may be said or done to lessen your sorrow, but it is my hope that these "Wings", indicative of operations against the enemy,

will be a treasured memento of a young life offered on the altar of freedom in defence of his Home and Country.

William Lavers and his crew members have no known grave, but they are all memorialized at Runnymede Memorial in Surrey, United Kingdom, Panel 105. William Lavers, 23, left behind his widowed father, Robert, in Amherstburg, his young wife Marie, and their three-month old daughter Lyn, who never got to meet her dad.

Years later, William's widow, Marie Delia Lavers, married Ed Westfall of Sarnia, and the couple moved to 511 Cathcart Drive. In mid-June 1952, Marie Westfall (formerly Lavers), received the following letter from the Wing Commander, R.C.A.F. Casualties Officer, for Chief of the Air Staff:

Dear Mrs. Westfall:

It is with reluctance that after so long an interval, I must refer to the loss of your former husband, Flight Sergeant Wilfred Henry Lavers, but due to the lack of any information concerning him since he was reported missing, it must be regretfully accepted and officially recorded that he does not have a "known" grave.

Due to the extreme hazards attending air operations there are, unhappily many thousands of British aircrew boys who do not have "known" graves and all will be commemorated on General Memorials that will be erected at a number of locations by the Imperial War Graves Commission (of which Canada is a member), each Memorial representative of a theatre of operations. One of these Memorials will be erected at Runnymede, England, and the name of your former husband will appear on that Memorial.

Marie and Ed Westfall would become the parents of ten children of their own. Carolyn "Lyn" Theresa, the daughter of William and Marie, took the name Westfall. She was raised surrounded by the love of her mother, stepfather and ten brothers and sisters growing up in Sarnia and Point Edward. Lyn Westfall created a painting to honour her late father, "Dies Irae (Day of Anger)", which can be found on You-tube.

LECKIE, John Lyle (#J/38412)

John Lyle Leckie was a successful student, was active in his church and in sports, and was well on his way to a successful career as a draftsman when he made the decision to fight for others. He gave his life for Canada while serving in one of the most dangerous postings in the war.

A young John Lyle Leckie (center)
with his older siblings Marjorie and Ken

John Lyle Leckie

He was born in Sarnia on March 28, 1917, the youngest son of William Christopher and Agnes May (nee Niblock) Leckie, of 376 Cromwell Street, Sarnia. William (born in Carlton Place, Lanark County, Ontario) and Agnes (born in Parkhill, Middlesex, Ontario) Leckie were married in Parkhill, Ontario on April 8, 1908. William was employed as a carpenter/builder in Sarnia. John Leckie had one brother, Kenneth Paul (born 1910), and one sister, Marjorie Isabel (born 1913). John received his education at Johnston Memorial School in Sarnia (1927-1931) and then at Sarnia Collegiate beginning in 1931, graduating in 1936 in drafting. While at school he was on the editorial

staff of the Collegiate Magazine. He was a member of Central United Church serving as an usher, and he was one of the older members of the Century Club, being very interested in boys' work. He enjoyed participating in skiing, tennis, handball and golf. In 1936, after leaving school, he accepted a job in Peterborough and served a four-year apprenticeship for General Electric in practical training before working as a draughtsman for them in 1940-41. He also served with the Prince of Wales Rangers as a Private in Peterborough in 1940-41. In 1941, he moved to Toronto and worked as a draughtsman for De Havilland Aircraft and was employed there until he enlisted for service.

Twenty-five-year-old John Leckie enlisted in the Royal Canadian Air Force on June 24, 1942 in Toronto. He stood five feet eleven inches tall, had brown eyes and brown hair, was single, and he requested flying duties. After the war he planned to take engineering courses. After leaving #11 Recruiting Centre, and then #1 Manning Depot both in Toronto, John received his air training at #6 Initial Training School (ITS) in Toronto; then went to #4 Bombing and Gunnery School (B&GS) in Fingal; and #1 Air Observer School (AOS) in Malton, Ontario. The Commanding Officer at #4 B&GS wrote of John, *Effervescent personality who can be entrusted with any responsibilities*. John was awarded his Air Bomber Badge on November 17, 1943 in Malton. He was commissioned as a Pilot Officer and, after a 14-day leave at home, was transferred to #1 Y Depot in Halifax in early December 1943. In January 1944, John trained at #3 Aircrew Graduate Training School (AGTS) in Three Rivers, Quebec, and in February 1944, he trained at #1 Aircrew Graduate Training School (AGTS) in Maitland, Nova Scotia (taking a commando course). On February 18, 1944, John was stationed at #1 Y Depot in Lachine, Quebec.

Flying Officer-Bomb Aimer John Lyle Leckie

On March 30, 1944, John Leckie embarked overseas from Halifax bound for the United Kingdom. From #3 Personnel Reception Centre, John continued his training in the U.K. as a member of #1 (Observer) Advance Flying Unit (AFU), and then #28 Operational Training Unit (OTU) at Wymeswold. On October 29, 1944, he became a member of RAF #153 Squadron "Noctivitus" (We see by night), part of **Bomber Command**, with the rank of Flying Officer-Bomb Aimer.

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain itself, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

No. 153 Squadron had two incarnations during the war, first as a night fighter squadron operating in England and in the Mediterranean, and then as a Lancaster squadron in Bomber Command. During John's time with the squadron, it was operating with Avro Lancasters based out of RAF Scampton, Lincoln, England. He would take part in twelve missions over enemy territory.

On the night of December 17, 1944, John Leckie and his crew of Lancaster III aircraft PB633 (markings P4-

J) were one of 18 aircraft detailed from No. 153 Squadron base at Scampton, Lincoln. They were to take part in an attack on Ulm, Germany that night. After taking off from their base, nothing was heard from the aircraft, and it went missing. It was later determined that while returning from Ulm, Lancaster PB633 was involved in a mid-air collision with another Lancaster and crashed near Laon (Aisne) in France. According to the #153 Wing Commander, "Enemy opposition consisted of only two or three bursts of flak, no fighters were seen, and searchlights were ineffective." The aircraft crashed at approximately 18:00 hours on December 17, 1944, ½ mile south of Vienne-la-Ville, France. Along with Flying Officer-Bomb Aimer John Lyle Leckie, also killed were F/O.s Harold Harrison Schopp, George Donald Frederick Hetherington and Sgt. Edward Whelan Davies (RAF). Three other Canadians in the crew—FS. R. Taylor, Sgt.s A.G. Pratt, and H. Cuthbertson, would survive the crash unharmed and were returned to their unit on Dec. 28, 1944.

In late December 1944, William and Agnes Leckie on Cromwell Street received a telegram from Ottawa informing them that their son, FLYING OFFICER JOHN LYLE LECKIE WAS MISSING AFTER AIR OPERATIONS OVERSEAS. Also in late December 1944, Agnes received the following letter from the Wing Commander, No. 153 Squadron, RAF, Scampton, Lincoln, England:

Dear Mrs. Leckie,

May I be permitted to express my own and the Squadron's sincere sympathy with you in the sad news concerning your son, Flying Officer John Lyle Leckie.

The aircraft of which he was the Air Bomber took off to attack Ulm on the night of the 17th December 1944 and nothing further has been heard. You may be aware that in quite a large percentage of cases aircrew reported missing are eventually reported prisoner of war and I hope that this may give you some comfort in your anxiety. Your son was a most efficient Air Bomber and his loss is deeply regretted. I would like you to know how greatly we all honour the sacrifice he has made so far from his home country in the service of the United Nations.

His effects have been collected and sent to the Royal Air Force Central Depository where they will be held until better news is received, or for a period of at least six months, before they are forwarded to you through the Administrator of Estates, Ottawa. In the meantime you may rest assured that should any news of your son be received you will be notified immediately.

At the end of December 1944, an investigation was conducted into the circumstances of the crash by interviewing the survivors. Following are portions of the report and interviews:

Aircraft was flying at 4,000-4,500 feet and had just come out of cloud... At approximately 2115 hours, aircraft was struck forward – appeared to be under pilot's cabin – and was lifted upward. Captain immediately gave the order, "Jump, jump". Flight Engineer (E.W. Davies) then asked if everything was O.K., Captain then said, "Emergency, jump, jump". Wireless Operator (R. Taylor) put on parachute and went to rear door and joined the two Gunners (A.G. Pratt and H. Cuthbertson) who were already there and had the door open. Then all baled out in turn with Wireless Operator leaving last. Approximately 30 seconds after leaving the aircraft, the aircraft was heard to crash.

From F/S R. Taylor, Wireless Operator: After the plane crashed I landed in a swamp near a small stream and found myself in water up to my waist. Immediately I was free of my 'chute I tried to find my way out. On the first attempt I just travelled in a circle. From there I managed to get a better bearing on the country and made my way to high ground... On the main road I proceeded in the direction of the aircraft which was still burning. When I arrived at the burning aircraft there were American troops from the 29th Infantry Division Security Troops (U.S.A.) there. A guard was left and two soldiers and one Lieutenant went with me to try to find the two Gunners that had baled out before me, in case they had sustained any injuries. Approximately an hour after... we located Sgt Pratt, the Mid Upper Gunner, in a French farm house... The next morning, I proceeded with a Lieutenant to the crashed aircraft to identify any personnel that I could. I managed to identify as best I could, parts of equipment and personal clothing which were on the crew. From there we located Sgt. Cuthbertson at the French farm house... They would be flown out of Laon, France on December 24 in an American C.47 to Bristol, England.

From Sgt. A.G. Pratt, Mid-upper Gunner: I was the first to jump. I opened the door and the Rear Gunner was just putting on his 'chute. I said "Come on Hugh" and then I jumped. I landed in water about a foot deep and the 'chute dragged me about 10 feet before I could release it. I got out of the water and started to head for the aircraft which I could see because it was burning. It would be about 4 to 5 miles away. I came to some more water and it looked pretty deep so I decided I had better not try and go through it. I started back and I thought I heard someone shouting, and I saw a light. I headed for the light but it went out. I came to a farm house and went in. They were French people. They gave me dry socks and some food. I tried to get the Military Police by telephone but the French people

couldn't understand me. About an hour after I came to the farm house the Wireless Operator and American soldiers came and they took us to their camp. The next day we picked up the other Gunner and the American Lieutenant took us to an aerodrome not far from Laon...

From Sgt. G. Cuthbertson, Rear Gunner: Upon leaving the aircraft via back fuselage door, I pulled parachute release and parachute shot up O.K. Floated down for about 40 seconds when our aircraft hit the ground exploding and bursting into flames. In the glow I saw three parachutes well up in the air. The Mid-Upper Gunner had gone first so I took the 'chutes to be other members of our crew, one being the W/Op. Floated down quite steadily until very near the ground when the ground wind started swinging my body. After a very short time I realized I was going to land in water so I inflated my Mae West and noted the closest way out to dry ground. Upon striking the water I immediately released the parachute harness and stood up. Though I had gone under water upon landing it was just a hole and the water though up to chest was not over the waist in most places. Having noted a light, or as I thought a star, I set out to reach the shore. The star turned out to be an aircraft with lights on. After wandering around in ice-cold water for nearly an hour I made for a large tree and remained there till morning. During the night there were 2 trains passed about ¾ miles away down the railroad line and across the water from me. At 7.30 a.m. I made my way through the water again to the railroad. Seeing a farm house in the distance I went there and had a cup of coffee and the people called the M.Ps. The M.Ps came with Taylor and we were taken to their billet, 29th Infantry Security Troops. From there we were taken to Laon, a landing (emergency) strip and American base. We were fogged in until Sunday when we flew back with an American Dakota to Bristol...

Of the crew of Lancaster PB633, FS. R. Taylor, Sgt.s A.G. Pratt, and H. Cuthbertson baled out and returned safely to England. F/O Hetherington and Sgt. Davies also attempted to bale out, but apparently came in contact with one of the propellers and their bodies were found with parachutes attached about a mile from the crash. The remaining two members; F/O-Bomb Aimer J.L. Leckie and F/O-Pilot H.H. Schopp, went down with the aircraft which crashed and burned near Laon... F/S Taylor returned to the crash the following day, December 18th, with an American officer and identified parts of equipment and personal clothing which were undoubtedly the property of F/O Leckie and F/O Schopp...

It was later determined that the remains of the dead airmen had been buried on December 20, 1944 in U.S. Military Cemetery, #1 Champigneul, Marne, France. F/O G.D. Hetherington was buried in Plot D, Row 2, Grave 39, and Sgt E.W. Davies was buried in Plot D, Row 2, Grave 40. In May 1945, the remains in Plot D, Row 2, Grave 42 were disinterred to determine the identity of the remains there. Inside Grave 42 were the remains of two deceased airmen. Although the remains were badly decomposed and severely mutilated, it was determined that they were those of F/O John Leckie and F/O H.H. Schopp. A red circled identification tag was found among the remains showing "Can J 38412, Officer J.L. Leckie, RCAF", along with a few pieces of a blue uniform and a cotton undershirt. The remains would be exhumed and reburied in Dieppe Canadian War Cemetery.

John Leckie's death was later officially recorded as, *Previously reported "missing" after air operations (over Ulm Germany), now reported "killed" during air operations, overseas.* In December 1945, William and Agnes Leckie received a War Service Gratuity of \$348.53 for the loss of their youngest son John. Twenty-seven-year-old John Lyle Leckie is buried in Dieppe Canadian War Cemetery, Hautot-Sur-Mer, Seine-Maritime, France, Grave N.8. On his headstone are inscribed the words, HE GAVE HIS LIFE FOR OTHERS.

LEE, Thomas Edwin (#J/89415)

Thomas Edwin Lee was only eighteen years old when he decided to serve his country. He gave his life in defence of freedom while serving in one of the most dangerous postings in the war. His public funeral, held against German orders, is a poignant reminder that acts of compassion can occur even amid the horrors of war.

He was born in Petrolia on September 18, 1922, the son of Edwin and Irene (nee Miller) Lee, of 244 North Christina Street, Sarnia. Edwin (born in Petrolia) and Irene (born in Evansville, Indiana) Lee were married on September 3, 1920 in Detroit, Michigan. Thomas had four siblings: two brothers--Joseph Conrad (who served in the R.C.N.V.R., *H.M.C.S. Givenchy*), and Ronald Patrick; and two sisters--Leona Irene (who became Mrs. L.I. Poliski, residing on Water Street, Sarnia) and Mary Jane Lee. There was another Lee sibling, Sydney Randolph Lee; however, he passed away on April 21, 1928 at the age of 1 year, 7 months. Thomas attended Lochiel Street Public School from 1928 to 1936. When he was fifteen years old, he lost his father who died of heart disease on August 15, 1937 at the age of 39.

Thomas attended Sarnia Collegiate from 1936 to 1940. He was active in the school cadets and sports, including basketball, swimming and baseball, and his hobby was art. Prior to enlisting, Thomas had a number of jobs in Sarnia: part time while attending school at Fred Galbraith Garage (Dodge & DeSoto Dealer) 1939-40; in a machine shop from January-March 1941; a helper for sign painter George Audaer, March-July 1941; and as a labourer with C.N.R. for 1 month prior to enlisting.

Eighteen year-old Thomas Lee enlisted in the Royal Canadian Air Force on August 5, 1941 in London, Ontario. He stood five feet eleven inches tall, had blue eyes and dark brown hair, was single, and lived at home with his mother on Christina Street at the time. He requested flying duties, anxious to serve as a pilot or wireless operator air gunner. From #1 Manning Depot in Toronto, he received air training at #1 Service Flying Training School (SFTS) at Camp Borden; then #1 Initial Training School (ITS) in Toronto; and #10 Elementary Flying School (EFTS) at Mount Hope; continuing at Composite Training School (KTS) in Trenton; #7 Bombing and Gunnery School in Paulson, Manitoba; and #4 Air Observers School in London, Ontario. He was awarded his Air Bombers Badge on December 4, 1942.

On January 4, 1943, Thomas Lee embarked overseas bound for the United Kingdom. From #3 Personnel Reception Centre, he continued his training with #23 Operational Training Unit (OTU), before becoming a member of #1659 Conversion Unit in June 1943. He would go on to serve with RCAF #405 Squadron, RAF #1664 Conversion Unit and RCAF #431 Squadron in September 1943, as part of **Bomber Command**.

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain itself, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

In November 1943, Irene Lee in Sarnia learned that Thomas had been recently promoted from Sergeant Air Gunner to Flight Sergeant while on active service. Also in November 1943, Thomas' brother Joseph Lee would report for duty with the Royal Canadian Navy at Windsor (Joseph's wife would also reside at 244 North Christina Street, Sarnia).

In late 1943, Thomas Lee and his crew were part of a powerful R.A.F.-R.C.A.F. night raid over Berlin, Germany. The Canadian bomber group included a large force of Lancasters and Halifaxes in what they described as a "perfect" attack. One flying officer said that he saw the streets of Berlin distinctly; another said fires were visible all the way through Denmark. Pilot Officer Jack Snelgrove of Regina said, "It looked like Sarnia, Ontario would if the entire Imperial Oil plant suddenly went up in flames."

On June 7, 1944, Thomas Lee became a member of RCAF #425 Alouette Squadron "Je Te Plumerai" (I shall pluck you), with the rank of Pilot Officer-Bomb Aimer. No. 425 Squadron formed in June 1942 at RAF Dishforth in Yorkshire, England. It was designated the "First French Canadian Squadron", equipped with Vickers Wellingtons. Bomber Command combed other squadrons for French speaking air and ground crews to fill its ranks. On January 1, 1943 the squadron was transferred to No. 6 (RCAF) Group. In May 1943, RCAF #425 Squadron had moved their base of operations from RAF Dishforth to Kairouan in Tunisia (North Africa). From there, still flying Wellingtons, it conducted operations against **Sicily** and **Italy**. In November 1943, the squadron returned to Dishforth resuming operations from there, and the following month were re-equipped with Handley Page Halifaxes. In December 1943, the squadron was transferred to RAF Tholthorpe, Yorkshire.

The **Battle of Normandy** would begin for the Canadians with the June 6, 1944 D-Day landings at Juno Beach. After breaching the "Atlantic Wall" of "Fortress Europe", Allied armies began their break out from the narrow Normandy bridgehead to carve out a foothold on the French mainland. In a brutal campaign of attrition, the Canadian army, supported by the navy and air force, faced fierce battles and vicious counterattacks as they clawed their way forward liberating villages and towns including Bretteville, Carpiquet, Caen and Falaise.

On August 5, 1944, Thomas Lee and his crew were aboard Halifax Mk. III bomber LL594 (markings KW-U) in an air raid mission in support of the Battle of Normandy. Their Halifax LL594 aircraft had the distinctive painted nose art of the 1942 Allan Cup (won by the Ottawa RCAF 'Flyers' hockey team) and the background logo used on the Ottawa hockey sweaters. In the August 5th operation, 172 Halifax bombers (from 408, 415, 420, 424, 425, 426, 427, 429, 431, 432, 433, and 434 squadrons) were joined by 52 Lancaster bombers (from 408, 419 and 428 squadrons) on a daylight attack of a V-1 storage site at St. Leu D'Esserent in northern France.

Halifax Mk. III

Lee's Halifax LL594 took off from its base at RAF Tholthorpe at approximately 11.00 a.m. This was Pilot Officer-Bomb Aimer Thomas Lee's 26th operation. Halifax aircraft LL594 was shot down by flak and crashed in the forest at Compiègne, France during the daylight trip to their target. Six crew members were killed and two were blown into the sky and parachuted to the ground where they were captured. Perishing with Pilot Officer-Bomb Aimer Thomas Lee were Pilot Officer Raymond Alexander Reed; FS. William Brown Gracie; and F/O.s Graham Beresford (RAF), Leslie George Stamp (RAF), and WO. Brian Clark (RAF). One Canadian, S/L. Gerald Philbin, was taken prisoner, hospitalized and later escaped, and Sgt. G.L. Milliard was taken Prisoner Of War.

In mid-August 1944, Thomas' widowed mother Irene Lee received a telegram from R.C.A.F. Headquarters at Ottawa informing her that her son, WARRANT OFFICER THOMAS LEE HAS BEEN REPORTED MISSING AFTER AIR OPERATIONS OVER ENEMY TERRITORY ON AUGUST 5. In mid-December 1944, Irene received a telegram from the R.C.A.F. Casualty Officer at Ottawa informing her that, INFORMATION FROM INTERNATIONAL RED CROSS STATES YOUR SON PILOT OFFICER THOMAS EDWIN LEE LOST HIS LIFE STOP PENDING FURTHER INFORMATION YOUR SON IS TO BE CONSIDERED MISSING BELIEVED KILLED. Thomas Lee's death was later officially recorded as, *Previously reported missing after air operations (overseas), now for official purposes, presumed dead.*

The story of how her son was buried in France after being shot down on the air raid was told to Irene Lee in a letter that she received from an American woman from Ohio. The American, Mrs. T.J. Kirby of Toledo, had just recently returned from France, and had witnessed the funeral. In her letter telling of his burial, she stated that before leaving France, she was entrusted with a little crucifix that had been placed on the body of Pilot Officer Lee after he met a glorious death at St. Maximin, Oise, France. The crucifix was placed there by the sisters of the Conde hospital at Chantilly where the funeral took place. Following is the letter that Irene Lee received just before Christmas 1945:

Well do I realize how you must have been felling when after all those many months of silence you received that holy relic of your beloved son. It is true that the only wound that never heals is that in a mother's heart.

We had some terrible bombing in July and August 1944 because that little French village of Saint Maximin was built right in the middle of large and deep stone quarries. Unfortunately for us, the Germans driven back by the speedy advance of the Allies during the battle of France, has started to stock large quantities of those V-1 bombs in the quarries and prepared launching platforms nearby to send their ghastly rockets against the approaching armies.

Thus, it became vital for the American and British airforces to destroy the quarries before the Germans could make use of the new weapon. Hundreds of planes came by night and day dropping powerful explosives until, at the end, not one house was left standing (the people had all been evacuated to nearby Chantilly) but the goal was attained as not one robot bomb ever got out of those quarries.

How the Germans reacted was awful and showed the importance they attached to the depot. To our horror we saw many planes brought down by their fire during those terrible days. Forgive me for recalling such things.

Your son was the only one among all those martyrs to have a special funeral. There must have been something about him to cause that exception. The Germans said they would permit the funeral to be held, according to the Catholic rites, under condition that nobody was to go to the cemetery.

But the sisters in charge of the hospital spread the word that at two o'clock in the afternoon there would be prayers and a service for a young Canadian aviator and just that verbal announcement was enough to bring practically all the people of Chantilly to the hospital.

The chapel was far too small and people had to stand on the surrounding grounds. Even the mayor of Chantilly was present.

I shall never forget the impression I received when entering the chapel to behold the casket draped in the folds of the French flag and surrounded by a bank of white flowers of all kinds. Everybody who could was bringing flowers and the good sisters did their best to make the decoration of the chapel beautiful and to do their most beautiful singing. What was most stirring was to see the emotion and profound respect of the people. There was not a mother there who was not thinking of that boy's mother and weeping with her.

At the end of the service, our venerable chaplain tried to say a few words, but his emotion was too great and his voice trailed away. He was only able to bless once more the body of your son. And then started the defile which lasted for two hours because so many persons took the time to go on foot or by bicycle to the cemetery in spite of the Germans.

The new cemetery of Chantilly is but a short walking distance from the town at the edge of a beautiful forest. Many people visit it on Sundays and the grave of your son is well taken care of. There is a cross and it was always decorated with flowers.

At the chapel of the Conde hospital, masses are frequently sung for the soul of Thomas Lee.

I hesitate to send this letter to you but yet I know there will be some sweetness and consolation for you to know what a splendid funeral your son had and how it came to be that a whole town, without knowing him, came to mourn for him.

In September 1945, Irene Lee received a War Service Gratuity of \$582.38 for the loss of her son Thomas. In January 1947, she received the following letter from the Wing Commander for Chief of the Air Staff in Ottawa:
Dear Mrs. Lee:

It is a privilege to have the opportunity of sending you the Operational Wings and Certificate in recognition of the gallant services rendered by your son, Pilot Officer T.E. Lee. I realize there is little which may be said or done to lessen your sorrow, but it is my hope that these "Wings", indicative of operations against the enemy, will be a treasured memento of a young life offered on the altar of freedom in defence of his Home and Country.

Twenty-one-year-old Thomas Lee is buried in Chantilly (St.Pierre) Communal Cemetery, Oise, France, Row 3, Grave 372. On his headstone are inscribed the words, IN OUR HEARTS YOUR MEMORY LINGERS, SWEETLY TENDER, FOND AND TRUE.

LEGARE, Joseph Raymond Wilfred (#A/107057)

Joseph Raymond Legare's first day of action against the enemy was on June 6, 1944 on Juno Beach. Approximately six weeks later, the young man who planned to be a farmer after the war, would lose his life serving Canada while fighting for the Liberation of France.

He was born in Belcourt, Quebec on January 8, 1923, the son of Arthur and Yvonne Visina Legare, of Belcourt, Quebec. He was baptized Roman Catholic in Belcourt shortly after. Arthur and Yvonne Legare were married in Quebec on September 23, 1919. Joseph had an older brother, Albert, and two younger brothers, Jean-Guy and Andre. Joseph was educated in a French school in Belcourt, leaving school in grade eight at age sixteen. His interests included fishing, hunting and woodworking. In 1937, when Joseph was fourteen years old, his father Arthur, a woodworker, passed away. Years later, Joseph's mother re-married, becoming Yvonne Coulombe. Joseph worked as a farm hand for three years, and then a lumberjack for six months. French-speaking Joseph Legare then made his way to Sarnia, becoming an employee of Polymer Corporation, working as a labourer in construction for two months.

Twenty year-old Joseph Legare enlisted in the Royal Canadian Army on June 9, 1943 in London, Ontario. He stood five feet three and a half inches tall, had hazel eyes and black hair, was single, and recorded his residence at time of enlistment as Polymer Corp., Sarnia. He planned to own his own farm after the war. From #1 District Depot in London, in mid-June he was transferred to #42 Basic Training Centre (BTC) in Joliette, Quebec to begin his army training. In mid-October 1943, he was transferred to A-13 Advanced Infantry Training Centre (AITC) in Valcartier, Quebec, where he continued his training.

In March 7, 1944, Joseph Legare embarked overseas bound for the United Kingdom, becoming a member of #2 then #6 Canadian Infantry Reinforcement Unit (CIRU). On April 8, 1944, he was transferred, becoming a member of the Le Regiment de la Chaudiere, Royal Canadian Infantry Corps (RCIC) with the rank of Private. Less than three months after arriving overseas, he departed from the U.K., disembarking in France on June 6, 1944 – **D-Day**.

The **Battle of Normandy** would begin for the Canadians with the June 6, 1944 D-Day landings at Juno Beach. After breaching the “Atlantic Wall” of “Fortress Europe”, Allied armies began their break out from the narrow Normandy bridgehead to carve out a foothold on the French mainland. It would take a whole summer of tenacious fighting, pushing against fierce and ruthless German forces to advance east across France. In a brutal campaign of attrition, the Canadians faced fierce battles and vicious counterattacks as they clawed their way forward liberating villages and towns including Bretteville, Carpiquet, Caen and Falaise.

Private Joseph Legare survived the horrors of D-Day and served with Le Regiment de la Chaudiere, RCIC, as they advanced through France in the Battle of Normandy. Approximately six weeks after the Juno landings, on July 18, 1944, Joseph Raymond Legare lost his life while fighting during the Battle of Normandy. His remains were buried two days later on July 20 at Beny-Sur-Mer Cemetery.

Joseph Legare’s death was later officially recorded as, *Overseas casualty, killed in action, in the field (France)*. In May 1945, Yvonne Visina in Belcourt, Quebec received a War Service Gratuity of \$142.35 for the loss of her son. Twenty-one-year-old Joseph Raymond Legare is buried in Beny-Sur-Mer Canadian War Cemetery, Revers, France, Grave XII.A.4. On his headstone are inscribed the words, MORT LOIN DES SIENS SON SOUVENIR VIVRA. JESUS DONNEZ LUI LE REPOS ETERNEL. (Died far from home his memory will live on. Jesus, grant him eternal rest).

LE GARE, Hector (#A/2084)

As a young child, Hector Le Gare had already experienced loss—the death of his brother and of his father. Yet as a young man, he chose to risk his own life for his country. He would make the ultimate sacrifice during the longest continuous campaign of the war, aboard a ship that would not sink, to what British Prime Minister Winston Churchill said was “... the only thing that ever really frightened me during the war...”

He was born in Chatham, Ontario on January 14, 1919, the son of Hector Octave and Hazel D. Le Gare. Hector Octave and Hazel Le Gare were married in Hull, Quebec in 1913. At some point, the Le Gare family moved to Sarnia, living at 330 North Mitton Street. Hector Octave Le Gare supported the family by operating a restaurant and poolroom near the Bell Telephone building. Hector had one brother, William, and five sisters: Jeanne and Katheline (Kay) (both would later move to Toronto); and Grace, Cora and Violet (all resided in Sarnia). On July 16, 1926, when Hector was just seven years old, his brother William passed away at the age of 5. Less than three years later, on January 18, 1929, when Hector was ten years old, he lost his father Hector Octave Le Gare, who died at the age of 39.

H. Le Gare

Hector Le Gare was educated at Our Lady of Mercy Catholic Elementary School in Sarnia and then Sarnia Collegiate, where he played football and was reputed to be a good swimmer. Hector was also a member of St. Joseph's Catholic Parish, Sarnia. Prior to enlisting, Hector had navigating experience as a seaman, having served six years on the *Noronic*, *Huron* and *Hamon* of the Northern Navigation division of the Canada Steamship Lines. He was a watchman on the latter vessel at the close of the previous navigation season, after which he was employed at the Sarnia General Hospital until he enlisted in the summer.

Twenty-one-year-old Hector Le Gare enlisted in the Royal Canadian Naval Reserve (RCNR) on July 12, 1940. He stood five feet five and a half inches tall, had blue eyes and dark hair, was single, and was living with his mother on Mitton Street, Sarnia at the time. Hector was initially posted for training at the eastern naval base *Stadacona* in Halifax. On September 4, 1940, he was transferred, becoming a member of the crew of the *HMCS Saguenay*, with the rank of Able Seaman.

Beginning on the opening day of the Second World War, the **Battle of the Atlantic** would be the longest continuous campaign of the war, and one in which Canada played a central role. The Royal Canadian Navy, along with the Royal Canadian Air Force (RCAF) and Canada's Merchant Navy, played a vital role in defending the country's eastern coast and escorting convoys of ships carrying men and essential machinery, arms, fuel and basic resources between North America and Europe.

The *HMCS Saguenay (D 79)* was an River-Class Destroyer commissioned for service in the Royal Canadian Navy in 1931. The *Saguenay* was the first warship ever to be custom built for the Royal Canadian Navy. In the early morning hours of December 1, 1940, the *HMCS Saguenay* was part of a group escorting a convoy about 300 nautical miles west of Ireland. Travelling at twelve knots and in a zigzagging pattern, she noticed a flare shot up from the dark sea that had been fired by a U-boat moving in to attack the rear of the convoy. The *Saguenay* increased her speed and made for the position of the flare. At approximately 3:50 am, the submarine was sighted half a mile distant. Almost simultaneously, a torpedo struck the *Saguenay*. The torpedo had been fired by the Italian submarine *Argo*. The *Saguenay* bow was blown off, and flames broke out and raced through the ship. The *Argo* surfaced again, circling to get in a second shot. Able Seaman Clifford McNaught demonstrated the kind of courage indicative of the remaining crew. Clifford was suffering from painful burns to his face, and his hands were horribly mangled. He nevertheless dashed forward to assist the short-handed gun crew by passing shells to them. The *Saguenay* crew was able to fend off the *Argo*. The British destroyer *Highlander* arrived within an hour or so to find the *Saguenay* limping slowly forward. Ninety men were transferred to the *Highlander* to reduce casualties in case of another torpedo attack. Throughout the night and most of the next day, a skeleton crew remained on board the *Saguenay* continuing to fight the fires.

River Class Destroyer *HMCS Saguenay D79*

Torpedo damage December 1940

By noon of the next day, the *Saguenay*, "the ship that would not sink" had managed to limp to the British port Barrow-in-Furness on one engine. The ship would be out of service for six months. A total of 21 of the *HMCS Saguenay* crew lost their lives in the U-boat attack, and another 18 were wounded. Two of the lost crew members were from Sarnia. Hector Le Gare was one of those killed in action in the damaging of the destroyer *Saguenay*. He

served only eighty-nine days in the service before his death. Also on board the ship was Able Seaman Paul Brown of Sarnia, who was also killed in the attack. His name is also inscribed on the Sarnia cenotaph and his story is included in this Project. Hector Le Gare and Paul Brown were the second and third casualties from Sarnia to lose their lives in the Second World War.

Hector's widowed mother Hazel had not seen her only son since he had enlisted, as he did not receive any leave. She had received a letter from him just before he sailed and a cablegram informing her of his safe arrival in England. A week after the attack on the *Saguenay*, Hazel Le Gare on Mitton Street received the following telegram from Naval Service Headquarters: THE MINISTER OF NATIONAL DEFENCE FOR NAVAL SERVICES DEEPLY REGRETS TO INFORM YOU THAT YOUR SON HECTOR LE GARE ABLE SEAMAN RCNR OFFICIAL NO A-2084 IS MISSING BELIEVED KILLED IN ACTION. After receiving the telegram, Hazel retained hope that he would later be reported rescued. At an assembly at Sarnia Collegiate, Principal F.C. Asbury announced the loss of the two former students, which was followed by a period of silence in respect to the memory of the two Canadian sailors.

In mid-December 1940, Hazel Le Gare received the following letter from the Naval Secretary:

Dear Madam:

It is with very deep regret that I confirm the telegram of the 9th December from the Minister of National Defence for Naval Services that your son, Hector Le Gare, Able Seaman, R.C.N.R., Official Number A.2084, is reported to be missing from H.M.C.S. "SAGUENAY", believed killed in action following damage to this vessel by a torpedo on the 1st December, 1940.

Please allow me, therefore, to express sincere sympathy with you in your sad loss on behalf of the Chief of the Naval Staff and the Officers and men of the Royal Canadian Navy, the high traditions of which your son has helped to maintain.

Only days later, she received another letter from the Naval Secretary. Following is that letter:

Dear Madam:

With reference to my letter of the 11th December, 1940, it is with deep regret that I must advise you that it has now been definitely established that your son, Hector Le Gare, Able Seaman, R.C.N.R., Official Number A.2084, was killed in action on the 1st of December, 1940, in H.M.C.S. "SAGUENAY".

Advice has been received that your son was buried ashore in England with full Naval honours. Exact location of the grave will be given to you in due course. Please allow me, therefore, again to express sincere sympathy with you in your sad bereavement.

In mid-March 1941, Hazel received the following letter from the Naval Secretary:

Dear Madam:

Further to my letter of the 16th December, 1940, information has now been received that the body of your late son, Hector Legare, Able Seaman, R.C.N.R., O.N. A.2084, who was killed in action on the 1st December whilst serving in H.M.C.S. "SAGUENAY", has been buried in the cemetery at Barrow-in-Furness, Lancs, England. The funeral took place on the 14th December, 1940. The exact location of the grave is #2439 Section 7.

Hector Le Gare's death was later officially recorded as the result of, *Enemy action, at sea*. In July 1945, widowed Hazel Le Gare, then living on Vaughan Road in Toronto, received a War Service Gratuity of \$58.18 for the loss of her son.

One of Hector's closest friends during the war was fellow Sarnian Oliver Jones, who also served in the RCNVR as an Able Seaman. [Note: Oliver Jones was a brother of Glyn Jones, who is included in this Project]. Twice during the war, while on convoy duty in the North Atlantic, Oliver Jones was aboard ships that were torpedoed by German U-boats. Oliver was in the same convoy escort group as his friend Hector Le Gare on December 1, 1940, when the *Saguenay* was torpedoed by an Italian submarine. Oliver Jones survived the war, and after returning home, he married Ilene (nee Kearney), and they had two children together, a boy and a girl. They named their son Ronald Hector Jones in honour of Oliver's friend Hector.

Twenty-one-year-old Hector Le Gare is buried in Barrow-in-Furness Cemetery, Lancashire, United Kingdom, Sec. 7. R.C. Grave 2439. On his headstone are inscribed the words, HIS WARFARE O'ER HIS BATTLE FOUGHT HIS VICTORY WON SO DEARLY BOUGHT. On the Sarnia cenotaph, his name is inscribed as H. Legarrie.

LIVING, Charles Henry (#J/12206)

Charles Henry Living, the son of a World War I veteran, was a university graduate and a star football player with a bright future ahead of him when he made the decision to serve his country. He heroically gave his life for Canada while serving in one of the most dangerous postings in the war. His is a story of remarkable courage and dedication.

He was born in Hafford, Saskatchewan on June 27, 1914, the eldest son of Charles William Robert and Viola Georgina Elizabeth (nee Chantelois) Living. Charles William (born March 13, 1885 in Ottawa) and Viola Chantelois (born 1896 in Iron River, Wisconsin) Living were married on September 21, 1911 in High River, Alberta. Charles William Living was a veteran of World War I. At age 31, Charles William Living enlisted in the Canadian Over-Seas Expeditionary Force on June 14, 1916 in Pincher Creek, Alberta. He stood five feet six and a half inches tall, had blue eyes and brown hair, recorded his occupation as book-keeper, and his next-of-kin as his wife Viola (living in Pincher Creek, later changed to 27th Avenue, Calgary, Alberta). He was also the father of two children at the time: Georgina Beatrice (age 4) and Charles Henry (age 2). Charles Living Sr. was initially a member of the 192nd Battalion, Canadian Expeditionary Force. He arrived in England on November 11, 1916. Less than three weeks later, on November 30, he arrived in France as a member of the 10th Battalion, Canadian Infantry.

During his time in France, Charles Sr. experienced the horrors of war and was hospitalized on a number of occasions: in December 1916 for twenty-two days due to influenza; in November 1917 for almost two months due to a gun shot wound in hip; in February 1918 due to shell concussion, bronchitis and poison gas; in April 1918 due to a "not yet determined" poison gas; and in August 1918 due to a gun shot wound in the right arm received at Amiens. Charles Living Sr. survived the war and was discharged on demobilization in Calgary in January 1919.

Around 1924, the Living family moved to the United States, first residing in Minnesota and a year or so later in Michigan. Around 1928, the Living family resided on North Broad Street in Holly Village, Oakland County, Michigan. Charles Sr. and Viola Living had eight children together: three girls--Georgina Beatrice (born 1912), Viola (born 1919, died on May 3, 1924 at the age of 5), and Clara May (born 1920); and five sons: Charles Henry (born June 27, 1914), Frederick Stevenson (born July 9, 1921 in Sibbald, Alberta), Paul Alfred (born 1925), Reece Burt (born 1928) and Charles William Jr. Living (born 1932).

Sometime in the early 1930's, father Charles Living Sr. left the family. After the separation, Charles Sr., a carpenter by trade, lived on Spadina Avenue in Toronto (when his son Charles was killed in the war, Charles Sr. lived on 107th Avenue in Edmonton, Alberta). Mother Viola Georgina later remarried, to Robert O'Day, and together they would have one child together, Patricia Katherine O'Day, born in 1940 in Holly, Michigan.

Charles Henry Living grew up with his seven brothers and sisters in Holly, Michigan, attending Holly Public School (1923-1928) and Holly High School in 1928, graduating in 1933. He did very well in academics and was very active in sports, including football, baseball and basketball. He then attended St. Michael's College in Toronto, in the Arts program from 1934-1935. Along with participating in sports, Charles devoted part of his time to coaching sports. From May 1935 to June 1936, Charles worked at Ford Motor Company, Detroit, in the Transportation Department, before returning to school. Charles attended Michigan State College in Lansing, Michigan taking one year of physical education, 1936-1937. While at Michigan State College, Charles also had half a year of military training in artillery.

Charles took up residence in Sarnia in April 1938, living at 177 ½ North Front Street, and was employed as a labourer at Imperial Oil Limited. While residing in Sarnia for 1 ½ years, Charles regularly attended St. Joseph's Catholic Church. He also played football with the Sarnia Imperials of the ORFU, as a star snap and inside wing (the ORFU, Ontario Rugby Football Union, was the predecessor of the Canadian Football League). From an article in the Ottawa Journal on November 30, 1939; *Their kicking is fortified too by the snapping of Hank Living, one of the best in the business in defence player.* Subsequently, he played football for the Toronto Argonauts prior to enlisting in the RCAF. He also worked part time as an instructor with Toronto-St. Catharines Trucking, and had served five months with the Toronto Scottish Highlanders, as a Private, from mid-August 1940 to January 20, 1941.

Twenty-six-year-old Charles Living enlisted in the Royal Canadian Air Force on May 1, 1941 in Toronto. He stood five feet ten inches tall, had blue eyes and light brown hair, and was single. When he enlisted, Charles was living on St. George Street in Toronto, but on his Attestation Paper, he originally recorded his address as 177 ½ N. Front Street, Sarnia and later it was changed to 266 St. George Street. When Charles enlisted, his father was also living in Toronto, and his remarried mother Viola was residing in Holly, Michigan.

Charles recorded his occupation as “labor”, and he planned to stay in the R.C.A.F. after the war. He requested flying duties with a preference to be an air gunner. From the Recruiting Centre then #1 Manning Depot in Toronto, Charles received his air training at RCAF Station Trenton; followed by #3 Initial Training School (ITS) in Victoriaville, Quebec; and #4 Elementary Flying Training School (EFTS) in Windsor Mills, Quebec; and #13 Service Flying Training School (SFTS) in St. Hubert, Quebec; and then Composite Training School (CTS) in Trenton. Comments made by his instructors and commanding officers about Charles included: *Above average pilot. Airmanship excellent. Will develop into a very reliable pilot; Very heavy set appearance, rugged healthy, fairly neat, jolly type, pleasant personality; and Very big, good natured man. Keenly interested. Quiet. Well spoken. Applying himself. Frank. Serious, Highly recommended. A man to rely to when the going is really tough.* Charles Living was awarded his Pilot’s Flying Badge in June 19, 1942.

Appointed to a commission in June 1942, Charles Living continued his training at #16 Service Flying Training School (SFTS) in Hagersville; then at Composite Training School (CTS) in Trenton; and #4 Bombing and Gunnery School (B&GS) in Fingal, Ontario. Stationed at Fingal until mid-November 1943, he was such a skilled pilot that he served as a staff pilot while there and taught others how to fly. During one of his leaves, nine days in April 1943, he married Miss Mary Alyce Wocker of Sarnia, on April 17, 1943 in London, Ontario. The young couple would reside at 339 George Street, Sarnia.

On November 16, 1943, Charles Living embarked overseas from Halifax for the United Kingdom, where he was initially posted to #3 Personnel Reception Centre. He continued his training in the U.K. at #3 (Pilots) Advance Flying Unit (AFU), #85 Operational Training Unit (OTU) and #1668 Conversion Unit.

Flight Lieutenant-Pilot Charles Henry Living

While in England, Charles was also able to play football in two special exhibition games arranged between teams of selected stars in the Canadian and American armed forces. The idea for the first football game originated when Major Dennis Whitaker, a former quarterback for the Hamilton Tigers of the CFL and a Dieppe survivor, and a U.S. Special Services lieutenant met in a pub, and began talking football. The result of the chance meeting was the **Tea Bowl**. The game was to be a hybrid, with the first half played under American rules, and the second under Canadian.

The Canadian Army team, named the “Mustangs”, had several Sarnians: Charles Living, Nick Paithouski (brother of Michael Paithowski, included in this Project), and Ken Withers, and several CFL players. The Tea Bowl was played on February 13, 1944 before over 30,000 fans in White City Stadium in London, and was even broadcast on British radio. With the threat of German bombers, RAF Spitfires were deployed to cover the skies around the stadium during the game. The Canadian Army “Mustangs” defeated the U.S. Army Central Base Station “Pirates” by a score of 16 to 6. Stung by the loss, the Americans called for a rematch. Their new team, the U.S. 29th Army team, named the “Blues”, was reinforced with a contingent from the University of Iowa Cornhuskers and a former NFL all-

star. The rematch, played on March 19, 1944, again in White City Stadium, this time before a crowd of 50,000, was dubbed the Coffee Bowl. The U.S. “Blues” defeated the Canadian Army “Mustangs” by a score of 18 to 0. The outcome of the games were really irrelevant; what counted was the camaraderie, the friendly competitiveness, and a sense of shared purpose. Less than three months later, the Allied forces, including some of the games’ participants, joined together in something much larger--the D-Day landings in France.

Charles’ brother, Frederick Stevenson Living, also served in the war. Nineteen year-old Frederick enlisted in the Canadian Active Service Force, with the Lincoln & Welland Regiment on November 13, 1940 at Niagara Barracks, Ontario. He recorded his reason for joining as, “Change from job + father in Cdn Army last war.” Frederick was single, stood five feet six inches tall, had brown eyes and brown hair, was employed as a truck driver and lived at 38 Court Street in St. Catharines, Ontario at the time. He received army training in Nanaimo, British Columbia and St. John’s, Newfoundland before proceeding overseas in July 1943. He arrived in the United Kingdom on July 17, 1943. One year later, on July 21, 1944, Frederick Living disembarked in France. Just over two weeks later, on August 6, 1944, Private Frederick Living of the Lincoln & Welland Regiment, 1st Battalion, lost his life during the Battle of Normandy, “killed in action against the enemy.” Twenty-three-year-old Frederick Stevenson Living was buried at a location recorded as, “France sheet No 40/14 NW-M.R. 076615.” His remains were later carefully exhumed from the original place of interment, and reverently re-buried in Bretteville-Sur-Laize Canadian War Cemetery in Calvados, France, Grave Reference: I.B.7. It was during that same month, August 1944 that brother Charles was promoted to the rank of Flight Lieutenant in the RCAF.

Private Frederick S. Living’s grave – Bretteville-Sur-Laize Cemetery, France

On October 27, 1944, Charles Living became a member of RAF #576 Squadron “Carpe Diem” (Seize the Opportunity), part of **Bomber Command**, with the rank of Flight Lieutenant-Pilot.

During the course of the war, one of this country’s most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain itself, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

No. 576 Squadron was formed at RAF Elsham Wolds, Lincolnshire on November 25, 1943, part of Bomber Command’s main force. The squadron was equipped with Avro Lancasters, the four-engine, heavy bombers. In late-October 1944, the squadron transferred its base to RAF Fiskerton, Lincolnshire. The squadron engaged in operations that included: missions against mostly German targets by night; support of the D-Day landings and Allied Armies in the field; and targeting V weapon sites in Northern France.

Following is a record of Charles Living’s tour details leading up to his last one (Date-Target-Aircraft #): 04/11/44-Bochum-PD363; 06/11/44-Gelsenkirchen-JB410; 09/11/44-Wanne Eikel-ND521; 11/11/44-Dortmund-ND521; 16/11/44-Duren-JB410; 21/11/44-Aschaffenburg-ME735; 27/11/44-Freiburg-ME735; 29/11/44-Dortmund-ME375; 04/12/44-Karlsruhe-JB410; 15/12/44-Ludswighafen/Oppau-PD403; 17/12/44-Ulm-PD403; 28/12/44-Bonn-PD403; 31/12/44-Osterfeld-PD403; 05/01/45-Royen-PD403; 07/01/45-Munich-ME735; 14/01/45-Leuna-JB410; 22/01/45-Duisburg/Hambourn-ME735; 08/02/45-Politz-PB785; 13/02/45-Dresdan-ME735; and 14/02/45-Chemnitz-ME735. The crew’s next mission, their 21st, would be their last.

It was with #576 Squadron that fellow pilot Frank Phripp found Charles Living one evening in early 1945. Writing in the book "The RCAF at War," Phripp recalled hearing muffled sobs in the back of a hut. Going to investigate, he was shocked to find Charles sitting in the dark, crying his eyes out. *I had never seen a man cry, that was unthinkable among my Air Force friends*, he wrote. *And if the idea had occurred to me, Hank Living was the last man I would have expected to be so broken up. Hank was undoubtedly the biggest guy on our squadron. He had used his size well when he played centre on the line for the Sarnia Imperials in the Ontario Rugby Football Union. He was known as 'Hi' Living in 1938 when he starred in the final game with the Montreal Nationals that won the Imperials the ORFU championship. Yet there he was on his cot in a dim corner of our hut in Lincolnshire and heaving uncontrollably.*⁹⁸ Charles confided to Frank that he was afraid to keep flying, that he was sure he was about to be killed. Living explained his concern that because of his large size, combined with wearing a parachute and his Mae West, that he would not be able to squeeze through the small pilot's escape hatch. If his aircraft was hit, he would be trapped in his burning plane as it plunged to the ground. Despite his fears, Flight Lieutenant Charles Living kept flying.

On the night of February 21, 1945, Charles Living was the pilot aboard Squadron #576 Lancaster Mk. I aircraft ME735 (markings UL-B2), joining over 370 aircraft on a night mission attack against Duisburg, Germany. Pilot Living's Lancaster took off from RAF Fiskerton and went missing during the night trip, along with two other Lancasters from 576 Squadron. Eyewitnesses saw the plane crash with great force and explode in flames three miles south of Kevelaar, on the boundary of Germany and Holland, between the hours of 11:30-11:45 pm. No parachutes were seen to leave the aircraft, and all crew members aboard Lancaster ME735 lost their lives in the crash. Along with F/Lt-Pilot Charles Living, also perishing in ME375 were Flying Officers John Arnold Russell and Raymond Campbell Hill; Flight Sergeant Geoffrey Leonard Vyvyan Tabor; and Sergeants John Francis Arthur Mooney, Harry Burrows and Harold Peach. Unusually, the crew included three married men--Living, Mooney and Russell. Aircraft ME735 was a veteran machine, being lost on its 84th operation.

In late February 1945, Mary Alyce Living, residing at George Street in Sarnia, received a telegram from Ottawa informing her that her husband, FLIGHT LIEUTENANT CHARLES HENRY LIVING IS REPORTED MISSING AFTER OPERATIONAL FLIGHTS OVER ENEMY TERRITORY. Charles Living was later officially recorded as, *Previously reported missing after air operations, now for official purposes, presumed dead, overseas (Germany)*. In April 1946, Mary Living received a War Service Gratuity of \$660.13 for the loss of her husband.

In late November 1946, the results of an R.A.F. Missing Research & Enquiries Unit investigation of the crash site and fate of the crew was completed. Following are portions of that investigation report:

Aircraft: ... *The circumstances of the crash being well supported by interrogation of many local people. One feature however must be emphasized that is, the fact that the a/c (aircraft) upon striking the ground with full impact burned very fiercely indeed for many hours. Nothing traceable of the a/c remained at the scene of the crash.*

Aircrew: *The morning following the crash a Mr. Winkel, who was responsible for guarding the crash personally supervised the collection of all human remains, notwithstanding that many pieces of such remains were found over a wide area. The identity card of one of the crew members was taken to the town hall at Kevelaar, but efforts to obtain it, were abortive. A short distance from the scene of the crash at Map Ref. E 969282 I found by the side of the main road a small wooden cross bearing the inscription "3010345 PEACH and 4 British airmen crashed 18-2-1945".*

Exhumation: *It was decided to exhume immediately to discover how many airmen of this crew were actually buried in this isolated grave... The grave was quite a shallow one and after digging for about 18 ins. A large number of a/c pieces and a considerable quantity of parachute material was uncovered. A little further down we found a quantity of burnt and charred clothing among which pieces of Officer's service dress trousers battle dress and pieces of a blue pullover. Further down the remains of the first body were exhumed and here we were fortunate enough to positively identify him as Sgt. Tabor. Further down we brought out the remains of another body with every indication conducive to the belief that he was F/Lt. Living. After that there remained only a very large collection of badly charred remains which could have been those of at least five airmen.*

Conclusion: *In the light of the results of the investigation and of the exhumation there can be no possible doubt about the fate of this entire crew. F/Sgt. Tabor has been positively identified, Sgt. Peach was obviously identified and the identity card of F/O J.A. Russell is most probably the one (at the time) which had been handed in at the town hall Kevelaar and which subsequently I was unable to find. F/Lt. Living as the only F/Lt. in this crew seems satisfactorily accounted for by the details of the exhumation report. As for Sgt's Mooney and Burrows I am convinced beyond a shadow of doubt that the remains of all of them are together in that heap of charred and cremated remains at the bottom of the grave.*

... I arranged in conjunction with Major Dawson from 39 G.C.U. for the remains to be divided into seven parts and buried in REICHSWALD British Cemetery...

In late August 1948, Viola O'Day in Holly, Michigan, received the following letter from the Wing Commander, R.C.A.F. Casualties Officer, for Chief of the Air Staff:

Dear Mrs. O'Day:

It is with regret that I again refer to the loss of your son, Flight Lieutenant Charles Henry Living, but you will wish to know of a report received from our Missing Research and Enquiry Service.

The report states that the graves of your son's crew were exhumed and that Flight Sergeant Tabor and your son were identified. The crew have since been re-interred in the Reichswald Forest British Military Cemetery, three miles South West of Cleve, Germany. Your son was laid to rest in Plot I, Row H, Grave 12.

This is a permanent British Military Cemetery located in Germany, and will be turned over to the Imperial War Graves Commission (of which Canada is a member), who are responsible for the reverent and perpetual care of the resting places of all our Fallen. The cemeteries will be beautified by landscaping and the planting of shrubs and flowers, and a headstone will be erected at each grave. Unhappily, there are great numbers of these headstones to be erected and it will quite naturally take considerable time.

May I again offer you my most sincere sympathy in the loss of your gallant son.

For Charles' mother Viola O'Day, this was her second son lost in war, having already lost Frederick Stevenson Living in August 1944. Charles Living's wife Mary Alyce, later re-married, becoming Mrs. Mary A. Valek, of Page Street in Flint, Michigan. Thirty year-old Charles Living is buried in Reichswald Forest War Cemetery, Germany, Grave 1.H.12. In November 2019, his name along with 25 others was added to the Sarnia cenotaph, engraved in stone to be remembered always.

Tragically, she would lose one more son to war. Her youngest son, Charles William Living Jr. (born 1932), served with the United States Army in the Korean War. As a member of the 9th Infantry Regiment, 2nd Infantry Division, he was seriously wounded in action by the enemy in South Korea on March 5, 1951. He returned to duty on March 30, 1951. Just over two months later, on June 2, 1951, he was killed in action while fighting the enemy in North Korea. Nineteen year-old Sergeant Charles William Living Jr. was posthumously awarded the Purple Heart with Oak Leaf Cluster, the Combat Infantryman's Badge, the Korean Service Medal, the United Nations Service Medal, the National Defense Service Medal and the Korean War Service Medal. The patriarch of the family, Charles William Living Sr., a World War I veteran who had lost three sons in war, passed away at the age of eighty-four in Edmonton, Alberta on August 23, 1969.

*The following article is courtesy of Dan McCaffrey, local Sarnia author, who wrote this column in November 2007:

When local residents pause to remember the nation's war dead this Nov. 11, they might want to reflect for a moment on the story of Charles Henry Living.

Living, who was known to his friends as Hank, was a Saskatchewan native who came to our city in 1938 to play for the Sarnia Imperials football club. In addition to his athletic skills, he was a bright guy. In an era in which few people graduated from high school, he'd gone to St. Michael's College in Toronto and the University of Michigan. He married a Sarnia girl and became a much-loved local figure.

When war came, he joined the Royal Canadian Air Force. He wanted to go overseas but he was such a skilled pilot that he was assigned to a flight school, where he taught others how to fly. It was only in November 1944 that he was posted to a Lancaster bomber squadron in England. It was there that fellow pilot Frank Phripp found him one evening in early 1945.

Writing in the book "The RCAF at War," Phripp recalled hearing muffled sobs in the back of a hut. Going to investigate, he was in for a shock. Living was sitting in the dark, crying his eyes out. "I had never seen a man cry, that was unthinkable among my Air Force friends," he wrote. "And if the idea had occurred to me, Hank Living was the last man I would have expected to be so broken up. Hank was undoubtedly the biggest guy on our squadron. He had used his size well when he played centre on the line for the Sarnia Imperials in the Ontario Rugby Football Union. He was known as 'Hi' Living in 1938 when he starred in the final game with the Montreal Nationals that won the Imperials the ORFU championship. Yet there he was on his cot in a dim corner of our hut in Lincolnshire and heaving uncontrollably."

Phripp put his hand on the Sarnian's trembling shoulder. For the longest time the two men sat silently. Then

slowly and almost unintelligibly, Living began to explain that he was afraid to keep flying, that he was sure he was about to be killed.

The problem was his great size.

"He explained there was no way he could squeeze through the pilot's escape hatch of the Lancaster with his parachute and Mae West (lifejacket) on," Phripp recalled. "He had tried every way possible with the help of trainers and his crew, and it couldn't be done."

Fearing he'd be trapped in his burning plane as it plunged to the ground, Living had asked to be reassigned to a different job, but had been turned down. At this point he could simply have quit. All aircrew were volunteers and no one could force them to fly. They would be stripped of rank and forced to clean latrines or to do other menial tasks, but they wouldn't have to face the deadly flak and fighters over Germany. But Living decided not to take the easy way out. Despite his fears, he kept flying until the night of Feb. 21, 1945, when his plane was shot down. Witnesses on the ground saw no parachutes emerge from the bomber as it plummeted to earth. Just as he had feared, Living had gone down with his aircraft.

If Remembrance Day is about recalling sacrifice and heroism, then Living's story is well worth remembering. It's easier to be brave if you have faith that you're going to make it, that death will always come to "the other guy." It's quite another thing to carry on after you've lost your nerve, when you're certain you're going to be killed. Hank Living did that. His courage should never be forgotten.

LOCHHEAD, Robert Lachlan (#J/90280)

Robert "Bob" Lochhead was so eager to serve that at sixteen, he lied about his age in an attempt to enlist. At age 18, his family then living in the U.S., he crossed back into Canada to enlist. According to his squadron wing commander, Robert was "fast becoming an 'Ace' Air Gunner". Robert Lochhead gave his life for the Allied cause while serving in one of the most dangerous postings of the war.

Robert was born in Toronto on June 27, 1924, the only son of Fraser Absalon and Gertrude Wilhelmina (nee Ward) Lochhead, of Mount Elliott Street, Detroit, and later Royal Oak, Michigan. Fraser, an electrician and engineer (born in Toronto) and Gertrude (born in Allandale, Ontario) were married on August 5, 1920 in Niagara Falls, New York. Fraser and Gertrude had two children together; son Robert and daughter Elizabeth Alba (later Elizabeth Doucher, resided on Bathurst St., Toronto).

Robert initially attended public elementary school in Toronto. After the family moved to Sarnia, he attended Wellington Street Public Elementary, 1930-1938 and Sarnia Collegiate in 1939-1940. He received his musical education in Sarnia and, being very interested in music, was a member of the Pressey's Boys Band for four years. During his musical career, Robert was awarded several medals for solo work. He was also fond of football, swimming, horseback riding and photography. Robert was a member of the Central Century Club and attended Central United Church. Robert and his family lived in Sarnia, at 128 North Christina Street, for more than seven years before moving to Detroit in 1941 (to reside at 8521 Mount Elliott Street).

On January 24, 1941, sixteen-and-a-half year-old Robert Lochhead enlisted in the Essex Scottish Regiment in Windsor, Ontario. He was living on Christina Street in Sarnia with his parents at the time, recording his occupation as musician (employed by Jack Kennedy, 1940-Jan. 41), and his date of birth as June 27, 1921 (making himself three years older than he was). From #1 District Depot in Windsor, Robert received his army training at Canadian Infantry Training Centre at Camp Borden, as a Private. Late in the year, army authorities discovered that his actual date of birth was June 27, 1924. Because he was underage (between the age of 17 and 18 at application), he was honourably discharged from the army on December 5, 1941 in London, Ontario. Robert then moved to Detroit to join his family. He studied at home from December 1941 to March 1942, and then worked as a "junior" with the Laucomer & Manser Engineering firm in Detroit from March to October 1942.

Upon reaching the required minimum age of 18, Robert Lochhead enlisted in Windsor, joining the Royal Canadian Air Force on October 13, 1942. He was living in Detroit at the time, and recorded his occupation as musician. He stood five feet ten and a half inches tall, had blue eyes and brown hair, and was single at the time. He requested flying duties with a preference to be a pilot. He planned to attend university and to study law after the war.

The interviewing recruiting officer wrote of Robert, *Good type, alert, cooperative, enthusiastic, keen to fly, discharged from army after 11 months service for being under age. A powerful, athletic, self reliant lad who is very keen to be of service, and should be excellent material for aircrew.*

From #1 Manning Depot in Toronto, Robert received his air training at #2 Wireless School (WS) in Calgary; followed by training at #2 Air Gunner School (AGGTS) in Trenton; and #3 Bombing and Gunnery School (B&GS) in Macdonald, Manitoba. He was awarded his Air Gunner's Badge on September 3, 1943. After a two-week leave, he was transferred to #1 Y Depot in Halifax. On October 8, 1943, Robert Lochhead sailed from New York bound for the United Kingdom.

P/O-AG Robert Lachlan Lochhead

Robert was initially posted to #3 Personnel Reception Centre (PRC) at RAF Bournemouth. He continued his training at #82 Operational Training Unit (OTU) and later #1664 Conversion Unit. On March 13, 1944, Robert Lochhead was transferred again becoming a member of RCAF #431 Iroquois Squadron "The Hatiten Ronterios" (Warriors of the air), part of **Bomber Command**, with the rank of Pilot Officer-Air Gunner.

During the course of the war, one of this country's most significant contributions was the approximately 50,000 Canadians who served with the RCAF and RAF in Bomber Command operations. Next to Britain, Canada was the largest contributor to Bomber Command, making up more than a third of all of Bomber Command personnel. The men who served in Bomber Command faced some of the most difficult odds of anyone fighting in the war.

RCAF #431 Squadron had formed in Britain in November 1942, based at RAF Burn, and was equipped with Vickers Wellington aircraft. In July 1943, it moved to RAF Tholthorpe and converted to Handley Page Halifax aircraft. In December 1943, the squadron moved again, to RAF Croft. The squadron remained at Croft for the balance of the war, and in October 1944 would be equipped with Lancasters.

Approximately five weeks after becoming a member of #431 Squadron, Robert Lochhead lost his life during a mission over enemy territory. On the night of April 22, 1944, he was aboard Halifax III aircraft MZ514 (markings SE-P) that left its base at Croft on a night operation targeting Dusseldorf, Germany. The aircraft failed to return to its base after the raid. In the early morning hours of April 23, Halifax MZ514 was lost during the operation. Of the 596 aircraft involved in the operation, there were 29 losses.

Later that month, parents Fraser and Gertrude Lochhead received a telegram informing them that their son, SERGEANT AIR GUNNER ROBERT LOCHHEAD WAS REPORTED MISSING IN ACTION OVER ENEMY TERRITORY AFTER TAKING PART IN AIR OPERATIONS OVER GERMANY. Further word released from Ottawa informed them that Robert, HAD TAKEN PART IN AIR OPERATIONS OVER DUESSELDORF GERMANY ON APRIL 21 AND FAILED TO RETURN FROM THE MISSION.

In late April 1944, Fraser and Gertrude in Detroit received a letter from the R.C.A.F. Casualty Officer, for Chief of the Air Staff. Following is a portion of that letter:

Dear Mr. Lochhead,

It is my painful duty to confirm the telegram recently received by you which informed you that your son, Sergeant Robert Lachlan Lochhead, is reported missing on Active Service.

Advice has been received from the Royal Canadian Air Force Casualties Officer, Overseas, that your son was a member of the crew of an aircraft which failed to return to its base after a bombing raid over Dusseldorf, Germany, on the night of April 22nd and the early morning of April 23rd, 1944. There were four other members of the Royal Canadian Air Force in the crew and they also have been reported missing. Since you may wish to know their names and next-of-kin, we are listing them below...

This does not necessarily mean that your son has been killed or wounded. He may have landed in enemy territory and might be a Prisoner of War. Enquiries have been made through the International Red Cross Society and all other appropriate sources and you may be assured that any further information received will be communicated to you immediately.

Your son's name will not appear on the official casualty list for five weeks. You may, however, release to the Press or Radio the fact that he is reported missing, but not disclosing the date, place, or his unit. May I join with you and the members of your family in the hope that better news will be forthcoming in the near future.

Also in late April 1944, Fraser and Gertrude received a letter from the Wing Commander, Commanding No. 431 (R.C.A.F.) Squadron. Following is a portion of that letter:

Dear Mrs. Lochhead,

Before you receive this letter, you will have had a signal informing you that your son R-187819 Sergeant Robert Lachlan Lochhead is missing as a result of air operations.

At approximately 10.30 P.M. on the night of the 22nd instant, Bob, and members of his crew took off from this aerodrome to carry out operations over DUSSELDORF, Germany, but unfortunately failed to return. He, and his crew were due back at this aerodrome on completion of the sortie, but no news has been received from either the crew or aircraft since the time of take-off.

It is with regret that I write you this date to convey the feelings of my entire Squadron. Your son was popular with this Squadron, and was fast becoming an "Ace" Air Gunner.

We lost one of our best crews, when this aircraft did not return, for it had already been mapped out for a great future with my Squadron. Your son had 4 sorties to his credit and a total of 19 operational hours over enemy territory.

There is always the possibility that your son may be a prisoner of war, in which case, you will either hear from him direct, or through Air Ministry, who will receive advice from the International Red Cross Society. To be a prisoner of war is not the happiest thought in one's mind, particularly for you who are so fond of your son, but on the other hand, I hope you will bear with me that it carries a certain gratifying thought in knowing that our loved ones are alive, and well, and will some day return home safely.

This war has caused grief to millions of people all over the world, and it is a sorrowful state to know that so many fine young men must make supreme sacrifices in order to crush him, and his members, an infuriated enemy whose jealousy and hatred of our spirit, and strength will eventually crush him, and his members.

I do not wish to grieve you further in your deep anxiety, but trust you will bear with me until such time as definite word is received one way or other concerning the welfare of your son....

It is desired to explain that the request in the telegram notifying you of the casualty of your son was included with the object of avoiding his chance of escape being prejudiced by undue publicity in case he was still at large. This is not to say that any information about him is available, but is a precaution adopted in the case of all personnel reported missing. May I offer my most sincere sympathies, as well as those of my Officers, and men in your anxiety.

Almost a year later, in March 1945, as the Lochheads had not received any further information about their son, Fraser wrote a letter to the RCAF Casualty Officer expressing his concern. Following is a portion of that letter:
Dear Sir:

I received your letter February 9 in which you ask us to confirm by letter that we have received no further evidence or news concerning our son, Pilot Officer Robert Lachlan Lochhead. I would like to state that we have been informed that a Mr. MacGregor of Toronto, Canada, had been sent information from you concerning his son, who was in the same flight with ours. We understand that you received your information from a Red Cross Committee in Geneva, and we feel we are not asking too much that the said information be sent to us also.

It is true we have not written you because we were of the opinion that any information received by your department would be distributed to all parents alike. Seemingly such has not been done. We are just as interested in our son as it is possible to be. As he was our only son we feel his loss keenly, but refrain from making ourselves a nuisance to your department, so we naturally feel keenly that we have not been informed...

I would like also at this time, to state that a mother of this same flight has received a script, which can be

framed, over her son's promotion to pilot officer. If such a certificate is to be had we would value it also of our son. I am sure you will understand, and trust you won't find this letter unduly harsh. At this time such small things are so big to us, and we are so eager for news of any kind concerning him.

One month later, in April 1945, the Lochheads received a letter from the RCAF Casualty Officer, for Chief of the Air Staff. Following is a portion of that letter:

Dear Mr. Lochhead:

I wish to acknowledge your letter of recent date concerning your son, Pilot Officer Robert Lachlan Lochhead. A report received from the International Red Cross Committee stated that Sergeant Priamo lost his life on April 23rd, 1944, and was buried in the Communal Cemetery at Veen, which is located approximately 30 miles North North West of Dusseldorf, Germany. A further report received from the Red Cross, advises that Sergeant Howcroft, who was also a member of your son's crew, together with four 'unknown' lost their lives and were buried in the same cemetery as Sergeant Priamo. Sergeant Howcroft is buried in grave number one, and the members referred to as 'unknown' are buried in graves two-three-four- and five.

As there were eight members in your son's crew, however, I am sure you will realize that it was not possible on the above information to identify the members referred to as 'unknown'. This information was not previously passed on to you as the report from the Red Cross did not specifically mention your son's name and it was, therefore, felt that it would only be the cause of additional distress and anxiety.

Your desire for further news of your son is well realized, and I wish to assure you that although presumption of death action is being instituted, it will not in any way affect or diminish any investigation being carried out to obtain all possible particulars.... May I express my sincere sympathy in this long and anxious period of waiting.

Later, the Lochhead's received official notification that their son Robert's death was officially recorded as, *Previously reported missing after air operations, now for official purposes, presumed dead, overseas (Germany).* Perishing with Pilot Officer-Air Gunner Robert Lochhead were F/O Peter George Harvey MacGregor; P/O.s Norman Herbert Lynch, Fred Hatchman, and Joseph Lidio Priamo; and Sgt.s Ronald Blair Corkill (RAF), Albert Howcroft (RAF) and Lt. Edmund Francis Boyle (American). The bodies were buried in a German cemetery at Veen on April 23, 1944. The remains were later exhumed but failed to produce any clues to individual identification.

In May 1946, Fraser and Gertrude received a War Service Gratuity of \$314.27 for the loss of their only son. In September 1946, the results of an R.A.F. Missing Research and Enquiries Unit investigation of the crash site and fate of the crew was completed. Following is a portion of that investigation report:

1. Calling at VEEN cemetery, I met a Mrs. Tiemann of VEEN, the owner of the ground on which the a/c (aircraft) crashed. She quite distinctly remembered that incident. She was up rather late and it might have been around 02:00 hours or 03:00 hours when the a/c hit the ground not very far from her house. It was seen as a ball of fire in the sky and was said to have been brought down by the flak from the nearby airdrome at BONNINGHARDT.

2. Although there was no terrific explosion – suggesting that the a/c was on its way back, it disintegrated in mid air and broke up all together, when hitting the ground. The wreckage burnt fiercely for the rest of the night and nobody could approach it, because of the heat and the exploding ammo. In the morning, only 2 more or less complete bodies were found, totally burnt though, 3 skulls and many bits and pieces of human bodies. Mrs. Tiemann remembers finding very small pieces of the bodies giving some indication of the force of the explosion. Those bits and pieces were collected and put in one grave, whilst the two bodies were placed in a coffin and buried in the local cemetery.

3. Mr H. Werner of VEEN, the local cemetery keeper, on which I called next confirmed what I had already heard from Mrs. Tiemann. Asked how he came to make just 5 graves, he said he had 2 bodies and another 3 skulls, so he presumed that there must have been 5 men in the crew. Graves No. 4 and 5 are empty, for there was not even enough to fill Grave No. 3.

4. A farmer Van Husen of VEEN had found 2 Identity Discs belonging to Boyle and Priamo respectively, which he had handed in to the authorities then....

5.... I met a Mr. H. SCHOOF, a young official there. He proved to be most helpful and had done some investigation on this case already. He suddenly remembered that rumours had been going around to the effect, that in the light of the search lights, 2 parachutes had been seen descending in the direction of Sevelen and ISSUM and it was assumed that they had come from this aircraft....

8. Exhumation would be without result, as apart from the 2 bodies which are burnt beyond recognition, nothing else would be found.

The investigator interviewed Burgomasters and Police Stations in Sevelen and Issum, but no records were

kept, or everything was destroyed through the war. Several local officials and farmers were also interviewed--some recalled POW's passing through the area, but not necessarily on that particular night. A weekly average of some 15 to 17 POW's passed through the area on the way to Stalag Luft III, but no records were available

In January 1947, Fraser and Gertrude Lochhead received a certificate from the RCAF Headquarters in Ottawa, signed by the Air Marshal Chief of the Air Staff. It read as follows:

Royal Canadian Air Force

This is to certify that Pilot Officer R.L. Lochhead has been posthumously awarded the Operational Wings of the Royal Canadian Air Force in recognition of gallant service in action against the enemy.

Dated this tenth day of January, 1947.

Nine months later, in October 1947, Fraser and Gertrude received the following letter from the R.C.A.F. Casualty Officer, for Chief of the Air Staff:

Dear Mr. Lochhead:

It is with regret that I again refer to the loss of your son, Pilot Officer Robert Lachlan Lochhead, but you will wish to know of a report received from our Missing Research and Enquiry Service.

Investigating Officers of this Service contacted Mrs. Tiemann of Veen which is approximately thirty miles North North West of Dusseldorf. Mrs. Tiemann is the owner of the ground on which your son's aircraft crashed. She quite definitely remembered the incident. She was up rather late that night and around 2:00 or 3:00 A.M. in the morning the aircraft hit the ground not far from her house. It was seen as a ball of fire in the sky and was said to have been brought down by anti-aircraft fire from the nearby airdrome at Bonninghardt. It disintegrated in the air and broke up altogether on impact with the ground.

The International Red Cross Committee reports which quoted information from German sources that Sergeant Priamo and Sergeant Howcroft had lost their lives was to some extent misleading as the identity discs of these two airmen were not attached to any of the remains. This was later proven on exhumation which was carried out in the local cemetery. Your son and his crew have since been re-interred in the Reichswald Forest British Military Cemetery, three miles South West of Cleve, Germany and are buried in collective graves 1 and 2 in Row E, Plot 18. I deeply regret having to convey such distressing information but it was thought that in view of the previous reports received from the International Red Cross an explanation was necessary so that you would know the reason the crew had to be buried collectively.

May I, at this time, extend my sincere and heartfelt sympathy to you and the members of your family in your bereavement.

In late fall 1954, Fraser and Gertrude Lochhead, then living in Royal Oak, Michigan, wrote a letter to the R.C.A.F. Casualties Officer, who had promised to send them a photograph of their son's grave. They expressed their sadness at not having received the promised picture, "as you must understand how very much it means to us... and have looked forward to seeing the picture long before now". In April 1955, Fraser received the promised photograph along with the following letter from the Wing Commander, R.C.A.F. Casualties Officer, for Chief of the Air Staff:

Dear Mr. Lochhead:

Some time ago you wrote here requesting a photograph of the permanent headstone at the resting place of your son, Pilot Officer Robert Lachlan Lochhead, at that time the permanent stones were not in place, but at long last I am able to send you the photograph you desired.

I am sorry indeed that it has taken so long, as you will notice there had been a light fall of snow shortly

before the picture was taken. I had the privilege of visiting the Reichswald Forest Cemetery in late 1953, and it is a beautiful location, the kind of place that I am sure you would approve of, and kept perfectly.

May I take this opportunity of expressing to you and the members of your family my deepest sympathy in the loss of your gallant son.

Nineteen year-old Robert Lochhead is buried in Reichswald Forest War Cemetery, Germany, Coll grave 18.E.1-5. On his headstone are inscribed the words, THE GRACE OF OUR LORD JESUS CHRIST BE WITH YOUR SPIRIT. AMEN.

LONEY, George Victor Lawrence (#A/69237)

George Loney had a career, a wife and two children at home with a third on the way, when he chose to serve his country. He sacrificed his life for Canada during the Allied push to rid France of the German forces.

He was born in London, Ontario on April 4, 1916, the only son of Joseph and Mary Alice Loney. Joseph and Mary Alice Loney were married in London, Ontario and they had two children together; George and Josephine Mary Alice (Sauve), who later lived at Cemetery Road, Sarnia. The Loney family moved to Sarnia in the early 1920s. Both of George's parents predeceased him. George also had a half-brother, Joseph, who predeceased him, and a half-sister, Frances Burnie, who later resided in Windsor, Ontario. George was educated at the Point Edward public school, and left school after passing grade seven at age sixteen. He was also a member of Our Lady of Mercy Catholic Parish.

On July 31, 1937, twenty-one-year-old George Loney married Teresa McGinn (born March 1912) who was originally from Preston, Lancashire, England. She was the daughter of Joseph and Mary McGinn, originally from England, then living in Hamilton, Ontario. George and Teresa were married at Our Lady of Mercy Church in Sarnia. At the ceremony, Marion Shortt of Point Edward served as bridesmaid and Orville Toole of Sarnia served as the best man. George and Teresa Loney had three children together: Larry (Lawrence Joseph born Sept. 5, 1938); George Douglas (born Dec. 28, 1939); and Marie Therese (born Sept. 25, 1942). The Loney family lived at 226 Cotterbury Street and later 240 Cobden Street, Sarnia. Prior to enlisting, George was employed at Electric Auto-Lite Limited in Sarnia as a machine operator for nine years.

With two young children at home, and a third on the way, twenty-six-year-old George Loney enlisted in the Canadian Army on April 20, 1942 in Watford, Ontario, becoming a member of the 48th Light Anti-Aircraft (48LAA) Battery, Royal Canadian Artillery. He stood five feet eight and a half inches tall, had greenish-blue eyes and dark brown hair, and recorded his residence at the time as 226 Cotterbury Street, Sarnia. George received his army training with the 48th LAA in Watford; followed by his training at #12 Basic Training Centre (BTC) in Chatham, and then with the 9th Light Anti-Aircraft Regiment in Petawawa and in Vancouver. While stationed in Vancouver in September 1942, his baby daughter Marie Therese was born in Sarnia. In January 1943, George was again training with the 48LAA in Terrace, British Columbia, and later in Wainwright, Alberta. During his training, he also received his Class III Driver and Class III Motorcyclist qualifications. In August 1943, he was transferred to #1 Transit Centre in Windsor, Nova Scotia.

Gunner George Victor Lawrence Loney

George Loney embarked overseas for the United Kingdom on August 28, 1943. He was initially posted to #3 Canadian Army Reinforcement Unit (CARU), and then #2 CARU, where he continued his training. In May 1944, he became a member of the Royal Canadian Artillery (RCA), 7 Medium Regiment with the rank of Gunner. He sailed from the U.K. on July 7, 1944, arriving two days later in France (one month after D-Day).

The **Battle of Normandy** began for the Canadians with the June 6, 1944 D-Day landings at Juno Beach. After breaching the “Atlantic Wall” of “Fortress Europe”, Allied armies began their break out from the narrow Normandy bridgehead to carve out a foothold on the French mainland. It would take a whole summer of tenacious fighting, pushing against fierce and ruthless German forces to advance east across France. In a brutal campaign of attrition, the Canadians faced fierce battles and vicious counterattacks as they clawed their way forward liberating villages and towns including Bretteville, Carpiquet, Caen and Falaise.

Gunner George Loney served with the RCA, 7 Medium Regiment as they advanced through France. One month after arriving in France, he lost his life. On August 8, 1944, George was killed in action against the enemy during the Battle of Normandy. His remains were buried the same day at a location recorded on the Army Field Service Card as “Canadian Military Temp. Cemetery, Mondeville MR087675”.

In mid-August of 1944, Teresa Loney on Cobden Street received a telegram informing her that her husband, GUNNER GEORGE LONEY WAS KILLED IN ACTION IN FRANCE ON AUGUST 8. At the time of George’s death, he left behind his wife, Teresa, and their three young children: Larry, age five; George, age four; and daughter Marie, age two.

In early September 1944, Teresa received the following letter from a Major-General, Adjutant-General:
Dear Mrs. Loney:

It was with deep regret that I learned of the death of your husband, A69237 Gunner George Victor Lawrence Loney, who gave his life in the Service of his Country in France on the 8th day of August, 1944.

From official information we have received, your husband was killed in action against the enemy. You may be assured that any additional information received will be communicated to you without delay.

The Minister of National Defence and the members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

In November 1945, Teresa received a War Service Gratuity of \$365.14 for the loss of her husband. Five months later, in April 1946, she received a letter from the Colonel, Director of Records, for Adjutant-General. Following is a portion of that letter:

Dear Madam:

Information has just been received from overseas that the remains of your husband, A69237 Gunner George Victor Lawrence Loney, have been carefully exhumed from the original place of interment and reverently reburied in grave 16, row H, plot 11, of Bretteville-sur-Laize Canadian Military Cemetery, Bretteville-sur-Laize, France. Marked map is enclosed. This is a recognized military burial ground and will receive care and maintenance in perpetuity.

The grave will have been marked with a temporary cross which will be replaced in due course by a permanent headstone suitably inscribed. While it cannot now be stated when this work of permanent commemoration will begin, before any action is taken you will be communicated with and an opportunity will be given you to submit a short personal inscription of your own choice for engraving on the headstone...

Twenty-eight-year-old George Loney is buried in Bretteville-Sur-Laize Canadian War Cemetery, Calvados, France, Grave XI.H.16.

LOVE, John Frederick (#V/19486)

John Frederick Love had a career, was in his sixth year of marriage, and had a daughter at home when he chose to serve his country. He gave his life for the Allied cause while ensuring that vital naval supply lines remained open to what British Prime Minister Winston Churchill said was “... the only thing that ever really frightened me during the war...”

He was born in Brandon, Manitoba on September 28, 1913, the son of Robin and Violet Love of Regina, Saskatchewan. John had two brothers: Allan (later resided in Burlington, Ontario) and Laurie (would serve overseas); and three sisters: Dorothy (who served with the Women’s Air Force), and married sisters, Mrs. R. Colville (would

reside in Vancouver) and Mrs. T. Dempster (would reside in Melville, Saskatchewan). The Love family later moved to Yorkton, Saskatchewan, where John served in the 1st Yorkton Regiment, Militia, as a bugler from 1925 to 1927. He completed one year of high school, leaving at age fifteen.

John Love moved to Sarnia around 1933. On May 16, 1936, the twenty-two-year-old married Mabel Patricia (nee Rutter), the eldest daughter of John and Bernice Rutter of Port Huron, Michigan. John and Mabel Love lived at 156 Cotterbury Street, Sarnia. The couple had one daughter together, Deanna Marie Love, born December 13, 1936 at Sarnia General Hospital.

John was an employee at the Electric Auto-Lite plant in Sarnia as machine operator prior to enlisting. Twenty-seven-year-old John Love enlisted in the Royal Canadian Naval Volunteer Reserve on August 7, 1941 in Windsor, Ontario. He stood five feet ten inches tall, had blue eyes and brown hair, and stated that he planned to return to Sarnia after the war to continue work as a machinist. When he enlisted, John's father Robin was a resident of Detroit and his mother Violet was residing in Regina, Saskatchewan.

John trained at Windsor Division Headquarters as a Stoker II until October 1941, and was then transferred to Halifax base *Stadacona*. In early 1942, he was transferred again, and on January 9, 1942, he was posted overseas to the Royal Naval Base (RNB) in Chatham, England. There he became a member of the crew of the *HMS Grove*, with the rank of Stoker II.

Stoker John Frederick Love

The Royal Navy *HMS Grove* (L77) was a Type II Hunt-class destroyer, launched in May 1941 and commissioned by the Royal Navy in February 1942. The ship's name comes from the name of a fox-hunt in Nottinghamshire, England. In its five months of service, the ship was first deployed in the Arctic, then the Atlantic Ocean, and then off the coast of Libya in the Mediterranean. The vessel played a vital role in escorting convoys of ships carrying men and essential machinery, arms, fuel and basic resources. On March 27, 1942 in the North Atlantic, the *HMS Grove*, along with *HMS Aldenham*, *HMS Volunteer* and *HMS Leamington*, sank the German U-boat *U-587* by depth charges.

The **Battle of the Mediterranean** was the naval campaign that began in June 1940, fought in the Mediterranean Sea, between the Italian Royal Navy (supported by Axis forces) and the British Royal Navy (supported by Allied forces). Each side had the same objectives: to attack the supply lines of the other side; to keep open the supply lines of their own armies in North Africa; and to destroy the ability of the opposing navy to wage war at sea. In May 1942, the *Grove* was in the Mediterranean Sea at Alexandria, off the north central coast of Egypt. In early June 1942, the ship was part of a flotilla escorting supply convoys from Alexandria to the Tobruk garrison--a seaport town in northeastern Libya in North Africa.

On June 12, 1942, the *HMS Grove* departed Tobruk bound for Alexandria. The ship ran aground briefly at Tobruk, damaging a port propeller and shaft, reducing her speed to 8.5 knots. At 5:37 am, the ship was struck by two torpedoes from German U-boat *U-77* and sunk north of Sollum, Egypt. The bow and stern structures were blown off, and the ship sank in 14 minutes. Two officers and 108 men were lost, including Stoker John Love. Seventy-eight

survivors from the *HMS Grove* were rescued by the destroyer *HMS Tetcott*. [Note: at the same time, *Operation Vigorous* was underway in the area--an Allied operation to deliver supply convoy MW-11 from Haifa and Port Said to Malta. That convoy would encounter heavy enemy opposition and would return to Alexandria. *HMS Grove* was not part of that operation].

Prior to the sinking of the *HMS Grove*, John's wife Mabel and their five year-old daughter Deanna in Sarnia had not heard from him for six months. Approximately one week after the ship's sinking, Mabel received a telegram informing her that John Love was reported killed in action overseas. The *Toronto Globe and Mail* had the following report on June 25:

Sarnia Sailor Thought Dead

The Royal Canadian Navy in its eighty-ninth casualty list of the war, today reported that Stoker John Frederick Love whose wife, Mrs. Mabel Patricia Love, lives at 156 Cotterbury Street, Sarnia, Ont., is missing and presumed killed on active service. Stoker Love was a member of the Royal Canadian Naval Volunteer Reserve.

In late June 1942, Mabel received the following letter from the Secretary, Naval Board:

Dear Madam:

It is with deepest regret that I must confirm the telegram of the 16th June from the Minister of National Defence for Naval Services informing you that your husband, John Frederick Love, Stoker II, R.C.N.V.R., O.N. V.19486, is missing, presumed killed on Active Service.

No details are known at Headquarters, but should any further information be received you will be advised immediately. I wish to express the sincere sympathy of the Chief of the Naval Staff, Officers and men of the Royal Canadian Navy, the high traditions of which your husband has helped to maintain.

John Love's death was later officially recorded as, *At Sea, missing, and presumed killed on active service. He was serving in a Royal Navy ship overseas.* John Love lost his life only one year after enlisting. In March 1945, Mabel, then living on Earl Grey Road in Toronto, received a War Service Gratuity of \$140.75 for the loss of her husband John. Mabel Love later remarried, becoming Mrs. Mabel Christiansen, residing on Logan Avenue, Toronto. Twenty-eight-year-old John Love has no known grave. His name is inscribed on the Halifax Memorial, Nova Scotia, Canada, Panel 9.

LOWRY, James (#R/78911)

One year after enlisting, James Lowry would marry. Less than a year later, with his wife six months pregnant, James Lowry was shipped overseas to serve his country. He sacrificed his life for Canada while fighting to drive the Germans out of Italy.

He was born in Belfast, Northern Ireland on July 5, 1916, the son of John and Annie (nee Park) Lowry, of Crumlin, County Antrim, Northern Ireland. John (a farmer) and Annie were both born in Belfast, and were married in Crumlin, Northern Ireland in 1893, and later resided at Pond Park Cottage, Lisburn, Northern Ireland. James had seven brothers and two sisters. His brothers Robert, William, Corky and Sam all lived in Ireland (two served in the RAF); John lived in Pittsburg, Pa., and Richard and Andrew lived in British Columbia. His sisters, both married, and lived in Ireland; Mrs. Agnes Kennedy and Mrs. Margaret Thompson. The Lowry's had another daughter, Rachel, who died in 1907 at age nine.

James received his education at Straidhavern Public School in Ireland, attending school for ten years from August 1920 to March 1930, which was equivalent to four years of high school in Canada. He was very active in boxing, and enjoyed golf, soccer and swimming, and motorcycle racing. From 1930 to 1938 he worked odd jobs in Ireland.

James Lowry immigrated to Canada in early 1938, and first worked for Samuel Neely of R.R. Camlachie, Ontario as a farm helper. When work ended there, he worked at London Roofing Company in London, Ontario in 1939-1940. When the factory closed, he came to Sarnia. He worked as a salesman at Wholesale Supply Company, and as a press operator at Mueller Limited. He then worked as a truck driver in Sarnia until he enlisted in 1941.

Twenty-four-year-old James Lowry enlisted in the Royal Canadian Air Force on January 3, 1941 in London, Ontario. He stood five feet nine inches tall, had brown eyes and dark brown hair, was single, and lived at 255 South Brock Street, Sarnia at the time. He requested flying duties, with a preference to be a Pilot. From the Recruiting Centre in London, then #1 Manning Depot in Toronto and #1 Auxillary Manning Depot in Picton, James began his

air training at #1 Initial Training School (ITS) in Toronto. His commanding officer at ITS wrote of James, *Keen alert self confident scrappy type of trainee with excellent spirit who is anxious to get overseas and get along with the job. Irishman who knows England well. Could take good care of himself in a tight spot.*

James continued his air training at #3 Elementary Flying Training School (EFTS) in London and #6 Service Flying Training School (SFTS) in Dunnville, where his commanding officers, recommending James for a fighter pilot, wrote of him, *A hard worker energetic and aggressive – cheerful and willingly accepts orders... A high average pilot with a keenness for operational flying.* James was awarded his Pilot's Flying Badge on December 23, 1941.

On January 3, 1942, twenty-five-year-old James Lowry married Pauline Ella Lowry (nee Sayers, born 1923) in Ottawa. They lived on Preston Street in Ottawa briefly before James was sent out west for further air training. Pauline later moved to Sarnia, residing at 775 Exmouth Street (R.R. #1), and later 255 South Brock Street. James and Pauline had one daughter together, Judith Anne Lowry, born January 13, 1943 at Sarnia General Hospital.

Only days after getting married, on January 6, 1942, James was transferred from RCAF Station Rockcliffe to #5 Bombing and Gunnery School (B&GS) in Dafoe, Saskatchewan, where he continued his training until mid-August 1942. On August 21, 1942, he was transferred to #1 Y Depot in Halifax.

WO1-Pilot James Lowry

James Lowry embarked overseas from Halifax for the United Kingdom on October 26, 1942. Initially posted to #3 Personnel Reception Centre, he continued his air training, first with #9 (Pilot) Advanced Flying Unit (AFU), and on January 12, 1943, with #53 Operational Training Unit (OTU). On May 5, 1943, he was posted to #5 Personnel Despatch Centre (PDC).

On May 17, 1943, James sailed from the U.K. bound for the Middle East, ending up at RAF Headquarters in Krendi, Malta. James Lowry became a member of RAF #185 Squadron "Ara Fejn Hu" (Look where it is), a Spitfire pilot, with the rank of Flight Sergeant (later promoted to the rank of Warrant Officer Class I-Pilot, effective June 23, 1943). His Commanding Officer wrote of James, *A very fine N.C.O. at all times. Keen to engage the enemy, and to do his job. A valuable man to have in a squadron. Above average intelligence and personality.*

RAF #185 Squadron went through several different incarnations during the war. It began in March 1938 as a training squadron in Bomber Command. In April 1941, it was re-formed as a **fighter squadron** on Malta, based at RAF Takali and Hal Far, operating Hawker Hurricane aircraft. In early 1942, the squadron began converting to Spitfire fighter aircraft, taking part in the fierce air battles that raged over Malta. By the end of 1942, the squadron flew sweeps over Sicily, in preparation for an Allied invasion on the island. In July 1943, the squadron supported the invasion of Sicily, the beginning of the Italian Campaign. In the early part of 1944, the squadron moved to Italy where it operated as a fighter-bomber unit, supporting the Allied advance north up the length of Italy.

The **Italian Campaign**, the first sustained Canadian Army operation of the War, began with the invasion of Sicily on July 10, 1943. The fierce fighting on the island lasted more than four weeks. By August 17, the Germans

had retreated to the Italian mainland. In early September, Canadian and Allied forces invaded Italy. Liberating Italy would be a painstaking northward crawl lasting 20 months.

On July 2, 1943, only days before his 27th birthday, Flight Sergeant James Lowry lost his life. His Spitfire Mk. IX aircraft EN404 had taken off from Malta and was shot down into the sea by enemy aircraft during an offensive fighter sweep over Sicily. The following is from the official report on the incident by the Squadron Leader, Commanding #185 Squadron: *At approximately 1500 hours local summer time... After sweeping Sicily, leaving the coast at Pexala and flying about 10 miles South, a left about was given for three enemy Me.109's (enemy aircraft), which were approaching from 7 o'clock. F/Sgt. Lowry was last seen during the turn, when he was hit in a head on attack by one of the enemy aircraft. He was reported to have dived into the sea, 20 miles South of Cape Calabria. Searching aircraft and the High Speed Launch failed to find any trace of F/Sgt. Lowry, who was subsequently reported missing.*

Days after the aircraft went missing, Pauline Lowry on Exmouth Street received a telegram from Air Force Headquarters in Ottawa informing her that her husband, FLIGHT SERGEANT JAMES LOWRY HAS BEEN REPORTED MISSING ON ACTIVE SERVICE IN THE MIDDLE EAST. Days later, Pauline received the following letter from the Flight Lieutenant, R.C.A.F. Casualties Officer for Chief of the Air Staff:

Dear Mrs. Lowry:

It is my painful duty to confirm the telegram recently received by you which informed you that your husband, Flight Sergeant James Lowry is reported missing on Active Service. Advice has been received from the Royal Canadian Air Force Casualties Officer, Overseas, that your husband was a member of the crew of an aircraft which failed to return to its base after air operations twenty miles south of Sicily on 2nd July, 1943.

This does not necessarily mean that your husband has been killed or wounded. He may have landed in enemy territory and might be a Prisoner of War. Enquiries have been made through the International red Cross Society and all other appropriate sources and you may be assured that any further information will be communicated to you immediately. Your husband's name will not appear on the official casualty list for five weeks. You may, however, release to the Press or Radio the fact that he is reported missing, but not disclosing the date, place, or his unit. May I join with you in the hope that better news will be forthcoming in the near future.

Also in July 1943, Pauline received the following letter from the Flight Lieutenant, for Air Officer Commanding-in-Chief, RCAF, Overseas:

Dear Mrs. Lowry,

It is with deep regret that I must confirm the information which you already received from Air Force Headquarters, Ottawa, which stated that your husband, Flight Sergeant James Lowry was reported missing as the result of air operations on the 2nd July, 1943.

Your husband, piloting a Spitfire aircraft, took off from Malta for operations against the enemy... and failed to return. Enquiries are being made through the International Red Cross Committee and other available sources, and I can assure you that any news which may be forthcoming will be communicated to you at once by Air Force Headquarters, Ottawa. Please accept my deepest sympathy with you in your great anxiety.

Also in July 1943, Pauline received a letter from the RCAF #185 Squadron Leader, Royal Air Force Station, Krendi, Malta. Following is a portion of that letter:

My dear Mrs. Lowry.

You will have heard by now through official channels that your husband failed to return from an offensive operation on the evening of July the second, and I am writing on behalf of myself and everyone else in the Squadron to offer you our deep sympathy.

Your husband joined the Squadron about three weeks ago and I was immediately struck by his outstanding personality, and his keenness to start operations, and straightaway he took up his place as a valuable member of the Squadron and flew with us as often as he was allowed. He was an extremely cheery fellow and in himself happy to be with the Squadron, as his best friend, F/Sgt Mercer was here too, and you may imagine what a blow it was to us all when he failed to return from the operation of the second of July.

I am very glad to say though, that I can hold out some hope for you for there is quite a possibility of his being a prisoner of war. While returning from a sweep over enemy territory we were attacked by enemy fighters and your husband who saw them first, was one of the first to turn and engage them. In the combat which ensued he was heard to say over the wireless that he had been hit but nothing more was seen or heard of him, and it can only be hoped that he crash landed in enemy territory or bailed out and picked up by them. The area of sea over which the

fight occurred was searched by launches and aircraft, but no sign of him was found.

Unfortunately I can tell you no more as those are the only facts in our possession. If anything further should come to light I will write to you immediately...

It is really with deep regret that I write this letter for I feel I can understand to some extent what this news must mean to you. For us there is a gap in the Squadron, for his personality and sense of humour and keenness on his work made him very popular with all, and I can say no more than that I wish we had many more like him in the Squadron.

If you feel that I am able to help you in any way please do not hesitate to write me, as I shall be only too glad to do anything within my power to soften the blow of this sad news.

In late March 1944, Pauline, then at R.R.#1 Sarnia, wrote the following letter to the Secretary, Department of National Defence for Air, in Ottawa:

Dear Sir:

In reference to your letter of March 18, concerning my husband, Flight Sergeant James Lowry R78911. As yet I have had no further evidence or news of him, but sincerely feel that he is somewhere over there alive. Will the International Red Cross still make enquiries?

Some time ago there was a newspaper item saying there were quite a number of escaped allied prisoners hiding in underground Rome. If there is any truth in this report, could it not be possible that he may be one of them?

Would you be kind enough to reply, as the least bit of hope would be very encouraging.

Yours truly, Mrs. James Lowry

In April 1944, James' mother Annie Lowry in Lisburn, Northern Ireland received the following letter from the Air Ministry Wing Commander, R.C.A.F., Overseas:

Dear Mrs. Lowry:

It is with deep regret that I must refer to my letter of the 5th July, 1943, regarding your son Flight Sergeant James Lowry. In view of the large lapse of time and the absence of any further news concerning him, it must regretfully be concluded that he has lost his life. Action has accordingly been taken to presume, for official purposes, that he lost his life on the 2nd July, 1943. Please accept my profound sympathy in the loss of your son.

In early December 1944, Pauline Lowry received the following information from Ottawa (though presumed dead): *Flight Sergeant James Lowry, has been promoted to the rank of Warrant Officer, Class One, effective June 23, 1943. James Lowry's death was later officially recorded as, Previously reported missing after air operations, now for official purposes, presumed dead, overseas (Sicily).* James Lowry left behind his wife Pauline of one and a half years, and their five-month old daughter Judith Anne.

In February 1945, Pauline received a War Service Gratuity of \$366.88 for the loss of her husband. In June 1948, the #5 Missing Research and Enquiry Unit (RAF) released the results of its investigation on the fate of Spitfire IX EN404. Following is a portion of their results:

The above aircraft was shot down into sea by enemy aircraft about 20 miles South of Sicily after taking part in an offensive sweep over Sicily. A search was made by both aircraft and a high speed launch but no trace could be found of F/Sgt. Lowry.

As Searcher Party investigations in Sicily failed to reveal any unknowns who might prove to be F/Sgt. Lowry, we propose to close the case on the assumption that this casualty was "Lost at Sea". This is subject to Air Ministry Confirmation.

In September 1952, Pauline received a letter from Wing Commander, R.C.A.F. Casualties Officer, for Chief of the Air Staff. Following is a portion of that letter:

Dear Mrs. Lowry:

It is with reluctance that after so long an interval, I must refer to the loss of your husband, Warrant Officer Class I James Lowry, but due to the lack of any information concerning him since he was reported missing, it must be regretfully accepted and officially recorded that he does not have a "known" grave.

Due to the extreme hazards attending air operations there are, unhappily many thousands of British aircrew boys who do not have "known" graves and all will be commemorated on General Memorials that will be erected at a number of locations by the Imperial War Graves Commission (of which Canada is a member), each Memorial representative of a theatre of operations. One of these Memorials will be erected at Malta, and the name of your husband will appear on that Memorial...

I realize that this is an extremely distressing letter and that there is no manner of conveying such information

to you that would not add to your heartaches. I am fully aware that nothing I may say will lessen your great sorrow, but I would like to express to you and the members of your family my deepest sympathy.

Twenty-six-year-old James Lowry has no known grave. His name is inscribed on the Malta War Memorial, Malta, Panel 10, Column 2.

SOURCES: A, B, C, D, E, F, L, M, N, 2C, 2D, 7C, 8X, 8Y, 10B

LUCAS, William Eldon (#V/19180)

British Prime Minister Winston Churchill would say that “The only thing that ever really frightened me during the war was the U-boat peril.” Sarnia’s William Lucas was one of many who lost his life at the hands of the dreaded U-boats. He gave his life for the Allied cause in the protection of vital shipping lanes between the Caribbean Sea and England.

He was born in Sarnia on October 29, 1918, the youngest son of Thomas Henry (born in Camlachie, Ontario) and Lillian Mae (nee Martin, born in Sarnia) Lucas, of 368 Shepherd Street, Sarnia. Thomas and Lillian Lucas were married on June 28, 1905 in Sarnia, and they had four children together: Helena Mae (born 1906, later becoming Mrs. Edmund Mackey); James Wesley (born 1912); William; and Shirley Catherine (born 1924, later becoming Mrs. Charles Demars). William attended Sarnia Collegiate, completing school at the age of seventeen. A former scoutmaster, prior to enlisting William worked a variety of jobs in Sarnia: on a farm for three summers; as a gas station attendant; as a labourer (grinder) at Muellers Foundry; and then as a chauffeur employed by W.H. Kenney until he enlisted.

Twenty-two-year-old William Lucas enlisted with the Royal Canadian Naval Volunteer Reserve on November 18, 1940, in Windsor, Ontario. He stood five feet ten inches tall, had blue eyes and brown hair, was single, and lived at home with his parents on Shepherd Street at the time. He began his training at the Royal Canadian Naval Division Headquarters in Windsor. One month later, Ordinary Seaman William Lucas, still in training, returned to Sarnia from the barracks at Windsor to assist two recruiting officers of the Windsor depot in the interviewing of recruits for the Royal Canadian Navy. Recruiting in Sarnia for only one day, William explained to the young men that if they were accepted, they would be given a medical examination before going to Windsor; they would undergo training for a six-week period at the Windsor barracks; and then would be transferred to one of the coastal naval bases. At that one-day recruitment, more than one hundred young men from Sarnia, Petrolia, Wyoming and Courtright presented themselves at the armory for enlistment in the Royal Canadian Naval detachment. The average age of those accepted was 18 to 20 years, many of high school age.

In April 1941, William was transferred to Halifax base *Stadacona*, with the rank of Steward Probationary. His training continued in Halifax at *HMCS Kings* (King’s College), where he attained full Steward in November 1941. William returned to Sarnia on leave during Christmas and New Year’s 1941 until January 1942. He then returned to *Stadacona* in Halifax on January 9, 1942. According to his official Service Files, three days later, on January 12, 1942, his ship/establishment was recorded as “*Gaspe (Vison)*”, with the rank of Steward. Also recorded on that date was that he “*was borne for passage in SS Lady Hawkins bound for Trinidad*”.

The *HMCS Vison (S11/Z30)*, formerly the *Avalon*, was launched in 1931.* In June 1940, it left Halifax for Pictou where she was converted to an armed yacht of 181 feet in length and a displacement of 422 tonnes. In early October 1940 she was commissioned by the RCN in Halifax and assigned to the base at Gaspe. In December 1940, the ship was sent southward operating out of Trinidad and Bermuda until her return to Halifax in May 1941. In July 1941 she became a member of Gaspé Force, proceeding from Halifax for passage to Trinidad again in December 1941. William Lucas was bound for his posting on the *Vison*. He would not make it.

*Note: His Service File records the name of ship as *Vison*. Some sources record the name as *Vision*.

The **Battle of the Caribbean** was part of the Battle of the Atlantic. German U-boats and Italian submarines attempted to disrupt the Allied supply of oil and other material by attacking shipping in the Caribbean Sea and the Gulf of Mexico. The Royal Canadian Navy played a vital role in this theatre, protecting ships carrying the vital supplies of fuel and resources.

HMCS Vison rejoined the Halifax Local Defence Force in April 1942 and was transferred to Sydney Force in July 1942. In February 1943, *Vison* returned to Halifax as a training ship attached to *HMCS Cornwallis* and moved with the establishment to Digby in April 1943. She remained there until the end of the war as a seamen's training ship, exercising with RN submarines in the Bay of Fundy.

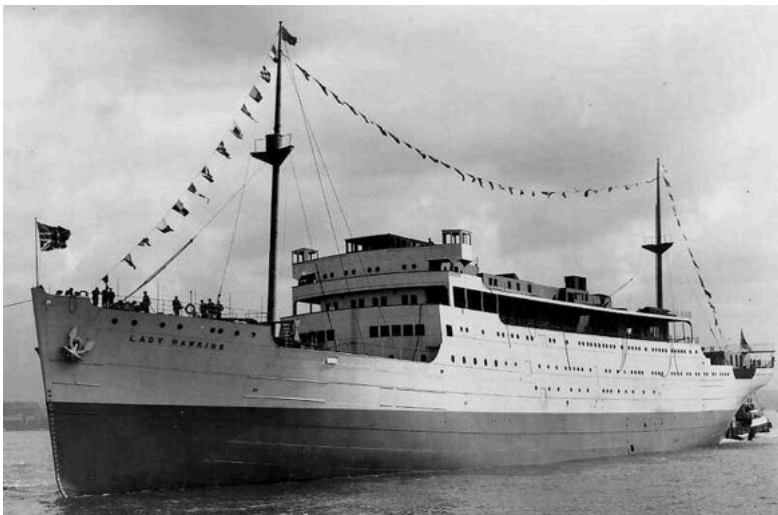

Steward William Eldon Lucas

Armed Yacht *HMCS Vison S11/Z30*

On January 12, 1942, William Lucas boarded the steamship *SS Lady Hawkins* in Halifax that had departed Montreal on its way to Bermuda (where the *Vison* was located at that time). The *Lady Hawkins*, a Canadian luxury liner, was part of Canada's merchant navy fleet designed for the Canada-West Indies service. Prior to the war, Canadian National Steamships operated a fleet of five luxury liners that sailed from eastern Canadian ports to Bermuda, the West Indies, British Honduras and British Guyana carrying passengers and freight. Known affectionately as the "Lady Boats", they were named after the wives of British admirals with a connection to the West Indies – *Lady Somers*, *Lady Rodney*, *Lady Nelson*, *Lady Drake* and *Lady Hawkins*. When war broke out, they were pressed into war service. Their sparkling white hulls were repainted with drab grey paint, and each had a four-inch gun mounted aft for protection against surface raiders and U-boats.

In January 1942, after leaving Montreal, then Halifax and Boston, the *Lady Hawkins* had 109 crew and 212 passengers, mostly civilian, on board. At least 50 of the passengers were Royal Canadian Navy Volunteer Reserve personnel (including William Lucas). The ship had no escort and only a small gun for defence, so it travelled in a zig-zag pattern and was blacked out for defence.

S.S. Lady Hawkins

On January 19, 1942, at about 2:00 a.m., the unescorted *Lady Hawkins* was sailing in the darkness when it was hit by two stern torpedoes from German *U-66*. The ship sank in less than 30 minutes, approximately 150 miles from Cape Hatteras, North Carolina. The ship's wireless sets were destroyed and no SOS was sent out, so there would be no quick rescue. Five of the ship's six lifeboats were smashed to bits and sank. One nine-metre lifeboat, built for 63, escaped the scene with 76 cold, wet survivors on board. One of those who survived later said, *There*

were no lights, no stars, no moon at that time of the morning. We could hear people in the water, but we couldn't actually see them. There were people shouting, but we couldn't take any more aboard. It was a horrible thing. Chief Officer Percy Kelly, in charge of the lifeboat, later reported that, (he gave) the agonizing order to pull away... there was nothing else we could do. The cries of the people in the water rang in my ears for years.

For five days the survivors drifted west under sail and by paddle, bailing out their lifeboat constantly, staying alive on meagre rations. Breakfast and supper consisted of half a biscuit and a dipper of water each. Lunch was a mouthful of condensed milk. After five days, the U.S. passenger steamship *Coamo* happened upon the lifeboat and picked up seventy-one survivors. Five of the 76 unfortunately had fallen into comas and died during the five days at sea. The *Coamo* landed at Puerto Rico on January 28. Two hundred fifty crew and passengers were lost in the sinking of the *Lady Hawkins*, including Sarnia's William Lucas.

Steward William Lucas' death was later officially recorded as, *Missing, believed lost at sea on war service*. On October 29, 1944, two and a half years after William Lucas was reported missing, the Remembrance Book at Devine Street Church was opened at the photograph of William Lucas in honour of his 26th birthday. Twenty-three-year-old William Lucas has no known grave. His name is inscribed on the Halifax Memorial, Nova Scotia, Canada, Panel 9.

LYCHOWICH, John Louis (#A/107694)

The death of John Lychowich, a carpenter at Polymer, revealed the dark and disturbing side of war. A member of the Winnipeg Rifles who was captured shortly after D-Day, John was one of over 150 Canadian soldiers who were systematically executed by members of the 12th SS Panzer Division (Hitler Youth).

John was born in Garson, Manitoba on January 20, 1918 and was raised on a farm there with his younger sister, Jean Engel. Their parents were Polish immigrants Steve (Szzepan, born in Galicia, Poland, a labourer and farmer) and Rosalie (nee Hower, born in Austria) Lychowich. On John's birth certificate, the family surname is actually spelled "Lehovitz".

After completing grade seven, John left school at age fourteen to work as a farmer and labourer in Manitoba and Saskatchewan. He spent five years working on "mixed farms" and sometime in 1940 made his way to Sarnia. He returned to Garson, Manitoba from time to time and worked there for short periods, but would always return to Sarnia. In Sarnia, he found employment at the Polymer Corporation, working almost three years as a carpenter. During his time living in Sarnia, he managed to find love, and made plans to marry Barbara Nemeth of Kitchener, Ontario.

John Lychowich

Steve and Rose
Lechowicz and John and
Jean - 1922.

On May 27, 1943, still single, John, 25, enlisted for military service and completed his National Resources Mobilization Act (NRMA) Enrolment Form at No. 1 District Depot in London, Ontario. He stood five feet seven and a half inches tall, had brown eyes and brown hair, and his hobby was baseball. He recorded his address as Polymer

Corp. Camp, Sarnia, and his occupation as a carpenter. He also expressed a preference for service in the Navy. John planned to return to Sarnia following the war, as Polymer Corp promised that once his service was complete, he would be employed with them. He was initially attached to #1 District Depot, Canadian Army in London, Ontario. In early June 1943, he ran into a bit of trouble when he was convicted of theft and sentenced to one month imprisonment in the “County Jail” at Sarnia. At the end of the month, he was released to the Military Police and attached to the Military Detention Barracks.

From #1 District Depot in London, John began his Canadian Army training on August 12, 1943 at #6 Basic Training Centre (BTC) in Stratford. In mid-September 1943, he was transferred to A-29 Canadian Infantry Training Centre (CITC) at Camp Ipperwash for advanced training. In mid-November, earning \$1.40 per day, he was granted a two-week furlough and an allowance of .50 cents per deim in lieu of rations. On December 23, 1943, he was granted a five-day Christmas leave, again with the .50 cents per deim allowance. At the start of the New Year, John earned himself a raise, to \$1.50 per day and four weeks later, on January 26, was transferred for further training to #1 Training Brigade in Debert, Nova Scotia.

On March 6, 1944, John Lychowich embarked overseas from Debert, Nova Scotia bound for the United Kingdom. He reported for duty in the U.K. on March 15, 1944, becoming part of #2 Canadian Infantry Reinforcement Unit (CIRU). He continued his training there and on May 25, 1944, became a member of the Royal Winnipeg Rifles (RWR), Royal Canadian Infantry Corps (RCIC), with the rank of Private.

Private John Louis Lychowich

In early June 1944, John departed from the U.K. bound for France, part of the Royal Winnipeg Rifles, 7th Infantry Brigade, 3rd Canadian Division. He disembarked with the Winnipeg Rifles in the first wave of landings on Juno Beach, June 6, 1944 – **D-Day**.

The **Battle of Normandy** began for the Canadians with the June 6, 1944 D-Day landings at Juno Beach. After breaching the “Atlantic Wall” of “Fortress Europe”, Allied armies began their break out from the narrow Normandy bridgehead to carve out a foothold on the French mainland. It would take a whole summer of tenacious fighting, pushing against fierce and ruthless German forces to advance east across France. In a brutal campaign of attrition, the Canadians faced fierce battles and vicious counterattacks as they clawed their way forward liberating villages and towns including Bretteville, Carpiquet, Caen and Falaise. John Lychowich would not to see these victories. John would not see these victories.

John Lychowich survived only those first couple of days of the invasion of France. On June 8, 1944, on his 94th day overseas, he was listed as “missing”. It was learned later that John had been captured by German troops and was one of as many as 156 Canadian soldiers who were executed by their captors. On Hitler’s order, as retribution for the invasion on France, members of the 12th SS Panzer Division (Hitler Youth) brutally murdered prisoners in scattered groups in various pockets of the Normandy countryside in the days and weeks following D-Day. It was one of the worst war crimes in Canadian history.

On June 7, the Germans took prisoners from the North Nova Scotia Highlanders and the 27th Canadian Armoured Regiment to Abbaye d'Ardenne, an ancient stone church. Later that night, eleven of the Canadian prisoners were taken into the Abbaye's garden and shot in the head. The next morning, seven more Canadian POWs were taken outside and shot. On June 8, sixty-four Canadians, including several dozen members of the Royal Winnipeg Rifles, were taken prisoner near Putot-en-Bessin.

The prisoners were marched to the Chateau d'Audrieu and, throughout the day, German soldiers murdered forty-five Canadians. One of those murdered on June 8, 1944 was John Lychowich. The murders of these Canadian soldiers and the consequent search for justice is documented in the book *Conduct Unbecoming: The Story of the Murder of Canadian Prisoners of War in Normandy* by Howard Margolian.^{D, 2N} The following is a portion of that book detailing the events of June 8th, beginning at about 2:00 in the afternoon:

At the crossroads east of Pavie, the column (of prisoners) was ordered to a halt. The first thing Bremer's men did was to instruct the prisoners to remove their helmets. Then, while they kept their hands clasped behind their heads, each prisoner subjected to a thorough, sometimes rough, search. All papers and personal effects confiscated. Identification documents were taken by the NCO in charge, while photographs, money, and other personal items were tossed willy-nilly to the ground, although the Germans did make a point of pocketing cigarettes. At the conclusion of the search, the prisoners, their hands still up, were marched another few hundred yards to the rear of a chateau.... Compared with the horrors of combat, the scene that greeted the prisoners on the grounds of the chateau must have seemed positively idyllic. Nestled among tall, leafy trees and other greenery, the chateau, named Chateau d'Audrieu, after the neighbouring village, recalled simpler, gentler times.

Three prisoners--Major Hodge, Lance Corporal Austin Fuller and Private Frederick Smith--were brought to a command post where they underwent interrogation. About 2:15, a frustrated and angry German officer ordered them killed. They were marched single file, arms still raised, onto a path that led to a cluster of shrubs and small trees and then ordered to halt. After ordering them to face away from the firing squad, German soldiers executed them. Half an hour later, after more unsuccessful interrogations, three more Canadian prisoners were executed. This time, however, after being ordered to lie on their stomachs, they were shot point blank in the back of the head. The German executors then returned to the chateau kitchen for food and cider. Bremer, the German officer, still thought the interrogation and the execution of prisoners three at a time was inefficient. This pace would have them executing the Canadians until the evening.

*Between 4:30 and 5:00 in the afternoon, Leon Leseigneur, a local dairy farmer, and Eugene Buchart, one of his farm hands, were walking along a dirt road past the hen house of the Chateau d'Audrieu. Gazing to the right, they noticed thirteen unarmed Canadian soldiers standing in the chateau's orchard. All were members of 9 Platoon of the Winnipegs' A Company. They were Mrs. Jennie Meakin's boys, George and Frank, both of whom were corporals, as well as Privates William Adams, Emmanuel Bishoff, Lawrence Chartrand, Sidney Cresswell, Anthony Fagnan, Robert Harper, Herve Labrecque, **John Lychowich**, Robert Mutch, Henry Rodgers, and Steve Slywchuk. The prisoners were being guarded by a detachment of SS Troopers. Buchart noted with interest that there were several officers among the guard....*

About forty yards past the hen house, Buchart and his employer headed into the pasture where the Leseigneur farm was situated. Just as they turned off the dirt road, the two men heard heavy bursts of gunfire. Buchart and Leseigneur instantly realized what this meant, but, after four years of brutal German occupation, they knew better than to investigate. Instead, the two men hurried back to the farm and tried to keep a low profile. A few minutes later, an SS officer and two troopers came by in order to appropriate Leseigneur's ladder. Forcing Buchart to carry the ladder for them, the Germans escorted him back towards their headquarters. As he passed the hen house and glanced left at the orchard, his worst fears were confirmed. The prisoners he had seen earlier were gone....

Based on what Buchart and Leseigneur saw and heard, as well as forensic evidence, the final moments of the thirteen Winnipegs was reconstructed.

Confined to the orchard by Bremer, the men of 9 Platoon probably milled about, exchanging small talk, bucking up each other's spirits. At around 4:30 PM, the guard detail was joined by several officers, with Bremer perhaps among them. A palpable tension would have filled the orchard. On orders from the most senior German officer (Bremer or a subordinate), the prisoners were lined up in a row. Facing them was a rough-and-ready firing squad, consisting of SS troopers with rifles, NCOs with machine pistols, and officers with sidearms. At the command to fire, the executioners opened up with a murderous fusillade. All of the Canadians went down with the first volley, although some clearly were not killed outright. Hearing the moans of Privates Bishoff, Labrecque, and Mutch, whose

wounds were not fatal, an officer walked over to where they lay and finished them off with shots to the head. As he moved down the line of stricken men, kicking each of them to see if he showed signs of life, the officer discovered that Lance Corporal Meakin and Private Slywchuk had not been hit at all. Slywchuk had apparently timed his dive perfectly, whereas Frank Meakin had been saved when George, in a last act of brotherly love, had stepped in front of him, taking a burst of machine-pistol fire across the chest. There would be no more reprieves, however. As Meakin lay waiting next to his lifeless brother, he was given the coup de grace. Then the officer emptied his pistol into Slywchuk's head. As the echo of the last shots faded, an eerie silence descended over the orchard.³²

Three days after the D-Day invasion, following heavy Allied naval and artillery bombardment, the Germans fled the Chateau. A British army unit, the Dorsets Regiment of England, soon occupied the mansion at Chateau d'Audrieu. The British were informed of the executions by the proprietor's daughter and were guided to the sites. At the orchard near the main house, they found a row of 13 Canadian soldiers lying dead along a fence. The Dorsets were forced to withdraw the next day, but the Chateau was liberated for good two weeks later by other British forces. The remaining bodies were found then. After his murder while a POW, John Lychowich's remains were buried at a location recorded on the Army Field Service Card as "Beny-sur-Mer Temp Cem. MR.987813 P19 Gr12".

On June 26, 1944, Mrs. Rosie Lychowich in Garson, Manitoba received the following telegram from the Director of Records in Ottawa: MINISTER OF NATIONAL DEFENCE DEEPLY REGRETS TO INFORM YOU THAT A107694 PRIVATE JOHN LOUIS Lychowich WHO WAS PREVIOUSLY REPORTED MISSING IN ACTION HAS NOW BEEN OFFICIALLY REPORTED KILLED IN ACTION EIGHTH JUNE 1944 STOP IF ANY FURTHER INFORMATION BECOMES AVAILABLE IT WILL BE FORWARDED AS SOON AS RECEIVED.

On July 5, 1944, the Major-General, Adjutant-General in Ottawa wrote this letter to John's grieving mother: *Dear Mrs. Lychowich:*

It is with deep regret that I learned of the death of your son, A107694 Private John Louis Lychowich, who gave his life in the Service of his Country France, on the 8th day of June 1944.

From official information we have received, your son was killed in action against the enemy. You may be assured that any additional information received will be communicated to you without delay.

The Minister of National Defence and the Members of the Army Council have asked me to express to you and your family their sincere sympathy in your bereavement. We pay tribute to the sacrifice he so bravely made.

A month later, in early August 1944, Rosie received this correspondence from the Colonel, Director of Records, for Adjutant-General:

Dear Mrs. Lychowich,

With regard to the regretted death of your son the late A107694 Private John Louis Lychowich, I am now to confirm the verbal message you received from an Officer of this Department earlier this week.

Prior to your receiving this verbal message, you were given all the information then available to the Authorities, both Overseas and here. Your son was reported from Overseas, first as Missing in Action, then as Killed in Action; and as the policy of the Department is not to withhold any information from those entitled to receive same, when the true manner in which Private Lychowich met his death became known to the Department of National Defence, it was felt that you should be advised verbally.

Details regarding date and place of burial have not as yet been received. They are being obtained from Overseas and you will be advised as soon as they become available here. Please accept my heartfelt sympathy in your sad bereavement and be assured that all information will be sent to you immediately as and when received.

In late August 1944, John's fiancée Barbara Nemeth on King Street in Kitchener, Ontario, wrote a letter to the Records Department in Ottawa searching for information about John. Following is a portion of that letter:

Dear Sirs:

Writing for information of the above (John Lychowich). Would appreciate as to his whereabouts not having heard from him since the end of May. Also would appreciate if you could forward me his home "address". Would you please send information as soon as possible.

Yours Sincerely, Barbara Nemeth (His Fiancee)

On September 12, 1944, Barbara received the following letter from the Colonel, Director of Records, for Adjutant-General:

Dear Miss Nemeth:

In reply to your letter dated 19th August, 1944, I deeply regret to inform you that your fiancé, A107694 Private John Louis Lychowich, has been officially reported to have been killed in action in France on the 8th of June, 1944.

In late May 1945, Rosie received the following letter from the Colonel, Director of Records, for Adjutant-General:

Dear Madam:

Information has now been received from the overseas military authorities that your son, A107694 Private John Louis Lychowich, was buried with religious rites in a temporary grave located at Beny-sur-Mer, approximately seven and a half miles North-North-West of Caen, in the Department of Calvados (Normandy) France.

The grave will have been temporarily marked with a wooden cross for identification purposes and in due course the remains will be reverently exhumed and removed to a recognized military burial ground when the concentration of graves in the area takes place. On this being completed the new location will be advised to you, but for obvious reasons it will likely take approximately one year before this information is received.

In January 1946, Rosie received a letter from the Colonel, Director of Records, for Adjutant-General. Following is a portion of that letter:

Dear Madam:

Information has just been received from overseas that the remains of your son, A107694 Private John Louis Lychowich, have been carefully exhumed from the original place of internment and reverently reburied in grave 16, row B, plot 15, of Beny-sur-Mer Canadian Military Cemetery, Beny-sur-Mer, France. Marked map is enclosed. This is a recognized military burial ground and will receive care and maintenance in perpetuity.

The grave will have been marked with a temporary cross which will be replaced in due course by a permanent headstone suitably inscribed. While it cannot now be stated when this work of permanent commemoration will begin, before any action is taken you will be communicated with and an opportunity will be given you to submit a short personal inscription of your own choice for engraving on the headstone...

John Lychowich's death was later officially recorded as, *Overseas casualty, killed in action, in the field (France)*. In February 1946, Rosie received a War Service Gratuity from the Department of National Defence for the loss of her son John. The gratuity broke down as: 301 days of Total Qualifying service = \$75.00 + 93 days of Qualifying Overseas service = \$23.25 + a 94 days Supplement for overseas service = \$9.89 for a Total Gratuity of \$108.14. Rosie also received the three campaign medals that John was awarded while in service: the 1939-45 Star; the France-Germany Star War Medal; and the 1939-45 CVSM and Clasp.

A memorial stele of white marble, with three mounted plaques, was erected in Audrieu, France, in memory of the members of the Royal Winnipeg Rifles and supporting arms who were murdered while prisoners of war at the Chateau d'Audrieu June 8, 9 and 11, 1944. John Lychowich's name is among the 64 names inscribed on the plaque.

Twenty-six-year-old John Lychowich is buried in Beny-sur-Mer Canadian War Cemetery in Reviers, France, Grave XV.B.16. The men who fell on the beaches of Normandy and in the bitter bridgehead battles that followed are buried in Beny-sur-Mer Canadian War Cemetery. John Lychowich is one of them. On John's headstone are inscribed the words, REQUIESCAT IN PACE.

MACGREGOR, Donald Cameron (#R/102776)

Donald Cameron MacGregor, a pilot in the RCAF, was an outstanding athlete in Sarnia and was, as his superior officer described the 27-year old, "Vigorous, enthusiastic...very responsible and conscientious." Despite his extensive training, he was killed in a plane crash during training in May 1942.

He was born in Petrolia on November 21, 1914, the only son of Donald Cameron MacGregor Sr. and Margaret Ellen (nee MacEachern, born in Paisley, Ontario) MacGregor, of 208 South Mitton Street, Sarnia. Scottish born Donald Sr. worked at Imperial Oil Limited to support Margaret and their two children, Donald Jr. and Mary (later became Mary Turnbull).

Donald Jr. attended public elementary school in Peru from 1924 to 1929, where the family lived while his father was employed in the oil industry there. The MacGregors returned to Sarnia where Donald attended Sarnia Collegiate from 1929 to 1934. He was an outstanding athlete at SCITS, where he was a member of the school's

football teams, swimming team and the gymnastics team that won the junior championship of Canada in 1932.

Donald kept himself busy after he graduated from SCITS. He continued to be active in sports by playing golf, rugby, skiing, basketball and boxing. Between 1931 and 1936, Donald served with the Lambton Regiment NPMA (Non-Permanent Active Militia) with the rank of Sergeant. In 1935-1936, Donald attended a Business college taking an accounting course. He was also a member of St. Andrew's Presbyterian Church.

Beginning in 1936, Donald attended Ontario Agricultural College (OAC) in Guelph, where he worked towards his Bachelor of Science Degree in Agriculture. Each summer, Donald worked a variety of summer jobs: as a labourer at Imperial Oil (April-Sept 1937); as a construction work in Sarnia (May-Sept 1938); and as a life-guard/swimming instructor at the Lion's Club Camp in Seaforth (June-Sept 1939 and 1940).

When he was in his fourth year of a chemistry course at the Ontario Agricultural College, Donald enlisted. Two reference letters in his application for the Air Force signify the type of person Donald was.

From the OAC Registrar: *I have known MacGregor for some years. He is a man of excellent character and considerable ability. I am very pleased to recommend him to you.*

From the Director of Physical Education: *This young man has served under me for the past four years in executive, as well as athletic capacities. I have found him to be a gentleman in every sense of the word. He undoubtedly rates well above the average and I am sure would be of value to the Royal Canadian Air Force.*

At age twenty-six, Donald MacGregor enlisted in the Royal Canadian Air Force on May 2, 1941 in Toronto. He stood five feet seven inches tall, had blue eyes and light brown hair, was single, and was living at home with his parents on Mitton Street at the time. He requested flying duties and his plan following the war was to complete his final year at Guelph to obtain his agriculture degree.

From #4 Manning Depot in St. Hubert, Quebec, Donald received his air training at #5 Equipment Depot in Moncton, New Brunswick; at #3 Initial Training School (ITS) in Victoriaville, Quebec; and then at #3 Elementary Flying Training School (EFTS) in London (Crumlin); in fact, while training at EFTS Crumlin, Donald flew over Sarnia during his training flights.

The Chief Instructor and Commanding Officer at EFTS wrote this about Donald: *A good pilot, absorbs training easily. Is good on aerobatics and will do well with further training,* and *"Vigorous, enthusiastic in what he undertakes. Very responsible and conscientious. Quick to grasp a situation and to take the initiative in acting promptly.* Donald continued his training at #2 Service Flying Training School (SFTS) at Uplands, Ontario, where he was awarded his Pilot's Flying Badge on January 16, 1942. On February 15, 1942, Donald was posted to #1 Y Depot in Halifax.

Sgt.-Pilot Donald Cameron MacGregor

Donald embarked overseas for the United Kingdom on March 8, 1942. He was initially posted to #3 Personnel Reception Centre before being transferred to RAF Station Exeter on May 1, 1942. There, he became a member of the RAF #286 Squadron, flying Oxford aircraft with the rank of Sergeant-Pilot.

No. 286 Squadron was formed at RAF Filton in November 1941. It operated a wide number of different aircraft in detachments at a number of airfields in the south-west of England. These aircraft, including the Westland Lysander, Hawker Hurricane, Boulton Defiant and Airspeed Oxford, were used for gun-laying training and for target towing for anti-aircraft gun practice.

On May 11, 1942, tragedy struck. Donald was aboard Oxford aircraft DF253 that crashed at Dymonds Farm, Honiton Clyst, near the aerodrome at Exeter RAF Station, Colerne, England. He was killed in the crash. The next day, his parents Donald Sr. and Margaret on Mitton Street, received a telegram informing them that their only son had lost his life while on active service in England. No other details were provided. Along with Sergeant-Pilot Donald MacGregor, two RAF members of the crew were also killed. Donald MacGregor's remains were buried on May 15, 1942. He was later officially recorded as, *Killed during flying operations, overseas*.

In January 1943, St. Andrew's Church in Sarnia held a memorial service for three parishioners, all members of the Royal Canadian Air Force, who had paid the supreme sacrifice in the previous year—George William Knowles, Donald Cameron MacGregor and Howard Fraser Thompson. The service was arranged at the request of family members with Rev. Dr. J.M. Macgillivray officiating. In his brief address, Dr. Macgillivray's words expressed the sentiment of many at the time:

These men, as well as others like them, went forth possessed, perhaps, of a spirit of adventure not unnatural in young men. But it was not only the call of adventure that led them to the King's service in the clouds. There was a deeper motive than that. They had a vision of a new and better world; a world free of tyranny, oppression, injustice and fear. They knew that the only way to secure such a world was by overthrowing forever the forces of evil now threatening mankind; and to that holy task they dedicated their lives. They have entered into the larger life; and to God's keeping we commend them in the Easter hope of a final resurrection to eternal life.

It is my personal conviction that they are not now far away from us, and I read to you as suggestive and appropriate some words written by a French soldier killed in 1915 during the First Great War: 'I believe the dead live close to the living, invisible but present; and perhaps it is they whom God sends to us in answer to our prayers, so that their spirit, which is His, may continue to guide us and inspire us.'

In April 1946, his parents received a War Service Gratuity of \$114.62 for the loss of their only son. Donald MacGregor, 27, is buried in Exeter Higher Cemetery, Devon, United Kingdom, Section Z.K. Grave 54. On his headstone are inscribed the words, HOLY FATHER, LOOK ON US TODAY, AS WE THINK OF HIM OUR DEAR ONE GONE AWAY.

MARTINDALE, Ralph Omar (#V/17891)

Ralph Omar Martindale's plan after the war was to resume his career as a machinist. He joined the Royal Canadian Navy, but his life ended when his ship, the *HMCS Raccoon*, was attacked in the Gulf of St. Lawrence by what British Prime Minister Winston Churchill said was "... the only thing that ever really frightened me during the war...".

Ralph Omar Martindale was born in York, Haldimand County, Ontario on July 27, 1922, the son of Ralph Emerson and Ina Agatha (nee Renshaw) Martindale, of 413 Nelson Street, Sarnia. Ralph Emerson (born October 12, 1903 in Haldimand) married Ina Agatha (born March 25, 1904 in Haldimand) on August 13, 1921. Ralph and Ina Martindale were blessed with four children: sons Ralph Jr., Ernest Albert and Edward Lorne (died March 14, 1926), and daughter Geraldine Jane.

Ralph Jr. attended two years of high school at Sarnia Collegiate and left at the age of seventeen. For a year prior to enlisting, Ralph worked as a machinist at Canadian Machinery Corporation in Galt, Ontario. Also, for several years, he had a steady girlfriend in Sarnia and there was talk of marriage in the future.

At age 19, Ralph Martindale enlisted in the Royal Canadian Naval Volunteer Reserve on December 27, 1941 in London, Ontario. He stood five feet seven and a quarter inches tall, had blue eyes and auburn hair, and was single at the time. His plan for after the war was to continue his employment as a machinist.

Ralph began his training as an Ordinary Seaman, at *HMCS Prevost*, the Naval Reserve base in London, Ontario. In mid-February 1942, he was transferred to *HMCS Stadacona*, the naval base in Halifax, where he continued his training until mid-April 1942. On April 21, 1942, Ralph Martindale was transferred to the *HMCS Raccoon*. Two months later, in June 1942, Ralph returned home to Sarnia while on leave to visit his parents and

friends. After his leave, Ordinary Seaman Ralph Martindale returned to service aboard the *HMCS Raccoon*.

The *HMCS Raccoon (S14)* was a 148-foot, 377-ton civilian yacht (formerly the *Halongia*), originally built in 1931, and commissioned for military service by the RCN in June 1940. Beginning in the spring of 1942, the *HMCS Raccoon* was assigned to the naval base at Gaspe to patrol the river and Gulf of the St. Lawrence and to escort convoys of ships sailing from Quebec to Sydney, Newfoundland and Halifax.

Armed Yacht *HMCS Raccoon S14*

Beginning on the opening day of the Second World War, the **Battle of the Atlantic** would be the longest continuous campaign of the war, and one in which Canada played a central role. The Royal Canadian Navy, along with the Royal Canadian Air Force (RCAF) and Canada's Merchant Navy, played a vital role in defending the country's eastern coast and in escorting convoys of ships carrying men and essential machinery, arms, fuel and basic resources.

The **Battle of the St. Lawrence** was an extension of the larger Battle of the Atlantic. It began on May 12, 1942 when after entering the Gulf of St. Lawrence, German U-boat *U-553* sank two steamers south of Anticosti Island, shocking Canadians. Between May 1942 and late 1944, German U-boats repeatedly penetrated the waters of the St. Lawrence River and the Gulf of St. Lawrence--sinking ships, destroying valuable cargo, and costing hundreds of lives. It was the first and only time since the War of 1812 that naval battles were waged in Canada's inland waters.

In early September 1942, the armed yacht *HMCS Raccoon*, along with corvette *HMCS Arrowhead*, minesweeper *HMCS Truro* and two Fairmile launches *Q-64* and *Q-83*, were escorting the convoy *QS-33* in the Gulf of St. Lawrence. The slow-moving convoy, bound for Sydney Nova Scotia, was unaware that two German U-boats, *U-165* and *U-517* were lying in wait on opposite sides of the river, by Cap Chat and Pointe-des-Monts, Quebec. Late on the night of September 6, 1942, west of Pointe-des-Monts where the St. Lawrence narrows to 50 kilometers in width, German U-boat *U-165* intercepted and struck the starboard side of the Greek steam merchant ship *Aeas* with one torpedo just under the bridge. The *Aeas* sank, two of the crew died, and the 29 others survived by abandoning ship and climbing into life rafts.

One of her escorts, the *HMCS Raccoon* left the convoy at midnight, zig-zagging in search of the German U-boat. Shortly after, at 1:12 am (September 7), a loud explosion ripped through the night air when the *HMCS Raccoon* was also torpedoed almost point-blank range by *U-165*. The *Raccoon*'s boiler exploded and the ship sank in minutes. Other ships in the convoy speculated they were hearing depth charges being dropped by the *Raccoon* as it pursued the U-boat. Explosions from both sinkings, which lit up the sky, could be heard for miles around; windows of houses close to shore were rattled by the detonations.

Three days later, only a few bits of debris from the *HMCS Raccoon* were found on the south coast of Anticosti Island: a portion of the ship's bridge, some signal pads, a life preserver and one body was found. The body was that of a well-known McGill University footballer, Sub-Lieutenant Russell McConnell, RCNVR. The entire *Raccoon* crew of thirty-seven men were lost, including Ralph Martindale, who had served less than five months aboard the *Raccoon*.

Days after the sinking, Ralph Sr. and Ina Martindale in Sarnia received a cable informing them that their son Ralph Jr. was reported missing when the Canadian patrol vessel *Raccoon* was lost while in convoy duty. Ralph Martindale was later officially recorded as, *At sea, presumed lost on board H.M.C.S. 'Raccoon'*.

On January 9, 1945, Ina Martindale passed away at the age of 40, a little over two years after she had lost her son. Ina is buried at Lakeview Cemetery in Sarnia. In two years, Ralph Sr. had lost a child and his wife. In July 1945, Ralph Sr. received a War Service Gratuity of \$107.59 for the loss of his son. Ralph Sr., passed away on October 10, 1987, two days before his 84th birthday. He is buried with his wife at Lakeview Cemetery. Twenty year-old Ordinary Seaman Ralph Omar Martindale has no known grave. His name is inscribed on the Halifax Memorial, Nova Scotia, Canada, Panel 9.

Another sad story in the loss of the *Raccoon*, is that of Supply Assistant John Sheflin, one of Ralph Martindale's crew-mates, who also perished in the sinking. At the very moment that the *Raccoon* was going down, a train sped through nearby Riviere-la-Madeleine carrying John Sheflin's wife, Marguerite, and their two pre-school children. They had made a spur-of-the moment decision to move from Toronto to join family in Eureka, Nova Scotia, so that they could see John when he took his occasional shore leave. It would be years before his family discovered just how close together they were, before tragedy tore them apart forever.
